

Chapter 4 Objectives

- Describe the components in the system unit
- Describe the types of expansion slots and cards in the system unit
- Explain how the CPU uses the four steps of a machine cycle to process data
- Explain the difference between a serial, a parallel, and a USB port
- Compare and contrast various personal computer processors on the market today
- Describe how buses contribute to a computer's processing speed
- Define a bit and describe how a series of bits represents data
- Identify components in a notebook computer
- Differentiate among the various types of memory
- Identify components in a handheld computer

Next p. 42

The System Unit What is the system unit?

- Box-like case that contains computer's electronic components
- Sometimes called the chassis

Next p. 42 Fig. 4-1

The System Unit What are common components inside the system unit?

- Processor
- Memory module
- Expansion cards
 - Sound card
 - Modem card
 - Video card
 - Network interface card
- Ports and Connectors

The System Unit What is the motherboard?

- Main circuit board in system unit
- Contains chips, integrated circuits, and transistors
- Also called system board

Next p. 44 Fig. 4-3

The System Unit What chip packages are available?

- single edge contact (SEC) cartridge
- dual inline package (DIP)
- flip chip-PGA (FC-PGA) package
- pin grid array (PGA)

What is the control unit?

- Directs and coordinates operations in computer

Control unit repeats four basic operations:

- Fetch - obtain program instruction or data item from memory
- Decode - translate instruction into commands
- Execute - carry out command
- Store - write result to memory

What is a machine cycle?

- Four operations of the CPU comprise a machine cycle
- Also called instruction cycle

- Instruction time (i-time) - time taken to fetch and decode
- Execution time (e-time) - time taken to execute and store

What are two designs used for the CPU?

CISC

(complex instruction set computing)

- Supports large number of instructions
- CPU executes complex instructions more quickly

RISC

(reduced instruction set computing)

- Supports smaller number of instructions
- CPU executes simple instructions more quickly

What is the arithmetic/logic unit (ALU) ?

- CPU component that performs execution part of the machine cycle

Arithmetic

(addition, subtraction, multiplication, and division)

Comparison

(greater than, equal to, or less than)

.and. .or. .not.

Logical

(AND, OR, NOT)

What is a register?

- Temporary storage area that holds data and instructions

Stores location from where instruction was fetched

Stores instruction while it is being decoded

Stores results of calculation

Stores data while ALU processes it

What is the system clock?

- Synchronizes all computer operations
- Each tick is clock cycle

MHz - one million ticks of system clock

GHz - one billion ticks of system clock

Data Representation

What are three popular coding systems to represent data?

- ASCII - American Standard Code for Information Interchange
- EBCDIC - Extended Binary Coded Decimal Interchange Code
- Unicode - coding scheme capable of representing all world's languages

ASCII	Symbol	EBCDIC
00110000	0	11110000

What is read-only memory (ROM)?

- Memory chips that contain data, instructions, or information that is recorded permanently

Data can only be read; cannot be modified in ROM

ROM is nonvolatile — Contents not lost when computer is turned off

BIOS
(basic input/output system)
Stored on ROM

Memory

What is memory access time?

- Speed at which processor can access data from memory directly
- Measured in nanoseconds (ns), which is one billionth of a second
- It takes 1/10 of a second to blink your eye; a computer can perform up to 10 million operations in same amount of time

TERM	ABBREVIATION	SPEED
Millisecond	ms	One-thousandth of a second
Microsecond	μs	One-millionth of a second

How are expansion cards used?

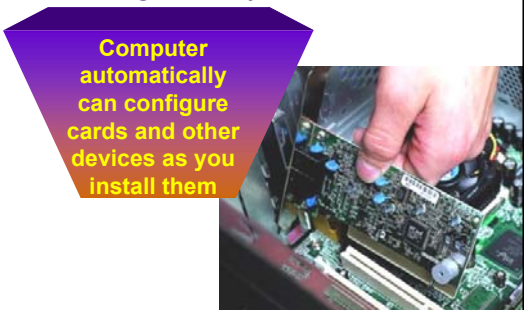

EXPANSION CARD	PURPOSE
Accelerator	To increase the speed of the processor
Controller	To connect disk drives; being phased out because newer motherboards support these connections
Game	To connect a joystick
I/O	To connect input and output devices such as a printer or mouse; being phased out because newer motherboards support these connections
Interface	To connect other peripherals such as a mouse, CD-ROM, or scanner
Memory	To add more memory to the computer
Modem	To connect to other computers through telephone lines
Network Interface	To connect to other computers and peripherals
PC-to-TV converter	To connect to a television
Sound	To connect speakers or microphone
TV Tuner	To view television channels on your monitor
Video	To connect a monitor
Video Capture	To connect a camcorder
