## Payroll

### action plan

- ✓ Determine net pay by subtracting payroll deductions from gross earnings.
- ✓ Record gross earnings as Salaries and Wages Expense, record payroll deductions as liabilities, and record net pay as Salaries and Wages Payable.

## Employer Payroll Taxes

Payroll tax expense for businesses results from three taxes that governmental agencies levy **on employers**. These taxes are: (1) FICA, (2) federal unemployment tax, and (3) state unemployment tax. These taxes plus such items as paid vacations and pensions (discussed in the appendix to this chapter) are collectively referred to as **fringe benefits**. As indicated earlier, the cost of fringe benefits in many companies is substantial. The pie chart in the margin shows the pieces of the benefits “pie.”

### FICA TAXES

Each employee must pay FICA taxes. In addition, employers must match each employee’s FICA contribution. This means the employer must remit to the federal government 12.4% of each employee’s first \$106,800 of taxable earnings, plus 2.9% of each employee’s earnings, regardless of amount. The matching contribution results in **payroll tax expense** to the employer. The employer’s tax is subject to the same rate and maximum earnings as the employee’s. The company uses the same account, FICA Taxes Payable, to record both the employee’s and the employer’s FICA contributions. For the January 14 payroll, Academy Company’s FICA tax contribution is \$1,376.80 ( $\$17,210.00 \times 8\%$ ).

**Study Objective [7]**  
Describe and record employer payroll taxes.

**Helpful Hint**

Both the employer and employee pay FICA taxes. Federal unemployment taxes and (in most states) the state unemployment taxes are borne entirely by the employer.

**FEDERAL UNEMPLOYMENT TAXES**

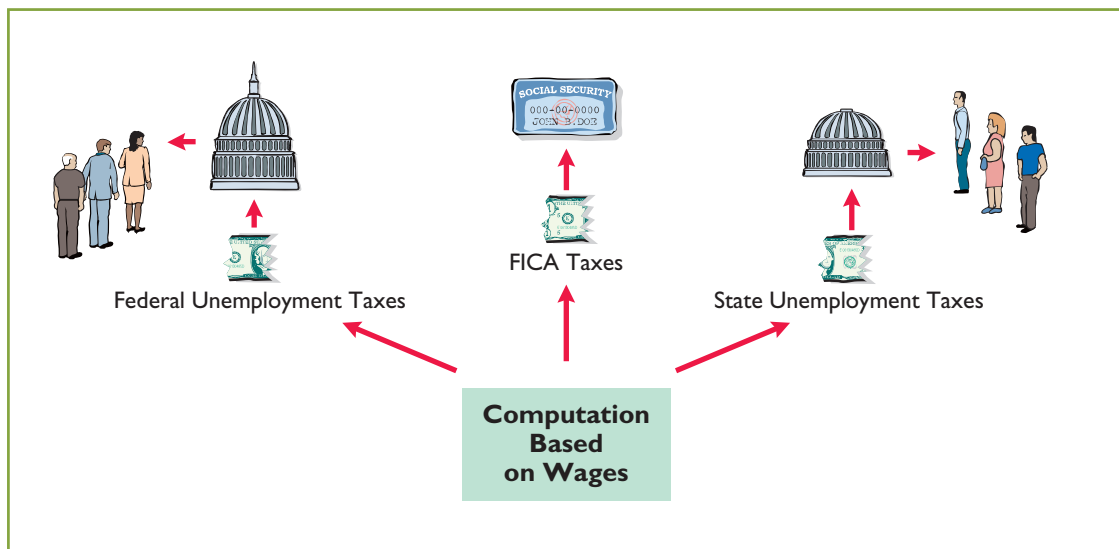

The Federal Unemployment Tax Act (FUTA) is another feature of the federal Social Security program. **Federal unemployment taxes** provide benefits for a limited period of time to employees who lose their jobs through no fault of their own. The FUTA tax rate is 6.2% of taxable wages. The taxable wage base is the first \$7,000 of wages paid to each employee in a calendar year. Employers who pay the state unemployment tax on a timely basis will receive an offset credit of up to 5.4%. Therefore, the net federal tax rate is generally 0.8% (6.2%–5.4%). This rate would equate to a maximum of \$56 of federal tax per employee per year ( $0.8\% \times \$7,000$ ). State tax rates are based on state law.

The **employer** bears the entire federal unemployment tax. There is no deduction or withholding from employees. Companies use the account Federal Unemployment Taxes Payable to recognize this liability. The federal unemployment tax for Academy Company for the January 14 payroll is \$137.68 ( $\$17,210.00 \times 0.8\%$ ).

**STATE UNEMPLOYMENT TAXES**

All states have unemployment compensation programs under state unemployment tax acts (SUTA). Like federal unemployment taxes, **state unemployment taxes** provide benefits to employees who lose their jobs. These taxes are levied on employers.<sup>2</sup> The basic rate is usually 5.4% on the first \$7,000 of wages paid to an employee during the year. The state adjusts the basic rate according to the employer's experience rating: Companies with a history of stable employment may pay less than 5.4%. Companies with a history of unstable employment may pay more than the basic rate. Regardless of the rate paid, the company's credit on the federal unemployment tax is still 5.4%.

Companies use the account State Unemployment Taxes Payable for this liability. The state unemployment tax for Academy Company for the January 14 payroll is \$929.34 ( $\$17,210.00 \times 5.4\%$ ). Illustration 11-15 summarizes the types of employer payroll taxes.

**Illustration 11-15**  
Employer payroll taxes

<sup>2</sup>In a few states, the employee is also required to make a contribution. In this textbook, including the homework, we will assume that the tax is only on the employer.

## RECORDING EMPLOYER PAYROLL TAXES

Companies usually record employer payroll taxes at the same time they record the payroll. The entire amount of gross pay (\$17,210.00) shown in the payroll register in Illustration 11-13 is subject to each of the three taxes mentioned above. Accordingly, Academy records the payroll tax expense associated with the January 14 payroll with the following entry.

|         |   |          |          |
|---------|---|----------|----------|
| Jan. 14 | Payroll Tax Expense   | 2,443.82 |          |
|         | FICA Taxes Payable  |          | 1,376.80 |
|         | Federal Unemployment Taxes Payable                            |          | 137.68   |
|         | State Unemployment Taxes Payable                              |          | 929.34   |
|         | (To record employer's payroll taxes on<br>January 14 payroll) |          |          |

|       |   |   |   |               |
|-------|---|---|---|---------------|
| A     | = | L | + | OE            |
|       |   |   |   | -2,443.82 Exp |
|       |   |   |   | +1,376.80     |
|       |   |   |   | +137.68       |
|       |   |   |   | +929.34       |
| <hr/> |   |   |   |               |

**Cash Flows**  
no effect

Note that Academy uses separate liability accounts instead of a single credit to Payroll Taxes Payable. Why? Because these liabilities are payable to different taxing authorities at different dates. Companies classify the liability accounts in the balance sheet as current liabilities since they will be paid within the next year. They classify Payroll Tax Expense on the income statement as an operating expense.

## ACCOUNTING ACROSS THE ORGANIZATION

### It Costs \$74,000 to Put \$44,000 in Sally's Pocket

Sally works for **Bogan Communications**, a small company in New Jersey that provides audio systems. She makes \$59,000 a year but only nets \$44,000. What happened to the other \$15,000? Well, \$2,376 goes for Sally's share of the medical and dental insurance that Bogan provides, \$126 for state unemployment insurance, \$149 for disability insurance, and \$856 for Medicare. New Jersey takes \$1,893 in income taxes, and the federal government gets \$3,661 for Social Security and another \$6,250 for income tax withholding. All of this adds up to some 22% of Sally's gross pay going to Washington or Trenton.

Employing Sally costs Bogan plenty too. Bogan has to write checks for \$74,000 so Sally can receive her \$59,000 in base pay. Health insurance is the biggest cost: While Sally pays nearly \$2,400 for coverage, Bogan pays the rest—\$9,561. Then, the federal and state governments take \$56 for federal unemployment coverage, \$149 for disability insurance, \$300 for workers' comp, and \$505 for state unemployment insurance. Finally, the government requires Bogan to pay \$856 for Sally's Medicare and \$3,661 for her Social Security.

When you add it all up, it costs \$74,000 to put \$44,000 in Sally's pocket and to give her \$12,000 in benefits.

Source: Michael P. Fleischer, "Why I'm Not Hiring," *Wall Street Journal* (August 9, 2010), p. A17.

**?** How are the Social Security and Medicare taxes computed for Sally's salary? (See page 549.)

| Year To Date          |          |
|-----------------------|----------|
| Total Gross Pay TD    | 12824.50 |
| Gross for Tax TD      | 12824.50 |
| Tax paid TD           | 2880.00  |
| Earnings For NI TD    | 87.00    |
| National Insurance TD |          |
| Pension TD (Inc AVC)  |          |
| <b>Net P</b>          |          |

## Do it!

In January, the payroll supervisor determines that gross earnings for Halo Company are \$70,000. All earnings are subject to 8% FICA taxes, 5.4% state unemployment taxes, and 0.8% federal unemployment taxes. Halo asks you to record the employer's payroll taxes.

## Employer's Payroll Taxes

**action plan**

- ✓ Compute the employer's payroll taxes on the period's gross earnings.
- ✓ Identify the expense account(s) to be debited.
- ✓ Identify the liability account(s) to be credited.

**Solution**

The entry to record the employer's payroll taxes is:

|  |       |       |
|--|-------|-------|
| Payroll Tax Expense  | 9,940 |       |
| FICA Taxes Payable ( $\$70,000 \times 8\%$ )                   |       | 5,600 |
| Federal Unemployment Taxes Payable ( $\$70,000 \times 0.8\%$ ) |       | 560   |
| State Unemployment Taxes Payable ( $\$70,000 \times 5.4\%$ )   |       | 3,780 |
| (To record employer's payroll taxes on January payroll)        |       |       |

Related exercise material: BE11-9, E11-12, E11-14, and **Do it!** 11-4.

## Filing and Remitting Payroll Taxes

Preparation of payroll tax returns is the responsibility of the payroll department. The treasurer's department makes the tax payment. Much of the information for the returns is obtained from employee earnings records.

For purposes of reporting and remitting to the IRS, the company combines the FICA taxes and federal income taxes that it withheld. **Companies must report the taxes quarterly**, no later than one month following the close of each quarter. The remitting requirements depend on the amount of taxes withheld and the length of the pay period. Companies remit funds through deposits in either a Federal Reserve bank or an authorized commercial bank.

Companies generally file and remit federal unemployment taxes **annually** on or before January 31 of the subsequent year. Earlier payments are required when the tax exceeds a specified amount. Companies usually must file and pay state unemployment taxes by the **end of the month following each quarter**. When payroll taxes are paid, companies debit payroll liability accounts, and credit Cash.

### ANATOMY OF A FRAUD

Art was a custodial supervisor for a large school district. The district was supposed to employ between 35 and 40 regular custodians, as well as 3 or 4 substitute custodians to fill in when regular custodians were missing. Instead, in addition to the regular custodians, Art "hired" 77 substitutes. In fact, almost none of these people worked for the district. Instead, Art submitted time cards for these people, collected their checks at the district office, and personally distributed the checks to the "employees." If a substitute's check was for \$1,200, that person would cash the check, keep \$200, and pay Art \$1,000.

Total take: \$150,000

#### THE MISSING CONTROLS

**Human Resource Controls.** Thorough background checks should be performed. No employees should begin work until they have been approved by the Board of Education and entered into the payroll system. No employees should be entered into the payroll system until they have been approved by a supervisor. All paychecks should be distributed directly to employees at the official school locations by designated employees.

**Independent internal verification.** Budgets should be reviewed monthly to identify situations where actual costs significantly exceed budgeted amounts.

Source: Adapted from Wells, *Fraud Casebook* (2007), pp. 164–171.

Employers also must provide each employee with a **Wage and Tax Statement (Form W-2)** by January 31 following the end of a calendar year. This statement shows gross earnings, FICA taxes withheld, and income taxes withheld for the year. The required W-2 form for Michael Jordan, using assumed annual data, is shown in Illustration 11-16. The employer must send a copy of each employee's Wage and Tax Statement (Form W-2) to the Social Security Administration. This agency subsequently furnishes the Internal Revenue Service with the income data required.

### Internal Control for Payroll

Chapter 8 introduced internal control. As applied to payrolls, the objectives of internal control are (1) to safeguard company assets against unauthorized payments of payrolls, and (2) to ensure the accuracy and reliability of the accounting records pertaining to payrolls.

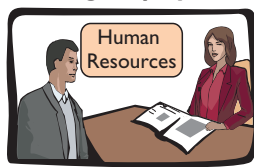

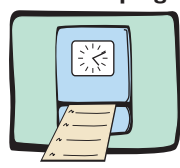

Irregularities often result if internal control is lax. Frauds involving payroll include overstating hours, using unauthorized pay rates, adding fictitious employees to the payroll, continuing terminated employees on the payroll, and distributing duplicate payroll checks. Moreover, inaccurate records will result in incorrect paychecks, financial statements, and payroll tax returns.

Payroll activities involve four functions: hiring employees, timekeeping, preparing the payroll, and paying the payroll. For effective internal control, companies should assign these four functions to different departments or individuals. Illustration 11-17 (page 530) highlights these functions and illustrates their internal control features.

**Study Objective [8]**

Discuss the objectives of internal control for payroll.

|   |   |   |  |
|---|---|---|--|
| <p><b>Payroll Function</b></p> <p><b>Hiring Employees</b></p>  | <p><b>Internal control feature:</b><br/>Human Resources department documents and authorizes employment.</p> <p><b>Fraud prevented:</b><br/>Fictitious employees are not added to payroll.</p> | <p><b>Payroll Function</b></p> <p><b>Preparing the Payroll</b></p>  | <p><b>Internal control feature:</b><br/>Two (or more) employees verify payroll amounts; supervisor approves.</p> <p><b>Fraud prevented:</b><br/>Payroll calculations are accurate and relevant.</p>          |
| <p><b>Timekeeping</b></p>                                      | <p><b>Internal control feature:</b><br/>Supervisors monitor hours worked through time cards and time reports.</p> <p><b>Fraud prevented:</b><br/>Employee works appropriate hours.</p>        | <p><b>Paying the Payroll</b></p>                                    | <p><b>Internal control feature:</b><br/>Treasurer signs and distributes prenumbered checks.</p> <p><b>Fraud prevented:</b><br/>Checks are not lost from theft; endorsed check provides proof of payment.</p> |

Internal control for payroll

**COMPREHENSIVE**

**Do it!**

Indiana Jones Company had the following selected transactions.

- Feb. 1 Signs a \$50,000, 6-month, 9%-interest-bearing note payable to CitiBank and receives \$50,000 in cash.
- 10 Cash register sales total \$43,200, which includes an 8% sales tax.
- 28 The payroll for the month consists of salaries and wages of \$50,000. All wages are subject to 8% FICA taxes. A total of \$8,900 federal income taxes are withheld. The salaries are paid on March 1.
- 28 The company develops the following adjustment data.
  - 1. Interest expense of \$375 has been incurred on the note.
  - 2. Employer payroll taxes include 8% FICA taxes, a 5.4% state unemployment tax, and a 0.8% federal unemployment tax.
  - 3. Some sales were made under warranty. Of the units sold under warranty, 350 are expected to become defective. Repair costs are estimated to be \$40 per unit.

**Instructions**

- (a) Journalize the February transactions.
- (b) Journalize the adjusting entries at February 28.

**action plan**

- ✓ To determine sales, divide the cash register total by 100% plus the sales tax percentage.
- ✓ Base payroll taxes on gross earnings.
- ✓ Expense warranty costs in the period in which the sale occurs.

**Solution to Comprehensive Do it!**

|            |  |        |        |

## Summary of Study Objectives

**[1] Explain a current liability, and identify the major types of current liabilities.** A current liability is a debt that a company can reasonably expect to pay (1) from existing current assets or through the creation of other current liabilities, and (2) within one year or the operating cycle, whichever is longer. The major types of current liabilities are notes payable, accounts payable, sales taxes payable, unearned revenues, and accrued liabilities such as taxes, salaries and wages, and interest payable.

**[2] Describe the accounting for notes payable.** When a promissory note is interest-bearing, the amount of assets received upon the issuance of the note is generally equal to the face value of the note. Interest expense accrues over the life of the note. At maturity, the amount paid equals the face value of the note plus accrued interest.

**[3] Explain the accounting for other current liabilities.** Companies record sales taxes payable at the time the related sales occur. The company serves as a collection agent for the taxing authority. Sales taxes are not an expense to the company. Companies initially record unearned revenues in an Unearned Revenue account. As the company earns the revenue, a transfer from unearned revenue to earned revenue occurs. Companies report the current maturities of long-term debt as a current liability in the balance sheet.

**[4] Explain the financial statement presentation and analysis of current liabilities.** Companies should report the nature and amount of each current liability in the balance sheet or in schedules in the notes accompanying the statements. The liquidity of a company may be analyzed by computing working capital and the current ratio.

**[5] Describe the accounting and disclosure requirements for contingent liabilities.** If the contingency is *probable* (likely to occur) and the amount is reasonably estimable, the company should record the liability in the accounts. If the contingency is only *reasonably possible* (it could happen), then it should be disclosed only in the notes to the financial statements. If the possibility that the contingency will happen is *remote* (unlikely to occur), it need not be recorded or disclosed.

**[6] Compute and record the payroll for a pay period.** The computation of the payroll involves gross earnings, payroll deductions, and net pay. In recording the payroll, companies debit salaries (or wages) expense for gross earnings, credit individual tax and other liability accounts for payroll deductions, and credit salaries (wages) payable for net pay. When the payroll is paid, companies debit Salaries and Wages Payable, and credit Cash.

**[7] Describe and record employer payroll taxes.** Employer payroll taxes consist of FICA, federal unemployment taxes, and state unemployment taxes. The taxes are usually accrued at the time the company records the payroll, by debiting Payroll Tax Expense and crediting separate liability accounts for each type of tax.

**[8] Discuss the objectives of internal control for payroll.** The objectives of internal control for payroll are (1) to safeguard company assets against unauthorized payments of payrolls, and (2) to ensure the accuracy of the accounting records pertaining to payrolls.

## Glossary

**Bonus** Compensation to management and other personnel, based on factors such as increased sales or the amount of net income. (p. 519).

**Contingent liability** A potential liability that may become an actual liability in the future. (p. 515).

**Current ratio** A measure of a company's liquidity; computed as current assets divided by current liabilities. (p. 515).

**Employee earnings record** A cumulative record of each employee's gross earnings, deductions, and net pay during the year. (p. 522).

**Federal unemployment taxes** Taxes imposed on the employer by the federal government that provide benefits for a limited time period to employees who lose their jobs through no fault of their own. (p. 526).

**Fees** Payments made for the services of professionals. (p. 519).

**FICA taxes** Taxes designed to provide workers with supplemental retirement, employment disability, and medical benefits. (p. 520).

**Full-disclosure principle** Requires that companies disclose all circumstances and events that would make a difference to financial statement users. (p. 517).

**Gross earnings** Total compensation earned by an employee. (p. 519).

**Net pay** Gross earnings less payroll deductions. (p. 522).

**Notes payable** Obligations in the form of written notes. (p. 510).

**Payroll deductions** Deductions from gross earnings to determine the amount of a paycheck. (p. 519).

**Payroll register** A payroll record that accumulates the gross earnings, deductions, and net pay by employee for each pay period. (p. 522).

**Salaries** Employee pay based on a specified amount rather than an hourly rate. (p. 518).

**Statement of earnings** A document attached to a paycheck that indicates the employee's gross earnings, payroll deductions, and net pay. (p. 524).

**State unemployment taxes** Taxes imposed on the employer by states that provide benefits to employees who lose their jobs. (p. 526).

**Wage and Tax Statement (Form W-2)** A form showing gross earnings, FICA taxes withheld, and income taxes withheld, prepared annually by an employer for each employee. (p. 528).

**Wages** Amounts paid to employees based on a rate per hour or on a piecework basis. (p. 518).

**Working capital** A measure of a company's liquidity; computed as current assets minus current liabilities. (p. 515).

## APPENDIX 11A

### Additional Fringe Benefits

#### Study Objective [9]

Identify additional fringe benefits associated with employee compensation.

In addition to the three payroll-tax fringe benefits, employers incur other substantial fringe benefit costs. Two of the most important are paid absences and post-retirement benefits.

#### *Paid Absences*

Employees often are given rights to receive compensation for absences when they meet certain conditions of employment. The compensation may be for paid vacations, sick pay benefits, and paid holidays. When the payment for such absences is **probable** and the amount can be **reasonably estimated**, the company should accrue a liability for paid future absences. When the amount cannot be reasonably estimated, the company should instead disclose the potential liability. Ordinarily, vacation pay is the only paid absence that is accrued. The other types of paid absences are only disclosed.

To illustrate, assume that Academy Company employees are entitled to one day's vacation for each month worked. If 30 employees earn an average of \$110 per day in a given month, the accrual for vacation benefits in one month is \$3,300. Academy records the liability at the end of the month by the following adjusting entry.

|   |   |            |   |    |
|---|---|------------|---|----|
| A | = | L          | + | OE |
|   |   | -3,300 Exp |   |    |
|   |   | +3,300     |   |    |

Cash Flows

no effect

|         |  |                                       |  |       |  |       |
|---------|--|---------------------------------------|--|-------|--|-------|
| Jan. 31 |  | Vacation Benefits Expense             |  | 3,300 |  | 3,300 |
|         |  | Vacation Benefits Payable             |  |       |  |       |
|         |  | (To accrue vacation benefits expense) |  |       |  |       |

This accrual is required by the expense recognition principle. Academy would report Vacation Benefits Expense as an operating expense in the income statement, and Vacation Benefits Payable as a current liability in the balance sheet.

Later, when Academy pays vacation benefits, it debits Vacation Benefits Payable and credits Cash. For example, if employees take 10 days of vacation in July, the entry is:

|         |   |       |       |
|---------|---|-------|-------|
| July 31 | Vacation Benefits Payable<br>Cash<br>(To record payment of vacation benefits) | 1,100 | 1,100 |
|---------|---|-------|-------|

The magnitude of unpaid absences has gained employers' attention. Consider the case of an assistant superintendent of schools who worked for 20 years and rarely took a vacation or sick day. A month or so before she retired, the school district discovered that she was due nearly \$30,000 in accrued benefits. Yet the school district had never accrued the liability.

|   |   |        |   |    |   |
|---|---|--------|---|----|---|
| A | = | L      | + | OE |   |
|   |   | -1,100 |   |    | -1,100  |
|   |   |        |   |    | Cash Flows<br>-1,100  |
|   |   |        |   |    |  |

## Post-Retirement Benefits

**Post-retirement benefits** are benefits that employers provide to retired employees for (1) pensions and (2) health care and life insurance. Companies account for both types of post-retirement benefits on the accrual basis. The cost of post-retirement benefits is getting steep. For example, states and localities must deal with a \$1 trillion deficit in public employees' retirement benefit funds. The shortfall amounts to more than \$8,800 for every household in the nation.

The average American has debt of approximately \$10,000 (not counting the mortgage on their home) and has little in the way of savings. What will happen at retirement for these people? The picture is not pretty—people are living longer, the future of Social Security is unclear, and companies are cutting back on post-retirement benefits. This situation may lead to one of the great social and moral dilemmas this country faces in the next 40 years. The more you know about post-retirement benefits, the better you will understand the issues involved in this dilemma.

### PENSIONS

A **pension plan** is an agreement whereby employers provide benefits (payments) to employees after they retire. The most popular type of pension plan used is the 401(k) plan. A 401(k) plan works as follows: As an employee, you can contribute up to a certain percentage of your pay into a 401(k) plan, and your employer will match a percentage of your contribution. These contributions are then generally invested in stocks and bonds through mutual funds. These funds will grow without being taxed and can be withdrawn beginning at age 59-1/2. If you must access the funds earlier, you may be able to do so, but a penalty usually occurs along with a payment of tax on the proceeds. Any time you have the opportunity to be involved in a 401(k) plan, you should avail yourself of this benefit!

The accounting for a 401(k) plan by the company is straightforward. When the company makes a contribution on behalf of the employee, it debits Pension Expense and credits Cash for the amount contributed. For example, Mark Hatfield, an employee of Veri Company, contributes \$11,000 to his 401(k) plan. Veri Company matches this contribution, and records the expense with the following entry.

|  |        |        |
|--|--------|--------|
| Pension Expense<br>Cash<br>(To record contribution to 401(k) plan) | 11,000 | 11,000 |
|--|--------|--------|

If the pension expense is not funded during the year, the company credits Pension Liability.

A 401(k) plan is often referred to as a **defined-contribution plan**. In a defined-contribution plan, the plan defines the contribution that an employer will make but not the benefit that the employee will receive at retirement.

The other type of pension plan is a **defined-benefit plan**. In a defined-benefit plan, the employer agrees to pay a defined amount to retirees, based on employees meeting certain eligibility standards. The amount of the benefit is usually based on years of service and average salary over a period of years. Employers are at risk with defined-benefit plans because they must contribute enough to meet the cost of benefits that the plan defines. Many large companies have defined-benefit plans. The accounting for these plans is complex. Many companies are starting to utilize 401(k) plans more extensively instead.

### POST-RETIREMENT HEALTH-CARE AND LIFE INSURANCE BENEFITS

Providing medical and related health-care benefits for retirees was at one time an inexpensive and highly effective way of generating employee goodwill. This practice has now turned into one of corporate America's most worrisome financial problems. Runaway medical costs, early retirement, and increased longevity are sending the liability for retiree health plans through the roof.

Companies estimate and expense post-retirement costs during the working years of the employee because the company benefits from the employee's services during this period. However, the company rarely sets up funds to meet the cost of the future benefits. It follows a pay-as-you-go basis for these costs. The major reason is that the company does not receive a tax deduction until it actually pays the medical bill.

## Summary of Study Objective for Appendix 11A

**[9] Identify additional fringe benefits associated with employee compensation.** Additional fringe benefits associated with wages are paid absences (paid vacations,

sick pay benefits, and paid holidays), and post-retirement benefits (pensions, health care, and life insurance).

## Glossary for Appendix 11A

**Pension plan** An agreement whereby an employer provides benefits to employees after they retire. (p. 533).

**Post-retirement benefits** Payments by employers to retired employees for health care, life insurance, and pensions. (p. 533).

Self-Test, Brief Exercises, Exercises Problem Set A, and many more components are available for practice in *WileyPLUS*

\***Note:** All **asterisked** Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## Self-Test Questions

Answers are on page 549.

- (SO 1) 1. The time period for classifying a liability as current is one year or the operating cycle, whichever is:
- a. longer.
  - b. shorter.
  - c. probable.
  - d. possible.
2. To be classified as a current liability, a debt must be expected to be paid:
- a. out of existing current assets.
  - b. by creating other current liabilities.
  - c. within 2 years.
  - d. Both (a) and (b).
- (SO 1)

- (SO 2) 3. Maggie Sharrer Company borrows \$88,500 on September 1, 2012, from Sandwich State Bank by signing an \$88,500, 12%, one-year note. What is the accrued interest at December 31, 2012?  
 a. \$2,655. c. \$4,425.  
 b. \$3,540. d. \$10,620.
- (SO 2) 4. RS Company borrowed \$70,000 on December 1 on a 6-month, 6% note. At December 31:  
 a. neither the note payable nor the interest payable is a current liability.  
 b. the note payable is a current liability, but the interest payable is not.  
 c. the interest payable is a current liability but the note payable is not.  
 d. both the note payable and the interest payable are current liabilities.
- (SO 3) 5. Becky Sherrick Company has total proceeds from sales of \$4,515. If the proceeds include sales taxes of 5%, the amount to be credited to Sales Revenue is:  
 a. \$4,000. c. \$4,289.25.  
 b. \$4,300. d. No correct answer given.
- (SO 3) 6. Sensible Insurance Company collected a premium of \$18,000 for a 1-year insurance policy on April 1. What amount should Sensible report as a current liability for Unearned Insurance Premiums at December 31?  
 a. \$0. c. \$13,500.  
 b. \$4,500. d. \$18,000.
- (SO 4) 7. Working capital is calculated as:  
 a. current assets minus current liabilities.  
 b. total assets minus total liabilities.  
 c. long-term liabilities minus current liabilities.  
 d. Both (b) and (c).
- (SO 4) 8. The current ratio is computed as:  
 a. total assets divided by total liabilities.  
 b. total assets divided by current liabilities.  
 c. current assets divided by total liabilities.  
 d. current assets divided by current liabilities.
- (SO 5) 9. A contingent liability should be recorded in the accounts when:  
 a. it is probable the contingency will happen, but the amount cannot be reasonably estimated.  
 b. it is reasonably possible the contingency will happen, and the amount can be reasonably estimated.  
 c. it is probable the contingency will happen, and the amount can be reasonably estimated.  
 d. it is reasonably possible the contingency will happen, but the amount cannot be reasonably estimated.
10. At December 31, Hanes Company prepares an adjusting entry for a product warranty contract. Which of the following accounts is/are included in the entry?  
 a. Miscellaneous Expense.  
 b. Warranty Liability.  
 c. Repair Parts.  
 d. Both (a) and (b).
11. Andy Manion earns \$14 per hour for a 40-hour week and \$21 per hour for any overtime work. If Manion works 45 hours in a week, gross earnings are:  
 a. \$560. c. \$650.  
 b. \$630. d. \$665.
12. When recording payroll:  
 a. gross earnings are recorded as salaries and wages payable.  
 b. net pay is recorded as salaries and wages expense.  
 c. payroll deductions are recorded as liabilities.  
 d. More than one of the above.
13. Employer payroll taxes do *not* include:  
 a. federal unemployment taxes.  
 b. state unemployment taxes.  
 c. federal income taxes.  
 d. FICA taxes.
14. FICA Taxes Payable was credited for \$7,500 in the entry when Antonio Company recorded payroll. When Antonio Company records employer's payroll taxes, FICA Taxes Payable should be credited for:  
 a. \$0. c. \$15,000.  
 b. \$7,500. d. Some other amount.
15. The department that should pay the payroll is the:  
 a. timekeeping department.  
 b. human resources department.  
 c. payroll department.  
 d. treasurer's department.
- \*16. Which of the following is *not* an additional fringe benefit?  
 a. Post-retirement pensions. c. Paid vacations.  
 b. Paid absences. d. Salaries.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), for additional Self-Test Questions.

## Questions

- Jill Loomis believes a current liability is a debt that can be expected to be paid in one year. Is Jill correct? Explain.
- Frederickson Company obtains \$40,000 in cash by signing a 9%, 6-month, \$40,000 note payable to First Bank on July 1. Frederickson's fiscal year ends on September 30. What information should be reported for the note payable in the annual financial statements?
- (a) Your roommate says, "Sales taxes are reported as an expense in the income statement." Do you agree? Explain.  
 (b) Planet Hollywood has cash proceeds from sales of \$7,400. This amount includes \$400 of sales taxes. Give the entry to record the proceeds.
- Baylor University sold 10,000 season football tickets at \$80 each for its five-game home schedule. What entries should be made (a) when the tickets were sold, and (b) after each game?
- What is liquidity? What are two measures of liquidity?
- What is a contingent liability? Give an example of a contingent liability that is usually recorded in the accounts.

7. Under what circumstances is a contingent liability disclosed only in the notes to the financial statements? Under what circumstances is a contingent liability not recorded in the accounts nor disclosed in the notes to the financial statements?
8. What is the difference between gross pay and net pay? Which amount should a company record as wages and salaries expense?
9. Which payroll tax is levied on both employers and employees?
10. Are the federal and state income taxes withheld from employee paychecks a payroll tax expense for the employer? Explain your answer.
11. What do the following acronyms stand for: FICA, FUTA, and SUTA?
12. What information is shown in a W-2 statement?
13. Distinguish between the two types of payroll deductions and give examples of each.
14. What are the primary uses of the employee earnings record?
15. (a) Identify the three types of employer payroll taxes. (b) How are tax liability accounts and payroll tax expense accounts classified in the financial statements?
16. You are a newly hired accountant with Batista Company. On your first day, the controller asks you to identify the main internal control objectives related to payroll accounting. How would you respond?
17. What are the four functions associated with payroll activities?
- \*18. Identify two additional types of fringe benefits associated with employees' compensation.
- \*19. Often during job interviews, the candidate asks the potential employer about the firm's paid absences policy. What are paid absences? How are they accounted for?
- \*20. What are two types of post-retirement benefits?
- \*21. Explain how a 401(k) plan works.
- \*22. What is the difference between a defined-contribution pension plan and a defined-benefit pension plan?

## Brief Exercises

*Identify whether obligations are current liabilities.*

(SO 1)

*Prepare entries for an interest-bearing note payable.*

(SO 2)

*Compute and record sales taxes payable.*

(SO 3)

*Prepare entries for unearned revenues.*

(SO 3)

*Analyze liquidity.*

(SO 4)

*Prepare adjusting entry for warranty costs.*

(SO 5)

*Compute gross earnings and net pay.*

(SO 6)

*Record a payroll and the payment of wages.*

(SO 6)

**BE11-1** Sanford Company has the following obligations at December 31: (a) a note payable for \$100,000 due in 2 years, (b) a 10-year mortgage payable of \$300,000 payable in ten \$30,000 annual payments, (c) interest payable of \$15,000 on the mortgage, and (d) accounts payable of \$60,000. For each obligation, indicate whether it should be classified as a current liability. (Assume an operating cycle of less than one year.)

**BE11-2** Douglas Company borrows \$80,000 on July 1 from the bank by signing a \$80,000, 10%, one-year note payable.

- (a) Prepare the journal entry to record the proceeds of the note.
- (b) Prepare the journal entry to record accrued interest at December 31, assuming adjusting entries are made only at the end of the year.

**BE11-3** Savango Auto Supply does not segregate sales and sales taxes at the time of sale. The register total for March 16 is \$15,540. All sales are subject to a 5% sales tax. Compute sales taxes payable, and make the entry to record sales taxes payable and sales.

**BE11-4** Frost University sells 4,000 season basketball tickets at \$180 each for its 12-game home schedule. Give the entry to record (a) the sale of the season tickets and (b) the revenue earned by playing the first home game.

**BE11-5** Yahoo! Inc.'s 2009 financial statements contain the following selected data (in thousands).

|                |              |                     |             |
|----------------|--------------|---------------------|-------------|
| Current assets | \$ 4,594,772 | Current liabilities | \$1,717,728 |
| Total assets   | 14,936,030   | Total liabilities   | 2,417,394   |

Compute (a) working capital and (b) current ratio.

**BE11-6** On December 1, Beaver Company introduces a new product that includes a one-year warranty on parts. In December, 1,000 units are sold. Management believes that 5% of the units will be defective and that the average warranty costs will be \$80 per unit. Prepare the adjusting entry at December 31 to accrue the estimated warranty cost.

**BE11-7** Dawn French's regular hourly wage rate is \$16, and she receives an hourly rate of \$24 for work in excess of 40 hours. During a January pay period, Dawn works 47 hours. Dawn's federal income tax withholding is \$95, and she has no voluntary deductions. Compute Dawn French's gross earnings and net pay for the pay period.

**BE11-8** Data for Dawn French are presented in BE11-7. Prepare the journal entries to record (a) Dawn's pay for the period and (b) the payment of Dawn's wages. Use January 15 for the end of the pay period and the payment date.

**BE11-9** In January, gross earnings in Gyro Company totaled \$70,000. All earnings are subject to 8% FICA taxes, 5.4% state unemployment taxes, and 0.8% federal unemployment taxes. Prepare the entry to record January payroll tax expense.

*Record employer payroll taxes.*  
(SO 7)

**BE11-10** Vardan Company has the following payroll procedures.

- (a) Supervisor approves overtime work.
- (b) The human resources department prepares hiring authorization forms for new hires.
- (c) A second payroll department employee verifies payroll calculations.
- (d) The treasurer's department pays employees.

*Identify payroll functions.*  
(SO 8)

Identify the payroll function to which each procedure pertains.

**\*BE11-11** At Wolf Company, employees are entitled to one day's vacation for each month worked. In January, 80 employees worked the full month. Record the vacation pay liability for January assuming the average daily pay for each employee is \$120.

*Record estimated vacation benefits.*  
(SO 9)

## Do it! Review

**Do it! 11-1** You and several classmates are studying for the next accounting examination. They ask you to answer the following questions:

*Answer questions about current liabilities.*

1. If cash is borrowed on a \$70,000, 9-month, 12% note on August 1, how much interest expense would be incurred by December 31?
2. The cash register total including sales taxes is \$42,000, and the sales tax rate is 5%. What is the sales taxes payable?
3. If \$42,000 is collected in advance on November 1 for 6-month magazine subscriptions, what amount of subscription revenue is earned by December 31?

(SO 2, 3)

**Do it! 11-2** Goblin Company, has the following account balances at December 31, 2012.

|   |           |
|---|-----------|
| Notes payable (\$60,000 due after 12/31/13) | \$100,000 |
| Unearned service revenue                    | 70,000    |
| Other long-term debt (\$90,000 due in 2013) | 250,000   |
| Salaries and wages payable                  | 32,000    |
| Accounts payable                            | 63,000    |

*Prepare current liabilities section and compute liquidity measures.*

(SO 4, 5)

In addition, Goblin is involved in a lawsuit. Legal counsel feels it is probable Goblin will pay damages of \$85,000 in 2013.

- (a) Prepare the current liability section of Goblin's 12/31/12 balance sheet.
- (b) Goblin's current assets are \$570,000. Compute Goblin's working capital and current ratio.

**Do it! 11-3** In January, gross earnings in Centaur Company were \$60,000. All earnings are subject to 8% FICA taxes. Federal income tax withheld was \$14,000, and state income tax withheld was \$1,600. (a) Calculate net pay for January, and (b) record the payroll.

*Calculate net pay and record payroll.*

(SO 6)

**Do it! 11-4** In January, the payroll supervisor determines that gross earnings for Maugrim Company are \$110,000. All earnings are subject to 8% FICA taxes, 5.4% state unemployment taxes, and 0.8% federal unemployment taxes. Bond asks you to record the employer's payroll taxes.

*Record employer's payroll taxes.*

(SO 7)

## Exercises

**E11-1** C.S. Lewis Company had the following transactions involving notes payable.

*Prepare entries for interest-bearing notes.*

|               |   |
|---------------|---|
| July 1, 2012  | Borrows \$50,000 from Fourth National Bank by signing a 9-month, 12% note.  |
| Nov. 1, 2012  | Borrows \$60,000 from Livingston State Bank by signing a 3-month, 10% note. |
| Dec. 31, 2012 | Prepares adjusting entries.   |
| Feb. 1, 2013  | Pays principal and interest to Livingston State Bank.                       |
| Apr. 1, 2013  | Pays principal and interest to Fourth National Bank.                        |

(SO 2)

### Instructions

Prepare journal entries for each of the transactions.

*Prepare entries for interest-bearing notes.*

**E11-2** On June 1, Caspian Company borrows \$90,000 from First Bank on a 6-month, \$90,000, 12% note.

(SO 2)

**Instructions**

- (a) Prepare the entry on June 1.
- (b) Prepare the adjusting entry on June 30.
- (c) Prepare the entry at maturity (December 1), assuming monthly adjusting entries have been made through November 30.
- (d) What was the total financing cost (interest expense)?

*Journalize sales and related taxes.*

(SO 3)

**E11-3** In providing accounting services to small businesses, you encounter the following situations pertaining to cash sales.

1. Miraz Company rings up sales and sales taxes separately on its cash register. On April 10, the register totals are sales \$30,000 and sales taxes \$1,500.
2. Trumpkin Company does not segregate sales and sales taxes. Its register total for April 15 is \$23,540, which includes a 7% sales tax.

**Instructions**

Prepare the entry to record the sales transactions and related taxes for each client.

*Journalize unearned subscription revenue.*

(SO 3)

**E11-4** Sergio Company publishes a monthly sports magazine, *Fishing Preview*. Subscriptions to the magazine cost \$20 per year. During November 2012, Sergio sells 12,000 subscriptions beginning with the December issue. Sergio prepares financial statements quarterly and recognizes subscription revenue earned at the end of the quarter. The company uses the accounts Unearned Subscription Revenue and Subscription Revenue.

**Instructions**

- (a) Prepare the entry in November for the receipt of the subscriptions.
- (b) Prepare the adjusting entry at December 31, 2012, to record sales revenue earned in December 2012.
- (c) Prepare the adjusting entry at March 31, 2013, to record sales revenue earned in the first quarter of 2013.

*Record estimated liability and expense for warranties.*

(SO 5)

**E11-5** Castellitto Company sells automatic can openers under a 75-day warranty for defective merchandise. Based on past experience, Castellitto estimates that 3% of the units sold will become defective during the warranty period. Management estimates that the average cost of replacing or repairing a defective unit is \$20. The units sold and units defective that occurred during the last 2 months of 2012 are as follows.

| <u>Month</u> | <u>Units Sold</u> | <u>Units Defective Prior to December 31</u> |
|--------------|-------------------|---|
| November     | 30,000            | 600   |
| December     | 32,000            | 400   |

**Instructions**

- (a) Determine the estimated warranty liability at December 31 for the units sold in November and December.
- (b) Prepare the journal entries to record the estimated liability for warranties and the costs incurred in honoring 1,000 warranty claims. (Assume actual costs of \$20,000.)
- (c) Give the entry to record the honoring of 500 warranty contracts in January at an average cost of \$20.

*Record and disclose contingent liabilities.*

(SO 5)

**E11-6** Nikabrik Co. is involved in a lawsuit as a result of an accident that took place September 5, 2012. The lawsuit was filed on November 1, 2012, and claims damages of \$1,000,000.

**Instructions**

- (a) At December 31, 2012, Nikabrik's attorneys feel it is remote that Nikabrik will lose the lawsuit. How should the company account for the effects of the lawsuit?
- (b) Assume instead that at December 31, 2012, Nikabrik's attorneys feel it is probable that Nikabrik will lose the lawsuit and be required to pay \$1,000,000. How should the company account for this lawsuit?
- (c) Assume instead that at December 31, 2012, Nikabrik's attorneys feel it is reasonably possible that Nikabrik could lose the lawsuit and be required to pay \$1,000,000. How should the company account for this lawsuit?

*Prepare the current liability section of the balance sheet.*

(SO 1, 2, 3, 4, 5)

**E11-7** Warwick Online Company has the following liability accounts after posting adjusting entries: Accounts Payable \$63,000, Unearned Ticket Revenue \$24,000, Estimated Warranty Liability \$18,000, Interest Payable \$8,000, Mortgage Payable \$120,000, Notes Payable \$80,000, and Sales Taxes Payable \$10,000. Assume the company's operating cycle is less than 1 year,

ticket revenue will be earned within 1 year, warranty costs are expected to be incurred within 1 year, and the notes mature in 3 years.

**Instructions**

- (a) Prepare the current liabilities section of the balance sheet, assuming \$30,000 of the mortgage is payable next year.
- (b) Comment on Warwick Online Company's liquidity, assuming total current assets are \$300,000.

**E11-8** Kroger Co.'s 2009 financial statements contained the following data (in millions).

|                     |          |                     |       |
|---------------------|----------|---------------------|-------|
| Current assets      | \$ 7,450 | Accounts receivable | \$909 |
| Total assets        | 23,093   | Interest expense    | 502   |
| Current liabilities | 7,714    | Income tax expense  | 532   |
| Total liabilities   | 18,187   | Net income          | 70    |
| Cash                | 424      |                     |       |

Calculate liquidity ratios.  
(SO 4)

**Instructions**

Compute these values:

- (a) Working capital.
- (b) Current ratio.

**E11-9** The following financial data were reported by 3M Company for 2008 and 2009 (dollars in millions).

Calculate current ratio and working capital before and after paying accounts payable.  
(SO 4)

| 3M Company<br>Balance Sheets (partial) |          |         |
|--|----------|---------|
|  | 2009     | 2008    |
| Current assets                         |          |         |
| Cash and cash equivalents              | \$ 3,040 | \$1,849 |
| Accounts receivable, net               | 3,250    | 3,195   |
| Inventories                            | 2,639    | 3,013   |
| Other current assets                   | 1,866    | 1,541   |
| Total current assets                   | \$10,795 | \$9,598 |
| Current liabilities                    | \$ 4,897 | \$5,839 |

**Instructions**

- (a) Calculate the current ratio and working capital for 3M for 2008 and 2009.
- (b) Suppose that at the end of 2009, 3M management used \$200 million cash to pay off \$200 million of accounts payable. How would its current ratio and working capital have changed?

**E11-10** Pedja Belic's regular hourly wage rate is \$15, and she receives a wage of 1½ times the regular hourly rate for work in excess of 40 hours. During a March weekly pay period, Pedja worked 42 hours. Her gross earnings prior to the current week were \$6,000. Pedja is married and claims three withholding allowances. Her only voluntary deduction is for group hospitalization insurance at \$25 per week.

Compute net pay and record pay for one employee.  
(SO 6)

**Instructions**

- (a) Compute the following amounts for Pedja's wages for the current week.
  - (1) Gross earnings.
  - (2) FICA taxes. (Assume an 8% rate on maximum of \$90,000.)
  - (3) Federal income taxes withheld. (Use the withholding table in the text, page 521.)
  - (4) State income taxes withheld. (Assume a 2.0% rate.)
  - (5) Net pay.
- (b) Record Pedja's pay.

**E11-11** Employee earnings records for Cornelius Company reveal the following gross earnings for four employees through the pay period of December 15.

Compute maximum FICA deductions.  
(SO 6)

|             |          |             |           |
|-------------|----------|-------------|-----------|
| J. Glozelle | \$93,500 | L. Schooler | \$96,100  |
| R. Jen      | \$97,600 | T. Crier    | \$104,000 |

For the pay period ending December 31, each employee's gross earnings is \$4,000. The FICA tax rate is 8% on gross earnings of \$100,000.

**Instructions**

Compute the FICA withholdings that should be made for each employee for the December 31 pay period. (Show computations.)

Prepare payroll register and record payroll and payroll tax expense.

(SO 6, 7)

**E11-12** Alvarez Company has the following data for the weekly payroll ending January 31.

| Employee    | Hours |    |   |   |    |   | Hourly Rate | Federal Income Tax Withholding | Health Insurance |
|-------------|-------|----|---|---|----|---|-------------|--------------------------------|------------------|
|             | M     | T  | W | T | F  | S |             |                                |                  |
| L. Donnon   | 8     | 8  | 9 | 8 | 10 | 3 | \$12        | \$34                           | \$10             |
| L. Gregoire | 8     | 8  | 8 | 8 | 8  | 2 | 13          | 37                             | 25               |
| D. Alcazar  | 9     | 10 | 8 | 8 | 9  | 0 | 15          | 58                             | 25               |

Employees are paid 1½ times the regular hourly rate for all hours worked in excess of 40 hours per week. FICA taxes are 8% on the first \$100,000 of gross earnings. Alvarez Company is subject to 5.4% state unemployment taxes and 0.8% federal unemployment taxes on the first \$7,000 of gross earnings.

**Instructions**

- (a) Prepare the payroll register for the weekly payroll.
- (b) Prepare the journal entries to record the payroll and Alvarez's payroll tax expense.

Compute missing payroll amounts and record payroll.

(SO 6)

**E11-13** Selected data from a February payroll register for Favino Company are presented below. Some amounts are intentionally omitted.

|                      |         |                            |         |
|----------------------|---------|----------------------------|---------|
| Gross earnings:      |         | State income taxes         | \$ (3)  |
| Regular              | \$8,900 | Union dues                 | 100     |
| Overtime             | (1)     | Total deductions           | (4)     |
| Total                | (2)     | Net pay                    | \$7,660 |
| Deductions:          |         | Account debited:           |         |
| FICA taxes           | \$ 800  | Salaries and wages expense | (5)     |
| Federal income taxes | 1,140   |                            |         |

FICA taxes are 8%. State income taxes are 3% of gross earnings.

**Instructions**

- (a) Fill in the missing amounts.
- (b) Journalize the February payroll and the payment of the payroll.

Determine employer's payroll taxes; record payroll tax expense.

(SO 7)

**E11-14** According to a payroll register summary of Pierfrancesco Company, the amount of employees' gross pay in December was \$850,000, of which \$90,000 was not subject to FICA tax and \$750,000 was not subject to state and federal unemployment taxes.

**Instructions**

- (a) Determine the employer's payroll tax expense for the month, using the following rates: FICA 8%, state unemployment 5.4%, federal unemployment 0.8%.
- (b) Prepare the journal entry to record December payroll tax expense.

Prepare adjusting entries for fringe benefits.

(SO 9)

**\*E11-15** Borrachero Company has two fringe benefit plans for its employees:

1. It grants employees 2 days' vacation for each month worked. Ten employees worked the entire month of March at an average daily wage of \$120 per employee.
2. In its pension plan, the company recognizes 10% of gross earnings as a pension expense. Gross earnings in March were \$40,000. No contribution has been made to the pension fund.

**Instructions**

Prepare the adjusting entries at March 31.

Prepare journal entries for fringe benefits.

(SO 9)

**\*E11-16** Glenstorm Corporation has 20 employees who each earn \$120 a day. The following information is available.

1. At December 31, Glenstorm recorded vacation benefits. Each employee earned 5 vacation days during the year.

2. At December 31, Glenstorm recorded pension expense of \$100,000, and made a contribution of \$70,000 to the pension plan.
3. In January, 18 employees used one vacation day each.

**Instructions**

Prepare Glenstorm's journal entries to record these transactions.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

**P11-1A** On January 1, 2012, the ledger of Montoya Company contains the following liability accounts.

|                          |          |
|--------------------------|----------|
| Accounts Payable         | \$52,000 |
| Sales Taxes Payable      | 7,700    |
| Unearned Service Revenue | 16,000   |

*Prepare current liability entries, adjusting entries, and current liabilities section.*

(SO 1, 2, 3, 4, 5)

During January, the following selected transactions occurred.

- Jan. 5 Sold merchandise for cash totaling \$22,680, which includes 8% sales taxes.
- 12 Provided services for customers who had made advance payments of \$10,000. (Credit Service Revenue.)
- 14 Paid state revenue department for sales taxes collected in December 2011 (\$7,700).
- 20 Sold 800 units of a new product on credit at \$50 per unit, plus 8% sales tax. This new product is subject to a 1-year warranty.
- 21 Borrowed \$18,000 from DeKalb Bank on a 3-month, 8%, \$18,000 note.
- 25 Sold merchandise for cash totaling \$12,420, which includes 8% sales taxes.

**Instructions**

- (a) Journalize the January transactions.
- (b) Journalize the adjusting entries at January 31 for (1) the outstanding notes payable, and (2) estimated warranty liability, assuming warranty costs are expected to equal 7% of sales of the new product. (*Hint:* Use one-third of a month for the DeKalb Bank note.)
- (c) Prepare the current liabilities section of the balance sheet at January 31, 2012. Assume no change in accounts payable.

(c) Current liability total  
\$84,640

**P11-2A** The following are selected transactions of Andreu Company. Andreu prepares financial statements quarterly.

- Jan. 2 Purchased merchandise on account from Diego Company, \$30,000, terms 2/10, n/30. (Andreu uses the perpetual inventory system.)
- Feb. 1 Issued a 9%, 2-month, \$30,000 note to Diego in payment of account.
- Mar. 31 Accrued interest for 2 months on Diego note.
- Apr. 1 Paid face value and interest on Diego note.
- July 1 Purchased equipment from Garcia Equipment paying \$11,000 in cash and signing a 10%, 3-month, \$40,000 note.
- Sept. 30 Accrued interest for 3 months on Garcia note.
- Oct. 1 Paid face value and interest on Garcia note.
- Dec. 1 Borrowed \$15,000 from the Isova Bank by issuing a 3-month, 8% note with a face value of \$15,000.
- Dec. 31 Recognized interest expense for 1 month on Isova Bank note.

*Journalize and post note transactions; show balance sheet presentation.*

(SO 2)

**Instructions**

- (a) Prepare journal entries for the listed transactions and events.
- (b) Post to the accounts Notes Payable, Interest Payable, and Interest Expense.
- (c) Show the balance sheet presentation of notes and interest payable at December 31.
- (d) What is total interest expense for the year?

(d) \$1,550

542 **11** Current Liabilities and Payroll Accounting

Prepare payroll register and payroll entries.  
(SO 6, 7)

**P11-3A** Hira Hardware has four employees who are paid on an hourly basis plus time-and-a-half for all hours worked in excess of 40 a week. Payroll data for the week ended March 15, 2012, are presented below.

| <u>Employee</u> | <u>Hours Worked</u> | <u>Hourly Rate</u> | <u>Federal Income Tax Withholdings</u> | <u>United Fund</u> |
|-----------------|---------------------|--------------------|--|--------------------|
| Joe Hana        | 40                  | \$15.00            | \$?                                    | \$5.00             |
| Mary Alina      | 42                  | 15.00              | ?                                      | 5.00               |
| Andy Silva      | 44                  | 13.00              | 60                                     | 8.00               |
| Kim Gomez       | 46                  | 13.00              | 61                                     | 5.00               |

Hana and Alina are married. They claim 0 and 4 withholding allowances, respectively. The following tax rates are applicable: FICA 8%, state income taxes 3%, state unemployment taxes 5.4%, and federal unemployment 0.8%.

**Instructions**

- (a) Net pay \$1,944.20
- (b) Payroll tax expense \$352.16
- (d) Cash paid \$636.80

- (a) Prepare a payroll register for the weekly payroll. (Use the wage-bracket withholding table in the text for federal income tax withholdings.)
- (b) Journalize the payroll on March 15, 2012, and the accrual of employer payroll taxes.
- (c) Journalize the payment of the payroll on March 16, 2012.
- (d) Journalize the deposit in a Federal Reserve bank on March 31, 2012, of the FICA and federal income taxes payable to the government.

Journalize payroll transactions and adjusting entries.  
(SO 6, 7, 9)

**P11-4A** The following payroll liability accounts are included in the ledger of Wimble Company on January 1, 2012.

|                                    |           |
|------------------------------------|-----------|
| FICA Taxes Payable                 | \$ 760.00 |
| Federal Income Taxes Payable       | 1,204.60  |
| State Income Taxes Payable         | 108.95    |
| Federal Unemployment Taxes Payable | 288.95    |
| State Unemployment Taxes Payable   | 1,954.40  |
| Union Dues Payable                 | 870.00    |
| U.S. Savings Bonds Payable         | 360.00    |

In January, the following transactions occurred.

- Jan. 10 Sent check for \$870.00 to union treasurer for union dues.
- 12 Remitted check for \$1,964.60 to the Federal Reserve bank for FICA taxes and federal income taxes withheld.
- 15 Purchased U.S. Savings Bonds for employees by writing check for \$360.00.
- 17 Paid state income taxes withheld from employees.
- 20 Paid federal and state unemployment taxes.
- 31 Completed monthly payroll register, which shows office salaries \$26,600, store wages \$28,400, FICA taxes withheld \$4,400, federal income taxes payable \$2,158, state income taxes payable \$454, union dues payable \$400, United Fund contributions payable \$1,888, and net pay \$45,700.
- 31 Prepared payroll checks for the net pay and distributed checks to employees.

At January 31, the company also makes the following accrued adjustments pertaining to employee compensation.

- 1. Employer payroll taxes: FICA taxes 8%, federal unemployment taxes 0.8%, and state unemployment taxes 5.4%.
- \*2. Vacation pay: 6% of gross earnings.

- (b) Payroll tax expense \$7,810; Vacation benefits expense \$3,300

Prepare entries for payroll and payroll taxes; prepare W-2 data.  
(SO 6, 7)

**Instructions**

- (a) Journalize the January transactions.
- (b) Journalize the adjustments pertaining to employee compensation at January 31.

**P11-5A** For the year ended December 31, 2012, Telmarine Electrical Repair Company reports the following summary payroll data.

|                                   |                  |
|-----------------------------------|------------------|
| Gross earnings:                   |                  |
| Administrative salaries           | \$200,000        |
| Electricians' wages               | <u>370,000</u>   |
| Total                             | <u>\$570,000</u> |
| Deductions:                       |                  |
| FICA taxes                        | \$ 38,800        |
| Federal income taxes withheld     | 174,400          |
| State income taxes withheld (3%)  | 17,100           |
| United Fund contributions payable | 27,500           |
| Health insurance premiums         | <u>17,200</u>    |
| Total                             | <u>\$275,000</u> |

Telmarine Company's payroll taxes are: FICA 8%, state unemployment 2.5% (due to a stable employment record), and 0.8% federal unemployment. Gross earnings subject to FICA taxes total \$485,000, and gross earnings subject to unemployment taxes total \$135,000.

### Instructions

- (a) Prepare a summary journal entry at December 31 for the full year's payroll.  
 (b) Journalize the adjusting entry at December 31 to record the employer's payroll taxes.  
 (c) The W-2 Wage and Tax Statement requires the following dollar data.

(a) Salaries and wages payable \$295,000  
 (b) Payroll tax expense \$43,255

| <u>Wages, Tips,<br/>Other Compensation</u> | <u>Federal Income<br/>Tax Withheld</u> | <u>State Income<br/>Tax Withheld</u> | <u>FICA<br/>Wages</u> | <u>FICA Tax<br/>Withheld</u> |
|--|--|--------------------------------------|-----------------------|------------------------------|
|--|--|--------------------------------------|-----------------------|------------------------------|

Complete the required data for the following employees.

| <u>Employee</u>     | <u>Gross Earnings</u> | <u>Federal Income Tax Withheld</u> |
|---------------------|-----------------------|------------------------------------|
| Lucie Solarava      | \$59,000              | \$28,500                           |
| Kristina Madericova | 26,000                | 10,200                             |

## Problems: Set B

**P11-1B** On January 1, 2012, the ledger of Tyrus Company contains the following liability accounts.

|                          |          |
|--------------------------|----------|
| Accounts Payable         | \$30,000 |
| Sales Taxes Payable      | 5,000    |
| Unearned Service Revenue | 12,000   |

Prepare current liability entries, adjusting entries, and current liabilities section.

(SO 1, 2, 3, 4, 5)

During January, the following selected transactions occurred.

- Jan. 1 Borrowed \$20,000 in cash from Platteville Bank on a 4-month, 6%, \$20,000 note.  
 5 Sold merchandise for cash totaling \$9,752, which includes 6% sales taxes.  
 12 Provided services for customers who had made advance payments of \$8,000. (Credit Service Revenue.)  
 14 Paid state treasurer's department for sales taxes collected in December 2011, \$5,000.  
 20 Sold 900 units of a new product on credit at \$44 per unit, plus 6% sales tax. This new product is subject to a 1-year warranty.  
 25 Sold merchandise for cash totaling \$16,536, which includes 6% sales taxes.

### Instructions

- (a) Journalize the January transactions.  
 (b) Journalize the adjusting entries at January 31 for (1) the outstanding notes payable, and (2) estimated warranty liability, assuming warranty costs are expected to equal 5% of sales of the new product.  
 (c) Prepare the current liabilities section of the balance sheet at January 31, 2012. Assume no change in accounts payable.

(c) Current liability total \$59,944

**P11-2B** The following are selected transactions of Karolina Company. Karolina prepares financial statements *quarterly*.

- Jan. 2 Purchased merchandise on account from Pavel Company, \$20,000, terms 2/10, n/30. (Karolina uses the perpetual inventory system.)

Journalize and post note transactions and show balance sheet presentation.

(SO 2)

- Feb. 1 Issued a 12%, 2-month, \$20,000 note to Pavel in payment of account.
- Mar. 31 Accrued interest for 2 months on Pavel note.
- Apr. 1 Paid face value and interest on Pavel note.
- July 1 Purchased equipment from Filipensky Equipment paying \$12,000 in cash and signing a 10%, 3-month, \$25,000 note.
- Sept. 30 Accrued interest for 3 months on Filipensky note.
- Oct. 1 Paid face value and interest on Filipensky note.
- Dec. 1 Borrowed \$15,000 from the Federated Bank by issuing a 3-month, 12% note with a face value of \$15,000.
- Dec. 31 Recognized interest expense for 1 month on Federated Bank note.

**Instructions**

- (a) Prepare journal entries for the above transactions and events.
- (b) Post to the accounts, Notes Payable, Interest Payable, and Interest Expense.
- (c) Show the balance sheet presentation of notes and interest payable at December 31.
- (d) What is total interest expense for the year?

(d) \$1,175

Prepare payroll register and payroll entries.

(SO 6, 7)

**P11-3B** Yemi’s Drug Store has four employees who are paid on an hourly basis plus time-and-a-half for all hours worked in excess of 40 a week. Payroll data for the week ended February 15, 2012, are shown below.

| <u>Employee</u> | <u>Hours Worked</u> | <u>Hourly Rate</u> | <u>Federal Income Tax Withholdings</u> | <u>United Fund Contributions</u> |
|-----------------|---------------------|--------------------|--|----------------------------------|
| M. Dvorska      | 39                  | \$12.00            | \$34                                   | \$ -0-                           |
| D. Mottl        | 42                  | 11.00              | 20                                     | 10.00                            |
| L. Abbasova     | 44                  | 10.00              | 51                                     | 5.00                             |
| A. Lee          | 46                  | 10.00              | 36                                     | 5.00                             |

The following tax rates are applicable: FICA 8%, state income taxes 3%, state unemployment taxes 5.4%, and federal unemployment 0.8%. The first three employees are sales clerks (store wages expense). The fourth employee performs administrative duties (office wages expense).

**Instructions**

- (a) Prepare a payroll register for the weekly payroll.
- (b) Journalize the payroll on February 15, 2012, and the accrual of employer payroll taxes.
- (c) Journalize the payment of the payroll on February 16, 2012.
- (d) Journalize the remittance to the Federal Reserve bank on February 28, 2012, of the FICA and federal income taxes payable to the government.

- (a) Net pay \$1,521.99
- (b) Payroll tax expense \$268.52
- (d) Cash paid \$443.56

Journalize payroll transactions and adjusting entries.

(SO 6, 7, 9)

**P11-4B** The following payroll liability accounts are included in the ledger of Patteri Company on January 1, 2012.

|                                    |        |
|------------------------------------|--------|
| FICA Taxes Payable                 | \$ 540 |
| Federal Income Taxes Payable       | 1,100  |
| State Income Taxes Payable         | 210    |
| Federal Unemployment Taxes Payable | 54     |
| State Unemployment Taxes Payable   | 365    |
| Union Dues Payable                 | 200    |
| U.S. Savings Bonds Payable         | 300    |

In January, the following transactions occurred.

- Jan. 10 Sent check for \$200 to union treasurer for union dues.
- 12 Remitted check for \$1,640 to the Federal Reserve bank for FICA taxes and federal income taxes withheld.
- 15 Purchased U.S. Savings Bonds for employees by writing check for \$300.
- 17 Paid state income taxes withheld from employees.
- 20 Paid federal and state unemployment taxes.
- 31 Completed monthly payroll register, which shows office salaries \$17,400, store wages \$22,500, FICA taxes withheld \$3,192, federal income taxes payable \$2,540, state income taxes payable \$500, union dues payable \$300, United Fund contributions payable \$1,300, and net pay \$32,068.
- 31 Prepared payroll checks for the net pay and distributed checks to employees.

At January 31, the company also makes the following accruals pertaining to employee compensation.

1. Employer payroll taxes: FICA taxes 8%, state unemployment taxes 5.4%, and federal unemployment taxes 0.8%.
- \*2. Vacation pay: 5% of gross earnings.

**Instructions**

- (a) Journalize the January transactions.
- (b) Journalize the adjustments pertaining to employee compensation at January 31.

(b) Payroll tax expense \$5,665.80; Vacation benefits expense \$1,995

**P11-5B** For the year ended December 31, 2012, Radar Company reports the following summary payroll data.

|                         |                  |                                   |                  |
|-------------------------|------------------|-----------------------------------|------------------|
| Gross earnings:         |                  | Deductions:                       |                  |
| Administrative salaries | \$150,000        | FICA taxes                        | \$ 29,600        |
| Electricians' wages     | 240,000          | Federal income taxes withheld     | 78,000           |
| Total                   | <u>\$390,000</u> | State income taxes withheld (3%)  | 11,700           |
|                         |                  | United Fund contributions payable | 17,000           |
|                         |                  | Health insurance premiums         | <u>12,000</u>    |
|                         |                  | Total                             | <u>\$148,300</u> |

Prepare entries for payroll and payroll taxes; prepare W-2 data.

(SO 6, 7)

Radar Company's payroll taxes are: FICA 8%, state unemployment 2.5% (due to a stable employment record), and 0.8% federal unemployment. Gross earnings subject to FICA taxes total \$370,000, and gross earnings subject to unemployment taxes total \$90,000.

**Instructions**

- (a) Prepare a summary journal entry at December 31 for the full year's payroll.
- (b) Journalize the adjusting entry at December 31 to record the employer's payroll taxes.
- (c) The W-2 Wage and Tax Statement requires the dollar data shown below.

(a) Salaries and wages payable \$241,700  
(b) Payroll tax expense \$32,570

| <u>Wages, Tips,<br/>Other Compensation</u> | <u>Federal Income<br/>Tax Withheld</u> | <u>State Income<br/>Tax Withheld</u> | <u>FICA<br/>Wages</u> | <u>FICA Tax<br/>Withheld</u> |
|--|--|--------------------------------------|-----------------------|------------------------------|
|--|--|--------------------------------------|-----------------------|------------------------------|

Complete the required data for the following employees.

| <u>Employee</u> | <u>Gross Earnings</u> | <u>Federal Income Tax Withheld</u> |
|-----------------|-----------------------|------------------------------------|
| A. Valdez       | \$50,000              | \$18,300                           |
| E. Izzard       | 24,000                | 4,800                              |

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Comprehensive Problem

**CP11** Wright Company's balance sheet at December 31, 2011, is presented below.

| <b>WRIGHT COMPANY</b> |                  |                  |                  |
|-----------------------|------------------|------------------|------------------|
| Balance Sheet         |                  |                  |                  |
| December 31, 2011     |                  |                  |                  |
| Cash                  | \$ 30,000        | Accounts Payable | \$ 13,750        |
| Inventory             | 30,750           | Interest Payable | 250              |
| Prepaid Insurance     | 6,000            | Notes Payable    | 50,000           |
| Equipment             | <u>38,000</u>    | Owner's Capital  | <u>40,750</u>    |
|                       | <u>\$104,750</u> |                  | <u>\$104,750</u> |

During January 2012, the following transactions occurred. (Wright Company uses the perpetual inventory system.)

1. Wright paid \$250 interest on the note payable on January 1, 2012. The note is due December 31, 2013.

2. Wright purchased \$241,100 of inventory on account.
3. Wright sold for \$480,000 cash, inventory which cost \$265,000. Wright also collected \$28,800 in sales taxes.
4. Wright paid \$230,000 in accounts payable.
5. Wright paid \$17,000 in sales taxes to the state.
6. Paid other operating expenses of \$20,000.
7. On January 31, 2012, the payroll for the month consists of salaries and wages of \$60,000. All salaries and wages are subject to 8% FICA taxes. A total of \$8,900 federal income taxes are withheld. The salaries and wages are paid on February 1.

**Adjustment data:**

8. Interest expense of \$250 has been incurred on the notes payable.
9. The insurance for the year 2012 was prepaid on December 31, 2011.
10. The equipment was acquired on December 31, 2011, and will be depreciated on a straight-line basis over 5 years with a \$2,000 salvage value.
11. Employer's payroll taxes include 8% FICA taxes, a 5.4% state unemployment tax, and an 0.8% federal unemployment tax.

**Instructions**

(You may need to set up T accounts to determine ending balances.)

- (a) Prepare journal entries for the transactions listed above and the adjusting entries.
- (b) Prepare an adjusted trial balance at January 31, 2012.
- (c) Prepare an income statement, an owner's equity statement for the month ending January 31, 2012, and a classified balance sheet as of January 31, 2012.

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 10.)

**CCC11** Recall that Cookie Creations sells fine European mixers that it purchases from Kzinski Supply Co. Kzinski warrants the mixers to be free of defects in material and workmanship for a period of one year from the date of original purchase. If the mixer has such a defect, Kzinski will repair or replace the mixer free of charge for parts and labor.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### Financial Reporting Problem: PepsiCo, Inc.

**BYP11-1** The financial statements of **PepsiCo, Inc.** and the notes to consolidated financial statements appear in Appendix A.

**Instructions**

Refer to PepsiCo's financial statements and answer the following questions about current and contingent liabilities and payroll costs.

- (a) What were PepsiCo's total current liabilities at December 26, 2009? What was the increase/decrease in PepsiCo's total current liabilities from the prior year?
- (b) In PepsiCo's Note 2 ("Our Significant Accounting Policies"), the company explains the nature of its contingencies. Under what conditions does PepsiCo recognize (record and report) liabilities for contingencies?
- (c) What were the components of total current liabilities on December 26, 2009?

## Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

**BYP11-2** PepsiCo, Inc.'s financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

### Instructions

- (a) At December 26, 2009, what was PepsiCo's largest current liability account? What were its total current liabilities? At December 31, 2009, what was Coca-Cola's largest current liability account? What were its total current liabilities?
- (b) Based on information contained in those financial statements, compute the following 2009 values for each company.
  - (1) Working capital.
  - (2) Current ratio.
- (c) What conclusions concerning the relative liquidity of these companies can be drawn from these data?

## On the Web

**BYP11-3** The Internal Revenue Service provides considerable information over the Internet. The following site answers payroll tax questions faced by employers.

**Address:** [www.irs.ustreas.gov/formspubs/index.html](http://www.irs.ustreas.gov/formspubs/index.html), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

### Steps

1. Go to the site shown above.
2. Choose **View Online, Tax Publications**.
3. Choose **Publication 15, Circular E, Employer's Tax Guide**.

### Instructions

Answer each of the following questions.

- (a) How does the government define "employees"?
- (b) What are the special rules for Social Security and Medicare regarding children who are employed by their parents?
- (c) How can an employee obtain a Social Security card if he or she doesn't have one?
- (d) Must employees report to their employer tips received from customers? If so, how?
- (e) Where should the employer deposit Social Security taxes withheld or contributed?

## Critical Thinking

### Decision Making Across the Organization

**BYP11-4** Kensington Processing Company provides word-processing services for business clients and students in a university community. The work for business clients is fairly steady throughout the year. The work for students peaks significantly in December and May as a result of term papers, research project reports, and dissertations.

Two years ago, the company attempted to meet the peak demand by hiring part-time help. This led to numerous errors and much customer dissatisfaction. A year ago, the company hired four experienced employees on a permanent basis in place of part-time help. This proved to be much better in terms of productivity and customer satisfaction. But, it has caused an increase in annual payroll costs and a significant decline in annual net income.

Recently, Valarie Flynn, a sales representative of Metcalfe Services Inc., has made a proposal to the company. Under her plan, Metcalfe will provide up to four experienced workers at a daily rate of \$75 per person for an 8-hour workday. Metcalfe workers are not available on an hourly basis. Kensington would have to pay only the daily rate for the workers used.

The owner of Kensington Processing, Donna Bell, asks you, as the company's accountant, to prepare a report on the expenses that are pertinent to the decision. If the Metcalfe plan is adopted, Donna will terminate the employment of two permanent employees and will keep two permanent employees. At the moment, each employee earns an annual income of \$21,000. Kensington pays 8% FICA taxes, 0.8% federal unemployment taxes, and 5.4% state unemployment taxes. The unemployment taxes apply

to only the first \$7,000 of gross earnings. In addition, Kensington pays \$40 per month for each employee for medical and dental insurance. Donna indicates that if the Metcalfe Services plan is accepted, her needs for temporary workers will be as follows.

| <u>Months</u>     | <u>Number<br/>of Employees</u> | <u>Working<br/>Days per Month</u> |
|-------------------|--------------------------------|-----------------------------------|
| January–March     | 2                              | 20                                |
| April–May         | 3                              | 25                                |
| June–October      | 2                              | 18                                |
| November–December | 3                              | 23                                |

### Instructions

With the class divided into groups, answer the following.

- (a) Prepare a report showing the comparative payroll expense of continuing to employ permanent workers compared to adopting the Metcalfe Services Inc. plan.
- (b) What other factors should Donna consider before finalizing her decision?

## Communication Activity

**BYP11-5** Jack Quaney, president of the Ramsberg Company, has recently hired a number of additional employees. He recognizes that additional payroll taxes will be due as a result of this hiring, and that the company will serve as the collection agent for other taxes.

### Instructions

In a memorandum to Jack Quaney, explain each of the taxes, and identify the taxes that result in payroll tax expense to Ramsberg Company.

## Ethics Case

**BYP11-6** Daniel Longan owns and manages Daniel's Restaurant, a 24-hour restaurant near the city's medical complex. Daniel employs 9 full-time employees and 16 part-time employees. He pays all of the full-time employees by check, the amounts of which are determined by Daniel's public accountant, Gina Watt. Daniel pays all of his part-time employees in currency. He computes their wages and withdraws the cash directly from his cash register.

Gina has repeatedly urged Daniel to pay all employees by check. But as Daniel has told his competitor and friend, Steve Hill, who owns the Greasy Diner, "My part-time employees prefer the currency over a check. Also, I don't withhold or pay any taxes or worker's compensation insurance on those cash wages because they go totally unrecorded and unnoticed."

### Instructions

- (a) Who are the stakeholders in this situation?
- (b) What are the legal and ethical considerations regarding Daniel's handling of his payroll?
- (c) Gina Watt is aware of Daniel's payment of the part-time payroll in currency. What are her ethical responsibilities in this case?
- (d) What internal control principle is violated in this payroll process?

## "All About You" Activity

**BYP11-7** As indicated in the **All About You** feature (available on the book's companion website), medical costs are substantial and rising. But will they be the most substantial expense over your lifetime? Not likely. Will it be housing or food? Again, not likely. The answer is taxes. On average, Americans work 99 days to afford their taxes. Companies, too, have large tax burdens. They look very hard at tax issues in deciding where to build their plants and where to locate their administrative headquarters.

### Instructions

- (a) Determine what your state income taxes are if your taxable income is \$60,000 and you file as a single taxpayer in the state in which you live.
- (b) Assume that you own a home worth \$200,000 in your community and the tax rate is 2.1%. Compute the property taxes you would pay.
- (c) Assume that the total gasoline bill for your automobile is \$1,200 a year (300 gallons at \$4 per gallon). What are the amounts of state and federal taxes that you pay on the \$1,200?

- (d) Assume that your purchases for the year total \$9,000. Of this amount, \$5,000 was for food and prescription drugs. What is the amount of sales tax you would pay on these purchases? (Many states do not levy a sales tax on food or prescription drugs. Does yours?)
- (e) Determine what your Social Security taxes are if your income is \$60,000.
- (f) Determine what your federal income taxes are if your taxable income is \$60,000 and you file as a single taxpayer.
- (g) Determine your total taxes paid based on the above calculations, and determine the percentage of income that you would pay in taxes based on the following formula: Total taxes paid  $\div$  Total income.

## FASB Codification Activity

**BYP11-8** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- (a) What is the definition of current liabilities?
- (b) What is the definition of a *contingent liability*?
- (c) What guidance does the Codification provide for the disclosure of contingent liabilities?

### Answers to Accounting Across the Organization Questions

**p. 516 Contingencies: How Big Are They?** **Q:** Why do you think most companies disclose, but do not record, contingent liabilities? **A:** A contingent liability may be probable, but often its amount is difficult to determine. If it cannot be determined, the company is not required to accrue it as a liability.

**p. 527 It Costs \$74,000 to Put \$44,000 in Sally's Pocket** **Q:** How are the Social Security and Medicare taxes computed for Sally's salary? **A:** As indicated in the story, Sally's gross earnings were \$59,000. The Social Security tax is 6.2% for both employee and employer up to gross earnings of \$106,800 (2010 guidelines). As shown, both Sally and Bogan pay \$3,661, which is  $6.2\% \times \$59,000$ . In addition, the Medicare tax is 1.45% on all gross earnings for both employee and employer. As shown, both Sally and Bogan pay \$856, which is  $1.45\% \times \$59,000$ .

### Answers to Self-Test Questions

1. a 2. d 3. b ( $\$88,500 \times 12\% \times 4/12$ ) 4. d 5. b ( $\$4,515 \div 1.05$ ) 6. b ( $\$18,000 \times 3/12$ ) 7. a 8. d 9. c

## IFRS A Look at IFRS

IFRS and GAAP have similar definitions of liabilities. IFRS related to reporting and recognition of liabilities are found in *IAS 1 (revised)* ("Presentation of Financial Statements") and *IAS 37* ("Provisions, Contingent Liabilities, and Contingent Assets"). The general recording procedures for payroll are similar, although differences occur depending on the types of benefits that are provided in different countries. For example, companies in other countries often have different forms of pensions, unemployment benefits, welfare payments, and so on. The accounting for various forms of compensation plans under IFRS is found in *IAS 19* ("Employee Benefits") and *IFRS 2* ("Share-based Payments"). *IAS 19* addresses the accounting for a wide range of compensation elements, including wages, bonuses, post-employment benefits, and compensated absences. Both of these standards were recently amended, resulting in significant convergence between IFRS and GAAP.

## Key Points

- The basic definition of a liability under GAAP and IFRS is very similar. In a more technical way, liabilities are defined by the IASB as a present obligation of the entity arising from past events, the settlement of which is expected to result in an outflow from the entity of resources embodying economic benefits. Liabilities may be legally enforceable via a contract or law but need not be; that is, they can arise due to normal business practice or customs.

- IFRS requires that companies classify liabilities as current or noncurrent on the face of the statement of financial position (balance sheet), except in industries where a *presentation* based on liquidity would be considered to provide more useful information (such as financial institutions). When current liabilities (also called short-term liabilities) are presented, they are generally presented in order of liquidity.
- Under IFRS, liabilities are classified as current if they are expected to be paid within 12 months.
- Similar to GAAP, items are normally reported in order of liquidity. Companies sometimes show liabilities before assets. Also, they will sometimes show long-term liabilities before current liabilities.
- Under IFRS, companies sometimes will net current liabilities against current assets to show working capital on the face of the statement of financial position. (This is evident in the Zetar financial statements in Appendix C.)
- Under GAAP, some contingent liabilities are recorded in the financial statements, others are disclosed, and in some cases no disclosure is required. Unlike GAAP, IFRS reserves the use of the term *contingent liability* to refer only to possible obligations that are *not* recognized in the financial statements but may be disclosed if certain criteria are met. Contingent liabilities are defined in *IAS 37* as being:
  - ◆ A possible obligation that arises from past events and whose existence will be confirmed only by the occurrence or nonoccurrence of one or more uncertain future events not wholly within the control of the entity; or
  - ◆ A present obligation that arises from past events but is not recognized because:
    - It is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation; or
    - The amount of the obligation cannot be measured with sufficient reliability.
- For those items that GAAP would treat as recordable contingent liabilities, IFRS instead uses the term *provisions*. **Provisions** are defined as liabilities of uncertain timing or amount. Examples of provisions would be provisions for warranties, employee vacation pay, or anticipated losses. Under IFRS, the measurement of a provision related to an uncertain obligation is based on the best estimate of the expenditure required to settle the obligation.
- IFRS and GAAP separate plans into defined benefit and defined contribution. The accounting for defined contribution plans is similar. For defined benefit plans, there are still some significant technical differences in the reporting between GAAP and IFRS. However, the IASB and FASB are working on a joint project on pensions that will most likely eliminate the differences between the two, while dramatically changing the approach used by both.

## Looking to the Future

The FASB and IASB are currently involved in two projects, each of which has implications for the accounting for liabilities. One project is investigating approaches to differentiate between debt and equity instruments. The other project, the elements phase of the conceptual framework project, will evaluate the definitions of the fundamental building blocks of accounting. The results of these projects could change the classification of many debt and equity securities.

## IFRS Self-Test Questions

1. Which of the following is *false*?
  - (a) Under IFRS, current liabilities must always be presented before noncurrent liabilities.
  - (b) Under IFRS, an item is a current liability if it will be paid within the next 12 months.
  - (c) Under IFRS, current liabilities are shown in order of liquidity.
  - (d) Under IFRS, a liability is only recognized if it is a present obligation.

2. Under IFRS, a contingent liability is:
  - (a) disclosed in the notes if certain criteria are met.
  - (b) reported on the face of the financial statements if certain criteria are met.
  - (c) the same as a provision.
  - (d) not covered by IFRS.
3. Under IFRS, obligations related to warranties are considered:
  - (a) contingent liabilities.
  - (b) provisions.
  - (c) possible obligations.
  - (d) None of these.
4. Which of the following statements is *true*?
  - (a) Under IFRS, the accounting for issues related to payroll are not covered in any IFRS.
  - (b) The accounting for payrolls is similar under IFRS and U.S. GAAP.
  - (c) Salary and wages payable is considered a contingent liability under IFRS.
  - (d) IFRS does not normally report liabilities in order of liquidity.
5. The joint projects of the FASB and IASB could potentially:
  - (a) change the definition of liabilities.
  - (b) change the definition of equity.
  - (c) change the definition of assets.
  - (d) All of the above.

## IFRS Concepts and Application

**IFRS11-1** Define a provision and give an example.

**IFRS11-2** Define a contingent liability and give an example.

**IFRS11-3** Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for liabilities.

### *International Financial Statement Analysis: Zetar plc*

**IFRS11-4** The financial statements of *Zetar plc* are presented in Appendix C.

#### Instructions

Use the company's complete annual report, available at [www.zetarplc.com](http://www.zetarplc.com), to answer the following questions.

- (a) According to the notes to the financial statements, what types of transactions do trade payables relate to? What was the average amount of time it took the company to pay its payables?
- (b) Note 2(B) discusses provisions that the company records for certain types of activities. What do the provisions relate to, what are the estimates based on, and what could cause those estimates to change in subsequent periods?
- (c) What was the average interest rate paid on bank loans and overdrafts?

#### Answers to IFRS Self-Test Questions

# CHAPTER 12

## Accounting for Partnerships

### Study Objectives

After studying this chapter, you should be able to:

- 1 Identify the characteristics of the partnership form of business organization.
- 2 Explain the accounting entries for the formation of a partnership.
- 3 Identify the bases for dividing net income or net loss.
- 4 Describe the form and content of partnership financial statements.
- 5 Explain the effects of the entries to record the liquidation of a partnership.

### Feature Story

#### FROM TRIALS TO THE TOP TEN

In 1990, Cliff Chenfield and Craig Balsam gave up the razors, ties, and six-figure salaries they had become accustomed to as New York lawyers. Instead, they set up a partnership, **Razor & Tie Music**, in Cliff's living room. Ten years later, it became the only record company in the country that had achieved success in selling music both on television and in stores. Razor & Tie's entertaining and effective TV commercials have yielded unprecedented sales for multi-artist music compilations. At the same time, its hot retail label has been behind some of the most recent original, progressive releases from artists such as Kelly Sweet, All That Remains, EndeverafterR, Angelique Kidjo, Ryan Shaw, Dave Barnes, Twisted Sister, Dar Williams, Danko Jones, and Yerba Buena.

Razor & Tie may be best known for its wildly popular *Kidz Bop* CD series, the top-selling children's audio product in the United States. Advertised on Nickelodeon, the

Cartoon Network, and elsewhere, *Kidz Bop* titles have sold millions of copies. Many of its releases in the series have “gone Gold.”

Razor & Tie got its start with its first TV release, *Those Fabulous '70s* (100,000 copies sold), followed by *Disco Fever* (over 300,000 sold).

After restoring the respectability of the oft-maligned music of the 1970s, the partners forged into the musical '80s with the same zeal that elicited success with their first releases. In 1993, Razor & Tie released *Totally '80s*, a collection of Top-10 singles from the 1980s that has sold over 450,000 units. Featuring the tag line, “The greatest hits from the decade when communism died and music videos were born,” *Totally '80s* was the best-selling direct-response album in the country in 1993.

In 1995, Razor & Tie broke into the contemporary music world with *Living in the '90s*, the most successful record in the history of the company. Featuring a number of songs that were still hits on the radio at the time the package initially aired, *Living in the '90s* was a blockbuster. It received Gold certification in less than nine months and rewrote the rules on direct-response albums. For the first time, contemporary music was available through an album offered only through direct-response spots. Razor & Tie pursued that same strategy with its 2002 introduction of the *Kidz Bop* titles.

In fact, Razor & Tie is now a vertically integrated business that includes a music company with major label distribution, a music publishing business, a media buying company, a home video company, a direct marketing operation, and a growing database of entertainment consumers.

Razor & Tie has carved out a sizable piece of the market through the complementary talents of the two partners. Their imagination and savvy, along with exciting new releases planned for the coming years, ensure Razor & Tie’s continued growth.

## InsideCHAPTER12

- *Accounting Across the Organization: Limited Liability Companies Gain in Popularity* (p. 556)
- *Accounting Across the Organization: How to Part Ways Nicely* (p. 559)

# Preview of CHAPTER 12

It is not surprising that when Cliff Chenfield and Craig Balsam began **Razor & Tie**, they decided to use the partnership form of organization. Both saw the need for hands-on control of their product and its promotion. In this chapter, we will discuss reasons why businesses select the partnership form of organization. We also will explain the major issues in accounting for partnerships.

The content and organization of Chapter 12 are as follows.

| Accounting for Partnerships  |   |   |
|--|---|---|
| Partnership Form of Organization   | Basic Partnership Accounting  | Liquidation of a Partnership  |
| <ul style="list-style-type: none"> <li>• Characteristics</li> <li>• Organizations with partnership characteristics</li> <li>• Advantages/disadvantages</li> <li>• Partnership agreement</li> </ul> | <ul style="list-style-type: none"> <li>• Forming a partnership</li> <li>• Dividing net income/loss</li> <li>• Financial statements</li> </ul> | <ul style="list-style-type: none"> <li>• No capital deficiency</li> <li>• Capital deficiency</li> </ul> |

## Partnership Form of Organization

A **partnership** is an association of two or more persons to carry on as co-owners of a business for profit. Partnerships are sometimes used in small retail, service, or manufacturing companies. Also accountants, lawyers, and doctors find it desirable to form partnerships with other professionals in the field.

### Study Objective [1]

Identify the characteristics of the partnership form of business organization.

### Characteristics of Partnerships

Partnerships are fairly easy to form. People form partnerships simply by a verbal agreement, or more formally, by written agreement. We explain the principal characteristics of partnerships in the following sections.

#### ASSOCIATION OF INDIVIDUALS

A partnership is a legal entity. A partnership can own property (land, buildings, equipment), and can sue or be sued. **A partnership also is an accounting entity.** Thus, the personal assets, liabilities, and transactions of the partners are excluded from the accounting records of the partnership, just as they are in a proprietorship.

The net income of a partnership is not taxed as a separate entity. But, a partnership must file an information tax return showing partnership net income and each partner's share of that net income. Each partner's share is taxable at **personal tax rates**, regardless of the amount of net income each withdraws from the business during the year.

#### MUTUAL AGENCY

**Mutual agency** means that each partner acts on behalf of the partnership when engaging in partnership business. The act of any partner is binding on all other partners. This is true even when partners act beyond the scope of their authority, so long as the act appears to be appropriate for the partnership. For example, a partner of a

grocery store who purchases a delivery truck creates a binding contract in the name of the partnership, even if the partnership agreement denies this authority. On the other hand, if a partner in a law firm purchased a snowmobile for the partnership, such an act would not be binding on the partnership. The purchase is clearly outside the scope of partnership business.

### LIMITED LIFE

Corporations have unlimited life. Partnerships do not. A partnership may be ended voluntarily at any time through the acceptance of a new partner or the withdrawal of a partner. It may be ended involuntarily by the death or incapacity of a partner. **Partnership dissolution** occurs whenever a partner withdraws or a new partner is admitted. Dissolution does not necessarily mean that the business ends. If the continuing partners agree, operations can continue without interruption by forming a new partnership.

Limited Life

### UNLIMITED LIABILITY

Each partner is **personally and individually liable** for all partnership liabilities. Creditors' claims attach first to partnership assets. If these are insufficient, the claims then attach to the personal resources of any partner, irrespective of that partner's equity in the partnership. Because each partner is responsible for all the debts of the partnership, each partner is said to have **unlimited liability**.

Unlimited Liability

### CO-OWNERSHIP OF PROPERTY

Partners jointly own partnership assets. If the partnership is dissolved, each partner has a claim on total assets equal to the balance in his or her respective capital account. This claim does not attach to **specific assets** that an individual partner contributed to the firm. Similarly, if a partner invests a building in the partnership valued at \$100,000 and the building is later sold at a gain of \$20,000, the partners all share in the gain.

Partnership net income (or net loss) is also co-owned. **If the partnership contract does not specify to the contrary, all net income or net loss is shared equally by the partners.** As you will see later, though, partners may agree to unequal sharing of net income or net loss.

Co-ownership of Property

## Organizations with Partnership Characteristics

If you are starting a business with a friend and each of you has little capital and your business is not risky, you probably want to use a partnership. As indicated above, the partnership is easy to establish and its cost is minimal. These types of partnerships are often called **regular partnerships**. However if your business is risky—say, roof repair or providing some type of professional service—you will want to limit your liability and not use a regular partnership. As a result, special forms of business organizations with partnership characteristics are now often used to provide protection from unlimited liability for people who wish to work together in some activity.

The special partnership forms are: limited partnerships, limited liability partnerships, and limited liability companies. These special forms use the same accounting procedures as those described for a regular partnership. In addition, for taxation purposes, all the profits and losses pass through these organizations (similar to the regular partnership) to the owners, who report their share of partnership net income or losses on their personal tax returns.

### LIMITED PARTNERSHIPS

In a **limited partnership**, one or more partners have **unlimited liability** and one or more partners have **limited liability** for the debts of the firm. Those with unlimited

### International Note

Much of the funding for successful new U.S. businesses comes from “venture capital” firms, which are organized as limited partnerships. To develop its own venture capital industry, China believes that it needs the limited liability form. Therefore, China has taken steps to model its partnership laws to allow for limited partnerships like those in the United States.

### Helpful Hint

In an LLP, *all* partners have limited liability. There are no general partners.

liability are **general partners**. Those with limited liability are **limited partners**. Limited partners are responsible for the debts of the partnership up to the limit of their investment in the firm.

The words “Limited Partnership,” or “Ltd.,” or “LP” identify this type of organization. For the privilege of limited liability, the limited partner usually accepts less compensation than a general partner and exercises less influence in the affairs of the firm. If the limited partners get involved in management, they risk their liability protection.

### LIMITED LIABILITY PARTNERSHIP

Most states allow professionals such as lawyers, doctors, and accountants to form a **limited liability partnership** or “LLP.” The LLP is designed to protect innocent partners from malpractice or negligence claims resulting from the acts of another partner. LLPs generally carry large insurance policies as protection against malpractice suits. These professional partnerships vary in size from a medical partnership of three to five doctors, to 150 to 200 partners in a large law firm, to more than 2,000 partners in an international accounting firm.

### LIMITED LIABILITY COMPANIES

A hybrid form of business organization with certain features like a corporation and others like a limited partnership is the **limited liability company**, or “LLC.” An LLC usually has a limited life. The owners, called **members**, have limited liability like owners of a corporation. Whereas limited partners do not actively participate in the management of a limited partnership (LP), the members of a limited liability company (LLC) can assume an active management role. For income tax purposes, the IRS usually classifies an LLC as a partnership.

## ACCOUNTING ACROSS THE ORGANIZATION

### Limited Liability Companies Gain in Popularity

The proprietorship form of business organization is still the most popular, followed by the corporate form. But whenever a group of individuals wants to form a partnership, the limited liability company is usually the popular choice.

One other form of business organization is a *subchapter S corporation*. A subchapter S corporation has many of the characteristics of a partnership—especially, taxation as a partnership—but it is losing its popularity. The reason: It involves more paperwork and expense than a limited liability company, which in most cases offers similar advantages.

**?** Why do you think that the use of the limited liability company is gaining in popularity? (See page 591.)

Illustration 12-1 summarizes different forms of organizations that have partnership characteristics.

## Advantages and Disadvantages of Partnerships

Why do people choose partnerships? One major advantage of a partnership is to combine the skills and resources of two or more individuals. In addition, partnerships are easily formed and are relatively free from government regulations and restrictions. A partnership does not have to contend with the “red tape” that a

|   | Major Advantages   | Major Disadvantages  |
|---|--|--|
| <p><b>Regular Partnership</b></p>  <p>General Partners</p>                       | <p>Simple and inexpensive to create and operate.</p>   | <p>Owners (partners) personally liable for business debts.</p>   |
| <p><b>Limited Partnership</b></p>  <p>General Partners      Limited Partners</p> | <p>Limited partners have limited personal liability for business debts as long as they do not participate in management.</p> <p>General partners can raise cash without involving outside investors in management of business.</p> | <p>General partners personally liable for business debts.</p> <p>More expensive to create than regular partnership.</p> <p>Suitable mainly for companies that invest in real estate.</p>                                     |
| <p><b>Limited Liability Partnership</b></p>                                      | <p>Mostly of interest to partners in old-line professions such as law, medicine, and accounting.</p> <p>Owners (partners) are not personally liable for the malpractice of other partners.</p>                                     | <p>Unlike a limited liability company, owners (partners) remain personally liable for many types of obligations owed to business creditors, lenders, and landlords.</p> <p>Often limited to a short list of professions.</p> |
| <p><b>Limited Liability Company</b></p>                                        | <p>Owners have limited personal liability for business debts even if they participate in management.</p>   | <p>More expensive to create than regular partnership.</p>  |

**Illustration 12-1**  
Different forms of organizations with partnership characteristics

Source: [www.nolo.com](http://www.nolo.com) (accessed June 2010).

corporation must face. Also, partners generally can make decisions quickly on substantive business matters without having to consult a board of directors.

On the other hand, partnerships also have some major disadvantages. **Unlimited liability** is particularly troublesome. Many individuals fear they may lose not only their initial investment but also their personal assets, if those assets are needed to pay partnership creditors.

Illustration 12-2 summarizes the advantages and disadvantages of the regular partnership form of business organization. As indicated in the previous section,

| Advantages  | Disadvantages       |
|---|---------------------|
| Combining skills and resources of two or more individuals | Mutual agency       |
| Ease of formation   | Limited life        |
| Freedom from governmental regulations and restrictions    | Unlimited liability |
| Ease of decision making                                   |                     |

**Illustration 12-2**  
Advantages and disadvantages of a partnership

different types of partnership forms have evolved to reduce some of the disadvantages.

## Do it!

### Partnership Organization

#### action plan

✓ When forming a business, carefully consider what type of organization would best suit the needs of the business.

✓ Keep in mind the new, “hybrid” organizational forms that have many of the best characteristics of partnerships and corporations.

Indicate whether each of the following statements is true or false.

- \_\_\_\_\_ 1. Partnerships have unlimited life. Corporations do not.
- \_\_\_\_\_ 2. Partners jointly own partnership assets. A partner’s claim on partnership assets does not attach to specific assets.
- \_\_\_\_\_ 3. In a limited partnership, the general partners have unlimited liability.
- \_\_\_\_\_ 4. The members of a limited liability company have limited liability, like shareholders of a corporation, and they are taxed like corporate shareholders.
- \_\_\_\_\_ 5. Because of mutual agency, the act of any partner is binding on all other partners.

#### Solution

- 1. False. Corporations have unlimited life. Partnerships do not.
- 2. True.
- 3. True.
- 4. False. The members of a limited liability company are taxed like partners in a partnership.
- 5. True.

Related exercise material: E12-1 and **Do it!** 12-1.

#### Ethics Note

A well-developed partnership agreement reduces ethical conflict among partners. It specifies in clear and concise language the process by which the partners will resolve ethical and legal problems. This issue is especially significant when the partnership experiences financial distress.

### The Partnership Agreement

Ideally, the agreement of two or more individuals to form a partnership should be expressed in a written contract, called the **partnership agreement** or **articles of co-partnership**. The partnership agreement contains such basic information as the name and principal location of the firm, the purpose of the business, and date of inception. In addition, it should specify relationships among the partners, such as:

- 1. Names and capital contributions of partners.
- 2. Rights and duties of partners.
- 3. Basis for sharing net income or net loss.
- 4. Provision for withdrawals of assets.
- 5. Procedures for submitting disputes to arbitration.
- 6. Procedures for the withdrawal or addition of a partner.
- 7. Rights and duties of surviving partners in the event of a partner’s death.

We cannot overemphasize the importance of a written contract. The agreement should attempt to anticipate all possible situations, contingencies, and disagreements. The help of a lawyer is highly desirable in preparing the agreement.

# ACCOUNTING ACROSS THE ORGANIZATION

## How to Part Ways Nicely

What should you do when you and your business partner do not agree on things, to the point where you are no longer on speaking terms? Given how heated business situations can get, this is not an unusual occurrence. Unfortunately, in many instances the partners do everything they can to undermine the other partner, eventually destroying the business. In some instances people even steal from the partnership because they either feel that they “deserve it” or they assume that the other partners are stealing from them.

It would be much better to follow the example of Jennifer Appel and her partner. They found that after opening a successful bakery and writing a cookbook, they couldn’t agree on how the business should be run. The other partner bought out Ms. Appel’s share of the business, and Ms. Appel went on to start her own style of bakery, which she ultimately franchised.

**?** How can partnership conflicts be minimized and more easily resolved? (See page 591.)

## Basic Partnership Accounting

We now turn to the basic accounting for partnerships. The major accounting issues relate to forming the partnership, dividing income or loss, and preparing financial statements.

### Forming a Partnership

Each partner’s initial investment in a partnership is entered in the partnership records. The partnership should record these investments at the **fair value of the assets at the date of their transfer to the partnership**. All partners must agree to the values assigned.

To illustrate, assume that A. Rolfe and T. Shea combine their proprietorships to start a partnership named U.S. Software. The firm will specialize in developing financial modeling software packages. Rolfe and Shea have the following assets prior to the formation of the partnership.

|                                 | Book Value      |                 | Fair Value             |                        |
|---------------------------------|-----------------|-----------------|------------------------|------------------------|
|                                 | A. Rolfe        | T. Shea         | A. Rolfe               | T. Shea                |
| Cash                            | \$ 8,000        | \$ 9,000        | <b>\$ 8,000</b>        | <b>\$ 9,000</b>        |
| Equipment                       | 5,000           |                 | <b>4,000</b>           |                        |
| Accumulated depreciation        | (2,000)         |                 |                        |                        |
| Accounts receivable             |                 | 4,000           |                        | <b>4,000</b>           |
| Allowance for doubtful accounts |                 | (700)           |                        | <b>(1,000)</b>         |
|                                 | <u>\$11,000</u> | <u>\$12,300</u> | <u><b>\$12,000</b></u> | <u><b>\$12,000</b></u> |

**Study Objective [2]**  
Explain the accounting entries for the formation of a partnership.

**Illustration 12-3**  
Book and fair values of assets invested

*Items under owners’ equity (OE) in the accounting equation analyses (in margins) are not labeled in this partnership chapter. Nearly all affect partners’ capital accounts.*

The partnership records the investments as follows.

| Investment of A. Rolfe          |  |        |
|---------------------------------|--|--------|
| Cash                            |  | 8,000  |
| Equipment                       |  | 4,000  |
| A. Rolfe, Capital               |  | 12,000 |
| (To record investment of Rolfe) |  |        |

|                   |   |   |   |         |
|-------------------|---|---|---|---------|
| A                 | = | L | + | OE      |
| +8,000            |   |   |   |         |
| +4,000            |   |   |   |         |
|                   |   |   |   | +12,000 |
| <b>Cash Flows</b> |   |   |   |         |
| +8,000            |   |   |   |         |

$$\text{A} = \text{L} + \text{OE}$$

|        |         |
|--------|---------|
| +9,000 |         |
| +4,000 |         |

| <hr/>  |         |
|        | +12,000 |

Cash Flows

+9,000

### International Note

Partnership accounting under GAAP and IFRS are essentially the same.

### Investment of T. Shea

|                                 |       |        |
|---------------------------------|-------|--------|
| Cash                            | 9,000 |        |
| Accounts Receivable             | 4,000 |        |
| Allowance for Doubtful Accounts |       | 1,000  |
| T. Shea, Capital                |       | 12,000 |
| (To record investment of Shea)  |       |        |

Note that the partnership records neither the original cost of the office equipment (\$5,000) nor its book value (\$5,000 – \$2,000). It records the equipment at its fair value, \$4,000. The partnership does not carry forward any accumulated depreciation from the books of previous entities (in this case, the two proprietorships).

In contrast, the gross claims on customers (\$4,000) are carried forward to the partnership. The partnership adjusts the allowance for doubtful accounts to \$1,000, to arrive at a cash (net) realizable value of \$3,000. A partnership may start with an allowance for doubtful accounts because it will continue to collect existing accounts receivable, some of which are expected to be uncollectible. In addition, this procedure maintains the control and subsidiary relationship between Accounts Receivable and the accounts receivable subsidiary ledger.

After formation of the partnership, the accounting for transactions is similar to any other type of business organization. For example, the partners record all transactions with outside parties, such as the purchase or sale of merchandise inventory and the payment or receipt of cash, the same as would a sole proprietor.

The steps in the accounting cycle described in Chapter 4 for a proprietorship also apply to a partnership. For example, the partnership prepares a trial balance and journalizes and posts adjusting entries. A worksheet may be used. There are minor differences in journalizing and posting closing entries and in preparing financial statements, as we explain in the following sections. The differences occur because there is more than one owner.

## Dividing Net Income or Net Loss

**Partners equally share partnership net income or net loss unless the partnership contract indicates otherwise.** The same basis of division usually applies to both net income and net loss. It is customary to refer to this basis as the **income ratio**, the **income and loss ratio**, or the **profit and loss (P&L) ratio**. Because of its wide acceptance, we will use the term **income ratio** to identify the basis for dividing net income and net loss. The partnership recognizes a partner's share of net income or net loss in the accounts through closing entries.

### CLOSING ENTRIES

As in the case of a proprietorship, a partnership must make four entries in preparing closing entries. The entries are:

1. Debit each revenue account for its balance, and credit Income Summary for total revenues.
2. Debit Income Summary for total expenses, and credit each expense account for its balance.
3. Debit Income Summary for its balance, and credit each partner's capital account for his or her share of net income. Or, credit Income Summary, and debit each partner's capital account for his or her share of net loss.
4. Debit each partner's capital account for the balance in that partner's drawing account, and credit each partner's drawing account for the same amount.

The first two entries are the same as in a proprietorship. The last two entries are different because (1) there are two or more owners' capital and drawing accounts, and (2) it is necessary to divide net income (or net loss) among the partners.

To illustrate the last two closing entries, assume that AB Company has net income of \$32,000 for 2012. The partners, L. Arbor and D. Barnett, share net income and net loss equally. Drawings for the year were Arbor \$8,000 and Barnett \$6,000. The last two closing entries are:

|         |  |  |                  |
|---------|--|--|------------------|
| Dec. 31 | Income Summary<br>L. Arbor, Capital (\$32,000 × 50%)<br>D. Barnett, Capital (\$32,000 × 50%)<br>(To transfer net income to partners' capital accounts) | 32,000<br><br><br>16,000<br>16,000       | 16,000<br>16,000 |
| Dec. 31 | L. Arbor, Capital<br>D. Barnett, Capital<br>L. Arbor, Drawings<br>D. Barnett, Drawings<br>(To close drawing accounts to capital accounts)              | 8,000<br>6,000<br><br><br>8,000<br>6,000 | 8,000<br>6,000   |

|   |   |   |   |    |         |
|---|---|---|---|----|---------|
| A | = | L | + | OE |         |
|   |   |   |   |    | -32,000 |
|   |   |   |   |    | +16,000 |
|   |   |   |   |    | +16,000 |

**Illustration 12-4**

Partners' capital and drawing accounts after closing

As in a proprietorship, the partners' capital accounts are permanent accounts; their drawing accounts are temporary accounts. Normally, the capital accounts will have credit balances, and the drawing accounts will have debit balances. Drawing accounts are debited when partners withdraw cash or other assets from the partnership for personal use.

**INCOME RATIOS**

As noted earlier, the partnership agreement should specify the basis for sharing net income or net loss. The following are typical income ratios.

1. A fixed ratio, expressed as a proportion (6:4), a percentage (70% and 30%), or a fraction (2/3 and 1/3).
2. A ratio based either on capital balances at the beginning of the year or on average capital balances during the year.
3. Salaries to partners and the remainder on a fixed ratio.
4. Interest on partners' capital balances and the remainder on a fixed ratio.
5. Salaries to partners, interest on partners' capital, and the remainder on a fixed ratio.

The objective is to settle on a basis that will equitably reflect the partners' capital investment and service to the partnership.

A **fixed ratio** is easy to apply, and it may be an equitable basis in some circumstances. Assume, for example, that Hughes and Lane are partners. Each contributes the same amount of capital, but Hughes expects to work full-time in the partnership and Lane expects to work only half-time. Accordingly, the partners agree to a fixed ratio of 2/3 to Hughes and 1/3 to Lane.

**Study Objective [3]**

Identify the bases for dividing net income or net loss.

A **ratio based on capital balances** may be appropriate when the funds invested in the partnership are considered the critical factor. Capital ratios may also be equitable when the partners hire a manager to run the business and do not plan to take an active role in daily operations.

The three remaining ratios (items 3, 4, and 5) give specific recognition to differences among partners. These ratios provide salary allowances for time worked and interest allowances for capital invested. Then, the partnership allocates any remaining net income or net loss on a fixed ratio.

**Salaries to partners and interest on partners' capital are not expenses of the partnership.** Therefore, these items do not enter into the matching of expenses with revenues and the determination of net income or net loss. For a partnership, as for other entities, salaries and wages expense pertains to the cost of services performed by employees. Likewise, interest expense relates to the cost of borrowing from creditors. But partners, as owners, are not considered either **employees** or **creditors**. When the partnership agreement permits the partners to make monthly withdrawals of cash based on their "salary," the partnership debits these withdrawals to the partner's drawing account.

### SALARIES, INTEREST, AND REMAINDER ON A FIXED RATIO

Under income ratio (5) in the list above, the partnership must apply salaries and interest **before** it allocates the remainder on the specified fixed ratio. **This is true even if the provisions exceed net income. It is also true even if the partnership has suffered a net loss for the year.** The partnership's income statement should show, below net income, detailed information concerning the division of net income or net loss.

To illustrate, assume that King and Lee are co-partners in the Kingslee Company. The partnership agreement provides for: (1) salary allowances of \$8,400 to King and \$6,000 to Lee, (2) interest allowances of 10% on capital balances at the beginning of the year, and (3) the remainder equally. Capital balances on January 1 were King \$28,000, and Lee \$24,000. In 2012, partnership net income is \$22,000. The division of net income is as follows.

**Illustration 12-5**  
Division of net income schedule

| Kingslee Company                               |                        |                       |                        |

| <b>Interest allowance on partners' capital</b> |                        |                       |                        |
| Sara King (\$28,000 × 10%)                     | 2,800                  |                       |                        |
| Ray Lee (\$24,000 × 10%)                       |                        | 2,400                 |                        |
| Total interest allowance                       | <u>          </u>      | <u>          </u>     | <u>5,200</u>           |
| Total salaries and interest                    | 11,200                 | 8,400                 | 19,600                 |
| <b>Remaining income, \$2,400</b>               |                        |                       |                        |
| (\$22,000 – \$19,600)                          |                        |                       |                        |
| Sara King (\$2,400 × 50%)                      | 1,200                  |                       |                        |
| Ray Lee (\$2,400 × 50%)                        |                        | 1,200                 |                        |
| Total remainder                                | <u>          </u>      | <u>          </u>     | <u>2,400</u>           |
| <b>Total division of net income</b>            | <u><b>\$12,400</b></u> | <u><b>\$9,600</b></u> | <u><b>\$22,000</b></u> |

Kingslee records the division of net income as follows.

|         |  |                               |
|---------|--|-------------------------------|
| Dec. 31 | Income Summary<br>Sara King, Capital<br>Ray Lee, Capital<br>(To close net income to partners' capital) | 22,000<br><br>12,400<br>9,600 |
|---------|--|-------------------------------|

|   |   |   |   |    |         |
|---|---|---|---|----|---------|
| A | = | L | + | OE |         |
|   |   |   |   |    | -22,000 |
|   |   |   |   |    | +12,000 |
|   |   |   |   |    | +9,600  |

**Cash Flows**  
no effect

Now let's look at a situation in which the salary and interest allowances *exceed* net income. Assume that Kingslee Company's net income is only \$18,000. In this case, the salary and interest allowances will create a deficiency of \$1,600 (\$19,600 – \$18,000). The computations of the allowances are the same as those in the preceding example. Beginning with total salaries and interest, we complete the division of net income as shown in Illustration 12-6.

|  | <b>Sara<br/>King</b> | <b>Ray<br/>Lee</b> | <b>Total</b>    |
|--|----------------------|--------------------|-----------------|
| Total salaries and interest                                    | \$11,200             | \$8,400            | \$19,600        |
| <b>Remaining deficiency (\$1,600)</b><br>(\$18,000 – \$19,600) |                      |                    |                 |
| Sara King (\$1,600 × 50%)                                      | (800)                |                    |                 |
| Ray Lee (\$1,600 × 50%)  |                      | (800)              |                 |
| Total remainder  |                      |                    | (1,600)         |
| <b>Total division</b>  | <b>\$10,400</b>      | <b>\$7,600</b>     | <b>\$18,000</b> |

**Illustration 12-6**  
Division of net income—  
income deficiency

## Partnership Financial Statements

The financial statements of a partnership are similar to those of a proprietorship. The differences are due to the number of owners involved. The income statement for a partnership is identical to the income statement for a proprietorship except for the division of net income, as shown earlier.

The owners' equity statement for a partnership is called the **partners' capital statement**. It explains the changes in each partner's capital account and in total partnership capital during the year. Illustration 12-7 shows the partners' capital statement for Kingslee Company. It is based on the division of \$22,000 of net income in Illustration 12-5. The statement includes assumed data for the additional investment and drawings. The partnership prepares the partners' capital statement from the income statement and the partners' capital and drawing accounts.

### Study Objective [4]

Describe the form and content of partnership financial statements.

| <b>Kingslee Company</b><br>Partners' Capital Statement<br>For the Year Ended December 31, 2012 |                      |                    |                 |
|--|----------------------|--------------------|-----------------|
|  | <b>Sara<br/>King</b> | <b>Ray<br/>Lee</b> | <b>Total</b>    |
| Capital, January 1   | \$28,000             | \$24,000           | \$52,000        |
| Add: Additional investment   | 2,000                |                    | 2,000           |
| Net income   | 12,400               | 9,600              | 22,000          |
|  | 42,400               | 33,600             | 76,000          |
| Less: Drawings   | 7,000                | 5,000              | 12,000          |
| <b>Capital, December 31</b>  | <b>\$35,400</b>      | <b>\$28,600</b>    | <b>\$64,000</b> |

**Illustration 12-7**  
Partners' capital statement

### Helpful Hint

As in a proprietorship, partners' capital may change due to (1) additional investment, (2) drawings, and (3) net income or net loss.

The balance sheet for a partnership is the same as for a proprietorship except for the owner's equity section. For a partnership, the balance sheet shows the capital balances of each partner. The owners' equity section for Kingslee Company would show the following.

**Illustration 12-8**

Owners' equity section of a partnership balance sheet

| Kingslee Company<br>Balance Sheet (partial)<br>December 31, 2012 |               |                  |
|--|---------------|------------------|
| Total liabilities (assumed amount)                               |               | \$115,000        |
| Owners' equity   |               |                  |
| Sara King, capital   | \$35,400      |                  |
| Ray Lee, capital   | <u>28,600</u> |                  |
| Total owners' equity   |               | <u>64,000</u>    |
| Total liabilities and owners' equity                             |               | <u>\$179,000</u> |

**Do it!****Division of Net Income****action plan**

- ✓ Compute net income exclusive of any salaries to partners and interest on partners' capital.
- ✓ Deduct salaries to partners from net income.
- ✓ Apply the partners' income ratios to the remaining net income.
- ✓ Prepare the closing entry distributing net income or net loss among the partners' capital accounts.

LeeMay Company reports net income of \$57,000. The partnership agreement provides for salaries of \$15,000 to L. Lee and \$12,000 to R. May. They will share the remainder on a 60:40 basis (60% to Lee). L. Lee asks your help to divide the net income between the partners and to prepare the closing entry.

**Solution**

The division of net income is as follows.

|   | <u>L. Lee</u>   | <u>R. May</u>   | <u>Total</u>    |
|---|-----------------|-----------------|-----------------|
| Salary allowance                                | \$15,000        | \$12,000        | \$27,000        |
| Remaining income \$30,000 (\$57,000 – \$27,000) |                 |                 |                 |
| L. Lee (60% × \$30,000)                         | 18,000          |                 |                 |
| R. May (40% × \$30,000)                         |                 | 12,000          |                 |
| Total remaining income                          |                 |                 | <u>30,000</u>   |
| Total division of net income                    | <u>\$33,000</u> | <u>\$24,000</u> | <u>\$57,000</u> |

The closing entry for net income therefore is:

|   |        |        |
|---|--------|--------|
| Income Summary                                      | 57,000 |        |
| L. Lee, Capital                                     |        | 33,000 |
| R. May, Capital                                     |        | 24,000 |
| (To close net income to partners' capital accounts) |        |        |

Related exercise material: BE12-3, BE12-4, BE12-5, E12-4, E12-5, and **Do it!** 12-2.

**Liquidation of a Partnership****Study Objective [5]**

Explain the effects of the entries to record the liquidation of a partnership.

**Liquidation** of a business involves selling the assets of the firm, paying liabilities, and distributing any remaining assets. Liquidation may result from the sale of the business by mutual agreement of the partners, from the death of a partner, or from bankruptcy. **Partnership liquidation** ends both the legal and economic life of the entity.

From an accounting standpoint, the partnership should complete the accounting cycle for the final operating period prior to liquidation. This includes preparing

adjusting entries and financial statements. It also involves preparing closing entries and a post-closing trial balance. Thus, only balance sheet accounts should be open as the liquidation process begins.

In liquidation, the sale of noncash assets for cash is called **realization**. Any difference between book value and the cash proceeds is called the **gain or loss on realization**. To liquidate a partnership, it is necessary to:

1. Sell noncash assets for cash and recognize a gain or loss on realization.
2. Allocate gain/loss on realization to the partners based on their income ratios.
3. Pay partnership liabilities in cash.
4. Distribute remaining cash to partners on the basis of their **capital balances**.

**Each of the steps must be performed in sequence.** The partnership must pay creditors **before** partners receive any cash distributions. Also, an accounting entry must record each step.

When a partnership is liquidated, all partners may have credit balances in their capital accounts. This situation is called **no capital deficiency**. Or, one or more partners may have a debit balance in the capital account. This situation is termed a **capital deficiency**. To illustrate each of these conditions, assume that Ace Company is liquidated when its ledger shows the following assets, liabilities, and owners' equity accounts.

| Assets                 |                 | Liabilities and Owners' Equity |                 |
|------------------------|-----------------|--------------------------------|-----------------|
| Cash                   | \$ 5,000        | Notes payable                  | \$15,000        |
| Accounts receivable    | 15,000          | Accounts payable               | 16,000          |
| Inventory              | 18,000          | R. Arnet, capital              | 15,000          |
| Equipment              | 35,000          | P. Carey, capital              | 17,800          |
| Accum. depr.—equipment | (8,000)         | W. Eaton, capital              | 1,200           |
|                        | <u>\$65,000</u> |                                | <u>\$65,000</u> |

### Ethics Note

The process of selling noncash assets and then distributing the cash reduces the likelihood of partner disputes. If, instead, the partnership distributes noncash assets to partners to liquidate the firm, the partners would need to agree on the value of the noncash assets, which can be very difficult to determine.

### Illustration 12-9

Account balances prior to liquidation

## No Capital Deficiency

The partners of Ace Company agree to liquidate the partnership on the following terms: (1) The partnership will sell its noncash assets to Jackson Enterprises for \$75,000 cash. (2) The partnership will pay its partnership liabilities. The income ratios of the partners are 3:2:1, respectively. The steps in the liquidation process are as follows.

1. Ace sells the noncash assets (accounts receivable, inventory, and equipment) for \$75,000. The book value of these assets is \$60,000 (\$15,000 + \$18,000 + \$35,000 – \$8,000). Thus, Ace realizes a gain of \$15,000 on the sale. The entry is:

| (1)                                       |        |
|---|--------|
| Cash                                      | 75,000 |
| Accumulated Depreciation—Equipment        | 8,000  |
| Accounts Receivable                       | 15,000 |
| Inventory                                 | 18,000 |
| Equipment                                 | 35,000 |
| Gain on Realization                       | 15,000 |
| (To record realization of noncash assets) |        |

| A                 | = | L | + | OE      |
|-------------------|---|---|---|---------|
| +75,000           |   |   |   |         |
| +8,000            |   |   |   |         |
| –15,000           |   |   |   |         |
| –18,000           |   |   |   |         |
| –35,000           |   |   |   |         |
|                   |   |   |   | +15,000 |
| <b>Cash Flows</b> |   |   |   |         |
| +75,000           |   |   |   |         |

2. Ace allocates the \$15,000 gain on realization to the partners based on their income ratios, which are 3:2:1. The entry is:

|   |   |   |   |         |
|---|---|---|---|---------|
| A | = | L | + | OE      |
|   |   |   |   | -15,000 |
|   |   |   |   | +7,500  |
|   |   |   |   | +5,000  |
|   |   |   |   | +2,500  |

Cash Flows  
no effect

|  |        |       |
|--|--------|-------|
| (2)  |        |       |
| Gain on Realization                              | 15,000 |       |
| R. Arnet, Capital (\$15,000 × 3/6)               |        | 7,500 |
| P. Carey, Capital (\$15,000 × 2/6)               |        | 5,000 |
| W. Eaton, Capital (\$15,000 × 1/6)               |        | 2,500 |
| (To allocate gain to partners' capital accounts) |        |       |

3. Partnership liabilities consist of Notes Payable \$15,000 and Accounts Payable \$16,000. Ace pays creditors in full by a cash payment of \$31,000. The entry is:

|   |   |   |   |         |
|---|---|---|---|---------|
| A | = | L | + | OE      |
|   |   |   |   | -15,000 |
|   |   |   |   | -16,000 |
|   |   |   |   | -31,000 |

Cash Flows  
-31,000

|  |        |        |
|--|--------|--------|
| (3)  |        |        |
| Notes Payable                                  | 15,000 |        |
| Accounts Payable                               | 16,000 |        |
| Cash   |        | 31,000 |
| (To record payment of partnership liabilities) |        |        |

4. Ace distributes the remaining cash to the partners on the basis of **their capital balances**. After posting the entries in the first three steps, all partnership accounts, including Gain on Realization, will have zero balances except for four accounts: Cash \$49,000; R. Arnet, Capital \$22,500; P. Carey, Capital \$22,800; and W. Eaton, Capital \$3,700, as shown below.

| Cash        |               |            | R. Arnet, Capital |               | P. Carey, Capital |               | W. Eaton, Capital |              |
|-------------|---------------|------------|-------------------|---------------|-------------------|---------------|-------------------|--------------|
| Bal.        | 5,000         | (3) 31,000 | Bal.              | 15,000        | Bal.              | 17,800        | Bal.              | 1,200        |
| (1)         | 75,000        |            | (2)               | 7,500         | (2)               | 5,000         | (2)               | 2,500        |
| <b>Bal.</b> | <b>49,000</b> |            | <b>Bal.</b>       | <b>22,500</b> | <b>Bal.</b>       | <b>22,800</b> | <b>Bal.</b>       | <b>3,700</b> |

**Illustration 12-10**  
Ledger balances before distribution of cash

Ace records the distribution of cash as follows.

|   |   |   |   |         |
|---|---|---|---|---------|
| A | = | L | + | OE      |
|   |   |   |   | -22,500 |
|   |   |   |   | -22,800 |
|   |   |   |   | -3,700  |
|   |   |   |   | -49,000 |

Cash Flows  
-49,000

|  |        |        |
|--|--------|--------|
| (4)  |        |        |
| R. Arnet, Capital                            | 22,500 |        |
| P. Carey, Capital                            | 22,800 |        |
| W. Eaton, Capital                            | 3,700  |        |
| Cash   |        | 49,000 |
| (To record distribution of cash to partners) |        |        |

After posting this entry, all partnership accounts will have zero balances.

A word of caution: **Partnerships should not distribute remaining cash to partners on the basis of their income-sharing ratios.** On this basis, Arnet would receive three-sixths, or \$24,500, which would produce an erroneous debit balance of \$2,000. The income ratio is the proper basis for allocating net income or loss. **It is not a proper basis for making the final distribution of cash to the partners.**

**Alternative Terminology**

The schedule of cash payments is sometimes called a *safe cash payments schedule*.

**SCHEDULE OF CASH PAYMENTS**

The **schedule of cash payments** shows the distribution of cash to the partners in a partnership liquidation. A cash payments schedule is sometimes prepared to determine the distribution of cash to the partners in the liquidation of a partnership.

The schedule of cash payments is organized around the basic accounting equation. Illustration 12-11 shows the schedule for Ace Company. The numbers in parentheses refer to the four required steps in the liquidation of a partnership. They also identify the accounting entries that Ace must make. The cash payments schedule is especially useful when the liquidation process extends over a period of time.

| ACE COMPANY<br>Schedule of Cash Payments                     |                 |          |                 |          |                 |   |                   |          |                   |          |                   |

## Partnership Liquidation

### action plan

- ✓ First, sell the noncash assets and determine the gain.
- ✓ Allocate the gain to the partners based on their income ratios.
- ✓ Use cash to pay off liabilities.
- ✓ Distribute remaining cash on the basis of their capital balances.

**Solution**

### Capital Deficiency

A capital deficiency may result from recurring net losses, excessive drawings, or losses from realization suffered during liquidation. To illustrate, assume that Ace Company is on the brink of bankruptcy. The partners decide to liquidate by having a “going-out-of-business” sale. They sell merchandise at substantial discounts, and sell the equipment at auction. Cash proceeds from these sales and collections from customers total only \$42,000. Thus, the loss from liquidation is \$18,000 (\$60,000 – \$42,000). The steps in the liquidation process are as follows.

1. The entry for the realization of noncash assets is:

|            |          |          |          |           |   |            |
|------------|----------|----------|----------|-----------|---|------------|
| <b>A</b>   | <b>=</b> | <b>L</b> | <b>+</b> | <b>OE</b> |   | <b>(1)</b> |
| +42,000    |          |          |          |           | Cash                                      | 42,000     |
| +8,000     |          |          |          |           | Accumulated Depreciation—Equipment        | 8,000      |
|            |          |          |          |           | Loss on Realization                       | 18,000     |
|            |          |          |          |           | Accounts Receivable                       | 15,000     |
| -15,000    |          |          |          |           | Inventory                                 | 18,000     |
| -18,000    |          |          |          |           | Equipment                                 | 35,000     |
| -35,000    |          |          |          |           |   |            |
| Cash Flows |          |          |          |           | (To record realization of noncash assets) |            |
| +42,000    |          |          |          |           |   |            |

2. Ace allocates the loss on realization to the partners on the basis of their income ratios. The entry is:

|            |          |          |          |           |   |            |
|------------|----------|----------|----------|-----------|---|------------|
| <b>A</b>   | <b>=</b> | <b>L</b> | <b>+</b> | <b>OE</b> |   | <b>(2)</b> |
|            |          |          |          |           | R. Arnet, Capital (\$18,000 × 3/6)            | 9,000      |

**Illustration 12-12**  
Ledger balances before distribution of cash

Eaton has a capital deficiency of \$1,800, and so owes the partnership \$1,800. Arnet and Carey have a legally enforceable claim for that amount against Eaton's personal assets. Note that the distribution of cash is still made on the basis of capital balances. But the amount will vary depending on how Eaton settles the deficiency. Two alternatives are presented in the following sections.

**PAYMENT OF DEFICIENCY**

If the partner with the capital deficiency pays the amount owed the partnership, the deficiency is eliminated. To illustrate, assume that Eaton pays \$1,800 to the partnership. The entry is:

(a)

|   |                |  |
|---|----------------|--|
| Cash<br>W. Eaton, Capital<br>(To record payment of capital deficiency by Eaton) | 1,800<br>1,800 |  |
|---|----------------|--|

|                   |          |          |          |           |
|-------------------|----------|----------|----------|-----------|
| <b>A</b>          | <b>=</b> | <b>L</b> | <b>+</b> | <b>OE</b> |
|                   |          | +1,800   |          |           |
|                   |          |          |          | +1,800    |
| <b>Cash Flows</b> |          |          |          |           |
|                   |          | +1,800   |          |           |

After posting this entry, account balances are as follows.

| Cash               |            |  | R. Arnet, Capital |                   |           | P. Carey, Capital  |           |                 | W. Eaton, Capital |  |  |
|--------------------|------------|--|-------------------|-------------------|-----------|--------------------|-----------|-----------------|-------------------|--|--|
| Bal. 5,000         | (3) 31,000 |  | (2) 9,000         | Bal. 15,000       | (2) 6,000 | Bal. 17,800        | (2) 3,000 | Bal. 1,200      |                   |  |  |
| (1) 42,000         |            |  |                   |                   |           |                    |           |                 |                   |  |  |
| (a) 1,800          |            |  |                   | <b>Bal. 6,000</b> |           | <b>Bal. 11,800</b> |           | (a) 1,800       |                   |  |  |
| <b>Bal. 17,800</b> |            |  |                   |                   |           |                    |           | <b>Bal. -0-</b> |                   |  |  |

**Illustration 12-13**  
Ledger balances after paying capital deficiency

The cash balance of \$17,800 is now equal to the credit balances in the capital accounts (Arnet \$6,000 + Carey \$11,800). Ace now distributes cash on the basis of these balances. The entry is:

|  |                           |  |
|--|---------------------------|--|
| R. Arnet, Capital<br>P. Carey, Capital<br>Cash<br>(To record distribution of cash to the partners) | 6,000<br>11,800<br>17,800 |  |
|--|---------------------------|--|

|                   |          |          |          |           |
|-------------------|----------|----------|----------|-----------|
| <b>A</b>          | <b>=</b> | <b>L</b> | <b>+</b> | <b>OE</b> |
|                   |          | -6,000   |          |           |
|                   |          | -11,800  |          |           |
|                   |          | -17,800  |          |           |
| <b>Cash Flows</b> |          |          |          |           |
|                   |          | -17,800  |          |           |

After posting this entry, all accounts will have zero balances.

**NONPAYMENT OF DEFICIENCY**

If a partner with a capital deficiency is unable to pay the amount owed to the partnership, the partners with credit balances must absorb the loss. The partnership allocates the loss on the basis of the income ratios that exist between the partners with credit balances.

The income ratios of Arnet and Carey are 3:2, or 3/5 and 2/5, respectively. Thus, Ace would make the following entry to remove Eaton's capital deficiency.

|          |   |          |   |           |
|----------|---|----------|---|-----------|
| <b>A</b> | = | <b>L</b> | + | <b>OE</b> |
|          |   |          |   | -1,080    |
|          |   |          |   | -720      |
|          |   |          |   | +1,800    |

**Cash Flows**  
no effect

(a)

|   |       |       |
|---|-------|-------|
| R. Arnet, Capital (\$1,800 × 3/5)           | 1,080 |       |
| P. Carey, Capital (\$1,800 × 2/5)           | 720   |       |
| W. Eaton, Capital                           |       | 1,800 |
| (To record write-off of capital deficiency) |       |       |

After posting this entry, the cash and capital accounts will have the following balances.

| Cash        |               |            | R. Arnet, Capital |             | P. Carey, Capital |           | W. Eaton, Capital |               |

| (1)         | 42,000        |            | (a) 1,080         |             |                   | (a) 720   | (2)               | 3,000         |
|             |               |            |                   |             |                   |           | Bal.              | 1,200         |
| <b>Bal.</b> | <b>16,000</b> |            |                   | <b>Bal.</b> | <b>4,920</b>      |           | <b>Bal.</b>       | <b>11,080</b> |
|             |               |            |                   |             |                   |           | (a)               | 1,800         |
|             |               |            |                   |             |                   |           | <b>Bal.</b>       | <b>-0-</b>    |

**Illustration 12-14**

Ledger balances after nonpayment of capital deficiency

|          |   |          |   |           |
|----------|---|----------|---|-----------|
| <b>A</b> | = | <b>L</b> | + | <b>OE</b> |
|          |   |          |   | -4,920    |
|          |   |          |   | -11,080   |
|          |   |          |   | -16,000   |

**Cash Flows**  
-16,000

The cash balance (\$16,000) now equals the sum of the credit balances in the capital accounts (Arnet \$4,920 + Carey \$11,080). Ace records the distribution of cash as:

|  |        |        |
|--|--------|--------|
| R. Arnet, Capital                                | 4,920  |        |
| P. Carey, Capital                                | 11,080 |        |
| Cash   |        | 16,000 |
| (To record distribution of cash to the partners) |        |        |

After posting this entry, all accounts will have zero balances.

**Do it!**

**Partnership Liquidation**

**action plan**

- ✓ Allocate any unpaid capital deficiency to the partners with credit balances, based on their income ratios.
- ✓ After distribution of the deficiency, distribute cash to the remaining partners, based on their capital balances.

Kessington Company wishes to liquidate the firm by distributing the company's cash to the three partners. Prior to the distribution of cash, the company's balances are: Cash \$45,000; Rollings, Capital (Cr.) \$28,000; Havens, Capital (Dr.) \$12,000; and Ostergard, Capital (Cr.) \$29,000. The income ratios of the three partners are 4:4:2, respectively. Prepare the entry to record the absorption of Havens' capital deficiency by the other partners and the distribution of cash to the partners with credit balances.

**Solution**

|  |        |        |
|--|--------|--------|
| Rollings, Capital (\$12,000 × 4/6)           | 8,000  |        |
| Ostergard, Capital (\$12,000 × 2/6)          | 4,000  |        |
| Havens, Capital                              |        | 12,000 |
| (To record write-off of capital deficiency)  |        |        |
| Rollings, Capital (\$28,000 - \$8,000)       | 20,000 |        |
| Ostergard, Capital (\$29,000 - \$4,000)      | 25,000 |        |
| Cash   |        | 45,000 |
| (To record distribution of cash to partners) |        |        |

**COMPREHENSIVE****Do it!**

On January 1, 2012, the capital balances in Hollingsworth Company are Lois Holly \$26,000, and Jim Worth \$24,000. In 2012 the partnership reports net income of \$30,000. The income ratio provides for salary allowances of \$12,000 for Holly and \$10,000 to Worth and the remainder equally. Neither partner had any drawings in 2012.

**Instructions**

- (a) Prepare a schedule showing the distribution of net income in 2012.  
 (b) Journalize the division of 2012 net income to the partners.

**Solution to Comprehensive Do it!**

|     |   |                       |                      |                 |

|     |          |  | (To close net income to partners' capital) |  |        |  |        |

**action plan**

- ✓ Compute the net income of the partnership.
- ✓ Allocate the partners' salaries.
- ✓ Divide the remaining net income among the partners, applying the income/loss ratio.
- ✓ Journalize the division of net income in a closing entry.

## Summary of Study Objectives

**[1] Identify the characteristics of the partnership form of business organization.** The principal characteristics of a partnership are: (a) association of individuals, (b) mutual agency, (c) limited life, (d) unlimited liability, and (e) co-ownership of property.

**[2] Explain the accounting entries for the formation of a partnership.** When formed, a partnership records each partner's initial investment at the fair value of the assets at the date of their transfer to the partnership.

**[3] Identify the bases for dividing net income or net loss.** Partnerships divide net income or net loss on the basis of the income ratio, which may be (a) a fixed ratio, (b) a ratio based on beginning or average capital balances, (c) salaries to partners and the remainder on a fixed ratio, (d) interest on partners' capital and the remainder on a fixed ratio, and (e) salaries to partners, interest on partners' capital, and the remainder on a fixed ratio.

**[4] Describe the form and content of partnership financial statements.** The financial statements of a partnership are similar to those of a proprietorship. The principal differences are: (a) The partnership shows the division of net income on the income statement. (b) The owners' equity statement is called a partners' capital statement. (c) The partnership reports each partner's capital on the balance sheet.

**[5] Explain the effects of the entries to record the liquidation of a partnership.** When a partnership is liquidated, it is necessary to record the (a) sale of noncash assets, (b) allocation of the gain or loss on realization, (c) payment of partnership liabilities, and (d) distribution of cash to the partners on the basis of their capital balances.

## Glossary

**Capital deficiency** A debit balance in a partner's capital account after allocation of gain or loss. (p. 565).

**General partners** Partners who have unlimited liability for the debts of the firm. (p. 556).

**Income ratio** The basis for dividing net income and net loss in a partnership. (p. 560).

**Limited liability company** A form of business organization, usually classified as a partnership for tax purposes and usually with limited life, in which partners, who are called *members*, have limited liability. (p. 556).

**Limited liability partnership** A partnership of professionals in which partners are given limited liability and the public is protected from malpractice by insurance carried by the partnership. (p. 556).

**Limited partners** Partners whose liability for the debts of the firm is limited to their investment in the firm. (p. 556).

**Limited partnership** A partnership in which one or more general partners have unlimited liability and one or more partners have limited liability for the obligations of the firm. (p. 555).

**No capital deficiency** All partners have credit balances after allocation of gain or loss. (p. 565).

**Partners' capital statement** The owners' equity statement for a partnership which shows the changes in each partner's capital account and in total partnership capital during the year. (p. 563).

**Partnership** An association of two or more persons to carry on as co-owners of a business for profit. (p. 554).

**Partnership agreement** A written contract expressing the voluntary agreement of two or more individuals in a partnership. (p. 558).

**Partnership dissolution** A change in partners due to withdrawal or admission, which does not necessarily terminate the business. (p. 555).

**Partnership liquidation** An event that ends both the legal and economic life of a partnership. (p. 564).

**Schedule of cash payments** A schedule showing the distribution of cash to the partners in a partnership liquidation. (p. 566).

## APPENDIX 12A

### Admission and Withdrawal of Partners

The chapter explained how the basic accounting for a partnership works. We now look at how to account for a common occurrence in partnerships—the addition or withdrawal of a partner.

#### Admission of a Partner

The admission of a new partner results in the **legal dissolution** of the existing partnership and the beginning of a new one. From an economic standpoint, however, the admission of a new partner (or partners) may be of minor significance in the continuity of the business. For example, in large public accounting or law firms, partners are admitted annually without any change in operating policies. **To recognize the economic effects, it is necessary only to open a capital account for each new partner.** In the entries illustrated in this appendix, we assume that the accounting records of the predecessor firm will continue to be used by the new partnership.

A new partner may be admitted either by (1) purchasing the interest of one or more existing partners or (2) investing assets in the partnership. The former affects only the capital accounts of the partners who are parties to the transaction. The latter increases both net assets and total capital of the partnership.

#### PURCHASE OF A PARTNER'S INTEREST

The **admission** of a partner **by purchase of an interest** is a personal transaction between one or more existing partners and the new partner. Each party acts as an individual separate from the partnership entity. The individuals involved negotiate

#### Study Objective [6]

Explain the effects of the entries when a new partner is admitted.

#### Helpful Hint

In a purchase of an interest, the partnership is not a participant in the transaction. In this transaction, the new partner contributes *no* cash to the partnership.

the price paid. It may be equal to or different from the capital equity acquired. The purchase price passes directly from the new partner to the partners who are giving up part or all of their ownership claims.

Any money or other consideration exchanged is the personal property of the participants and **not** the property of the partnership. Upon purchase of an interest, the new partner acquires each selling partner's capital interest and income ratio.

Accounting for the purchase of an interest is straightforward. The partnership records record only the changes in partners' capital. **Partners' capital accounts are debited for any ownership claims sold.** At the same time, the new partner's capital account is credited for the capital equity purchased. Total assets, total liabilities, and total capital remain unchanged, as do all individual asset and liability accounts.

To illustrate, assume that L. Carson agrees to pay \$10,000 each to C. Ames and D. Barker for 33⅓% (one-third) of their interest in the Ames–Barker partnership. At the time of the admission of Carson, each partner has a \$30,000 capital balance. Both partners, therefore, give up \$10,000 of their capital equity. The entry to record the admission of Carson is:

|   |        |        |
|---|--------|--------|
| C. Ames, Capital                            | 10,000 |        |
| D. Barker, Capital                          | 10,000 |        |
| L. Carson, Capital                          |        | 20,000 |
| (To record admission of Carson by purchase) |        |        |

**Illustration 12A-1**

Ledger balances after purchase of a partner's interest

The effect of this transaction on net assets and partners' capital is shown below.

| Net Assets | C. Ames, Capital       | D. Barker, Capital     | L. Carson, Capital |
|------------|------------------------|------------------------|--------------------|
| 60,000     | <b>10,000</b>   30,000 | <b>10,000</b>   30,000 | <b>20,000</b>      |
|            | Bal. 20,000            | Bal. 20,000            |                    |

Note that net assets remain unchanged at \$60,000, and each partner has a \$20,000 capital balance. Ames and Barker continue as partners in the firm, but the capital interest of each has changed. The cash paid by Carson goes directly to the individual partners and not to the partnership.

**Regardless of the amount paid by Carson for the one-third interest, the entry is exactly the same.** If Carson pays \$12,000 each to Ames and Barker for one-third of the partnership, the partnership still makes the entry shown above.

**INVESTMENT OF ASSETS IN A PARTNERSHIP**

The admission of a partner by an investment of assets is a transaction between the new partner and the partnership. Often referred to simply as **admission by investment**, the transaction **increases both the net assets and total capital of the partnership.**

Assume, for example, that instead of purchasing an interest, Carson invests \$30,000 in cash in the Ames–Barker partnership for a 33⅓% capital interest. In such a case, the entry is:

|   |        |        |
|---|--------|--------|
| Cash  | 30,000 |        |
| L. Carson, Capital                            |        | 30,000 |
| (To record admission of Carson by investment) |        |        |

**Illustration 12A-2**

Ledger balances after investment of assets

The effects of this transaction on the partnership accounts would be:

| Net Assets    | C. Ames, Capital | D. Barker, Capital | L. Carson, Capital |
|---------------|------------------|--------------------|--------------------|
| 60,000        |                  | 30,000             |                    |
| <b>30,000</b> |                  |                    | <b>30,000</b>      |
| Bal. 90,000   |                  |                    |                    |

Note that both net assets and total capital have increased by \$30,000.

Remember that Carson's one-third capital interest might not result in a one-third income ratio. The new partnership agreement should specify Carson's income ratio, and it may or may not be equal to the one-third capital interest.

The comparison of the net assets and capital balances in Illustration 12A-3 shows the different effects of the purchase of an interest and admission by investment.

### Illustration 12A-3

Comparison of purchase of an interest and admission by investment

| Purchase of an Interest |                 | Admission by Investment |                 |
|-------------------------|-----------------|-------------------------|-----------------|
| <b>Net assets</b>       | <b>\$60,000</b> | <b>Net assets</b>       | <b>\$90,000</b> |
| Capital                 |                 | Capital                 |                 |
| C. Ames                 | \$20,000        | C. Ames                 | \$30,000        |
| D. Barker               | 20,000          | D. Barker               | 30,000          |
| L. Carson               | 20,000          | L. Carson               | 30,000          |
| <b>Total capital</b>    | <b>\$60,000</b> | <b>Total capital</b>    | <b>\$90,000</b> |

When a new partner purchases an interest, the total net assets and total capital of the partnership *do not change*. When a partner is admitted by investment, both the total net assets and the total capital *change*.

In the case of admission by investment, further complications occur when the new partner's investment differs from the capital equity acquired. When those amounts are not the same, the difference is considered a **bonus** either to (1) the existing (old) partners or (2) the new partner.

**Bonus to Old Partners.** For both personal and business reasons, the existing partners may be unwilling to admit a new partner without receiving a bonus. In an established firm, existing partners may insist on a bonus as compensation for the work they have put into the company over the years. Two accounting factors underlie the business reason: First, total partners' capital equals the **book value** of the recorded net assets of the partnership. When the new partner is admitted, the fair values of assets such as land and buildings may be higher than their book values. The bonus will help make up the difference between fair value and book value. Second, when the partnership has been profitable, goodwill may exist. But, the partnership balance sheet does not report goodwill. The new partner is usually willing to pay the bonus to become a partner.

A bonus to old partners results when the new partner's investment in the firm is greater than the capital credit on the date of admittance. The bonus results in **an increase in the capital balances of the old partners. The partnership allocates the bonus to them on the basis of their income ratios before the admission of the new partner.** To illustrate, assume that the Bart–Cohen partnership, owned by Sam Bart and Tom Cohen, has total capital of \$120,000. Lea Eden acquires a 25% ownership (capital) interest in the partnership by making a cash investment of \$80,000. The procedure for determining Eden's capital credit and the bonus to the old partners is as follows.

- Determine the total capital of the new partnership:** Add the new partner's investment to the total capital of the old partnership. In this case, the total capital of the new firm is \$200,000, computed as follows.

|                                       |                  |
|---------------------------------------|------------------|
| Total capital of existing partnership | \$120,000        |
| Investment by new partner, Eden       | <u>80,000</u>    |
| Total capital of new partnership      | <u>\$200,000</u> |

- Determine the new partner's capital credit:** Multiply the total capital of the new partnership by the new partner's ownership interest. Eden's capital credit is \$50,000 ( $\$200,000 \times 25\%$ ).
- Determine the amount of bonus:** Subtract the new partner's capital credit from the new partner's investment. The bonus in this case is \$30,000 ( $\$80,000 - \$50,000$ ).
- Allocate the bonus to the old partners on the basis of their income ratios:** Assuming the ratios are Bart 60%, and Cohen 40%, the allocation is: Bart \$18,000 ( $\$30,000 \times 60\%$ ) and Cohen \$12,000 ( $\$30,000 \times 40\%$ ).

The entry to record the admission of Eden is:

|   |        |        |
|---|--------|--------|
| Cash  | 80,000 |        |
| Sam Bart, Capital                                       |        | 18,000 |
| Tom Cohen, Capital                                      |        | 12,000 |
| Lea Eden, Capital                                       |        | 50,000 |
| (To record admission of Eden and bonus to old partners) |        |        |

|                   |   |   |   |   |
|-------------------|---|---|---|---|
| A                 | = | L | + | OE  |
| +80,000           |   |   |   | +18,000   |
|                   |   |   |   | +12,000   |
|                   |   |   |   | +50,000   |
| <hr/>             |   |   |   |   |
| <b>Cash Flows</b> |   |   |   |   |
| +80,000           |   |   |   |  |

**Bonus to New Partner.** A bonus to a new partner results when the new partner's investment in the firm is less than his or her capital credit. This may occur when the new partner possesses special attributes that the partnership wants. For example, the new partner may be able to supply cash that the firm needs for expansion or to meet maturing debts. Or the new partner may be a recognized expert in a relevant field. Thus, an engineering firm may be willing to give a renowned engineer a bonus to join the firm. The partners of a restaurant may offer a bonus to a sports celebrity in order to add the athlete's name to the partnership. A bonus to a new partner may also result when recorded book values on the partnership books are higher than their fair values.

A bonus to a new partner results in a **decrease in the capital balances of the old partners. The amount of the decrease for each partner is based on the income ratios before the admission of the new partner.** To illustrate, assume that Lea Eden invests \$20,000 in cash for a 25% ownership interest in the Bart–Cohen partnership. The computations for Eden's capital credit and the bonus are as follows, using the four procedures described in the preceding section.

|   |           |
|---|-----------|
| 1. Total capital of Bart–Cohen partnership                  | \$120,000 |
| Investment by new partner, Eden                             | 20,000    |
| Total capital of new partnership                            | \$140,000 |
| 2. <b>Eden's capital credit</b> ( $25\% \times \$140,000$ ) | \$ 35,000 |
| 3. <b>Bonus to Eden</b> ( $\$35,000 - \$20,000$ )           | \$ 15,000 |
| 4. Allocation of bonus to old partners:                     |           |
| Bart ( $\$15,000 \times 60\%$ )                             | \$9,000   |
| Cohen ( $\$15,000 \times 40\%$ )                            | 6,000     |
|   | \$ 15,000 |

**Illustration 12A-4**  
Computation of capital credit and bonus to new partner

The partnership records the admission of Eden as follows.

|  |        |        |
|--|--------|--------|
| Cash                                   | 20,000 |        |
| Sam Bart, Capital                      |        | 9,000  |
| Tom Cohen, Capital                     |        | 6,000  |
| Lea Eden, Capital                      |        | 35,000 |
| (To record Eden's admission and bonus) |        |        |

|                   |   |   |   |   |
|-------------------|---|---|---|---|
| A                 | = | L | + | OE  |
| +20,000           |   |   |   | -9,000  |
|                   |   |   |   | -6,000  |
|                   |   |   |   | +35,000   |
| <hr/>             |   |   |   |   |
| <b>Cash Flows</b> |   |   |   |   |
| +20,000           |   |   |   |  |

## Withdrawal of a Partner

### Study Objective [7]

Describe the effects of the entries when a partner withdraws from the firm.

Now let's look at the opposite situation—the withdrawal of a partner. A partner may withdraw from a partnership **voluntarily**, by selling his or her equity in the firm. Or, he or she may withdraw **involuntarily**, by reaching mandatory retirement age or by dying. The withdrawal of a partner, like the admission of a partner, legally dissolves the partnership. The legal effects may be recognized by dissolving the firm. However, it is customary to record only the economic effects of the partner's withdrawal, while the firm continues to operate and reorganizes itself legally.

As indicated earlier, the partnership agreement should specify the terms of withdrawal. The withdrawal of a partner may be accomplished by (1) payment from partners' personal assets or (2) payment from partnership assets. The former affects only the partners' capital accounts. The latter decreases total net assets and total capital of the partnership.

### PAYMENT FROM PARTNERS' PERSONAL ASSETS

**Withdrawal by payment from partners' personal assets** is a personal transaction between the partners. **It is the direct opposite of admitting a new partner who purchases a partner's interest.** The remaining partners pay the retiring partner directly from their personal assets. **Partnership assets are not involved in any way, and total capital does not change.** The effect on the partnership is limited to changes in the partners' capital balances.

To illustrate, assume that partners Morz, Nead, and Odom have capital balances of \$25,000, \$15,000, and \$10,000, respectively. Morz and Nead agree to buy out Odom's interest. Each of them agrees to pay Odom \$8,000 in exchange for one-half of Odom's total interest of \$10,000. The entry to record the withdrawal is:

|   |   |   |   |    |         |
|---|---|---|---|----|---------|
| A | = | L | + | OE |         |
|   |   |   |   |    | -10,000 |
|   |   |   |   |    | +5,000  |
|   |   |   |   |    | +5,000  |

**Cash Flows**  
no effect

|   |        |       |
|---|--------|-------|
| J. Odom, Capital                        | 10,000 |       |
| A. Morz, Capital                        |        | 5,000 |
| M. Nead, Capital                        |        | 5,000 |
| (To record purchase of Odom's interest) |        |       |

The effect of this entry on the partnership accounts is shown below.

| Net Assets | A. Morz, Capital | M. Nead, Capital | J. Odom, Capital |
|------------|------------------|------------------|------------------|
| 50,000     | 25,000           | 15,000           | <b>10,000</b>    |
|            | <b>5,000</b>     | <b>5,000</b>     |                  |
|            | Bal. 30,000      | Bal. 20,000      | Bal. -0-         |

#### Illustration 12A-5

Ledger balances after payment from partners' personal assets

Note that net assets and total capital remain the same at \$50,000.

What about the \$16,000 paid to Odom? You've probably noted that it is not recorded. The entry debited Odom's capital only for \$10,000, not for the \$16,000 that she received. Similarly, both Morz and Nead credit their capital accounts for only \$5,000, not for the \$8,000 they each paid.

After Odom's withdrawal, Morz and Nead will share net income or net loss equally unless they indicate another income ratio in the partnership agreement.

### PAYMENT FROM PARTNERSHIP ASSETS

**Withdrawal by payment from partnership assets** is a transaction that involves the partnership. **Both partnership net assets and total capital decrease as a result.** Using partnership assets to pay for a withdrawing partner's interest is the **reverse** of admitting a partner through the investment of assets in the partnership.

Many partnership agreements provide that the amount paid should be based on the fair value of the assets at the time of the partner's withdrawal. When this

basis is required, some maintain that any differences between recorded asset balances and their fair values should be (1) recorded by an adjusting entry, and (2) allocated to all partners on the basis of their income ratios. This position has serious flaws. Recording the revaluations violates the cost principle, which requires that assets be stated at original cost. It also violates the going-concern assumption, which assumes the entity will continue indefinitely. The terms of the partnership contract should not dictate the accounting for this event.

In accounting for a withdrawal by payment from partnership assets, the partnership should not record asset revaluations. Instead, it should consider any difference between the amount paid and the withdrawing partner's capital balance as a **bonus** to the retiring partner or to the remaining partners.

**Bonus to Retiring Partner.** A partnership may pay a bonus to a retiring partner when:

1. The fair value of partnership assets is more than their book value,
2. There is unrecorded goodwill resulting from the partnership's superior earnings record, or
3. The remaining partners are eager to remove the partner from the firm.

**The partnership deducts the bonus from the remaining partners' capital balances on the basis of their income ratios at the time of the withdrawal.**

To illustrate, assume that the following capital balances exist in the RST partnership: Roman \$50,000, Sand \$30,000, and Terk \$20,000. The partners share income in the ratio of 3 : 2 : 1, respectively. Terk retires from the partnership and receives a cash payment of \$25,000 from the firm. The procedure for determining the bonus to the retiring partner and the allocation of the bonus to the remaining partners is as follows.

1. **Determine the amount of the bonus:** Subtract the retiring partner's capital balance from the cash paid by the partnership. The bonus in this case is \$5,000 (\$25,000 - \$20,000).
2. **Allocate the bonus to the remaining partners on the basis of their income ratios:** The ratios of Roman and Sand are 3 : 2. Thus, the allocation of the \$5,000 bonus is: Roman \$3,000 ( $\$5,000 \times 3/5$ ) and Sand \$2,000 ( $\$5,000 \times 2/5$ ).

The partnership records the withdrawal of Terk as follows.

|   |        |        |
|---|--------|--------|
| B. Terk, Capital                            | 20,000 |        |
| F. Roman, Capital                           | 3,000  |        |
| D. Sand, Capital                            | 2,000  |        |
| Cash  |        | 25,000 |
| (To record withdrawal of and bonus to Terk) |        |        |

The remaining partners, Roman and Sand, will recover the bonus given to Terk as the partnership sells or uses the undervalued assets.

**Bonus to Remaining Partners.** The retiring partner may give a bonus to the remaining partners when:

1. Recorded assets are overvalued,
2. The partnership has a poor earnings record, or
3. The partner is eager to leave the partnership.

In such cases, the cash paid to the retiring partner will be less than the retiring partner's capital balance. **The partnership allocates (credits) the bonus to the capital accounts of the remaining partners on the basis of their income ratios.**

|         |   | +2,400  |   |    |
|         |   | +1,600  |   |    |
| -16,000 |   |         |   |    |

**Cash Flows**

-16,000

To illustrate, assume instead that the partnership pays Terk only \$16,000 for her \$20,000 equity when she withdraws from the partnership. In that case:

1. The bonus to remaining partners is \$4,000 (\$20,000 – \$16,000).
2. The allocation of the \$4,000 bonus is: Roman \$2,400 ( $\$4,000 \times 3/5$ ) and Sand \$1,600 ( $\$4,000 \times 2/5$ ).

Under these circumstances, the entry to record the withdrawal is:

|   |  |        |  |                          |
|---|--|--------|--|--------------------------|
| B. Terk, Capital<br>F. Roman, Capital<br>D. Sand, Capital<br>Cash<br>(To record withdrawal of Terk and bonus to remaining partners) |  | 20,000 |  | 2,400<br>1,600<br>16,000 |
|---|--|--------|--|--------------------------|

Note that if Sand had withdrawn from the partnership, Roman and Terk would divide any bonus on the basis of their income ratio, which is 3 : 1 or 75% and 25%.

**DEATH OF A PARTNER**

The death of a partner dissolves the partnership. But partnership agreements usually contain a provision for the surviving partners to continue operations. When a partner dies, it usually is necessary to determine the partner's equity at the date of death. This is done by (1) determining the net income or loss for the year to date, (2) closing the books, and (3) preparing financial statements. The partnership agreement may also require an independent audit and a revaluation of assets.

The surviving partners may agree to purchase the deceased partner's equity from their personal assets. Or they may use partnership assets to settle with the deceased partner's estate. In both instances, the entries to record the withdrawal of the partner are similar to those presented earlier.

To facilitate payment from partnership assets, some partnerships obtain life insurance policies on each partner, with the partnership named as the beneficiary. The partnership then uses the proceeds from the insurance policy on the deceased partner to settle with the estate.

## Summary of Study Objectives for Appendix 12A

**[6] Explain the effects of the entries when a new partner is admitted.** The entry to record the admittance of a new partner by purchase of a partner's interest affects only partners' capital accounts. The entries to record the admittance by investment of assets in the partnership (a) increase both net assets and total capital and (b) may result in recognition of a bonus to either the old partners or the new partner.

**[7] Describe the effects of the entries when a partner withdraws from the firm.** The entry to record a withdrawal from the firm when the partners pay from their personal assets affects only partners' capital accounts. The entry to record a withdrawal when payment is made from partnership assets (a) decreases net assets and total capital and (b) may result in recognizing a bonus either to the retiring partner or the remaining partners.

## Glossary for Appendix 12A

**Admission by investment** Admission of a partner by investing assets in the partnership, causing both partnership net assets and total capital to increase. (p. 573).

**Admission by purchase of an interest** Admission of a partner in a personal transaction between one or more existing partners and the new partner; does not change total partnership assets or total capital. (p. 572).

**Withdrawal by payment from partners' personal assets** Withdrawal of a partner in a personal transaction between partners; does not change total partnership assets or total capital. (p. 576).

**Withdrawal by payment from partnership assets** Withdrawal of a partner in a transaction involving the partnership, causing both partnership net assets and total capital to decrease. (p. 576).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

\*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## Self-Test Questions

Answers are on page 591.

- (SO 1) 1. Which of the following is *not* a characteristic of a partnership?
- Taxable entity.
  - Co-ownership of property.
  - Mutual agency.
  - Limited life.
- (SO 1) 2. A partnership agreement should include each of the following except:
- names and capital contributions of partners.
  - rights and duties of partners as well as basis for sharing net income or loss.
  - basis for splitting partnership income taxes.
  - provision for withdrawal of assets.
- (SO 1) 3. The advantages of a partnership do *not* include:
- ease of formation.
  - unlimited liability.
  - freedom from government regulation.
  - ease of decision making.
- (SO 2) 4. Upon formation of a partnership, each partner's initial investment of assets should be recorded at their:
- book values.
  - cost.
  - fair values.
  - appraised values.
- (SO 2) 5. Ben and Sam Jenkins formed a partnership. Ben contributed \$8,000 cash and a used truck that originally cost \$35,000 and had accumulated depreciation of \$15,000. The truck's fair value was \$16,000. Sam, a builder, contributed a new storage garage. His cost of construction was \$40,000. The garage has a fair value of \$55,000. What is the combined total capital that would be recorded on the partnership books for the two partners?
- \$79,000.
  - \$60,000.
  - \$75,000.
  - \$90,000.
- (SO 3) 6. The NBC Company reports net income of \$60,000. If partners N, B, and C have an income ratio of 50%, 30%, and 20%, respectively, C's share of the net income is:
- \$30,000.
  - \$12,000.
  - \$18,000.
  - No correct answer is given.
- (SO 3) 7. Using the data in (6) above, what is B's share of net income if the percentages are applicable after each partner receives a \$10,000 salary allowance?
- \$12,000.
  - \$20,000.
  - \$19,000.
  - \$21,000.
- (SO 3) 8. To close a partner's drawing account, an entry must be made that:
- debits that partner's drawing account and credits Income Summary.
  - debits that partner's drawing account and credits that partner's capital account.
  - credits that partner's drawing account and debits that partner's capital account.
  - credits that partner's drawing account and debits the firm's dividend account.
9. Which of the following statements about partnership financial statements is *true*?
- Details of the distribution of net income are shown in the owners' equity statement.
  - The distribution of net income is shown on the balance sheet.
  - Only the total of all partner capital balances is shown in the balance sheet.
  - The owners' equity statement is called the partners' capital statement.
10. In the liquidation of a partnership, it is necessary to (1) distribute cash to the partners, (2) sell noncash assets, (3) allocate any gain or loss on realization to the partners, and (4) pay liabilities. These steps should be performed in the following order:
- (2), (3), (4), (1).
  - (2), (3), (1), (4).
  - (3), (2), (1), (4).
  - (3), (2), (4), (1).
- Use the following account balance information for *Creeksville Partnership* to answer questions 11 and 12. Income ratios are 2 : 4 : 4 for Harriet, Mike, and Elly, respectively.
- | Assets              |                  | Liabilities and Owners' Equity |                  |
|---------------------|------------------|--------------------------------|------------------|
| Cash                | \$ 9,000         | Accounts payable               | \$ 21,000        |
| Accounts receivable | 22,000           | Harriet, capital               | 23,000           |
| Inventory           | 73,000           | Mike, capital                  | 8,000            |
|                     |                  | Elly, capital                  | 52,000           |
|                     | <u>\$104,000</u> |                                | <u>\$104,000</u> |
11. Assume that, as part of liquidation proceedings, Creeksville sells its noncash assets for \$85,000. The amount of cash that would ultimately be distributed to Elly would be:
- \$52,000.
  - \$48,000.
  - \$34,000.
  - \$86,000.
12. Assume that, as part of liquidation proceedings, Creeksville sells its noncash assets for \$60,000. As a result, one of the partners has a capital deficiency which that partner decides not to repay. The amount of cash that would ultimately be distributed to Elly would be:
- \$52,000.
  - \$38,000.
  - \$24,000.
  - \$34,000.
- \*13. Louisa Santiago purchases 50% of Leo Lemon's capital interest in the K & L partnership for \$22,000. If the capital

- \*20. Tracy Harper has a \$39,000 capital balance in a partnership. She sells her interest to Kim Remington for \$45,000 cash. What entry is made by the partnership for this transaction?
- \*21. Debbie Perry retires from the partnership of Garland, Newlin, and Perry. She receives \$85,000 of partnership assets in settlement of her capital balance of \$77,000. Assuming that the income-sharing ratios are 5 : 3 : 2, respectively, how much of Perry's bonus is debited to Newlin's capital account?
- \*22. Your roommate argues that partnership assets should be revalued in situations like those in question 21. Why is this generally not done?
- \*23. How is a deceased partner's equity determined?
24.  PEPSICO Why is PepsiCo not a partnership?

## Brief Exercises

**BE12-1** Eustace Scrubb and Will Poulter decide to organize the ALL-Star partnership. Scrubb invests \$15,000 cash, and Poulter contributes \$10,000 cash and equipment having a book value of \$3,500. Prepare the entry to record Poulter's investment in the partnership, assuming the equipment has a fair value of \$5,000.

*Journalize entries in forming a partnership.*

(SO 2)

**BE12-2** Rhince and Rynelf decide to merge their proprietorships into a partnership called Dawn Treader Company. The balance sheet of Rynelf Co. shows:

*Prepare portion of opening balance sheet for partnership.*

(SO 2)

|                                       |          |          |
|---------------------------------------|----------|----------|
| Accounts receivable                   | \$16,000 |          |
| Less: Allowance for doubtful accounts | 1,200    | \$14,800 |
| Equipment                             | 20,000   |          |
| Less: Accumulated depreciation—equip. | 7,000    | 13,000   |

The partners agree that the net realizable value of the receivables is \$13,500 and that the fair value of the equipment is \$11,000. Indicate how the accounts should appear in the opening balance sheet of the partnership.

**BE12-3** Pug Bern Co. reports net income of \$70,000. The income ratios are Pug 60% and Bern 40%. Indicate the division of net income to each partner, and prepare the entry to distribute the net income.

*Journalize the division of net income using fixed income ratios.*

(SO 3)

**BE12-4** SDT Co. reports net income of \$55,000. Partner salary allowances are Sweet \$15,000, Drinian \$5,000, and Tavros \$5,000. Indicate the division of net income to each partner, assuming the income ratio is 50 : 30 : 20, respectively.

*Compute division of net income with a salary allowance and fixed ratios.*

(SO 3)

**BE12-5** Lill & Dil Co. reports net income of \$28,000. Interest allowances are Lill \$7,000 and Dil \$5,000; salary allowances are Lill \$15,000 and Dil \$10,000; the remainder is shared equally. Show the distribution of income on the income statement.

*Show division of net income when allowances exceed net income.*

(SO 3)

**BE12-6** After liquidating noncash assets and paying creditors, account balances in the Kidz Co. are Cash \$19,000, A Capital (Cr.) \$8,000, B Capital (Cr.) \$7,000, and C Capital (Cr.) \$4,000. The partners share income equally. Journalize the final distribution of cash to the partners.

*Journalize final cash distribution in liquidation.*

(SO 5)

\***BE12-7** Beta Co. capital balances are: Ace \$30,000, Bly \$25,000, and Gumpus \$20,000. The partners share income equally. Rhoop is admitted to the firm by purchasing one-half of Gumpus's interest for \$13,000. Journalize the admission of Rhoop to the partnership.

*Journalize admission by purchase of an interest.*

(SO 6)

\***BE12-8** In Coriakin Co., capital balances are Gael \$40,000 and Nausus \$50,000. The partners share income equally. Slaver is admitted to the firm with a 45% interest by an investment of cash of \$52,000. Journalize the admission of Slaver.

*Journalize admission by investment.*

(SO 6)

\***BE12-9** Capital balances in Midway Co. are Mirko \$40,000, Neil \$30,000, and Grillini \$18,000. Mirko and Neil each agree to pay Grillini \$12,000 from their personal assets. Mirko and Neil each receive 50% of Grillini's equity. The partners share income equally. Journalize the withdrawal of Grillini.

*Journalize withdrawal paid by personal assets.*

(SO 7)

\***BE12-10** Data pertaining to Midway Co. are presented in BE12-9. Instead of payment from personal assets, assume that Grillini receives \$24,000 from partnership assets in withdrawing from the firm. Journalize the withdrawal of Grillini.

*Journalize withdrawal paid by partnership assets.*

(SO 7)

## Do it! Review

Analyze statements about partnership organization.

(SO 1)

**Do it! 12-1** Indicate whether each of the following statements is true or false.

- \_\_\_\_\_ 1. Each partner is personally and individually liable for all partnership liabilities.
- \_\_\_\_\_ 2. If a partnership dissolves, each partner has a claim to the specific assets he/she contributed to the firm.
- \_\_\_\_\_ 3. In a limited partnership, all partners have limited liability.
- \_\_\_\_\_ 4. A major advantage of regular partnership is that it is simple and inexpensive to create and operate.
- \_\_\_\_\_ 5. Members of a limited liability company can take an active management role.

Divide net income and prepare closing entry.

(SO 3)

**Do it! 12-2** Villa America Company reported net income of \$85,000. The partnership agreement provides for salaries of \$25,000 to Kibra and \$18,000 to Devrish. They divide the remainder 40% to Kibra and 60% to Devrish. Kibra asks your help to divide the net income between the partners and to prepare the closing entry.

Complete schedule of partnership liquidation payments.

(SO 5)

**Do it! 12-3** The partners of CS Company have decided to liquidate their business. Noncash assets were sold for \$125,000. The income ratios of the partners Arabella, Dufflepud, and Davies are 3 : 2 : 3, respectively. Complete the following schedule of cash payments for CS Company

|   | A  | B      | C | D              | E | F           | G | H                 | I | J                  | K | L               |
|---|--|--------|---|----------------|---|-------------|---|-------------------|---|--------------------|---|-----------------|
| 1 | Item   | Cash   | + | Noncash Assets | = | Liabilities | + | Arabella, Capital | + | Dufflepud, Capital | + | Davies, Capital |
| 2 | Balances before liquidation                          | 15,000 |   | 90,000         |   | 40,000      |   | 20,000            |   | 32,000             |   | 13,000          |
| 3 | <b>Sale of noncash assets and allocation of gain</b> |        |   |                |   |             |   |                   |   |                    |   |                 |
| 4 | New balances   |        |   |                |   |             |   |                   |   |                    |   |                 |
| 5 | <b>Pay liabilities</b>                               |        |   |                |   |             |   |                   |   |                    |   |                 |
| 6 | New balances   |        |   |                |   |             |   |                   |   |                    |   |                 |
| 7 | <b>Cash distribution to partners</b>                 |        |   |                |   |             |   |                   |   |                    |   |                 |
| 8 | Final balances                                       |        |   |                |   |             |   |                   |   |                    |   |                 |

Prepare entries to record absorption of capital deficiency and distribution of cash.

(SO 5)

**Do it! 12-4** Granger Company wishes to liquidate the firm by distributing the company's cash to the three partners. Prior to the distribution of cash, the company's balances are: Cash \$66,000; Moffit, Capital (Cr.) \$47,000; Nation, Capital (Dr.) \$21,000; and Davis, Capital (Cr.) \$40,000. The income ratios of the three partners are 3 : 3 : 4, respectively. Prepare the entry to record the absorption of Nation's capital deficiency by the other partners and the distribution of cash to the partners with credit balances.

## Exercises

Identify characteristics of partnership.

(SO 1)

**E12-1** David Tennant has prepared the following list of statements about partnerships.

1. A partnership is an association of three or more persons to carry on as co-owners of a business for profit.
2. The legal requirements for forming a partnership can be quite burdensome.
3. A partnership is not an entity for financial reporting purposes.
4. The net income of a partnership is taxed as a separate entity.
5. The act of any partner is binding on all other partners, even when partners perform business acts beyond the scope of their authority.
6. Each partner is personally and individually liable for all partnership liabilities.
7. When a partnership is dissolved, the assets legally revert to the original contributor.

8. In a limited partnership, one or more partners have unlimited liability and one or more partners have limited liability for the debts of the firm.
9. Mutual agency is a major advantage of the partnership form of business.

**Instructions**

Identify each statement as true or false. If false, indicate how to correct the statement.

**E12-2** K. Billie, S. Piper, and E. Rose are forming a partnership. Billie is transferring \$50,000 of personal cash to the partnership. Piper owns land worth \$15,000 and a small building worth \$80,000, which she transfers to the partnership. Rose transfers to the partnership cash of \$9,000, accounts receivable of \$32,000 and equipment worth \$19,000. The partnership expects to collect \$29,000 of the accounts receivable.

*Journalize entry for formation of a partnership.*

(SO 2)

**Instructions**

- (a) Prepare the journal entries to record each of the partners' investments.
- (b) What amount would be reported as total owners' equity immediately after the investments?

**E12-3** Rose Tyler has owned and operated a proprietorship for several years. On January 1, she decides to terminate this business and become a partner in the firm of Tyler and Sigma. Tyler's investment in the partnership consists of \$12,000 in cash, and the following assets of the proprietorship: accounts receivable \$14,000 less allowance for doubtful accounts of \$2,000, and equipment \$20,000 less accumulated depreciation of \$4,000. It is agreed that the allowance for doubtful accounts should be \$3,000 for the partnership. The fair value of the equipment is \$13,500.

*Journalize entry for formation of a partnership.*

(SO 2)

**Instructions**

Journalize Tyler's admission to the firm of Tyler and Sigma.

**E12-4** Martha and Jones have capital balances on January 1 of \$50,000 and \$40,000, respectively. The partnership income-sharing agreement provides for (1) annual salaries of \$20,000 for Martha and \$12,000 for Jones, (2) interest at 10% on beginning capital balances, and (3) remaining income or loss to be shared 60% by Martha and 40% by Jones.

*Prepare schedule showing distribution of net income and closing entry.*

(SO 3)

**Instructions**

- (a) Prepare a schedule showing the distribution of net income, assuming net income is (1) \$50,000 and (2) \$36,000.
- (b) Journalize the allocation of net income in each of the situations above.

**E12-5** Aikman (beginning capital, \$60,000) and Rory (beginning capital \$90,000) are partners. During 2012, the partnership earned net income of \$70,000, and Aikman made drawings of \$18,000 while Rory made drawings of \$24,000.

*Prepare journal entries to record allocation of net income.*

(SO 3)

**Instructions**

- (a) Assume the partnership income-sharing agreement calls for income to be divided 45% to Aikman and 55% to Rory. Prepare the journal entry to record the allocation of net income.
- (b) Assume the partnership income-sharing agreement calls for income to be divided with a salary of \$30,000 to Aikman and \$25,000 to Rory, with the remainder divided 45% to Aikman and 55% to Rory. Prepare the journal entry to record the allocation of net income.
- (c) Assume the partnership income-sharing agreement calls for income to be divided with a salary of \$40,000 to Aikman and \$35,000 to Rory, interest of 10% on beginning capital, and the remainder divided 50%–50%. Prepare the journal entry to record the allocation of net income.
- (d) Compute the partners' ending capital balances under the assumption in part (c).

**E12-6** For Starrite Co., beginning capital balances on January 1, 2012, are Donna Noble \$20,000 and Amy Bond \$18,000. During the year, drawings were Noble \$8,000 and Bond \$5,000. Net income was \$30,000, and the partners share income equally.

*Prepare partners' capital statement and partial balance sheet.*

(SO 4)

**Instructions**

- (a) Prepare the partners' capital statement for the year.
- (b) Prepare the owners' equity section of the balance sheet at December 31, 2012.

**E12-7** David, Matt, and Chris are forming The Doctor Partnership. David is transferring \$30,000 of personal cash and equipment worth \$25,000 to the partnership. Matt owns land worth \$18,000 and a small building worth \$75,000, which he transfers to the partnership. There is a long-term mortgage of \$20,000 on the land and building, which the partnership assumes. Chris transfers cash of \$7,000, accounts receivable of \$36,000, supplies worth \$3,000, and equipment

*Prepare a classified balance sheet of a partnership.*

(SO 4)

worth \$22,000 to the partnership. The partnership expects to collect \$32,000 of the accounts receivable.

#### Instructions

Prepare a classified balance sheet for the partnership after the partners' investments on December 31, 2012.

*Prepare cash payments schedule.*

(SO 5)

**E12-8** The Freema Company at December 31 has cash \$20,000, noncash assets \$100,000, liabilities \$55,000, and the following capital balances: Dalek \$45,000 and Briggs \$20,000. The firm is liquidated, and \$110,000 in cash is received for the noncash assets. Dalek and Briggs income ratios are 60% and 40%, respectively.

#### Instructions

Prepare a schedule of cash payments.

*Journalize transactions in a liquidation.*

(SO 5)

**E12-9** Data for The Freema Company are presented in E12-8.

#### Instructions

Prepare the entries to record:

- (a) The sale of noncash assets.
- (b) The allocation of the gain or loss on realization to the partners.
- (c) Payment of creditors.
- (d) Distribution of cash to the partners.

*Journalize transactions with a capital deficiency.*

(SO 5)

**E12-10** Prior to the distribution of cash to the partners, the accounts in the TSM Company are: Cash \$28,000; Tyler, Capital (Cr.) \$17,000; Smith, Capital (Cr.) \$15,000; and Mott, Capital (Dr.) \$4,000. The income ratios are 5 : 3 : 2, respectively.

#### Instructions

- (a) Prepare the entry to record (1) Mott's payment of \$4,000 in cash to the partnership and (2) the distribution of cash to the partners with credit balances.
- (b) Prepare the entry to record (1) the absorption of Mott's capital deficiency by the other partners and (2) the distribution of cash to the partners with credit balances.

*Journalize admission of a new partner by purchase of an interest.*

(SO 6)

**\*E12-11** K. Gillan, C. Coduri, and C. Tate share income on a 5 : 3 : 2 basis. They have capital balances of \$30,000, \$26,000, and \$18,000, respectively, when Cap Harkness is admitted to the partnership.

#### Instructions

Prepare the journal entry to record the admission of Cap Harkness under each of the following assumptions.

- (a) Purchase of 50% of Gillan's equity for \$19,000.
- (b) Purchase of 50% of Coduri's equity for \$12,000.
- (c) Purchase of 33½% of Tate's equity for \$9,000.

*Journalize admission of a new partner by investment.*

(SO 6)

**\*E12-12** S. Noble and T. Wells share income on a 6 : 4 basis. They have capital balances of \$100,000 and \$70,000, respectively, when W. Trinity is admitted to the partnership.

#### Instructions

Prepare the journal entry to record the admission of W. Trinity under each of the following assumptions.

- (a) Investment of \$90,000 cash for a 30% ownership interest with bonuses to the existing partners.
- (b) Investment of \$50,000 cash for a 30% ownership interest with a bonus to the new partner.

*Journalize withdrawal of a partner with payment from partners' personal assets.*

(SO 7)

**\*E12-13** N. Clark, C. Camille, and C. Eccleston have capital balances of \$50,000, \$40,000, and \$32,000, respectively. Their income ratios are 5 : 3 : 2. Eccleston withdraws from the partnership under each of the following independent conditions.

1. Clark and Camille agree to purchase Eccleston's equity by paying \$17,000 each from their personal assets. Each purchaser receives 50% of Eccleston's equity.
2. Camille agrees to purchase all of Eccleston's equity by paying \$22,000 cash from her personal assets.
3. Clark agrees to purchase all of Eccleston's equity by paying \$26,000 cash from his personal assets.

#### Instructions

Journalize the withdrawal of Eccleston under each of the assumptions above.

**\*E12-14** B. Edwards, J. King, and N. Pegg have capital balances of \$95,000, \$75,000, and \$60,000, respectively. They share income or loss on a 5 : 3 : 2 basis. Pegg withdraws from the partnership under each of the following conditions.

1. Pegg is paid \$68,000 in cash from partnership assets, and a bonus is granted to the retiring partner.
2. Pegg is paid \$56,000 in cash from partnership assets, and bonuses are granted to the remaining partners.

#### Instructions

Journalize the withdrawal of Pegg under each of the assumptions above.

**\*E12-15** Carl, Barrowman, and Cribbins are partners who share profits and losses 50%, 30%, and 20%, respectively. Their capital balances are \$100,000, \$60,000, and \$40,000, respectively.

#### Instructions

- (a) Assume Darvill joins the partnership by investing \$80,000 for a 25% interest with bonuses to the existing partners. Prepare the journal entry to record his investment.
- (b) Assume instead that Carl leaves the partnership. Carl is paid \$120,000 with a bonus to the retiring partner. Prepare the journal entry to record Carl's withdrawal.

*Journalize withdrawal of a partner with payment from partnership assets.*

(SO 7)

*Journalize entry for admission and withdrawal of partners.*

## Problems: Set A

**P12-1A** The post-closing trial balances of two proprietorships on January 1, 2012, are presented below.

|                                    | Williams Company |                  | Jones Company   |                 |
|------------------------------------|------------------|------------------|-----------------|-----------------|
|                                    | Dr.              | Cr.              | Dr.             | Cr.             |
| Cash                               | \$ 14,000        |                  | \$12,000        |                 |
| Accounts receivable                | 17,500           |                  | 26,000          |                 |
| Allowance for doubtful accounts    |                  | \$ 3,000         |                 | \$ 4,400        |
| Inventory                          | 26,500           |                  | 18,400          |                 |
| Equipment                          | 45,000           |                  | 29,000          |                 |
| Accumulated depreciation—equipment |                  | 24,000           |                 | 11,000          |
| Notes payable                      |                  | 18,000           |                 | 15,000          |
| Accounts payable                   |                  | 22,000           |                 | 31,000          |
| Williams, capital                  |                  | 36,000           |                 |                 |
| Jones, capital                     |                  |                  |                 | 24,000          |
|                                    | <u>\$103,000</u> | <u>\$103,000</u> | <u>\$85,400</u> | <u>\$85,400</u> |

*Prepare entries for formation of a partnership and a balance sheet.*

(SO 2, 4)

Williams and Jones decide to form a partnership, Wijo Company, with the following agreed upon valuations for noncash assets.

|                                 | Williams Company | Jones Company |
|---------------------------------|------------------|---------------|
| Accounts receivable             | \$17,500         | \$26,000      |
| Allowance for doubtful accounts | 4,500            | 4,000         |
| Inventory                       | 28,000           | 20,000        |
| Equipment                       | 23,000           | 16,000        |

All cash will be transferred to the partnership, and the partnership will assume all the liabilities of the two proprietorships. Further, it is agreed that Williams will invest an additional \$5,000 in cash, and Jones will invest an additional \$19,000 in cash.

#### Instructions

- (a) Prepare separate journal entries to record the transfer of each proprietorship's assets and liabilities to the partnership.
- (b) Journalize the additional cash investment by each partner.
- (c) Prepare a classified balance sheet for the partnership on January 1, 2012.

(a) Williams, Capital \$38,000  
Jones, Capital \$24,000

(c) Total assets \$172,000

Journalize divisions of net income and prepare a partners' capital statement.

(SO 3, 4)

**P12-2A** At the end of its first year of operations on December 31, 2012, LAD Company's accounts show the following.

| Partner        | Drawings | Capital  |
|----------------|----------|----------|
| Rory Lachelle  | \$23,000 | \$48,000 |
| Andy Andoh     | 14,000   | 30,000   |
| Francine Dalek | 10,000   | 25,000   |

The capital balance represents each partner's initial capital investment. Therefore, net income or net loss for 2012 has not been closed to the partners' capital accounts.

**Instructions**

- (a) (1) Lachelle \$18,000
- (2) Lachelle \$19,000
- (3) Lachelle \$15,700

- (a) Journalize the entry to record the division of net income for the year 2012 under each of the following independent assumptions.
  - (1) Net income is \$30,000. Income is shared 6 : 3 : 1.
  - (2) Net income is \$37,000. Lachelle and Andoh are given salary allowances of \$15,000 and \$10,000, respectively. The remainder is shared equally.
  - (3) Net income is \$19,000. Each partner is allowed interest of 10% on beginning capital balances. Lachelle is given a \$12,000 salary allowance. The remainder is shared equally.
- (b) Prepare a schedule showing the division of net income under assumption (3) above.
- (c) Prepare a partners' capital statement for the year under assumption (3) above.

- (c) Lachelle \$40,700

Prepare entries with a capital deficiency in liquidation of a partnership.

(SO 5)

**P12-3A** The partners in River Song Company decide to liquidate the firm when the balance sheet shows the following.

**RIVER SONG COMPANY**  
Balance Sheet  
May 31, 2012

| Assets                             |           | Liabilities and Owners' Equity |           |
|------------------------------------|-----------|--------------------------------|-----------|
| Cash                               | \$ 27,500 | Notes payable                  | \$ 13,500 |
| Accounts receivable                | 25,000    | Accounts payable               | 27,000    |
| Allowance for doubtful accounts    | (1,000)   | Salaries and wages payable     | 4,000     |
| Inventory                          | 34,500    | A. Mangold, capital            | 33,000    |
| Equipment                          | 21,000    | S. Otis, capital               | 21,000    |
| Accumulated depreciation—equipment | (5,500)   | P. Tyler, capital              | 3,000     |
| Total                              | \$101,500 | Total                          | \$101,500 |

The partners share income and loss 5 : 3 : 2. During the process of liquidation, the following transactions were completed in the following sequence.

1. A total of \$55,000 was received from converting noncash assets into cash.
2. Gain or loss on realization was allocated to partners.
3. Liabilities were paid in full.
4. P. Tyler paid his capital deficiency.
5. Cash was paid to the partners with credit balances.

**Instructions**

- (a) Loss on realization \$19,000
- Cash paid: to Mangold \$23,500; to Otis \$15,300

- (a) Prepare the entries to record the transactions.
- (b) Post to the cash and capital accounts.
- (c) Assume that Tyler is unable to pay the capital deficiency.
  - (1) Prepare the entry to allocate Tyler's debit balance to Mangold and Otis.
  - (2) Prepare the entry to record the final distribution of cash.

Journalize admission of a partner under different assumptions.

(SO 6)

**\*P12-4A** At April 30, partners' capital balances in SCJ Company are: G. Cooper \$52,000, C. Jones \$54,000, and J. Simmonds \$18,000. The income sharing ratios are 5 : 4 : 1, respectively. On May 1, the SCJR Company is formed by admitting J. Redfern to the firm as a partner.

**Instructions**

- (a) (1) Redfern \$9,000
- (2) Redfern \$18,000
- (3) Redfern \$57,000
- (4) Redfern \$51,000

- (a) Journalize the admission of Redfern under each of the following independent assumptions.
  - (1) Redfern purchases 50% of Simmonds's ownership interest by paying Simmonds \$16,000 in cash.
  - (2) Redfern purchases 33⅓% of Jones's ownership interest by paying Jones \$15,000 in cash.

- (3) Redfern invests \$66,000 for a 30% ownership interest, and bonuses are given to the old partners.
- (4) Redfern invests \$46,000 for a 30% ownership interest, which includes a bonus to the new partner.
- (b) Jones's capital balance is \$32,000 after admitting Redfern to the partnership by investment. If Jones's ownership interest is 20% of total partnership capital, what were (1) Redfern's cash investment and (2) the bonus to the new partner?

**\*P12-5A** On December 31, the capital balances and income ratios in SAR Company are as follows.

| <u>Partner</u> | <u>Capital Balance</u> | <u>Income Ratio</u> |
|----------------|------------------------|---------------------|
| Spargo         | \$60,000               | 50%                 |
| Ames           | 40,000                 | 30%                 |
| Rusco          | 26,000                 | 20%                 |

*Journalize withdrawal of a partner under different assumptions.*

(SO 7)

### Instructions

- (a) Journalize the withdrawal of Ruscoe under each of the following assumptions.
- (1) Each of the continuing partners agrees to pay \$18,000 in cash from personal funds to purchase Ruscoe's ownership equity. Each receives 50% of Ruscoe's equity.
- (2) Ames agrees to purchase Ruscoe's ownership interest for \$25,000 cash.
- (3) Ruscoe is paid \$34,000 from partnership assets, which includes a bonus to the retiring partner.
- (4) Ruscoe is paid \$22,000 from partnership assets, and bonuses to the remaining partners are recognized.
- (b) If Ames's capital balance after Ruscoe's withdrawal is \$42,400, what were (1) the total bonus to the remaining partners and (2) the cash paid by the partnership to Ruscoe?

- (a) (1) Ames, Capital \$13,000  
 (2) Ames, Capital \$26,000  
 (3) Bonus \$8,000  
 (4) Bonus \$4,000

## Problems: Set B

**P12-1B** The post-closing trial balances of two proprietorships on January 1, 2012, are presented below.

|                                    | <u>Skorr Company</u> |                  | <u>Crane Company</u> |                 |
|------------------------------------|----------------------|------------------|----------------------|-----------------|
|                                    | <u>Dr.</u>           | <u>Cr.</u>       | <u>Dr.</u>           | <u>Cr.</u>      |
| Cash                               | \$ 10,000            |                  | \$ 8,000             |                 |
| Accounts receivable                | 18,000               |                  | 30,000               |                 |
| Allowance for doubtful accounts    |                      | \$ 2,000         |                      | \$ 3,000        |
| Inventory                          | 35,000               |                  | 20,000               |                 |
| Equipment                          | 60,000               |                  | 35,000               |                 |
| Accumulated depreciation—equipment |                      | 28,000           |                      | 15,000          |
| Notes payable                      |                      | 20,000           |                      |                 |
| Accounts payable                   |                      | 30,000           |                      | 40,000          |
| Skorr, capital                     |                      | 43,000           |                      |                 |
| Crane, capital                     |                      |                  |                      | 35,000          |
|                                    | <u>\$123,000</u>     | <u>\$123,000</u> | <u>\$93,000</u>      | <u>\$93,000</u> |

*Prepare entries for formation of a partnership and a balance sheet.*

(SO 2, 4)

Skorr and Crane decide to form a partnership, Commander Company, with the following agreed upon valuations for noncash assets.

|                                 | <u>Skorr Company</u> | <u>Crane Company</u> |
|---------------------------------|----------------------|----------------------|
| Accounts receivable             | \$18,000             | \$30,000             |
| Allowance for doubtful accounts | 2,500                | 4,000                |
| Inventory                       | 38,000               | 25,000               |
| Equipment                       | 40,000               | 22,000               |

All cash will be transferred to the partnership, and the partnership will assume all the liabilities of the two proprietorships. Further, it is agreed that Skorr will invest an additional \$3,500 in cash, and Crane will invest an additional \$16,000 in cash.

(a) Skorr, Capital \$53,500  
Crane, Capital \$41,000

(c) Total assets \$204,000

Journalize divisions of net income and prepare a partners' capital statement.

(SO 3, 4)

**Instructions**

- (a) Prepare separate journal entries to record the transfer of each proprietorship's assets and liabilities to the partnership.
- (b) Journalize the additional cash investment by each partner.
- (c) Prepare a classified balance sheet for the partnership on January 1, 2012.

**P12-2B** At the end of its first year of operations on December 31, 2012, SHB Company's accounts show the following.

| Partner | Drawings | Capital  |
|---------|----------|----------|
| Staal   | \$15,000 | \$40,000 |
| Harris  | 10,000   | 25,000   |
| Blaine  | 5,000    | 15,000   |

The capital balance represents each partner's initial capital investment. Therefore, net income or net loss for 2012 has not been closed to the partners' capital accounts.

**Instructions**

- (a) Journalize the entry to record the division of net income for 2012 under each of the independent assumptions shown on the next page.
  - (1) Net income is \$50,000. Income is shared 5 : 3 : 2.
  - (2) Net income is \$40,000. Staal and Harris are given salary allowances of \$15,000 and \$10,000, respectively. The remainder is shared equally.
  - (3) Net income is \$37,000. Each partner is allowed interest of 10% on beginning capital balances. Staal is given a \$20,000 salary allowance. The remainder is shared equally.
- (b) Prepare a schedule showing the division of net income under assumption (3) above.
- (c) Prepare a partners' capital statement for the year under assumption (3) above.

(a) (1) Staal \$25,000  
(2) Staal \$20,000  
(3) Staal \$27,000

(c) Staal \$52,000

Prepare entries and schedule of cash payments in liquidation of a partnership

(SO 5)

**P12-3B** The partners in Tallis Company decide to liquidate the firm when the balance sheet shows the following.

**TALLIS COMPANY**  
Balance Sheet  
April 30, 2012

| Assets                             |                  | Liabilities and Owners' Equity |                  |
|------------------------------------|------------------|--------------------------------|------------------|
| Cash                               | \$30,000         | Notes payable                  | \$20,000         |
| Accounts receivable                | 25,000           | Accounts payable               | 30,000           |
| Allowance for doubtful accounts    | (2,000)          | Salaries and wages payable     | 2,500            |
| Inventory                          | 35,000           | Laszlo, capital                | 28,000           |
| Equipment                          | 20,000           | Alaya, capital                 | 13,650           |
| Accumulated depreciation—equipment | (8,000)          | Octavian, capital              | 5,850            |
| Total                              | <u>\$100,000</u> | Total                          | <u>\$100,000</u> |

The partners share income and loss 5 : 3 : 2. During the process of liquidation, the transactions below were completed in the following sequence.

1. A total of \$57,000 was received from converting noncash assets into cash.
2. Gain or loss on relization was allocated to partners.
3. Liabilities were paid in full.
4. Cash was paid to the partners with credit balances.

**Instructions**

- (a) Prepare a schedule of cash payments.
- (b) Prepare the entries to record the transactions.
- (c) Post to the cash and capital accounts.

**\*P12-4B** At April 30, partners' capital balances in ZCF Company are: Zachary \$30,000. Cross \$16,000, and Flane \$15,000. The income-sharing ratios are 5 : 3 : 2, respectively. On May 1, the ZCFC Company is formed by admitting Chantho to the firm as a partner.

**Instructions**

- (a) Journalize the admission of Chantho under each of the following independent assumptions.
  - (1) Chantho purchases 50% of Flane's ownership interest by paying Flane \$6,000 in cash.
  - (2) Chantho purchases 50% of Cross's ownership interest by paying Cross \$10,000 in cash.
  - (3) Chantho invests \$29,000 cash in the partnership for a 40% ownership interest that includes a bonus to the new partner.

(a) Loss on realization \$13,000  
Cash paid: to Laszlo \$21,500; to Octavian \$3,250

Journalize admission of a partner under different assumptions.

(SO 6)

(a) (1) Chantho, Capital \$7,500  
(2) Chantho \$8,000  
(3) Chantho \$36,000

- (4) Chantho invests \$24,000 in the partnership for a 20% ownership interest, and bonuses are given to the old partners.
- (b) Cross's capital balance is \$24,000 after admitting Chantho to the partnership by investment. If Cross's ownership interest is 24% of total partnership capital, what were (1) Chantho's cash investment and (2) the total bonus to the old partners?

(4) Chantho \$17,000

**\*P12-5B** On December 31, the capital balances and income ratios in Noma Company are as follows.

| <u>Partner</u> | <u>Capital Balance</u> | <u>Income Ratio</u> |
|----------------|------------------------|---------------------|
| Morgan         | \$100,000              | 60%                 |
| White          | 51,000                 | 30                  |
| Ogden          | 25,000                 | 10                  |

*Journalize withdrawal of a partner under different assumptions.*

(SO 7)

### Instructions

- (a) Journalize the withdrawal of Ogden under each of the following independent assumptions.
- (1) Each of the remaining partners agrees to pay \$15,000 in cash from personal funds to purchase Ogden's ownership equity. Each receives 50% of Ogden's equity.
  - (2) White agrees to purchase Ogden's ownership interest for \$22,000 in cash.
  - (3) From partnership assets, Ogden is paid \$34,000, which includes a bonus to the retiring partner.
  - (4) Ogden is paid \$19,000 from partnership assets. Bonuses to the remaining partners are recognized.
- (b) If White's capital balance after Ogden's withdrawal is \$55,000, what were (1) the total bonus to the remaining partners and (2) the cash paid by the partnership to Ogden?

- (a) (1) White, Capital \$12,500  
 (2) White, Capital \$25,000  
 (3) Bonus \$9,000  
 (4) Bonus \$6,000

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 11.)

**CCC12** Natalie's high school friend, Katy Peterson, has been operating a bakery for approximately 18 months. Because Natalie has been so successful operating Cookie Creations, Katy would like to have Natalie become her partner. Katy believes that together they will create a thriving cookie-making business. Natalie is quite happy with her current business set-up. Up until now, she had not considered joining forces with anyone. However, Natalie thinks that it may be a good idea to establish a partnership with Katy, and decides to look into it.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### On the Web

**BYP12-1** This exercise is an introduction to the Big Four accounting firms, all of which are partnerships.

#### Addresses

|   |  |
|---|--|
| Deloitte & Touche   | <a href="http://www.deloitte.com/">www.deloitte.com/</a> |
| Ernst & Young   | <a href="http://www.ey.com/">www.ey.com/</a>             |
| KPMG  | <a href="http://www.us.kpmg.com/">www.us.kpmg.com/</a>   |
| PricewaterhouseCoopers  | <a href="http://www.pw.com/">www.pw.com/</a>             |
| or go to <a href="http://www.wiley.com/college/weygandt">www.wiley.com/college/weygandt</a> |  |

**Steps**

1. Select a firm that is of interest to you.
2. Go to the firm's homepage.

**Instructions**

- (a) Name two services provided by the firm.
- (b) What is the firm's total annual revenue?
- (c) How many clients does it service?
- (d) How many people are employed by the firm?
- (e) How many partners are there in the firm?

## Critical Thinking

### Decision Making Across the Organization

**BYP12-2** Richard Powers and Jane Keckley, two professionals in the finance area, have worked for Eberhart Leasing for a number of years. Eberhart Leasing is a company that leases high-tech medical equipment to hospitals. Richard and Jane have decided that, with their financial expertise, they might start their own company to provide consulting services to individuals interested in leasing equipment. One form of organization they are considering is a partnership.

If they start a partnership, each individual plans to contribute \$50,000 in cash. In addition, Richard has a used IBM computer that originally cost \$3,700, which he intends to invest in the partnership. The computer has a present fair value of \$1,500.

Although both Richard and Jane are financial wizards, they do not know a great deal about how a partnership operates. As a result, they have come to you for advice.

**Instructions**

With the class divided into groups, answer the following.

- (a) What are the major disadvantages of starting a partnership?
- (b) What type of document is needed for a partnership, and what should this document contain?
- (c) Both Richard and Jane plan to work full-time in the new partnership. They believe that net income or net loss should be shared equally. However, they are wondering how they can provide compensation to Richard Powers for his additional investment of the computer. What would you tell them?
- (d) Richard is not sure how the computer equipment should be reported on his tax return. What would you tell him?
- (e) As indicated above, Richard and Jane have worked together for a number of years. Richard's skills complement Jane's and vice versa. If one of them dies, it will be very difficult for the other to maintain the business, not to mention the difficulty of paying the deceased partner's estate for his or her partnership interest. What would you advise them to do?

### Communication Activity

**BYP12-3** You are an expert in the field of forming partnerships. Daniel Ortman and Sue Stafford want to establish a partnership to start "Pasta Shop," and they are going to meet with you to discuss their plans. Prior to the meeting, you will send them a memo discussing the issues they need to consider before their visit.

**Instructions**

Write a memo in good form to be sent to Ortman and Stafford.

### Ethics Case

**BYP12-4** Elizabeth and Laurie operate a beauty salon as partners who share profits and losses equally. The success of their business has exceeded their expectations; the salon is operating quite profitably. Laurie is anxious to maximize profits and schedules appointments from 8 a.m. to 6 p.m. daily, even sacrificing some lunch hours to accommodate regular customers. Elizabeth schedules her appointments from 9 a.m. to 5 p.m. and takes long lunch hours. Elizabeth regularly makes significantly larger withdrawals of

cash than Laurie does, but, she says, “Laurie, you needn’t worry, I never make a withdrawal without you knowing about it, so it is properly recorded in my drawing account and charged against my capital at the end of the year.” Elizabeth’s withdrawals to date are double Laurie’s.

### Instructions

- Who are the stakeholders in this situation?
- Identify the problems with Elizabeth’s actions and discuss the ethical considerations of her actions.
- How might the partnership agreement be revised to accommodate the differences in Elizabeth’s and Laurie’s work and withdrawal habits?

## “All About You” Activity

**BYP12-5** As the text in this chapter indicates, the partnership form of organization has advantages and disadvantages. The chapter noted that different types of partnerships have been developed to minimize some of these disadvantages. Alternatively, an individual or company can choose the proprietorship or corporate form of organization.

### Instructions

Go to two local businesses that are different, such as a restaurant, a retailer, a construction company, or a professional office (dentist, doctor, etc.), and find the answers to the following questions.

- What form of organization do you use in your business?
- What do you believe are the two major advantages of this form of organization for your business?
- What do you believe are the two major disadvantages of this form of organization for your business?
- Do you believe that eventually you may choose another form of organization?
- Did you have someone help you form this organization (attorney, accountant, relative, etc.)?

### Answers to Insight and Accounting Across the Organization Questions

**p. 556 Limited Liability Companies Gain in Popularity** **Q:** Why do you think that the use of the limited liability company is gaining in popularity? **A:** The LLC is gaining in popularity because owners in such companies have limited liability for business debts even if they participate in management. As a result, the LLC form has a distinct advantage over regular partnerships. In addition, the other limited-type partnerships discussed in Illustration 12-1 are restrictive as to their use. As a result, it is not surprising that limited liability companies are now often used as the form of organization when individuals want to set up a partnership.

**p. 559 How to Part Ways Nicely** **Q:** How can partnership conflicts be minimized and more easily resolved? **A:** First, it is important to develop a business plan that all parties agree to. Second, it is vital to have a well-thought-out partnership agreement. Third, it can be useful to set up a board of mutually agreed upon and respected advisors to consult when making critical decisions.

### Answers to Self-Test Questions

1. a 2. c 3. b 4. c 5. a  $(\$8,000 + \$16,000 + \$55,000)$  6. b  $(\$60,000 \times 20\%)$  7. c  $[\$60,000 - (\$10,000 \times 3)] \times 30\% = \$9,000$  8. c 9. d 10. a 11. b  $(\$22,000 + \$73,000) - \$85,000 = \$10,000$  loss; Ely  $\$52,000 - (40\% \times 10,000)$  12. d  $(\$22,000 + \$73,000) - \$60,000 = \$35,000$  loss; loss allocation Harriett  $\$23,000 - (20\% \times 35,000)$ ; Mike  $\$8,000 - (40\% \times 35,000)$ ; Ely  $\$52,000 - (40\% \times 35,000)$ ; Mike deficiency is  $\$6,000$ ; allocated to Ely  $\$38,000 - (\$6,000 \times 4/6)$  \*13. d  $(\$30,000 \times 50\%)$  \*14. d  $(\$60,000 + \$50,000 + \$40,000 + \$60,000) = \$210,000$ ;  $\$210,000 \times 25\% = \$52,500$ ;  $(\$60,000 - \$52,500) \times 20\%$  \*15. b  $(\$29,000 - \$20,000) = \$9,000$  loss;  $\$40,000 - (\$9,000 \times 3/9)$

 Remember to go back to the Navigator box on the chapter opening page and check off your completed work.

# CHAPTER 13

## Corporations: Organization and Capital Stock Transactions

### Study Objectives

After studying this chapter, you should be able to:

- 1 Identify the major characteristics of a corporation.
- 2 Differentiate between paid-in capital and retained earnings.
- 3 Record the issuance of common stock.
- 4 Explain the accounting for treasury stock.
- 5 Differentiate preferred stock from common stock.
- 6 Prepare a stockholders' equity section.

### Feature Story

#### WHAT'S COOKING?

What major U.S. corporation got its start 38 years ago with a waffle iron? *Hint:* It doesn't sell food. *Another hint:* Swoosh. *Another hint:* "Just do it." That's right, **Nike**. In 1971 Nike co-founder Bill Bowerman put a piece of rubber into a kitchen waffle iron, and the trademark waffle sole was born. It seems fair to say that at Nike, "They don't make 'em like they used to."

Nike was co-founded by Bowerman and Phil Knight, a member of Bowerman's University of Oregon track team. Each began in the shoe business independently during the early 1960s. Bowerman got his start by making hand-crafted running shoes for his University of Oregon track team. Knight, after completing graduate school, started a small business importing low-cost, high-quality shoes from Japan. In 1964, the two joined forces, each contributing \$500, and formed Blue Ribbon Sports, a partnership that marketed Japanese shoes.

It wasn't until 1971 that the company began manufacturing its own line of shoes. With the new shoes came a new corporate name—Nike—the Greek goddess of victory. It is hard to imagine that the company that now

boasts a stable full of world-class athletes as promoters at one time had part-time employees selling shoes out of car trunks at track meets. Nike has achieved its success through relentless innovation combined with unbridled promotion.

By 1980, Nike was sufficiently established that it was able to issue its first stock to the public. In that same year, it also created a stock ownership program for its employees, allowing them to share in the company's success. Since then, Nike has enjoyed phenomenal growth, with 2009 sales reaching \$19.2 billion and total dividends paid of \$467 million.

Nike is not alone in its quest for the top of the sport shoe world. **Reebok** used to be Nike's arch rival (get it? "arch"), but then Reebok was acquired by the German company **adidas**. Now adidas pushes Nike every step of the way.

The shoe market is fickle, with new styles becoming popular almost daily and vast international markets still lying untapped. Whether one of these two giants does eventually take control of the pedi-planet remains to be seen. Meanwhile, the shareholders sit anxiously in the stands as this Olympic-size drama unfolds.

## Preview of CHAPTER 13

Corporations like **Nike** and **adidas** have substantial resources at their disposal. In fact, the corporation is the dominant form of business organization in the United States in terms of sales, earnings, and number of employees. All of the 500 largest companies in the United States are corporations. In this chapter, we will explain the essential features of a corporation and the accounting for a corporation's capital stock transactions. In Chapter 14, we will look at other issues related to accounting for corporations.

The content and organization of Chapter 13 are as follows.

| Corporations: Organization and Capital Stock Transactions   |   |  |  |  |
|---|---|--|--|--|
| The Corporate Form of Organization  | Accounting for Issues of Common Stock   | Accounting for Treasury Stock  | Preferred Stock  | Statement Presentation   |

## The Corporate Form of Organization

In 1819, Chief Justice John Marshall defined a corporation as “an artificial being, invisible, intangible, and existing only in contemplation of law.” This definition is the foundation for the prevailing legal interpretation that a **corporation** is an **entity separate and distinct from its owners**.

A corporation is created by law, and its continued existence depends upon the statutes of the state in which it is incorporated. As a legal entity, a corporation has most of the rights and privileges of a person. The major exceptions relate to privileges that only a living person can exercise, such as the right to vote or to hold public office. A corporation is subject to the same duties and responsibilities as a person. For example, it must abide by the laws, and it must pay taxes.

Two common ways to classify corporations are by **purpose** and by **ownership**. A corporation may be organized for the purpose of making a profit, or it may be not-for-profit. For-profit corporations include such well-known companies as **McDonald's**, **Nike**, **PepsiCo**, and **Google**. Not-for-profit corporations are organized for charitable, medical, or educational purposes. Examples are the **Salvation Army** and the **American Cancer Society**.

Classification by ownership differentiates publicly held and privately held corporations. A **publicly held corporation** may have thousands of stockholders. Its stock is regularly traded on a national securities exchange such as the New York Stock Exchange. Examples are **IBM**, **Caterpillar**, and **General Electric**.

In contrast, a **privately held corporation** usually has only a few stockholders, and does not offer its stock for sale to the general public. Privately held companies are generally much smaller than publicly held companies, although some notable exceptions exist. **Cargill Inc.**, a private corporation that trades in grain and other commodities, is one of the largest companies in the United States.

### Alternative Terminology

Privately held corporations are also referred to as *closely held corporations*.

## Characteristics of a Corporation

In 1964, when Nike's founders, Knight and Bowerman, were just getting started in the running shoe business, they formed their original organization as a partnership. In 1968, they reorganized the company as a corporation. A number of characteristics distinguish corporations from proprietorships and partnerships. We explain the most important of these characteristics below.

### SEPARATE LEGAL EXISTENCE

As an entity separate and distinct from its owners, the corporation acts under its own name rather than in the name of its stockholders. Nike may buy, own, and sell property. It may borrow money, and may enter into legally binding contracts in its own name. It may also sue or be sued, and it pays its own taxes.

Remember that in a partnership the acts of the owners (partners) bind the partnership. In contrast, the acts of its owners (stockholders) do not bind the corporation unless such owners are **agents** of the corporation. For example, if you owned shares of Nike stock, you would not have the right to purchase inventory for the company unless you were designated as an agent of the corporation.

### LIMITED LIABILITY OF STOCKHOLDERS

Since a corporation is a separate legal entity, creditors have recourse only to corporate assets to satisfy their claims. The liability of stockholders is normally limited to their investment in the corporation. Creditors have no legal claim on the personal assets of the owners unless fraud has occurred. Even in the event of bankruptcy, stockholders' losses are generally limited to their capital investment in the corporation.

### TRANSFERABLE OWNERSHIP RIGHTS

Shares of capital stock give ownership in a corporation. These shares are transferable units. Stockholders may dispose of part or all of their interest in a corporation simply by selling their stock. Remember that the transfer of an ownership interest in a partnership requires the consent of each owner. In contrast, the transfer of stock is entirely at the discretion of the stockholder. It does not require the approval of either the corporation or other stockholders.

The transfer of ownership rights between stockholders normally has no effect on the daily operating activities of the corporation. Nor does it affect the corporation's assets, liabilities, and total ownership equity. The transfer of these ownership rights is a transaction between individual owners. After it first issues the capital stock, the company does not participate in such transfers.

### ABILITY TO ACQUIRE CAPITAL

It is relatively easy for a corporation to obtain capital through the issuance of stock. Investors buy stock in a corporation to earn money over time as the share price grows, and because a stockholder has limited liability and shares of stock are readily transferable. Also, individuals can become stockholders by investing relatively small amounts of money. In sum, the ability of a successful corporation to obtain capital is virtually unlimited.

### CONTINUOUS LIFE

The life of a corporation is stated in its charter. The life may be perpetual, or it may be limited to a specific number of years. If it is limited, the company can extend the life through renewal of the charter. Since a corporation is a separate legal entity, its continuance as a going concern is not affected by the withdrawal, death, or incapacity of a stockholder, employee, or officer. As a result, a successful company can have a continuous and perpetual life.

#### Study Objective [1]

Identify the major characteristics of a corporation.

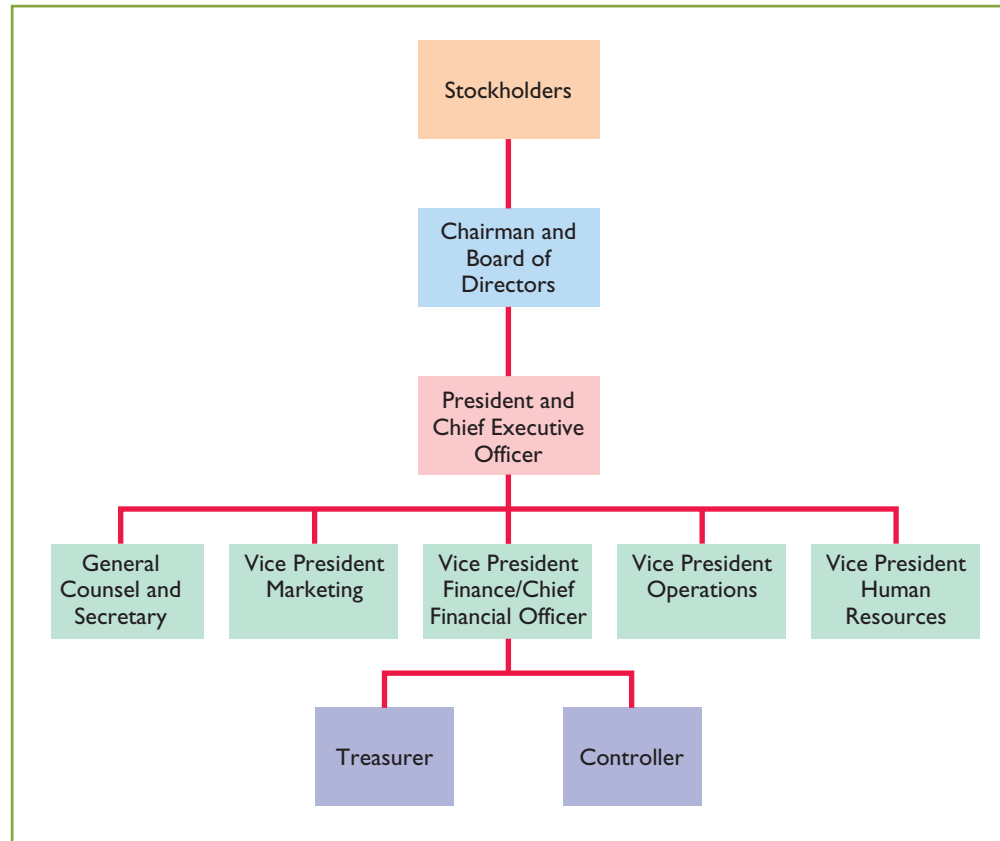

### CORPORATION MANAGEMENT

Stockholders legally own the corporation. However, they manage the corporation indirectly through a board of directors they elect. Philip Knight is the chairman of **Nike**. The board, in turn, formulates the operating policies for the company. The board also selects officers, such as a president and one or more vice presidents, to execute policy and to perform daily management functions. As a result of the Sarbanes-Oxley Act, the board is now required to monitor management's actions more closely. Many feel that the failures of **Enron** and **WorldCom** could have been avoided by more diligent boards.

Illustration 13-1 presents a typical organization chart showing the delegation of responsibility.

**Illustration 13-1**  
Corporation organization  
chart

The chief executive officer (CEO) has overall responsibility for managing the business. As the organization chart shows, the CEO delegates responsibility to other officers. The chief accounting officer is the **controller**. The controller's responsibilities include (1) maintaining the accounting records, (2) maintaining an adequate system of internal control, and (3) preparing financial statements, tax returns, and internal reports. The **treasurer** has custody of the corporation's funds and is responsible for maintaining the company's cash position.

The organizational structure of a corporation enables a company to hire professional managers to run the business. On the other hand, the separation of ownership and management often reduces an owner's ability to actively manage the company.

#### Ethics Note

Managers who are not owners are often compensated based on the performance of the firm. They thus may be tempted to exaggerate firm performance by inflating income figures.

### GOVERNMENT REGULATIONS

A corporation is subject to numerous state and federal regulations. For example, state laws usually prescribe the requirements for issuing stock, the distributions of earnings permitted to stockholders, and the effects of retiring stock. Federal securities laws

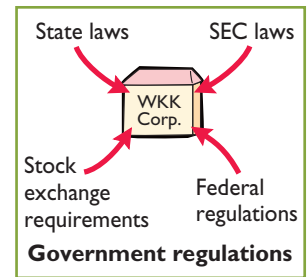

govern the sale of capital stock to the general public. Also, most publicly held corporations are required to make extensive disclosure of their financial affairs to the Securities and Exchange Commission (SEC) through quarterly and annual reports. In addition, when a corporation lists its stock on organized securities exchanges, it must comply with the reporting requirements of these exchanges. Government regulations are designed to protect the owners of the corporation.

**ADDITIONAL TAXES**

Owners of proprietorships and partnerships report their share of earnings on their personal income tax returns. The individual owner then pays taxes on this amount. Corporations, on the other hand, must pay federal and state income taxes as a **separate legal entity**. These taxes are substantial.

In addition, stockholders must pay taxes on cash dividends (pro rata distributions of net income). Thus, many argue that the government taxes corporate income **twice (double taxation)**—once at the corporate level, and again at the individual level.

In summary, Illustration 13-2 shows the advantages and disadvantages of a corporation compared to a proprietorship and a partnership.

| Advantages                                   | Disadvantages   |
|--|---|
| Separate legal existence                     | Corporation management—separation of ownership and management |
| Limited liability of stockholders            | Government regulations  |
| Transferable ownership rights                | Additional taxes  |
| Ability to acquire capital                   |   |
| Continuous life                              |   |
| Corporation management—professional managers |   |

**Illustration 13-2**  
Advantages and disadvantages of a corporation

**Forming a Corporation**

A corporation is formed by grant of a state **charter**. The charter is a document that describes the name and purpose of the corporation, the types and number of shares of stock that are authorized to be issued, the names of the individuals that formed the company, and the number of shares that these individuals agreed to purchase. Regardless of the number of states in which a corporation has operating divisions, it is incorporated in only one state.

It is to the company’s advantage to incorporate in a state whose laws are favorable to the corporate form of business organization. For example, although **General Motors** has its headquarters in Michigan, it is incorporated in New Jersey. In fact, more and more corporations have been incorporating in states with rules that favor existing management. For example, **Gulf Oil** changed its state of incorporation to Delaware to thwart possible unfriendly takeovers. There, certain defensive tactics against takeovers can be approved by the board of directors alone, without a vote by shareholders.

Upon receipt of its charter from the state of incorporation, the corporation establishes **by-laws**. The by-laws establish the internal rules and procedures for conducting the affairs of the corporation. Corporations engaged in interstate commerce must also obtain a **license** from each state in which they do business. The license subjects the corporation’s operating activities to the general corporation laws of the state.

Costs incurred in the formation of a corporation are called **organization costs**. These costs include legal and state fees, and promotional expenditures involved in the organization of the business. **Corporations expense organization costs as incurred**. To determine the amount and timing of future benefits is so difficult that it is standard procedure to take a conservative approach of expensing these costs immediately.

**Alternative Terminology**

The charter is often referred to as the *articles of incorporation*.

## ACCOUNTING ACROSS THE ORGANIZATION

### Wall Street No Friend of Facebook

In the 1990s, it was the dream of every young technology entrepreneur to start a company and do an initial public offering (IPO), that is, list company shares on a stock exchange. It seemed like there was a never-ending supply of 20-something year-old technology entrepreneurs that made millions doing IPOs of companies that never made a profit and eventually failed. In sharp contrast to this is Mark Zuckerberg, the 25-year-old founder and CEO of Facebook. If Facebook did an IPO, he would make billions of dollars. But, he is in no hurry to go public. Because his company doesn't need to invest in factories, distribution systems, or even marketing, it doesn't need to raise a lot of cash. Also, by not going public, Zuckerberg has more control over the direction of the company. Right now, he and the other founders don't have to answer to outside shareholders, who might be more concerned about short-term investment horizons rather than long-term goals. In addition, publicly traded companies face many more financial reporting disclosure requirements.

Source: Jessica E. Vascellaro, "Facebook CEO in No Rush to 'Friend' Wall Street," *Wall Street Journal Online* (March 4, 2010).

**?** Why has Mark Zuckerberg, the CEO and founder of Facebook, delayed taking his company's shares public through an initial public offering (IPO)? (See page 629.)

## Ownership Rights of Stockholders

When chartered, the corporation may begin selling ownership rights in the form of shares of stock. When a corporation has only one class of stock, it is **common stock**. Each share of common stock gives the stockholder the ownership rights pictured in Illustration 13-3. The articles of incorporation or the by-laws state the ownership rights of a share of stock.

Proof of stock ownership is evidenced by a form known as a **stock certificate**. As Illustration 13-4 shows, the face of the certificate shows the name of the corporation, the stockholder's name, the class and special features of the stock, the number of shares owned, and the signatures of authorized corporate officials. Prenumbered certificates facilitate accountability. They may be issued for any quantity of shares.

## Stock Issue Considerations

In considering the issuance of stock, a corporation must resolve a number of basic questions: How many shares should it authorize for sale? How should it issue the stock? At what price should it issue the shares? What value should the corporation assign to the stock? These questions are addressed in the following sections.

### AUTHORIZED STOCK

The charter indicates the amount of stock that a corporation is **authorized** to sell. The total amount of **authorized stock** at the time of incorporation normally anticipates both initial and subsequent capital needs. As a result, the number of shares authorized generally exceeds the number initially sold. If it sells all authorized stock, a corporation must obtain consent of the state to amend its charter before it can issue additional shares.

**The authorization of capital stock does not result in a formal accounting entry. This event has no immediate effect on either corporate assets or stockholders' equity.** However, the number of authorized shares is often reported in the stockholders' equity section. It is then simple to determine the number of unissued shares that the corporation can issue without amending the charter: subtract the total shares issued from the total authorized. For example, if **Advanced Micro** was authorized to sell 100,000 shares of common stock and issued 80,000 shares, 20,000 shares would remain unissued.

**Stockholders have the right to:**

1. Vote in election of board of directors at annual meeting and vote on actions that require stockholder approval.

2. Share the corporate earnings through receipt of dividends.

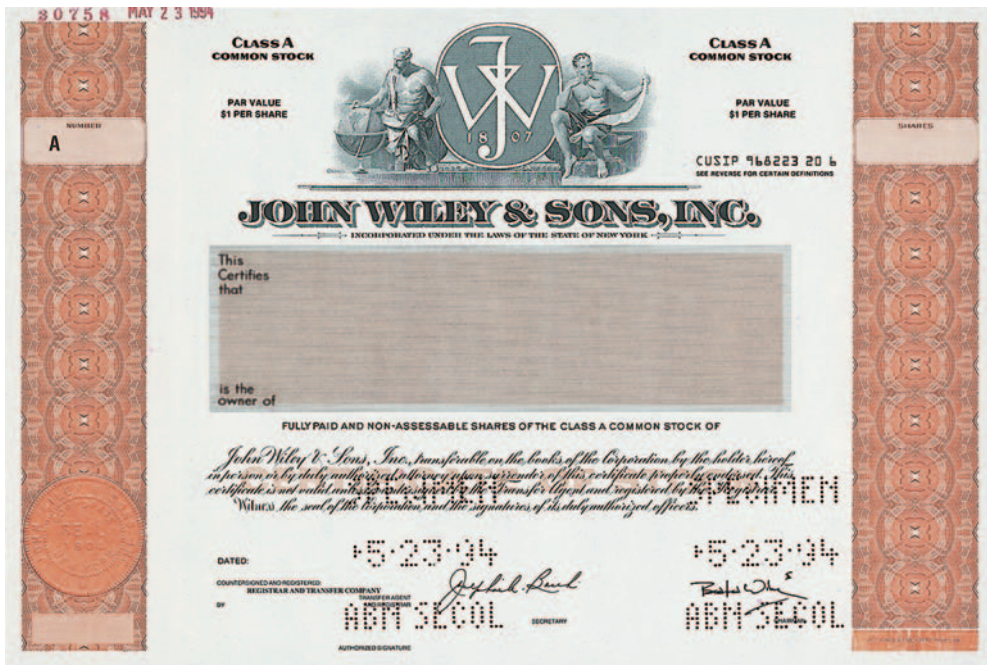

3. Keep the same percentage ownership when new shares of stock are issued (**preemptive right**<sup>1</sup>).

4. Share in assets upon liquidation in proportion to their holdings. This is called a **residual claim**: owners are paid with assets that remain after all creditors' claims have been paid.

**Illustration 13-3**  
Ownership rights of stockholders

**Illustration 13-4**  
A stock certificate

<sup>1</sup>A number of companies have eliminated the preemptive right, because they believe it makes an unnecessary and cumbersome demand on management. For example, by stockholder approval, **IBM** has dropped its preemptive right for stockholders.

### ISSUANCE OF STOCK

A corporation can issue common stock **directly** to investors. Or, it can issue the stock **indirectly** through an investment banking firm that specializes in bringing securities to the attention of prospective investors. Direct issue is typical in closely held companies. Indirect issue is customary for a publicly held corporation.

In an indirect issue, the investment banking firm may agree to **underwrite** the entire stock issue. In this arrangement, the investment banker buys the stock from the corporation at a stipulated price and resells the shares to investors. The corporation thus avoids any risk of being unable to sell the shares. Also, it obtains immediate use of the cash received from the underwriter. The investment banking firm, in turn, assumes the risk of reselling the shares, in return for an underwriting fee.<sup>2</sup> For example, **Google** (the world’s number-one Internet search engine) used underwriters when it issued a highly successful initial public offering, raising \$1.67 billion. The underwriters charged a 3% underwriting fee (approximately \$50 million) on Google’s stock offering.

How does a corporation set the price for a new issue of stock? Among the factors to be considered are: (1) the company’s anticipated future earnings, (2) its expected dividend rate per share, (3) its current financial position, (4) the current state of the economy, and (5) the current state of the securities market. The calculation can be complex and is properly the subject of a finance course.

### MARKET VALUE OF STOCK

The stock of publicly held companies is traded on organized exchanges. The interaction between buyers and sellers determines the prices per share. In general, the prices set by the marketplace tend to follow the trend of a company’s earnings and dividends. But, factors beyond a company’s control, such as an oil embargo, changes in interest rates, and the outcome of a presidential election, may cause day-to-day fluctuations in market prices.

The trading of capital stock on securities exchanges involves the transfer of **already issued shares** from an existing stockholder to another investor. These transactions have **no impact** on a corporation’s stockholders’ equity.

## INVESTOR INSIGHT

### How to Read Stock Quotes

Organized exchanges trade the stock of publicly held companies at dollar prices per share established by the interaction between buyers and sellers. For each listed security, the financial press reports the high and low prices of the stock during the year, the total volume of stock traded on a given day, the high and low prices for the day, and the closing market price, with the net change for the day. **Nike** is listed on the New York Stock Exchange. Here is a recent listing for Nike:

| Stock | 52 Weeks |       | Volume    | High  | Low   | Close | Net Change |
|-------|----------|-------|-----------|-------|-------|-------|------------|
|       | High     | Low   |           |       |       |       |            |
| Nike  | 78.55    | 48.76 | 5,375,651 | 72.44 | 69.78 | 70.61 | -1.69      |

These numbers indicate the following: The high and low market prices for the last 52 weeks have been \$78.55 and \$48.76. The trading volume for the day was 5,375,651 shares. The high, low, and closing prices for that date were \$72.44, \$69.78, and \$70.61, respectively. The net change for the day was a decrease of \$1.69 per share.

- ? For stocks traded on organized exchanges, how are the dollar prices per share established?
- What factors might influence the price of shares in the marketplace? (See page 629.)

<sup>2</sup> Alternatively, the investment banking firm may agree only to enter into a **best-efforts** contract with the corporation. In such cases, the banker agrees to sell as many shares as possible at a specified price. The corporation bears the risk of unsold stock. Under a best-efforts arrangement, the banking firm is paid a fee or commission for its services.

## PAR AND NO-PAR VALUE STOCKS

**Par value stock** is capital stock to which the charter has assigned a value per share. Years ago, par value determined the **legal capital** per share that a company must retain in the business for the protection of corporate creditors; that amount was not available for withdrawal by stockholders. Thus, in the past, most states required the corporation to sell its shares at par or above.

However, par value was often immaterial relative to the value of the company's stock—even at the time of issue. Thus, its usefulness as a protective device to creditors was questionable. For example, **Loews Corporation's** par value is \$0.01 per share, yet a new issue in 2010 would have sold at a **market value** in the \$35 per share range. Thus, par has no relationship with market value; in the vast majority of cases, it is an immaterial amount. As a consequence, today many states do not require a par value. Instead, they use other means to protect creditors.

**No-par value stock** is capital stock to which the charter has not assigned a value. No-par value stock is fairly common today. For example, **Nike** and **Procter & Gamble** both have no-par stock. In many states, the board of directors assigns a **stated value** to no-par shares.

## Do it!

Indicate whether each of the following statements is true or false.

- \_\_\_\_\_ 1. Similar to partners in a partnership, stockholders of a corporation have unlimited liability.
- \_\_\_\_\_ 2. It is relatively easy for a corporation to obtain capital through the issuance of stock.
- \_\_\_\_\_ 3. The separation of ownership and management is an advantage of the corporate form of business.
- \_\_\_\_\_ 4. The journal entry to record the authorization of capital stock includes a credit to the appropriate capital stock account.
- \_\_\_\_\_ 5. All states require a par value per share for capital stock.

### Solution

1. False. The liability of stockholders is normally limited to their investment in the corporation.
2. True.
3. False. The separation of ownership and management is a disadvantage of the corporate form of business.
4. False. The authorization of capital stock does not result in a formal accounting entry.
5. False. Many states do not require a par value.

## Corporate Organization

### action plan

- ✓ Review the characteristics of a corporation and understand which are advantages and which are disadvantages.
- ✓ Understand that corporations raise capital through the issuance of stock, which can be par or no-par.

## Corporate Capital

Owners' equity is identified by various names: **stockholders' equity**, **shareholders' equity**, or **corporate capital**. The stockholders' equity section of a corporation's balance sheet consists of two parts: (1) paid-in (contributed) capital and (2) retained earnings (earned capital).

### Study Objective [2]

Differentiate between paid-in capital and retained earnings.

The distinction between **paid-in capital** and **retained earnings** is important from both a legal and a financial point of view. Legally, corporations can make distributions of earnings (declare dividends) out of retained earnings in all states. However, in many states they cannot declare dividends out of paid-in capital. Management, stockholders, and others often look to retained earnings for the continued existence and growth of the corporation.

**PAID-IN CAPITAL**

**Paid-in capital** is the total amount of cash and other assets paid in to the corporation by stockholders in exchange for capital stock. As noted earlier, when a corporation has only one class of stock, it is **common stock**.

**RETAINED EARNINGS**

**Retained earnings** is net income that a corporation retains for future use. Net income is recorded in Retained Earnings by a closing entry that debits Income Summary and credits Retained Earnings. For example, assuming that net income for Delta Robotics in its first year of operations is \$130,000, the closing entry is:

|                   |   |   |   |                               |
|-------------------|---|---|---|-------------------------------|
| A                 | = | L | + | SE                            |
|                   |   |   |   | - 130,000 Inc<br>+ 130,000 RE |
| <b>Cash Flows</b> |   |   |   |                               |
| no effect         |   |   |   |                               |

|  |         |  |         |
|--|---------|--|---------|
| Income Summary   | 130,000 |  |         |
| Retained Earnings  |         |  | 130,000 |
| (To close Income Summary and transfer net income to retained earnings) |         |  |         |

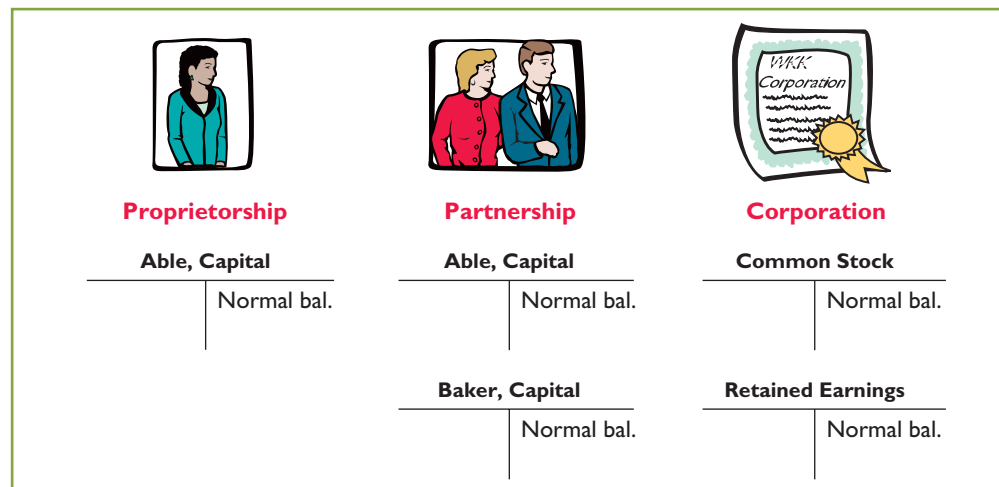

If Delta Robotics has a balance of \$800,000 in common stock at the end of its first year, its stockholders' equity section is as follows.

**Illustration 13-5**  
Stockholders' equity section

| Delta Robotics<br>Balance Sheet (partial) |                |                         |
|---|----------------|-------------------------|
| Stockholders' equity                      |                |                         |
| <b>Paid-in capital</b>                    |                |                         |
| Common stock                              | \$800,000      |                         |
| <b>Retained earnings</b>                  | <u>130,000</u> |                         |
| Total stockholders' equity                |                | <b><u>\$930,000</u></b> |

The following illustration compares the owners' equity (stockholders' equity) accounts reported on a balance sheet for a proprietorship, a partnership, and a corporation.

**Illustration 13-6**  
Comparison of owners' equity accounts

## Do it!

At the end of its first year of operation, Doral Corporation has \$750,000 of common stock and net income of \$122,000. Prepare (a) the closing entry for net income and (b) the stockholders' equity section at year-end.

### Solution

|  |           |                  |
|--|-----------|------------------|
| (a) Income Summary   | 122,000   |                  |
| Retained Earnings  |           | 122,000          |
| (To close Income Summary and transfer net income to retained earnings) |           |                  |
| (b) Stockholders' equity   |           |                  |
| Paid-in capital  |           |                  |
| Common stock   | \$750,000 |                  |
| Retained earnings  | 122,000   |                  |
| Total stockholders' equity   |           | <u>\$872,000</u> |

Related exercise material: BE13-2 and **Do it!** 13-2.

## Corporate Capital

### action plan

- ✓ Record net income in Retained Earnings by a closing entry in which Income Summary is debited and Retained Earnings is credited.
- ✓ In the stockholders' equity section, show (1) paid-in capital and (2) retained earnings.

## Accounting for Issues of Common Stock

Let's now look at how to account for issues of common stock. The primary objectives in accounting for the issuance of common stock are: (1) to identify the specific sources of paid-in capital, and (2) to maintain the distinction between paid-in capital and retained earnings. **The issuance of common stock affects only paid-in capital accounts.**

### Issuing Par Value Common Stock for Cash

As discussed earlier, par value does not indicate a stock's market value. Therefore, the cash proceeds from issuing par value stock may be equal to, greater than, or less than par value. When the company records issuance of common stock for cash, it credits to Common Stock the par value of the shares. It records in a separate paid-in capital account the portion of the proceeds that is above or below par value.

To illustrate, assume that Hydro-Slide, Inc. issues 1,000 shares of \$1 par value common stock at par for cash. The entry to record this transaction is:

|   |       |       |
|---|-------|-------|
| Cash  | 1,000 |       |
| Common Stock  |       | 1,000 |
| (To record issuance of 1,000 shares of \$1 par common stock at par) |       |       |

Now assume that Hydro-Slide issues an additional 1,000 shares of the \$1 par value common stock for cash at \$5 per share. The amount received above the par value, in this case \$4 (\$5 - \$1), is credited to Paid-in Capital in Excess of Par—Common Stock. The entry is:

|  |       |       |
|--|-------|-------|
| Cash   | 5,000 |       |
| Common Stock   |       | 1,000 |
| Paid-in Capital in Excess of Par—Common Stock                |       | 4,000 |
| (To record issuance of 1,000 shares of \$1 par common stock) |       |       |

### Study Objective [3]

Record the issuance of common stock.

|            |   |   |   |           |
|------------|---|---|---|-----------|
| A          | = | L | + | SE        |
| +1,000     |   |   |   | +1,000 CS |
| <hr/>      |   |   |   |           |
| Cash Flows |   |   |   |           |
| +1,000     |   |   |   |           |

|            |   |   |   |           |
|------------|---|---|---|-----------|
| A          | = | L | + | SE        |
| +5,000     |   |   |   | +1,000 CS |
|            |   |   |   | +4,000 CS |
| <hr/>      |   |   |   |           |
| Cash Flows |   |   |   |           |
| +5,000     |   |   |   |           |

The total paid-in capital from these two transactions is \$6,000, and the legal capital is \$2,000. Assuming Hydro-Slide, Inc. has retained earnings of \$27,000, Illustration 13-7 shows the company’s stockholders’ equity section.

**Illustration 13-7**  
Stockholders’ equity—paid-in capital in excess of par

| Hydro-Slide, Inc.<br>Balance Sheet (partial)              |              |
|---|--------------|
| Stockholders’ equity                                      |              |
| Paid-in capital   |              |
| Common stock  | \$ 2,000     |
| <b>Paid-in capital in excess of par—<br/>common stock</b> | <b>4,000</b> |
| Total paid-in capital                                     | 6,000        |
| Retained earnings   | 27,000       |
| Total stockholders’ equity                                | \$33,000     |

**Alternative Terminology**

Paid-in Capital in Excess of Par is also called *Premium on Stock*.

When a corporation issues stock for less than par value, it debits the account Paid-in Capital in Excess of Par—Common Stock if a credit balance exists in this account. If a credit balance does not exist, then the corporation debits to Retained Earnings the amount less than par. This situation occurs only rarely: Most states do not permit the sale of common stock below par value, because stockholders may be held personally liable for the difference between the price paid upon original sale and par value.

**Issuing No-Par Common Stock for Cash**

When no-par common stock has a stated value, the entries are similar to those illustrated for par value stock. The corporation credits the stated value to Common Stock. Also, when the selling price of no-par stock exceeds stated value, the corporation credits the excess to Paid-in Capital in Excess of Stated Value—Common Stock.

For example, assume that instead of \$1 par value stock, Hydro-Slide, Inc. has \$5 stated value no-par stock and the company issues 5,000 shares at \$8 per share for cash. The entry is:

|                              |   |   |   |                          |
|------------------------------|---|---|---|--------------------------|
| A                            | = | L | + | SE                       |
| +40,000                      |   |   |   | +25,000 CS<br>+15,000 CS |
| <b>Cash Flows</b><br>+40,000 |   |   |   |                          |

|  |        |        |
|--|--------|--------|
| Cash   | 40,000 |        |
| Common Stock   |        | 25,000 |
| Paid-in Capital in Excess of Stated Value—Common Stock<br>(To record issue of 5,000 shares of \$5 stated value no-par stock) |        | 15,000 |

Hydro-Slide, Inc. reports Paid-in Capital in Excess of Stated Value—Common Stock as part of paid-in capital in the stockholders’ equity section.

What happens when no-par stock does not have a stated value? In that case, the corporation credits the entire proceeds to Common Stock. Thus, if Hydro-Slide does not assign a stated value to its no-par stock, it records the issuance of the 5,000 shares at \$8 per share for cash as follows.

|                              |   |   |   |            |
|------------------------------|---|---|---|------------|
| A                            | = | L | + | SE         |
| +40,000                      |   |   |   | +40,000 CS |
| <b>Cash Flows</b><br>+40,000 |   |   |   |            |

|   |        |        |
|---|--------|--------|
| Cash  | 40,000 |        |
| Common Stock<br>(To record issue of 5,000 shares of no-par stock) |        | 40,000 |

## Issuing Common Stock for Services or Noncash Assets

Corporations also may issue stock for services (compensation to attorneys or consultants) or for noncash assets (land, buildings, and equipment). In such cases, what cost should be recognized in the exchange transaction? To comply with the **cost principle**, in a noncash transaction **cost is the cash equivalent price**. Thus, **cost is either the fair value of the consideration given up, or the fair value of the consideration received**, whichever is more clearly determinable.

To illustrate, assume that attorneys have helped Jordan Company incorporate. They have billed the company \$5,000 for their services. They agree to accept 4,000 shares of \$1 par value common stock in payment of their bill. At the time of the exchange, there is no established market price for the stock. In this case, the fair value of the consideration received, \$5,000, is more clearly evident. Accordingly, Jordan Company makes the following entry.

|   |       |       |
|---|-------|-------|
| Organization Expense  | 5,000 |       |
| Common Stock  |       | 4,000 |
| Paid-in Capital in Excess of Par—Common Stock<br>(To record issuance of 4,000 shares of \$1 par value stock to attorneys) |       | 1,000 |

|   |   |   |   |            |
|---|---|---|---|------------|
| A | = | L | + | SE         |
|   |   |   |   | −5,000 Exp |
|   |   |   |   | +4,000 CS  |
|   |   |   |   | +1,000 CS  |

**Cash Flows**  
no effect

As explained on page 597, organization costs are expensed as incurred.

In contrast, assume that Athletic Research Inc. is an existing publicly held corporation. Its \$5 par value stock is actively traded at \$8 per share. The company issues 10,000 shares of stock to acquire land recently advertised for sale at \$90,000. The most clearly evident value in this noncash transaction is the market price of the consideration given, \$80,000. The company records the transaction as follows.

|  |        |        |
|--|--------|--------|
| Land   | 80,000 |        |
| Common Stock   |        | 50,000 |
| Paid-in Capital in Excess of Par—Common Stock<br>(To record issuance of 10,000 shares of \$5 par value stock for land) |        | 30,000 |

|         |   |   |   |            |
|---------|---|---|---|------------|
| A       | = | L | + | SE         |
| +80,000 |   |   |   | +50,000 CS |
|         |   |   |   | +30,000 CS |

**Cash Flows**  
no effect

As illustrated in these examples, **the par value of the stock is never a factor in determining the cost of the assets received**. This is also true of the stated value of no-par stock.

### ANATOMY OF A FRAUD

The president, chief operating officer, and chief financial officer of **SafeNet**, a software encryption company, were each awarded employee stock options by the company's board of directors as part of their compensation package. Stock options enable an employee to buy a company's stock sometime in the future at the price that existed when the stock option was awarded. For example, suppose that you received stock options today, when the stock price of your company was \$30. Three years later, if the stock price rose to \$100, you could "exercise" your options and buy the stock for \$30 per share, thereby making \$70 per share. After being awarded their stock options, the three employees changed the award dates in the company's records to dates in the past, when the company's stock was trading at historical lows. For example, using the previous example, they would choose a past date when the stock was selling for \$10 per share, rather than the \$30 price on the actual award date. In our example, this would increase the profit from exercising the options to \$90 per share.

Total take: \$1.7 million

**THE MISSING CONTROL**

**Independent internal verification.** The company's board of directors should have ensured that the awards were properly administered. For example, the date on the minutes from the board meeting could be compared to the dates that were recorded for the awards. In addition, the dates should again be confirmed upon exercise.

**Do it!****Issuance of Stock****action plan**

- ✓ In issuing shares for cash, credit Common Stock for par value per share.
- ✓ Credit any additional proceeds in excess of par to a separate paid-in capital account.
- ✓ When stock is issued for services, use the cash equivalent price.
- ✓ For the cash equivalent price use either the fair value of what is given up or the fair value of what is received, whichever is more clearly determinable.

Cayman Corporation begins operations on March 1 by issuing 100,000 shares of \$10 par value common stock for cash at \$12 per share. On March 15, it issues 5,000 shares of common stock to attorneys in settlement of their bill of \$50,000 for organization costs. Journalize the issuance of the shares, assuming the stock is not publicly traded.

**Solution**

|         |  |                              |                              |

**Accounting for Treasury Stock****Study Objective [4]**

Explain the accounting for treasury stock.

**Helpful Hint**

Treasury shares do not have dividend rights or voting rights.

**Treasury stock** is a corporation's own stock that it has issued and subsequently re-acquired from shareholders, but not retired. A corporation may acquire treasury stock for various reasons:

1. To reissue the shares to officers and employees under bonus and stock compensation plans.
2. To signal to the stock market that management believes the stock is underpriced, in the hope of enhancing its market value.
3. To have additional shares available for use in the acquisition of other companies.
4. To reduce the number of shares outstanding and thereby increase earnings per share.

Another infrequent reason for purchasing shares is that management may want to eliminate hostile shareholders by buying them out.

Many corporations have treasury stock. For example, in the United States approximately 70% of companies have treasury stock.<sup>3</sup> In a recent year, Nike purchased more than 6 million treasury shares.

<sup>3</sup> *Accounting Trends & Techniques 2009* (New York: American Institute of Certified Public Accountants).

## Purchase of Treasury Stock

Companies generally account for treasury stock by **the cost method**. This method uses the cost of the shares purchased to value the treasury stock. Under the cost method, the company debits **Treasury Stock** for the **price paid to reacquire the shares**. When the company disposes of the shares, it credits to Treasury Stock **the same amount** it paid to reacquire the shares.

To illustrate, assume that on January 1, 2012, the stockholders' equity section of Mead, Inc. has 100,000 shares of \$5 par value common stock outstanding (all issued at par value) and Retained Earnings of \$200,000. The stockholders' equity section before purchase of treasury stock is as follows.

| Mead, Inc.<br>Balance Sheet (partial)                                 |                         |
|---|-------------------------|
| Stockholders' equity  |                         |
| Paid-in capital   |                         |
| Common stock, \$5 par value, 100,000 shares<br>issued and outstanding | \$500,000               |
| Retained earnings   | <u>200,000</u>          |
| Total stockholders' equity  | <u><u>\$700,000</u></u> |

**Illustration 13-8**

Stockholders' equity with no treasury stock

On February 1, 2012, Mead acquires 4,000 shares of its stock at \$8 per share. The entry is:

|        |  |                          |
|--------|--|--------------------------|
| Feb. 1 | Treasury Stock<br>Cash<br>(To record purchase of 4,000 shares of<br>treasury stock at \$8 per share) | 32,000<br><br><br>32,000 |
|--------|--|--------------------------|

|   |   |   |   |    |   |
|---|---|---|---|----|---|
| A | = | L | + | SE |   |
|   |   |   |   |    | -32,000 TS  |
|   |   |   |   |    | -32,000   |
|   |   |   |   |    |   |
|   |   |   |   |    | Cash Flows  |
|   |   |   |   |    | -32,000   |
|   |   |   |   |    |  |

Note that Mead debits Treasury Stock for the cost of the shares purchased. Is the original paid-in capital account, Common Stock, affected? No, because the number of issued shares does not change. In the stockholders' equity section of the balance sheet, Mead deducts treasury stock from total paid-in capital and retained earnings. Treasury Stock is a **contra stockholders' equity account**. Thus, the acquisition of treasury stock reduces stockholders' equity.

The stockholders' equity section of Mead, Inc. after purchase of treasury stock is as follows.

| Mead, Inc.<br>Balance Sheet (partial)   |                         |
|---|-------------------------|
| Stockholders' equity  |                         |
| Paid-in capital   |                         |
| Common stock, \$5 par value, 100,000 shares issued<br>and 96,000 shares outstanding | \$500,000               |
| Retained earnings   | <u>200,000</u>          |
| Total paid-in capital and retained earnings   | 700,000                 |
| <b>Less: Treasury stock (4,000 shares)</b>  | <b><u>32,000</u></b>    |
| Total stockholders' equity  | <u><u>\$668,000</u></u> |

**Illustration 13-9**

Stockholders' equity with treasury stock

**Ethics Note**

The purchase of treasury stock reduces the cushion for creditors and preferred stockholders. A restriction for the cost of treasury stock purchased is often required. The restriction is usually applied to retained earnings.

Mead discloses in the balance sheet both the number of shares issued (100,000) and the number in the treasury (4,000). The difference is the number of shares of stock outstanding (96,000). The term **outstanding stock** means the number of shares of issued stock that are being held by stockholders.

Some maintain that companies should report treasury stock as an asset because it can be sold for cash. Under this reasoning, companies should also show unissued stock as an asset, clearly an erroneous conclusion. Rather than being an asset, treasury stock reduces stockholder claims on corporate assets. This effect is correctly shown by reporting treasury stock as a deduction from total paid-in capital and retained earnings.

**ACCOUNTING ACROSS THE ORGANIZATION**

**Why Did Reebok Buy Its Own Stock?**

In a bold (and some would say risky) move, **Reebok** at one time bought back nearly a *third* of its shares. This repurchase of shares dramatically reduced Reebok's available cash. In fact, the company borrowed significant funds to accomplish the repurchase. In a press release, management stated that it was repurchasing the shares because it believed its stock was severely underpriced. The repurchase of so many shares was meant to signal management's belief in good future earnings.

Skeptics, however, suggested that Reebok's management was repurchasing shares to make it less likely that another company would acquire Reebok (in which case Reebok's top managers would likely lose their jobs). By depleting its cash, Reebok became a less likely acquisition target. Acquiring companies like to purchase companies with large cash balances so they can pay off debt used in the acquisition.

**?** What signal might a large stock repurchase send to investors regarding management's belief about the company's growth opportunities? (See page 629.)

**Helpful Hint**

Treasury stock transactions are classified as capital stock transactions. As in the case when stock is issued, the income statement is not involved.

|                   |   |   |   |           |
|-------------------|---|---|---|-----------|
| A                 | = | L | + | SE        |
| +10,000           |   |   |   | +8,000 TS |
|                   |   |   |   | +2,000 TS |
| <b>Cash Flows</b> |   |   |   |           |
| +10,000           |   |   |   |           |

**Disposal of Treasury Stock**

Treasury stock is usually sold or retired. The accounting for its sale differs when treasury stock is sold above cost than when it is sold below cost.

**SALE OF TREASURY STOCK ABOVE COST**

If the selling price of the treasury shares is equal to their cost, the company records the sale of the shares by a debit to Cash and a credit to Treasury Stock. When the selling price of the shares is greater than their cost, the company credits the difference to Paid-in Capital from Treasury Stock.

To illustrate, assume that on July 1, Mead sells for \$10 per share the 1,000 shares of its treasury stock, previously acquired at \$8 per share. The entry is as follows.

|        |  |                        |                |
|--------|--|------------------------|----------------|
| July 1 | Cash<br>Treasury Stock<br>Paid-in Capital from Treasury Stock<br>(To record sale of 1,000 shares of treasury stock above cost) | 10,000<br><br><br><br> | 8,000<br>2,000 |
|--------|--|------------------------|----------------|

Mead does not record a \$2,000 gain on sale of treasury stock for two reasons: (1) Gains on sales occur when **assets** are sold, and treasury stock is not an asset. (2) A corporation does not realize a gain or suffer a loss from stock transactions with its own stockholders. Thus, companies should not include in net income any paid-in capital arising from the sale of treasury stock. Instead, they report Paid-in Capital from Treasury Stock separately on the balance sheet, as a part of paid-in capital.

### SALE OF TREASURY STOCK BELOW COST

When a company sells treasury stock below its cost, it usually debits to Paid-in Capital from Treasury Stock the excess of cost over selling price. Thus, if Mead, Inc. sells an additional 800 shares of treasury stock on October 1 at \$7 per share, it makes the following entry.

|        |  |                           |       |
|--------|--|---------------------------|-------|
| Oct. 1 | Cash<br>Paid-in Capital from Treasury Stock<br>Treasury Stock<br>(To record sale of 800 shares of treasury stock below cost) | 5,600<br>800<br><br>6,400 | 6,400 |
|--------|--|---------------------------|-------|

|                   |   |   |   |                       |
|-------------------|---|---|---|-----------------------|
| A                 | = | L | + | SE                    |
| +5,600            |   |   |   | - 800 TS<br>+6,400 TS |
|                   |   |   |   |                       |
| <b>Cash Flows</b> |   |   |   |                       |
| +5,600            |   |   |   |                       |

Observe the following from the two sales entries: (1) Mead credits Treasury Stock at cost in each entry. (2) Mead uses Paid-in Capital from Treasury Stock for the difference between cost and the resale price of the shares. (3) The original paid-in capital account, Common Stock, is not affected. **The sale of treasury stock increases both total assets and total stockholders' equity.**

After posting the foregoing entries, the treasury stock accounts will show the following balances on October 1.

| Treasury Stock |        | Paid-in Capital from Treasury Stock |       |
|----------------|--------|-------------------------------------|-------|
| Feb. 1         | 32,000 | July 1                              | 8,000 |
|                |        | Oct. 1                              | 6,400 |
| Oct. 1 Bal.    | 17,600 |                                     |       |

**Illustration 13-10**  
Treasury stock accounts

When a company fully depletes the credit balance in Paid-in Capital from Treasury Stock, it debits to Retained Earnings any additional excess of cost over selling price. To illustrate, assume that Mead, Inc. sells its remaining 2,200 shares at \$7 per share on December 1. The excess of cost over selling price is \$2,200 [2,200 × (\$8 - \$7)]. In this case, Mead debits \$1,200 of the excess to Paid-in Capital from Treasury Stock. It debits the remainder to Retained Earnings. The entry is:

|        |   |  |        |
|--------|---|--|--------|
| Dec. 1 | Cash<br>Paid-in Capital from Treasury Stock<br>Retained Earnings<br>Treasury Stock<br>(To record sale of 2,200 shares of treasury stock at \$7 per share) | 15,400<br>1,200<br>1,000<br><br>17,600 | 17,600 |
|--------|---|--|--------|

|                   |   |   |   |  |
|-------------------|---|---|---|--|
| A                 | = | L | + | SE                                     |
| +15,400           |   |   |   | - 1,200 TS<br>- 1,000 RE<br>+17,600 TS |
|                   |   |   |   |  |
| <b>Cash Flows</b> |   |   |   |  |
| +15,400           |   |   |   |  |

## Do it!

Santa Anita Inc. purchases 3,000 shares of its \$50 par value common stock for \$180,000 cash on July 1. It will hold the shares in the treasury until resold. On November 1, the corporation sells 1,000 shares of treasury stock for cash at \$70 per share. Journalize the treasury stock transactions.

## Preferred Stock

**Study Objective [5]**

Differentiate preferred stock from common stock.

To appeal to more investors, a corporation may issue an additional class of stock, called preferred stock. **Preferred stock** has contractual provisions that give it some preference or priority over common stock. Typically, preferred stockholders have a priority as to (1) distributions of earnings (dividends) and (2) assets in the event of liquidation. However, they generally do not have voting rights.

Like common stock, corporations may issue preferred stock for cash or for noncash assets. The entries for these transactions are similar to the entries for common stock. When a corporation has more than one class of stock, each paid-in capital account title should identify the stock to which it relates. A company might have the following accounts: Preferred Stock, Common Stock, Paid-in Capital in Excess of Par—Preferred Stock, and Paid-in Capital in Excess of Par—Common Stock. For example, if Stine Corporation issues 10,000 shares of \$10 par value preferred stock for \$12 cash per share, the entry to record the issuance is:

|                   |   |   |   |                           |
|-------------------|---|---|---|---------------------------|
| A                 | = | L | + | SE                        |
| +120,000          |   |   |   | +100,000 PS<br>+20,000 PS |
| <b>Cash Flows</b> |   |   |   |                           |
| +120,000          |   |   |   |                           |

|   |  |         |         |
|---|--|---------|---------|
| Cash  |  | 120,000 |         |
| Preferred Stock   |  |         | 100,000 |
| Paid-in Capital in Excess of Par—Preferred Stock                            |  |         | 20,000  |
| (To record the issuance of 10,000 shares of \$10 par value preferred stock) |  |         |         |

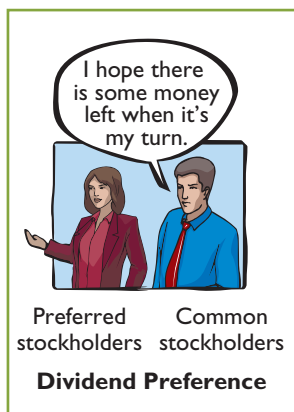

Preferred stock may have either a par value or no-par value. In the stockholders' equity section of the balance sheet, companies list preferred stock first because of its dividend and liquidation preferences over common stock.

We discuss various features associated with the issuance of preferred stock on the following pages.

### Dividend Preferences

As indicated above, **preferred stockholders have the right to receive dividends before common stockholders**. For example, if the dividend rate on preferred stock is \$5 per share, common shareholders will not receive any dividends in the current year until preferred stockholders have received \$5 per share. The first claim to dividends does not, however, guarantee the payment of dividends. Dividends depend on many factors, such as adequate retained earnings and availability of cash. If a company does not pay dividends to preferred stockholders, it cannot of course pay dividends to common stockholders.

For preferred stock, companies state the per share dividend amount as a percentage of the par value or as a specified amount. For example, **Earthlink** specifies a 3% dividend on its \$100 par value preferred, whereas **PepsiCo** pays \$4.56 per share on its no-par value stock.

## CUMULATIVE DIVIDEND

Preferred stock often contains a **cumulative dividend** feature. This means that preferred stockholders must be paid both current-year dividends and any unpaid prior-year dividends before common stockholders receive dividends. When preferred stock is cumulative, preferred dividends not declared in a given period are called **dividends in arrears**.

To illustrate, assume that Scientific Leasing has 5,000 shares of 7%, \$100 par value, cumulative preferred stock outstanding. Each \$100 share pays a \$7 dividend ( $.07 \times \$100$ ). The annual dividend is \$35,000 ( $5,000 \times \$7$  per share). If dividends are two years in arrears, preferred stockholders are entitled to receive the following dividends in the current year.

|  |                         |
|--|-------------------------|
| Dividends in arrears ( $\$35,000 \times 2$ ) | \$ 70,000               |
| Current-year dividends                       | 35,000                  |
| <b>Total preferred dividends</b>             | <b><u>\$105,000</u></b> |

The company cannot pay dividends to common stockholders until it pays the entire preferred dividend. In other words, companies cannot pay dividends to common stockholders while any preferred dividends are in arrears.

Are dividends in arrears considered a liability? **No—no payment obligation exists until the board of directors declares a dividend.** However, companies should disclose in the notes to the financial statements the amount of dividends in arrears. Doing so enables investors to assess the potential impact of this commitment on the corporation's financial position.

Companies that are unable to meet their dividend obligations are not looked upon favorably by the investment community. As a financial officer noted in discussing one company's failure to pay its cumulative preferred dividend for a period of time, "Not meeting your obligations on something like that is a major black mark on your record." The accounting entries for preferred stock dividends are explained in Chapter 14.

## Liquidation Preference

Most preferred stocks also have a preference on corporate assets if the corporation fails. This feature provides security for the preferred stockholder. The preference to assets may be for the par value of the shares or for a specified liquidating value. For example, **Commonwealth Edison's** preferred stock entitles its holders to receive \$31.80 per share, plus accrued and unpaid dividends, in the event of liquidation. The liquidation preference establishes the respective claims of creditors and preferred stockholders in litigation involving bankruptcy lawsuits.

## Statement Presentation

Companies report paid-in capital and retained earnings in the stockholders' equity section of the balance sheet. They identify the specific sources of paid-in capital, using the following classifications.

- 1. Capital stock.** This category consists of preferred and common stock. Preferred stock appears before common stock because of its preferential rights. Companies report par value, shares authorized, shares issued, and shares outstanding for each class of stock.
- 2. Additional paid-in capital.** This category includes the excess of amounts paid in over par or stated value and paid-in capital from treasury stock.

### Illustration 13-11

Computation of total dividends to preferred stock

### Study Objective [6]

Prepare a stockholders' equity section.

### Alternative Terminology

Paid-in capital is sometimes called *contributed capital*.

The stockholders' equity section of Connally Inc. in Illustration 13-12 includes most of the accounts discussed in this chapter. The disclosures pertaining to Connally's common stock indicate that: the company issued 400,000 shares; 100,000 shares are unissued (500,000 authorized less 400,000 issued); and 390,000 shares are outstanding (400,000 issued less 10,000 shares in treasury).

**Illustration 13-12**  
Stockholders' equity section

| <b>Connally Inc.</b><br>Balance Sheet (partial)   |                    |
|---|--------------------|
| Stockholders' equity  |                    |
| Paid-in capital   |                    |
| <b>Capital stock</b>  |                    |
| 9% preferred stock, \$100 par value<br>cumulative, 10,000 shares authorized, 6,000<br>shares issued and outstanding     | \$ 600,000         |
| Common stock, no par, \$5 stated value, 500,000<br>shares authorized, 400,000 shares issued, and<br>390,000 outstanding | 2,000,000          |
| Total capital stock   | 2,600,000          |
| <b>Additional paid-in capital</b>   |                    |
| In excess of par—preferred stock  | \$ 30,000          |
| In excess of stated—common stock  | 860,000            |
| From treasury stock   | 140,000            |
| Total additional paid-in capital  | 1,030,000          |
| Total paid-in capital   | 3,630,000          |
| Retained earnings   | 1,058,000          |
| Total paid-in capital and retained earnings   | 4,688,000          |
| Less: Treasury stock (10,000 common shares) (at cost)   | (80,000)           |
| Total stockholders' equity  | <u>\$4,608,000</u> |

Published annual reports often combine and report as a single amount the individual sources of additional paid-in capital, as shown in Illustration 13-13. In addition, authorized shares are sometimes not reported.

**Illustration 13-13**  
Published stockholders' equity section

| <b>Kellogg Company</b><br>Balance Sheet (partial)<br>(\$ in millions) |                |
|---|----------------|
| Stockholders' equity  |                |
| Common stock, \$0.25 par value, 1,000,000,000 shares authorized       |                |
| Issued: 418,669,193 shares  | \$ 105         |
| Capital in excess of par value  | 388            |
| Retained earnings   | 4,217          |
| Treasury stock, at cost   |                |
| 28,618,052 shares   | (1,357)        |
| Accumulated other comprehensive income (loss)                         | (827)          |
| Total stockholders' equity  | <u>\$2,526</u> |

In practice, companies sometimes use the term "Capital surplus" in place of "Additional paid-in capital," and "Earned surplus" in place of "Retained earnings." The use of the term "surplus" suggests that the company has available an excess amount of funds. Such is not necessarily the case. Therefore, **the term "surplus" should not be employed in accounting.** Unfortunately, a number of companies still do use it.

## Do it!

Jennifer Corporation has issued 300,000 shares of \$3 par value common stock. It authorized 600,000 shares. The paid-in capital in excess of par on the common stock is \$380,000. The corporation has reacquired 15,000 shares at a cost of \$50,000 and is currently holding those shares. Treasury stock was reissued in prior years for \$72,000 more than its cost.

The corporation also has 4,000 shares issued and outstanding of 8%, \$100 par-value preferred stock. It authorized 10,000 shares. The paid-in capital in excess of par on the preferred stock is \$25,000. Retained earnings is \$610,000.

Prepare the stockholders' equity section of the balance sheet.

### Solution

| <b>JENNIFER CORPORATION</b>   |               |                           |

| Less: Treasury stock (15,000 common shares) (at cost)   |               | <u>(50,000)</u>           |
| Total stockholders' equity  |               | <u><u>\$2,337,000</u></u> |

## Stockholders' Equity Section

### action plan

- ✓ Present capital stock first; list preferred stock before common stock.
- ✓ Present additional paid-in capital after capital stock.
- ✓ Report retained earnings after capital stock and additional paid-in capital.
- ✓ Deduct treasury stock from total paid-in capital and retained earnings.

Related exercise material: BE13-8, E13-9, E13-12, E13-13, E13-14, E13-15, and **Do it!** 13-5.

## COMPREHENSIVE

## Do it!

The Rolman Corporation is authorized to issue 1,000,000 shares of \$5 par value common stock. In its first year, the company has the following stock transactions.

- Jan. 10 Issued 400,000 shares of stock at \$8 per share.  
 July 1 Issued 100,000 shares of stock for land. The land had an asking price of \$900,000. The stock is currently selling on a national exchange at \$8.25 per share.  
 Sept. 1 Purchased 10,000 shares of common stock for the treasury at \$9 per share.  
 Dec. 1 Sold 4,000 shares of the treasury stock at \$10 per share.

### Instructions

- (a) Journalize the transactions.
- (b) Prepare the stockholders' equity section assuming the company had retained earnings of \$200,000 at December 31.

have a stated value, companies credit the entire proceeds to Common Stock.

**[4] Explain the accounting for treasury stock.** The cost method is generally used in accounting for treasury stock. Under this approach, companies debit Treasury Stock at the price paid to reacquire the shares. They credit the same amount to Treasury Stock when they sell the shares. The difference between the sales price and cost is recorded in stockholders' equity accounts, not in income statement accounts.

**[5] Differentiate preferred stock from common stock.** Preferred stock has contractual provisions that give it priority over common stock in certain areas. Typically,

preferred stockholders have preferences (1) to dividends and (2) to assets in liquidation. They usually do not have voting rights.

**[6] Prepare a stockholders' equity section.** In the stockholders' equity section, companies report paid-in capital and retained earnings and identify specific sources of paid-in capital. Within paid-in capital, two classifications are shown: capital stock and additional paid-in capital. If a corporation has treasury stock, it deducts the cost of treasury stock from total paid-in capital and retained earnings to obtain total stockholders' equity.

## Glossary

**Authorized stock** The amount of stock that a corporation is authorized to sell as indicated in its charter. (p. 598).

**Charter** A document that creates a corporation. (p. 597).

**Corporation** A business organized as a legal entity separate and distinct from its owners under state corporation law. (p. 594).

**Cumulative dividend** A feature of preferred stock entitling the stockholder to receive current and unpaid prior-year dividends before common stockholders receive dividends. (p. 611).

**No-par value stock** Capital stock that has not been assigned a value in the corporate charter. (p. 601).

**Organization costs** Costs incurred in the formation of a corporation. (p. 597).

**Outstanding stock** Capital stock that has been issued and is being held by stockholders. (p. 608).

**Paid-in capital** Total amount of cash and other assets paid in to the corporation by stockholders in exchange for capital stock. (p. 602).

**Par value stock** Capital stock that has been assigned a value per share in the corporate charter. (p. 601).

**Preferred stock** Capital stock that has some preferences over common stock. (p. 610).

**Privately held corporation** A corporation that has only a few stockholders and whose stock is not available for sale to the general public. (p. 594).

**Publicly held corporation** A corporation that may have thousands of stockholders and whose stock is regularly traded on a national securities exchange. (p. 594).

**Retained earnings** Net income that is retained in the corporation for future use. (p. 602).

**Stated value** The amount per share assigned by the board of directors to no-par stock. (p. 601).

**Treasury stock** A corporation's own stock that has been issued and subsequently reacquired from shareholders by the corporation but not retired. (p. 606).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 629.

- (SO 1) 1. Which of the following is *not* a major advantage of a corporation?
- Separate legal existence.
  - Continuous life.
  - Government regulations.
  - Transferable ownership rights.
- (SO 1) 2. A major disadvantage of a corporation is:
- limited liability of stockholders.
  - additional taxes.
  - transferable ownership rights.
  - None of the above.

3. Costs incurred in the formation of a corporation:
- do not include legal fees.
  - are expensed as incurred.
  - are recorded as an asset.
  - provide future benefits whose amounts and timing are easily determined.
- (SO 1) 4. Which of the following statements is *false*?
- Ownership of common stock gives the owner a voting right.
  - The stockholders' equity section begins with paid-in capital.
  - The authorization of capital stock does not result in a formal accounting entry.

- d. Legal capital per share applies to par value stock but not to no-par value stock.
- (SO 2) 5. Total stockholders' equity (in the absence of treasury stock) equals:
- Total paid-in capital + Retained earnings.
  - Paid-in capital + Capital stock + Retained earnings.
  - Capital stock + Additional paid-in capital – Retained earnings.
  - Common stock + Retained earnings.
- (SO 2) 6. The account Retained Earnings is:
- a subdivision of paid-in capital.
  - net income retained in the corporation.
  - reported as an expense in the income statement.
  - closed to capital stock.
- (SO 3) 7. A-Team Corporation issued 1,000 shares of \$5 par value stock for land. The stock is actively traded at \$9 per share. The land was advertised for sale at \$10,500. The land should be recorded at:
- |             |              |
|-------------|--------------|
| a. \$4,000. | c. \$9,000.  |
| b. \$5,000. | d. \$10,500. |
- (SO 3) 8. ABC Corporation issues 1,000 shares of \$10 par value common stock at \$12 per share. In recording the transaction, credits are made to:
- Common Stock \$10,000 and Paid-in Capital in Excess of Stated Value \$2,000.
  - Common Stock \$12,000.
  - Common Stock \$10,000 and Paid-in Capital in Excess of Par \$2,000.
  - Common Stock \$10,000 and Retained Earnings \$2,000.
- (SO 4) 9. Treasury stock may be repurchased:
- to reissue the shares to officers and employees under bonus and stock compensation plans.
  - to signal to the stock market that management believes the stock is underpriced.
  - to have additional shares available for use in the acquisition of other companies.
  - More than one of the above.
- (SO 4) 10. XYZ, Inc. sells 100 shares of \$5 par value treasury stock at \$13 per share. If the cost of acquiring the shares was \$10 per share, the entry for the sale should include credits to:
- Treasury Stock \$1,000 and Paid-in Capital from Treasury Stock \$300.
  - Treasury Stock \$500 and Paid-in Capital from Treasury Stock \$800.
  - Treasury Stock \$1,000 and Retained Earnings \$300.
  - Treasury Stock \$500 and Paid-in Capital in Excess of Par \$800.
11. In the stockholders' equity section, the cost of treasury stock is deducted from:
- total paid-in capital and retained earnings.
  - retained earnings.
  - total stockholders' equity.
  - common stock in paid-in capital.
12. Preferred stock may have priority over common stock *except* in:
- dividends.
  - assets in the event of liquidation.
  - cumulative dividend features.
  - voting.
13. Which of the following is *not* reported under additional paid-in capital?
- Paid-in capital in excess of par.
  - Common stock.
  - Paid-in capital in excess of stated value.
  - Paid-in capital from treasury stock.
14. M-Bot Corporation has 10,000 shares of 8%, \$100 par value, cumulative preferred stock outstanding at December 31, 2012. No dividends were declared in 2010 or 2011. If M-Bot wants to pay \$375,000 of dividends in 2012, common stockholders will receive:
- |               |               |
|---------------|---------------|
| a. \$0.       | c. \$215,000. |
| b. \$295,000. | d. \$135,000. |
15. In the stockholders' equity section of the balance sheet, common stock:
- is listed before preferred stock.
  - is added to total capital stock.
  - is part of paid-in capital.
  - is part of additional paid-in capital.

## Questions

- Eric Fink, a student, asks your help in understanding the following characteristics of a corporation: (a) separate legal existence, (b) limited liability of stockholders, and (c) transferable ownership rights. Explain these characteristics to Eric.
- (a) Your friend Vicky Biel cannot understand how the characteristic of corporation management is both an advantage and a disadvantage. Clarify this problem for Vicky.  
 (b) Identify and explain two other disadvantages of a corporation.
- (a) The following terms pertain to the forming of a corporation: (1) charter, (2) by-laws, and (3) organization costs. Explain the terms.  
 (b) Linda Merando believes a corporation must be incorporated in the state in which its headquarters office is located. Is Linda correct? Explain.
- What are the basic ownership rights of common stockholders in the absence of restrictive provisions?
- (a) What are the two principal components of stockholders' equity?  
 (b) What is paid-in capital? Give three examples.

6. How do the financial statements for a corporation differ from the statements for a proprietorship?
7. The corporate charter of Hawes Corporation allows the issuance of a maximum of 100,000 shares of common stock. During its first two years of operations, Hawes sold 70,000 shares to shareholders and reacquired 7,000 of these shares. After these transactions, how many shares are authorized, issued, and outstanding?
8. Which is the better investment—common stock with a par value of \$5 per share, or common stock with a par value of \$20 per share? Why?
9. What factors help determine the market value of stock?
10. What effect does the issuance of stock at a price above par value have on the issuer's net income? Explain.
11. Why is common stock usually not issued at a price that is less than par value?
12. Land appraised at \$80,000 is purchased by issuing 1,000 shares of \$20 par value common stock. The market price of the shares at the time of the exchange, based on active trading in the securities market, is \$95 per share. Should the land be recorded at \$20,000, \$80,000, or \$95,000? Explain.
13. For what reasons might a company like **IBM** repurchase some of its stock (treasury stock)?
14. Kwun, Inc. purchases 1,000 shares of its own previously issued \$5 par common stock for \$12,000. Assuming the shares are held in the treasury, what effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?
15. The treasury stock purchased in question 14 is resold by Kwun, Inc. for \$18,000. What effect does this transaction have on (a) net income, (b) total assets, (c) total paid-in capital, and (d) total stockholders' equity?
16. (a) What are the principal differences between common stock and preferred stock?  
(b) Preferred stock may be cumulative. Discuss this feature.  
(c) How are dividends in arrears presented in the financial statements?
17. Ruiz Inc.'s common stock has a par value of \$1 and a current market value of \$15. Explain why these amounts are different.
18. Indicate how each of the following accounts should be classified in the stockholders' equity section.  
(a) Common stock  
(b) Paid-in capital in excess of par—common stock  
(c) Retained earnings  
(d) Treasury stock  
(e) Paid-in capital from treasury stock  
(f) Paid-in capital in excess of stated value—common stock  
(g) Preferred stock
19.  **PEPSICO** How many shares of treasury stock did **PepsiCo** have at December 26, 2009, and at December 27, 2008?

## Brief Exercises

**BE13-1** Trudy Borke is studying for her accounting midterm examination. Identify for Trudy the advantages and disadvantages of the corporate form of business organization.

*List the advantages and disadvantages of a corporation.*

(SO 1)

**BE13-2** At December 31, Jimbo Corporation reports net income of \$450,000. Prepare the entry to close net income.

*Prepare closing entries for a corporation.* (SO 2)

**BE13-3** On May 10, Jack Corporation issues 2,000 shares of \$10 par value common stock for cash at \$18 per share. Journalize the issuance of the stock.

*Prepare entries for issuance of par value common stock.*

(SO 3)

**BE13-4** On June 1, Donkey Inc. issues 3,000 shares of no-par common stock at a cash price of \$6 per share. Journalize the issuance of the shares assuming the stock has a stated value of \$1 per share.

*Prepare entries for issuance of no-par value common stock.*

(SO 3)

**BE13-5** Jer Inc.'s \$10 par value common stock is actively traded at a market value of \$15 per share. Jer issues 5,000 shares to purchase land advertised for sale at \$85,000. Journalize the issuance of the stock in acquiring the land.

*Prepare entries for issuance of stock in a noncash transaction.*

(SO 3)

**BE13-6** On July 1, Laura Corporation purchases 500 shares of its \$5 par value common stock for the treasury at a cash price of \$8 per share. On September 1, it sells 300 shares of the treasury stock for cash at \$11 per share. Journalize the two treasury stock transactions.

*Prepare entries for treasury stock transactions.*

(SO 4)

**BE13-7** Cora Inc. issues 5,000 shares of \$100 par value preferred stock for cash at \$130 per share. Journalize the issuance of the preferred stock.

*Prepare entries for issuance of preferred stock.*

(SO 5)

**BE13-8** Vivi Corporation has the following accounts at December 31: Common Stock, \$10 par, 5,000 shares issued, \$50,000; Paid-in Capital in Excess of Par—Common Stock \$20,000; Retained Earnings \$45,000; and Treasury Stock, 500 shares, \$11,000. Prepare the stockholders' equity section of the balance sheet.

*Prepare stockholders' equity section.*

(SO 6)

## Do it! Review

Analyze statements about corporate organization.

(SO 1)

**Do it! 13-1** Indicate whether each of the following statements is true or false.

- \_\_\_\_\_ 1. The corporation is an entity separate and distinct from its owners.
- \_\_\_\_\_ 2. The liability of stockholders is normally limited to their investment in the corporation.
- \_\_\_\_\_ 3. The relative lack of government regulation is an advantage of the corporate form of business.
- \_\_\_\_\_ 4. There is no journal entry to record the authorization of capital stock.
- \_\_\_\_\_ 5. No-par value stock is quite rare today.

Close net income and prepare stockholders' equity section.

(SO 2)

**Do it! 13-2** At the end of its first year of operation, Jane Corporation has \$1,000,000 of common stock and net income of \$216,000. Prepare (a) the closing entry for net income and (b) the stockholders' equity section at year-end.

Journalize issuance of stock.

(SO 3)

**Do it! 13-3** Balboa Island Corporation began operations on April 1 by issuing 60,000 shares of \$5 par value common stock for cash at \$13 per share. On April 19, it issued 2,000 shares of common stock to attorneys in settlement of their bill of \$27,500 for organization costs. Journalize both issuances, assuming the stock is not publicly traded.

Journalize treasury stock transactions.

(SO 4)

**Do it! 13-4** Caleb Corporation purchased 2,000 shares of its \$10 par value common stock for \$120,000 on August 1. It will hold these shares in the treasury until resold. On December 1, the corporation sold 1,200 shares of treasury stock for cash at \$72 per share. Journalize the treasury stock transactions.

Prepare stockholders' equity section.

(SO 6)

**Do it! 13-5** Doreen Corporation has issued 100,000 shares of \$5 par value common stock. It authorized 500,000 shares. The paid-in capital in excess of par on the common stock is \$240,000. The corporation has reacquired 7,000 shares at a cost of \$46,000 and is currently holding those shares. Treasury stock was reissued in prior years for \$47,000 more than its cost.

The corporation also has 2,000 shares issued and outstanding of 7%, \$100 par-value preferred stock. It authorized 10,000 shares. The paid-in capital in excess of par on the preferred stock is \$23,000.

Retained earnings is \$372,000.

Prepare the stockholders' equity section of the balance sheet.

## Exercises

Identify characteristics of a corporation.

(SO 1)

**E13-1** Angela has prepared the following list of statements about corporations.

1. A corporation is an entity separate and distinct from its owners.
2. As a legal entity, a corporation has most of the rights and privileges of a person.
3. Most of the largest U.S. corporations are privately held corporations.
4. Corporations may buy, own, and sell property; borrow money; enter into legally binding contracts; and sue and be sued.
5. The net income of a corporation is not taxed as a separate entity.
6. Creditors have a legal claim on the personal assets of the owners of a corporation if the corporation does not pay its debts.
7. The transfer of stock from one owner to another requires the approval of either the corporation or other stockholders.
8. The board of directors of a corporation legally owns the corporation.
9. The chief accounting officer of a corporation is the controller.
10. Corporations are subject to less state and federal regulations than partnerships or proprietorships.

### Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Identify characteristics of a corporation.

(SO 1, 2)

**E13-2** Angela (see E13-1) has studied the information you gave her in that exercise and has come to you with more statements about corporations.

1. Corporation management is both an advantage and a disadvantage of a corporation compared to a proprietorship or a partnership.

2. Limited liability of stockholders, government regulations, and additional taxes are the major disadvantages of a corporation.
3. When a corporation is formed, organization costs are recorded as an asset.
4. Each share of common stock gives the stockholder the ownership rights to vote at stockholder meetings, share in corporate earnings, keep the same percentage ownership when new shares of stock are issued, and share in assets upon liquidation.
5. The number of issued shares is always greater than or equal to the number of authorized shares.
6. A journal entry is required for the authorization of capital stock.
7. Publicly held corporations usually issue stock directly to investors.
8. The trading of capital stock on a securities exchange involves the transfer of already issued shares from an existing stockholder to another investor.
9. The market value of common stock is usually the same as its par value.
10. Retained earnings is the total amount of cash and other assets paid in to the corporation by stockholders in exchange for capital stock.

### Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

**E13-3** During its first year of operations, Benji Corporation had the following transactions pertaining to its common stock.

*Journalize issuance of common stock.*

- Jan. 10 Issued 70,000 shares for cash at \$5 per share.  
 July 1 Issued 40,000 shares for cash at \$7 per share.

(SO 3)

### Instructions

- (a) Journalize the transactions, assuming that the common stock has a par value of \$5 per share.
- (b) Journalize the transactions, assuming that the common stock is no-par with a stated value of \$1 per share.

**E13-4** Jake Corporation issued 1,000 shares of stock.

*Journalize issuance of common stock.*

### Instructions

Prepare the entry for the issuance under the following assumptions.

- (a) The stock had a par value of \$5 per share and was issued for a total of \$52,000.
- (b) The stock had a stated value of \$5 per share and was issued for a total of \$52,000.
- (c) The stock had no par or stated value and was issued for a total of \$52,000.
- (d) The stock had a par value of \$5 per share and was issued to attorneys for services during incorporation valued at \$52,000.
- (e) The stock had a par value of \$5 per share and was issued for land worth \$52,000.

(SO 3)

**E13-5** Laci Co. had the following transactions during the current period.

*Journalize issuance of common and preferred stock and purchase of treasury stock.*

- Mar. 2 Issued 5,000 shares of \$5 par value common stock to attorneys in payment of a bill for \$30,000 for services provided in helping the company to incorporate.  
 June 12 Issued 60,000 shares of \$5 par value common stock for cash of \$375,000.  
 July 11 Issued 1,000 shares of \$100 par value preferred stock for cash at \$110 per share.  
 Nov. 28 Purchased 2,000 shares of treasury stock for \$80,000.

(SO 3, 4, 5)

### Instructions

Journalize the transactions.

**E13-6** As an auditor for the CPA firm of Valente and Ardvino, you encounter the following situations in auditing different clients.

*Journalize noncash common stock transactions.*

1. PM Corporation is a closely held corporation whose stock is not publicly traded. On December 5, the corporation acquired land by issuing 5,000 shares of its \$20 par value common stock. The owners' asking price for the land was \$120,000, and the fair value of the land was \$115,000.
2. Paul Corporation is a publicly held corporation whose common stock is traded on the securities markets. On June 1, it acquired land by issuing 20,000 shares of its \$10 par value stock. At the time of the exchange, the land was advertised for sale at \$250,000. The stock was selling at \$12 per share.

(SO 3)

Journalize treasury stock transactions.  
(SO 4)

**Instructions**

Prepare the journal entries for each of the situations above.

**E13-7** On January 1, 2012, the stockholders' equity section of Joshua Corporation shows: Common stock (\$5 par value) \$1,500,000; paid-in capital in excess of par \$1,000,000; and retained earnings \$1,200,000. During the year, the following treasury stock transactions occurred.

- Mar. 1 Purchased 50,000 shares for cash at \$15 per share.
- July 1 Sold 10,000 treasury shares for cash at \$17 per share.
- Sept. 1 Sold 8,000 treasury shares for cash at \$14 per share.

**Instructions**

- (a) Journalize the treasury stock transactions.
- (b) Restate the entry for September 1, assuming the treasury shares were sold at \$12 per share.

Journalize treasury stock transactions.  
(SO 4)

**E13-8** Michaela Corporation purchased from its stockholders 5,000 shares of its own previously issued stock for \$250,000. It later resold 2,000 shares for \$54 per share, then 2,000 more shares for \$49 per share, and finally 1,000 shares for \$40 per share.

**Instructions**

Prepare journal entries for the purchase of the treasury stock and the three sales of treasury stock.

Journalize preferred stock transactions and indicate statement presentation.  
(SO 5, 6)

**E13-9** Paul Corporation is authorized to issue both preferred and common stock. The par value of the preferred is \$50. During the first year of operations, the company had the following events and transactions pertaining to its preferred stock.

- Feb. 1 Issued 20,000 shares for cash at \$53 per share.
- July 1 Issued 12,000 shares for cash at \$57 per share.

**Instructions**

- (a) Journalize the transactions.
- (b) Post to the stockholders' equity accounts.
- (c) Indicate the financial statement presentation of the related accounts.

Differentiate between preferred and common stock.  
(SO 5)

**E13-10** David Corporation issued 100,000 shares of \$20 par value, cumulative, 8% preferred stock on January 1, 2011, for \$2,100,000. In December 2013, David declared its first dividend of \$500,000.

**Instructions**

- (a) Prepare David's journal entry to record the issuance of the preferred stock.
- (b) If the preferred stock is *not* cumulative, how much of the \$500,000 would be paid to **common** stockholders?
- (c) If the preferred stock is cumulative, how much of the \$500,000 would be paid to **common** stockholders?

Prepare correct entries for capital stock transactions.  
(SO 3, 4, 5)

**E13-11** Carolyn Corporation recently hired a new accountant with extensive experience in accounting for partnerships. Because of the pressure of the new job, the accountant was unable to review his textbooks on the topic of corporation accounting. During the first month, the accountant made the following entries for the corporation's capital stock.

|       |  |         |  |         |
|-------|--|---------|--|---------|
| May 2 | Cash   | 130,000 |  | 130,000 |
|       | Capital Stock  |         |  |         |
|       | (Issued 10,000 shares of \$10 par value<br>common stock at \$13 per share)     |         |  |         |
| 10    | Cash   | 600,000 |  | 600,000 |

**Instructions**

On the basis of the explanation for each entry, prepare the entry that should have been made for the capital stock transactions.

**E13-12** The following stockholders' equity accounts, arranged alphabetically, are in the ledger of Borkowski Corporation at December 31, 2012.

*Prepare a stockholders' equity section.*

|  |             |
|--|-------------|
| Common Stock (\$5 stated value)                        | \$1,700,000 |
| Paid-in Capital in Excess of Par—Preferred Stock       | 280,000     |
| Paid-in Capital in Excess of Stated Value—Common Stock | 900,000     |
| Preferred Stock (8%, \$100 par, noncumulative)         | 500,000     |
| Retained Earnings                                      | 1,134,000   |
| Treasury Stock (10,000 common shares)                  | 120,000     |

(SO 6)

**Instructions**

Prepare the stockholders' equity section of the balance sheet at December 31, 2012.

**E13-13** The stockholders' equity section of Erik Corporation at December 31 is as follows.

*Answer questions about stockholders' equity section.*

**ERIK CORPORATION**  
Balance Sheet (partial)

(SO 3, 4, 5, 6)

|  |                    |
|--|--------------------|
| Paid-in capital  |                    |
| Preferred stock, cumulative, 10,000 shares authorized, 6,000 shares issued and outstanding | \$ 300,000         |
| Common stock, no par, 750,000 shares authorized, 600,000 shares issued                     | 1,200,000          |
| Total paid-in capital  | 1,500,000          |
| Retained earnings  | 1,858,000          |
| Total paid-in capital and retained earnings  | 3,358,000          |
| Less: Treasury stock (10,000 common shares)  | (64,000)           |
| Total stockholders' equity   | <u>\$3,294,000</u> |

**Instructions**

 From a review of the stockholders' equity section, as chief accountant, write a memo to the president of the company answering the following questions.

- (a) How many shares of common stock are outstanding?
- (b) Assuming there is a stated value, what is the stated value of the common stock?
- (c) What is the par value of the preferred stock?
- (d) If the annual dividend on preferred stock is \$30,000, what is the dividend rate on preferred stock?
- (e) If dividends of \$60,000 were in arrears on preferred stock, what would be the balance in Retained Earnings?

**E13-14** In a recent year, the stockholders' equity section of **Aluminum Company of America (Alcoa)** showed the following (in alphabetical order): additional paid-in capital \$6,101, common stock \$925, preferred stock \$55, retained earnings \$7,428, and treasury stock 2,828. All dollar data are in millions.

*Prepare a stockholders' equity section.*

(SO 6)

The preferred stock has 557,740 shares authorized, with a par value of \$100 and an annual \$3.75 per share cumulative dividend preference. At December 31, 557,649 shares of preferred are issued and 546,024 shares are outstanding. There are 1.8 billion shares of \$1 par value common stock authorized, of which 924.6 million are issued and 844.8 million are outstanding at December 31.

**Instructions**

Prepare the stockholders' equity section, including disclosure of all relevant data.

Classify stockholders' equity accounts.

(SO 6)

**E13-15** The ledger of Hickory Hills Corporation contains the following accounts: Common Stock, Preferred Stock, Treasury Stock, Paid-in Capital in Excess of Par—Preferred Stock, Paid-in Capital in Excess of Stated Value—Common Stock, Paid-in Capital from Treasury Stock, and Retained Earnings.

  - (3) Purchase of common treasury stock for cash.
  - (4) Sale of treasury stock for cash.
- (b) Prepare the stockholders' equity section at December 31, 2012.

(b) Total stockholders' equity  
\$7,237,000

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 12.)

**CCC13** Natalie's friend, Curtis Lesperance, decides to meet with Natalie after hearing that her discussions about a possible business partnership with her friend Katy Peterson have failed. Because Natalie has been so successful with Cookie Creations and Curtis has been just as successful with his coffee shop, they both conclude that they could benefit from each other's business expertise. Curtis and Natalie next evaluate the different types of business organization, and because of the advantage of limited personal liability, decide to form a corporation. Natalie and Curtis are very excited about this new business venture. They come to you with information about their businesses and with a number of questions.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### Financial Reporting Problem: PepsiCo

**BYP13-1** The stockholders' equity section for **PepsiCo, Inc.** is shown in Appendix A. You will also find data relative to this problem on other pages of the appendix.

#### Instructions

- (a) What is the par or stated value per share of PepsiCo's common stock?
- (b) What percentage of PepsiCo's authorized common stock was issued at December 26, 2009?

- (c) How many shares of common stock were outstanding at December 26, 2009, and at December 27, 2008?  
 (d) What was the high and low market price per share in the fourth quarter of fiscal 2009, as reported under Selected Financial Data?

## Comparative Analysis Problem: PepsiCo vs. Coca-Cola

**BYP13-2** PepsiCo, Inc.'s financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

### Instructions

- (a) What is the par or stated value of Coca-Cola's and PepsiCo's common of capital, stock?  
 (b) What percentage of authorized shares was issued by Coca-Cola at December 31, 2009, and by PepsiCo at December 26, 2009?  
 (c) How many shares are held as treasury stock by Coca-Cola at December 31, 2009, and by PepsiCo at December 26, 2009?  
 (d) How many Coca-Cola common shares are outstanding at December 31, 2009? How many PepsiCo shares of capital stock are outstanding at December 26, 2009?

## On the Web

**BYP13-3** SEC filings of publicly traded companies are available to view online.

**Address:** <http://biz.yahoo.com/i>, or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

### Steps

1. Pick a company and type in the company's name.
2. Choose **Quote**.

### Instructions

Answer the following questions.

- (a) What company did you select?  
 (b) What is its stock symbol?  
 (c) What was the stock's trading range today?  
 (d) What was the stock's trading range for the year?

## Critical Thinking

### Decision Making Across the Organization

**BYP13-4** The stockholders' meeting for Strauder Corporation has been in progress for some time. The chief financial officer for Strauder is presently reviewing the company's financial statements and is explaining the items that comprise the stockholders' equity section of the balance sheet for the current year. The stockholders' equity section of Strauder Corporation at December 31, 2012, is as follows.

#### STRAUDER CORPORATION Balance Sheet (partial) December 31, 2012

|  |            |            |
|--|------------|------------|
| Paid-in capital  |            |            |
| Capital stock  |            |            |
| Preferred stock, authorized 1,000,000 shares<br>cumulative, \$100 par value, \$8 per share, 6,000<br>shares issued and outstanding |            | \$ 600,000 |
| Common stock, authorized 5,000,000 shares, \$1 par<br>value, 3,000,000 shares issued, and 2,700,000<br>outstanding                 |            | 3,000,000  |
| Total capital stock  |            | 3,600,000  |
| Additional paid-in capital   |            |            |
| In excess of par—preferred stock   | \$ 50,000  |            |
| In excess of par—common stock  | 25,000,000 |            |

|  |                     |
|--|---------------------|
| Total additional paid-in capital             | 25,050,000          |
| Total paid-in capital                        | 28,650,000          |
| Retained earnings                            | 900,000             |
| Total paid-in capital and retained earnings  | 29,550,000          |
| Less: Treasury stock (300,000 common shares) | 9,300,000           |
| Total stockholders' equity                   | <u>\$20,250,000</u> |

At the meeting, stockholders have raised a number of questions regarding the stockholders' equity section.

### Instructions

With the class divided into groups, answer the following questions as if you were the chief financial officer for Strauder Corporation.

- “What does the cumulative provision related to the preferred stock mean?”
- “I thought the common stock was presently selling at \$29.75, but the company has the stock stated at \$1 per share. How can that be?”
- “Why is the company buying back its common stock? Furthermore, the treasury stock has a debit balance because it is subtracted from stockholders' equity. Why is treasury stock not reported as an asset if it has a debit balance?”

## Communication Activity

**BYP13-5** Sid Hosey, your uncle, is an inventor who has decided to incorporate. Uncle Sid knows that you are an accounting major at U.N.O. In a recent letter to you, he ends with the question, “I’m filling out a state incorporation application. Can you tell me the difference in the following terms: (1) authorized stock, (2) issued stock, (3) outstanding stock, (4) preferred stock?”

### Instructions

In a brief note, differentiate for Uncle Sid among the four different stock terms. Write the letter to be friendly, yet professional.

## Ethics Case

**BYP13-6** The R&D division of Marco Chemical Corp. has just developed a chemical for sterilizing the vicious Brazilian “killer bees” which are invading Mexico and the southern states of the United States. The president of Marco is anxious to get the chemical on the market to boost Marco’s profits. He believes his job is in jeopardy because of decreasing sales and profits. Marco has an opportunity to sell this chemical in Central American countries, where the laws are much more relaxed than in the United States.

The director of Marco’s R&D division strongly recommends further testing in the laboratory for side-effects of this chemical on other insects, birds, animals, plants, and even humans. He cautions the president, “We could be sued from all sides if the chemical has tragic side-effects that we didn’t even test for in the labs.” The president answers, “We can’t wait an additional year for your lab tests. We can avoid losses from such lawsuits by establishing a separate wholly owned corporation to shield Marco Corp. from such lawsuits. We can’t lose any more than our investment in the new corporation, and we’ll invest just the patent covering this chemical. We’ll reap the benefits if the chemical works and is safe, and avoid the losses from lawsuits if it’s a disaster.” The following week Marco creates a new wholly owned corporation called Brecht Inc., sells the chemical patent to it for \$10, and watches the spraying begin.

### Instructions

- Who are the stakeholders in this situation?
- Are the president’s motives and actions ethical?
- Can Marco shield itself against losses of Brecht Inc.?

## “All About You” Activity

**BYP13-7** A high percentage of Americans own stock in corporations. As a shareholder in a corporation, you will receive an annual report. One of the goals of this course is for you to learn how to navigate your way around an annual report.

### Instructions

Use the annual report provided in Appendix A to answer the following questions.

- What CPA firm performed the audit of PepsiCo’s financial statements?
- What was the amount of PepsiCo’s earnings per share in 2009?

- (c) What was net revenue in 2009?
- (d) How many shares of treasury stock did the company have at the end of 2009?
- (e) How much cash did PepsiCo spend on capital expenditures in 2009?
- (f) Over what life does the company depreciate its buildings?
- (g) What was the total amount of dividends paid in 2009?

## FASB Codification Activity

**BYP13-8** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- (a) How is *common stock* defined?
- (b) How is *preferred stock* defined?
- (c) What is the meaning of the term *shares*?

### Answers to Insight and Accounting Across the Organization Questions

**p. 598 Wall Street No Friend of Facebook** **Q:** Why has Mark Zuckerberg, the CEO and founder of Facebook, delayed taking his company's shares public through an initial public offering (IPO)? **A:** Facebook doesn't need to invest in factories, distribution systems, or even marketing, so it doesn't need to raise a lot of cash. Also, by not going public, Zuckerberg has more control over the direction of the company. In addition, publicly traded companies face many more financial reporting disclosure requirements.

**p. 600 How to Read Stock Quotes** **Q:** For stocks traded on organized stock exchanges, how are the dollar prices per share established? **A:** The dollar prices per share are established by the interaction between buyers and sellers of the shares. **Q:** What factors might influence the price of shares in the marketplace? **A:** The price of shares is influenced by a company's earnings and dividends as well as by factors beyond a company's control, such as changes in interest rates, labor strikes, scarcity of supplies or resources, and politics. The number of willing buyers and sellers (demand and supply) also plays a part in the price of shares.

**p. 608 Why Did Reebok Buy Its Own Stock?** **Q:** What signal might a large stock repurchase send to investors regarding management's belief about the company's growth opportunities? **A:** When a company has many growth opportunities it will normally conserve its cash in order to be better able to fund expansion. A large use of cash to buy back stock (and essentially shrink the company) would suggest that management was not optimistic about its growth opportunities.

## IFRS A Look at IFRS

The accounting for transactions related to stockholders' equity, such as issuance of shares and purchase of treasury stock, are similar under both IFRS and GAAP. Major differences relate to terminology used, introduction of items such as revaluation surplus, and presentation of stockholders' equity information.

## Key Points

- Under IFRS, the term *reserves* is used to describe all equity accounts other than those arising from contributed (paid-in) capital. This would include, for example, reserves related to retained earnings, asset revaluations, and fair value differences.
- Many countries have a different mix of investor groups than in the United States. For example, in Germany, financial institutions like banks are not only major creditors of corporations but often are the largest corporate stockholders as well. In the United States, Asia, and the United Kingdom, many companies rely on substantial investment from private investors.
- There are often terminology differences for equity accounts. The following summarizes some of the common differences in terminology.

| GAAP   | IFRS                                       |
|--|--|
| Common stock                                     | Share capital—ordinary                     |
| Stockholders                                     | Shareholders                               |
| Par value  | Nominal or face value                      |
| Authorized stock                                 | Authorized share capital                   |
| Preferred stock                                  | Share capital—preference                   |
| Paid-in capital                                  | Issued/allocated share capital             |
| Paid-in capital in excess of par—common stock    | Share premium—ordinary                     |
| Paid-in capital in excess of par—preferred stock | Share premium—preference                   |
| Retained earnings                                | Retained earnings or Retained profits      |
| Retained earnings deficit                        | Accumulated losses                         |
| Accumulated other comprehensive income           | General reserve and other reserve accounts |

As an example of how similar transactions use different terminology under IFRS, consider the accounting for the issuance of 1,000 shares of \$1 par value common stock for \$5 per share. Under IFRS, the entry is as follows.

|      |                        |       |       |
|------|------------------------|-------|-------|
| Cash |                        | 5,000 |       |
|      | Share Capital—Ordinary |       | 1,000 |
|      | Share Premium—Ordinary |       | 4,000 |

- The accounting for treasury stock differs somewhat between IFRS and GAAP. (However, many of the differences are beyond the scope of this course.) Like GAAP, IFRS does not allow a company to record gains or losses on purchases of its own shares. One difference worth noting is that, when a company purchases its own shares, IFRS treats it as a reduction of stockholders' equity, but it does not specify which particular stockholders' equity accounts are to be affected. Therefore, it could be shown as an increase to a contra equity account (Treasury Stock) or a decrease to retained earnings or share capital.
- A major difference between IFRS and GAAP relates to the account Revaluation Surplus. Revaluation surplus arises under IFRS because companies are permitted to revalue their property, plant, and equipment to fair value under certain circumstances. This account is part of general reserves under IFRS and is not considered contributed capital.
- IFRS often uses terms such as *retained profits* or *accumulated profit or loss* to describe retained earnings. The term *retained earnings* is also often used.
- Equity is given various descriptions under IFRS, such as shareholders' equity, owners' equity, capital and reserves, and shareholders' funds.

## Looking to the Future

As indicated in earlier discussions, the IASB and the FASB are currently working on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements.

## IFRS Self-Test Questions

- Under IFRS, a purchase by a company of its own shares is recorded by:
  - an increase in Treasury Stock.
  - a decrease in contributed capital.
  - a decrease in share capital.
  - All of these are acceptable treatments.
- Which of the following is *true*?
  - In the United States, the primary corporate stockholders are financial institutions.
  - Share capital means total assets under IFRS.
  - The IASB and FASB are presently studying how financial statement information should be presented.
  - The accounting for treasury stock differs extensively between GAAP and IFRS.

3. Under IFRS, the amount of capital received in excess of par value would be credited to:
  - (a) Retained Earnings.
  - (b) Contributed Capital.
  - (c) Share Premium.
  - (d) Par value is not used under IFRS.
4. Which of the following is *false*?
  - (a) Under GAAP, companies cannot record gains on transactions involving their own shares.
  - (b) Under IFRS, companies cannot record gains on transactions involving their own shares.
  - (c) Under IFRS, the statement of stockholders' equity is a required statement.
  - (d) Under IFRS, a company records a revaluation surplus when it experiences an increase in the price of its common stock.
5. Which of the following does *not* represent a pair of GAAP/IFRS-comparable terms?
  - (a) Additional paid-in capital/Share premium.
  - (b) Treasury stock/Repurchase reserve.
  - (c) Common stock/Share capital.
  - (d) Preferred stock/Preference shares.

## IFRS Concepts and Application

**IFRS13-1** On May 10, Romano Corporation issues 1,000 shares of \$10 par value ordinary shares for cash at \$18 per share. Journalize the issuance of the shares.

**IFRS13-2** Ingram Corporation has the following accounts at December 31: Share Capital—Ordinary, €10 par, 5,000 shares issued, €50,000; Share Premium—Ordinary €10,000; Retained Earnings €45,000; and Treasury Shares—Ordinary, 500 shares, €11,000. Prepare the equity section of the statement of financial position.

**IFRS13-3** Sorocaba Co. had the following transactions during the current period.

- Mar. 2 Issued 5,000 shares of \$1 par value ordinary shares to attorneys in payment of a bill for \$30,000 for services provided in helping the company to incorporate.
- June 12 Issued 60,000 shares of \$1 par value ordinary shares for cash of \$375,000.
- July 11 Issued 1,000 shares of \$100 par value preference shares for cash at \$110 per share.
- Nov. 28 Purchased 2,000 treasury shares for \$80,000.

### Instructions

Journalize the above transactions.

## International Financial Reporting

### Problem: Zetar plc

**IFRS13-4** The financial statements of Zetar plc are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at [www.zetarplc.com](http://www.zetarplc.com).

### Instructions

Use the company's annual report to answer the following questions.

- (a) Using the information in the statement of changes in equity, prepare the journal entry to record the issuance of ordinary shares during the year ended April 30, 2009.
- (b) Examine the equity section of the company's balance sheet. For each item in the equity section, provide the comparable label that would be used under GAAP.

# CHAPTER 14

## Corporations: Dividends, Retained Earnings, and Income Reporting

### Study Objectives

After studying this chapter, you should be able to:

- 1 Prepare the entries for cash dividends and stock dividends.
- 2 Identify the items reported in a retained earnings statement.
- 3 Prepare and analyze a comprehensive stockholders' equity section.
- 4 Describe the form and content of corporation income statements.
- 5 Compute earnings per share.

### Feature Story

#### OWNING A PIECE OF THE ACTION

*Van Meter Industrial, Inc.*, an electrical-parts distributor in Cedar Rapids, Iowa, is 100% employee-owned. For many years the company has issued bonuses in the form of shares of company stock to all of its employees. These bonus distributions typically have a value equal to several weeks of pay. Top management always thought that this was a great program. Therefore, it came as quite a surprise a few years ago when an employee stood up at a company-wide meeting and said that he did not see any real value in receiving the company's shares. Instead, he wanted "a few hundred extra bucks for beer and cigarettes."

As it turned out, many of the company's 340 employees felt this way. Rather than end the stock bonus program, however, the company decided to educate its employees on the value of share ownership. The employees now are taught how to determine the worth

of their shares, the rights that come with share ownership, and what they can do to help increase the value of those shares.

As part of the education

program, management developed a slogan, “Work ten, get five free.” The idea is that after working 10 years, an employee’s shares would be worth the equivalent of about five years’ worth of salary. For example, a person earning a \$30,000 salary would earn \$300,000 in wages over a 10-year period. During that same 10-year period, it was likely that the value of the employee’s shares would accumulate to about \$150,000 (five years’ worth of salary). This demonstrates in more concrete terms why employees should be excited about share ownership.

A 12-member employee committee has the responsibility of educating new employees about the program. The committee also runs training programs so that employees understand how their cost-saving actions improve the company’s results—and its stock price. It appears that the company’s education program to encourage employees to act like owners is working. Profitability has increased rapidly, and employee turnover has fallen from 18% to 8%. Given Van Meter’s success, many of the 10,000 other employee-owned companies in the United States might want to investigate whether their employees understand the benefits of share ownership.

**Source:** Adapted from Simona Covell, “How to Get Workers to Think and Act Like Owners,” *Wall Street Journal Online* (February 15, 2008).

## Inside **CHAPTER 14**

- *Accounting Across the Organization: Up, Down, and ??* (p. 637)
- *Investor Insight: A No-Split Personality* (p. 641)

## Preview of CHAPTER 14

As indicated in the Feature Story, a profitable corporation like **Van Meter Industrial, Inc.** can provide real benefits to employees through its stock bonus plan. And as employees learn more about the role of dividends, retained earnings, and earnings per share, they develop an understanding and appreciation for what the company is providing to them.

The content and organization of Chapter 14 are as follows.

| Corporations: Dividends, Retained Earnings, and Income Reporting  |   |   |

## Dividends

### Study Objective [1]

Prepare the entries for cash dividends and stock dividends.

A **dividend** is a corporation's distribution of cash or stock to its stockholders on a **pro rata (proportional to ownership) basis**. Pro rata means that if you own 10% of the common shares, you will receive 10% of the dividend. Dividends can take four forms: cash, property, scrip (a promissory note to pay cash), or stock. Cash dividends predominate in practice. Also, companies declare stock dividends with some frequency. These two forms of dividends will be the focus of discussion in this chapter.

Investors are very interested in a company's dividend practices. In the financial press, **dividends are generally reported quarterly as a dollar amount per share**. (Sometimes they are reported on an annual basis.) For example, **Nike's quarterly** dividend rate in the fourth quarter of 2010 was 27 cents per share; the dividend rate for the fourth quarter of 2010 for **GE** was 12 cents, and for **ConAgra Foods** it was 28 cents.

### Cash Dividends

A **cash dividend** is a pro rata distribution of cash to stockholders. For a corporation to pay a cash dividend, it must have:

1. **Retained earnings.** The legality of a cash dividend depends on the laws of the state in which the company is incorporated. Payment of cash dividends from retained earnings is legal in all states. In general, cash dividend distributions from only the balance in common stock (legal capital) are illegal.

A dividend declared out of paid-in capital is termed a **liquidating dividend**. Such a dividend reduces or "liquidates" the amount originally paid in by stockholders. Statutes vary considerably with respect to cash dividends based on paid-in capital in excess of par or stated value. Many states permit such dividends.

2. **Adequate cash.** The legality of a dividend and the ability to pay a dividend are two different things. For example, **Nike**, with retained earnings of over \$4.8 billion,

could legally declare a dividend of at least \$4.8 billion. But Nike’s cash balance is only \$1.8 billion.

Before declaring a cash dividend, a company’s board of directors must carefully consider both current and future demands on the company’s cash resources. In some cases, current liabilities may make a cash dividend inappropriate. In other cases, a major plant expansion program may warrant only a relatively small dividend.

- 3. **A declaration of dividends.** A company does not pay dividends unless its board of directors decides to do so, at which point the board “declares” the dividend. The board of directors has full authority to determine the amount of income to distribute in the form of a dividend and the amount to retain in the business. Dividends do not accrue like interest on a note payable, and they are not a liability until declared.

The amount and timing of a dividend are important issues for management to consider. The payment of a large cash dividend could lead to liquidity problems for the company. On the other hand, a small dividend or a missed dividend may cause unhappiness among stockholders. Many stockholders expect to receive a reasonable cash payment from the company on a periodic basis. Many companies declare and pay cash dividends quarterly. On the other hand, a number of high-growth companies pay no dividends, preferring to conserve cash to finance future capital expenditures.

### ENTRIES FOR CASH DIVIDENDS

Three dates are important in connection with dividends: (1) the declaration date, (2) the record date, and (3) the payment date. Normally, there are two to four weeks between each date. Companies make accounting entries on the declaration date and the payment date.

On the **declaration date**, the board of directors formally declares (authorizes) the cash dividend and announces it to stockholders. Declaration of a cash dividend **commits the corporation to a legal obligation**. The obligation is binding and cannot be rescinded. The company makes an entry to recognize the increase in Cash Dividends and the increase in the liability Dividends Payable.

To illustrate, assume that on December 1, 2012, the directors of Media General declare a 50¢ per share cash dividend on 100,000 shares of \$10 par value common stock. The dividend is \$50,000 (100,000 × 50¢). The entry to record the declaration is:

| Declaration Date |   |        |        |
|------------------|---|--------|--------|
| Dec. 1           | Cash Dividends<br>Dividends Payable<br>(To record declaration of cash dividend) | 50,000 | 50,000 |

Media General debits the account Cash Dividends. Cash dividends decrease retained earnings. We use the specific title Cash Dividends to differentiate it from other types of dividends, such as stock dividends. Dividends Payable is a current liability: It will normally be paid within the next several months.

When using a dividend account, the company transfers the balance of that account to Retained Earnings at the end of the year by a closing entry. Whichever account is used for the dividend declaration, the effect is the same: Retained earnings decreases, and a current liability increases. *For homework problems, you should use the Cash Dividends account for recording dividend declarations.*

At the **record date**, the company determines ownership of the outstanding shares for dividend purposes. The stockholders’ records maintained by the corporation supply this information. In the interval between the declaration date and the record date, the corporation updates its stock ownership records. For Media General, the record date is December 22. No entry is required on this date because the corporation’s liability recognized on the declaration date is unchanged.

|   |   |   |   |              |
|---|---|---|---|--------------|
| A | = | L | + | SE           |
|   |   |   |   | - 50,000 Div |
|   |   |   |   | + 50,000     |

**Cash Flows**  
no effect

### Helpful Hint

The purpose of the record date is to identify the persons or entities that will receive the dividend, not to determine the amount of the dividend liability.

**Record Date**

|         |  |                    |  |  |
|---------|--|--------------------|--|--|
| Dec. 22 |  | No entry necessary |  |  |
|---------|--|--------------------|--|--|

On the **payment date**, the company makes cash dividend payments to the stockholders of record (as of December 22) and records the payment of the dividend. If January 20 is the payment date for Media General, the entry on that date is:

**Payment Date**

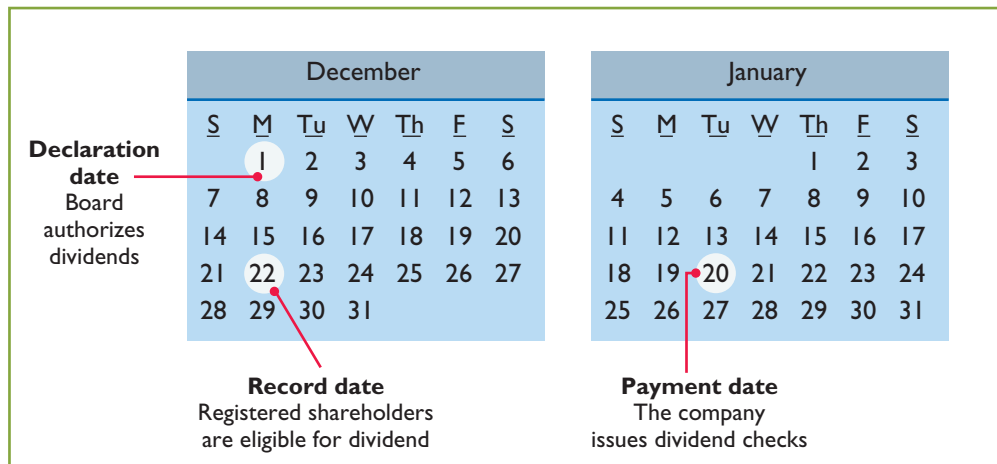

|         |  |                                      |  |        |  |        |
|---------|--|--------------------------------------|--|--------|--|--------|
| Jan. 20 |  | Dividends Payable                    |  | 50,000 |  | 50,000 |
|         |  | Cash                                 |  |        |  |        |
|         |  | (To record payment of cash dividend) |  |        |  |        |

Note that payment of the dividend reduces both current assets and current liabilities. It has no effect on stockholders' equity. The **cumulative effect** of the **declaration and payment** of a cash dividend is to **decrease both stockholders' equity and total assets**. Illustration 14-1 summarizes the three important dates associated with dividends for Media General.

|                   |   |         |   |    |
|-------------------|---|---------|---|----|
| A                 | = | L       | + | SE |
|                   |   | -50,000 |   |    |
|                   |   | -50,000 |   |    |
| <b>Cash Flows</b> |   | -50,000 |   |    |

**Illustration 14-1**  
Key dividend dates

**ALLOCATING CASH DIVIDENDS BETWEEN PREFERRED AND COMMON STOCK**

As explained in Chapter 13, preferred stock has priority over common stock in regard to dividends. Holders of cumulative preferred stock must be paid any unpaid prior-year dividends and its current year's dividend before common stockholders receive dividends.

To illustrate, assume that at December 31, 2012, IBR Inc. has 1,000 shares of 8%, \$100 par value cumulative preferred stock. It also has 50,000 shares of \$10 par value common stock outstanding. The dividend per share for preferred stock is \$8 (\$100 par value × 8%). The required annual dividend for preferred stock is therefore \$8,000 (1,000 × \$8). At December 31, 2012, the directors declare a \$6,000 cash dividend. In this case, the entire dividend amount goes to preferred stockholders because of their dividend preference. The entry to record the declaration of the dividend is:

|                   |   |            |   |    |
|-------------------|---|------------|---|----|
| A                 | = | L          | + | SE |
|                   |   | -6,000 Div |   |    |
|                   |   | +6,000     |   |    |
| <b>Cash Flows</b> |   | no effect  |   |    |

|         |  |   |  |       |  |       |
|---------|--|---|--|-------|--|-------|
| Dec. 31 |  | Cash Dividends  |  | 6,000 |  | 6,000 |
|         |  | Dividends Payable   |  |       |  |       |
|         |  | (To record \$6 per share cash dividend to preferred stockholders) |  |       |  |       |

Because of the cumulative feature, dividends of \$2 (\$8 - \$6) per share are in arrears on preferred stock for 2012. IBR must pay these dividends to preferred

stockholders before it can pay any future dividends to common stockholders. IBR should disclose dividends in arrears in the financial statements.

At December 31, 2013, IBR declares a \$50,000 cash dividend. The allocation of the dividend to the two classes of stock is as follows.

|   |                     |                 |
|---|---------------------|-----------------|
| Total dividend                                  |                     | \$50,000        |
| Allocated to preferred stock                    |                     |                 |
| <b>Dividends in arrears, 2012 (1,000 × \$2)</b> | <b>\$2,000</b>      |                 |
| <b>2013 dividend (1,000 × \$8)</b>              | <b><u>8,000</u></b> | <u>10,000</u>   |
| Remainder allocated to common stock             |                     | <u>\$40,000</u> |

**Illustration 14-2**

Allocating dividends to preferred and common stock

The entry to record the declaration of the dividend is:

|         |   |        |        |
|---------|---|--------|--------|
| Dec. 31 | Cash Dividends  | 50,000 |        |
|         | Dividends Payable   |        | 50,000 |
|         | (To record declaration of cash dividends of \$10,000 to preferred stock and \$40,000 to common stock) |        |        |

$$\begin{array}{r}
 \text{A} = \text{L} + \text{SE} \\
 \phantom{A} = \phantom{L} - 50,000 \text{ Div} \\
 \phantom{A} = \phantom{L} + 50,000 \\
 \hline
 \end{array}$$

**Cash Flows**  
no effect

If IBR's preferred stock is not cumulative, preferred stockholders receive only \$8,000 in dividends in 2013. Common stockholders receive \$42,000.

## ACCOUNTING ACROSS THE ORGANIZATION

### Up, Down, and ??

The decision whether to pay a dividend, and how much to pay, is a very important management decision. As the chart below shows, from 2002 to 2007, many companies substantially increased their dividends, and total dividends paid by U.S. companies hit record levels. One reason for the increase is that Congress lowered, from 39% to 15%, the tax rate paid by investors on dividends received, making dividends more attractive to investors.

Then the financial crisis of 2008 occurred. As result, in 2009, 804 companies cut their dividends (see chart), the highest level since the S&P started collecting data in 1995. In 2010, more companies are again starting to increase their dividends. However, potential higher taxes on dividends coming in 2011 and the possibility of a low-growth economy may stall any significant increase.

Source: Matt Phillips and Jay Miller, "Last Year's Dividend Slash Was \$58 Billion," *Wall Street Journal* (January 8, 2010), p. C5.

**?** What factors must management consider in deciding how large a dividend to pay? (See page 665.)

## Do it!

### Dividends on Preferred and Common Stock

#### action plan

✓ Determine dividends on preferred shares by multiplying the dividend rate times the par value of the stock times the number of preferred shares.

✓ Understand the cumulative feature: If preferred stock is cumulative, then any missed dividends (dividends in arrears) and the current year's dividend must be paid to preferred stockholders before dividends are paid to common stockholders.

MasterMind Corporation has 2,000 shares of 6%, \$100 par value preferred stock outstanding at December 31, 2012. At December 31, 2012, the company declared a \$60,000 cash dividend. Determine the dividend paid to preferred stockholders and common stockholders under each of the following scenarios.

1. The preferred stock is noncumulative, and the company has not missed any dividends in previous years.
2. The preferred stock is noncumulative, and the company did not pay a dividend in each of the two previous years.
3. The preferred stock is cumulative, and the company did not pay a dividend in each of the two previous years.

#### Solution

1. The company has not missed past dividends and the preferred stock is noncumulative; thus, the preferred stockholders are paid only this year's dividend. The dividend paid to preferred stockholders would be \$12,000 ( $2,000 \times .06 \times \$100$ ). The dividend paid to common stockholders would be \$48,000 ( $\$60,000 - \$12,000$ ).
2. The preferred stock is noncumulative; thus, past unpaid dividends do not have to be paid. The dividend paid to preferred stockholders would be \$12,000 ( $2,000 \times .06 \times \$100$ ). The dividend paid to common stockholders would be \$48,000 ( $\$60,000 - \$12,000$ ).
3. The preferred stock is cumulative; thus, dividends that have been missed (dividends in arrears) must be paid. The dividend paid to preferred stockholders would be \$36,000 ( $3 \times 2,000 \times .06 \times \$100$ ). The dividend paid to common stockholders would be \$24,000 ( $\$60,000 - \$36,000$ ).

## Stock Dividends

A **stock dividend** is a pro rata distribution to stockholders of the corporation's own stock. Whereas a company pays cash in a cash dividend, a company issues shares of stock in a stock dividend. **A stock dividend results in a decrease in retained earnings and an increase in paid-in capital.** Unlike a cash dividend, a stock dividend does not decrease total stockholders' equity or total assets.

To illustrate, assume that you have a 2% ownership interest in Cetus Inc.; you own 20 of its 1,000 shares of common stock. If Cetus declares a 10% stock dividend, it would issue 100 shares ( $1,000 \times 10\%$ ) of stock. You would receive two shares ( $2\% \times 100$ ). Would your ownership interest change? No, it would remain at 2% ( $22 \div 1,100$ ). **You now own more shares of stock, but your ownership interest has not changed.** Illustration 14-3 (next page) shows the effect of a stock dividend for stockholders.

Cetus has disbursed no cash, and has assumed no liabilities. What, then, are the purposes and benefits of a stock dividend? Corporations issue stock dividends generally for one or more of the following reasons.

1. To satisfy stockholders' dividend expectations without spending cash.
2. To increase the marketability of the corporation's stock. When the number of shares outstanding increases, the market price per share decreases. Decreasing

**Illustration 14-3**  
Effect of stock dividend for stockholders

the market price of the stock makes it easier for smaller investors to purchase the shares.

- To emphasize that a portion of stockholders' equity has been permanently reinvested in the business (and is unavailable for cash dividends).

When the dividend is declared, the board of directors determines the size of the stock dividend and the value assigned to each dividend.

Generally, if the company issues a **small stock dividend** (less than 20–25% of the corporation's issued stock), the value assigned to the dividend is the fair value per share. This treatment is based on the assumption that a small stock dividend will have little effect on the market price of the shares previously outstanding. Thus, many stockholders consider small stock dividends to be distributions of earnings equal to the fair market value of the shares distributed. If a company issues a **large stock dividend** (greater than 20–25%), the value assigned to the dividend is the par or stated value. Small stock dividends predominate in practice. Thus, we will illustrate only entries for small stock dividends.

### ENTRIES FOR STOCK DIVIDENDS

To illustrate the accounting for small stock dividends, assume that Medland Corporation has a balance of \$300,000 in retained earnings. It declares a 10% stock dividend on its 50,000 shares of \$10 par value common stock. The current fair market value of its stock is \$15 per share. The number of shares to be issued is 5,000 (10% × 50,000). Therefore the total amount to be debited to Stock Dividends is \$75,000 (5,000 × \$15). The entry to record the declaration of the stock dividend is as follows.

|   |        |        |
|---|--------|--------|
| Stock Dividends                               | 75,000 |        |
| Common Stock Dividends Distributable          |        | 50,000 |
| Paid-in Capital in Excess of Par—Common Stock |        | 25,000 |
| (To record declaration of 10% stock dividend) |        |        |

|   |   |   |   |             |
|---|---|---|---|-------------|
| A | = | L | + | SE          |
|   |   |   |   | –75,000 Div |
|   |   |   |   | +50,000 CS  |
|   |   |   |   | +25,000 CS  |

**Cash Flows**  
no effect

Medland debits Stock Dividends for the fair market value of the stock issued (\$15 × 5,000). (Similar to Cash Dividends, Stock Dividends decrease retained earnings.) Medland also credits Common Stock Dividends Distributable for the par value of the dividend shares (\$10 × 5,000), and credits Paid-in Capital in Excess of Par—Common Stock for the excess over par (\$5 × 5,000).

Common Stock Dividends Distributable is a **stockholders' equity account**. It is not a liability because assets will not be used to pay the dividend. If the company prepares a balance sheet before it issues the dividend shares, it reports the distributable account under Paid-in capital as shown in Illustration 14-4 (next page).

**Illustration 14-4**

Statement presentation of common stock dividends distributable

|   |               |           |
|---|---------------|-----------|
| Paid-in capital                             |               |           |
| Common stock                                | \$500,000     |           |
| <b>Common stock dividends distributable</b> | <u>50,000</u> | \$550,000 |

When Medland issues the dividend shares, it debits Common Stock Dividends Distributable and credits Common Stock, as follows.

|   |   |   |   |            |
|---|---|---|---|------------|
| A | = | L | + | SE         |
|   |   |   |   | -50,000 CS |
|   |   |   |   | +50,000 CS |

**Cash Flows**

no effect

|                                      |        |        |
|--------------------------------------|--------|--------|
| Common Stock Dividends Distributable | 50,000 |        |
| Common Stock                         |        | 50,000 |

(To record issuance of 5,000 shares in a stock dividend)

**EFFECTS OF STOCK DIVIDENDS**

How do stock dividends affect stockholders' equity? They **change the composition of stockholders' equity**, because they transfer to paid-in capital a portion of retained earnings. However, **total stockholders' equity remains the same**. Stock dividends also have no effect on the par or stated value per share. But the number of shares outstanding increases. Illustration 14-5 shows these effects for Medland Corporation.

**Illustration 14-5**

Stock dividend effects

|   | <u>Before Dividend</u> | <u>After Dividend</u> |
|---|------------------------|-----------------------|
| Stockholders' equity                          |                        |                       |
| Paid-in capital                               |                        |                       |
| Common stock, \$10 par                        | \$500,000              | \$550,000             |
| Paid-in capital in excess of par—common stock | —                      | 25,000                |
| Total paid-in capital                         | 500,000                | 575,000               |
| Retained earnings                             | 300,000                | 225,000               |
| <b>Total stockholders' equity</b>             | <b>\$800,000</b>       | <b>\$800,000</b>      |
| <b>Outstanding shares</b>                     | <b>50,000</b>          | <b>55,000</b>         |
| <b>Par value per share</b>                    | <b>\$10.00</b>         | <b>\$10.00</b>        |

In this example, total paid-in capital increases by \$75,000 (50,000 shares  $\times$  10%  $\times$  \$15) and retained earnings decreases by the same amount. Note also that total stockholders' equity remains unchanged at \$800,000. The number of shares increases by 5,000 (50,000  $\times$  10%).

**Stock Splits**

A **stock split**, like a stock dividend, involves issuance of additional shares to stockholders according to their percentage ownership. **However, a stock split results in a reduction in the par or stated value per share.** The purpose of a stock split is to increase the marketability of the stock by lowering its market value per share. This, in turn, makes it easier for the corporation to issue additional stock.

The effect of a split on market value is generally *inversely proportional* to the size of the split. For example, after a recent 2-for-1 stock split, the market value of Nike's stock fell from \$111 to approximately \$55. The lower market value stimulated market activity, and within one year the stock was trading above \$100 again.

In a stock split, the number of shares increases in the same proportion that par or stated value per share decreases. For example, in a 2-for-1 split, one share of \$10 par value stock is exchanged for two shares of \$5 par value stock. **A stock split does**

**Helpful Hint**

A stock split changes the par value per share but does not affect any balances in stockholders' equity.

**not have any effect on total paid-in capital, retained earnings, or total stockholders' equity.** But the number of shares outstanding increases, and par value per share decreases. Illustration 14-6 shows these effects for Medland Corporation, assuming that it splits its 50,000 shares of common stock on a 2-for-1 basis.

|  | <u>Before<br/>Stock Split</u> | <u>After<br/>Stock Split</u> |
|--|-------------------------------|------------------------------|
| Stockholders' equity                   |                               |                              |
| Paid-in capital                        |                               |                              |
| Common stock                           | \$500,000                     | \$500,000                    |
| Paid-in capital in excess of par value | —0—                           | —0—                          |
| Total paid-in capital                  | 500,000                       | 500,000                      |
| Retained earnings                      | 300,000                       | 300,000                      |
| <b>Total stockholders' equity</b>      | <b>\$800,000</b>              | <b>\$800,000</b>             |
| <b>Outstanding shares</b>              | <b>50,000</b>                 | <b>100,000</b>               |
| <b>Par value per share</b>             | <b>\$10.00</b>                | <b>\$5.00</b>                |

**Illustration 14-6**  
Stock split effects

A stock split does not affect the balances in any stockholders' equity accounts. Therefore **it is not necessary to journalize a stock split.**

Illustration 14-7 summarizes the differences between stock splits and stock dividends.

| <u>Item</u>                    | <u>Stock Split</u> | <u>Stock Dividend</u> |
|--------------------------------|--------------------|-----------------------|
| Total paid-in capital          | No change          | Increase              |
| Total retained earnings        | No change          | Decrease              |
| Total par value (common stock) | No change          | Increase              |
| Par value per share            | Decrease           | No change             |
| Total stockholders' equity     | No change          | No change             |

**Illustration 14-7**  
Differences between the effects of stock splits and stock dividends

## INVESTOR INSIGHT

### A No-Split Philosophy

Warren Buffett's company, Berkshire Hathaway, has two classes of shares. Until recently, the company had never split either class of stock. As a result, the class A stock had a market price of \$97,000 and the class B sold for about \$3,200 per share. Because the price per share is so high, the stock does not trade as frequently as the stock of other companies. Mr. Buffett has always opposed stock splits because he feels that a lower stock price attracts short-term investors. He appears to be correct. For example, while more than 6 million shares of IBM are exchanged on the average day, only about 1,000 class A shares of Berkshire are traded. Despite Mr. Buffett's aversion to splits, in order to accomplish a recent acquisition, Berkshire decided to split its class B shares 50 to 1.

Source: Scott Patterson, "Berkshire Nears Smaller Baby B's," *Wall Street Journal Online* (January 19, 2010).

**?** Why does Warren Buffett usually oppose stock splits? (See page 665.)

## Do it!

Sing CD Company has had five years of record earnings. Due to this success, the market price of its 500,000 shares of \$2 par value common stock has tripled from \$15 per share to \$45. During this period, paid-in capital remained the same at \$2,000,000. Retained earnings increased from \$1,500,000 to \$10,000,000. President

## Stock Dividends and Stock Splits

**action plan**

✓ Calculate the stock dividend's effect on retained earnings by multiplying the number of new shares times the market price of the stock (or par value for a large stock dividend).

✓ Recall that a stock dividend increases the number of shares without affecting total stockholders' equity.

✓ Recall that a stock split only increases the number of shares outstanding and decreases the par value per share.

Joan Elbert is considering either a 10% stock dividend or a 2-for-1 stock split. She asks you to show the before-and-after effects of each option on retained earnings and total stockholders' equity.

**Solution**

The stock dividend amount is \$2,250,000  $[(500,000 \times 10\%) \times \$45]$ . The new balance in retained earnings is \$7,750,000  $(\$10,000,000 - \$2,250,000)$ . The retained earnings balance after the stock split is the same as it was before the split: \$10,000,000. Total stockholders' equity does not change. The effects on the stockholders' equity accounts are as follows.

|                            | <u>Original<br/>Balances</u> | <u>After<br/>Dividend</u> | <u>After<br/>Split</u> |
|----------------------------|------------------------------|---------------------------|------------------------|
| Paid-in capital            | \$ 2,000,000                 | \$ 4,250,000              | \$ 2,000,000           |
| Retained earnings          | 10,000,000                   | 7,750,000                 | 10,000,000             |

## Retained Earnings

### Study Objective [2]

Identify the items reported in a retained earnings statement.

As you learned in Chapter 13, **retained earnings** is net income that a company retains in the business. The balance in retained earnings is part of the stockholders' claim on the total assets of the corporation. It does not, though, represent a claim on any specific asset. Nor can the amount of retained earnings be associated with the balance of any asset account. For example, a \$100,000 balance in retained earnings does not mean that there should be \$100,000 in cash. The reason is that the company may have used the cash resulting from the excess of revenues over expenses to purchase buildings, equipment, and other assets.

To demonstrate that retained earnings and cash may be quite different, Illustration 14-8 shows recent amounts of retained earnings and cash in selected companies.

### Illustration 14-8

Retained earnings and cash balances

| <u>Company</u> | (in millions)                |             |
|----------------|------------------------------|-------------|
|                | <u>Retained<br/>Earnings</u> | <u>Cash</u> |
| Disney Co.     | \$24,207                     | \$3,670     |
| Intel Corp.    | 28,984                       | 6,598       |
| Kellogg Co.    | 4,217                        | 1,026       |
| Amazon.com     | (1,837)                      | 1,022       |

Remember from Chapter 13 that when a company has net income, it closes net income to retained earnings. The closing entry is a debit to Income Summary and a credit to Retained Earnings.

When a company has a **net loss** (expenses exceed revenues), it also closes this amount to retained earnings. The closing entry in this case is a debit to Retained Earnings and a credit to Income Summary. This is done even if it results in a debit

### Helpful Hint

Remember that Retained Earnings is a stockholders' equity account, whose normal balance is a credit.

balance in Retained Earnings. **Companies do not debit net losses to paid-in capital accounts.** To do so would destroy the distinction between paid-in and earned capital. If cumulative losses exceed cumulative income over a company's life, a debit balance in Retained Earnings results. A debit balance in Retained Earnings is identified as a **deficit**. A company reports a deficit as a deduction in the stockholders' equity section, as shown in Illustration 14-9.

| <u>Balance Sheet (partial)</u>     |                        |
|------------------------------------|------------------------|
| Stockholders' equity               |                        |
| Paid-in capital                    |                        |
| Common stock                       | \$800,000              |
| <b>Retained earnings (deficit)</b> | <b><u>(50,000)</u></b> |
| Total stockholders' equity         | <u>\$750,000</u>       |

**Illustration 14-9**  
Stockholders' equity with deficit

## Retained Earnings Restrictions

The balance in retained earnings is generally available for dividend declarations. Some companies state this fact. For example, **Lockheed Martin Corporation** states the following in the notes to its financial statements.

### Lockheed Martin Corporation Notes to the Financial Statements

At December 31, retained earnings were unrestricted and available for dividend payments.

**Illustration 14-10**  
Disclosure of unrestricted retained earnings

In some cases, there may be **retained earnings restrictions**. These make a portion of the retained earnings balance currently unavailable for dividends. Restrictions result from one or more of the following causes.

- 1. Legal restrictions.** Many states require a corporation to restrict retained earnings for the cost of treasury stock purchased. The restriction keeps intact the corporation's legal capital that is being temporarily held as treasury stock. When the company sells the treasury stock, the restriction is lifted.
- 2. Contractual restrictions.** Long-term debt contracts may restrict retained earnings as a condition for the loan. The restriction limits the use of corporate assets for payment of dividends. Thus, it increases the likelihood that the corporation will be able to meet required loan payments.
- 3. Voluntary restrictions.** The board of directors may voluntarily create retained earnings restrictions for specific purposes. For example, the board may authorize a restriction for future plant expansion. By reducing the amount of retained earnings available for dividends, the company makes more cash available for the planned expansion.

Companies generally disclose **retained earnings restrictions** in the notes to the financial statements. For example, **Tektronix Inc.**, a manufacturer of electronic measurement devices, had total retained earnings of \$774 million, but the unrestricted portion was only \$223.8 million.

**Illustration 14-11**  
Disclosure of restriction

| Tektronix Inc.<br>Notes to the Financial Statements  |  |
|--|--|
| Certain of the Company's debt agreements require compliance with debt covenants. Management believes that the Company is in compliance with such requirements. The Company had unrestricted retained earnings of \$223.8 million after meeting those requirements. |  |

### Prior Period Adjustments

Suppose that a corporation has closed its books and issued financial statements. The corporation then discovers that it made a material error in reporting net income of a prior year. How should the company record this situation in the accounts and report it in the financial statements?

The correction of an error in previously issued financial statements is known as a **prior period adjustment**. The company makes the correction directly to Retained Earnings, because the effect of the error is now in this account. The net income for the prior period has been recorded in retained earnings through the journalizing and posting of closing entries.

To illustrate, assume that General Microwave discovers in 2012 that it understated depreciation expense on equipment in 2011 by \$300,000 due to computational errors. These errors overstated both net income for 2011 and the current balance in retained earnings. The entry for the prior period adjustment, ignoring all tax effects, is as follows.

|                   |   |             |   |    |
|-------------------|---|-------------|---|----|
| A                 | = | L           | + | SE |
| -300,000          |   | -300,000 RE |   |    |
| <b>Cash Flows</b> |   |             |   |    |
| no effect         |   |             |   |    |

|  |         |         |
|--|---------|---------|
| Retained Earnings  | 300,000 |         |
| Accumulated Depreciation—Equipment                               |         | 300,000 |
| (To adjust for understatement of depreciation in a prior period) |         |         |

A debit to an income statement account in 2012 is incorrect because the error pertains to a prior year.

Companies report prior period adjustments in the retained earnings statement.<sup>1</sup> They add (or deduct, as the case may be) these adjustments from the beginning retained earnings balance. This results in an adjusted beginning balance. For example, assuming a beginning balance of \$800,000 in retained earnings, General Microwave reports the prior period adjustment as follows.

**Illustration 14-12**  
Statement presentation of prior period adjustments

| General Microwave<br>Retained Earnings Statement (partial)                             |                         |
|--|-------------------------|
| Balance, January 1, as reported  | \$ 800,000              |
| <b>Correction for overstatement of net income in prior period (depreciation error)</b> | <b><u>(300,000)</u></b> |
| Balance, January 1, as adjusted  | \$ 500,000              |

Again, reporting the correction in the current year's income statement would be incorrect because it applies to a prior year's income statement.

<sup>1</sup>A complete retained earnings statement is shown in Illustration 14-14 on the next page.

## Retained Earnings Statement

The **retained earnings statement** shows the changes in retained earnings during the year. The company prepares the statement from the Retained Earnings account. Illustration 14-13 shows (in account form) transactions that affect retained earnings.

| Retained Earnings   |  |
|---|--|
| 1. Net loss   | 1. Net income  |
| 2. Prior period adjustments for overstatement of net income | 2. Prior period adjustments for understatement of net income |
| 3. Cash dividends and stock dividends                       |  |
| 4. Some disposals of treasury stock                         |  |

**Illustration 14-13**  
Debits and credits to retained earnings

As indicated, net income increases retained earnings, and a net loss decreases retained earnings. Prior period adjustments may either increase or decrease retained earnings. Both cash dividends and stock dividends decrease retained earnings. The circumstances under which treasury stock transactions decrease retained earnings are explained in Chapter 13, page 609.

A complete retained earnings statement for Graber Inc., based on assumed data, is as follows.

| Graber Inc.<br>Retained Earnings Statement<br>For the Year Ended December 31, 2012 |           |                    |
|--|-----------|--------------------|
| Balance, January 1, as reported  |           | \$1,050,000        |
| Correction for understatement of net income<br>in prior period (inventory error)   |           | 50,000             |
| Balance, January 1, as adjusted  |           | 1,100,000          |

**Illustration 14-14**  
Retained earnings statement

## Do it!

Vega Corporation has retained earnings of \$5,130,000 on January 1, 2012. During the year, Vega earned \$2,000,000 of net income. It declared and paid a \$250,000 cash dividend. In 2012, Vega recorded an adjustment of \$180,000 due to the understatement (from a mathematical error) of 2011 depreciation expense. Prepare a retained earnings statement for 2012.

## Retained Earnings Statement

**action plan**

- ✓ Recall that a retained earnings statement begins with retained earnings, as reported at the end of the previous year.
- ✓ Add or subtract any prior period adjustments to arrive at the adjusted beginning figure.
- ✓ Add net income and subtract dividends declared to arrive at the ending balance in retained earnings.

**Solution**

| <b>VEGA CORPORATION</b>  |                           |

## Statement Presentation and Analysis

### Stockholders' Equity Presentation

#### Study Objective [3]

Prepare and analyze a comprehensive stockholders' equity section.

#### Illustration 14-15

Comprehensive stockholders' equity section

Illustration 14-15 presents the stockholders' equity section of Graber Inc.'s balance sheet. Note the following: (1) "Common stock dividends distributable" is shown under "Capital stock," in "Paid-in capital." (2) A note (Note R) discloses a retained earnings restriction.

| Graber Inc.   |                           |
|---|---------------------------|
| Balance Sheet (partial)   |                           |
| Stockholders' equity  |                           |
| Paid-in capital   |                           |
| Capital stock   |                           |
| 9% Preferred stock, \$100 par value, cumulative,<br>callable at \$120, 10,000 shares authorized,<br>6,000 shares issued and outstanding | \$ 600,000                |
| Common stock, no par, \$5 stated value,<br>500,000 shares authorized, 400,000 shares<br>issued and 390,000 outstanding                  | \$2,000,000               |
| <b>Common stock dividends distributable</b>   | <b><u>50,000</u></b>      |
| Total capital stock   | <u>2,650,000</u>          |
| Additional paid-in capital  |                           |
| In excess of par—preferred stock  | 30,000                    |
| In excess of stated value—common stock  | <u>1,050,000</u>          |
| Total additional paid-in capital  | <u>1,080,000</u>          |
| Total paid-in capital   | 3,730,000                 |
| Retained earnings ( <b>see Note R</b> )   | <u>1,160,000</u>          |
| Total paid-in capital and retained earnings   | 4,890,000                 |
| Less: Treasury stock (10,000 common shares)   | <u>80,000</u>             |
| Total stockholders' equity  | <u><u>\$4,810,000</u></u> |

**Note R: Retained earnings is restricted for the cost of treasury stock, \$80,000.**

Instead of presenting a detailed stockholders' equity section in the balance sheet and a retained earnings statement, many companies prepare a **stockholders' equity statement**. This statement shows the changes (1) in each stockholders' equity account and (2) in total that occurred during the year. An example of a stockholders' equity statement appears in **PepsiCo's** financial statements in Appendix A (page A7).

## Stockholders' Equity Analysis

Investors and analysts can measure profitability from the viewpoint of the common stockholder by the **return on common stockholders' equity**. This ratio shows how many dollars of net income the company earned for each dollar invested by the common stockholders. It is computed by dividing **net income available to common stockholders** (which is net income minus preferred stock dividends) by average common stockholders' equity.

To illustrate, **Walt Disney Company's** beginning-of-the-year and end-of-the-year common stockholders' equity were \$31,820 and \$30,753 million respectively. Its net income was \$4,687 million, and no preferred stock was outstanding. The return on common stockholders' equity ratio is computed as follows.

|  |   |  |   |  |
|--|---|--|---|--|
| <b>Net Income Available to Common Stockholders</b> | ÷ | <b>Average Common Stockholders' Equity</b> | = | <b>Return on Common Stockholders' Equity</b> |
| (\$4,687 - \$0)                                    | ÷ | $\frac{(\$31,820 + \$30,753)}{2}$          | = | <b>15.0%</b>                                 |

**Illustration 14-16**  
Return on common stockholders' equity ratio and computation

As shown above, if a company has preferred stock, we would deduct the amount of **preferred dividends** from the company's net income to compute income available to common stockholders. Also, the par value of preferred stock is deducted from total average stockholders' equity to arrive at the amount of common stockholders' equity.

## Income Statement Presentation

Income statements for **corporations are the same as the statements for proprietorships or partnerships except for one thing: the reporting of income taxes**. For income tax purposes, corporations are a separate legal entity. As a result, corporations report **income tax expense** in a separate section of the corporation income statement, before net income. The condensed income statement for Leads Inc. in Illustration 14-17 shows a typical presentation. Note that the

**Study Objective [4]**  
Describe the form and content of corporation income statements.

| Leads Inc.<br>Income Statement<br>For the Year Ended December 31, 2012 |                         |
|--|-------------------------|
| Sales revenue  | \$800,000               |
| Cost of goods sold   | <u>600,000</u>          |
| Gross profit   | 200,000                 |
| Operating expenses   | <u>50,000</u>           |
| Income from operations   | 150,000                 |
| Other revenues and gains   | 10,000                  |
| Other expenses and losses  | <u>(4,000)</u>          |
| <b>Income before income taxes</b>                                      | <b>156,000</b>          |
| <b>Income tax expense</b>  | <b><u>46,800</u></b>    |
| Net income   | <u><u>\$109,200</u></u> |

**Illustration 14-17**  
Income statement with income taxes

corporation reports income before income taxes as one line item and income tax expense as another.

Companies record income tax expense and the related liability for income taxes payable as part of the adjusting process. Using the data for Leads Inc., in Illustration 14-17, the adjusting entry for income tax expense at December 31, 2012, is:

|                   |   |             |   |    |
|-------------------|---|-------------|---|----|
| A                 | = | L           | + | SE |
|                   |   | -46,800 Exp |   |    |
|                   |   | +46,800     |   |    |
| <b>Cash Flows</b> |   |             |   |    |
| no effect         |   |             |   |    |

|                                   |        |  |        |
|-----------------------------------|--------|--|--------|
| Income Tax Expense                | 46,800 |  | 46,800 |
| Income Taxes Payable              |        |  | 46,800 |
| (To record income taxes for 2012) |        |  |        |

The income statement of PepsiCo, in Appendix A presents another illustration of income taxes.

### Income Statement Analysis

The financial press frequently reports earnings data. Stockholders and potential investors widely use these data in evaluating the profitability of a company. A convenient measure of earnings is **earnings per share (EPS)**, which indicates the net income earned by each share of outstanding **common stock**.

#### EPS AND PREFERRED DIVIDENDS

The existence of preferred dividends slightly complicates the calculation of EPS. When a corporation has both preferred and common stock, we must subtract the current year's preferred dividend from net income, to arrive at **income available to common stockholders**. Illustration 14-18 shows the formula for computing EPS.

**Study Objective [5]**  
Compute earnings per share.

**Illustration 14-18**  
Formula for earnings per share

$$\frac{\text{Net Income minus Preferred Dividends}}{\text{Weighted-Average of Common Shares Outstanding}} = \text{Earnings per Share}$$

#### Ethics Note

In order to meet market expectations for EPS, some managers engage in elaborate treasury stock transactions. These transactions can be very costly for the remaining shareholders.

To illustrate, assume that Rally Inc. reports net income of \$211,000 on its 102,500 weighted-average common shares.<sup>2</sup> During the year it also declares a \$6,000 dividend on its preferred stock. Therefore, the amount Rally has available for common stock dividends is \$205,000 (\$211,000 – \$6,000). Earnings per share is \$2 (\$205,000 ÷ 102,500). If the preferred stock is cumulative, Rally deducts the dividend for the current year, whether or not it is declared. Remember that companies report **earnings per share only for common stock**.

Investors often attempt to link earnings per share to the market price per share of a company's stock.<sup>3</sup> Because of the importance of earnings per share, most companies must report it on the face of the income statement. Generally companies simply report this amount below net income on the statement. For Rally Inc. the presentation is as follows.

**Illustration 14-19**  
Basic earnings per share disclosure

| Rally Inc.<br>Income Statement (partial) |               |
|--|---------------|
| Net income                               | \$211,000     |
| <b>Earnings per share</b>                | <b>\$2.00</b> |

<sup>2</sup>The calculation of the weighted average of common shares outstanding is discussed in advanced accounting courses.

<sup>3</sup>The ratio of the market price per share to the earnings per share is called the *price/earnings (P/E) ratio*. The financial media report this ratio for common stocks listed on major stock exchanges.

## Do it!

On January 1, 2012, Siena Corporation purchased 2,000 shares of treasury stock. Other information regarding Siena Corporation is provided below.

|  | <u>2011</u> | <u>2012</u> |
|--|-------------|-------------|
| Net income                                     | \$110,000   | \$110,000   |
| Dividends on preferred stock                   | \$10,000    | \$10,000    |
| Dividends on common stock                      | \$2,000     | \$1,600     |
| Weighted-average number of shares outstanding  | 10,000      | 8,000*      |
| Common stockholders' equity, beginning of year | \$500,000   | \$400,000*  |
| Common stockholders' equity, end of year       | \$500,000   | \$400,000   |

\*Adjusted for purchase of treasury stock.

Compute (a) return on common stockholders' equity for each year and (b) earnings per share for each year, and (c) discuss the changes in each.

### Solution

- (a)
- |                                       | <u>2011</u>   |  | <u>2012</u>   |
|---------------------------------------|---|--|---|
| Return on common stockholders' equity | $\frac{(\$110,000 - \$10,000)}{(\$500,000 + \$500,000)/2} = 20\%$ |  | $\frac{(\$110,000 - \$10,000)}{(\$400,000 + \$400,000)/2} = 25\%$ |
- (b)

| Earnings per share | $\frac{(\$110,000 - \$10,000)}{10,000} = \$10$ |  | $\frac{(\$110,000 - \$10,000)}{8,000} = \$12.50$ |
|--------------------|--|--|--|
- (c) Between 2011 and 2012, return on common stockholders' equity improved from 20% to 25%. Earnings per share increased from \$10 to \$12.50. While this would appear to be good news for the company's common stockholders, these increases should be carefully evaluated. It is important to note that net income did not change during this period. The increase in both ratios was due to the purchase of treasury shares, which reduced the denominator of each ratio. As the company repurchases its own shares, it becomes more reliant on debt and thus increases its risk.

Related exercise material: BE14-6, BE14-7, BE14-9, BE14-10, E14-12, E14-13, E14-14, E14-15, E14-16, E14-17, and **Do it!** 14-4.

## Stockholders' Equity and EPS

### action plan

- ✓ Determine return on common stockholders' equity by dividing net income available to common stockholders by the average common stockholders' equity.
- ✓ Determine earnings per share by dividing net income available to common stockholders by the weighted-average number of common shares outstanding.

## COMPREHENSIVE

## Do it!

On January 1, 2012, Hayslett Corporation had the following stockholders' equity accounts.

|  |             |
|--|-------------|
| Common Stock (\$10 par value, 260,000 shares issued and outstanding) | \$2,600,000 |
| Paid-in Capital in Excess of Par—Common Stock                        | 1,500,000   |
| Retained Earnings  | 3,200,000   |

During the year, the following transactions occurred.

- April 1 Declared a \$1.50 cash dividend per share to stockholders of record on April 15, payable May 1.
- May 1 Paid the dividend declared in April.
- June 1 Announced a 2-for-1 stock split. Prior to the split, the market price per share was \$24.
- Aug. 1 Declared a 10% stock dividend to stockholders of record on August 15, distributable August 31. On August 1, the market price of the stock was \$10 per share.
- 31 Issued the shares for the stock dividend.

- Dec. 1 Declared a \$1.50 per share dividend to stockholders of record on December 15, payable January 5, 2011.
- 31 Determined that net income for the year was \$600,000.

**Instructions**

- (a) Journalize the transactions and the closing entry for net income.
- (b) Prepare a stockholders' equity section at December 31.

**action plan**

- ✓ Award dividends to outstanding shares only.
- ✓ Adjust the par value and number of shares for stock splits, but make no journal entry.
- ✓ Use fair value of stock to determine the value of a small stock dividend.
- ✓ Close Income Summary to Retained Earnings.

\*\$3,200,000 + \$600,000 – \$390,000 – \$520,000 – \$858,000

## Summary of Study Objectives

**[1] Prepare the entries for cash dividends and stock dividends.** Companies make entries for both cash and stock dividends at the declaration date and at the payment date. At the *declaration date*, the entries are: cash dividend—debit Cash Dividends, and credit Dividends Payable; small stock dividend—debit Stock Dividends, credit Paid-in Capital in Excess

of Par (or Stated) Value—Common Stock, and credit Common Stock Dividends Distributable. At the *payment date*, the entries for cash and stock dividends are: cash dividend—debit Dividends Payable and credit Cash; small stock dividend—debit Common Stock Dividends Distributable and credit Common Stock.

**[2] Identify the items reported in a retained earnings statement.** Companies report each of the individual debits and credits to retained earnings in the retained earnings statement. Additions consist of net income and prior period adjustments to correct understatements of prior years' net income. Deductions consist of net loss, adjustments to correct overstatements of prior years' net income, cash and stock dividends, and some disposals of treasury stock.

**[3] Prepare and analyze a comprehensive stockholders' equity section.** A comprehensive stockholders' equity section includes all stockholders' equity accounts. It consists of two sections: paid-in capital and retained earnings. It should also include notes to the financial statements that explain any restrictions on retained earnings and any dividends in arrears. One measure of profitability is the return on common stockholders' equity. It is calculated by dividing net income

minus preferred stock dividends by average common stockholders' equity.

**[4] Describe the form and content of corporation income statements.** The form and content of corporation income statements are similar to the statements of proprietorships and partnerships with one exception: Corporations must report income taxes or income tax expense in a separate section before net income in the income statement.

**[5] Compute earnings per share.** Companies compute earnings per share by dividing net income by the weighted-average number of common shares outstanding during the period. When preferred stock dividends exist, they must be deducted from net income in order to calculate EPS.

## Glossary

**Cash dividend** A pro rata distribution of cash to stockholders. (p. 634).

**Declaration date** The date the board of directors formally declares a dividend and announces it to stockholders. (p. 635).

**Deficit** A debit balance in retained earnings. (p. 643).

**Dividend** A corporation's distribution of cash or stock to its stockholders on a pro rata (proportional) basis. (p. 634).

**Earnings per share** The net income earned by each share of outstanding common stock. (p. 648).

**Liquidating dividend** A dividend declared out of paid-in capital. (p. 634).

**Payment date** The date dividend checks are mailed to stockholders. (p. 636).

**Prior period adjustment** The correction of an error in previously issued financial statements. (p. 644).

**Record date** The date when ownership of outstanding shares is determined for dividend purposes. (p. 635).

**Retained earnings** Net income that is retained in the business. (p. 642).

**Retained earnings restrictions** Circumstances that make a portion of retained earnings currently unavailable for dividends. (p. 643).

**Retained earnings statement** A financial statement that shows the changes in retained earnings during the year. (p. 645).

**Return on common stockholders' equity** A measure of profitability that shows how many dollars of net income were earned for each dollar invested by the owners; computed as net income minus preferred dividends divided by average common stockholders' equity. (p. 647).

**Stock dividend** A pro rata distribution to stockholders of the corporation's own stock. (p. 638).

**Stockholders' equity statement** A statement that shows the changes in each stockholders' equity account and in total stockholders' equity during the year. (p. 647).

**Stock split** The issuance of additional shares of stock to stockholders according to their percentage ownership; is accompanied by a reduction in the par or stated value per share. (p. 640).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 665.

- (SO 1) 1. Entries for cash dividends are required on the:
- declaration date and the payment date.
  - record date and the payment date.
  - declaration date, record date, and payment date.
  - declaration date and the record date.
- (SO 1) 2. Which of the following statements about small stock dividends is *true*?
- A debit to Retained Earnings for the par value of the shares issued should be made.
  - A small stock dividend decreases total stockholders' equity.
  - Market value per share should be assigned to the dividend shares.
  - A small stock dividend ordinarily will have an effect on par value per share of stock.

- (SO 1) 3. Which of the following statements about a 3-for-1 stock split is *true*?
- It will triple the market value of the stock.
  - It will triple the amount of total stockholders' equity.
  - It will have no effect on total stockholders' equity.
  - It requires the company to distribute cash.
- (SO 1) 4. Encore Inc. declared an \$80,000 cash dividend. It currently has 3,000 shares of 7%, \$100 par value cumulative preferred stock outstanding. It is one year in arrears on its preferred stock. How much cash will Encore distribute to the common stockholders?
- \$38,000.
  - \$42,000.
  - \$59,000.
  - None.
- (SO 1) 5. Raptor Inc. has retained earnings of \$500,000 and total stockholders' equity of \$2,000,000. It has 100,000 shares of \$8 par value common stock outstanding, which is currently selling for \$30 per share. If Raptor declares a 10% stock dividend on its common stock:
- net income will decrease by \$80,000.
  - retained earnings will decrease by \$80,000 and total stockholders' equity will increase by \$80,000.
  - retained earnings will decrease by \$300,000 and total stockholders' equity will increase by \$300,000.
  - retained earnings will decrease by \$300,000 and total paid-in capital will increase by \$300,000.
- (SO 2) 6. Which of the following can cause a restriction in retained earnings?
- State laws regarding treasury stock.
  - Long-term debt contract terms.
  - Authorizations by the board of directors in light of planned expansion of corporate facilities.
  - All of the above.
- (SO 2) 7. All *but one* of the following is reported in a retained earnings statement. The exception is:
- cash and stock dividends.
  - net income and net loss.
  - sales revenue.
  - prior period adjustments.
- (SO 2) 8. A prior period adjustment is:
- reported in the income statement as a nontypical item.
  - a correction of an error that is recorded directly to retained earnings.
  - reported directly in the stockholders' equity section.
  - reported in the retained earnings statement as an adjustment of the ending balance of retained earnings.
- (SO 3) 9. In the stockholders' equity section, Common Stock Dividends Distributable is reported as a(n):
- deduction from total paid-in capital and retained earnings.
  - addition to additional paid-in capital.
  - deduction from retained earnings.
  - addition to capital stock.
10. Katie Inc. reported net income of \$186,000 during 2012 and paid dividends of \$26,000 on common stock. It also has 10,000 shares of 6%, \$100 par value, noncumulative preferred stock outstanding. Common stockholders' equity was \$1,200,000 on January 1, 2012, and \$1,600,000 on December 31, 2012. The company's return on common stockholders' equity for 2012 is:
- 10.0%.
  - 9.0%.
  - 7.1%.
  - 13.3%.
11. Corporation income statements may be the same as the income statements for unincorporated companies *except* for:
- gross profit.
  - income tax expense.
  - operating income.
  - net sales.
12. During 2012, Talon Inc. had sales revenue \$376,000, gross profit \$176,000, operating expenses \$66,000, cash dividends \$30,000, other expenses and losses \$20,000. Its corporate tax rate is 30%. What was Talon's income tax expense for the year?
- \$18,000.
  - \$52,800.
  - \$112,800.
  - \$27,000.
13. The return on common stockholders' equity is defined as:
- net income divided by total assets.
  - cash dividends divided by average common stockholders' equity.
  - income available to common stockholders divided by average common stockholders' equity.
  - None of these is correct.
14. If everything else is held constant, earnings per share is increased by:
- the payment of a cash dividend to common shareholders.
  - the payment of a cash dividend to preferred shareholders.
  - the issuance of new shares of common stock.
  - the purchase of treasury stock.
15. The income statement for Nadeen, Inc. shows income before income taxes \$700,000, income tax expense \$210,000, and net income \$490,000. If Nadeen has 100,000 shares of common stock outstanding throughout the year, earnings per share is:
- \$7.00.
  - \$4.90.
  - \$2.10.
  - No correct answer is given.

 for additional Self-Test Questions.

## Questions

- (a) What is a dividend? (b) "Dividends must be paid in cash." Do you agree? Explain.
- Sue DeVine maintains that adequate cash is the only requirement for the declaration of a cash dividend. Is Sue correct? Explain.
- (a) Three dates are important in connection with cash dividends. Identify these dates, and explain their significance to the corporation and its stockholders.  
 (b) Identify the accounting entries that are made for a cash dividend and the date of each entry.

4. Conger Inc. declares a \$45,000 cash dividend on December 31, 2012. The required annual dividend on preferred stock is \$10,000. Determine the allocation of the dividend to preferred and common stockholders assuming the preferred stock is cumulative and dividends are 1 year in arrears.
  5. Contrast the effects of a cash dividend and a stock dividend on a corporation's balance sheet.
  6. Todd Huebner asks, "Since stock dividends don't change anything, why declare them?" What is your answer to Todd?
  7. Meenen Corporation has 30,000 shares of \$10 par value common stock outstanding when it announces a 2-for-1 stock split. Before the split, the stock had a market price of \$120 per share. After the split, how many shares of stock will be outstanding? What will be the approximate market price per share?
  8. The board of directors is considering either a stock split or a stock dividend. They understand that total stockholders' equity will remain the same under either action. However, they are not sure of the different effects of the two types of actions on other aspects of stockholders' equity. Explain the differences to the directors.
  9. What is a prior period adjustment, and how is it reported in the financial statements?
  10. KSU Corporation has a retained earnings balance of \$210,000 on January 1. During the year, a prior period adjustment of \$50,000 is recorded because of the under-
- statement of depreciation in the prior period. Show the retained earnings statement presentation of these data.
11. What is the purpose of a retained earnings restriction? Identify the possible causes of retained earnings restrictions.
  12. How are retained earnings restrictions generally reported in the financial statements?
  13. Identify the events that result in debits and credits to retained earnings.
  14. Juan Ortega believes that both the beginning and ending balances in retained earnings are shown in the stockholders' equity section. Is Juan correct? Discuss.
  15. Gene Remington, who owns many investments in common stock, says, "I don't care what a company's net income is. The stock price tells me everything I need to know!" How do you respond to Gene?
  16. What is the unique feature of a corporation income statement? Illustrate this feature, using assumed data.
  17. Why must preferred stock dividends be subtracted from net income in computing earnings per share?
  18.  **PEPSICO** What were the amounts of the dividends PepsiCo declared per share of common stock in the years 2005 to 2009? Is the trend in dividends consistent with the company's net income trend during the period?

## Brief Exercises

- BE14-1** Charmaine Corporation has 80,000 shares of common stock outstanding. It declares a \$1 per share cash dividend on November 1 to stockholders of record on December 1. The dividend is paid on December 31. Prepare the entries on the appropriate dates to record the declaration and payment of the cash dividend. *Prepare entries for a cash dividend.* (SO 1)
- BE14-2** Willand Corporation has 50,000 shares of \$10 par value common stock outstanding. It declares a 10% stock dividend on December 1 when the market value per share is \$16. The dividend shares are issued on December 31. Prepare the entries for the declaration and payment of the stock dividend. *Prepare entries for a stock dividend.* (SO 1)
- BE14-3** The stockholders' equity section of Melanie Corporation consists of common stock (\$10 par) \$2,000,000 and retained earnings \$500,000. A 10% stock dividend (20,000 shares) is declared when the market value per share is \$14. Show the before and after effects of the dividend on the following. *Show before and after effects of a stock dividend.* (SO 1)
- (a) The components of stockholders' equity.
  - (b) Shares outstanding.
  - (c) Par value per share.
- BE14-4** For the year ending December 31, 2012, Vail Inc. reports net income \$140,000 and dividends \$85,000. Prepare the retained earnings statement for the year assuming the balance in retained earnings on January 1, 2012, was \$220,000. *Prepare a retained earnings statement.* (SO 2)
- BE14-5** The balance in retained earnings on January 1, 2012, for Thomas Inc, was \$800,000. During the year, the corporation paid cash dividends of \$90,000 and distributed a stock dividend of \$8,000. In addition, the company determined that it had understated its depreciation expense in prior years by \$50,000. Net income for 2012 was \$120,000. Prepare the retained earnings statement for 2012. *Prepare a retained earnings statement.* (SO 2)
- BE14-6** **SUPERVALU**, one of the largest grocery retailers in the United States, is headquartered in Minneapolis. The following financial information (in millions) was taken from the *Calculate the return on common stockholders' equity.* (SO 3)

company's 2009 annual report. Net sales \$40,597; net income \$393; beginning stockholders' equity \$2,581; ending stockholders' equity \$2,887. Compute the return on common stockholders' equity ratio.

Compute return on common stockholders' equity.

(SO 3)

Prepare a corporate income statement.

(SO 4)

Compute earnings per share.

(SO 5)

Compute earnings per share with cumulative preferred stock.

(SO 5)

**BE14-7** Stanley Corporation reported net income of \$152,000, declared dividends on common stock of \$50,000, and had an ending balance in retained earnings of \$360,000. Stockholders' equity was \$700,000 at the beginning of the year and \$820,000 at the end of the year. Compute the return on common stockholders' equity.

**BE14-8** The following information is available for Mildred Corporation for the year ended December 31, 2012: Cost of goods sold \$205,000; Sales revenue \$450,000; Other revenues and gains \$50,000; and Operating expenses \$75,000. Assuming a corporate tax rate of 30%, prepare an income statement for the company.

**BE14-9** Wegrzyn Corporation reports net income of \$380,000 and a weighted-average of 200,000 shares of common stock outstanding for the year. Compute the earnings per share of common stock.

**BE14-10** Income and common stock data for Wegrzyn Corporation are presented in BE14-9. Assume also that Wegrzyn has cumulative preferred stock dividends for the current year of \$20,000 that were declared and paid. Compute the earnings per share of common stock.

## Do it! Review

Determine dividends paid to preferred and common stockholders.

(SO 1)

**Do it! 14-1** Erik Corporation has 3,000 shares of 7%, \$100 par value preferred stock outstanding at December 31, 2012. At December 31, 2012, the company declared a \$105,000 cash dividend. Determine the dividend paid to preferred stockholders and common stockholders under each of the following scenarios.

1. The preferred stock is noncumulative, and the company has not missed any dividends in previous years.
2. The preferred stock is noncumulative, and the company did not pay a dividend in each of the two previous years.
3. The preferred stock is cumulative, and the company did not pay a dividend in each of the two previous years.

Determine effects of stock dividend and stock split.

(SO 1)

**Do it! 14-2** Ekedahl Company has had 4 years of retained earnings. Due to this success, the market price of its 400,000 shares of \$3 par value common stock has increased from \$12 per share to \$51. During this period, paid-in capital remained the same at \$2,400,000. Retained earnings increased from \$1,800,000 to \$12,000,000. President E. Ofey is considering either a 15% stock dividend or a 2-for-1 stock split. He asks you to show the before-and-after effects of each option on (a) retained earnings and (b) total stockholders' equity.

Prepare a retained earnings statement.

(SO 2)

**Do it! 14-3** Jason Corporation has retained earnings of \$3,100,000 on January 1, 2012. During the year, Jason earned \$1,200,000 of net income. It declared and paid a \$150,000 cash dividend. In 2012, Jason recorded an adjustment of \$110,000 due to the overstatement (from mathematical error) of 2011 depreciation expense. Prepare a retained earnings statement for 2012.

Compute return on stockholders' equity and EPS and discuss changes in each.

(SO 3, 5)

**Do it! 14-4** On January 1, 2012, Raczynski Corporation purchased 1,000 shares of treasury stock. Other information regarding Raczynski Corporation is provided below.

|  | <u>2011</u> | <u>2012</u> |
|--|-------------|-------------|
| Net income   | \$200,000   | \$210,000   |
| Dividends on preferred stock                         | \$30,000    | \$30,000    |
| Dividends on common stock                            | \$20,000    | \$25,000    |
| Weighted-average number of common shares outstanding | 10,000      | 9,000       |
| Common stockholders' equity beginning of year        | \$600,000   | \$750,000   |
| Common stockholders' equity end of year              | \$750,000   | \$830,000   |

Compute (a) return on common stockholders' equity for each year and (b) earnings per share for each year, and (c) discuss the changes in each.

## Exercises

**E14-1** On January 1, Chreesh Corporation had 95,000 shares of no-par common stock issued and outstanding. The stock has a stated value of \$5 per share. During the year, the following occurred.

- Apr. 1 Issued 25,000 additional shares of common stock for \$17 per share.  
 June 15 Declared a cash dividend of \$1 per share to stockholders of record on June 30.  
 July 10 Paid the \$1 cash dividend.  
 Dec. 1 Issued 2,000 additional shares of common stock for \$19 per share.  
     15 Declared a cash dividend on outstanding shares of \$1.20 per share to stockholders of record on December 31.

*Journalize cash dividends; indicate statement presentation.*  
 (SO 1)

### Instructions

- (a) Prepare the entries, if any, on each of the three dividend dates.  
 (b) How are dividends and dividends payable reported in the financial statements prepared at December 31?

**E14-2** Griseta Corporation was organized on January 1, 2011. During its first year, the corporation issued 2,000 shares of \$50 par value preferred stock and 100,000 shares of \$10 par value common stock. At December 31, the company declared the following cash dividends: 2011, \$6,000; 2012, \$12,000; and 2013, \$28,000.

*Allocate cash dividends to preferred and common stock.*  
 (SO 1)

### Instructions

- (a) Show the allocation of dividends to each class of stock, assuming the preferred stock dividend is 7% and not cumulative.  
 (b) Show the allocation of dividends to each class of stock, assuming the preferred stock dividend is 8% and cumulative.  
 (c) Journalize the declaration of the cash dividend at December 31, 2013, under part (b).

**E14-3** On January 1, 2012, Brittany Corporation had \$1,000,000 of common stock outstanding that was issued at par. It also had retained earnings of \$750,000. The company issued 40,000 shares of common stock at par on July 1 and earned net income of \$400,000 for the year.

*Journalize stock dividends.*  
 (SO 1)

### Instructions

Journalize the declaration of a 15% stock dividend on December 10, 2012, for the following independent assumptions.

- Par value is \$10, and market value is \$18.
- Par value is \$5, and market value is \$20.

**E14-4** On October 31, the stockholders' equity section of Ennis Company consists of common stock \$300,000 and retained earnings \$900,000. Ennis is considering the following two courses of action: (1) declaring a 5% stock dividend on the 30,000, \$10 par value shares outstanding, or (2) effecting a 2-for-1 stock split that will reduce par value to \$5 per share. The current market price is \$14 per share.

*Compare effects of a stock dividend and a stock split.*  
 (SO 1)

### Instructions

Prepare a tabular summary of the effects of the alternative actions on the components of stockholders' equity, outstanding shares, and par value per share. Use the following column headings: Before Action, After Stock Dividend, and After Stock Split.

**E14-5** On October 1, Little Tommy Corporation's stockholders' equity is as follows.

|   |                  |
|---|------------------|
| Common stock, \$5 par value                   | \$400,000        |
| Paid-in capital in excess of par—common stock | 25,000           |
| Retained earnings                             | <u>155,000</u>   |
| Total stockholders' equity                    | <u>\$580,000</u> |

*Indicate account balances after a stock dividend.*  
 (SO 1, 3)

On October 1, Little Tommy declares and distributes a 10% stock dividend when the market value of the stock is \$15 per share.

### Instructions

- (a) Compute the par value per share (1) before the stock dividend and (2) after the stock dividend.  
 (b) Indicate the balances in the three stockholders' equity accounts after the stock dividend shares have been distributed.

Indicate the effects on stockholders' equity components.

(SO 1, 2, 3)

**E14-6** During 2012, Margan Corporation had the following transactions and events.

1. Declared a cash dividend.
2. Issued par value common stock for cash at par value.
3. Completed a 2-for-1 stock split in which \$10 par value stock was changed to \$5 par value stock.
4. Declared a small stock dividend when the market value was higher than par value.
5. Made a prior period adjustment for overstatement of net income.
6. Issued the shares of common stock required by the stock dividend declaration in item no. 4 above.
7. Paid the cash dividend in item no. 1 above.
8. Issued par value common stock for cash above par value.

**Instructions**

Indicate the effect(s) of each of the foregoing items on the subdivisions of stockholders' equity. Present your answer in tabular form with the following columns. Use (I) for increase, (D) for decrease, and (NE) for no effect. Item no. 1 is given as an example.

| Item | Paid-in Capital |            | Retained Earnings |
|------|-----------------|------------|-------------------|
|      | Capital Stock   | Additional |                   |
| 1    | NE              | NE         | D                 |

Prepare correcting entries for dividends and a stock split.

(SO 1)

**E14-7** Before preparing financial statements for the current year, the chief accountant for Paul Company discovered the following errors in the accounts.

1. The declaration and payment of \$50,000 cash dividend was recorded as a debit to Interest Expense \$50,000 and a credit to Cash \$50,000.
2. A 10% stock dividend (1,000 shares) was declared on the \$10 par value stock when the market value per share was \$18. The only entry made was: Stock Dividends (Dr.) \$10,000 and Dividend Payable (Cr.) \$10,000. The shares have not been issued.
3. A 4-for-1 stock split involving the issue of 400,000 shares of \$5 par value common stock for 100,000 shares of \$20 par value common stock was recorded as a debit to Retained Earnings \$2,000,000 and a credit to Common Stock \$2,000,000.

**Instructions**

Prepare the correcting entries at December 31.

Prepare a retained earnings statement.

(SO 2)

**E14-8** On January 1, 2012, Barb Corporation had retained earnings of \$550,000. During the year, Barb had the following selected transactions.

1. Declared cash dividends \$120,000.
2. Corrected overstatement of 2011 net income because of depreciation error \$40,000.
3. Earned net income \$350,000.
4. Declared stock dividends \$60,000.

**Instructions**

Prepare a retained earnings statement for the year.

Prepare a retained earnings statement.

(SO 2)

**E14-9** Jayleah Company reported retained earnings at December 31, 2011, of \$310,000. Jayleah had 200,000 shares of common stock outstanding throughout 2012.

The following transactions occurred during 2012.

1. An error was discovered: in 2010, depreciation expense was recorded at \$70,000, but the correct amount was \$50,000.
2. A cash dividend of \$0.50 per share was declared and paid.
3. A 5% stock dividend was declared and distributed when the market price per share was \$15 per share.
4. Net income was \$285,000.

**Instructions**

Prepare a retained earnings statement for 2012.

Prepare stockholders' equity section.

(SO 3)

**E14-10** Beck Company reported the following balances at December 31, 2011: common stock \$400,000; paid-in capital in excess of par value—common stock \$100,000; and retained earnings \$250,000. During 2012, the following transactions affected stockholder's equity.

1. Issued preferred stock with a par value of \$125,000 for \$200,000.
2. Purchased treasury stock (common) for \$40,000.
3. Earned net income of \$140,000.
4. Declared and paid cash dividends of \$56,000.

**Instructions**

Prepare the stockholders' equity section of Beck Company's December 31, 2012, balance sheet.

**E14-11** The following accounts appear in the ledger of Kallie Inc. after the books are closed at December 31.

|   |            |
|---|------------|
| Common Stock, no par, \$1 stated value, 400,000 shares authorized;<br>300,000 shares issued | \$ 300,000 |
| Common Stock Dividends Distributable  | 30,000     |
| Paid-in Capital in Excess of Stated Value—Common Stock                                      | 1,200,000  |
| Preferred Stock, \$5 par value, 8%, 40,000 shares authorized;<br>30,000 shares issued       | 150,000    |
| Retained Earnings   | 800,000    |
| Treasury Stock (10,000 common shares)   | 74,000     |
| Paid-in Capital in Excess of Par—Preferred Stock  | 344,000    |

*Prepare a stockholders' equity section.*  
(SO 3)

**Instructions**

Prepare the stockholders' equity section at December 31, assuming retained earnings is restricted for plant expansion in the amount of \$100,000.

**E14-12** The following information is available for Kelsey Corporation for the year ended December 31, 2012: Sales \$800,000; Other revenues and gains \$92,000; Operating expenses \$110,000; Cost of goods sold \$465,000; Other expenses and losses \$32,000; Preferred stock dividends \$30,000. The company's tax rate was 20%, and it had 50,000 shares outstanding during the entire year.

*Prepare an income statement and compute earnings per share.*  
(SO 4, 5)

**Instructions**

- (a) Prepare a corporate income statement.
- (b) Calculate earnings per share.

**E14-13** In 2012, Stone Pony Corporation had net sales of \$600,000 and cost of goods sold of \$360,000. Operating expenses were \$153,000, and interest expense was \$7,500. The corporation's tax rate is 30%. The corporation declared preferred dividends of \$15,000 in 2012, and its average common stockholders' equity during the year was \$200,000.

*Prepare an income statement and compute return on equity.*  
(SO 3, 4)

**Instructions**

- (a) Prepare an income statement for Stone Pony Corporation.
- (b) Compute Stone Pony Corporation's return on common stockholders' equity for 2012.

**E14-14** Nikennis Corporation has outstanding at December 31, 2012, 50,000 shares of \$20 par value, cumulative, 8% preferred stock and 200,000 shares of \$5 par value common stock. All shares were outstanding the entire year. During 2012, Nikennis earned total revenues of \$2,000,000 and incurred total expenses (except income taxes) of \$1,200,000. Nikennis's income tax rate is 30%.

*Compute EPS.*  
(SO 4, 5)

**Instructions**

Compute Nikennis's 2012 earnings per share.

**E14-15** The following financial information is available for Monique Corporation.

*Calculate ratios to evaluate earnings performance.*  
(SO 3, 5)

|  | 2012        | 2011      |
|--|-------------|-----------|
| Average common stockholders' equity      | \$1,200,000 | \$900,000 |
| Dividends paid to common stockholders    | 50,000      | 30,000    |
| Dividends paid to preferred stockholders | 20,000      | 20,000    |
| Net income                               | 290,000     | 200,000   |
| Market price of common stock             | 20          | 15        |

The weighted-average number of shares of common stock outstanding was 80,000 for 2011 and 100,000 for 2012.

Calculate ratios to evaluate earnings performance.

(SO 3, 5)

### Instructions

Calculate earnings per share and return on common stockholders' equity for 2012 and 2011.

**E14-16** This financial information is available for Hoyle Corporation.

|  | 2012        | 2011        |
|--|-------------|-------------|
| Average common stockholders' equity      | \$1,800,000 | \$1,900,000 |
| Dividends paid to common stockholders    | 90,000      | 70,000      |
| Dividends paid to preferred stockholders | 20,000      | 20,000      |
| Net income                               | 290,000     | 248,000     |
| Market price of common stock             | 20          | 25          |

The weighted-average number of shares of common stock outstanding was 180,000 for 2011 and 150,000 for 2012.

### Instructions

Calculate earnings per share and return on common stockholders' equity for 2012 and 2011.

Compute earnings per share under different assumptions.

(SO 5)

**E14-17** At December 31, 2012, Jennyfer Corporation has 2,000 shares of \$100 par value, 8%, preferred stock outstanding and 100,000 shares of \$10 par value common stock issued. Jennyfer's net income for the year is \$241,000.

### Instructions

Compute the earnings per share of common stock under the following independent situations. (Round to two decimals.)

- The dividend to preferred stockholders was declared. There has been no change in the number of shares of common stock outstanding during the year.
- The dividend to preferred stockholders was not declared. The preferred stock is cumulative. Jennyfer held 10,000 shares of common treasury stock throughout the year.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

Prepare dividend entries and stockholders' equity section.

(SO 1, 3)

**P14-1A** On January 1, 2012, Kristen Corporation had the following stockholders' equity accounts.

|   |             |
|---|-------------|
| Common Stock (\$20 par value, 60,000 shares issued and outstanding) | \$1,200,000 |
| Paid-in Capital in Excess of Par—Common Stock                       | 200,000     |
| Retained Earnings   | 600,000     |

During the year, the following transactions occurred.

- Feb. 1 Declared a \$1 cash dividend per share to stockholders of record on February 15, payable March 1.
- Mar. 1 Paid the dividend declared in February.
- Apr. 1 Announced a 2-for-1 stock split. Prior to the split, the market price per share was \$36.
- July 1 Declared a 10% stock dividend to stockholders of record on July 15, distributable July 31. On July 1, the market price of the stock was \$13 per share.
  - Issued the shares for the stock dividend.
- Dec. 1 Declared a \$0.50 per share dividend to stockholders of record on December 15, payable January 5, 2013.
  - Determined that net income for the year was \$350,000.

### Instructions

- Journalize the transactions and the closing entry for net income.
- Enter the beginning balances, and post the entries to the stockholders' equity accounts. (Note: Open additional stockholders' equity accounts as needed.)
- Prepare a stockholders' equity section at December 31.

(c) Total stockholders' equity  
\$2,224,000

**P14-2A** The stockholders' equity accounts of Falk Company at January 1, 2012, are as follows.

|  |           |
|--|-----------|
| Preferred Stock, 6%, \$50 par                    | \$600,000 |
| Common Stock, \$5 par                            | 800,000   |
| Paid-in Capital in Excess of Par—Preferred Stock | 200,000   |
| Paid-in Capital in Excess of Par—Common Stock    | 300,000   |
| Retained Earnings                                | 800,000   |

There were no dividends in arrears on preferred stock. During 2012, the company had the following transactions and events.

- July 1 Declared a \$0.50 cash dividend on common stock.  
 Aug. 1 Discovered \$25,000 understatement of 2011 depreciation on equipment. Ignore income taxes.  
 Sept. 1 Paid the cash dividend declared on July 1.  
 Dec. 1 Declared a 10% stock dividend on common stock when the market value of the stock was \$18 per share.  
 15 Declared a 6% cash dividend on preferred stock payable January 15, 2013.  
 31 Determined that net income for the year was \$355,000.  
 31 Recognized a \$200,000 restriction of retained earnings for plant expansion.

### Instructions

- (a) Journalize the transactions, events, and closing entry.  
 (b) Enter the beginning balances in the accounts, and post to the stockholders' equity accounts. (*Note:* Open additional stockholders' equity accounts as needed.)  
 (c) Prepare a retained earnings statement for the year.  
 (d) Prepare a stockholders' equity section at December 31, 2012.

*Journalize and post transactions; prepare retained earnings statement and stockholders' equity section.*

(SO 1, 2, 3)

(c) Ending balance \$726,000  
 (d) Total stockholders' equity \$2,914,000

**P14-3A** The post-closing trial balance of Violet Corporation at December 31, 2012, contains the following stockholders' equity accounts.

|  |            |
|--|------------|
| Preferred Stock (15,000 shares issued)           | \$ 750,000 |
| Common Stock (250,000 shares issued)             | 2,500,000  |
| Paid-in Capital in Excess of Par—Preferred Stock | 250,000    |
| Paid-in Capital in Excess of Par—Common Stock    | 400,000    |
| Common Stock Dividends Distributable             | 250,000    |
| Retained Earnings                                | 1,042,000  |

A review of the accounting records reveals the following.

- No errors have been made in recording 2012 transactions or in preparing the closing entry for net income.
- Preferred stock is \$50 par, 6%, and cumulative; 15,000 shares have been outstanding since January 1, 2011.
- Authorized stock is 20,000 shares of preferred, 500,000 shares of common with a \$10 par value.
- The January 1 balance in Retained Earnings was \$1,170,000.
- On July 1, 20,000 shares of common stock were issued for cash at \$16 per share.
- On September 1, the company discovered an understatement error of \$90,000 in computing depreciation in 2011. The net of tax effect of \$63,000 was properly debited directly to Retained Earnings.
- A cash dividend of \$250,000 was declared and properly allocated to preferred and common stock on October 1. No dividends were paid to preferred stockholders in 2011.
- On December 31, a 10% common stock dividend was declared out of retained earnings on common stock when the market price per share was \$16.
- Net income for the year was \$585,000.
- On December 31, 2012, the directors authorized disclosure of a \$200,000 restriction of retained earnings for plant expansion. (Use Note X.)

### Instructions

- (a) Reproduce the Retained Earnings account for 2012.  
 (b) Prepare a retained earnings statement for 2012.  
 (c) Prepare a stockholders' equity section at December 31, 2012.  
 (d) Compute the allocation of the cash dividend to preferred and common stock.  
 (e) Compute the earnings per share of common stock using 240,000 as the weighted-average shares outstanding for the year.

*Prepare retained earnings statement and stockholders' equity section, and compute earnings per share.*

(SO 1, 2, 3, 5)

(c) Total stockholders' equity, \$5,192,000

Prepare the stockholders' equity section, reflecting dividends and stock split.  
(SO 1, 2, 3)

**P14-4A** On January 1, 2012, Saa Corporation had the following stockholders' equity accounts.

|   |             |
|---|-------------|
| Common Stock (no par value, 90,000 shares issued and outstanding) | \$1,400,000 |
| Retained Earnings   | 500,000     |

During the year, the following transactions occurred.

- Feb. 1 Declared a \$1 cash dividend per share to stockholders of record on February 15, payable March 1.
- Mar. 1 Paid the dividend declared in February.
- Apr. 1 Announced a 4-for-1 stock split. Prior to the split, the market price per share was \$36.
- July 1 Declared a 5% stock dividend to stockholders of record on July 15, distributable July 31. On July 1, the market price of the stock was \$13 per share.
- 31 Issued the shares for the stock dividend.
- Dec. 1 Declared a \$0.50 per share dividend to stockholders of record on December 15, payable January 5, 2013.
- 31 Determined that net income for the year was \$350,000.

#### Instructions

(d) Total stockholders' equity  
\$1,971,000

Prepare the stockholders' equity section of the balance sheet at: (a) March 31, (b) June 30, (c) September 30, and (d) December 31, 2012.

Prepare the stockholders' equity section, reflecting various events.  
(SO 1, 3)

**P14-5A** On January 1, 2012, Hammermeister Inc. had the following stockholders' equity account balances.

|  |             |
|--|-------------|
| Common Stock, no-par value (500,000 shares issued) | \$1,500,000 |
| Common Stock Dividends Distributable               | 200,000     |
| Retained Earnings                                  | 600,000     |

During 2012, the following transactions and events occurred.

- Issued 50,000 shares of common stock as a result of a 10% stock dividend declared on December 15, 2009.
- Issued 30,000 shares of common stock for cash at \$6 per share.
- Corrected an error that had understated the net income for 2010 by \$70,000.
- Declared and paid a cash dividend of \$80,000.
- Earned net income of \$300,000.

Total stockholders' equity  
\$2,770,000

#### Instructions

Prepare the stockholders' equity section of the balance sheet at December 31, 2012.

## Problems: Set B

Prepare dividend entries and stockholders' equity section.  
(SO 1, 3)

**P14-1B** On January 1, 2012, Syed Corporation had the following stockholders' equity accounts.

|   |             |
|---|-------------|
| Common Stock (\$5 par value, 200,000 shares issued and outstanding) | \$1,000,000 |
| Paid-in Capital in Excess of Par—Common Stock                       | 200,000     |
| Retained Earnings   | 840,000     |

During the year, the following transactions occurred.

- Jan. 15 Declared a \$1 cash dividend per share to stockholders of record on January 31, payable February 15.
- Feb. 15 Paid the dividend declared in January.
- Apr. 15 Declared a 10% stock dividend to stockholders of record on April 30, distributable May 15. On April 15, the market price of the stock was \$15 per share.
- May 15 Issued the shares for the stock dividend.
- July 1 Announced a 2-for-1 stock split. The market price per share prior to the announcement was \$17. (The new par value is \$2.50.)
- Dec. 1 Declared a \$0.50 per share cash dividend to stockholders of record on December 15, payable January 10, 2013.
- 31 Determined that net income for the year was \$250,000.

**Instructions**

- (a) Journalize the transactions and the closing entry for net income.  
 (b) Enter the beginning balances, and post the entries to the stockholders' equity accounts.  
 (Note: Open additional stockholders' equity accounts as needed.)  
 (c) Prepare a stockholders' equity section at December 31.

(c) Total stockholders' equity  
 \$1,870,000

**P14-2B** The stockholders' equity accounts of Motz Inc., at January 1, 2012, are as follows.

|  |           |
|--|-----------|
| Preferred Stock, \$100 par, 7%                   | \$600,000 |
| Common Stock, \$10 par                           | 900,000   |
| Paid-in Capital in Excess of Par—Preferred Stock | 100,000   |
| Paid-in Capital in Excess of Par—Common Stock    | 200,000   |
| Retained Earnings                                | 500,000   |

Journalize and post transactions; prepare retained earnings statement and stockholders' equity section.

(SO 1, 2, 3)

There were no dividends in arrears on preferred stock. During 2012, the company had the following transactions and events.

- July 1 Declared a \$0.50 cash dividend on common stock.  
 Aug. 1 Discovered a \$72,000 overstatement of 2011 depreciation on equipment. Ignore income taxes.  
 Sept. 1 Paid the cash dividend declared on July 1.  
 Dec. 1 Declared a 10% stock dividend on common stock when the market value of the stock was \$16 per share.  
 15 Declared a 7% cash dividend on preferred stock payable January 31, 2013.  
 31 Determined that net income for the year was \$350,000.

**Instructions**

- (a) Journalize the transactions and the closing entry for net income.  
 (b) Enter the beginning balances in the accounts and post to the stockholders' equity accounts.  
 (Note: Open additional stockholders' equity accounts as needed.)  
 (c) Prepare a retained earnings statement for the year.  
 (d) Prepare a stockholders' equity section at December 31, 2012.

(c) Ending balance \$691,000  
 (d) Total stockholders' equity  
 \$2,635,000

**P14-3B** The ledger of Conway Corporation at December 31, 2012, after the books have been closed, contains the following stockholders' equity accounts.

|  |             |
|--|-------------|
| Preferred Stock (10,000 shares issued)           | \$1,000,000 |
| Common Stock (400,000 shares issued)             | 2,000,000   |
| Paid-in Capital in Excess of Par—Preferred Stock | 200,000     |
| Paid-in Capital in Excess of Stated—Common Stock | 1,180,000   |
| Common Stock Dividends Distributable             | 200,000     |
| Retained Earnings                                | 2,560,000   |

Prepare retained earnings statement and stockholders' equity section, and compute earnings per share.

(SO 1, 2, 3, 5)

A review of the accounting records reveals the following.

- No errors have been made in recording 2012 transactions or in preparing the closing entry for net income.
- Preferred stock is 6%, \$100 par value, noncumulative, and callable at \$125. Since January 1, 2011, 10,000 shares have been outstanding; 20,000 shares are authorized.
- Common stock is no-par with a stated value of \$5 per share; 600,000 shares are authorized.
- The January 1 balance in Retained Earnings was \$2,450,000.
- On October 1, 100,000 shares of common stock were sold for cash at \$8 per share.
- A cash dividend of \$500,000 was declared and properly allocated to preferred and common stock on November 1. No dividends were paid to preferred stockholders in 2011.
- On December 31, a 10% common stock dividend was declared out of retained earnings on common stock when the market price per share was \$9.
- Net income for the year was \$970,000.
- On December 31, 2012, the directors authorized disclosure of a \$100,000 restriction of retained earnings for plant expansion. (Use Note A.)

**Instructions**

- (a) Reproduce the Retained Earnings account (T account) for 2012.  
 (b) Prepare a retained earnings statement for 2012.

(c) Total stockholders' equity:  
\$7,140,000

Prepare the stockholders' equity section, reflecting dividends and stock split.

(SO 1, 2, 3)

- (c) Prepare a stockholders' equity section at December 31, 2012.  
 (d) Compute the allocation of the cash dividend to preferred and common stock.  
 (e) Compute the earnings per share of common stock using 325,000 as the weighted-average shares outstanding for the year.

**P14-4B** On January 1, 2012, Acierno Corporation had the following stockholders' equity accounts.

|  |             |
|--|-------------|
| Common Stock (no-par value, 100,000 shares issued and outstanding) | \$2,800,000 |
| Retained Earnings  | 1,000,000   |

During the year, the following transactions occurred.

- Feb. 1 Declared a \$1 cash dividend per share to stockholders of record on February 15, payable March 1.  
 Mar. 1 Paid the dividend declared in February.  
 Apr. 1 Announced a 4-for-1 stock split. Prior to the split, the market price per share was \$36.  
 July 1 Declared a 5% stock dividend to stockholders of record on July 15, distributable July 31. On July 1, the market price of the stock was \$13 per share.  
       31 Issued the shares for the stock dividend.  
 Dec. 1 Declared a \$0.50 per share dividend to stockholders of record on December 15, payable January 5, 2013.  
       31 Determined that net income for the year was \$700,000.

#### Instructions

Prepare the stockholders' equity section of the balance sheet at: (a) March 31, (b) June 30, (c) September 30, and (d) December 31, 2012.

(d) Total, stockholders' equity  
\$4,190,000

Prepare the stockholders' equity section, reflecting various events.

(SO 1, 3)

**P14-5B** On January 1, 2012, Beacham Inc. had the following shareholders' equity balances.

|  |             |
|--|-------------|
| Common Stock, no-par value (1,000,000 shares issued) | \$3,000,000 |
| Common Stock Dividends Distributable                 | 400,000     |
| Retained Earnings                                    | 1,200,000   |

During 2012, the following transactions and events occurred.

1. Issued 100,000 shares of common stock as a result of a 10% stock dividend declared on December 15, 2011.
2. Issued 60,000 shares of common stock for cash at \$5 per share.
3. Corrected an error that had understated the net income for 2010 by \$140,000.
4. Declared and paid a cash dividend of \$300,000.
5. Earned net income of \$600,000.

#### Instructions

Prepare the stockholders' equity section of the balance sheet at December 31, 2012.

Total stockholders' equity  
\$5,340,000

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 13.)

**CCC14** After establishing their company's fiscal year-end to be October 31, Natalie and Curtis began operating Cookie & Coffee Creations Inc. on November 1, 2012. On that date, they issued both preferred and common stock. After the first year of operations, Natalie and Curtis want to prepare financial information for the year.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### Financial Reporting Problem: PepsiCo, Inc.

**BYP14-1** The financial statements of **PepsiCo, Inc.** are presented in Appendix A.

#### Instructions

Refer to PepsiCo's financial statements and answer the following questions.

- (a) What amount did PepsiCo declare in dividends on common stock in the year ended December 26, 2009?
- (b) How does this amount compare with dividends declared on common stock in the year ended December 27, 2008?

### Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

**BYP14-2** PepsiCo's financial statements are presented in Appendix A. Financial statements of **The Coca-Cola Company** are presented in Appendix B.

#### Instructions

- (a) Compute earnings per share and return on common stockholders' equity for both companies for 2009. Assume PepsiCo's weighted-average shares were 1,560 million and Coca-Cola's weighted-average shares were 2,314 million. Can these measures be used to compare the profitability of the two companies? Why or why not?
- (b) What was the total amount of dividends paid by each company in 2009?

### On the Web

**BYP14-3** Use the stockholders' equity section of an annual report and identify the major components.

**Address:** [www.reportgallery.com](http://www.reportgallery.com), or go to [www.wiley.com/college/wegandt](http://www.wiley.com/college/wegandt)

#### Steps

1. From Report Gallery Homepage, choose **Search by Alphabet**, and choose a letter.
2. Select a particular company.
3. Choose Annual Report.
4. Follow instructions below.

#### Instructions

Answer the following questions.

- (a) What is the company's name?
- (b) What classes of capital stock has the company issued?
- (c) For each class of stock:
  - (1) How many shares are authorized, issued, and/or outstanding?
  - (2) What is the par value?
- (d) What are the company's retained earnings?
- (e) Has the company acquired treasury stock? How many shares?

## Critical Thinking

### Decision Making Across the Organization

**BYP14-4** The stockholders' equity accounts of Fernandez, Inc., at January 1, 2012, are as follows.

|  |           |
|--|-----------|
| Preferred Stock, no par, 4,000 shares issued | \$400,000 |
| Common Stock, no par, 140,000 shares issued  | 700,000   |
| Retained Earnings                            | 500,000   |

During 2012, the company had the following transactions and events.

- |       |    |  |
|-------|----|--|
| July  | 1  | Declared a \$0.50 cash dividend on common stock.   |
| Aug.  | 1  | Discovered a \$72,000 overstatement of 2011 depreciation expense. (Ignore income taxes.)             |
| Sept. | 1  | Paid the cash dividend declared on July 1.   |
| Dec.  | 1  | Declared a 10% stock dividend on common stock when the market value of the stock was \$12 per share. |
|       | 15 | Declared a \$9 per share cash dividend on preferred stock, payable January 31, 2013.                 |
|       | 31 | Determined that net income for the year was \$320,000.   |

### Instructions

With the class divided into groups, answer the following questions.

- Prepare a retained earnings statement for the year. There are no preferred dividends in arrears.
- Discuss why the overstatement of 2011 depreciation expense is not treated as an adjustment of the current year's income.
- Discuss the reasons why a company might decide to issue a stock dividend rather than a cash dividend.

## Communication Activity

**BYP14-5** In the past year, Cormier Corporation declared a 10% stock dividend, and Fegan, Inc. announced a 2-for-1 stock split. Your parents own 100 shares of each company's \$50 par value common stock. During a recent phone call, your parents ask you, as an accounting student, to explain the differences between the two events.

### Instructions

Write a letter to your parents that explains the effects of the two events to them as stockholders and the effects of each event on the financial statements of each corporation.

## Ethics Case

**BYP14-6** Garcia Corporation has paid 60 consecutive quarterly cash dividends (15 years). The last 6 months, however, have been a cash drain on the company, as profit margins have been greatly narrowed by increasing competition. With a cash balance sufficient to meet only day-to-day operating needs, the president, Tom Henson, has decided that a stock dividend instead of a cash dividend should be declared. He tells Garcia's financial vice president, Andrea Lane, to issue a press release stating that the company is extending its consecutive dividend record with the issuance of a 5% stock dividend. "Write the press release convincing the stockholders that the stock dividend is just as good as a cash dividend," he orders. "Just watch our stock rise when we announce the stock dividend; it must be a good thing if that happens."

### Instructions

- Who are the stakeholders in this situation?
- Is there anything unethical about Henson's intentions or actions?
- What is the effect of a stock dividend on a corporation's stockholders' equity accounts? Which would you rather receive as a stockholder—a cash dividend or a stock dividend? Why?

## "All About You" Activity

**BYP14-7** In the **All About You** feature (available at the book's companion website), you learned that in response to the Sarbanes-Oxley Act, many companies have implemented formal ethics codes. Many other organizations also have ethics codes.

### Instructions

Obtain the ethics code from an organization that you belong to (e.g., student organization, business school, employer, or a volunteer organization). Evaluate the ethics code based on how clearly it identifies proper and improper behavior. Discuss its strengths, and how it might be improved.

## FASB Codification Activity

**BYP14-8** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- What is the stock dividend?
- What is a stock split?
- At what percentage point does the issuance of additional shares qualify as a stock dividend, as opposed to a stock split?

### Answers to Insight and Accounting Across the Organization Questions

**p. 637 Up, Down, and ??** **Q:** What factors must management consider in deciding how large a dividend to pay? **A:** Management must consider the size of the company's retained earnings balance, the amount of available cash, the company's expected near-term cash needs, the company's growth opportunities, and what level of dividend the company will be able to sustain based upon its expected future earnings.

**p. 641 A No-Split Philosophy** **Q:** Why does Warren Buffett usually oppose stock splits? **A:** Mr. Buffett prefers to attract shareholders that make a long-term commitment to his company, as opposed to traders that only hold their investment for a short period of time. He believes that a high stock price discourages short-term investment.

### Answers to Self-Test Questions

1. a 2. c 3. c 4. a  $\$80,000 - [(3,000 \times 7\% \times \$100) \times 2]$  5. d  $(100,000 \times 10\% \times \$30)$  6. d 7. c

14. d 15. b  $(\$490,000 \div 100,000)$

## IFRS A Look at IFRS

The basic accounting for cash and stock dividends is essentially the same under both GAAP and IFRS. IFRS terminology is something different, but the recording of the transaction is the same.

### Key Points

- The term *reserves* is used in IFRS to indicate all non-contributed (non-paid-in) capital. Reserves include retained earnings and other comprehensive income items, such as revaluation surplus and unrealized gains or losses on available-for sale securities.
- IFRS often uses terms such as *retained profits* or *accumulated profit or loss* to describe retained earnings. The term *retained earnings* is also often used.
- The accounting related to prior period adjustment is essentially the same under IFRS and GAAP. IFRS addresses the accounting for errors in *IAS 8* ("Accounting Policies, Changes in Accounting Estimates, and Errors"). One area where IFRS and GAAP differ in reporting relates to error corrections in previously issued financial statements. While IFRS requires restatement with some exceptions, GAAP does not permit any exceptions.
- The stockholders' equity section is essentially the same under IFRS and GAAP. However, terminology used to describe certain components is often different. These differences are discussed in Chapter 13.
- Equity is given various descriptions under IFRS, such as shareholder's equity, owners' equity, capital and reserves, and shareholders' funds.
- The income statement using IFRS is called the *statement of comprehensive income*. A statement of comprehensive income is presented in a one- or two-statement format. The single-statement approach includes all items of income and expense, as well as each component of other comprehensive income or loss by its individual characteristic. In the two-statement approach, a traditional income statement is prepared. It is then followed by a statement of comprehensive income, which starts with net income or loss and then adds other comprehensive income or loss items. Regardless of which approach is reported, income tax expense is required to be reported.
- The computations related to earnings per share are essentially the same under IFRS and GAAP.

### Looking to the Future

The IASB and the FASB are currently working on a project related to financial statement presentation. An important part of this study is to determine whether certain line items, subtotals, and totals should be clearly defined and required to be displayed in the financial statements. For example, it is likely that the statement of stockholders' equity and its presentation will be examined closely.

Both the IASB and FASB are working toward a convergence of any remaining differences related to earnings per share computations. This convergence will deal with highly technical changes beyond the scope of this textbook.

## IFRS Self-Test Questions

- The basic accounting for cash dividends and stock dividends:
  - is different under IFRS versus GAAP.
  - is the same under IFRS and GAAP.
  - differs only for the accounting for cash dividends between GAAP and IFRS.
  - differs only for the accounting for stock dividends between GAAP and IFRS.
- Which item in *not* considered part of reserves?
  - Unrealized loss on available-for-sale investments.
  - Revaluation surplus.
  - Retained earnings.
  - Issued shares.
- Under IFRS, a statement of comprehensive income must include:
  - accounts payable.
  - retained earnings.
  - income tax expense.
  - preference stock.
- Which set of terms can be used to describe total stockholders' equity under IFRS?
  - Shareholders' equity, capital and reserves, other comprehensive income.
  - Capital and reserves, shareholders' equity, shareholders' funds.
  - Capital and reserves, retained earnings, shareholders' equity.
  - All of the above.
- Earnings per share computations related to IFRS and GAAP:
  - are essentially similar.
  - result in an amount referred to as earnings per share.
  - must deduct preferred (preference) dividends when computing earnings per share.
  - All of the above.

## IFRS Concepts and Application

### *International Financial Reporting*

#### **Problem: Zetar plc**

**IFRS14-1** The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at [www.zetarplc.com](http://www.zetarplc.com).

#### **Instructions**

Use the company's annual report to answer the following questions.

- Did the company declare and pay any dividends for the year ended April 30, 2009?
- Compute the company's return on ordinary shareholders' equity for the year ended April 30, 2009.
- What was Zetar's earnings per share for the year ended April 30, 2009?

# CHAPTER 15

## Long-Term Liabilities

### Study Objectives

After studying this chapter, you should be able to:

- 1 Explain why bonds are issued.
- 2 Prepare the entries for the issuance of bonds and interest expense.
- 3 Describe the entries when bonds are redeemed or converted.
- 4 Describe the accounting for long-term notes payable.
- 5 Contrast the accounting for operating and capital leases.
- 6 Identify the methods for the presentation and analysis of long-term liabilities.

### Feature Story

#### THANK GOODNESS FOR BANKRUPTCY

One piece of baggage America's first settlers carried with them from England was the belief that not repaying one's debts was a moral failure. As in England, the colonists' penalty for such wickedness was often prison.

The theory behind jailing debtors was that the threat of incarceration might persuade them to reveal hidden assets. Or their families might take pity and pay their ransom. But if the debtor was truly penniless, he could be sentenced to what amounted to life in prison. Unlike murderers, rapists, and thieves, the debtors were also responsible for paying their own upkeep, thus putting them even further into debt. . . .

The colonies gradually developed more forgiving laws on debt, recognizing that owing money could be the result of bad luck rather than evidence of fraud or indolence. "Crops fail, prices fall, ships sink, warehouses burn, owners die, partners steal, pirates

pillage, wars ravage, and people simply make mistakes," wrote Bruce Mann in his 2002 book *Republic of Debtors*. "Failure was the down side of entrepreneurial risk. This made failure the potential common fate of all merchants." . . .

Colonial lawmakers began taking a more charitable view toward debtors, but they were likelier to excuse a rich defaulter than a poor one. . . . Indeed, when some large speculative financial schemes collapsed after the Revolutionary War, many wealthy men were suddenly bankrupt. One of them, Robert Morris, who had signed the Declaration of Independence and

provided critical financing for the war, lost his fortune speculating on land. Sentenced to debtors' prison in Philadelphia, Morris rented the best room in the jail and outfitted it with a settee, writing desks, a bed, a trunk of clothes and other comforts of home.

However lavishly they could outfit their prison cells, though, rich and poor faced the same dim future. There was no way an insolvent could get a fresh start—the "holy grail of debt relief," as Mr. Mann put it. In prison or out, debtors were expected to repay every penny they owed their creditors, even if it took them the rest of their lives. . . .

Congress passed a bankruptcy law in 1800 but then repealed it three years later. Not until 1831 did New York abolish prison for most debtors; Pennsylvania kept its debtors' prisons open until 1842. . . .

## Inside CHAPTER 15

- **Accounting Across the Organization: Bonds Versus Notes?** (p. 682)
- **Investor Insight: "Covenant-Lite" Debt** (p. 686)

# Preview of CHAPTER 15

As you can see from the Feature Story, having liabilities can be dangerous in difficult economic times. In this chapter we will explain the accounting for the major types of long-term liabilities reported on the balance sheet. **Long-term liabilities** are obligations that are expected to be paid after one year. These liabilities may be bonds, long-term notes, or lease obligations.

The content and organization of Chapter 15 are as follows.

| Long-Term Liabilities  |   |  |  |  |
|--|---|--|--|--|
| Bond Basics  | Bond Issuances  | Bond Retirements   | Other Long-Term Liabilities  | Statement Presentation and Analysis  |
| <ul style="list-style-type: none"> <li>• Types of bonds</li> <li>• Issuing procedures</li> <li>• Market value</li> </ul> | <ul style="list-style-type: none"> <li>• Issuing bonds at face value</li> <li>• Discount or premium</li> <li>• Issuing bonds at a discount</li> <li>• Issuing bonds at a premium</li> </ul> | <ul style="list-style-type: none"> <li>• Redeeming bonds at maturity</li> <li>• Redeeming bonds before maturity</li> <li>• Converting bonds into common stock</li> </ul> | <ul style="list-style-type: none"> <li>• Long-term notes payable</li> <li>• Lease liabilities</li> </ul> | <ul style="list-style-type: none"> <li>• Presentation</li> <li>• Analysis</li> </ul> |

## Bond Basics

**Study Objective [1]**  
Explain why bonds are issued.

**Bonds** are a form of interest-bearing notes payable. To obtain **large amounts of long-term capital**, corporate management usually must decide whether to issue common stock (equity financing) or bonds. Bonds offer three advantages over common stock, as shown in Illustration 15-1.

**Illustration 15-1**  
Advantages of bond financing over common stock

| Bond Financing  | Advantages   |
|---|--|
|  | 1. <b>Stockholder control is not affected.</b><br>Bondholders do not have voting rights, so current owners (stockholders) retain full control of the company.  |
|  | 2. <b>Tax savings result.</b><br>Bond interest is deductible for tax purposes; dividends on stock are not.   |
|  | 3. <b>Earnings per share may be higher.</b><br>Although bond interest expense reduces net income, earnings per share on common stock often is higher under bond financing because no additional shares of common stock are issued. |

As the illustration shows, one reason to issue bonds is that they do not affect stockholder control. Because bondholders do not have voting rights, owners can raise capital with bonds and still maintain corporate control. In addition, bonds are attractive to corporations because the cost of bond interest is tax-deductible.

As a result of this tax treatment, which stock dividends do not offer, bonds may result in lower cost of capital than equity financing.

To illustrate the third advantage, on earnings per share, assume that Microsystems, Inc. is considering two plans for financing the construction of a new \$5 million plant. Plan A involves issuance of 200,000 shares of common stock at the current market price of \$25 per share. Plan B involves issuance of \$5 million, 8% bonds at face value. Income before interest and taxes on the new plant will be \$1.5 million. Income taxes are expected to be 30%. Microsystems currently has 100,000 shares of common stock outstanding. Illustration 15-2 shows the alternative effects on earnings per share.

|                                  | <b>Plan A</b><br><b>Issue Stock</b> | <b>Plan B</b><br><b>Issue Bonds</b> |
|----------------------------------|-------------------------------------|-------------------------------------|
| Income before interest and taxes | \$1,500,000                         | \$1,500,000                         |
| Interest (8% × \$5,000,000)      | —                                   | 400,000                             |
| Income before income taxes       | 1,500,000                           | 1,100,000                           |
| Income tax expense (30%)         | 450,000                             | 330,000                             |
| Net income                       | \$1,050,000                         | \$ 770,000                          |
| Outstanding shares               | 300,000                             | 100,000                             |
| <b>Earnings per share</b>        | <b>\$3.50</b>                       | <b>\$7.70</b>                       |

**Illustration 15-2**  
Effects on earnings per share—stocks vs. bonds

Note that net income is \$280,000 less (\$1,050,000 – \$770,000) with long-term debt financing (bonds). However, earnings per share is higher because there are 200,000 fewer shares of common stock outstanding.

One disadvantage in using bonds is that the company must **pay interest** on a periodic basis. In addition, the company must also **repay the principal** at the due date. A company with fluctuating earnings and a relatively weak cash position may have great difficulty making interest payments when earnings are low.

A corporation may also obtain long-term financing from notes payable and leasing. However, notes payable and leasing are seldom sufficient to furnish the amount of funds needed for plant expansion and major projects like new buildings.

Bonds are sold in relatively small denominations (usually \$1,000 multiples). As a result of their size, and the variety of their features, bonds attract many investors.

## Types of Bonds

Bonds may have many different features. In the following sections, we describe the types of bonds commonly issued.

### SECURED AND UNSECURED BONDS

**Secured bonds** have specific assets of the issuer pledged as collateral for the bonds. A bond secured by real estate, for example, is called a **mortgage bond**. A bond secured by specific assets set aside to retire the bonds is called a **sinking fund bond**.

**Unsecured bonds**, also called **debenture bonds**, are issued against the general credit of the borrower. Companies with good credit ratings use these bonds extensively. For example, at one time, **DuPont** reported over \$2 billion of debenture bonds outstanding.

### Helpful Hint

Besides corporations, governmental agencies and universities also issue bonds to raise capital.

**TERM AND SERIAL BONDS**

Bonds that mature—are due for payment—at a single specified future date are **term bonds**. In contrast, bonds that mature in installments are **serial bonds**.

**REGISTERED AND BEARER BONDS**

Bonds issued in the name of the owner are **registered bonds**. Interest payments on registered bonds are made by check to bondholders of record. Bonds not registered are **bearer** (or **coupon**) **bonds**. Holders of bearer bonds must send in coupons to receive interest payments. Most bonds issued today are registered bonds.

**CONVERTIBLE AND CALLABLE BONDS**

Bonds that can be converted into common stock at the bondholder's option are **convertible bonds**. The conversion feature generally is attractive to bond buyers. Bonds that the issuing company can retire at a stated dollar amount prior to maturity are **callable bonds**. A call feature is included in nearly all corporate bond issues.

**Issuing Procedures**

State laws grant corporations the power to issue bonds. Both the board of directors and stockholders usually must approve bond issues. **In authorizing the bond issue, the board of directors must stipulate the number of bonds to be authorized, total face value, and contractual interest rate.** The total bond authorization often exceeds the number of bonds the company originally issues. This gives the corporation the flexibility to issue more bonds, if needed, to meet future cash requirements.

The **face value** is the amount of principal the issuing company must pay at the maturity date. The **maturity date** is the date that the final payment is due to the investor from the issuing company. The **contractual interest rate**, often referred to as the **stated rate**, is the rate used to determine the amount of cash interest the borrower pays and the investor receives. Usually the contractual rate is stated as an annual rate. Interest is generally paid semiannually.

The terms of the bond issue are set forth in a legal document called a **bond indenture**. The indenture shows the terms and summarizes the rights of the bondholders and their trustees, and the obligations of the issuing company. The **trustee** (usually a financial institution) keeps records of each bondholder, maintains custody of unissued bonds, and holds conditional title to pledged property.

In addition, the issuing company arranges for the printing of **bond certificates**. The indenture and the certificate are separate documents. As shown in Illustration 15-3, a bond certificate provides the following information: name of the issuer, face value, contractual interest rate, and maturity date. An investment company that specializes in selling securities generally sells the bonds for the issuing company.

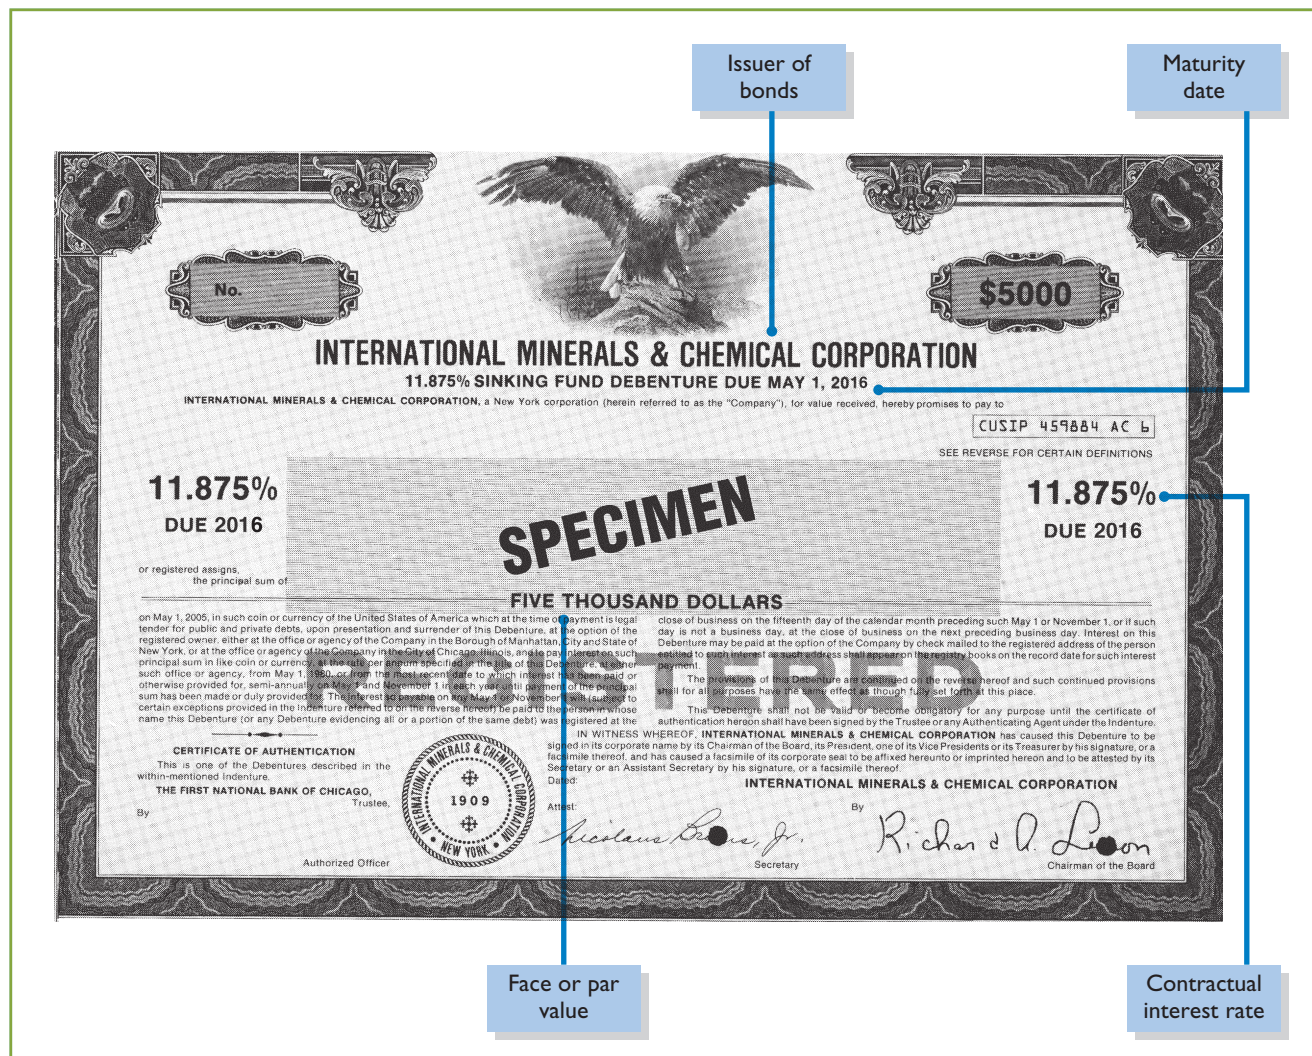

**Determining the Market Value of Bonds**

If you were an investor wanting to purchase a bond, how would you determine how much to pay? To be more specific, assume that Coronet, Inc. issues a **zero-interest bond** (pays no interest) with a face value of \$1,000,000 due in 20 years. For this bond, the only cash you receive is a million dollars at the end of 20 years. Would you pay a million dollars for this bond? We hope not! A million dollars received 20 years from now is not the same as a million dollars received today.

**Ethics Note**

Some companies try to minimize the amount of debt reported on their balance sheet by not reporting certain types of commitments as liabilities. This subject is of intense interest in the financial community.

**Illustration 15-3**  
Bond certificate

The term **time value of money** is used to indicate the relationship between time and money—that a dollar received today is worth more than a dollar promised at some time in the future. If you had a million dollars today, you would invest it. From that investment, you would earn interest such that at the end of 20 years, you would have much more than a million dollars. If someone is going to pay you a million dollars 20 years from now, you would want to find its equivalent today, in other words, you would want to determine how much you must invest today at current interest rates to have a million dollars in 20 years. The amount that must be invested today at a given rate of interest over a specified time is called **present value**.

The present value of a bond is the value at which it should sell in the marketplace. Market value therefore is a function of the three factors that determine present value: (1) the dollar amounts to be received, (2) the length of time until the amounts are received, and (3) the market rate of interest. The **market interest rate** is the rate investors demand for loaning funds. Appendix 15A discusses the process of finding the present value for bonds. Appendix C near the end of the book also provides additional material for time value of money computations.

## Do it!

### Bond Terminology

State whether each of the following statements is true or false.

- \_\_\_\_\_ 1. Mortgage bonds and sinking fund bonds are both examples of secured bonds.
- \_\_\_\_\_ 2. Unsecured bonds are also known as debenture bonds.
- \_\_\_\_\_ 3. The stated rate is the rate investors demand for loaning funds.
- \_\_\_\_\_ 4. The face value is the amount of principal the issuing company must pay at the maturity date.
- \_\_\_\_\_ 5. The bond issuer must make journal entries to record transfers of its bonds among investors.

#### action plan

✓ Review the types of bonds and the basic terms associated with bonds.

#### Solution

1. True.
2. True.
3. False. The stated rate is the contractual interest rate used to determine the amount of cash interest the borrower pays.
4. True.
5. False. The bond issuer makes journal entries only when it issues or buys back bonds, when it records interest, and when bonds are converted.

## Accounting for Bond Issues

### Study Objective [2]

Prepare the entries for the issuance of bonds and interest expense.

A corporation records bond transactions when it issues (sells) or retires (buys back) bonds and when bondholders convert bonds into common stock. If bondholders sell their bond investments to other investors, the issuing firm receives no further money on the transaction, **nor does the issuing corporation journalize the transaction** (although it does keep records of the names of bondholders in some cases).

Bonds may be issued at face value, below face value (discount), or above face value (premium). Bond prices for both new issues and existing bonds are quoted as **a percentage of the face value of the bond. Face value is usually \$1,000.** Thus, a \$1,000 bond with a quoted price of 97 means that the selling price of the bond is 97% of face value, or \$970.

### Issuing Bonds at Face Value

To illustrate the accounting for bonds issued at face value, assume that on January 1, 2012, Candlestick Corporation issues \$100,000, five-year, 10% bonds at 100 (100% of face value). The entry to record the sale is:

|  |   |          |   |    |  |
|--|---|----------|---|----|--|
| A  | = | L        | + | SE |  |
| +100,000                                 |   |          |   |    |  |
|  |   | +100,000 |   |    |  |
| <hr style="border: 0.5px solid black;"/> |   |          |   |    |  |
| Cash Flows                               |   |          |   |    |  |
| +100,000                                 |   |          |   |    |  |

|  |        |   |         |         |
|--|--------|---|---------|---------|
|  | Jan. 1 | Cash                                    | 100,000 |         |
|  |        | Bonds Payable                           |         | 100,000 |
|  |        | (To record sale of bonds at face value) |         |         |

Candlestick reports bonds payable in the long-term liabilities section of the balance sheet because the maturity date is January 1, 2017 (more than one year away).

Over the term (life) of the bonds, companies make entries to record bond interest. Interest on bonds payable is computed in the same manner as interest on notes payable, as explained in Chapter 11 (page 511). Assume that interest is payable semiannually on January 1 and July 1 on the Candlestick bonds. In that case, Candlestick must pay interest of \$5,000 ( $\$100,000 \times 10\% \times 6/12$ ) on July 1, 2012. The entry for the payment, assuming no previous accrual of interest, is:

|        |                                      |       |       |
|--------|--------------------------------------|-------|-------|
| July 1 | Interest Expense                     | 5,000 |       |
|        | Cash                                 |       | 5,000 |
|        | (To record payment of bond interest) |       |       |

At December 31, Candlestick recognizes the \$5,000 of interest expense incurred since July 1 with the following adjusting entry:

|         |                           |       |       |
|---------|---------------------------|-------|-------|
| Dec. 31 | Interest Expense          | 5,000 |       |
|         | Interest Payable          |       | 5,000 |
|         | (To accrue bond interest) |       |       |

**Companies classify interest payable as a current liability** because it is scheduled for payment within the next year. When Candlestick pays the interest on January 1, 2013, it debits (decreases) Interest Payable and credits (decreases) Cash for \$5,000.

Candlestick records the payment on January 1 as follows.

|        |                                      |       |       |
|--------|--------------------------------------|-------|-------|
| Jan. 1 | Interest Payable                     | 5,000 |       |
|        | Cash                                 |       | 5,000 |
|        | (To record payment of bond interest) |       |       |

## Discount or Premium on Bonds

In the Candlestick illustrations above, we assumed that the contractual (stated) interest rate and the market (effective) interest rate paid on the bonds were the same. Recall that the **contractual interest rate** is the rate applied to the face (par) value to arrive at the interest paid in a year. The **market interest rate** is the rate investors demand for loaning funds to the corporation. When the contractual interest rate and the market interest rate are the same, bonds sell **at face value (par value)**.

However, market interest rates change daily. The type of bond issued, the state of the economy, current industry conditions, and the company's performance all affect market interest rates. As a result, contractual and market interest rates often differ. To make bonds salable when the two rates differ, bonds sell below or above face value.

To illustrate, suppose that a company issues 10% bonds at a time when other bonds of similar risk are paying 12%. Investors will not be interested in buying the 10% bonds, so their value will fall below their face value. When a bond is sold for less than its face value, the difference between the face value of a bond and its selling price is called a **discount**. As a result of the decline in the bonds' selling price, the actual interest rate incurred by the company increases to the level of the current market interest rate.

Conversely, if the market rate of interest is **lower than** the contractual interest rate, investors will have to pay more than face value for the bonds. That is, if the market rate of interest is 8% but the contractual interest rate on the bonds is 10%, the price of the bonds will be bid up. When a bond is sold for more than its face value, the difference between the face value and its selling price is called a **premium**. Illustration 15-4 (page 676) shows these relationships graphically.

|   |   |   |   |            |
|---|---|---|---|------------|
| A   | = | L | + | SE         |
|   |   |   |   | -5,000 Exp |
|   |   |   |   | -5,000     |
| <hr/>   |   |   |   |            |
| Cash Flows  |   |   |   |            |
| -5,000  |   |   |   |            |
|  |   |   |   |            |

|            |   |   |   |            |
|------------|---|---|---|------------|
| A          | = | L | + | SE         |
|            |   |   |   | -5,000 Exp |
|            |   |   |   | +5,000     |
| <hr/>      |   |   |   |            |
| Cash Flows |   |   |   |            |
| no effect  |   |   |   |            |

**Illustration 15-4**  
Interest rates and bond prices

**Helpful Hint**

| Discount on Bonds Payable |                    |
|---------------------------|--------------------|
| Increase<br>Debit<br>↓    | Decrease<br>Credit |
| Normal Balance            |                    |

Issuance of bonds at an amount different from face value is quite common. By the time a company prints the bond certificates and markets the bonds, it will be a coincidence if the market rate and the contractual rate are the same. Thus, the issuance of bonds at a discount does not mean that the issuer’s financial strength is suspect. Conversely, the sale of bonds at a premium does not indicate that the financial strength of the issuer is exceptional.

**Issuing Bonds at a Discount**

To illustrate issuance of bonds at a discount, assume that on January 1, 2012, Candlestick, Inc. sells \$100,000, five-year, 10% bonds for \$92,639 (92.639% of face value). Interest is payable on July 1 and January 1. The entry to record the issuance is:

|                   |   |          |   |           |
|-------------------|---|----------|---|-----------|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b> |
| +92,639           |   | -7,361   |   | +100,000  |
| <b>Cash Flows</b> |   |          |   |           |
| +92,639           |   |          |   |           |

|        |   |        |         |
|--------|---|--------|---------|
| Jan. 1 | Cash                                    | 92,639 |         |
|        | Discount on Bonds Payable               | 7,361  |         |
|        | Bonds Payable                           |        | 100,000 |
|        | (To record sale of bonds at a discount) |        |         |

Although Discount on Bonds Payable has a debit balance, **it is not an asset**. Rather, it is a **contra account**. This account is **deducted from bonds payable** on the balance sheet, as shown in Illustration 15-5.

**Illustration 15-5**  
Statement presentation of discount on bonds payable

| Candlestick, Inc.<br>Balance Sheet (partial) |              |          |
|--|--------------|----------|
| Long-term liabilities                        |              |          |
| Bonds payable                                | \$100,000    |          |
| <b>Less: Discount on bonds payable</b>       | <b>7,361</b> | \$92,639 |

**Helpful Hint**

Carrying value (book value) of bonds issued at a discount is determined by subtracting the balance of the discount account from the balance of the Bonds Payable account.

The \$92,639 represents the **carrying (or book) value** of the bonds. On the date of issue this amount equals the market price of the bonds.

The issuance of bonds below face value—at a discount—causes the total cost of borrowing to differ from the bond interest paid. That is, the issuing corporation must pay not only the contractual interest rate over the term of the bonds, but also the face value (rather than the issuance price) at maturity. Therefore, the difference between the issuance price and face value of the bonds—the discount—is an

**additional cost of borrowing.** The company records this additional cost as **interest expense** over the life of the bonds. Appendices 15B and 15C show the procedures for recording this additional cost.

The total cost of borrowing \$92,639 for Candlestick, Inc. is \$57,361, computed as follows.

| <u>Bonds Issued at a Discount</u>   |                        |
|---|------------------------|
| Semiannual interest payments<br>(\$100,000 × 10% × ½ = \$5,000; \$5,000 × 10) | \$50,000               |
| Add: Bond discount (\$100,000 – \$92,639)                                     | <u>7,361</u>           |
| <b>Total cost of borrowing</b>  | <b><u>\$57,361</u></b> |

**Illustration 15-6**

Total cost of borrowing—bonds issued at a discount

Alternatively, we can compute the total cost of borrowing as follows.

| <u>Bonds Issued at a Discount</u>           |                         |
|---|-------------------------|
| Principal at maturity                       | \$100,000               |
| Semiannual interest payments (\$5,000 × 10) | <u>50,000</u>           |
| Cash to be paid to bondholders              | 150,000                 |
| Cash received from bondholders              | <u>92,639</u>           |
| <b>Total cost of borrowing</b>              | <b><u>\$ 57,361</u></b> |

**Illustration 15-7**

Alternative computation of total cost of borrowing—bonds issued at a discount

## Issuing Bonds at a Premium

To illustrate the issuance of bonds at a premium, we now assume the Candlestick, Inc. bonds described above sell for \$108,111 (108.111% of face value) rather than for \$92,639. The entry to record the sale is:

|        |  |         |         |
|--------|--|---------|---------|
| Jan. 1 | Cash                                   | 108,111 | 100,000 |
|        | Bonds Payable                          |         | 8,111   |
|        | Premium on Bonds Payable               |         |         |
|        | (To record sale of bonds at a premium) |         |         |

Candlestick adds the premium on bonds payable **to the bonds payable amount** on the balance sheet, as shown in Illustration 15-8.

| Candlestick, Inc.<br>Balance Sheet (partial) |                     |           |
|--|---------------------|-----------|
| Long-term liabilities                        |                     |           |
| Bonds payable                                | \$100,000           |           |
| <b>Add: Premium on bonds payable</b>         | <b><u>8,111</u></b> | \$108,111 |

The sale of bonds above face value causes the total cost of borrowing to be **less than the bond interest paid**. The reason: The borrower is not required to pay the bond premium at the maturity date of the bonds. Thus, the bond premium is considered to be **a reduction in the cost of borrowing**. The company credits the bond premium to Interest Expense over the life of the bonds. Appendices 15B and 15C

|                   |   |          |   |   |
|-------------------|---|----------|---|---|
| A                 | = | L        | + | SE  |
| +108,111          |   |          |   |   |
|                   |   | +100,000 |   |   |
|                   |   | +8,111   |   |   |
|                   |   |          |   |   |
| <b>Cash Flows</b> |   |          |   |   |
| +108,111          |   |          |   |  |

**Illustration 15-8**

Statement presentation of bond premium

**Helpful Hint**

| Premium on Bonds Payable |                        |
|--------------------------|------------------------|
| Decrease<br>Debit        | Increase<br>Credit     |
|                          | ↓<br>Normal<br>Balance |

show the procedures for recording this reduction in the cost of borrowing. The total cost of borrowing \$108,111 for Candlestick, Inc. is computed as follows.

**Illustration 15-9**

Total cost of borrowing—  
bonds issued at a premium

| <u>Bonds Issued at a Premium</u>  |                        |
|---|------------------------|
| Semiannual interest payments<br>(\$100,000 × 10% × ½ = \$5,000; \$5,000 × 10) | \$50,000               |
| Less: Bond premium (\$108,111 – \$100,000)                                    | <u>8,111</u>           |
| <b>Total cost of borrowing</b>  | <b><u>\$41,889</u></b> |

Alternatively, we can compute the cost of borrowing as follows.

## Accounting for Bond Retirements

**Study Objective [3]**

Describe the entries when bonds are redeemed or converted.

An issuing corporation retires bonds either when it buys back (redeems) the bonds or when bondholders convert them into common stock. We explain the entries for these transactions in the following sections.

## Redeeming Bonds at Maturity

Regardless of the issue price of bonds, the book value of the bonds at maturity will equal their face value. Assuming that the company pays and records separately the interest for the last interest period, Candlestick records the redemption of its bonds at maturity as follows:

|   |         |         |
|---|---------|---------|
| Bonds Payable                               | 100,000 |         |
| Cash  |         | 100,000 |
| (To record redemption of bonds at maturity) |         |         |

|                   |   |          |   |   |
|-------------------|---|----------|---|---|
| A                 | = | L        | + | SE  |
|                   |   | -100,000 |   |   |
|                   |   | -100,000 |   |   |
| <hr/>             |   |          |   |   |
| <b>Cash Flows</b> |   |          |   |   |
|                   |   | -100,000 |   |  |

## Redeeming Bonds before Maturity

Bonds also may be redeemed before maturity. A company may decide to retire bonds before maturity to reduce interest cost and to remove debt from its balance sheet. A company should retire debt early only if it has sufficient cash resources.

When a company retires bonds before maturity, it is necessary to: (1) eliminate the carrying value of the bonds at the redemption date; (2) record the cash paid; and (3) recognize the gain or loss on redemption. The **carrying value** of the bonds is the face value of the bonds less any remaining bond discount or plus any remaining bond premium at the redemption date.

To illustrate, assume that Candlestick, Inc. has sold its bonds at a premium. At the end of the eighth period, Candlestick retires these bonds at 103 after paying the semiannual interest. Assume also that the carrying value of the bonds at the redemption date is \$101,623. Candlestick makes the following entry to record the redemption at the end of the eighth interest period (January 1, 2016):

|       |  |         |         |
|-------|--|---------|---------|
| Jan.1 | Bonds Payable                          | 100,000 |         |
|       | Premium on Bonds Payable               | 1,623   |         |
|       | Loss on Bond Redemption                | 1,377   |         |
|       | Cash                                   |         | 103,000 |
|       | (To record redemption of bonds at 103) |         |         |

### Helpful Hint

Question: A bond is redeemed prior to its maturity date. Its carrying value exceeds its redemption price. Will the retirement result in a gain or a loss on redemption?  
Answer: Gain.

|                   |   |          |   |   |
|-------------------|---|----------|---|---|
| A                 | = | L        | + | SE  |
|                   |   | -100,000 |   |   |
|                   |   | -1,623   |   |   |
|                   |   |          |   | -1,377 Exp  |
|                   |   | -103,000 |   |   |
| <hr/>             |   |          |   |   |
| <b>Cash Flows</b> |   |          |   |   |
|                   |   | -103,000 |   |  |

Note that the loss of \$1,377 is the difference between the cash paid of \$103,000 and the carrying value of the bonds of \$101,623.

## Converting Bonds into Common Stock

**Convertible bonds** have features that are attractive both to bondholders and to the issuer. The conversion often gives bondholders an opportunity to benefit if the market price of the common stock increases substantially. Until conversion, though, the bondholder receives interest on the bond. For the issuer of convertible bonds, the bonds sell at a higher price and pay a lower rate of interest than comparable debt securities without the conversion option. Many corporations, such as **Intel**, **Ford**, and **Wells Fargo**, have convertible bonds outstanding.

When the issuing company records a conversion, the company ignores the current market prices of the bonds and stock. Instead, the company transfers the **carrying value** of the bonds to paid-in capital accounts. **No gain or loss is recognized.**

To illustrate, assume that on July 1 Saunders Associates converts \$100,000 bonds sold at face value into 2,000 shares of \$10 par value common stock. Both the

|   |   |          |   |            |
|---|---|----------|---|------------|
| A | = | L        | + | SE         |
|   |   | -100,000 |   |            |
|   |   |          |   | +20,000 CS |
|   |   |          |   | +80,000 CS |

**Cash Flows**

no effect

bonds and the common stock have a market value of \$130,000. Saunders makes the following entry to record the conversion:

|        |   |   |                          |
|--------|---|---|--------------------------|
| July 1 | Bonds Payable<br>Common Stock<br>Paid-in Capital in Excess of Par—<br>Common Stock<br>(To record bond conversion) | 100,000<br><br><br><br>20,000<br><br><br>80,000 | 20,000<br><br><br>80,000 |
|--------|---|---|--------------------------|

Note that the company does not consider the current market price of the bonds and stock (\$130,000) in making the entry. This method of recording the bond conversion is often referred to as the **carrying (or book) value method**.

## Do it!

### Bond Redemption

**action plan**

- ✓ Determine and eliminate the carrying value of the bonds.
- ✓ Record the cash paid.
- ✓ Compute and record the gain or loss (the difference between the first two items).

R & B Inc. issued \$500,000, 10-year bonds at a premium. Prior to maturity, when the carrying value of the bonds is \$508,000, the company retires the bonds at 102. Prepare the entry to record the redemption of the bonds.

**Solution**

There is a loss on redemption: The cash paid, \$510,000 (\$500,000 × 102%), is greater than the carrying value of \$508,000. The entry is:

|  |         |  |         |
|--|---------|--|---------|
| Bonds Payable                          | 500,000 |  |         |
| Premium on Bonds Payable               | 8,000   |  |         |
| Loss on Bond Redemption                | 2,000   |  |         |
| Cash                                   |         |  | 510,000 |
| (To record redemption of bonds at 102) |         |  |         |

## Accounting for Other Long-Term Liabilities

Other common types of long-term obligations are notes payable and lease liabilities. The accounting for these liabilities is explained in the following sections.

### Long-Term Notes Payable

**Study Objective [4]**

Describe the accounting for long-term notes payable.

The use of notes payable in long-term debt financing is quite common. **Long-term notes payable** are similar to short-term interest-bearing notes payable except that the term of the notes exceeds one year. In periods of unstable interest rates, lenders may tie the interest rate on long-term notes to changes in the market rate for comparable loans. Examples are the 8.03% adjustable rate notes issued by **General Motors** and the floating-rate notes issued by **American Express Company**.

A long-term note may be secured by a **mortgage** that pledges title to specific assets as security for a loan. Individuals widely use **mortgage notes payable** to purchase homes, and many small and some large companies use them to acquire plant assets. At one time, approximately 18% of **McDonald's** long-term debt related to mortgage notes on land, buildings, and improvements.

Like other long-term notes payable, the mortgage loan terms may stipulate either a **fixed** or an **adjustable** interest rate. The interest rate on a fixed-rate mortgage remains the same over the life of the mortgage. The interest rate on an adjustable-rate mortgage is adjusted periodically to reflect changes in the market rate of interest. Typically, the terms require the borrower to make equal installment payments over the term of the loan. Each payment consists of (1) interest on the unpaid balance of the loan and (2) a reduction of loan principal. While the total amount of the payment remains constant, the interest decreases each period, while the portion applied to the loan principal increases.

Companies initially record mortgage notes payable at face value. They subsequently make entries for each installment payment. To illustrate, assume that Porter Technology Inc. issues a \$500,000, 12%, 20-year mortgage note on December 31, 2012, to obtain needed financing for a new research laboratory. The terms provide for semiannual installment payments of \$33,231 (not including real estate taxes and insurance). The installment payment schedule for the first two years is as follows.

| Semiannual Interest Period | (A)<br>Cash Payment | (B)<br>Interest Expense<br>(D) × 6% | (C)<br>Reduction of Principal<br>(A) – (B) | (D)<br>Principal Balance<br>(D) – (C) |
|----------------------------|---------------------|-------------------------------------|--|---------------------------------------|
| 12/31/12                   |                     |                                     |  | \$500,000                             |
| 06/30/13                   | \$33,231            | \$30,000                            | \$3,231                                    | 496,769                               |
| 12/31/13                   | 33,231              | 29,806                              | 3,425                                      | 493,344                               |
| 06/30/14                   | 33,231              | 29,601                              | 3,630                                      | 489,714                               |
| 12/31/14                   | 33,231              | 29,383                              | 3,848                                      | 485,866                               |

**Illustration 15-11**  
Mortgage installment payment schedule

Porter records the mortgage loan and first installment payment as follows.

|         |  |         |         |
|---------|--|---------|---------|
| Dec. 31 | Cash                                       | 500,000 | 500,000 |
|         | Mortgage Payable                           |         |         |
|         | (To record mortgage loan)                  |         |         |
|         |  |         |         |
| June 30 | Interest Expense                           | 30,000  | 33,231  |
|         | Mortgage Payable                           | 3,231   |         |
|         | Cash                                       |         |         |
|         | (To record semiannual payment on mortgage) |         |         |

|                   |   |   |   |             |
|-------------------|---|---|---|-------------|
| A                 | = | L | + | SE          |
| +500,000          |   |   |   | +500,000    |
|                   |   |   |   |             |
| <b>Cash Flows</b> |   |   |   |             |
| +500,000          |   |   |   |             |
|                   |   |   |   |             |
| A                 | = | L | + | SE          |
|                   |   |   |   | –30,000 Exp |
|                   |   |   |   | –3,231      |
|                   |   |   |   |             |
| <b>Cash Flows</b> |   |   |   |             |
| –33,231           |   |   |   |             |

**In the balance sheet, the company reports the reduction in principal for the next year as a current liability, and it classifies the remaining unpaid principal balance as a long-term liability.** At December 31, 2013, the total liability is \$493,344. Of that amount, \$7,478 (\$3,630 + \$3,848) is current, and \$485,866 (\$493,344 – \$7,478) is long-term.

## Do it!

Cole Research issues a \$250,000, 8%, 20-year mortgage note to obtain needed financing for a new lab. The terms call for semiannual payments of \$12,631 each. Prepare the entries to record the mortgage loan and the first installment payment.

## Long-Term Note

**action plan**

- ✓ Record the issuance of the note as a cash receipt and a liability.
- ✓ Each installment payment consists of interest and payment of principal.

**Solution**

|  |         |         |
|--|---------|---------|
| Cash                                       | 250,000 |         |
| Mortgage Payable                           |         | 250,000 |
| (To record mortgage loan)                  |         |         |
| Interest Expense                           | 10,000* |         |
| Mortgage Payable                           | 2,361   |         |
| Cash                                       |         | 12,361  |
| (To record semiannual payment on mortgage) |         |         |

\*Interest expense = \$250,000 × 8% × 6/12.

Related exercise material: BE15-6, E15-10, E15-11, and **Do it!** 15-4.

## ACCOUNTING ACROSS THE ORGANIZATION

### Bonds Versus Notes?

Companies have a choice in the form of long-term borrowing they undertake—issue bonds or issue notes. Notes are generally issued to a single lender (usually through a loan from a bank). Bonds, on the other hand, allow the company to divide the borrowing into many small investing units, thereby enabling more than one investor to participate in the borrowing. As indicated in the graph below, companies are recently borrowing more from bond investors than from banks and other loan providers in a bid to lock in cheap, long-term funding.

Why this trend? For one thing, low interest rates and rising inflows into fixed-income funds have triggered record bond issuances as banks cut back lending. In addition, for some high-rated companies, it can be riskier to borrow from a bank than the bond markets. The reason: High-rated companies tended to rely on short-term financing to fund working capital but were left stranded when these markets froze up. Some are now financing themselves with longer-term bonds instead.

Source: A. Sakoui and N. Bullock, "Companies Choose Bonds for Cheap Funds," *Financial Times* (October 12, 2009).

**?** Why might companies prefer bond financing instead of short-term financing? (See page 718.)

## Lease Liabilities

A lease is a contractual arrangement between a lessor (owner of the property) and a lessee (renter of the property). It grants the right to use specific property for a period of time in return for cash payments. Leasing is big business. The global leasing market has recently been between \$600 to \$700 billion for capital equipment. This represents approximately one-third of equipment financed in a year. The two most common types of leases are operating leases and capital leases.

### Study Objective [5]

Contrast the accounting for operating and capital leases.

### OPERATING LEASES

The renting of an apartment and the rental of a car at an airport are examples of **operating leases**. In an **operating lease** the intent is temporary use of the property by the lessee, while the lessor continues to own the property.

In an operating lease, the lessee records the lease (or rental) payments as an expense. The lessor records the payments as revenue. For example, assume that a sales representative for Western Inc. leases a car from **Hertz Car Rental** at the Los Angeles airport and that Hertz charges a total of \$275. Western, the lessee, records the rental as follows:

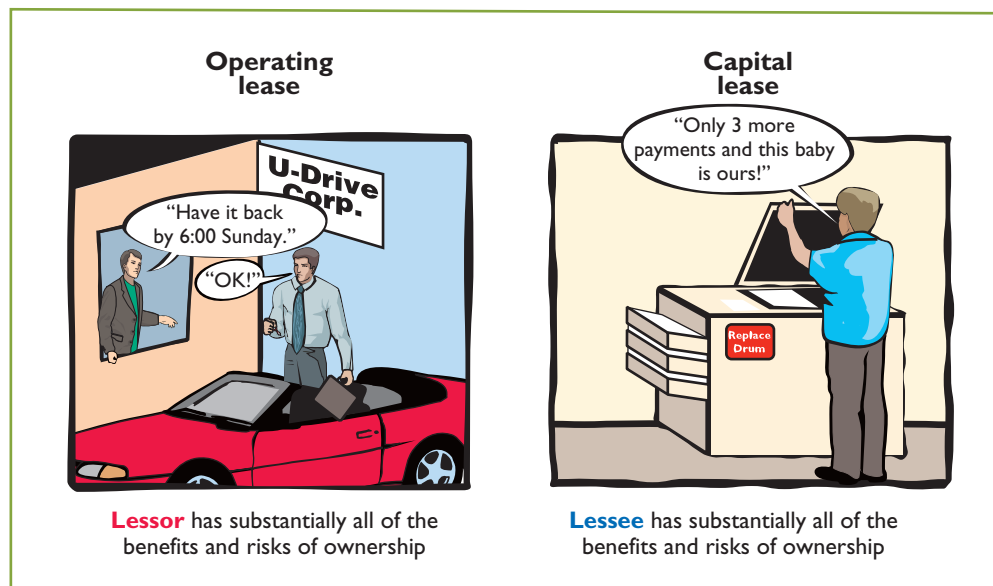

|  |  |     |     |
|--|--|-----|-----|
| Car Rental Expense                         |  | 275 |     |
| Cash                                       |  |     | 275 |
| (To record payment of lease rental charge) |  |     |     |

|            |   |   |   |          |
|------------|---|---|---|----------|
| A          | = | L | + | SE       |
|            |   |   |   | -275 Exp |
| -275       |   |   |   |          |
| Cash Flows |   |   |   |          |
| -275       |   |   |   |          |

The lessee may incur other costs during the lease period. For example, in the case above, Western will generally incur costs for gas. Western would report these costs as an expense.

### CAPITAL LEASES

In most lease contracts, the lessee makes a periodic payment and records that payment in the income statement as rent expense. In some cases, however, the lease contract transfers to the lessee substantially all the benefits and risks of ownership. Such a lease is in effect a purchase of the property. This type of lease is a **capital lease**. Its name comes from the fact that the company capitalizes the present value of the cash payments for the lease and records that amount as an asset. Illustration 15-12 indicates the major difference between operating and capital leases.

**Illustration 15-12**  
Types of leases

### Helpful Hint

A capital lease situation is one that, although legally a rental case, is *in substance* an installment purchase by the lessee. Accounting standards require that substance over form be used in such a situation.

If **any one** of the following conditions exists, the lessee must record a lease as **an asset**—that is, as a capital lease:

1. **The lease transfers ownership of the property to the lessee.** *Rationale:* If during the lease term the lessee receives ownership of the asset, the lessee should report the leased item as an asset on its books.
2. **The lease contains a bargain purchase option.** *Rationale:* If during the term of the lease the lessee can purchase the asset at a price substantially below its fair market value, the lessee will exercise this option. Thus, the lessee should report the leased item as an asset on its books.
3. **The lease term is equal to 75% or more of the economic life of the leased property.** *Rationale:* If the lease term is for much of the asset’s useful life, the lessee should report the leased item as an asset on its books.
4. **The present value of the lease payments equals or exceeds 90% of the fair market value of the leased property.** *Rationale:* If the present value of the lease payments is equal to or almost equal to the fair market value of the asset, the lessee has essentially purchased the asset. As a result, the lessee should report the leased item as an asset on its books.

To illustrate, assume that Gonzalez Company decides to lease new equipment. The lease period is four years; the economic life of the leased equipment is estimated to be five years. The present value of the lease payments is \$190,000, which is equal to the fair market value of the equipment. There is no transfer of ownership during the lease term, nor is there any bargain purchase option.

In this example, Gonzalez has essentially purchased the equipment. Conditions 3 and 4 have been met. First, the lease term is 75% or more of the economic life of the asset. Second, the present value of cash payments is equal to the equipment’s fair market value. Gonzalez records the transaction as follows.

|            |   |   |   |          |
|------------|---|---|---|----------|
| A          | = | L | + | SE       |
| +190,000   |   |   |   | +190,000 |
| Cash Flows |   |   |   |          |
| no effect  |   |   |   |          |

|  |         |         |
|--|---------|---------|
| Leased Asset—Equipment                       | 190,000 |         |
| Lease Liability                              |         | 190,000 |
| (To record leased asset and lease liability) |         |         |

The lessee reports a leased asset on the balance sheet under plant assets. It reports the lease liability on the balance sheet as a liability. **The portion of the lease liability expected to be paid in the next year is a current liability. The remainder is classified as a long-term liability.**

Most lessees do not like to report leases on their balance sheets. Why? Because the lease liability increases the company’s total liabilities. This, in turn, may make it more difficult for the company to obtain needed funds from lenders. As a result, companies attempt to keep leased assets and lease liabilities off the balance sheet by structuring leases so as not to meet any of the four conditions discussed earlier. The practice of keeping liabilities off the balance sheet is referred to as **off-balance-sheet financing**.

**Ethics Note**

Accounting standard setters are attempting to rewrite rules on lease accounting because of concerns that abuse of the current standards is reducing the usefulness of financial statements.

## Statement Presentation and Analysis

**Study Objective [6]**

Identify the methods for the presentation and analysis of long-term liabilities.

**Presentation**

Companies report long-term liabilities in a separate section of the balance sheet immediately following current liabilities, as shown in Illustration 15-13. Alternatively, companies may present summary data in the balance sheet, with detailed data

(interest rates, maturity dates, conversion privileges, and assets pledged as collateral) shown in a supporting schedule.

| Lax Corporation<br>Balance Sheet (partial)                        |             |             |
|---|-------------|-------------|
| Long-term liabilities   |             |             |
| Bonds payable 10% due in 2017                                     | \$1,000,000 |             |
| Less: Discount on bonds payable                                   | 80,000      | \$ 920,000  |
| Mortgage payable, 11%, due in 2023<br>and secured by plant assets |             | 500,000     |
| Lease liability   |             | 440,000     |
| Total long-term liabilities                                       |             | \$1,860,000 |

**Illustration 15-13**  
Balance sheet presentation  
of long-term liabilities

Companies report the current maturities of long-term debt under current liabilities if they are to be paid from current assets.

## Analysis

Long-term creditors and stockholders are interested in a company's long-run solvency. Of particular interest is the company's ability to pay interest as it comes due and to repay the face value of the debt at maturity. Here we look at two ratios that provide information about debt-paying ability and long-run solvency.

The **debt to total assets ratio** measures the percentage of the total assets provided by creditors. As shown in the formula in Illustration 15-14, it is computed by dividing total debt (both current and long-term liabilities) by total assets. The higher the percentage of debt to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

The **times interest earned ratio** indicates the company's ability to meet interest payments as they come due. It is computed by dividing income before income taxes and interest expense by interest expense.

To illustrate these ratios, we will use data from **Kellogg Company's** recent annual report. The company had total liabilities of \$8,925 million, total assets of \$11,200 million, interest expense of \$295 million, income taxes of \$476 million, and net income of \$1,208 million. Kellogg's debt to total assets ratio and times interest earned ratio are shown below.

|   |   |                             |   |                                  |
|---|---|-----------------------------|---|----------------------------------|
| <b>Total Debt</b>   | ÷ | <b>Total Assets</b>         | = | <b>Debt to Total Assets</b>      |
| \$8,925   | ÷ | \$11,200                    | = | <b>79.7%</b>                     |
|   |   |                             |   |                                  |
| <b>Income before<br/>Income Taxes and<br/>Interest Expenses</b> | ÷ | <b>Interest<br/>Expense</b> | = | <b>Times Interest<br/>Earned</b> |
| \$1,208 + \$476 + \$295   | ÷ | \$295                       | = | <b>6.71 times</b>                |

**Illustration 15-14**  
Debt to total assets and times  
interest earned ratios, with  
computations

Kellogg has a relatively high debt to total assets percentage of 79.7%. Its interest coverage of 6.71 times is considered safe.

## Do it!

### Lease Liability; Analysis of Long- Term Liabilities

#### action plan

- ✓ Record the present value of the lease payments as an asset and a liability.
- ✓ Use the formula for the debt to total assets ratio (total debt divided by total assets).

FX Corporation leases new equipment on December 31, 2012. The lease transfers ownership to FX at the end of the lease. The present value of the lease payments is \$240,000. After recording this lease, FX has assets of \$2,000,000, liabilities of \$1,200,000, and stockholders' equity of \$800,000. (a) Prepare the entry to record the lease, and (b) compute and discuss the debt to total assets ratio at year-end.

#### Solution

|  |                        |         |  |                 |  |         |  |  |  |  |
|--|------------------------|---------|--|-----------------|--|---------|--|--|--|--|
| <p>(a)</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 60%;">Leased Asset—Equipment</td> <td style="width: 10%; text-align: center; border-left: 1px solid black; border-right: 1px solid black;">240,000</td> <td style="width: 30%;"></td> </tr> <tr> <td>Lease Liability</td> <td style="border-left: 1px solid black; border-right: 1px solid black;"></td> <td style="text-align: right;">240,000</td> </tr> <tr> <td colspan="3" style="text-align: center;">(To record leased asset and lease liability)</td> </tr> </table> | Leased Asset—Equipment | 240,000 |  | Lease Liability |  | 240,000 | (To record leased asset and lease liability) |  |  |  |
| Leased Asset—Equipment   | 240,000                |         |  |                 |  |         |  |  |  |  |
| Lease Liability  |                        | 240,000 |  |                 |  |         |  |  |  |  |
| (To record leased asset and lease liability)   |                        |         |  |                 |  |         |  |  |  |  |

- (b) The debt to total assets ratio =  $\$1,200,000 \div \$2,000,000 = 60\%$ . This means that 60% of the total assets were provided by creditors. The higher the percentage of debt to total assets, the greater the risk that the company may be unable to meet its maturing obligations.

## INVESTOR INSIGHT

### “Covenant-Lite” Debt

In many corporate loans and bond issuances the lending agreement specifies debt covenants. These covenants typically are specific financial measures, such as minimum levels of retained earnings, cash flows, times interest earned ratios, or other measures that a company must maintain during the life of the loan. If the company violates a covenant it is considered to have violated the loan agreement; the creditors can demand immediate repayment, or they can renegotiate the loan's terms. Covenants protect lenders because they enable lenders to step in and try to get their money back before the borrower gets too deep into trouble.

During the 1990s most traditional loans specified between three to six covenants or “triggers.” In more recent years, when lots of cash was available, lenders began reducing or completely eliminating covenants from loan agreements in order to be more competitive with other lenders. When the economy declined, lenders lost big money when companies defaulted.

**?** How can financial ratios such as those covered in this chapter provide protection for creditors? (See page 718.)

## COMPREHENSIVE

## Do it!

Snyder Software Inc. has successfully developed a new spreadsheet program. To produce and market the program, the company needed \$2 million of additional financing. On January 1, 2012, Snyder borrowed money as follows.

1. Snyder issued \$500,000, 11%, 10-year convertible bonds. The bonds sold at face value and pay semiannual interest on January 1 and July 1. Each \$1,000 bond is convertible into 30 shares of Snyder's \$20 par value common stock.

2. Snyder issued \$1 million, 10%, 10-year bonds at face value. Interest is payable semiannually on January 1 and July 1.
3. Snyder also issued a \$500,000, 12%, 15-year mortgage payable. The terms provide for semiannual installment payments of \$36,324 on June 30 and December 31.

### Instructions

1. For the convertible bonds, prepare journal entries for:
  - (a) The issuance of the bonds on January 1, 2012.
  - (b) Interest expense on July 1 and December 31, 2012.
  - (c) The payment of interest on January 1, 2013.
  - (d) The conversion of all bonds into common stock on January 1, 2013, when the market value of the common stock was \$67 per share.
2. For the 10-year, 10% bonds:
  - (a) Journalize the issuance of the bonds on January 1, 2012.
  - (b) Prepare the journal entries for interest expense in 2012. Assume no accrual of interest on July 1.
  - (c) Prepare the entry for the redemption of the bonds at 101 on January 1, 2015, after paying the interest due on this date.
3. For the mortgage note payable:
  - (a) Prepare the entry for the issuance of the note on January 1, 2012.
  - (b) Prepare a payment schedule for the first four installment payments.
  - (c) Indicate the current and noncurrent amounts for the mortgage note payable at December 31, 2012.

### action plan

- ✓ Compute interest semiannually (six months).
- ✓ Record the accrual and payment of interest on appropriate dates.
- ✓ Record the conversion of the bonds into common stock by removing the book (carrying) value of the bonds from the liability account.

### Solution to Comprehensive Do it!

#### 1. (a) 2012

|        |   |         |         |
|--------|---|---------|---------|
| Jan. 1 | Cash  | 500,000 |         |
|        | Bonds Payable   |         | 500,000 |
|        | (To record issue of 11%, 10-year convertible bonds at face value) |         |         |

#### (b) 2012

|        |  |        |        |
|--------|--|--------|--------|
| July 1 | Interest Expense                           | 27,500 |        |
|        | Cash (\$500,000 × 0.055)                   |        | 27,500 |
|        | (To record payment of semiannual interest) |        |        |

|         |   |        |        |
|---------|---|--------|--------|
| Dec. 31 | Interest Expense                                | 27,500 |        |
|         | Interest Payable                                |        | 27,500 |
|         | (To record accrual of semiannual bond interest) |        |        |

#### (c) 2013

|        |   |        |        |
|--------|---|--------|--------|
| Jan. 1 | Interest Payable                        | 27,500 |        |
|        | Cash                                    |        | 27,500 |
|        | (To record payment of accrued interest) |        |        |

|            |   |         |          |
|------------|---|---------|----------|
| (d) Jan. 1 | Bonds Payable   | 500,000 |          |
|            | Common Stock  |         | 300,000* |
|            | Paid-in Capital in Excess of Par—Common Stock   |         | 200,000  |
|            | (To record conversion of bonds into common stock)   |         |          |
|            | *(\$500,000 ÷ \$1,000 = 500 bonds;<br>500 × 30 = 15,000 shares;<br>15,000 × \$20 = \$300,000) |         |          |

**action plan**

- ✓ Record the issuance of the bonds.
- ✓ Compute interest expense for each period.
- ✓ Compute the loss on bond redemption as the excess of the cash paid over the carrying value of the redeemed bonds.

**action plan**

- ✓ Compute periodic interest expense on a mortgage note, recognizing that as the principal amount decreases, so does the interest expense.
- ✓ Record mortgage payments, recognizing that each payment consists of (1) interest on the unpaid loan balance and (2) a reduction of the loan principal.

|                              |                        |   |                         |                               |                          |
|------------------------------|------------------------|---|-------------------------|-------------------------------|--------------------------|
| <b>2. (a) 2012</b>           |                        |   |                         |                               |                          |
|                              | Jan. 1                 | Cash  | 1,000,000               |                               |                          |
|                              |                        | Bonds Payable                                 |                         | 1,000,000                     |                          |

|                              | Issue date             |   |                         |                               | \$500,000                |
|                              | 1                      | \$36,324                                      | \$30,000                | \$6,324                       | 493,676                  |
|                              | 2                      | 36,324  | 29,621                  | 6,703                         | 486,973                  |
|                              | 3                      | 36,324  | 29,218                  | 7,106                         | 479,867                  |
|                              | 4                      | 36,324  | 28,792                  | 7,532                         | 472,335                  |
| <b>(c) Current liability</b> |                        | \$14,638                                      | (\$7,106 + \$7,532)     |                               |                          |
| <b>Long-term liability</b>   |                        |   | \$472,335               |                               |                          |

## Summary of Study Objectives

**[1] Explain why bonds are issued.** Companies may sell bonds to investors to raise long-term capital. Bonds offer the following advantages over common stock: (a) stockholder control is not affected, (b) tax savings result, (c) earnings per share of common stock may be higher.

**[2] Prepare the entries for the issuance of bonds and interest expense.** When companies issue bonds, they debit Cash for the cash proceeds, and credit Bonds Payable for the face value of the bonds. The account Premium on Bonds

Payable shows a bond premium; Discount on Bonds Payable shows a bond discount.

**[3] Describe the entries when bonds are redeemed or converted.** When bondholders redeem bonds at maturity, the issuing company credits Cash and debits Bonds Payable for the face value of the bonds. When bonds are redeemed before maturity, the issuing company (a) eliminates the carrying value of the bonds at the redemption date, (b) records the cash paid, and (c) recognizes the gain or loss on

redemption. When bonds are converted to common stock, the issuing company transfers the carrying (or book) value of the bonds to appropriate paid-in capital accounts; no gain or loss is recognized.

**[4] Describe the accounting for long-term notes payable.** Each payment consists of (1) interest on the unpaid balance of the loan and (2) a reduction of loan principal. The interest decreases each period, while the portion applied to the loan principal increases.

**[5] Contrast the accounting for operating and capital leases.** For an operating lease, the lessee (renter) records lease (rental) payments as an expense. For a capital lease, the

lessee records the asset and related obligation at the present value of the future lease payments.

**[6] Identify the methods for the presentation and analysis of long-term liabilities.** Companies should report the nature and amount of each long-term debt in the balance sheet or in the notes accompanying the financial statements. Stockholders and long-term creditors are interested in a company's long-run solvency. Debt to total assets and times interest earned are two ratios that provide information about debt-paying ability and long-run solvency.

## Glossary

**Bearer (coupon) bonds** Bonds not registered in the name of the owner. (p. 672).

**Bond certificate** A legal document that indicates the name of the issuer, the face value of the bonds, the contractual interest rate and maturity date of the bonds. (p. 672).

**Bond indenture** A legal document that sets forth the terms of the bond issue. (p. 672).

**Bonds** A form of interest-bearing notes payable issued by corporations, universities, and governmental entities. (p. 670).

**Callable bonds** Bonds that are subject to retirement at a stated dollar amount prior to maturity at the option of the issuer. (p. 672).

**Capital lease** A contractual arrangement that transfers substantially all the benefits and risks of ownership to the lessee so that the lease is in effect a purchase of the property. (p. 683).

**Contractual interest rate** Rate used to determine the amount of cash interest the borrower pays and the investor receives. (p. 672).

**Convertible bonds** Bonds that permit bondholders to convert them into common stock at the bondholders' option. (p. 672).

**Debenture bonds** Bonds issued against the general credit of the borrower. Also called unsecured bonds. (p. 671).

**Debt to total assets ratio** A solvency measure that indicates the percentage of total assets provided by creditors; computed as total debt divided by total assets. (p. 685).

**Discount (on a bond)** The difference between the face value of a bond and its selling price, when the bond is sold for less than its face value. (p. 675).

**Face value (par value)** Amount of principal the issuer must pay at the maturity date of the bond. (p. 672).

**Long-term liabilities** Obligations expected to be paid after one year. (p. 670).

**Market interest rate** The rate investors demand for loaning funds to the corporation. (p. 673).

**Maturity date** The date on which the final payment on the bond is due from the bond issuer to the investor. (p. 672).

**Mortgage bond** A bond secured by real estate. (p. 671).

**Mortgage notes payable** A long-term note secured by a mortgage that pledges title to specific assets as security for a loan. (p. 680).

**Operating lease** A contractual arrangement giving the lessee temporary use of the property, with continued ownership of the property by the lessor. (p. 683).

**Premium (on a bond)** The difference between the selling price and the face value of a bond, when the bond is sold for more than its face value. (p. 675).

**Registered bonds** Bonds issued in the name of the owner. (p. 672).

**Secured bonds** Bonds that have specific assets of the issuer pledged as collateral. (p. 671).

**Serial bonds** Bonds that mature in installments. (p. 672).

**Sinking fund bonds** Bonds secured by specific assets set aside to retire them. (p. 671).

**Term bonds** Bonds that mature at a single specified future date. (p. 672).

**Times interest earned ratio** A solvency measure that indicates a company's ability to meet interest payments; computed by dividing income before income taxes and interest expense by interest expense. (p. 685).

**Time value of money** The relationship between time and money. A dollar received today is worth more than a dollar promised at some time in the future. (p. 673).

**Unsecured bonds** Bonds issued against the general credit of the borrower. Also called debenture bonds. (p. 671).

# APPENDIX 15A

## Present Value Concepts Related to Bond Pricing

Congratulations! You have a winning lottery ticket and the state has provided you with three possible options for payment. They are:

1. Receive \$10,000,000 in three years.
2. Receive \$7,000,000 immediately.
3. Receive \$3,500,000 at the end of each year for three years.

Which of these options would you select? The answer is not easy to determine at a glance. To make a dollar-maximizing choice, you must perform present value computations. A present value computation is based on the concept of time value of money. Time value of money concepts are useful for the lottery situation and for pricing other amounts to be received in the future. This appendix discusses how to use present value concepts to price bonds. It also will tell you how to determine what option you should take as a lottery winner.

### Present Value of Face Value

To illustrate present value concepts, assume that you are willing to invest a sum of money that will yield \$1,000 at the end of one year. In other words, what amount would you need to invest today to have \$1,000 one year from now? If you want to earn 10%, the investment (or present value) is \$909.09 ( $\$1,000 \div 1.10$ ). Illustration 15A-1 shows the computation.

#### Study Objective [7]

Compute the market price of a bond.

#### Illustration 15A-1

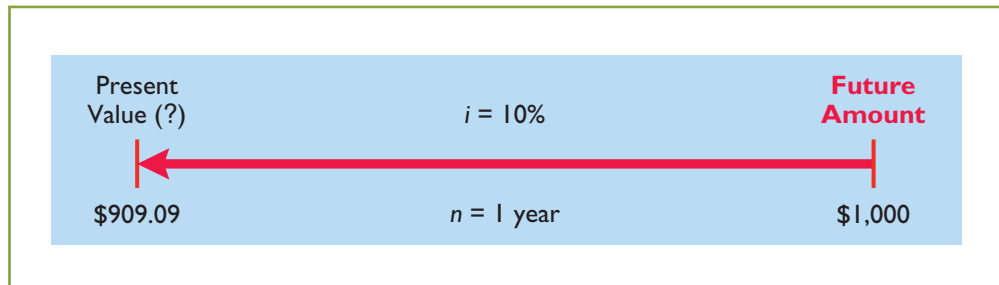

Present value computation—  
\$1,000 discounted at 10% for  
one year

|                      |          |                            |          |                      |
|----------------------|----------|----------------------------|----------|----------------------|
| <b>Present value</b> | <b>×</b> | <b>(1 + Interest rate)</b> | <b>=</b> | <b>Future amount</b> |
| Present value        | ×        | (1 + 10%)                  | =        | \$1,000              |
| Present value        |          |                            | =        | $\$1,000 \div 1.10$  |
| Present value        |          |                            | =        | <b>\$909.09</b>      |

The future amount (\$1,000), the interest rate (10%), and the number of periods (1) are known. We can depict the variables in this situation as shown in the time diagram in Illustration 15A-2.

#### Illustration 15A-2

Finding present value if  
discounted for one period

If you are to receive the single future amount of \$1,000 **in two years**, discounted at 10%, its present value is \$826.45 [ $(\$1,000 \div 1.10) \div 1.10$ ], depicted as follows.

**Illustration 15A-3**  
Finding present value if discounted for two periods

We also can determine the present value of 1 through tables that show the present value of 1 for  $n$  periods. In Table 15A-1,  $n$  is the number of discounting periods involved. The percentages are the periodic interest rates, and the 5-digit decimal numbers in the respective columns are the factors for the present value of 1.

When using Table 15A-1, we multiply the future amount by the present value factor specified at the intersection of the number of periods and the interest rate. For example, the present value factor for 1 period at an interest rate of 10% is .90909, which equals the \$909.09 ( $\$1,000 \times .90909$ ) computed in Illustration 15A-1.

| Table 15A-1<br>Present Value of 1 |        |        |        |        |        |        |        |        |        |
|-----------------------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| (n)<br>Periods                    | 4%     | 5%     | 6%     | 8%     | 9%     | 10%    | 11%    | 12%    | 15%    |
| 1                                 | .96154 | .95238 | .94340 | .92593 | .91743 | .90909 | .90090 | .89286 | .86957 |
| 2                                 | .92456 | .90703 | .89000 | .85734 | .84168 | .82645 | .81162 | .79719 | .75614 |
| 3                                 | .88900 | .86384 | .83962 | .79383 | .77218 | .75132 | .73119 | .71178 | .65752 |
| 4                                 | .85480 | .82270 | .79209 | .73503 | .70843 | .68301 | .65873 | .63552 | .57175 |
| 5                                 | .82193 | .78353 | .74726 | .68058 | .64993 | .62092 | .59345 | .56743 | .49718 |
| 6                                 | .79031 | .74622 | .70496 | .63017 | .59627 | .56447 | .53464 | .50663 | .43233 |
| 7                                 | .75992 | .71068 | .66506 | .58349 | .54703 | .51316 | .48166 | .45235 | .37594 |
| 8                                 | .73069 | .67684 | .62741 | .54027 | .50187 | .46651 | .43393 | .40388 | .32690 |
| 9                                 | .70259 | .64461 | .59190 | .50025 | .46043 | .42410 | .39092 | .36061 | .28426 |
| 10                                | .67556 | .61391 | .55839 | .46319 | .42241 | .38554 | .35218 | .32197 | .24719 |

For two periods at an interest rate of 10%, the present value factor is .82645, which equals the \$826.45 ( $\$1,000 \times .82645$ ) computed previously.

Let's now go back to our lottery example. Given the present value concepts just learned, we can determine whether receiving \$10,000,000 in three years is better than receiving \$7,000,000 today, assuming the appropriate discount rate is 9%. The computation is as follows.

|   |             |
|---|-------------|
| $\$10,000,000 \times \text{PV of 1 due in 3 years at } 9\% =$ |             |
| $\$10,000,000 \times .77218$ (Table 15A-1)                    | \$7,721,800 |
| Amount to be received from state immediately                  | 7,000,000   |
| Difference  | \$ 721,800  |

**Illustration 15A-4**  
Present value of \$10,000,000 to be received in three years

What this computation shows you is that you would be \$721,800 better off receiving the \$10,000,000 at the end of three years rather than taking \$7,000,000 immediately.

### Present Value of Interest Payments (Annuities)

In addition to receiving the face value of a bond at maturity, an investor also receives periodic interest payments over the life of the bonds. These periodic payments are called **annuities**.

In order to compute the present value of an annuity, we need to know: (1) the interest rate, (2) the number of interest periods, and (3) the amount of the periodic receipts or payments. To illustrate the computation of the present value of an annuity, assume that you will receive \$1,000 cash annually for three years and the interest rate is 10%. The time diagram in Illustration 15A-5 depicts this situation.

**Illustration 15A-5**  
Time diagram for a three-year annuity

The present value in this situation may be computed as follows.

**Illustration 15A-6**  
Present value of a series of future amounts computation

|                       | Present Value of 1 |   |                   |
|-----------------------|--------------------|---|-------------------|
| Future Amount         | × Factor at 10%    | = | Present Value     |
| \$1,000 (1 year away) | .90909             |   | \$ 909.09         |
| 1,000 (2 years away)  | .82645             |   | 826.45            |
| 1,000 (3 years away)  | .75132             |   | 751.32            |
|                       | <u>2.48686</u>     |   | <u>\$2,486.86</u> |

We also can use annuity tables to value annuities. As illustrated in Table 15A-2 below, these tables show the present value of 1 to be received periodically for a given number of periods.

| (n)<br>Periods | 4%      | 5%      | 6%      | 8%      | 9%      | 10%     | 11%     | 12%     | 15%     |
|----------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| 1              | .96154  | .95238  | .94340  | .92593  | .91743  | .90909  | .90090  | .89286  | .86957  |
| 2              | 1.88609 | 1.85941 | 1.83339 | 1.78326 | 1.75911 | 1.73554 | 1.71252 | 1.69005 | 1.62571 |
| 3              | 2.77509 | 2.72325 | 2.67301 | 2.57710 | 2.53130 | 2.48685 | 2.44371 | 2.40183 | 2.28323 |
| 4              | 3.62990 | 3.54595 | 3.46511 | 3.31213 | 3.23972 | 3.16986 | 3.10245 | 3.03735 | 2.85498 |
| 5              | 4.45182 | 4.32948 | 4.21236 | 3.99271 | 3.88965 | 3.79079 | 3.69590 | 3.60478 | 3.35216 |
| 6              | 5.24214 | 5.07569 | 4.91732 | 4.62288 | 4.48592 | 4.35526 | 4.23054 | 4.11141 | 3.78448 |
| 7              | 6.00205 | 5.78637 | 5.58238 | 5.20637 | 5.03295 | 4.86842 | 4.71220 | 4.56376 | 4.16042 |
| 8              | 6.73274 | 6.46321 | 6.20979 | 5.74664 | 5.53482 | 5.33493 | 5.14612 | 4.96764 | 4.48732 |
| 9              | 7.43533 | 7.10782 | 6.80169 | 6.24689 | 5.99525 | 5.75902 | 5.53705 | 5.32825 | 4.77158 |
| 10             | 8.11090 | 7.72173 | 7.36009 | 6.71008 | 6.41766 | 6.14457 | 5.88923 | 5.65022 | 5.01877 |

From Table 15A-2 you can see that the present value factor of an annuity of 1 for three periods at 10% is 2.48685.<sup>1</sup> This present value factor is the total of the three individual present value factors as shown in Illustration 15A-6. Applying this amount to the annual cash flow of \$1,000 produces a present value of \$2,486.85.

Let's now go back to our lottery example. We determined that you would get more money if you wait and take the \$10,000,000 in three years rather than take \$7,000,000 immediately. But there is still another option—to receive \$3,500,000 at the end of **each year** for three years (an annuity). The computation to evaluate this option (again assuming a 9% discount rate) is as follows.

|   |                    |
|---|--------------------|
| $\$3,500,000 \times \text{PV of 1 due yearly for 3 years at 9\%} =$ |                    |
| $\$3,500,000 \times 2.53130$ (Table 15A-2)                          | \$8,859,550        |
| Present value of \$10,000,000 to be received in 3 years             | <u>7,721,800</u>   |
| Difference  | <u>\$1,137,750</u> |

**Illustration 15A-7**  
Present value of lottery payments to be received over three years

If you take the annuity of \$3,500,000 for each of 3 years, you will be \$1,137,750 richer as a result.

## Time Periods and Discounting

We have used an **annual** interest rate to determine present value. Present value computations may also be done over shorter periods of time, such as monthly, quarterly, or semiannually. When the time frame is less than one year, it is necessary to convert the annual interest rate to the shorter time frame.

Assume, for example, that the investor in Illustration 15A-6 received \$500 **semiannually** for three years instead of \$1,000 annually. In this case, the number of periods becomes 6 ( $3 \times 2$ ), the interest rate is 5% ( $10\% \div 2$ ), the present value factor from Table 15A-2 is 5.07569, and the present value of the future cash flows is \$2,537.85 ( $5.07569 \times \$500$ ). This amount is slightly higher than the \$2,486.86 computed in Illustration 15A-6 because interest is computed twice during the same year. That is, interest is earned on the first half year's interest.

## Computing the Present Value of a Bond

The present value (or market price) of a bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the interest (discount) rate.

The first variable (dollars to be paid) is made up of two elements: (1) a series of interest payments (an annuity), and (2) the principal amount (a single sum). To compute the present value of the bond, we must discount both the interest payments and the principal amount.

When the investor's interest (discount) rate is equal to the bond's contractual interest rate, the present value of the bonds will equal the face value of the bonds. To illustrate, assume a bond issue of 10%, five-year bonds with a face value of \$100,000 with interest payable **semiannually** on January 1 and July 1. If the discount rate is the same as the contractual rate, the bonds will sell **at face value**. In this case, the investor will receive: (1) \$100,000 at maturity and (2) a series of ten \$5,000 interest payments [ $\$100,000 \times (10\% \div 2)$ ] over the term of the bonds. The length of time is expressed in terms of interest periods (in this case, 10) and the discount rate per interest period (5%). The time diagram in Illustration 15A-8 (page 694) depicts the variables involved in this discounting situation.

<sup>1</sup>The difference of .00001 between 2.48686 and 2.48685 is due to rounding.

**Illustration 15A-8**

Time diagram for the present value of a 10%, five-year bond paying interest semiannually

The computation of the present value of Candlestick’s bonds, assuming they were issued at face value (page 674), is shown below.

**Illustration 15A-9**

Present value of principal and interest (face value)

| <u>10% Contractual Rate—10% Discount Rate</u>   |                         |
|---|-------------------------|
| <b>Present value of principal to be received at maturity</b>                            |                         |
| $\$100,000 \times \text{PV of 1 due in 10 periods at 5\%}$                              |                         |
| $\$100,000 \times .61391 \text{ (Table 15A-1)}$   | \$ 61,391               |
| <b>Present value of interest to be received periodically over the term of the bonds</b> |                         |
| $\$5,000 \times \text{PV of 1 due periodically for 10 periods at 5\%}$                  |                         |
| $\$5,000 \times 7.72173 \text{ (Table 15A-2)}$  | <u>38,609*</u>          |
| <b>Present value of bonds</b>   | <u><b>\$100,000</b></u> |

\*(Rounded).

Now assume that the investor’s required rate of return is 12%, not 10%. The future amounts are again \$100,000 and \$5,000, respectively. But now we must use a discount rate of 6% (12% ÷ 2). The present value of Candlestick’s bonds issued at a discount (page 676) is \$92,639 as computed below.

**Illustration 15A-10**

Present value of principal and interest (discount)

| <u>10% Contractual Rate—12% Discount Rate</u>   |                        |
|---|------------------------|
| <b>Present value of principal to be received at maturity</b>                            |                        |
| $\$100,000 \times .55839 \text{ (Table 15A-1)}$   | \$55,839               |
| <b>Present value of interest to be received periodically over the term of the bonds</b> |                        |

## Summary of Study Objective for Appendix 15A

**[7] Compute the market price of a bond.** Time value of money concepts are useful for pricing bonds. The present value (or market price) of a bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the interest rate.

# APPENDIX 15B

## Effective-Interest Method of Bond Amortization

Under the **effective-interest method**, the amortization of bond discount or bond premium results in periodic interest expense equal to a **constant percentage** of the carrying value of the bonds. The effective-interest method results in varying amounts of amortization and interest expense per period but a **constant percentage rate**.

The following steps are required under the effective-interest method.

1. Compute the **bond interest expense**. To do so, multiply the carrying value of the bonds at the beginning of the interest period by the effective-interest rate.
2. Compute the **bond interest paid** (or accrued). To do so, multiply the face value of the bonds by the contractual interest rate.
3. Compute the **amortization amount**. To do so, determine the difference between the amounts computed in steps (1) and (2).

Illustration 15B-1 depicts these steps.

$$\begin{array}{ccc}
 \text{(1)} & & \text{(2)} & & \text{(3)} \\
 \text{Bond Interest Expense} & & \text{Bond Interest Paid} & & \\
 \left( \begin{array}{l} \text{Carrying Value} \\ \text{of Bonds at} \\ \text{Beginning of} \\ \text{Period} \end{array} \times \begin{array}{l} \text{Effective} \\ \text{Interest} \\ \text{Rate} \end{array} \right) - \left( \begin{array}{l} \text{Face} \\ \text{Amount of} \\ \text{Bonds} \end{array} \times \begin{array}{l} \text{Contractual} \\ \text{Interest} \\ \text{Rate} \end{array} \right) = \text{Amortization} \\
 & & & & \text{Amount}
 \end{array}$$

### Study Objective [8]

Apply the effective-interest method of amortizing bond discount and bond premium.

**Illustration 15B-1**  
Computation of amortization—effective-interest method

When the difference between the straight-line method of amortization (Appendix 15C) and the effective-interest method is material, GAAP requires the use of the effective-interest method.

### Amortizing Bond Discount

To illustrate the effective-interest method of bond discount amortization, assume that Candlestick, Inc. issues \$100,000 of 10%, five-year bonds on January 1, 2012, with interest payable each July 1 and January 1 (pages 676–677). The bonds sell for \$92,639 (92.639% of face value). This sales price results in bond discount of \$7,361 (\$100,000 – \$92,639) and an effective-interest rate of 12%. A bond discount amortization schedule, as shown in Illustration 15B-2 (page 696), facilitates the recording of interest expense and the discount amortization. Note that interest expense as a percentage of carrying value remains constant at 6%.

| 18  | 9   | 5,000               | 5,890 (6% × \$98,165)    | 890          | 945         | 99,055          |
| 19  | 10  | 5,000               | 5,945* (6% × \$99,055)   | 945          | –0–         | 100,000         |
| 20  |   | \$50,000            | \$57,361                 | \$7,361      |             |                 |
| 21  |   |                     |                          |              |             |                 |
| 22  | Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate |                     |                          |              |             |                 |
| 23  | (5%) each period.   |                     |                          |              |             |                 |
| 24  | Column (B) is computed as the preceding bond carrying value times the semiannual effective-interest rate (6%).                        |                     |                          |              |             |                 |
| 25  | Column (C) indicates the discount amortization each period.   |                     |                          |              |             |                 |
| 26  | Column (D) decreases each period until it reaches zero at maturity.   |                     |                          |              |             |                 |
| 27  | Column (E) increases each period until it equals face value at maturity.  |                     |                          |              |             |                 |
| 28  |   |                     |                          |              |             |                 |
| 29  | *\$2 difference due to rounding.  |                     |                          |              |             |                 |

**Illustration 15B-2**  
Bond discount amortization schedule

We have highlighted columns (A), (B), and (C) in the amortization schedule to emphasize their importance. These three columns provide the numbers for each period’s journal entries. They are the primary reason for preparing the schedule.

For the first interest period, the computations of interest expense and the bond discount amortization are:

**Illustration 15B-3**  
Computation of bond discount amortization

|   |                      |
|---|----------------------|
| Interest expense ( $\$92,639 \times 6\%$ )      | \$5,558              |
| Contractual interest ( $\$100,000 \times 5\%$ ) | <u>5,000</u>         |
| <b>Bond discount amortization</b>               | <b><u>\$ 558</u></b> |

Candlestick records the payment of interest and amortization of bond discount on July 1, 2012, as follows.

|                   |   |          |   |           |            |
|-------------------|---|----------|---|-----------|------------|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b> |            |
|                   |   |          |   |           | –5,558 Exp |
|                   |   |          |   |           | +558       |
|                   |   |          |   |           | –5,000     |
| <b>Cash Flows</b> |   |          |   |           |            |
|                   |   |          |   |           | –5,000     |

|  |        |  |       |       |
|--|--------|--|-------|-------|
|  | July 1 | Interest Expense   | 5,558 |       |
|  |        | Discount on Bonds Payable  |       | 558   |
|  |        | Cash   |       | 5,000 |
|  |        | (To record payment of bond interest and amortization of bond discount) |       |       |

For the second interest period, bond interest expense will be \$5,592 ( $\$93,197 \times 6\%$ ), and the discount amortization will be \$592. At December 31, Candlestick makes the following adjusting entry.

|         |  |                                       |  |
|---------|--|---------------------------------------|--|
| Dec. 31 | Interest Expense<br>Discount on Bonds Payable<br>Interest Payable<br>(To record accrued interest and<br>amortization of bond discount) | 5,592<br><br><br><br><br>592<br>5,000 |  |
|---------|--|---------------------------------------|--|

|   |   |   |   |            |
|---|---|---|---|------------|
| A | = | L | + | SE         |
|   |   |   |   | -5,592 Exp |
|   |   |   |   | +592       |
|   |   |   |   | +5,000     |

**Cash Flows**  
no effect

Total interest expense for 2012 is \$11,150 ( $\$5,558 + \$5,592$ ). On January 1, Candlestick records payment of the interest by a debit to Interest Payable and a credit to Cash.

## Amortizing Bond Premium

The amortization of bond premium by the effective-interest method is similar to the procedures described for bond discount. For example, assume that Candlestick, Inc. issues \$100,000, 10%, five-year bonds on January 1, 2012, with interest payable on July 1 and January 1 (pages 677–678). In this case, the bonds sell for \$108,111. This sales price results in bond premium of \$8,111 and an effective-interest rate of 8%. Illustration 15B-4 shows the bond premium amortization schedule.

### Helpful Hint

When a bond sells for \$108,111, it is quoted as 108.111% of face value. Note that \$108,111 can be proven as shown in Appendix 15A.

| 15  | 5   | 5,000               | 4,210 (4% × \$105,241)    | 790          | 4,451       | 104,451         |
| 16  | 6   | 5,000               | 4,178 (4% × \$104,451)    | 822          | 3,629       | 103,629         |
| 17  | 7   | 5,000               | 4,145 (4% × \$103,629)    | 855          | 2,774       | 102,774         |
| 18  | 8   | 5,000               | 4,111 (4% × \$102,774)    | 889          | 1,885       | 101,885         |
| 19  | 9   | 5,000               | 4,075 (4% × \$101,885)    | 925          | 960         | 100,960         |
| 20  | 10  | 5,000               | 4,040* (4% × \$100,960)   | 960          | –0–         | 100,000         |
| 21  |   | \$50,000            | \$41,889                  | \$8,111      |             |                 |
| 22  |   |                     |                           |              |             |                 |
| 23  | Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate |                     |                           |              |             |                 |
| 24  | (5%) each period.   |                     |                           |              |             |                 |
| 25  | Column (B) is computed as the carrying value of the bonds times the semiannual effective-interest rate (4%).                          |                     |                           |              |             |                 |
| 26  | Column (C) indicates the premium amortization each period.  |                     |                           |              |             |                 |
| 27  | Column (D) decreases each period until it reaches zero at maturity.   |                     |                           |              |             |                 |
| 28  | Column (E) decreases each period until it equals face value at maturity.  |                     |                           |              |             |                 |
| 29  |   |                     |                           |              |             |                 |
| 30  | *\$2 difference due to rounding.  |                     |                           |              |             |                 |

For the first interest period, the computations of interest expense and the bond premium amortization are:

**Illustration 15B-5**  
Computation of bond premium amortization

|   |                      |
|---|----------------------|
| Interest expense ( $\$108,111 \times 4\%$ )     | \$4,324              |
| Contractual interest ( $\$100,000 \times 5\%$ ) | <u>5,000</u>         |
| <b>Bond premium amortization</b>                | <b><u>\$ 676</u></b> |

|                   |   |          |   |            |
|-------------------|---|----------|---|------------|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b>  |
|                   |   |          |   |            |
|                   |   |          |   | -4,324 Exp |
|                   |   |          |   | -676       |
| -5,000            |   |          |   |            |
| <b>Cash Flows</b> |   |          |   |            |
| -5,000            |   |          |   |            |

Candlestick records payments on the first interest date as follows.

|        |   |              |       |
|--------|---|--------------|-------|
| July 1 | Interest Expense<br>Premium on Bonds Payable<br>Cash<br>(To record payment of bond interest and amortization of bond premium) | 4,324<br>676 | 5,000 |
|--------|---|--------------|-------|

For the second interest period, interest expense will be \$4,297, and the premium amortization will be \$703. Total bond interest expense for 2012 is \$8,621 ( $\$4,324 + \$4,297$ ).

## Do it!

Gardner Corporation issues \$1,750,000, 10-year, 12% bonds on January 1, 2012, at \$1,968,090, to yield 10%. The bonds pay semiannual interest July 1 and January 1. Gardner uses the effective-interest method of amortization.

### Instructions

- Prepare the journal entry to record the issuance of the bonds.
- Prepare the journal entry to record the payment of interest on July 1, 2012.

#### action plan

- ✓ Compute interest expense by multiplying bond carrying value at the beginning of the period by the effective-interest rate.
- ✓ Compute credit to cash (or bond interest payable) by multiplying the face value of the bonds by the contractual interest rate.
- ✓ Compute bond premium or discount amortization, which is the difference between interest expense and cash paid.
- ✓ Interest expense decreases when the effective-interest method is used for bonds issued at a premium. The reason is that a constant percentage is applied to a decreasing book value to compute interest expense.

### Solution to Comprehensive Do it! for Appendix 15B

|                    |  |                    |                      |

## Summary of Study Objective for Appendix 15B

**[8] Apply the effective-interest method of amortizing bond discount and bond premium.** The effective-interest method results in varying amounts of amortization and interest expense per period but a *constant percentage rate*

of interest. When the difference between the straight-line and effective-interest method is material, GAAP requires the use of the effective-interest method.

## Glossary for Appendix 15B

**Effective-interest method of amortization** A method of amortizing bond discount or bond premium that results

in periodic interest expense equal to a constant percentage of the carrying value of the bonds. (p. 695).

## APPENDIX 15C

### Straight-Line Amortization

#### Amortizing Bond Discount

Under the **straight-line method of amortization**, the amortization of bond discount or bond premium results in periodic interest expense of the same amount in each interest period. In other words, the straight-line method results in a constant amount of amortization and interest expense per period. The amount is determined using the formula in Illustration 15C-1.

#### Study Objective [9]

Apply the straight-line method of amortizing bond discount and bond premium.

$$\text{Bond Discount} \div \text{Number of Interest Periods} = \text{Bond Discount Amortization}$$

#### Illustration 15C-1

Formula for straight-line method of bond discount amortization

In the Candlestick, Inc. example (pages 676–677), the company sold \$100,000, five-year, 10% bonds on January 1, 2012, for \$92,639. This price resulted in a \$7,361 bond discount (\$100,000 – \$92,639). Interest is payable on July 1 and January 1. The bond discount amortization for each interest period is \$736 (\$7,361 ÷ 10). Candlestick records the payment of bond interest and the amortization of bond discount on the first interest date (July 1, 2012) as follows.

|        |  |       |       |
|--------|--|-------|-------|
| July 1 | Interest Expense   | 5,736 |       |
|        | Discount on Bonds Payable  |       | 736   |
|        | Cash   |       | 5,000 |
|        | (To record payment of bond interest and amortization of bond discount) |       |       |

At December 31, Candlestick makes the following adjusting entry.

|         |   |       |       |
|---------|---|-------|-------|
| Dec. 31 | Interest Expense  | 5,736 |       |
|         | Discount on Bonds Payable   |       | 736   |
|         | Interest Payable  |       | 5,000 |
|         | (To record accrued bond interest and amortization of bond discount) |       |       |

Over the term of the bonds, the balance in Discount on Bonds Payable will decrease annually by the **same amount** until it has a zero balance at the maturity date of the bonds. Thus, the carrying value of the bonds at maturity will be equal to the face value.

It is useful to prepare a bond discount amortization schedule as shown in Illustration 15C-2 (page 700). The schedule shows interest expense, discount amortization, and the carrying value of the bond for each interest period. As indicated, the interest expense recorded **each period** for the Candlestick bond is \$5,736. Also note that the carrying value of the bond increases \$736 each period until it reaches its face value \$100,000 at the end of period 10.

| Issue date   |  |   |  | \$7,361                                  | \$92,639                                      |
| 1  | \$ 5,000                                       | \$ 5,736  | \$ 736   | 6,625                                    | 93,375  |
| 2  | 5,000  | 5,736   | 736  | 5,889                                    | 94,111  |
| 3  | 5,000  | 5,736   | 736  | 5,153                                    | 94,847  |
| 4  | 5,000  | 5,736   | 736  | 4,417                                    | 95,583  |
| 5  | 5,000  | 5,736   | 736  | 3,681                                    | 96,319  |
| 6  | 5,000  | 5,736   | 736  | 2,945                                    | 97,055  |
| 7  | 5,000  | 5,736   | 736  | 2,209                                    | 97,791  |
| 8  | 5,000  | 5,736   | 736  | 1,473                                    | 98,527  |
| 9  | 5,000  | 5,736   | 736  | 737                                      | 99,263  |
| 10   | 5,000  | 5,737*  | 737*   | –0–                                      | 100,000                                       |
|  | <u>\$50,000</u>                                | <u>\$57,361</u>                                     | <u>\$7,361</u>                                 |  |   |

Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate (5%) each period.  
 Column (B) is computed as the interest paid (Column A) plus the discount amortization (Column C).  
 Column (C) indicates the discount amortization each period.  
 Column (D) decreases each period by the same amount until it reaches zero at maturity.  
 Column (E) increases each period by the same amount of discount amortization until it equals the face value at maturity.  
 \*One dollar difference due to rounding.

We have highlighted columns (A), (B), and (C) in the amortization schedule to emphasize their importance. These three columns provide the numbers for each period’s journal entries. They are the primary reason for preparing the schedule.

### Amortizing Bond Premium

The amortization of bond premium parallels that of bond discount. Illustration 15C-3 presents the formula for determining bond premium amortization under the straight-line method.

**Illustration 15C-3**  
Formula for straight-line method of bond premium amortization

$$\text{Bond Premium} \div \text{Number of Interest Periods} = \text{Bond Premium Amortization}$$

Continuing our example, assume that Candlestick sells the bonds for \$108,111, rather than \$92,639 (pages 677–678). This sale price results in a bond premium of \$8,111 (\$108,111 – \$100,000). The bond premium amortization for each interest period is \$811 (\$8,111 ÷ 10). Candlestick records the first payment of interest on July 1 as follows.

|                   |   |          |   |            |
|-------------------|---|----------|---|------------|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b>  |
|                   |   |          |   | –4,189 Exp |
| –5,000            |   |          |   | –811       |
| <b>Cash Flows</b> |   |          |   |            |
| –5,000            |   |          |   |            |

|        |   |       |       |
|--------|---|-------|-------|
| July 1 | Interest Expense  | 4,189 |       |
|        | Premium on Bonds Payable  | 811   |       |
|        | Cash  |       | 5,000 |
|        | (To record payment of bond interest and amortization of bond premium) |       |       |

At December 31, the company makes the following adjusting entry.

|         |  |       |       |
|---------|--|-------|-------|
| Dec. 31 | Interest Expense   | 4,189 |       |
|         | Premium on Bonds Payable   | 811   |       |
|         | Interest Payable   |       | 5,000 |
|         | (To record accrued bond interest and amortization of bond premium) |       |       |

|                   |   |   |   |            |
|-------------------|---|---|---|------------|
| A                 | = | L | + | SE         |
|                   |   |   |   | -4,189 Exp |
|                   |   |   |   | -811       |
|                   |   |   |   | +5,000     |
|                   |   |   |   |            |
| <b>Cash Flows</b> |   |   |   |            |
| no effect         |   |   |   |            |

Over the term of the bonds, the balance in Premium on Bonds Payable will decrease annually **by the same amount** until it has a zero balance at maturity.

It is useful to prepare a bond premium amortization schedule as shown in Illustration 15C-4. It shows interest expense, premium amortization, and the carrying value of the bond. The interest expense recorded each period for the Candlestick bond is \$4,189. Also note that the carrying value of the bond decreases \$811 each period until it reaches its face value \$100,000 at the end of period 10.

| CANDLESTICK, INC.<br>Bond Premium Amortization<br>Straight-Line Method—Semiannual Interest Payments |                                      |   |                                     |                               |                                     |
|---|--------------------------------------|---|-------------------------------------|-------------------------------|-------------------------------------|

| 7   | 5,000                                | 4,189                                     | 811                                 | 2,434                         | 102,434                             |
| 8   | 5,000                                | 4,189                                     | 811                                 | 1,623                         | 101,623                             |
| 9   | 5,000                                | 4,189                                     | 811                                 | 812                           | 100,812                             |
| 10  | 5,000                                | 4,188*                                    | 812*                                | -0-                           | 100,000                             |
|   | <u>\$50,000</u>                      | <u>\$41,889</u>                           | <u>\$8,111</u>                      |                               |                                     |

Column (A) remains constant because the face value of the bonds (\$100,000) is multiplied by the semiannual contractual interest rate (5%) each period.  
 Column (B) is computed as the interest paid (Column A) less the premium amortization (Column C).  
 Column (C) indicates the premium amortization each period.  
 Column (D) decreases each period by the same amount until it reaches zero at maturity.  
 Column (E) decreases each period by the amount of premium amortization until it equals the face value at maturity.  
 \*One dollar difference due to rounding.

**Illustration 15C-4**  
Bond premium amortization schedule

## Do it!

Glenda Corporation issues \$1,750,000, 10-year, 12% bonds on January 1, 2012, for \$1,968,090 to yield 10%. The bonds pay semiannual interest July 1 and January 1. Glenda uses the straight-line method of amortization.

### Instructions

- (a) Prepare the journal entry to record the issuance of the bonds.
- (b) Prepare the journal entry to record the payment of interest on July 1, 2012.

**action plan**

- ✓ Compute credit to cash (or interest payable) by multiplying the face value of the bonds by the contractual interest rate.
- ✓ Compute bond premium or discount amortization by dividing bond premium or discount by the total number of periods.
- ✓ Understand that interest expense decreases when bonds are issued at a premium. The reason is that the amortization of premium reduces the total cost of borrowing.

**Solution to Comprehensive Do it! for Appendix 15C**

|          |        |                           |             |           |
|----------|--------|---------------------------|-------------|-----------|
| (a) 2012 | Jan. 1 | Cash                      | 1,968,090   |           |
|          |        | Bonds Payable             |             | 1,750,000 |
|          |        | Premium on Bonds Payable  |             | 218,090   |
| (b) 2012 | July 1 | Interest Expense          | 94,095.50** |           |
|          |        | Premium on Bonds Payable  | 10,904.50*  |           |
|          |        | Cash                      |             | 105,000   |
|          |        | *\$218,090 ÷ 20           |             |           |
|          |        | **\$105,000 – \$10,904.50 |             |           |

## Summary of Study Objective for Appendix 15C

**[9] Apply the straight-line method of amortizing bond discount and bond premium.** The straight-line

method of amortization results in a *constant amount* of amortization and interest expense per period.

## Glossary for Appendix 15C

**Straight-line method of amortization.** A method of amortizing bond discount or bond premium that results in

allocating the same amount to interest expense in each interest period. (p. 699)

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

\***Note:** All **asterisked** Questions, Exercises, and Problems relate to material in the appendices to the chapter.

## Self-Test Questions

Answers are on page 718.

- (SO 1) 1. The term used for bonds that are unsecured is:
- a. callable bonds.
  - b. indenture bonds.
  - c. debenture bonds.
  - d. bearer bonds.
- (SO 1) 2. The market interest rate:
- a. is the contractual interest rate used to determine the amount of cash interest paid by the borrower.
  - b. is listed in the bond indenture.
  - c. is the rate investors demand for loaning funds.
  - d. More than one of the above is true.
- (SO 2) 3. Karson Inc. issues 10-year bonds with a maturity value of \$200,000. If the bonds are issued at a premium, this indicates that:
- a. the contractual interest rate exceeds the market interest rate.
  - b. the market interest rate exceeds the contractual interest rate.
  - c. the contractual interest rate and the market interest rate are the same.
  - d. no relationship exists between the two rates.
4. Four-Nine Corporation issued bonds that pay interest every July 1 and January 1. The entry to accrue bond interest at December 31 includes a:
- a. debit to Interest Payable.
  - b. credit to Cash.
  - c. credit to Interest Expense.
  - d. credit to Interest Payable.
5. Gester Corporation retires its \$100,000 face value bonds at 105 on January 1, following the payment of semiannual interest. The carrying value of the bonds at the redemption date is \$103,745. The entry to record the redemption will include a:
- a. credit of \$3,745 to Loss on Bond Redemption.
  - b. debit of \$3,745 to Premium on Bonds Payable.
  - c. credit of \$1,255 to Gain on Bond Redemption.
  - d. debit of \$5,000 to Premium on Bonds Payable.

- (SO 3) 6. Colson Inc. converts \$600,000 of bonds sold at face value into 10,000 shares of common stock, par value \$1. Both the bonds and the stock have a market value of \$760,000. What amount should be credited to Paid-in Capital in Excess of Par—Common Stock as a result of the conversion?  
**a.** \$10,000. **c.** \$600,000.  
**b.** \$160,000. **d.** \$590,000.
- (SO 4) 7. Howard Corporation issued a 20-year mortgage note payable on January 1, 2012. At December 31, 2012, the unpaid principal balance will be reported as:  
**a.** a current liability.  
**b.** a long-term liability.  
**c.** part current and part long-term liability.  
**d.** interest payable.
- (SO 4) 8. Andrews Inc. issues a \$497,000, 10% 3-year mortgage note on January 1. The note will be paid in three annual installments of \$200,000, each payable at the end of the year. What is the amount of interest expense that should be recognized by Andrews Inc. in the second year?  
**a.** \$16,567. **c.** \$34,670.  
**b.** \$49,700. **d.** \$346,700.
- (SO 5) 9. Lease A does not contain a bargain purchase option, but the lease term is equal to 90 percent of the estimated economic life of the leased property. Lease B does not transfer ownership of the property to the lessee by the end of the lease term, but the lease term is equal to 75 percent of the estimated economic life of the leased property. How should the lessee classify these leases?
- | Lease A                   | Lease B         |
|---------------------------|-----------------|
| <b>a.</b> Operating lease | Capital lease   |
| <b>b.</b> Operating lease | Operating lease |
| <b>c.</b> Capital lease   | Operating lease |
| <b>d.</b> Capital lease   | Capital lease   |
- (SO 6) 10. For 2012, Corn Flake Corporation reported net income of \$300,000. Interest expense was \$40,000 and income taxes were \$100,000. The times interest earned ratio was:  
**a.** 3 times. **c.** 7.5 times.  
**b.** 4.4 times. **d.** 11 times.
- \*11. The market price of a bond is dependent on: (SO 7)  
**a.** the payment amounts.  
**b.** the length of time until the amounts are paid.  
**c.** the interest rate.  
**d.** All of the above.
- \*12. On January 1, Besalium Inc. issued \$1,000,000, 9% bonds for \$938,554. The market rate of interest for these bonds is 10%. Interest is payable annually on December 31. Besalium uses the effective-interest method of amortizing bond discount. At the end of the first year, Besalium should report unamortized bond discount of: (SO 8)  
**a.** \$54,900. **c.** \$51,610.  
**b.** \$57,591. **d.** \$51,000.
- \*13. On January 1, Dias Corporation issued \$1,000,000, 10%, 5-year bonds with interest payable on July 1 and January 1. The bonds sold for \$1,081,105. The market rate of interest for these bonds was 8%. On the first interest date, using the effective-interest method, the debit entry to Interest Expense is for: (SO 8)  
**a.** \$50,000. **c.** \$43,244.  
**b.** \$54,055. **d.** \$100,811.
- \*14. On January 1, Hurley Corporation issues \$500,000, 5-year, 12% bonds at 96 with interest payable on July 1 and January 1. The entry on July 1 to record payment of bond interest and the amortization of bond discount using the straight-line method will include a: (SO 9)  
**a.** debit to Interest Expense \$30,000.  
**b.** debit to Interest Expense \$60,000.  
**c.** credit to Discount on Bonds Payable \$4,000.  
**d.** credit to Discount on Bonds Payable \$2,000.
- \*15. For the bonds issued in question 14 above, what is the carrying value of the bonds at the end of the third interest period? (SO 9)  
**a.** \$486,000. **c.** \$472,000.  
**b.** \$488,000. **d.** \$464,000.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), for additional Self-Test Questions.

## Questions

- (a) What are long-term liabilities? Give three examples. (b) What is a bond?
- (a) As a source of long-term financing, what are the major advantages of bonds over common stock? (b) What are the major disadvantages in using bonds for long-term financing?
- Contrast the following types of bonds: (a) secured and unsecured, (b) term and serial, (c) registered and bearer, and (d) convertible and callable.
- The following terms are important in issuing bonds: (a) face value, (b) contractual interest rate, (c) bond indenture, and (d) bond certificate. Explain each of these terms.
- Describe the two major obligations incurred by a company when bonds are issued.
- Assume that Koslowski Inc. sold bonds with a face value of \$100,000 for \$104,000. Was the market interest rate equal to, less than, or greater than the bonds' contractual interest rate? Explain.
- If a 7%, 10-year, \$800,000 bond is issued at face value and interest is paid semiannually, what is the amount of the interest payment at the end of the first semiannual period?
- If the Bonds Payable account has a balance of \$900,000 and the Discount on Bonds Payable account has a balance of \$40,000, what is the carrying value of the bonds?
- Which accounts are debited and which are credited if a bond issue originally sold at a premium is redeemed before maturity at 97 immediately following the payment of interest?

10. Henricks Corporation is considering issuing a convertible bond. What is a convertible bond? Discuss the advantages of a convertible bond from the standpoint of (a) the bondholders and (b) the issuing corporation.
11. Tim Brown, a friend of yours, has recently purchased a home for \$125,000, paying \$25,000 down and the remainder financed by a 10.5%, 20-year mortgage, payable at \$998.38 per month. At the end of the first month, Tim receives a statement from the bank indicating that only \$123.38 of principal was paid during the month. At this rate, he calculates that it will take over 67 years to pay off the mortgage. Is he right? Discuss.
12. (a) What is a lease agreement? (b) What are the two most common types of leases? (c) Distinguish between the two types of leases.
13. Clooney Company rents a warehouse on a month-to-month basis for the storage of its excess inventory. The company periodically must rent space when its production greatly exceeds actual sales. What is the nature of this type of lease agreement, and what accounting treatment should be used?
14. Rondelli Company entered into an agreement to lease 12 computers from Estes Electronics Inc. The present value of the lease payments is \$186,300. Assuming that this is a capital lease, what entry would Rondelli Company make on the date of the lease agreement?
15. In general, what are the requirements for the financial statement presentation of long-term liabilities?
- \*16. Laura Hiatt is discussing the advantages of the effective-interest method of bond amortization with her accounting staff. What do you think Laura is saying?
- \*17. Markham Corporation issues \$500,000 of 9%, 5-year bonds on January 1, 2012, at 104. If Markham uses the effective-interest method in amortizing the premium, will the annual interest expense increase or decrease over the life of the bonds? Explain.
- \*18. Tina Cruz and Dale Commons are discussing how the market price of a bond is determined. Tina believes that the market price of a bond is solely a function of the amount of the principal payment at the end of the term of a bond. Is she right? Discuss.
- \*19. Explain the straight-line method of amortizing discount and premium on bonds payable.
- \*20. DeWeese Corporation issues \$400,000 of 8%, 5-year bonds on January 1, 2012, at 105. Assuming that the straight-line method is used to amortize the premium, what is the total amount of interest expense for 2012?
21.  **PEPSICO** Did PepsiCo redeem any of its debt during the fiscal year ended December 26, 2009? (*Hint:* Examine PepsiCo's statement of cash flows.)

## Brief Exercises

Compare bond versus stock financing.

(SO 1)

**BE15-1** Laci Inc. is considering two alternatives to finance its construction of a new \$2 million plant.

- (a) Issuance of 200,000 shares of common stock at the market price of \$10 per share.  
 (b) Issuance of \$2 million, 8% bonds at face value.

Complete the following table, and indicate which alternative is preferable.

|                                  | <u>Issue Stock</u> | <u>Issue Bond</u> |
|----------------------------------|--------------------|-------------------|
| Income before interest and taxes | \$700,000          | \$700,000         |
| Interest expense from bonds      | _____              | _____             |
| Income before income taxes       | \$ _____           | \$ _____          |
| Income tax expense (30%)         | _____              | _____             |
| Net income                       | <u>\$ _____</u>    | <u>\$ _____</u>   |
| Outstanding shares               | _____              | 500,000           |
| Earnings per share               | _____              | _____             |

Prepare entries for bonds issued at face value.

(SO 2)

**BE15-2** Xenia Corporation issued 3,000, 8%, 5-year, \$1,000 bonds dated January 1, 2012, at 100.

- (a) Prepare the journal entry to record the sale of these bonds on January 1, 2012.  
 (b) Prepare the journal entry to record the first interest payment on July 1, 2012 (interest payable semiannually), assuming no previous accrual of interest.  
 (c) Prepare the adjusting journal entry on December 31, 2012, to record interest expense.

Prepare entries for bonds sold at a discount and a premium.

(SO 2)

**BE15-3** Robbell Company issues \$2 million, 10-year, 8% bonds at 97, with interest payable on July 1 and January 1.

- (a) Prepare the journal entry to record the sale of these bonds on January 1, 2012.  
 (b) Assuming instead that the above bonds sold for 104, prepare the journal entry to record the sale of these bonds on January 1, 2012.

Prepare entries for bonds issued.

(SO 2)

**BE15-4** Beetown Company has issued three different bonds during 2012. Interest is payable semiannually on each of these bonds.

- On January 1, 2012, 1,000, 8%, 5-year, \$1,000 bonds dated January 1, 2012, were issued at face value.
- On July 1, \$800,000, 9%, 5-year bonds dated July 1, 2012, were issued at 102.
- On September 1, \$200,000, 7%, 5-year bonds dated September 1, 2012, were issued at 98.

Prepare the journal entry to record each bond transaction at the date of issuance.

**BE15-5** The balance sheet for Focus Consulting reports the following information on July 1, 2012.

|                                 |             |           |
|---------------------------------|-------------|-----------|
| Long-term liabilities           |             |           |
| Bonds payable                   | \$1,000,000 |           |
| Less: Discount on bonds payable | 60,000      | \$940,000 |

Focus decides to redeem these bonds at 101 after paying semiannual interest. Prepare the journal entry to record the redemption on July 1, 2012.

*Prepare entry for redemption of bonds.*  
(SO 3)

**BE15-6** Bondorf Inc. issues a \$600,000, 10%, 10-year mortgage note on December 31, 2012, to obtain financing for a new building. The terms provide for semiannual installment payments of \$48,145. Prepare the entry to record the mortgage loan on December 31, 2012, and the first installment payment.

*Prepare entries for long-term notes payable.*  
(SO 4)

**BE15-7** Prepare the journal entries that the lessee should make to record the following transactions.

- The lessee makes a lease payment of \$80,000 to the lessor in an operating lease transaction.
- Bethel Company leases a new building from Sasse Construction, Inc. The present value of the lease payments is \$700,000. The lease qualifies as a capital lease.

*Contrast accounting for operating and capital leases.*  
(SO 5)

**BE15-8** Presented below are long-term liability items for Beun Company at December 31, 2012. Prepare the long-term liabilities section of the balance sheet for Beun Company.

|                           |           |
|---------------------------|-----------|
| Bonds payable, due 2014   | \$500,000 |
| Lease liability           | 70,000    |
| Notes payable, due 2017   | 80,000    |
| Discount on bonds payable | 45,000    |

*Prepare statement presentation of long-term liabilities.*  
(SO 6)

- \*BE15-9** (a) What is the present value of \$10,000 due 8 periods from now, discounted at 10%?  
(b) What is the present value of \$20,000 to be received at the end of each of 6 periods, discounted at 8%?

*Determine present value.*  
(SO 7)

**\*BE15-10** Presented below is the partial bond discount amortization schedule for Bilder Corp. Bilder uses the effective-interest method of amortization.

*Use effective-interest method of bond amortization.*  
(SO 8)

| Semiannual Interest Periods | Interest to Be Paid | Interest Expense to Be Recorded | Discount Amortization | Unamortized Discount | Bond Carrying Value |
|-----------------------------|---------------------|---------------------------------|-----------------------|----------------------|---------------------|
| Issue date                  |                     |                                 |                       | \$62,311             | \$937,689           |
| 1                           | \$45,000            | \$46,884                        | \$1,884               | 60,427               | 939,573             |
| 2                           | 45,000              | 46,979                          | 1,979                 | 58,448               | 941,552             |

**Instructions**

- Prepare the journal entry to record the payment of interest and the discount amortization at the end of period 1.
-  Explain why interest expense is greater than interest paid.
- Explain why interest expense will increase each period.

**\*BE15-11** Pagewynne Company issues \$5 million, 10-year, 9% bonds at 96, with interest payable on July 1 and January 1. The straight-line method is used to amortize bond discount.

*Prepare entries for bonds issued at a discount.*  
(SO 9)

- Prepare the journal entry to record the sale of these bonds on January 1, 2012.
- Prepare the journal entry to record interest expense and bond discount amortization on July 1, 2012, assuming no previous accrual of interest.

**\*BE15-12** Binger Inc. issues \$3 million, 5-year, 10% bonds at 102, with interest payable on July 1 and January 1. The straight-line method is used to amortize bond premium.

*Prepare entries for bonds issued at a premium.*  
(SO 9)

- Prepare the journal entry to record the sale of these bonds on January 1, 2012.
- Prepare the journal entry to record interest expense and bond premium amortization on July 1, 2012, assuming no previous accrual of interest.

## Do it! Review

Evaluate statements about bonds.

(SO 1)

**Do it! 15-1** State whether each of the following statements is true or false.

- \_\_\_\_\_ 1. Mortgage bonds and sinking fund bonds are both examples of debenture bonds.
- \_\_\_\_\_ 2. Convertible bonds are also known as callable bonds.
- \_\_\_\_\_ 3. The market rate is the rate investors demand for loaning funds.
- \_\_\_\_\_ 4. Semiannual interest on bonds is equal to the face value times the stated rate times 6/12.
- \_\_\_\_\_ 5. The present value of a bond is the value at which it should sell in the market.

Prepare journal entry for bond issuance and show balance sheet presentation.

(SO 2)

**Do it! 15-2** Biskup Corporation issues \$300,000 of bonds for \$312,000. (a) Prepare the journal entry to record the issuance of the bonds, and (b) show how the bonds would be reported on the balance sheet at the date of issuance.

Prepare entry for bond redemption.

(SO 3)

**Do it! 15-3** Venice Corporation issued \$400,000 of 10-year bonds at a discount. Prior to maturity, when the carrying value of the bonds was \$390,000, the company retired the bonds at 99. Prepare the entry to record the redemption of the bonds.

Prepare entries for mortgage note and installment payment on note.

(SO 4)

**Do it! 15-4** Bluebell Orchard issues a \$350,000, 6%, 15-year mortgage note to obtain needed financing for a new lab. The terms call for semiannual payments of \$17,857 each. Prepare the entries to record the mortgage loan and the first installment payment.

Prepare entry for lease, and compute debt to total assets ratio.

(SO 5)

**Do it! 15-5** Seipple Corporation leases new equipment on December 31, 2012. The lease transfers ownership of the equipment to Seipple at the end of the lease. The present value of the lease payments is \$192,000. After recording this lease, Seipple has assets of \$1,800,000, liabilities of \$1,100,000, and stockholders' equity of \$700,000. (a) Prepare the entry to record the lease, and (b) compute and discuss the debt to total assets ratio at year-end.

## Exercises

Evaluate statements about bonds.

(SO 1)

**E15-1** Jeff Bly has prepared the following list of statements about bonds.

1. Bonds are a form of interest-bearing notes payable.
2. When seeking long-term financing, an advantage of issuing bonds over issuing common stock is that stockholder control is not affected.
3. When seeking long-term financing, an advantage of issuing common stock over issuing bonds is that tax savings result.
4. Secured bonds have specific assets of the issuer pledged as collateral for the bonds.
5. Secured bonds are also known as debenture bonds.
6. Bonds that mature in installments are called term bonds.
7. A conversion feature may be added to bonds to make them more attractive to bond buyers.
8. The rate used to determine the amount of cash interest the borrower pays is called the stated rate.
9. Bond prices are usually quoted as a percentage of the face value of the bond.
10. The present value of a bond is the value at which it should sell in the marketplace.

### Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Compare two alternatives of financing—issuance of common stock vs. issuance of bonds.

(SO 1)

**E15-2** Bohlander Airlines is considering two alternatives for the financing of a purchase of a fleet of airplanes. These two alternatives are:

1. Issue 60,000 shares of common stock at \$45 per share. (Cash dividends have not been paid nor is the payment of any contemplated).
2. Issue 10%, 10-year bonds at face value for \$2,700,000.

It is estimated that the company will earn \$800,000 before interest and taxes as a result of this purchase. The company has an estimated tax rate of 30% and has 90,000 shares of common stock outstanding prior to the new financing.

### Instructions

Determine the effect on net income and earnings per share for these two methods of financing.

**E15-3** On January 1, Camel Cove Company issued \$500,000, 10%, 10-year bonds at face value. Interest is payable semiannually on July 1 and January 1.

*Prepare entries for issuance of bonds, and payment and accrual of bond interest.*

(SO 2)

**Instructions**

Present journal entries to record the following.

- (a) The issuance of the bonds.
- (b) The payment of interest on July 1, assuming that interest was not accrued on June 30.
- (c) The accrual of interest on December 31.

**E15-4** On January 1, Borgstrom Company issued \$300,000, 8%, 5-year bonds at face value. Interest is payable semiannually on July 1 and January 1.

*Prepare entries for bonds issued at face value.*

(SO 2)

**Instructions**

Prepare journal entries to record the following events.

- (a) The issuance of the bonds.
- (b) The payment of interest on July 1, assuming no previous accrual of interest.
- (c) The accrual of interest on December 31.

**E15-5** Reffue Company issued \$400,000 of 9%, 10-year bonds on January 1, 2012, at face value. Interest is payable semiannually on July 1 and January 1.

*Prepare entries for bonds issued at face value.*

(SO 2, 3)

**Instructions**

Prepare the journal entries to record the following events.

- (a) The issuance of the bonds.
- (b) The payment of interest on July 1, assuming no previous accrual of interest.
- (c) The accrual of interest on December 31.
- (d) The redemption of bonds at maturity, assuming interest for the last interest period has been paid and recorded.

**E15-6** Pas Company issued \$1,000,000 of bonds on January 1, 2012.

*Prepare entries for issuance, retirement, and conversion of bonds.*

(SO 2, 3)

**Instructions**

- (a) Prepare the journal entry to record the issuance of the bonds if they are issued at (1) 100, (2) 98, and (3) 103.
- (b) Prepare the journal entry to record the retirement of the bonds at maturity, assuming the bonds were issued at 100.
- (c) Prepare the journal entry to record the retirement of the bonds before maturity at 98. Assume the balance in Premium on Bonds Payable is \$9,000.
- (d) Prepare the journal entry to record the conversion of the bonds into 30,000 shares of \$10 par value common stock. Assume the bonds were issued at par.

**E15-7** Jacobson Company issued \$500,000 of 5-year, 8% bonds at 97 on January 1, 2012. The bonds pay interest twice a year.

*Prepare entries to record issuance of bonds at discount and premium.*

(SO 2)

**Instructions**

- (a) (1) Prepare the journal entry to record the issuance of the bonds.  
(2) Compute the total cost of borrowing for these bonds.
- (b) Repeat the requirements from part (a), assuming the bonds were issued at 105.

**E15-8** The following section is taken from Koster Corp.'s balance sheet at December 31, 2011.

*Prepare entries for bond interest and redemption.*

(SO 2, 3)

|  |           |
|--|-----------|
| Current liabilities                    |           |
| Interest payable                       | \$ 72,000 |
| Long-term liabilities                  |           |
| Bonds payable, 9%, due January 1, 2016 | 1,600,000 |

Bond interest is payable semiannually on January 1 and July 1. The bonds are callable on any interest date.

**Instructions**

- (a) Journalize the payment of the bond interest on January 1, 2012.
- (b) Assume that on January 1, 2012, after paying interest, Koster calls bonds having a face value of \$600,000. The call price is 104. Record the redemption of the bonds.
- (c) Prepare the entry to record the payment of interest on July 1, 2012, assuming no previous accrual of interest on the remaining bonds.

Prepare entries for redemption of bonds and conversion of bonds into common stock.

(SO 3)

**E15-9** Presented below are three independent situations.

1. Wakarusa Corporation retired \$130,000 face value, 12% bonds on June 30, 2012, at 102. The carrying value of the bonds at the redemption date was \$117,500. The bonds pay semiannual interest, and the interest payment due on June 30, 2012, has been made and recorded.
2. Pin Oak Inc. retired \$150,000 face value, 12.5% bonds on June 30, 2012, at 98. The carrying value of the bonds at the redemption date was \$151,000. The bonds pay semiannual interest, and the interest payment due on June 30, 2012, has been made and recorded.
3. Mishawaka Company has \$80,000, 8%, 12-year convertible bonds outstanding. These bonds were sold at face value and pay semiannual interest on June 30 and December 31 of each year. The bonds are convertible into 30 shares of Mishawaka \$5 par value common stock for each \$1,000 worth of bonds. On December 31, 2012, after the bond interest has been paid, \$20,000 face value bonds were converted. The market value of Mishawaka common stock was \$44 per share on December 31, 2012.

#### Instructions

For each independent situation above, prepare the appropriate journal entry for the redemption or conversion of the bonds.

Prepare entries to record mortgage note and installment payments.

(SO 4)

**E15-10** Bay Front Co. receives \$240,000 when it issues a \$240,000, 10%, mortgage note payable to finance the construction of a building at December 31, 2012. The terms provide for semiannual installment payments of \$20,000 on June 30 and December 31.

#### Instructions

Prepare the journal entries to record the mortgage loan and the first two installment payments.

Prepare entries to record mortgage note and installment payments.

(SO 4)

**E15-11** Amethyst Company borrowed \$300,000 on January 1, 2012, by issuing a \$300,000, 8% mortgage note payable. The terms call for semiannual installment payments of \$20,000 on June 30 and December 31.

#### Instructions

- (a) Prepare the journal entries to record the mortgage loan and the first two installment payments.
- (b) Indicate the amount of mortgage note payable to be reported as a current liability and as a long-term liability at December 31, 2012.

Prepare entries for operating lease and capital lease.

(SO 5)

**E15-12** Presented below are two independent situations.

1. Sunny Isles Car Rental leased a car to Emmaus Company for one year. Terms of the operating lease agreement call for monthly payments of \$500.
2. On January 1, 2012, Wruck Inc. entered into an agreement to lease 20 computers from Bras-kich Electronics. The terms of the lease agreement require three annual rental payments of \$30,000 (including 10% interest) beginning December 31, 2012. The present value of the three rental payments is \$74,606. Wruck considers this a capital lease.

#### Instructions

- (a) Prepare the appropriate journal entry to be made by Emmaus Company for the first lease payment.
- (b) Prepare the journal entry to record the lease agreement on the books of Wruck Inc. on January 1, 2012.

Prepare long-term liabilities section.

(SO 6)

**E15-13** The adjusted trial balance for Olde Farm Corporation at the end of the current year contained the following accounts.

|                          |          |
|--------------------------|----------|
| Interest Payable         | \$ 9,000 |
| Lease Liability          | 89,500   |
| Bonds Payable, due 2017  | 180,000  |
| Premium on Bonds Payable | 32,000   |

#### Instructions

Prepare the long-term liabilities section of the balance sheet.

**E15-14** Brasswood Corporation reports the following amounts in its 2012 financial statements:

|                            | <u>At December 31, 2012</u> | <u>For the Year 2012</u> |
|----------------------------|-----------------------------|--------------------------|
| Total assets               | \$1,000,000                 |                          |
| Total liabilities          | 620,000                     |                          |
| Total stockholders' equity | ?                           |                          |
| Interest expense           |                             | \$ 7,000                 |
| Income tax expense         |                             | 100,000                  |
| Net income                 |                             | 150,000                  |

**Instructions**

- (a) Compute the December 31, 2012, balance in stockholders' equity.
- (b) Compute the debt to total assets ratio at December 31, 2012.
- (c) Compute times interest earned for 2012.

*Compute debt to total assets and times interest earned ratios.*  
(SO 6)

**\*E15-15** Brislin Corporation is issuing \$200,000 of 8%, 5-year bonds when potential bond investors want a return of 10%. Interest is payable semiannually.

**Instructions**

Compute the market price (present value) of the bonds.

*Compute market price of bonds.*  
(SO 7)

**\*E15-16** Hoboken Corporation issued \$600,000, 9%, 10-year bonds on January 1, 2012, for \$562,613. This price resulted in an effective-interest rate of 10% on the bonds. Interest is payable semiannually on July 1 and January 1. Hoboken uses the effective-interest method to amortize bond premium or discount.

**Instructions**

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- (a) The issuance of the bonds.
- (b) The payment of interest and the discount amortization on July 1, 2012, assuming that interest was not accrued on June 30.
- (c) The accrual of interest and the discount amortization on December 31, 2012.

*Prepare entries for issuance of bonds, payment of interest, and amortization of discount using effective-interest method.*  
(SO 8)

**\*E15-17** WJTY Company issued \$300,000, 11%, 10-year bonds on January 1, 2012, for \$318,694. This price resulted in an effective-interest rate of 10% on the bonds. Interest is payable semiannually on July 1 and January 1. WJTY uses the effective-interest method to amortize bond premium or discount.

**Instructions**

Prepare the journal entries to record the following. (Round to the nearest dollar.)

- (a) The issuance of the bonds.
- (b) The payment of interest and the premium amortization on July 1, 2012, assuming that interest was not accrued on June 30.
- (c) The accrual of interest and the premium amortization on December 31, 2012.

*Prepare entries for issuance of bonds, payment of interest, and amortization of premium using effective-interest method.*  
(SO 8)

**\*E15-18** Caruba Company issued \$400,000, 9%, 20-year bonds on January 1, 2012, at 103. Interest is payable semiannually on July 1 and January 1. Caruba uses straight-line amortization for bond premium or discount.

**Instructions**

Prepare the journal entries to record the following.

- (a) The issuance of the bonds.
- (b) The payment of interest and the premium amortization on July 1, 2012, assuming that interest was not accrued on June 30.
- (c) The accrual of interest and the premium amortization on December 31, 2012.
- (d) The redemption of the bonds at maturity, assuming interest for the last interest period has been paid and recorded.

*Prepare entries to record issuance of bonds, payment of interest, amortization of premium, and redemption at maturity.*  
(SO 3, 9)

**\*E15-19** Caygill Company issued \$800,000, 11%, 10-year bonds on December 31, 2011, for \$730,000. Interest is payable semiannually on June 30 and December 31. Caygill Company uses the straight-line method to amortize bond premium or discount.

**Instructions**

Prepare the journal entries to record the following.

*Prepare entries to record issuance of bonds, payment of interest, amortization of discount, and redemption at maturity.*  
(SO 3, 9)

- (a) The issuance of the bonds.
- (b) The payment of interest and the discount amortization on June 30, 2012.
- (c) The payment of interest and the discount amortization on December 31, 2012.
- (d) The redemption of the bonds at maturity, assuming interest for the last interest period has been paid and recorded.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(SO 2, 3, 6)

**P15-1A** On May 1, 2012, Chance Corp. issued \$600,000, 9%, 5-year bonds at face value. The bonds were dated May 1, 2012, and pay interest semiannually on May 1 and November 1. Financial statements are prepared annually on December 31.

### Instructions

- (a) Prepare the journal entry to record the issuance of the bonds.
- (b) Prepare the adjusting entry to record the accrual of interest on December 31, 2012.
- (c) Show the balance sheet presentation on December 31, 2012.
- (d) Prepare the journal entry to record payment of interest on May 1, 2013, assuming no accrual of interest from January 1, 2013, to May 1, 2013.
- (e) Prepare the journal entry to record payment of interest on November 1, 2013.
- (f) Assume that on November 1, 2013, Chance calls the bonds at 102. Record the redemption of the bonds.

(d) Int. exp. \$18,000

(f) Loss \$12,000

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(SO 2, 3, 6)

**P15-2A** Cherney Electric sold \$500,000, 10%, 10-year bonds on January 1, 2012. The bonds were dated January 1 and paid interest on January 1 and July 1. The bonds were sold at 104.

### Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2012.
- (b) At December 31, 2012, the balance in the Premium on Bonds Payable account is \$18,000. Show the balance sheet presentation of accrued interest and the bond liability at December 31, 2012.
- (c) On January 1, 2014, when the carrying value of the bonds was \$516,000, the company redeemed the bonds at 105. Record the redemption of the bonds assuming that interest for the period has already been paid.

(c) Loss \$9,000

Prepare installment payments schedule and journal entries for a mortgage note payable.

(SO 4)

**P15-3A** Dutch Hollow Electronics issues a \$400,000, 8%, 10-year mortgage note on December 31, 2011. The proceeds from the note are to be used in financing a new research laboratory. The terms of the note provide for semiannual installment payments, exclusive of real estate taxes and insurance, of \$29,433. Payments are due June 30 and December 31.

### Instructions

- (a) Prepare an installment payments schedule for the first 2 years.
- (b) Prepare the entries for (1) the loan and (2) the first two installment payments.
- (c) Show how the total mortgage liability should be reported on the balance sheet at December 31, 2012.

(b) June 30 Mortgage Payable \$13,433

(c) Current liability—2012 \$29,639

Analyze three different lease situations and prepare journal entries.

(SO 5)

**P15-4A** Presented below are three different lease transactions that occurred for Manitoba Inc. in 2012. Assume that all lease contracts start on January 1, 2012. In no case does Manitoba receive title to the properties leased during or at the end of the lease term.

|  | Lessor          |                    |                |
|--|-----------------|--------------------|----------------|
|  | Farrey Delivery | DiBell Co.         | Diederich Auto |
| Type of property                           | Computer        | Delivery equipment | Automobile     |
| Yearly rental                              | \$ 6,000        | \$ 4,200           | \$ 3,700       |
| Lease term                                 | 6 years         | 4 years            | 2 years        |
| Estimated economic life                    | 7 years         | 7 years            | 5 years        |
| Fair value of lease asset                  | \$33,000        | \$19,000           | \$11,000       |
| Present value of the lease rental payments | \$31,000        | \$13,000           | \$ 6,400       |
| Bargain purchase option                    | None            | None               | None           |

**Instructions**

- (a) Which of the leases are operating leases and which are capital leases? Explain.
- (b) How should the lease transaction for DiBell Co. be recorded in 2012?
- (c) How should the lease transaction for Farrey Delivery be recorded on January 1, 2012?

**\*P15-5A** On July 1, 2012, Charisse Corporation issued \$2,000,000 face value, 10%, 10-year bonds at \$2,271,813. This price resulted in an effective-interest rate of 8% on the bonds. Charisse uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest July 1 and January 1.

**Instructions**

(Round all computations to the nearest dollar.)

- (a) Prepare the journal entry to record the issuance of the bonds on July 1, 2012.
- (b) Prepare an amortization table through December 31, 2013 (3 interest periods) for this bond issue.
- (c) Prepare the journal entry to record the accrual of interest and the amortization of the premium on December 31, 2012.
- (d) Prepare the journal entry to record the payment of interest and the amortization of the premium on July 1, 2013, assuming no accrual of interest on June 30.
- (e) Prepare the journal entry to record the accrual of interest and the amortization of the premium on December 31, 2013.

**\*P15-6A** On July 1, 2012, Francesca Company issued \$4,000,000 face value, 8%, 10-year bonds at \$3,501,514. This price resulted in an effective-interest rate of 10% on the bonds. Francesca uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest July 1 and January 1.

**Instructions**

(Round all computations to the nearest dollar.)

- (a) Prepare the journal entries to record the following transactions.
  - (1) The issuance of the bonds on July 1, 2012.
  - (2) The accrual of interest and the amortization of the discount on December 31, 2012.
  - (3) The payment of interest and the amortization of the discount on July 1, 2013, assuming no accrual of interest on June 30.
  - (4) The accrual of interest and the amortization of the discount on December 31, 2013.
- (b) Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2013, balance sheet.
- (c)  Provide the answers to the following questions in letter form.
  - (1) What amount of interest expense is reported for 2013?
  - (2) Would the bond interest expense reported in 2013 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?
  - (3) Determine the total cost of borrowing over the life of the bond.
  - (4) Would the total bond interest expense be greater than, the same as, or less than the total interest expense that would be reported if the straight-line method of amortization were used?

**\*P15-7A** Brown Deer Electric sold \$3,000,000, 10%, 10-year bonds on January 1, 2012. The bonds were dated January 1 and pay interest July 1 and January 1. Brown Deer Electric uses the straight-line method to amortize bond premium or discount. The bonds were sold at 104. Assume no interest is accrued on June 30.

**Instructions**

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2012.
- (b) Prepare a bond premium amortization schedule for the first 4 interest periods.
- (c) Prepare the journal entries for interest and the amortization of the premium in 2012 and 2013.
- (d) Show the balance sheet presentation of the bond liability at December 31, 2013.

**\*P15-8A** Canyon Run Company sold \$2,500,000, 8%, 10-year bonds on July 1, 2012. The bonds were dated July 1, 2012, and pay interest July 1 and January 1. Canyon Run Company uses the straight-line method to amortize bond premium or discount. Assume no interest is accrued on June 30.

*Prepare entries to record issuance of bonds, payment of interest, and amortization of bond premium using effective-interest method.*

(SO 2, 8)

(c) Amortization \$9,127

(d) Amortization \$9,493

(e) Amortization \$9,872

*Prepare entries to record issuance of bonds, payment of interest, and amortization of discount using effective-interest method. In addition, answer questions.*

(SO 2, 8)

(a) (3) Amortization \$15,830

(a) (4) Amortization \$16,621

(b) Bond carrying value  
\$3,549,041

*Prepare entries to record issuance of bonds, interest accrual, and straight-line amortization for 2 years.*

(SO 6, 9)

(b) Amortization \$6,000

(d) Premium on bonds  
payable \$96,000

*Prepare entries to record issuance of bonds, interest, and straight-line amortization of bond premium and discount.*

(SO 6, 9)

- (a) Amortization \$5,000  
 (b) Amortization \$2,500  
 (c) Premium on bonds payable \$95,000  
 Discount on bonds payable \$47,500

Prepare entries to record interest payments, straight-line premium amortization, and redemption of bonds.

(SO 2, 3, 9)

### Instructions

- (a) Prepare all the necessary journal entries to record the issuance of the bonds and bond interest expense for 2012, assuming that the bonds sold at 104.  
 (b) Prepare journal entries as in part (a) assuming that the bonds sold at 98.  
 (c) Show balance sheet presentation for each bond issue at December 31, 2012.

**\*P15-9A** The following is taken from the Gajda Company balance sheet.

### GAJDA COMPANY Balance Sheet (partial) December 31, 2012

|  |                |             |
|--|----------------|-------------|
| Current liabilities  |                |             |
| Interest payable (for 6 months from July 1 to December 31) |                | \$ 105,000  |
| Long-term liabilities                                      |                |             |
| Bonds payable, 7% due January 1, 2023                      | \$3,000,000    |             |
| Add: Premium on bonds payable                              | <u>200,000</u> | \$3,200,000 |

Interest is payable semiannually on January 1 and July 1. The bonds are callable on any semiannual interest date. Gajda uses straight-line amortization for any bond premium or discount. From December 31, 2012, the bonds will be outstanding for an additional 10 years (120 months).

### Instructions

- (b) Amortization \$10,000  
 (c) Gain \$64,000  
 (d) Amortization \$6,000

- (a) Journalize the payment of bond interest on January 1, 2013.  
 (b) Prepare the entry to amortize bond premium and to pay the interest due on July 1, 2013, assuming no accrual of interest on June 30.  
 (c) Assume that on July 1, 2013, after paying interest, Gajda Company calls bonds having a face value of \$1,200,000. The call price is 101. Record the redemption of the bonds.  
 (d) Prepare the adjusting entry at December 31, 2013, to amortize bond premium and to accrue interest on the remaining bonds.

## Problems: Set B

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(SO 2, 3, 6)

(d) Int. exp. \$75,000

(f) Loss \$40,000

Prepare entries to record issuance of bonds, interest accrual, and bond redemption.

(SO 2, 3, 6)

(c) Loss \$8,000

Prepare installment payments schedule and journal entries for a mortgage note payable.

(SO 4)

**P15-1B** On June 1, 2012, Lublin Corp. issued \$2,000,000, 9%, 5-year bonds at face value. The bonds were dated June 1, 2012, and pay interest semiannually on June 1 and December 1. Financial statements are prepared annually on December 31.

### Instructions

- (a) Prepare the journal entry to record the issuance of the bonds.  
 (b) Prepare the adjusting entry to record the accrual of interest on December 31, 2012.  
 (c) Show the balance sheet presentation on December 31, 2012.  
 (d) Prepare the journal entry to record payment of interest on June 1, 2013, assuming no accrual of interest from January 1, 2013, to June 1, 2013.  
 (e) Prepare the journal entry to record payment of interest on December 1, 2013.  
 (f) Assume that on December 1, 2013, Lublin calls the bonds at 102. Record the redemption of the bonds.

**P15-2B** Petoskey Co. sold \$800,000, 9%, 10-year bonds on January 1, 2012. The bonds were dated January 1, and interest is paid on January 1 and July 1. The bonds were sold at 105.

### Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2012.  
 (b) At December 31, 2012, the balance in the Premium on Bonds Payable account is \$36,000. Show the balance sheet presentation of accrued interest and the bond liability at December 31, 2012.  
 (c) On January 1, 2014, when the carrying value of the bonds was \$832,000, the company redeemed the bonds at 105. Record the redemption of the bonds assuming that interest for the period has already been paid.

**P15-3B** Giordano's Electronics issues a \$600,000, 8%, 10-year mortgage note on December 31, 2012, to help finance a plant expansion program. The terms provide for semiannual installment payments, not including real estate taxes and insurance, of \$44,149. Payments are due June 30 and December 31.

**Instructions**

- (a) Prepare an installment payments schedule for the first 2 years.  
 (b) Prepare the entries for (1) the mortgage loan and (2) the first two installment payments.  
 (c) Show how the total mortgage liability should be reported on the balance sheet at December 31, 2013.

- (b) June 30 Mortgage Payable \$20,149  
 (c) Current liability—2013: \$44,458

**P15-4B** Presented below are three different lease transactions in which Kristi Enterprises engaged in 2012. Assume that all lease transactions start on January 1, 2012. In no case does Kristi receive title to the properties leased during or at the end of the lease term.

Analyze three different lease situations and prepare journal entries.

(SO 5)

|  | Lessor             |                |            |
|--|--------------------|----------------|------------|
|  | Denham Springs Co. | Hofmeister Co. | Janca Inc. |
| Type of property                           | Bulldozer          | Truck          | Furniture  |
| Bargain purchase option                    | None               | None           | None       |
| Lease term                                 | 4 years            | 6 years        | 3 years    |
| Estimated economic life                    | 8 years            | 7 years        | 5 years    |
| Yearly rental                              | \$13,000           | \$20,000       | \$ 3,000   |
| Fair value of leased asset                 | \$80,000           | \$96,000       | \$20,500   |
| Present value of the lease rental payments | \$48,000           | \$82,000       | \$ 9,000   |

**Instructions**

- (a) Identify the leases above as operating or capital leases. Explain.  
 (b) How should the lease transaction for Hofmeister Co. be recorded on January 1, 2012?  
 (c) How should the lease transaction for Janca Inc. be recorded in 2012?

**\*P15-5B** On July 1, 2012, Sagittarius Satellites issued \$4,500,000 face value, 9%, 10-year bonds at \$4,219,600. This price resulted in an effective-interest rate of 10% on the bonds. Sagittarius uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest July 1 and January 1.

Prepare entries to record issuance of bonds, payment of interest, and amortization of bond discount using effective-interest method.

(SO 2, 8)

**Instructions**

(Round all computations to the nearest dollar.)

- (a) Prepare the journal entry to record the issuance of the bonds on July 1, 2012.  
 (b) Prepare an amortization table through December 31, 2013 (3 interest periods) for this bond issue.  
 (c) Prepare the journal entry to record the accrual of interest and the amortization of the discount on December 31, 2012.  
 (d) Prepare the journal entry to record the payment of interest and the amortization of the discount on July 1, 2013, assuming that interest was not accrued on June 30.  
 (e) Prepare the journal entry to record the accrual of interest and the amortization of the discount on December 31, 2013.

(c) Amortization \$8,480

(d) Amortization \$8,904

(e) Amortization \$9,349

**\*P15-6B** On July 1, 2012, Dacotah Chemical Company issued \$4,000,000 face value, 10%, 10-year bonds at \$4,543,627. This price resulted in an 8% effective-interest rate on the bonds. Dacotah uses the effective-interest method to amortize bond premium or discount. The bonds pay semiannual interest on each July 1 and January 1.

Prepare entries to record issuance of bonds, payment of interest, and amortization of premium using effective-interest method. In addition, answer questions.

(SO 2, 8)

**Instructions**

(Round all computations to the nearest dollar.)

- (a) Prepare the journal entries to record the following transactions.  
 (1) The issuance of the bonds on July 1, 2012.  
 (2) The accrual of interest and the amortization of the premium on December 31, 2012.  
 (3) The payment of interest and the amortization of the premium on July 1, 2013, assuming no accrual of interest on June 30.  
 (4) The accrual of interest and the amortization of the premium on December 31, 2013.  
 (b) Show the proper balance sheet presentation for the liability for bonds payable on the December 31, 2013, balance sheet.  
 (c)  Provide the answers to the following questions in letter form.  
 (1) What amount of interest expense is reported for 2013?  
 (2) Would the bond interest expense reported in 2013 be the same as, greater than, or less than the amount that would be reported if the straight-line method of amortization were used?

(a) (2) Amortization \$18,255

(a) (3) Amortization \$18,985

(a) (4) Amortization \$19,745

(b) Bond carrying value \$4,486,642

Prepare entries to record issuance of bonds, interest accrual, and straight-line amortization for 2 years.

(SO 6, 9)

(b) Amortization \$6,000

(d) Discount on bonds payable \$216,000

Prepare entries to record issuance of bonds, interest, and straight-line amortization of bond premium and discount.

(SO 6, 9)

(a) Amortization \$6,000

(b) Amortization \$8,000

(c) Premium on bonds payable \$108,000  
Discount on bonds payable \$144,000

Prepare entries to record interest payments, straight-line discount amortization, and redemption of bonds.

(SO 2, 3, 9)

(b) Amortization \$4,500

(c) Loss \$44,500

(d) Amortization \$3,000

- (3) Determine the total cost of borrowing over the life of the bond.
- (4) Would the total bond interest expense be greater than, the same as, or less than the total interest expense if the straight-line method of amortization were used?

**\*P15-7B** Somonauk Company sold \$6,000,000, 9%, 20-year bonds on January 1, 2012. The bonds were dated January 1, 2012, and pay interest on January 1 and July 1. Somonauk Company uses the straight-line method to amortize bond premium or discount. The bonds were sold at 96. Assume no interest is accrued on June 30.

#### Instructions

- (a) Prepare the journal entry to record the issuance of the bonds on January 1, 2012.
- (b) Prepare a bond discount amortization schedule for the first 4 interest periods.
- (c) Prepare the journal entries for interest and the amortization of the discount in 2012 and 2013.
- (d) Show the balance sheet presentation of the bond liability at December 31, 2013.

**\*P15-8B** Gabriel Corporation sold \$4,000,000, 8%, 10-year bonds on January 1, 2012. The bonds were dated January 1, 2012, and pay interest on July 1 and January 1. Gabriel Corporation uses the straight-line method to amortize bond premium or discount. Assume no interest is accrued on June 30.

#### Instructions

- (a) Prepare all the necessary journal entries to record the issuance of the bonds and bond interest expense for 2012, assuming that the bonds sold at 103.
- (b) Prepare journal entries as in part (a) assuming that the bonds sold at 96.
- (c) Show balance sheet presentation for each bond issue at December 31, 2012.

**\*P15-9B** The following is taken from the Kijak Corp. balance sheet.

#### KIJAK CORPORATION Balance Sheet (partial) December 31, 2012

|   |             |    |           |
|---|-------------|----|-----------|
| Current liabilities   |             |    |           |
| Interest payable (for 6 months<br>from July 1 to December 31) |             | \$ | 108,000   |
| Long-term liabilities   |             |    |           |
| Bonds payable, 9%, due<br>January 1, 2023                     | \$2,400,000 |    |           |
| Less: Discount on bonds payable                               | 90,000      |    | 2,310,000 |

Interest is payable semiannually on January 1 and July 1. The bonds are callable on any semiannual interest date. Kijak uses straight-line amortization for any bond premium or discount. From December 31, 2012, the bonds will be outstanding for an additional 10 years (120 months).

#### Instructions

(Round all computations to the nearest dollar).

- (a) Journalize the payment of bond interest on January 1, 2013.
- (b) Prepare the entry to amortize bond discount and to pay the interest due on July 1, 2013, assuming that interest was not accrued on June 30.
- (c) Assume that on July 1, 2013, after paying interest, Kijak Corp. calls bonds having a face value of \$800,000. The call price is 102. Record the redemption of the bonds.
- (d) Prepare the adjusting entry at December 31, 2013, to amortize bond discount and to accrue interest on the remaining bonds.

## Comprehensive Problem: Chapters 13–15

**CP15** Nordham Corporation's trial balance at December 31, 2012, is presented below. All 2012 transactions have been recorded except for the items described below.

|  | <b>Debit</b> | <b>Credit</b> |
|--|--------------|---------------|
| Cash   | \$ 23,000    |               |
| Accounts Receivable                              | 51,000       |               |
| Inventory  | 22,700       |               |
| Land   | 65,000       |               |
| Buildings  | 95,000       |               |
| Equipment  | 40,000       |               |
| Allowance for Doubtful Accounts                  |              | \$ 450        |
| Accumulated Depreciation—Buildings               |              | 30,000        |
| Accumulated Depreciation—Equipment               |              | 14,400        |
| Accounts Payable                                 |              | 19,300        |
| Interest Payable                                 |              | –0–           |
| Dividends Payable                                |              | –0–           |
| Unearned Rent Revenue                            |              | 8,000         |
| Bonds Payable (10%)                              |              | 50,000        |
| Common Stock (\$10 par)                          |              | 30,000        |
| Paid-in Capital in Excess of Par—Common Stock    |              | 6,000         |
| Preferred Stock (\$20 par)                       |              | –0–           |
| Paid-in Capital in Excess of Par—Preferred Stock |              | –0–           |
| Retained Earnings                                |              | 75,050        |
| Treasury Stock                                   | –0–          |               |
| Cash Dividends                                   | –0–          |               |
| Sales Revenue                                    |              | 570,000       |
| Rent Revenue                                     |              | –0–           |
| Bad Debts Expense                                | –0–          |               |
| Interest Expense                                 | 2,500        |               |
| Cost of Goods Sold                               | 400,000      |               |
| Depreciation Expense                             | –0–          |               |
| Other Operating Expenses                         | 39,000       |               |
| Salaries and Wages Expense                       | 65,000       |               |
| Total  | \$803,200    | \$803,200     |

### Unrecorded transactions

1. On January 1, 2012, Nordham issued 1,000 shares of \$20 par, 6% preferred stock for \$22,000.
2. On January 1, 2012, Nordham also issued 1,000 shares of common stock for \$23,000.
3. Nordham reacquired 300 shares of its common stock on July 1, 2012, for \$49 per share.
4. On December 31, 2012, Nordham declared the annual preferred stock dividend and a \$1.50 per share dividend on the outstanding common stock, all payable on January 15, 2013.
5. Nordham estimates that uncollectible accounts receivable at year-end is \$5,100.
6. The building is being depreciated using the straight-line method over 30 years. The salvage value is \$5,000.
7. The equipment is being depreciated using the straight-line method over 10 years. The salvage value is \$4,000.
8. The unearned rent was collected on October 1, 2012. It was receipt of 4 months' rent in advance (October 1, 2012 through January 31, 2013).
9. The 10% bonds payable pay interest every January 1 and July 1. The interest for the 6 months ended December 31, 2012, has not been paid or recorded.

### Instructions

(Ignore income taxes.)

- (a) Prepare journal entries for the transactions listed above.
- (b) Prepare an updated December 31, 2012, trial balance, reflecting the unrecorded transactions. (b) Total \$868,700
- (c) Prepare a multiple-step income statement for the year ending December 31, 2012.
- (d) Prepare a retained earnings statement for the year ending December 31, 2012.
- (e) Prepare a classified balance sheet as of December 31, 2012. (e) Total assets \$270,900

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 14.)

**CCC15** Natalie and Curtis have been experiencing great demand for their cookies and muffins. As a result, they are now thinking about buying a commercial oven. They know which oven they want and how much it will cost. They have some cash set aside for the purchase and will need to borrow the rest. They met with a bank manager to discuss their options.

Go to the book's companion website, [www.wiley.com/college/wegandt](http://www.wiley.com/college/wegandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### Financial Reporting Problem: PepsiCo, Inc.

**BYP15-1** Refer to the financial statements of **PepsiCo, Inc.** and the Notes to Consolidated Financial Statements in Appendix A.

#### Instructions

- What was PepsiCo's total long-term debt at December 26, 2009? What was the increase/decrease in total long-term debt from the prior year? What does Note 9 to the financial statements indicate about the composition of PepsiCo's long-term debt obligation?
- What type of leases, operating or capital, does PepsiCo report? (See Note 9.) Are these leases reported on PepsiCo's financial statements?
- What are the total long-term contractual commitments that PepsiCo reports as of December 26, 2009? (See Note 9.)

### Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

**BYP15-2** PepsiCo's financial statements are presented in Appendix A. Financial statements of **The Coca-Cola Company** are presented in Appendix B.

#### Instructions

- Based on the information contained in these financial statements, compute the following 2009 ratios for each company.
  - Debt to total assets.
  - Times interest earned.
- What conclusions concerning the companies' long-run solvency can be drawn from these ratios?
- Which company has reported the greater amount of future long-term commitments for the 5 succeeding years?

### On the Web

**BYP15-3** Bond or debt securities pay a stated rate of interest. This rate of interest is dependent on the risk associated with the investment. **Moody's Investment Service** provides ratings for companies that issue debt securities.

**Address:** [www.moody.com](http://www.moody.com), or go to [www.wiley.com/college/wegandt](http://www.wiley.com/college/wegandt)

**Steps:** From Moody's homepage, choose **About Moody's**.

#### Instructions

- What year did Moody's introduce the first bond rating? (See **Moody's History**.)
- What is the total amount of debt securities that Moody's analysts "track"? (See **An Introduction**.)
- What characteristics must debt ratings have in order to be useful to the capital markets? (See **Understand Risk: The Truth About Credit Ratings**.)

## Critical Thinking

### Decision Making Across the Organization

**\*BYP15-4** On January 1, 2010, Carlin Corporation issued \$2,400,000 of 5-year, 8% bonds at 95; the bonds pay interest semiannually on July 1 and January 1. By January 1, 2012, the market rate of interest for bonds of risk similar to those of Carlin Corporation had risen. As a result, the market value of these bonds was \$2,000,000 on January 1, 2012—below their carrying value. Andrea Carlin, president of the company, suggests repurchasing all of these bonds in the open market at the \$2,000,000 price. To do so the company will have to issue \$2,000,000 (face value) of new 10-year, 11% bonds at par. The president asks you, as controller, “What is the feasibility of my proposed repurchase plan?”

#### Instructions

With the class divided into groups, answer the following.

- What is the carrying value of the outstanding Carlin Corporation 5-year bonds on January 1, 2012? (Assume straight-line amortization.)
- Prepare the journal entry to retire the 5-year bonds on January 1, 2012. Prepare the journal entry to issue the new 10-year bonds.
- Prepare a short memo to the president in response to her request for advice. List the economic factors that you believe should be considered for her repurchase proposal.

### Communication Activity

**BYP15-5** Joe Penner, president of Penner Corporation, is considering the issuance of bonds to finance an expansion of his business. He has asked you to (1) discuss the advantages of bonds over common stock financing, (2) indicate the types of bonds he might issue, and (3) explain the issuing procedures used in bond transactions.

#### Instructions

Write a memo to the president, answering his request.

### Ethics Case

**BYP15-6** Sam Farr is the president, founder, and majority owner of Galena Medical Corporation, an emerging medical technology products company. Galena is in dire need of additional capital to keep operating and to bring several promising products to final development, testing, and production. Sam, as owner of 51% of the outstanding stock, manages the company’s operations. He places heavy emphasis on research and development and on long-term growth. The other principal stockholder is Jill Hutton who, as a nonemployee investor, owns 40% of the stock. Jill would like to deemphasize the R&D functions and emphasize the marketing function, to maximize short-run sales and profits from existing products. She believes this strategy would raise the market price of Galena’s stock.

All of Sam’s personal capital and borrowing power is tied up in his 51% stock ownership. He knows that any offering of additional shares of stock will dilute his controlling interest because he won’t be able to participate in such an issuance. But, Jill has money and would likely buy enough shares to gain control of Galena. She then would dictate the company’s future direction, even if it meant replacing Sam as president and CEO.

The company already has considerable debt. Raising additional debt will be costly, will adversely affect Galena’s credit rating, and will increase the company’s reported losses due to the growth in interest expense. Jill and the other minority stockholders express opposition to the assumption of additional debt, fearing the company will be pushed to the brink of bankruptcy. Wanting to maintain his control and to preserve the direction of “his” company, Sam is doing everything to avoid a stock issuance. He is contemplating a large issuance of bonds, even if it means the bonds are issued with a high effective-interest rate.

#### Instructions

- Who are the stakeholders in this situation?
- What are the ethical issues in this case?
- What would you do if you were Sam?

## “All About You” Activity

**BYP15-7** Numerous articles have been written that identify early warning signs that you might be getting into trouble with your personal debt load. You can find many good articles on this topic on the Internet.

### Instructions

Find an article that identifies early warning signs of personal debt trouble. Write a summary of the article and bring your summary and the article to class to share.

## FASB Codification Activity

**BYP15-8** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following:

- What is the long-term obligation?
- What guidance does the Codification provide for the disclosure of long-term obligations?

### Answers to Insight and Accounting Across the Organization Questions

**p. 682 Bonds Versus Notes?** **Q:** Why might companies prefer bond financing instead of short-term financing? **A:** In some cases, it is difficult to get loans from banks. In addition, low interest rates have encouraged companies to go more long-term and fix their rate. Recently, short-term loans suddenly froze, leading to liquidity problems for certain companies.

**p. 686 “Covenant-Lite” Debt** **Q:** How can financial ratios such as those covered in this chapter provide protection for creditors? **A:** Financial ratios such as the current ratio, debt to total assets ratio, and the times interest earned ratio provide indications of a company’s liquidity and solvency. By specifying minimum levels of liquidity and solvency, as measured by these ratios, a creditor creates triggers that enable it to step in before a company’s financial situation becomes too dire.

## IFRS A Look at IFRS

IFRS and GAAP have similar definitions of liabilities. IFRSs related to reporting and recognition of liabilities are found in *IAS 1 (revised)* (“Presentation of Financial Statements”) and *IAS 37* (“Provisions, Contingent Liabilities, and Contingent Assets”).

## Key Points

- As indicated in Chapter 11, in general GAAP and IFRS define liabilities similarly.
- IFRS requires that companies classify liabilities as current or noncurrent on the face of the statement of financial position (balance sheet), except in industries where a *presentation* based on liquidity would be considered to provide more useful information (such as financial institutions). When current liabilities (also called short-term liabilities) are presented, they are generally presented in order of liquidity.
- Under IFRS, liabilities are classified as current if they are expected to be paid within 12 months.

- Similar to GAAP, items are normally reported in order of liquidity. Companies sometimes show liabilities before assets. Also, they will sometimes show noncurrent (long-term) liabilities before current liabilities.
- Under both GAAP and IFRS, preferred stock that is required to be redeemed at a specific point in time in the future must be reported as debt, rather than being presented as either equity or in a “mezzanine” area between debt and equity.
- The basic calculation for bond valuation is the same under GAAP and IFRS. In addition, the accounting for bond liability transactions is essentially the same between GAAP and IFRS.
- IFRS requires use of the effective-interest method for amortization of bond discounts and premiums. GAAP also requires the effective-interest method, except that it allows use of the straight-line method where the difference is not material. Under IFRS, companies do not use a premium or discount account but instead show the bond at its net amount. For example, if a \$100,000 bond was issued at 97, under IFRS a company would record:

|               |        |        |
|---------------|--------|--------|
| Cash          | 97,000 |        |
| Bonds Payable |        | 97,000 |

- The accounting for convertible bonds differs between IFRS and GAAP. Unlike GAAP, IFRS splits the proceeds from the convertible bond between an equity component and a debt component. The equity conversion rights are reported in equity.

To illustrate, assume that Harris Corp. issues convertible 7% bonds with a face value of \$1,000,000 and receives \$1,000,000. Comparable bonds without a conversion feature would have required a 9% rate of interest. To determine how much of the proceeds would be allocated to debt and how much to equity, the promised payments of the bond obligation would be discounted at the market rate of 9%. Suppose that this results in a present value of \$850,000. The entry to record the issuance would be:

|                                 |           |         |
|---------------------------------|-----------|---------|
| Cash                            | 1,000,000 |         |
| Bonds Payable                   |           | 850,000 |
| Share Premium—Conversion Equity |           | 150,000 |

- The IFRS leasing standard is *IAS 17*. Both Boards share the same objective of recording leases by lessees and lessors according to their economic substance—that is, according to the definitions of assets and liabilities. However, GAAP for leases is much more “rules-based” with specific bright-line criteria (such as the “90% of fair value” test) to determine if a lease arrangement transfers the risks and rewards of ownership; IFRS is more conceptual in its provisions. Rather than a 90% cut-off, it asks whether the agreement transfers substantially all of the risks and rewards associated with ownership.

## Looking to the Future

The FASB and IASB are currently involved in two projects, each of which has implications for the accounting for liabilities. One project is investigating approaches to differentiate between debt and equity instruments. The other project, the elements phase of the conceptual framework project, will evaluate the definitions of the fundamental building blocks of accounting. The results of these projects could change the classification of many debt and equity securities.

In addition to these projects, the FASB and IASB have also identified leasing as one of the most problematic areas of accounting. A joint project is now focused on lessee accounting. One of the first areas studied is, “What are the assets and liabilities to be recognized related to a lease contract?” Should the focus remain on the leased item or the right to use the leased item? This question is tied to the Boards’ joint project on the conceptual framework—defining an “asset” and a “liability.”

## IFRS Self-Test Questions

- The accounting for bonds payable is:
  - essentially the same under IFRS and GAAP.
  - differs in that GAAP requires use of the straight-line method for amortization of bond premium and discount.
  - the same except that market prices may be different because the present value calculations are different between IFRS and GAAP.
  - not covered by IFRS.
- Stevens Corporation issued 5% convertible bonds with a total face value of \$3,000,000 for \$3,000,000. If the bonds had not had a conversion feature, they would have sold for \$2,600,000. Under IFRS, the entry to record the transaction would require a credit to:
  - Bonds Payable for \$3,000,000.
  - Bonds Payable for \$400,000.
  - Share Premium—Conversion Equity for \$400,000.
  - Discount on Bonds Payable for \$400,000.
- Under IFRS, if preference shares (preferred stock) have a requirement to be redeemed at a specific point in time in the future, they are treated:
  - as a type of asset account.
  - as ordinary shares (common stock).
  - in the same fashion as other types of preference shares.
  - as a liability.
- The leasing standards employed by IFRS:
  - rely more heavily on interpretation of the conceptual meaning of assets and liabilities than GAAP.
  - are more “rules based” than those of GAAP.
  - employ the same “bright-line test” as GAAP.
  - are identical to those of GAAP.
- The joint projects of the FASB and IASB could potentially:
  - change the definition of liabilities.
  - change the definition of equity.
  - change the definition of assets.
  - All of the above.

## IFRS Concepts and Application

**IFRS15-1** Briefly describe some of the similarities and differences between GAAP and IFRS with respect to the accounting for liabilities.

**IFRS15-2** Ratzlaff Company issues €2 million, 10-year, 8% bonds at 97, with interest payable on July 1 and January 1.

### Instructions

- Prepare the journal entry to record the sale of these bonds on January 1, 2012.
- Assuming instead that the above bonds sold for 104, prepare the journal entry to record the sale of these bonds on January 1, 2012.

**IFRS15-3** Archer Company issued £4,000,000 par value, 7% convertible bonds at 99 for cash. The net present value of the debt without the conversion feature is £3,800,000. Prepare the journal entry to record the issuance of the convertible bonds.

## International Financial Statement Analysis: *Zetar plc*

**IFRS15-4** The financial statements of *Zetar plc* are presented on Appendix C. The company's complete annual report, including the notes to its financial statements, is available at [www.zetarplc.com](http://www.zetarplc.com).

### Instructions

Use the company's annual report to answer the following questions.

- (a) According to the notes to the financial statements, what types of transactions do trade payables relate to? What was the average amount of time it took the company to pay its payables?
- (b) Note 2 (B) discusses provisions that the company records for certain types of activities. What do the provisions relate to, what are the estimates based on, and what could cause those estimates to change in subsequent periods?
- (c) What was the average interest rate paid on bank loans and overdrafts?

# CHAPTER 16

## Investments

### Study Objectives

After studying this chapter, you should be able to:

- 1 Discuss why corporations invest in debt and stock securities.
- 2 Explain the accounting for debt investments.
- 3 Explain the accounting for stock investments.
- 4 Describe the use of consolidated financial statements.
- 5 Indicate how debt and stock investments are reported in financial statements.
- 6 Distinguish between short-term and long-term investments.

### Feature Story

#### "IS THERE ANYTHING ELSE WE CAN BUY?"

In a rapidly changing world, you must change rapidly or suffer the consequences. In business, change requires investment.

A case in point is found in the entertainment industry. Technology is bringing about innovations so quickly that it is nearly impossible to guess which technologies will last and which will soon fade away. For example, will both satellite TV and cable TV survive, or will just one succeed, or will both be replaced by something else? Or consider the publishing industry. Will paper newspapers and magazines be replaced by online news via the World Wide Web? If you are a publisher, you have to make your best guess about what the future holds and invest accordingly.

**Time Warner, Inc.** lives at the center of this arena. It is not an environment for the timid, and Time Warner's philosophy is anything but timid. It might be characterized

as, "If we can't beat you, we will buy you." Its mantra is "invest, invest, invest." A list

of Time Warner's holdings gives an idea of its reach. Magazines: *People*, *Time*, *Life*, *Sports Illustrated*, *Fortune*. Book publishers: Time-Life Books, Book-of-the-Month Club, Little, Brown & Co, Sunset Books. Television and movies: Warner Bros. ("ER," "Without a Trace," the WB Network), HBO, and movies like *Harry Potter and the Goblet of Fire*, and *Batman Begins*. Broadcasting: TNT, CNN news, and Turner's library of thousands of classic movies. Internet: America Online, and AOL Anywhere. Time Warner owns more information and entertainment copyrights and brands than any other company in the world.

The merger of **America Online (AOL)** with Time Warner, one of the biggest mergers ever, was originally perceived by many as the gateway to the future. In actuality, it was a financial disaster. It is largely responsible for much of the decline in Time Warner's stock price, from a high of \$95.80 to a recent level of \$14.07. Ted Turner, who was at one time Time Warner's largest shareholder, lost billions of dollars on the deal and eventually sold most of his shares.

## Inside **CHAPTER 16**

- **Accounting Across the Organization: How Procter & Gamble Accounts for Gillette** (p. 731)
- **Accounting Across the Organization: And the Correct Way to Report Investments Is...?** (p. 734)

# Preview of CHAPTER 16

**Time Warner's** management believes in aggressive growth through investing in the stock of existing companies. Besides purchasing stock, companies also purchase other securities such as bonds issued by corporations or by governments. Companies can make investments for a short or long period of time, as a passive investment, or with the intent to control another company. As you will see in this chapter, the way in which a company accounts for its investments is determined by a number of factors.

The content and organization of Chapter 16 are as follows.

| Investments   |  |  |  |
|---|--|--|--|

## Why Corporations Invest

### Study Objective [1]

Discuss why corporations invest in debt and stock securities.

Corporations purchase investments in debt or stock securities generally for one of three reasons. First, a corporation may **have excess cash** that it does not need for the immediate purchase of operating assets. For example, many companies experience seasonal fluctuations in sales. A Cape Cod marina has more sales in the spring and summer than in the fall and winter. (The reverse is true for an Aspen ski shop.) At the end of an operating cycle, the marina may have cash on hand that is temporarily idle until the start of another operating cycle. It may invest the excess funds to earn a greater return—interest and dividends—than it would get by just holding the funds in the bank. Illustration 16-1 depicts the role that such temporary investments play in the operating cycle.

**Illustration 16-1**  
Temporary investments and the operating cycle

Excess cash may also result from economic cycles. For example, when the economy is booming, **General Electric** generates considerable excess cash. It uses some of this cash to purchase new plant and equipment and pays out some of the cash in dividends. But it may also invest excess cash in liquid assets in anticipation of a future downturn in the economy. It can then liquidate these investments during a recession, when sales slow and cash is scarce.

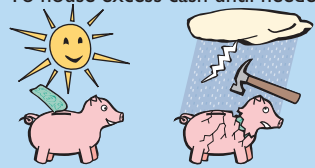

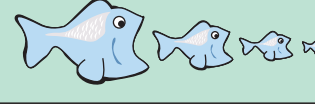

When investing excess cash for short periods of time, corporations invest in low-risk, highly liquid securities—most often short-term government securities. It is generally not wise to invest short-term excess cash in shares of common stock because stock investments can experience rapid price changes. If you did invest your short-term excess cash in stock and the price of the stock declined significantly just before you needed cash again, you would be forced to sell your stock investment at a loss.

A second reason some companies purchase investments is to generate **earnings from investment income**. For example, banks make most of their earnings by lending money, but they also generate earnings by investing in debt. Conversely, mutual stock funds invest primarily in equity securities in order to benefit from stock-price appreciation and dividend revenue.

Third, companies also invest for **strategic reasons**. A company can exercise some influence over a customer or supplier by purchasing a significant, but not controlling, interest in that company. Or, a company may purchase a noncontrolling interest in another company in a related industry in which it wishes to establish a presence. For example, **Time Warner** initially purchased an interest of less than 20% in **Turner Broadcasting** to have a stake in Turner's expanding business opportunities. At a later date **Time Warner** acquired the remaining 80%. Subsequently, Time Warner merged with **AOL** and became **AOL Time Warner, Inc.** Now, it is again just **Time Warner, Inc.**, having dropped the "AOL" from its name in late 2003.

A corporation may also choose to purchase a controlling interest in another company. For example, as the *Accounting Across the Organization* box on page 731 shows, **Procter & Gamble** purchased **Gillette**. Such purchases might be done to enter a new industry without incurring the tremendous costs and risks associated with starting from scratch. Or a company might purchase another company in its same industry.

In summary, businesses invest in other companies for the reasons shown in Illustration 16-2.

| Reason   | Typical Investment   |
|--|--|
| To house excess cash until needed<br> | Low-risk, high-liquidity, short-term securities such as government-issued securities                           |
| To generate earnings<br>              | Debt securities (banks and other financial institutions) and stock securities (mutual funds and pension funds) |
| To meet strategic goals<br>           | Stocks of companies in a related industry or in an unrelated industry that the company wishes to enter         |

**Illustration 16-2**  
Why corporations invest

## Accounting for Debt Investments

**Debt investments** are investments in government and corporation bonds. In accounting for debt investments, companies make entries to record (1) the acquisition, (2) the interest revenue, and (3) the sale.

### Study Objective [2]

Explain the accounting for debt investments.

## Recording Acquisition of Bonds

**At acquisition, the cost principle applies.** Cost includes all expenditures necessary to acquire these investments, such as the price paid plus brokerage fees (commissions), if any.

Assume, for example, that Kuhl Corporation acquires 50 Doan Inc. 8%, 10-year, \$1,000 bonds on January 1, 2012, for \$54,000, including brokerage fees of \$1,000. The entry to record the investment is:

|                   |   |   |   |    |
|-------------------|---|---|---|----|
| A                 | = | L | + | SE |
| +54,000           |   |   |   |    |
| -54,000           |   |   |   |    |
| <hr/>             |   |   |   |    |
| <b>Cash Flows</b> |   |   |   |    |
| -54,000           |   |   |   |    |

|        |  |        |        |
|--------|--|--------|--------|
| Jan. 1 | Debt Investments                           | 54,000 |        |
|        | Cash                                       |        | 54,000 |
|        | (To record purchase of 50 Doan Inc. bonds) |        |        |

## Recording Bond Interest

The Doan, Inc. bonds pay interest of \$2,000 semiannually on July 1 and January 1 ( $\$50,000 \times 8\% \times \frac{1}{2}$ ). The entry for the receipt of interest on July 1 is:

|                   |   |   |            |    |
|-------------------|---|---|------------|----|
| A                 | = | L | +          | SE |
| +2,000            |   |   |            |    |
|                   |   |   | +2,000 Rev |    |
| <hr/>             |   |   |            |    |
| <b>Cash Flows</b> |   |   |            |    |
| +2,000            |   |   |            |    |

|        |  |       |       |
|--------|--|-------|-------|
| July 1 | Cash   | 2,000 |       |
|        | Interest Revenue                                   |       | 2,000 |
|        | (To record receipt of interest on Doan Inc. bonds) |       |       |

If Kuhl Corporation's fiscal year ends on December 31, it accrues the interest of \$2,000 earned since July 1. The adjusting entry is:

|                   |   |   |            |    |
|-------------------|---|---|------------|----|
| A                 | = | L | +          | SE |
| +2,000            |   |   |            |    |
|                   |   |   | +2,000 Rev |    |
| <hr/>             |   |   |            |    |
| <b>Cash Flows</b> |   |   |            |    |
| no effect         |   |   |            |    |

|         |   |       |       |
|---------|---|-------|-------|
| Dec. 31 | Interest Receivable                     | 2,000 |       |
|         | Interest Revenue                        |       | 2,000 |
|         | (To accrue interest on Doan Inc. bonds) |       |       |

Kuhl reports Interest Receivable as a current asset in the balance sheet. It reports Interest Revenue under "Other revenues and gains" in the income statement.

Kuhl reports receipt of the interest on January 1 as follows.

|                   |   |   |   |    |
|-------------------|---|---|---|----|
| A                 | = | L | + | SE |
| +2,000            |   |   |   |    |
| -2,000            |   |   |   |    |
| <hr/>             |   |   |   |    |
| <b>Cash Flows</b> |   |   |   |    |
| +2,000            |   |   |   |    |

|        |   |       |       |
|--------|---|-------|-------|
| Jan. 1 | Cash                                    | 2,000 |       |
|        | Interest Receivable                     |       | 2,000 |
|        | (To record receipt of accrued interest) |       |       |

A credit to Interest Revenue at this time is incorrect because the company earned and accrued interest revenue in the *preceding* accounting period.

## Recording Sale of Bonds

When Kuhl sells the bonds, it credits the investment account for the cost of the bonds. Kuhl records as a gain or loss any difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the bonds.

Assume, for example, that Kuhl Corporation receives net proceeds of \$58,000 on the sale of the Doan Inc. bonds on January 1, 2013, after receiving the interest due. Since the securities cost \$54,000, the company realizes a gain of \$4,000. It records the sale as:

|                   |   |   |            |    |
|-------------------|---|---|------------|----|
| A                 | = | L | +          | SE |
| +58,000           |   |   |            |    |
| -54,000           |   |   |            |    |
| <hr/>             |   |   |            |    |
|                   |   |   | +4,000 Rev |    |
| <b>Cash Flows</b> |   |   |            |    |
| +58,000           |   |   |            |    |

|        |                                     |        |        |
|--------|-------------------------------------|--------|--------|
| Jan. 1 | Cash                                | 58,000 |        |
|        | Debt Investments                    |        | 54,000 |
|        | Gain on Sale of Debt Investments    |        | 4,000  |
|        | (To record sale of Doan Inc. bonds) |        |        |

Kuhl reports the gain on sale of debt investments under “Other revenues and gains” in the income statement and reports losses under “Other expenses and losses.”

## Do it!

Waldo Corporation had the following transactions pertaining to debt investments.

- Jan. 1 Purchased 30, \$1,000 Hillary Co. 10% bonds for \$30,000, plus brokerage fees of \$900. Interest is payable semiannually on July 1 and January 1.  
 July 1 Received semiannual interest on Hillary Co. bonds.  
 July 1 Sold 15 Hillary Co. bonds for \$15,000, less \$400 brokerage fees.

(a) Journalize the transactions, and (b) prepare the adjusting entry for the accrual of interest on December 31.

### Solution

|             |  |        |        |
|-------------|--|--------|--------|

## Debt Investments

### action plan

- ✓ Record bond investments at cost.
- ✓ Record interest when received and/or accrued.
- ✓ When bonds are sold, credit the investment account for the cost of the bonds.
- ✓ Record any difference between the cost and the net proceeds as a gain or loss.

## Accounting for Stock Investments

**Stock investments** are investments in the capital stock of other corporations. When a company holds stock (and/or debt) of several different corporations, the group of securities is identified as an **investment portfolio**.

The accounting for investments in common stock depends on the extent of the investor’s influence over the operating and financial affairs of the issuing corporation (the **investee**). Illustration 16-3 (page 728) shows the general guidelines.

Companies are required to use judgment instead of blindly following the guidelines.<sup>1</sup> On the following pages we will explain the application of each guideline.

<sup>1</sup>Among the questions that are considered in determining an investor’s influence are these: (1) Does the investor have representation on the investee’s board? (2) Does the investor participate in the investee’s policy-making process? (3) Are there material transactions between the investor and investee? (4) Is the common stock held by other stockholders concentrated or dispersed?

**Study Objective [3]**  
 Explain the accounting for stock investments.

**Illustration 16-3**

Accounting guidelines for stock investments

| Investor's Ownership Interest in Investee's Common Stock  | Presumed Influence on Investee | Accounting Guidelines             |
|---|--------------------------------|-----------------------------------|
|  Less than 20%       | Insignificant                  | Cost method                       |
|  Between 20% and 50% | Significant                    | Equity method                     |
|  More than 50%       | Controlling                    | Consolidated financial statements |

**Helpful Hint**

The entries for investments in common stock also apply to investments in preferred stock.

**Holdings of Less than 20%**

In accounting for stock investments of less than 20%, companies use the cost method. Under the **cost method**, companies record the investment at cost, and recognize revenue only when cash dividends are received.

**RECORDING ACQUISITION OF STOCK INVESTMENTS**

At acquisition, the cost principle applies. Cost includes all expenditures necessary to acquire these investments, such as the price paid plus any brokerage fees (commissions).

Assume, for example, that on July 1, 2012, Sanchez Corporation acquires 1,000 shares (10% ownership) of Beal Corporation common stock. Sanchez pays \$40 per share plus brokerage fees of \$500. The entry for the purchase is:

|                   |   |          |   |           |
|-------------------|---|----------|---|-----------|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b> |
| +40,500           |   |          |   |           |
| -40,500           |   |          |   |           |
| <b>Cash Flows</b> |   |          |   |           |
| -45,500           |   |          |   |           |

|        |   |        |        |
|--------|---|--------|--------|
| July 1 | Stock Investments   | 40,500 |        |
|        | Cash  |        | 40,500 |
|        | (To record purchase of 1,000 shares of Beal Corporation common stock) |        |        |

**RECORDING DIVIDENDS**

During the time Sanchez owns the stock, it makes entries for any cash dividends received. If Sanchez receives a \$2 per share dividend on December 31, the entry is:

|                   |   |          |   |            |
|-------------------|---|----------|---|------------|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b>  |
| +2,000            |   |          |   |            |
|                   |   |          |   | +2,000 Rev |
| <b>Cash Flows</b> |   |          |   |            |
| +2,000            |   |          |   |            |

|         |  |       |       |
|---------|--|-------|-------|
| Dec. 31 | Cash (1,000 × \$2)                     | 2,000 |       |
|         | Dividend Revenue                       |       | 2,000 |
|         | (To record receipt of a cash dividend) |       |       |

Sanchez reports Dividend Revenue under “Other revenues and gains” in the income statement. Unlike interest on notes and bonds, dividends do not accrue. Therefore, companies do not make adjusting entries to accrue dividends.

**RECORDING SALE OF STOCK**

When a company sells a stock investment, it recognizes as a gain or a loss the difference between the net proceeds from the sale (sales price less brokerage fees) and the cost of the stock.

Assume that Sanchez Corporation receives net proceeds of \$39,500 on the sale of its Beal stock on February 10, 2013. Because the stock cost \$40,500, Sanchez incurred a loss of \$1,000. The entry to record the sale is:

|         |   |                               |   |
|---------|---|-------------------------------|---|
| Feb. 10 | Cash<br>Loss on Sale of Stock Investments<br>Stock Investments<br>(To record sale of Beal common stock) | 39,500<br>1,000<br><br>40,500 | ) |
|---------|---|-------------------------------|---|

|                   |   |   |   |            |
|-------------------|---|---|---|------------|
| A                 | = | L | + | SE         |
| +39,500           |   |   |   | -1,000 Exp |
| -40,500           |   |   |   |            |
| <b>Cash Flows</b> |   |   |   |            |
| +39,500           |   |   |   |            |

Sanchez reports the loss under “Other expenses and losses” in the income statement. It would show a gain on sale under “Other revenues and gains.”

## Holdings Between 20% and 50%

When an investor company owns only a small portion of the shares of stock of another company, the investor cannot exercise control over the investee. But, when an investor owns between 20% and 50% of the common stock of a corporation, it is presumed that the investor has significant influence over the financial and operating activities of the investee. The investor probably has a representative on the investee’s board of directors, and through that representative, may exercise some control over the investee. The investee company in some sense becomes part of the investor company.

For example, even prior to purchasing all of **Turner Broadcasting, Time Warner** owned 20% of Turner. Because it exercised significant control over major decisions made by Turner, Time Warner used an approach called the equity method. Under the **equity method, the investor records its share of the net income of the investee in the year when it is earned.** An alternative might be to delay recognizing the investor’s share of net income until the investee declares a cash dividend. But that approach would ignore the fact that the investor and investee are, in some sense, one company, making the investor better off by the investee’s earned income.

Under the equity method, the investor company initially records the investment in common stock at cost. After that, it **adjusts** the investment account annually to show the investor’s equity in the investee. Each year, the investor does the following: (1) It increases (debits) the investment account and increases (credits) revenue for its share of the investee’s net income.<sup>2</sup> (2) The investor also decreases (credits) the investment account for the amount of dividends received. The investment account is reduced for dividends received, because payment of a dividend decreases the net assets of the investee.

### Helpful Hint

Under the equity method, the investor recognizes revenue on the accrual basis—i.e., when it is earned by the investee.

## RECORDING ACQUISITION OF STOCK INVESTMENTS

Assume that Milar Corporation acquires 30% of the common stock of Beck Company for \$120,000 on January 1, 2012. The entry to record this transaction is:

|        |   |                            |   |
|--------|---|----------------------------|---|
| Jan. 1 | Stock Investments<br>Cash<br>(To record purchase of Beck common<br>stock) | 120,000<br><br><br>120,000 | ) |
|--------|---|----------------------------|---|

|                   |   |   |   |    |
|-------------------|---|---|---|----|
| A                 | = | L | + | SE |
| +120,000          |   |   |   |    |
| -120,000          |   |   |   |    |
| <b>Cash Flows</b> |   |   |   |    |
| -120,000          |   |   |   |    |

## RECORDING REVENUE AND DIVIDENDS

For 2012, Beck reports net income of \$100,000. It declares and pays a \$40,000 cash dividend. Milar records (1) its share of Beck’s income, \$30,000 (30% × \$100,000)

<sup>2</sup>Or, the investor increases (debits) a loss account and decreases (credits) the investment account for its share of the investee’s net loss.

and (2) the reduction in the investment account for the dividends received, \$12,000 (\$40,000 × 30%). The entries are:

|                   |   |   |   |             |
|-------------------|---|---|---|-------------|
| A                 | = | L | + | SE          |
| +30,000           |   |   |   | +30,000 Rev |
| <b>Cash Flows</b> |   |   |   |             |
| no effect         |   |   |   |             |

|         |  |        |        |
|---------|--|--------|--------|
| (1)     |  |        |        |
| Dec. 31 | Stock Investments                                | 30,000 |        |
|         | Revenue from Stock Investments                   |        | 30,000 |
|         | (To record 30% equity in Beck's 2012 net income) |        |        |

|                   |   |   |   |    |
|-------------------|---|---|---|----|
| A                 | = | L | + | SE |
| +12,000           |   |   |   |    |
| -12,000           |   |   |   |    |
| <b>Cash Flows</b> |   |   |   |    |
| +12,000           |   |   |   |    |

|         |                                |        |        |
|---------|--------------------------------|--------|--------|
| (2)     |                                |        |        |
| Dec. 31 | Cash                           | 12,000 |        |
|         | Stock Investments              |        | 12,000 |
|         | (To record dividends received) |        |        |

After Milar posts the transactions for the year, its investment and revenue accounts will show the following.

**Illustration 16-4**  
Investment and revenue accounts after posting

| Stock Investments |         | Revenue from Stock Investments |        |
|-------------------|---------|--------------------------------|--------|
| Jan. 1            | 120,000 | Dec. 31                        | 12,000 |
| Dec. 31           | 30,000  | Dec. 31                        | 30,000 |
| Dec. 31 Bal.      | 138,000 |                                |        |

During the year, the net increase in the investment account was \$18,000. As indicated above, the investment account increased by \$30,000 due to Milar's share of Beck's income, and it decreased by \$12,000 due to dividends received from Beck. In addition, Milar reports \$30,000 of revenue from its investment, which is 30% of Beck's net income of \$100,000.

Note that the difference between reported revenue under the cost method and reported revenue under the equity method can be significant. For example, Milar would report only \$12,000 of dividend revenue (30% × \$40,000) if it used the cost method.

### Holdings of More than 50%

A company that owns more than 50% of the common stock of another entity is known as the **parent company**. The entity whose stock the parent company owns is called the **subsidiary (affiliated) company**. Because of its stock ownership, the parent company has a **controlling interest** in the subsidiary.

When a company owns more than 50% of the common stock of another company, it usually prepares **consolidated financial statements**. These statements present the total assets and liabilities controlled by the parent company. They also present the total revenues and expenses of the subsidiary companies. Companies prepare consolidated statements **in addition to** the financial statements for the parent and individual subsidiary companies.

As noted earlier, when Time Warner had a 20% investment in Turner, it reported this investment in a single line item—Other Investments. After the merger, Time Warner instead consolidated Turner's results with its own. Under this approach, Time Warner included Turner's individual assets and liabilities with its own: its plant and equipment were added to Time Warner's plant and equipment, its receivables were added to Time Warner's receivables, and so on.

#### Study Objective [4]

Describe the use of consolidated financial statements.

#### Helpful Hint

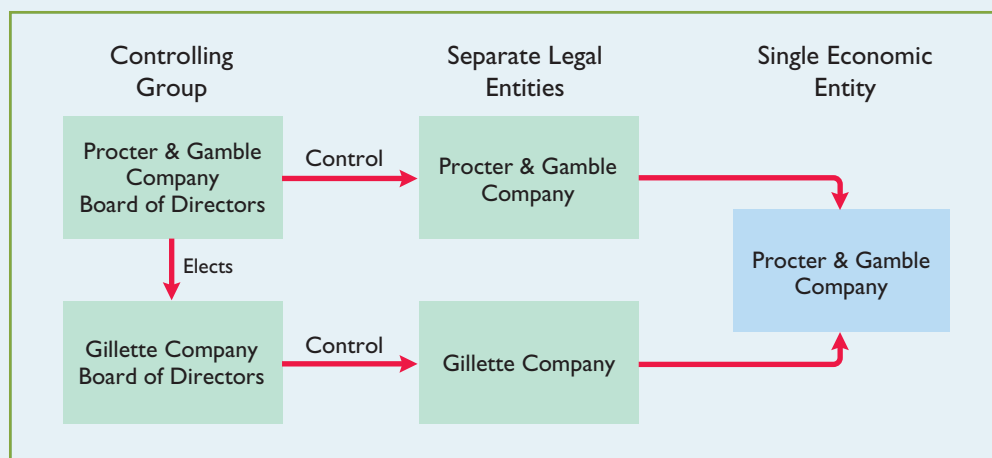

If parent (A) has three wholly owned subsidiaries (B, C, & D), there are four separate legal entities. From the viewpoint of the shareholders of the parent company, there is only one economic entity.

## ACCOUNTING ACROSS THE ORGANIZATION

### How Procter & Gamble Accounts for Gillette

Recently, **Procter & Gamble Company** acquired **Gillette Company** for \$53.4 billion. The common stockholders of Procter & Gamble elect the board of directors of the company, who, in turn, select the officers and managers of the company. Procter & Gamble's board of directors controls the property owned by the corporation, which includes the common stock of Gillette. Thus, they are in a position to elect the board of directors of Gillette and, in effect, control its operations. These relationships are graphically illustrated here.

**?** Where on Procter & Gamble's balance sheet will you find its investment in Gillette Company? (See page 756.)

**Consolidated statements are useful to the stockholders, board of directors, and managers of the parent company. These statements indicate the magnitude and scope of operations of the companies under common control.** For example, regulators and the courts undoubtedly used the consolidated statements of **AT&T** to determine whether a breakup of AT&T was in the public interest. Listed below are three companies that prepare consolidated statements and some of the companies they have owned. One, **Disney**, is Time Warner's arch rival.

| <b>PepsiCo</b> | <b>Cendant</b>  | <b>The Disney Company</b> |
|----------------|-----------------|---------------------------|
| Frito-Lay      | Howard Johnson  | Capital Cities/ABC, Inc.  |
| Tropicana      | Ramada Inn      | Disneyland, Disney World  |
| Quaker Oats    | Century 21      | Mighty Ducks              |
| Pepsi-Cola     | Coldwell Banker | Anaheim Angels            |
| Gatorade       | Avis            | ESPN                      |

**Illustration 16-5**  
Examples of consolidated companies and their subsidiaries

## Do it!

Presented below are two independent situations.

1. Rho Jean Inc. acquired 5% of the 400,000 shares of common stock of Stillwater Corp. at a total cost of \$6 per share on May 18, 2012. On August 30, Stillwater declared and paid a \$75,000 dividend. On December 31, Stillwater reported net income of \$244,000 for the year.

## Stock Investments

2. Debbie, Inc. obtained significant influence over North Sails by buying 40% of North Sails' 60,000 outstanding shares of common stock at a cost of \$12 per share on January 1, 2012. On April 15, North Sails declared and paid a cash dividend of \$45,000. On December 31, North Sails reported net income of \$120,000 for the year.

Prepare all necessary journal entries for 2012 for (1) Rho Jean Inc. and (2) Debbie, Inc.

### action plan

✓ Presume that the investor has relatively little influence over the investee when an investor owns less than 20% of the common stock of another corporation. In this case, net income earned by the investee is not considered a proper basis for recognizing income from the investment by the investor.

✓ Presume significant influence for investments of 20%–50%. Therefore, record the investor's share of the net income of the investee.

### Solution

## Valuing and Reporting Investments

### Study Objective [5]

Indicate how debt and stock investments are reported in financial statements.

The value of debt and stock investments may fluctuate greatly during the time they are held. For example, in one 12-month period, the stock price of **Time Warner** hit a high of \$58.50 and a low of \$9. In light of such price fluctuations, how should companies value investments at the balance sheet date? Valuation could be at cost, at fair value, or at the lower-of-cost-or-market value.

Many people argue that fair value offers the best approach because it represents the expected cash realizable value of securities. **Fair value** is the amount for which a security could be sold in a normal market. Others counter that, unless a security is going to be sold soon, the fair value is not relevant because the price of the security will likely change again.

## Categories of Securities

For purposes of valuation and reporting at a financial statement date, companies classify debt and stock investments into three categories:

1. **Trading securities** are bought and held primarily for sale in the near term to generate income on short-term price differences.
2. **Available-for-sale securities** are held with the intent of selling them sometime in the future.
3. **Held-to-maturity securities** are debt securities that the investor has the intent and ability to hold to maturity.<sup>3</sup>

Illustration 16-6 shows the valuation guidelines for these securities. **These guidelines apply to all debt securities and all stock investments in which the holdings are less than 20%.**

### International Note

A recent U.S. accounting standard gives companies the "option" of applying fair value accounting, rather than historical cost, to certain types of assets and liabilities. This makes U.S. accounting more similar to international standards.

**Illustration 16-6**  
Valuation guidelines

| Trading   | Available-for-sale  | Held-to-maturity  |
|---|---|---|
|  |  |  |
| At fair value with changes reported in net income                                 | At fair value with changes reported in the stockholders' equity section           | At amortized cost   |

### TRADING SECURITIES

Companies hold trading securities with the intention of selling them in a short period (generally less than a month). *Trading* means frequent buying and selling. As indicated in Illustration 16-7, companies adjust trading securities to fair value at the end of each period, and report changes from cost as part of net income. The changes are reported as **unrealized gains or losses** because the securities have not been sold. The unrealized gain or loss is the difference between the **total cost** of trading securities and their **total fair value**. Companies classify trading securities as current assets.

Illustration 16-7 shows the cost and fair values for investments Pace Corporation classified as trading securities on December 31, 2012. Pace has an unrealized gain of \$7,000 because total fair value of \$147,000 is \$7,000 greater than total cost of \$140,000.

### Helpful Hint

The fact that trading securities are short-term investments increases the likelihood that they will be sold at fair value (the company may not be able to time their sale) and the likelihood that there will be realized gains or losses.

| Trading Securities, December 31, 2012 |                  |                  |                        |
|---------------------------------------|------------------|------------------|------------------------|
| Investments                           | Cost             | Fair Value       | Unrealized Gain (Loss) |
| Yorkville Company bonds               | \$ 50,000        | \$ 48,000        | \$(2,000)              |

| Total                                 | <u>\$140,000</u> | <u>\$147,000</u> | <u>\$ 7,000</u>        |

**Illustration 16-7**  
Valuation of trading securities

<sup>3</sup>This category is provided for completeness. The accounting and valuation issues related to held-to-maturity securities are discussed in more advanced accounting courses.

Pace records fair value and unrealized gain or loss through an adjusting entry at the time it prepares financial statements. In this entry, the company uses a valuation allowance account, Market Adjustment—Trading, to record the difference between the total cost and the total fair value of the securities. The adjusting entry for Pace Corporation is:

|                   |   |   |   |            |
|-------------------|---|---|---|------------|
| A                 | = | L | + | SE         |
| +7,000            |   |   |   | +7,000 Rev |
| <b>Cash Flows</b> |   |   |   |            |
| no effect         |   |   |   |            |

|         |  |       |       |
|---------|--|-------|-------|
| Dec. 31 | Market Adjustment—Trading<br>Unrealized Gain—Income<br>(To record unrealized gain on trading securities) | 7,000 | 7,000 |
|---------|--|-------|-------|

The use of a Market Adjustment—Trading account enables Pace to maintain a record of the investment cost. It needs actual cost to determine the gain or loss realized when it sells the securities. Pace adds the debit balance (or subtracts a credit balance) of the Market Adjustment—Trading balance to the cost of the investments to arrive at a fair value for the trading securities.

**The fair value of the securities is the amount Pace reports on its balance sheet.** It reports the unrealized gain in the income statement in the “Other revenues and gains” section. The term “Income” in the account title indicates that the gain affects net income.

If the total cost of the trading securities is greater than total fair value, an unrealized loss has occurred. In such a case, the adjusting entry is a debit to Unrealized Loss—Income and a credit to Market Adjustment—Trading. Companies report the unrealized loss under “Other expenses and losses” in the income statement.

The market adjustment account is carried forward into future accounting periods. The company does not make any entry to the account until the end of each reporting period. At that time, the company adjusts the balance in the account to the difference between cost and fair value. For trading securities, it closes the Unrealized Gain (Loss)—Income account at the end of the reporting period.

## ACCOUNTING ACROSS THE ORGANIZATION

### And the Correct Way to Report Investments Is...?

The accompanying graph presents an estimate of the percentage of companies on the major exchanges that have investments in the equity of other entities.

As the graph indicates, many companies have equity investments of some type. These investments can be substantial. For example, the total amount of equity-method investments appearing on company balance sheets is approximately \$403 billion, and the amount shown in the income statements in any one year for all companies is approximately \$38 billion.

Source: “Report and Recommendations Pursuant to Section 401(c) of the Sarbanes-Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers,” United States Securities and Exchange Commission—Office of Chief Accountant, Office of Economic Analyses, Division of Corporation Finance (June 2005), pp. 36–39.

**?** Why might the use of the equity method not lead to full disclosure in the financial statements? (See page 756.)

**AVAILABLE-FOR-SALE SECURITIES**

As indicated earlier, companies hold available-for-sale securities with the intent of selling these investments sometime in the future. If the intent is to sell the securities within the next year or operating cycle, the investor classifies the securities as current assets in the balance sheet. Otherwise, it classifies them as long-term assets in the investments section of the balance sheet.

Companies report available-for-sale securities at fair value. The procedure for determining fair value and the unrealized gain or loss for these securities is the same as for trading securities. To illustrate, assume that Ingrao Corporation has two securities that it classifies as available-for-sale. Illustration 16-8 provides information on the cost, fair value, and amount of the unrealized gain or loss on December 31, 2012. There is an unrealized loss of \$9,537 because total cost of \$293,537 is \$9,537 more than total fair value of \$284,000.

**Ethics Note**

---

Some managers seem to hold their available-for-sale securities that have experienced losses, while selling those that have gains, thus increasing income. Do you think this is ethical?

| <b>Available-for-Sale Securities, December 31, 2012</b> |                         |                         |                          |
|---|-------------------------|-------------------------|--------------------------|
| Investments   | Cost                    | Fair Value              | Unrealized Gain (Loss)   |
| Campbell Soup Corporation                               |                         |                         |                          |
| 8% bonds  | \$ 93,537               | \$103,600               | \$10,063                 |
| Hershey Company stock                                   | <u>200,000</u>          | <u>180,400</u>          | <u>(19,600)</u>          |
| <b>Total</b>  | <b><u>\$293,537</u></b> | <b><u>\$284,000</u></b> | <b><u>\$ (9,537)</u></b> |

**Illustration 16-8**  
Valuation of available-for-sale securities

Both the adjusting entry and the reporting of the unrealized gain or loss for Ingrao’s available-for-sale securities differ from those illustrated for trading securities. The differences result because Ingrao does not expect to sell these securities in the near term. Thus, prior to actual sale it is more likely that changes in fair value may change either unrealized gains or losses. Therefore, Ingrao does not report an unrealized gain or loss in the income statement. Instead, it reports it as a **separate component of stockholders’ equity**.

In the adjusting entry, Ingrao identifies the market adjustment account with available-for-sale securities, and it identifies the unrealized gain or loss account with stockholders’ equity. Ingrao records the unrealized loss of \$9,537 as follows.

|         |  |       |       |
|---------|--|-------|-------|
| Dec. 31 | Unrealized Gain or Loss—Equity<br>Market Adjustment—Available-for-Sale<br>(To record unrealized loss on available-for-sale securities) | 9,537 | 9,537 |
|---------|--|-------|-------|

If total fair value exceeds total cost, Ingrao debits Market Adjustment—Available-for-Sale and credits Unrealized Gain or Loss—Equity.

For available-for-sale securities, the company carries forward the Unrealized Gain or Loss—Equity account to future periods. At each future balance sheet date, Ingrao adjusts the market adjustment and the Unrealized Gain or Loss—Equity account to show the difference between cost and fair value at that time.

|                   |   |          |   |            |  |
|-------------------|---|----------|---|------------|--|
| <b>A</b>          | = | <b>L</b> | + | <b>SE</b>  |  |
|                   |   |          |   | -9,537 Exp |  |
| -9,537            |   |          |   |            |  |
| <b>Cash Flows</b> |   |          |   |            |  |
| no effect         |   |          |   |            |  |

**Ethics Note**

---

At one time, the SEC accused investment bank **Morgan Stanley** of overstating the value of certain bond investments by \$75 million. The SEC stated that, in applying market value accounting, Morgan Stanley used its own more-optimistic assumptions rather than relying on external pricing sources.

**Do it!**

Some of Powderhorn Corporation’s investment securities are classified as trading securities and some are classified as available-for-sale. The cost and fair value of each category at December 31, 2012, are shown on page 736.

**Trading and Available-for-Sale Securities**

|                               | <u>Cost</u> | <u>Fair Value</u> | <u>Unrealized Gain (Loss)</u> |
|-------------------------------|-------------|-------------------|-------------------------------|
| Trading securities            | \$93,600    | \$94,900          | \$1,300                       |
| Available-for-sale securities | \$48,800    | \$51,400          | \$2,600                       |

At December 31, 2011, the Market Adjustment—Trading account had a debit balance of \$9,200, and the Market Adjustment—Available-for-Sale account had a credit balance of \$5,750. Prepare the required journal entries for each group of securities for December 31, 2012.

**action plan**

✓ Mark trading securities to fair value and report the adjustment in current-period income.

✓ Mark available-for-sale securities to fair value and report the adjustment as a separate component of stockholders' equity.

**Solution***Trading securities:*

**Study Objective [6]**

Distinguish between short-term and long-term investments.

**Helpful Hint**

Trading securities are always classified as short-term. Available-for-sale securities can be either short-term or long-term.

## Balance Sheet Presentation

In the balance sheet, companies classify investments as either short-term or long-term.

**SHORT-TERM INVESTMENTS**

**Short-term investments** (also called **marketable securities**) are securities held by a company that are (1) **readily marketable** and (2) **intended to be converted into cash** within the next year or operating cycle, whichever is longer. Investments that do not meet **both criteria** are classified as **long-term investments**.

**Readily Marketable.** An investment is readily marketable when it can be sold easily whenever the need for cash arises. Short-term paper<sup>4</sup> meets this criterion. It can be readily sold to other investors. Stocks and bonds traded on organized securities exchanges, such as the New York Stock Exchange, are readily marketable. They can be bought and sold daily. In contrast, there may be only a limited market for the securities issued by small corporations, and no market for the securities of a privately held company.

**Intent to Convert.** Intent to convert means that management intends to sell the investment within the next year or operating cycle, whichever is longer. Generally, this criterion is satisfied when the investment is considered a resource that the investor will use whenever the need for cash arises. For example, a ski resort may invest idle cash during the summer months with the intent to sell the securities to buy supplies and equipment shortly before the winter season. This investment is

<sup>4</sup>Short-term paper includes (1) certificates of deposit (CDs) issued by banks, (2) money market certificates issued by banks and savings and loan associations, (3) Treasury bills issued by the U.S. government, and (4) commercial paper (notes) issued by corporations with good credit ratings.

considered short-term even if lack of snow cancels the next ski season and eliminates the need to convert the securities into cash as intended.

Because of their high liquidity, short-term investments appear immediately below Cash in the “Current assets” section of the balance sheet. They are reported at fair value. For example, Pace Corporation would report its trading securities as shown in Illustration 16-9.

| <b>Pace Corporation</b><br>Balance Sheet (partial) |           |
|--|-----------|
| Current assets                                     |           |
| Cash   | \$ 21,000 |
| Short-term investments, at fair value              | 147,000   |

**Illustration 16-9**  
Presentation of short-term investments

## LONG-TERM INVESTMENTS

Companies generally report long-term investments in a separate section of the balance sheet immediately below “Current assets,” as shown later in Illustration 16-12 (page 739). Long-term investments in available-for-sale securities are reported at fair value. Investments in common stock accounted for under the equity method are reported at equity.

## Presentation of Realized and Unrealized Gain or Loss

Companies must present in the financial statements gains and losses on investments, whether realized or unrealized. In the income statement, companies report gains and losses in the nonoperating activities section under the categories listed in Illustration 16-10. Interest and dividend revenue are also reported in that section.

| <u>Other Revenue and Gains</u> | <u>Other Expenses and Losses</u> |
|--------------------------------|----------------------------------|
| Interest Revenue               | Loss on Sale of Investments      |
| Dividend Revenue               | Unrealized Loss—Income           |
| Gain on Sale of Investments    |                                  |
| Unrealized Gain—Income         |                                  |

**Illustration 16-10**  
Nonoperating items related to investments

As indicated earlier, companies report an unrealized gain or loss on available-for-sale securities as a separate component of stockholders’ equity. To illustrate, assume that Dawson Inc. has common stock of \$3,000,000, retained earnings of \$1,500,000, and an unrealized loss on available-for-sale securities of \$100,000. Illustration 16-11 shows the balance sheet presentation of the unrealized loss.

| <b>Dawson Inc.</b><br>Balance Sheet (partial)                 |                                  |
|---|----------------------------------|
| Stockholders’ equity  |                                  |
| Common stock  | \$3,000,000                      |
| Retained earnings   | <u>1,500,000</u>                 |
| Total paid-in capital and retained earnings                   | 4,500,000                        |
| <b>Less: Unrealized loss on available-for-sale securities</b> | <b><u>100,000</u></b>            |
| Total stockholders’ equity                                    | <b><u><u>\$4,400,000</u></u></b> |

**Illustration 16-11**  
Unrealized loss in stockholders’ equity section

Note that the loss decreases stockholders' equity. An unrealized gain is added to stockholders' equity. Reporting the unrealized gain or loss in the stockholders' equity section serves two purposes: (1) It reduces the volatility of net income due to fluctuations in fair value. (2) It informs the financial statement user of the gain or loss that would occur if the securities were sold at fair value.

Companies must report items such as this, which affect stockholders' equity but are not included in the calculation of net income, as part of a more inclusive measure called *comprehensive income*. We discuss comprehensive income more fully in Chapter 18.

## Classified Balance Sheet

We have presented many sections of classified balance sheets in this and preceding chapters. The classified balance sheet in Illustration 16-12 includes, in one place, key topics from previous chapters: the issuance of par value common stock, restrictions of retained earnings, and issuance of long-term bonds. From this chapter, the statement includes (highlighted in red) short-term and long-term investments. The investments in short-term securities are considered trading securities. The long-term investments in stock of less than 20% owned companies are considered available-for-sale securities. Illustration 16-12 also includes a long-term investment reported at equity and descriptive notations within the statement, such as the basis for valuing merchandise inventory and one note to the statement.

## Do it!

### Financial Statement Presentation of Investments

Identify where each of the following items would be reported in the financial statements.

1. Interest earned on investments in bonds.
2. Market adjustment—available-for-sale.
3. Unrealized loss on available-for-sale securities.
4. Gain on sale of investments in stock.
5. Unrealized gain on trading securities.

Use the following possible categories:

*Balance sheet:*

|                                |                       |
|--------------------------------|-----------------------|
| Current assets                 | Current liabilities   |
| Investments                    | Long-term liabilities |
| Property, plant, and equipment | Stockholders' equity  |
| Intangible assets              |                       |

*Income statement:*

|                          |                           |
|--------------------------|---------------------------|
| Other revenues and gains | Other expenses and losses |
|--------------------------|---------------------------|

#### action plan

- ✓ Classify investments as current assets if they will be held for less than one year.
- ✓ Report unrealized gains or losses on trading securities in income.
- ✓ Report unrealized gains or losses on available-for-sale securities in equity.
- ✓ Report realized earnings on investments in the income statement as "Other revenues and gains" or as "Other expenses and losses."

#### Solution

| Item  | Financial Statement | Category                 |
|---|---------------------|--------------------------|
| 1. Interest earned on investments in bonds.         | Income statement    | Other revenues and gains |
| 2. Market adjustment—available-for-sale             | Balance sheet       | Investments              |

**Note 1.** Retained earnings of \$100,000 is restricted for plant expansion.

## COMPREHENSIVE

## Do it!

In its first year of operations, DeMarco Company had the following selected transactions in stock investments that are considered trading securities.

- June 1 Purchased for cash 600 shares of Sanburg common stock at \$24 per share, plus \$300 brokerage fees.  
 July 1 Purchased for cash 800 shares of Cey common stock at \$33 per share, plus \$600 brokerage fees.  
 Sept. 1 Received a \$1 per share cash dividend from Cey Corporation.  
 Nov. 1 Sold 200 shares of Sanburg common stock for cash at \$27 per share, less \$150 brokerage fees.  
 Dec. 15 Received a \$0.50 per share cash dividend on Sanburg common stock.

At December 31, the fair values per share were Sanburg \$25 and Cey \$30.

## Instructions

- (a) Journalize the transactions.  
 (b) Prepare the adjusting entry at December 31 to report the securities at fair value.

## action plan

- ✓ Include the price paid plus brokerage fees in the cost of the investment.
- ✓ Compute the gain or loss on sales as the difference between net selling price and the cost of the securities.
- ✓ Base the adjustment to fair value on the total difference between the cost and the fair value of the securities.

## Solution to Comprehensive Do it!

## Summary of Study Objectives

**[1] Discuss why corporations invest in debt and stock securities.** Corporations invest for three primary reasons: (a) They have excess cash. (b) They view investments as a significant revenue source. (c) They have strategic goals such as gaining control of a competitor or moving into a new line of business.

**[2] Explain the accounting for debt investments.** Companies record investments in debt securities when they purchase bonds, receive or accrue interest, and sell the bonds. They report gains or losses on the sale of bonds in the “Other revenues and gains” or “Other expenses and losses” sections of the income statement.

**[3] Explain the accounting for stock investments.** Companies record investments in common stock when they purchase the stock, receive dividends, and sell the stock. When ownership is less than 20%, the cost method is used. When ownership is between 20% and 50%, the equity method should be used. When ownership is more than 50%, companies prepare consolidated financial statements.

**[4] Describe the use of consolidated financial statements.** When a company owns more than 50% of the common stock of another company, it usually prepares

consolidated financial statements. These statements indicate the magnitude and scope of operations of the companies under common control.

**[5] Indicate how debt and stock investments are reported in financial statements.** Investments in debt and stock securities are classified as trading, available-for-sale, or held-to-maturity securities for valuation and reporting purposes. Trading securities are reported as current assets at fair value, with changes from cost reported in net income. Available-for-sale securities are also reported at fair value, with the changes from cost reported in stockholders’ equity. Available-for-sale securities are classified as short-term or long-term, depending on their expected future sale date.

**[6] Distinguish between short-term and long-term investments.** Short-term investments are securities that are (a) readily marketable and (b) intended to be converted to cash within the next year or operating cycle, whichever is longer. Investments that do not meet both criteria are classified as long-term investments.

## Glossary

**Available-for-sale securities** Securities that are held with the intent of selling them sometime in the future. (p. 733).

**Consolidated financial statements** Financial statements that present the assets and liabilities controlled by the parent company and the total revenues and expenses of the subsidiary companies. (p. 730).

**Controlling interest** Ownership of more than 50% of the common stock of another entity. (p. 730).

**Cost method** An accounting method in which the investment in common stock is recorded at cost, and revenue is recognized only when cash dividends are received. (p. 728).

**Debt investments** Investments in government and corporation bonds. (p. 725).

**Equity method** An accounting method in which the investment in common stock is initially recorded at cost, and the investment account is then adjusted annually to show the investor’s equity in the investee. (p. 729).

**Fair value** Amount for which a security could be sold in a normal market. (p. 732).

**Held-to-maturity securities** Debt securities that the investor has the intent and ability to hold to their maturity date. (p. 733).

**Investment portfolio** A group of stocks and/or debt securities in different corporations held for investment purposes. (p. 727).

**Long-term investments** Investments that are not readily marketable or that management does not intend to convert into cash within the next year or operating cycle, whichever is longer. (p. 736).

**Parent company** A company that owns more than 50% of the common stock of another entity. (p. 730).

**Short-term investments** Investments that are readily marketable and intended to be converted into cash within the next year or operating cycle, whichever is longer. (p. 736).

**Stock investments** Investments in the capital stock of other corporations. (p. 727).

**Subsidiary (affiliated) company** A company in which more than 50% of its stock is owned by another company. (p. 730).

**Trading securities** Securities bought and held primarily for sale in the near term to generate income on short-term price differences. (p. 733).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 756.

- (SO 1) 1. Which of the following is *not* a primary reason why corporations invest in debt and equity securities?
- They wish to gain control of a competitor.
  - They have excess cash.
  - They wish to move into a new line of business.
  - They are required to by law.
- (SO 2) 2. Debt investments are initially recorded at:
- cost.
  - cost plus accrued interest.
  - fair value.
  - None of the above.
- (SO 2) 3. Hanes Company sells debt investments costing \$26,000 for \$28,000, plus accrued interest that has been recorded. In journalizing the sale, credits are to:
- Debt Investments and Loss on Sale of Debt Investments.
  - Debt Investments, Gain on Sale of Debt Investments, and Bond Interest Receivable.
  - Stock Investments and Bond Interest Receivable.
  - No correct answer is given.
- (SO 3) 4. Pryor Company receives net proceeds of \$42,000 on the sale of stock investments that cost \$39,500. This transaction will result in reporting in the income statement a:
- loss of \$2,500 under “Other expenses and losses.”
  - loss of \$2,500 under “Operating expenses.”
  - gain of \$2,500 under “Other revenues and gains.”
  - gain of \$2,500 under “Operating revenues.”
- (SO 3) 5. The equity method of accounting for long-term investments in stock should be used when the investor has significant influence over an investee and owns:
- between 20% and 50% of the investee’s common stock.
  - 20% or more of the investee’s common stock.
  - more than 50% of the investee’s common stock.
  - less than 20% of the investee’s common stock.
- (SO 3) 6. Assume that Horicon Corp acquired 25% of the common stock of Sheboygan Corp. on January 1, 2012, for \$300,000. During 2012, Sheboygan Corp. reported net income of \$160,000 and paid total dividends of \$60,000. If Horicon uses the equity method to account for its investment, the balance in the investment account on December 31, 2012, will be:
- \$300,000.
  - \$325,000.
  - \$400,000.
  - \$340,000.
- (SO 3) 7. Using the information in question 6, what entry would Horicon make to record the receipt of the dividend from Sheboygan?
- Debit Cash and credit Revenue from Stock Investments.
  - Debit Cash Dividends and credit Revenue from Stock Investments.
  - Debit Cash and credit Stock Investments.
  - Debit Cash and credit Dividend Revenue.
8. You have a controlling interest if: (SO 3)
- you own more than 20% of a company’s stock.
  - you are the president of the company.
  - you use the equity method.
  - you own more than 50% of a company’s stock.
9. Which of the following statements is *not true*? Consolidated financial statements are useful to: (SO 4)
- determine the profitability of specific subsidiaries.
  - determine the total profitability of enterprises under common control.
  - determine the breadth of a parent company’s operations.
  - determine the full extent of total obligations of enterprises under common control.
10. At the end of the first year of operations, the total cost of the trading securities portfolio is \$120,000. Total fair value is \$115,000. The financial statements should show: (SO 5)
- a reduction of an asset of \$5,000 and a realized loss of \$5,000.
  - a reduction of an asset of \$5,000 and an unrealized loss of \$5,000 in the stockholders’ equity section.
  - a reduction of an asset of \$5,000 in the current assets section and an unrealized loss of \$5,000 in “Other expenses and losses.”
  - a reduction of an asset of \$5,000 in the current assets section and a realized loss of \$5,000 in “Other expenses and losses.”
11. At December 31, 2012, the fair value of available-for-sale securities is \$41,300 and the cost is \$39,800. At January 1, 2012, there was a credit balance of \$900 in the Market Adjustment—Available-for-Sale account. The required adjusting entry would be: (SO 5)
- Debit Market Adjustment—Available-for-Sale for \$1,500 and credit Unrealized Gain or Loss—Equity for \$1,500.
  - Debit Market Adjustment—Available-for-Sale for \$600 and credit Unrealized Gain or Loss—Equity for \$600.
  - Debit Market Adjustment—Available-for-Sale for \$2,400 and credit Unrealized Gain or Loss—Equity for \$2,400.
  - Debit Unrealized Gain or Loss—Equity for \$2,400 and credit Market Adjustment—Available-for-Sale for \$2,400.

- (SO 5) 12. In the balance sheet, a debit balance in Unrealized Gain or Loss—Equity is reported as a(n):
- increase to stockholders' equity.
  - decrease to stockholders' equity.
  - loss in the income statement.
  - loss in the retained earnings statement.
- (SO 6) 13. Short-term debt investments must be readily marketable and expected to be sold within:
- 3 months from the date of purchase.
  - the next year or operating cycle, whichever is shorter.
  - the next year or operating cycle, whichever is longer.
  - the operating cycle.

## Questions

- What are the reasons that corporations invest in securities?
- (a) What is the cost of an investment in bonds?  
(b) When is interest on bonds recorded?
- Tino Martinez is confused about losses and gains on the sale of debt investments. Explain to Tino (a) how the gain or loss is computed, and (b) the statement presentation of the gains and losses.
- Olindo Company sells Gish's bonds costing \$40,000 for \$45,000, including \$500 of accrued interest. In recording the sale, Olindo books a \$5,000 gain. Is this correct? Explain.
- What is the cost of an investment in stock?
- To acquire Kinston Corporation stock, R. Neal pays \$62,000 in cash, plus \$1,200 broker's fees. What entry should be made for this investment?
- (a) When should a long-term investment in common stock be accounted for by the equity method? (b) When is revenue recognized under this method?
- Rijo Corporation uses the equity method to account for its ownership of 30% of the common stock of Pippen Packing. During 2012, Pippen reported a net income of \$80,000 and declares and pays cash dividends of \$10,000. What recognition should Rijo Corporation give to these events?
- What constitutes "significant influence" when an investor's financial interest is below the 50% level?
- Distinguish between the cost and equity methods of accounting for investments in stocks.
- What are consolidated financial statements?
- What are the valuation guidelines for investments at a balance sheet date?
- Tina Eddings is the controller of Mendez Inc. At December 31, the company's investments in trading securities cost \$74,000. They have a fair value of \$70,000. Indicate how Tina would report these data in the financial statements prepared on December 31.
- Using the data in question 13, how would Tina report the data if the investment were long-term and the securities were classified as available-for-sale?
- Hashmi Company's investments in available-for-sale securities at December 31 show total cost of \$195,000 and total fair value of \$205,000. Prepare the adjusting entry.
- Using the data in question 15, prepare the adjusting entry assuming the securities are classified as trading securities.
- What is the proper statement presentation of the account Unrealized Loss—Equity?
- What purposes are served by reporting Unrealized Gains (Losses)—Equity in the stockholders' equity section?
- Altoona Wholesale Supply owns stock in Key Corporation. Altoona intends to hold the stock indefinitely because of some negative tax consequences if sold. Should the investment in Key be classified as a short-term investment? Why or why not?
-  **PEPSICO** What does PepsiCo state regarding its accounting policy involving consolidated financial statements?

## Brief Exercises

**BE16-1** Kimmel Corporation purchased debt investments for \$52,000 on January 1, 2012. On July 1, 2012, Kimmel received cash interest of \$2,340. Journalize the purchase and the receipt of interest. Assume that no interest has been accrued.

*Journalize entries for debt investments.*

(SO 2)

**BE16-2** On August 1, Paul Company buys 1,000 shares of Merlynn common stock for \$35,000 cash, plus brokerage fees of \$700. On December 1, Paul sells the stock investments for \$40,000 in cash. Journalize the purchase and sale of the common stock.

*Journalize entries for stock investments.*

(SO 3)

**BE16-3** Texas Company owns 25% of Plano Company. For the current year, Plano reports net income of \$180,000 and declares and pays a \$50,000 cash dividend. Record Texas's equity in Plano's net income and the receipt of dividends from Plano.

*Record transactions under the equity method of accounting.*

(SO 3)

**BE16-4** The cost of the trading securities of Hardy Company at December 31, 2012, is \$62,000. At December 31, 2012, the fair value of the securities is \$59,000. Prepare the adjusting entry to record the securities at fair value.

*Prepare adjusting entry using fair value.*

(SO 5)

**BE16-5** For the data presented in BE16-4, show the financial statement presentation of the trading securities and related accounts.

*Indicate statement presentation using fair value.*

(SO 5, 6)

Prepare adjusting entry using fair value.

(SO 5)

Indicate statements presentation using fair value.

(SO 5, 6)

Prepare investments section of balance sheet.

(SO 5, 6)

**BE16-6** Latrobe Corporation holds as a long-term investment available-for-sale stock securities costing \$72,000. At December 31, 2012, the fair value of the securities is \$66,000. Prepare the adjusting entry to record the securities at fair value.

**BE16-7** For the data presented in BE16-6, show the financial statement presentation of the available-for-sale securities and related accounts. Assume the available-for-sale securities are noncurrent.

**BE16-8** Gurnee Corporation has the following long-term investments: (1) Common stock of Kornas Co. (10% ownership) held as available-for-sale securities, cost \$108,000, fair value \$115,000. (2) Common stock of Kozanecki Inc. (30% ownership), cost \$210,000, equity \$270,000. Prepare the investments section of the balance sheet.

## Do it! Review

Make journal entry for bond purchase and adjusting entry for interest accrual.

(SO 2)

Make journal entries for stock investments.

(SO 3)

Make journal entries for trading and available-for-sale securities.

(SO 5)

Indicate financial statement presentation of investments.

(SO 6)

**Do it! 16-1** Kurtyka Corporation had the following transactions relating to debt investments:

- Jan. 1 Purchased 50, \$1,000, 12% Nordica Company bonds for \$50,000 plus broker's fees of \$1,500. Interest is payable semiannually on January 1 and July 1.  
 July 1 Received semiannual interest from Nordica Company bonds.  
 July 1 Sold 30 Nordica Company bonds for \$30,000, less \$800 broker's fees.

(a) Journalize the transactions, and (b) prepare the adjusting entry for the accrual of interest on December 31.

**Do it! 16-2** Presented below are two independent situations:

- Lorfeld Inc. acquired 10% of the 500,000 shares of common stock of Northbrook Corporation at a total cost of \$11 per share on June 17, 2012. On September 3, Northbrook declared and paid a \$160,000 dividend. On December 31, Northbrook reported net income of \$550,000 for the year.
- Saa Corporation obtained significant influence over McCarthy Company by buying 30% of McCarthy's 100,000 outstanding shares of common stock at a cost of \$18 per share on January 1, 2012. On May 15, McCarthy declared and paid a cash dividend of \$150,000. On December 31, McCarthy reported net income of \$270,000 for the year.

Prepare all necessary journal entries for 2012 for (1) Lorfeld and (2) Saa.

**Do it! 16-3** Some of McEveven Corporation's investment securities are classified as trading securities and some are classified as available-for-sale. The cost and fair value of each category at December 31, 2012, was as follows.

|                               | <u>Cost</u> | <u>Fair Value</u> | <u>Unrealized Gain (Loss)</u> |
|-------------------------------|-------------|-------------------|-------------------------------|
| Trading securities            | \$96,300    | \$84,900          | \$(11,400)                    |
| Available-for-sale securities | \$59,000    | \$63,200          | \$ 4,200                      |

At December 31, 2011, the Market Adjustment—Trading account had a debit balance of \$2,200, and the Market Adjustment—Available-for-Sale account had a credit balance of \$7,750. Prepare the required journal entries for each group of securities for December 31, 2012.

**Do it! 16-4** Identify where each of the following items would be reported in the financial statements.

- Loss on sale of investments in stock.
- Unrealized gain on available-for-sale securities.
- Market adjustment—trading.
- Interest earned on investments in bonds.
- Unrealized loss on trading securities.

Use the following possible categories:

*Balance sheet:*

|                                |                       |
|--------------------------------|-----------------------|
| Current assets                 | Current liabilities   |
| Investments                    | Long-term liabilities |
| Property, plant, and equipment | Stockholders' equity  |
| Intangible assets              |                       |

*Income statement:*

|                          |                           |
|--------------------------|---------------------------|
| Other revenues and gains | Other expenses and losses |
|--------------------------|---------------------------|

## Exercises

**E16-1** Mr. Wellington is studying for an accounting test and has developed the following questions about investments.

1. What are three reasons why companies purchase investments in debt or stock securities?
2. Why would a corporation have excess cash that it does not need for operations?
3. What is the typical investment when investing cash for short periods of time?
4. What are the typical investments when investing cash to generate earnings?
5. Why would a company invest in securities that provide no current cash flows?
6. What is the typical stock investment when investing cash for strategic reasons?

### Instructions

Provide answers for Mr. Wellington.

*Understand debt and stock investments.*

(SO 1)

**E16-2** Floyd Corporation had the following transactions pertaining to debt investments.

- Jan. 1 Purchased 50 8%, \$1,000 Petal Co. bonds for \$50,000 cash plus brokerage fees of \$900. Interest is payable semiannually on July 1 and January 1.  
 July 1 Received semiannual interest on Petal Co. bonds.  
 July 1 Sold 30 Petal Co. bonds for \$34,000 less \$500 brokerage fees.

### Instructions

- (a) Journalize the transactions.
- (b) Prepare the adjusting entry for the accrual of interest at December 31.

*Journalize debt investment transactions and accrue interest.*

(SO 2)

**E16-3** Brook Company purchased 70 Meissner Company 12%, 10-year, \$1,000 bonds on January 1, 2012, for \$73,000. Brook Company also had to pay \$500 of broker's fees. The bonds pay interest semiannually on July 1 and January 1. On January 1, 2013, after receipt of interest, Brook Company sold 40 of the bonds for \$40,100.

### Instructions

Prepare the journal entries to record the transactions described above.

*Journalize debt investment transactions, accrue interest, and record sale.*

(SO 2)

**E16-4** Diann Company had the following transactions pertaining to stock investments.

- Feb. 1 Purchased 600 shares of Ronn common stock (2%) for \$6,000 cash, plus brokerage fees of \$200.  
 July 1 Received cash dividends of \$1 per share on Ronn common stock.  
 Sept. 1 Sold 300 shares of Ronn common stock for \$4,400, less brokerage fees of \$100.  
 Dec. 1 Received cash dividends of \$1 per share on Ronn common stock.

### Instructions

- (a) Journalize the transactions.
- (b) Explain how dividend revenue and the gain (loss) on sale should be reported in the income statement.

*Journalize stock investment transactions.*

(SO 3)

**E16-5** Spring Inc. had the following transactions pertaining to investments in common stock.

- Jan. 1 Purchased 2,500 shares of Angeltide Corporation common stock (5%) for \$140,000 cash plus \$2,100 broker's commission.  
 July 1 Received a cash dividend of \$3 per share.  
 Dec. 1 Sold 500 shares of Angeltide Corporation common stock for \$32,000 cash, less \$800 broker's commission.  
 Dec. 31 Received a cash dividend of \$3 per share.

### Instructions

Journalize the transactions.

*Journalize transactions for investments in stocks.*

(SO 3)

**E16-6** On February 1, Minitori Company purchased 500 shares (2% ownership) of Becker Company common stock for \$30 per share plus brokerage fees of \$400. On March 20, Minitori Company sold 100 shares of Becker stock for \$2,900, less a \$50 brokerage fee. Minitori received a dividend of \$1.00 per share on April 25. On June 15, Minitori sold 200 shares of Becker stock for \$7,400, less a \$90 brokerage fee. On July 28, Minitori received a dividend of \$1.25 per share.

### Instructions

Prepare the journal entries to record the transactions described above.

*Journalize transactions for investments in stocks.*

(SO 3)

Journalize and post transactions, and contrast cost and equity method results.

(SO 3)

Journalize entries under cost and equity methods.

(SO 3, 5)

Understand the usefulness of consolidated statements.

(SO 4)

Prepare adjusting entry to record fair value, and indicate statement presentation.

(SO 5, 6)

Prepare adjusting entry to record fair value, and indicate statement presentation.

(SO 5, 6)

Prepare adjusting entries for fair value, and indicate statement presentation for two classes of securities.

(SO 5, 6)

**E16-7** On January 1, Vince Corporation purchased a 25% equity in Morelli Corporation for \$180,000. At December 31, Morelli declared and paid a \$60,000 cash dividend and reported net income of \$200,000.

#### Instructions

- Journalize the transactions.
- Determine the amount to be reported as an investment in Morelli stock at December 31.

**E16-8** Presented below are two independent situations.

- Chicory Cosmetics acquired 15% of the 200,000 shares of common stock of Racine Fashion at a total cost of \$13 per share on March 18, 2012. On June 30, Racine declared and paid a \$60,000 dividend. On December 31, Racine reported net income of \$122,000 for the year. At December 31, the market price of Racine Fashion was \$15 per share. The stock is classified as available-for-sale.
- Frank, Inc., obtained significant influence over Nowak Corporation by buying 30% of Nowak's 30,000 outstanding shares of common stock at a total cost of \$9 per share on January 1, 2012. On June 15, Nowak declared and paid a cash dividend of \$30,000. On December 31, Nowak reported a net income of \$80,000 for the year.

#### Instructions

Prepare all the necessary journal entries for 2012 for (1) Chicory Cosmetics and (2) Frank, Inc.

**E16-9** Edna Company purchased 70% of the outstanding common stock of Damen Corporation.

#### Instructions

- Explain the relationship between Edna Company and Damen Corporation.
- How should Edna account for its investment in Damen?
- Why is the accounting treatment described in (b) useful?

**E16-10** At December 31, 2012, the trading securities for Oglesbee, Inc. are as follows.

| <u>Security</u> | <u>Cost</u>     | <u>Fair Value</u> |
|-----------------|-----------------|-------------------|
| A               | \$17,500        | \$16,000          |
| B               | 12,500          | 14,000            |
| C               | 23,000          | 19,000            |
|                 | <u>\$53,000</u> | <u>\$49,000</u>   |

#### Instructions

- Prepare the adjusting entry at December 31, 2012, to report the securities at fair value.
- Show the balance sheet and income statement presentation at December 31, 2012, after adjustment to fair value.

**E16-11** Data for investments in stock classified as trading securities are presented in E16-10. Assume instead that the investments are classified as available-for-sale securities. They have the same cost and fair value. The securities are considered to be a long-term investment.

#### Instructions

- Prepare the adjusting entry at December 31, 2012, to report the securities at fair value.
- Show the statement presentation at December 31, 2012, after adjustment to fair value.
-  E. Devonshire, a member of the board of directors, does not understand the reporting of the unrealized gains or losses. Write a letter to Ms. Devonshire explaining the reporting and the purposes that it serves.

**E16-12** Zippydah Company has the following data at December 31, 2012.

| <u>Securities</u>  | <u>Cost</u> | <u>Fair Value</u> |
|--------------------|-------------|-------------------|
| Trading            | \$120,000   | \$124,000         |
| Available-for-sale | 100,000     | 94,000            |

The available-for-sale securities are held as a long-term investment.

#### Instructions

- Prepare the adjusting entries to report each class of securities at fair value.
- Indicate the statement presentation of each class of securities and the related unrealized gain (loss) accounts.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

**P16-1A** Pagnucci Carecenters Inc. provides financing and capital to the health-care industry, with a particular focus on nursing homes for the elderly. The following selected transactions relate to bonds acquired as an investment by Pagnucci, whose fiscal year ends on December 31.

*Journalize debt investment transactions and show financial statement presentation.*

(SO 2, 5, 6)

### 2012

- Jan. 1 Purchased at face value \$2,000,000 of Franco Nursing Centers, Inc., 10-year, 8% bonds dated January 1, 2012, directly from Franco.
- July 1 Received the semiannual interest on the Franco bonds.
- Dec. 31 Accrual of interest at year-end on the Franco bonds.

(Assume that all intervening transactions and adjustments have been properly recorded and that the number of bonds owned has not changed from December 31, 2012, to December 31, 2014.)

### 2015

- Jan. 1 Received the semiannual interest on the Franco bonds.
- Jan. 1 Sold \$1,000,000 Franco bonds at 106. The broker deducted \$6,000 for commissions and fees on the sale.
- July 1 Received the semiannual interest on the Franco bonds.
- Dec. 31 Accrual of interest at year-end on the Franco bonds.

### Instructions

- (a) Journalize the listed transactions for the years 2012 and 2015.
- (b) Assume that the fair value of the bonds at December 31, 2012, was \$2,200,000. These bonds are classified as available-for-sale securities. Prepare the adjusting entry to record these bonds at fair value.
- (c) Based on your analysis in part (b), show the balance sheet presentation of the bonds and interest receivable at December 31, 2012. Assume the investments are considered long-term. Indicate where any unrealized gain or loss is reported in the financial statements.

(a) Gain on sale of debt investment \$54,000

**P16-2A** In January 2012, the management of Stefan Company concludes that it has sufficient cash to permit some short-term investments in debt and stock securities. During the year, the following transactions occurred.

*Journalize investment transactions, prepare adjusting entry, and show statement presentation.*

(SO 2, 3, 5, 6)

- Feb. 1 Purchased 600 shares of Superior common stock for \$31,800, plus brokerage fees of \$600.
- Mar. 1 Purchased 800 shares of Pawlik common stock for \$20,000, plus brokerage fees of \$400.
- Apr. 1 Purchased 50 \$1,000, 7% Venice bonds for \$50,000, plus \$1,000 brokerage fees. Interest is payable semiannually on April 1 and October 1.
- July 1 Received a cash dividend of \$0.60 per share on the Superior common stock.
- Aug. 1 Sold 200 shares of Superior common stock at \$58 per share less brokerage fees of \$200.
- Sept. 1 Received a \$1 per share cash dividend on the Pawlik common stock.
- Oct. 1 Received the semiannual interest on the Venice bonds.
- Oct. 1 Sold the Venice bonds for \$50,000 less \$1,000 brokerage fees.

At December 31, the fair value of the Superior common stock was \$55 per share. The fair value of the Pawlik common stock was \$24 per share.

### Instructions

- (a) Journalize the transactions and post to the accounts Debt Investments and Stock Investments. (Use the T-account form.)
- (b) Prepare the adjusting entry at December 31, 2012, to report the investment securities at fair value. All securities are considered to be trading securities.

(a) Gain on stock sale \$600

- (c) Show the balance sheet presentation of investment securities at December 31, 2012.  
 (d) Identify the income statement accounts and give the statement classification of each account.

Journalize transactions and adjusting entry for stock investments.

(SO 3, 5, 6)

**P16-3A** On December 31, 2012, Ogallala Associates owned the following securities, held as a long-term investment. The securities are not held for influence or control of the investee.

|               | <u>Common Stock</u> | <u>Shares</u> | <u>Cost</u> |
|---------------|---------------------|---------------|-------------|
| Carlene Co.   |                     | 2,000         | \$60,000    |
| Riverdale Co. |                     | 5,000         | 45,000      |
| Raczynski Co. |                     | 1,500         | 30,000      |

On December 31, 2012, the total fair value of the securities was equal to its cost. In 2013, the following transactions occurred.

- July 1 Received \$1 per share semiannual cash dividend on Riverdale Co. common stock.  
 Aug. 1 Received \$0.50 per share cash dividend on Carlene Co. common stock.  
 Sept. 1 Sold 1,500 shares of Riverdale Co. common stock for cash at \$8 per share, less brokerage fees of \$300.  
 Oct. 1 Sold 800 shares of Carlene Co. common stock for cash at \$33 per share, less brokerage fees of \$500.  
 Nov. 1 Received \$1 per share cash dividend on Raczynski Co. common stock.  
 Dec. 15 Received \$0.50 per share cash dividend on Carlene Co. common stock.  
 31 Received \$1 per share semiannual cash dividend on Riverdale Co. common stock.

At December 31, the fair values per share of the common stocks were: Carlene Co. \$32, Riverdale Co. \$8, and Raczynski Co. \$18.

#### Instructions

- (a) Journalize the 2013 transactions and post to the account Stock Investments. (Use the T-account form.)  
 (b) Prepare the adjusting entry at December 31, 2013, to show the securities at fair value. The stock should be classified as available-for-sale securities.  
 (c) Show the balance sheet presentation of the investments at December 31, 2013. At this date, Ogallala Associates has common stock \$1,500,000 and retained earnings \$1,000,000.

**P16-4A** Control Alt Design acquired 30% of the outstanding common stock of Walter Company on January 1, 2012, by paying \$800,000 for the 45,000 shares. Walter declared and paid \$0.30 per share cash dividends on March 15, June 15, September 15, and December 15, 2012. Walter reported net income of \$320,000 for the year. At December 31, 2012, the market price of Walter common stock was \$24 per share.

#### Instructions

- (a) Prepare the journal entries for Control Alt Design for 2012 assuming Control Alt Design cannot exercise significant influence over Walter. (Use the cost method and assume that Walter common stock should be classified as a trading security.)  
 (b) Prepare the journal entries for Control Alt Design for 2012, assuming Control Alt Design can exercise significant influence over Walter. Use the equity method.  
 (c) Indicate the balance sheet and income statement account balances at December 31, 2012, under each method of accounting.

**P16-5A** The following securities are in Amberwood Company's portfolio of long-term available-for-sale securities at December 31, 2012.

|   | <u>Cost</u> |
|---|-------------|
| 1,000 shares of Reginald Corporation common stock   | \$52,000    |
| 1,400 shares of Elderberry Corporation common stock | 84,000      |
| 1,200 shares of Mattoon Corporation preferred stock | 33,600      |

On December 31, 2012, the total cost of the portfolio equaled total fair value. Amberwood had the following transactions related to the securities during 2013.

- Jan. 20 Sold all 1,000 shares of Reginald Corporation common stock at \$55 per share less brokerage fees of \$600.  
 28 Purchased 400 shares of \$70 par value common stock of Hachito Corporation at \$78 per share, plus brokerage fees of \$480.  
 30 Received a cash dividend of \$1.15 per share on Elderberry Corp. common stock.

Prepare entries under the cost and equity methods, and tabulate differences.

(SO 3)

(a) Total dividend revenue  
\$54,000

(b) Revenue from investments  
\$96,000

Journalize stock investment transactions and show statement presentation.

(SO 3, 5, 6)

- Feb. 8 Received cash dividends of \$0.40 per share on Mattoon Corp. preferred stock.  
 18 Sold all 1,200 shares of Mattoon Corp. preferred stock at \$27 per share less brokerage fees of \$360.  
 July 30 Received a cash dividend of \$1.00 per share on Elderberry Corp. common stock.  
 Sept. 6 Purchased an additional 900 shares of \$10 par value common stock of Hachito Corporation at \$82 per share, plus brokerage fees of \$1,200.  
 Dec. 1 Received a cash dividend of \$1.50 per share on Hachito Corporation common stock.

At December 31, 2013, the fair values of the securities were:

|                                     |                |
|-------------------------------------|----------------|
| Elderberry Corporation common stock | \$64 per share |
| Hachito Corporation common stock    | \$72 per share |

### Instructions

- (a) Prepare journal entries to record the transactions.  
 (b) Post to the investment accounts. (Use T accounts.)  
 (c) Prepare the adjusting entry at December 31, 2013 to report the portfolio at fair value.  
 (d) Show the balance sheet presentation at December 31, 2013, for the investment-related accounts.

(a) Loss on sale of stock investment \$1,560  
 (c) Unrealized loss \$7,480

**P16-6A** The following data, presented in alphabetical order, are taken from the records of Radar Corporation.

Prepare a balance sheet.  
 (SO 5, 6)

|  |            |
|--|------------|
| Accounts payable   | \$ 240,000 |
| Accounts receivable  | 140,000    |
| Accumulated depreciation—buildings   | 180,000    |
| Accumulated depreciation—equipment   | 52,000     |
| Allowance for doubtful accounts  | 6,000      |
| Bonds payable (10%, due 2020)  | 500,000    |
| Buildings  | 950,000    |
| Cash   | 42,000     |
| Common stock (\$10 par value; 500,000 shares authorized,<br>150,000 shares issued) | 1,500,000  |
| Dividends payable  | 80,000     |
| Equipment  | 275,000    |
| Goodwill   | 200,000    |
| Income taxes payable   | 120,000    |
| Inventory  | 170,000    |
| Investment in Sasse common stock (10% ownership), at cost                          | 278,000    |
| Investment in Mara common stock (30% ownership), at equity                         | 380,000    |
| Land   | 390,000    |
| Market adjustment—available-for-sale securities (Dr)                               | 8,000      |
| Notes payable (due 2013)   | 70,000     |
| Paid-in capital in excess of par—common stock                                      | 130,000    |
| Premium on bonds payable   | 40,000     |
| Prepaid insurance  | 16,000     |
| Retained earnings  | 103,000    |
| Short-term investments, at fair value (and cost)                                   | 180,000    |
| Unrealized gain—available-for-sale securities                                      | 8,000      |

The investment in Sasse common stock is considered to be a long-term available-for-sale security.

### Instructions

Prepare a classified balance sheet at December 31, 2012.

Total assets \$2,791,000

## Problems: Set B

**P16-1B** Cheese Farms is a grower of hybrid seed corn for Steenbergen Genetics Corporation. It has had two exceptionally good years and has elected to invest its excess funds in bonds. The selected transactions, shown on the next page, relate to bonds acquired as an investment by Cheese Farms, whose fiscal year ends on December 31.

Journalize debt investment transactions and show financial statement presentation.  
 (SO 2, 5, 6)

**2012**

- Jan. 1 Purchased at face value \$400,000 of Stombaugh Corporation 10-year, 9% bonds dated January 1, 2012, directly from the issuing corporation.  
 July 1 Received the semiannual interest on the Stombaugh bonds.  
 Dec. 31 Accrual of interest at year-end on the Stombaugh bonds.

(Assume that all intervening transactions and adjustments have been properly recorded and the number of bonds owned has not changed from December 31, 2012, to December 31, 2014.)

**2015**

- Jan. 1 Received the semiannual interest on the Stombaugh bonds.  
 Jan. 1 Sold \$200,000 of Stombaugh bonds at 114. The broker deducted \$7,000 for commissions and fees on the sale.  
 July 1 Received the semiannual interest on the Stombaugh bonds.  
 Dec. 31 Accrual of interest at year-end on the Stombaugh bonds.

**Instructions**

(a) Gain on sale of debt investments \$21,000

- (a) Journalize the listed transactions for the years 2012 and 2015.  
 (b) Assume that the fair value of the bonds at December 31, 2012, was \$385,000. These bonds are classified as available-for-sale securities. Prepare the adjusting entry to record these bonds at fair value.  
 (c) Based on your analysis in part (b), show the balance sheet presentation of the bonds and interest receivable at December 31, 2012. Assume the investments are considered long-term. Indicate where any unrealized gain or loss is reported in the financial statements.

Journalize investment transactions, prepare adjusting entry, and show statement presentation.

(SO 2, 3, 5, 6)

**P16-2B** In January 2012, the management of Gina Company concludes that it has sufficient cash to purchase some short-term investments in debt and stock securities. During the year, the following transactions occurred.

- Feb. 1 Purchased 500 shares of Joy common stock for \$30,000, plus brokerage fees of \$800.  
 Mar. 1 Purchased 600 shares of Aurelius common stock for \$20,000, plus brokerage fees of \$300.  
 Apr. 1 Purchased 40 \$1,000, 9% Sikich bonds for \$40,000, plus \$1,200 brokerage fees. Interest is payable semiannually on April 1 and October 1.  
 July 1 Received a cash dividend of \$0.60 per share on the Joy common stock.  
 Aug. 1 Sold 300 shares of Joy common stock at \$69 per share, less brokerage fees of \$350.  
 Sept. 1 Received a \$1 per share cash dividend on the Aurelius common stock.  
 Oct. 1 Received the semiannual interest on the Sikich bonds.  
 Oct. 1 Sold the Sikich bonds for \$45,000, less \$1,000 brokerage fees.

At December 31, the fair value of the Joy common stock was \$66 per share. The fair value of the Aurelius common stock was \$29 per share.

**Instructions**

(b) Unrealized loss \$2,020

- (a) Journalize the transactions and post to the accounts Debt Investments and Stock Investments. (Use the T-account form.)  
 (b) Prepare the adjusting entry at December 31, 2012, to report the investments at fair value. All securities are considered to be trading securities.  
 (c) Show the balance sheet presentation of investment securities at December 31, 2012.  
 (d) Identify the income statement accounts and give the statement classification of each account.

Journalize transactions and adjusting entry for stock investments.

(SO 3, 5, 6)

**P16-3B** On December 31, 2012, Eli Associates owned the following securities, held as long-term investments.

| <u>Common Stock</u> | <u>Shares</u> | <u>Cost</u> |
|---------------------|---------------|-------------|
| Trowbridge Co.      | 4,000         | \$100,000   |
| Holly Co.           | 5,000         | 30,000      |
| Oriental Motors Co. | 3,000         | 60,000      |

On this date, the total fair value of the securities was equal to its cost. The securities are not held for influence or control over the investees. In 2013, the following transactions occurred.

- July 1 Received \$1 per share semiannual cash dividend on Holly Co. common stock.  
 Aug. 1 Received \$0.50 per share cash dividend on Trowbridge Co. common stock.

- Sept. 1 Sold 1,500 shares of Holly Co. common stock for cash at \$8 per share, less brokerage fees of \$300.
- Oct. 1 Sold 600 shares of Trowbridge Co. common stock for cash at \$30 per share, less brokerage fees of \$600.
- Nov. 1 Received \$1 per share cash dividend on Oriental Motor Co. common stock.
- Dec. 15 Received \$0.50 per share cash dividend on Trowbridge Co. common stock.
- 31 Received \$1 per share semiannual cash dividend on Holly Co. common stock.

At December 31, the fair values per share of the common stocks were: Trowbridge Co. \$23, Holly Co. \$7, and Oriental Motors Co. \$19.

### Instructions

- (a) Journalize the 2013 transactions and post to the account Stock Investments. (Use the T-account form.)
- (b) Prepare the adjusting entry at December 31, 2013, to show the securities at fair value. The stock should be classified as available-for-sale securities.
- (c) Show the balance sheet presentation of the investment-related accounts at December 31, 2013. At this date, Eli Associates has common stock \$2,000,000 and retained earnings \$1,200,000.

(a) Gain on sale, \$2,700 and \$2,400

**P16-4B** Tuecke's Concrete acquired 20% of the outstanding common stock of Drew, Inc. on January 1, 2012, by paying \$1,100,000 for 40,000 shares. Drew declared and paid a \$0.50 per share cash dividend on June 30 and again on December 31, 2012. Drew reported net income of \$600,000 for the year. At December 31, 2012, the market price of Drew's common stock was \$30 per share.

Prepare entries under the cost and equity methods, and tabulate differences.

(SO 3)

### Instructions

- (a) Prepare the journal entries for Tuecke's Concrete for 2012, assuming Tuecke's cannot exercise significant influence over Drew. (Use the cost method and assume Drew common stock should be classified as available-for-sale.)
- (b) Prepare the journal entries for Tuecke's Concrete for 2012, assuming Tuecke's can exercise significant influence over Drew. (Use the equity method.)
- (c) Indicate the balance sheet and income statement account balances at December 31, 2012, under each method of accounting.

(a) Total dividend revenue \$40,000

(b) Revenue from investment \$120,000

**P16-5B** The following are in Verbitsky's Company's portfolio of long-term available-for-sale securities at December 31, 2012.

|  | <u>Cost</u> |
|--|-------------|
| 700 shares of Sasha Corporation common stock   | \$35,000    |
| 900 shares of Ukraine Corporation common stock | 42,000      |
| 800 shares of Zaba Corporation preferred stock | 22,400      |

Journalize stock investment transactions and show statement presentation.

(SO 3, 5, 6)

On December 31, the total cost of the portfolio equaled total fair value. Verbitsky's Company had the following transactions related to the securities during 2013.

- Jan. 7 Sold 700 shares of Sasha Corporation common stock at \$56 per share, less brokerage fees of \$700.
- 10 Purchased 300 shares, \$70 par value common stock of Vanucci Corporation at \$78 per share, plus brokerage fees of \$240.
- 26 Received a cash dividend of \$1.15 per share on Ukraine Corporation common stock.
- Feb. 2 Received cash dividends of \$0.40 per share on Zaba Corporation preferred stock.
- 10 Sold all 800 shares of Zaba Corporation preferred stock at \$26 per share less brokerage fees of \$180.
- July 1 Received a cash dividend of \$1.00 per share on Ukraine Corporation common stock.
- Sept. 1 Purchased an additional 800 shares of the \$70 par value common stock of Vanucci Corporation at \$75 per share, plus brokerage fees of \$900.
- Dec. 15 Received a cash dividend of \$1.50 per share on Vanucci Corporation common stock.

At December 31, 2013, the fair values of the securities were:

|                                  |                |
|----------------------------------|----------------|
| Ukraine Corporation common stock | \$48 per share |
| Vanucci Corporation common stock | \$72 per share |

(a) Loss on sale \$1,780

(c) Unrealized loss \$4,140

Prepare a balance sheet.

(SO 5, 6)

**Instructions**

- (a) Prepare journal entries to record the transactions.  
 (b) Post to the investment accounts. (Use T accounts.)  
 (c) Prepare the adjusting entry at December 31, 2013, to report the portfolio at fair value.  
 (d) Show the balance sheet presentation at December 31, 2013, for the investment-related accounts.

**P16-6B** The following data, presented in alphabetical order, are taken from the records of Redlands Corporation.

|   |            |
|---|------------|
| Accounts payable  | \$ 375,000 |
| Accounts receivable   | 135,000    |
| Accumulated depreciation—buildings  | 270,000    |
| Accumulated depreciation—equipment  | 80,000     |
| Allowance for doubtful accounts   | 10,000     |
| Bonds payable (10%, due 2022)   | 600,000    |
| Buildings   | 1,350,000  |
| Cash  | 210,000    |
| Common stock (\$5 par value; 500,000 shares authorized,<br>440,000 shares issued) | 2,200,000  |
| Discount on bonds payable   | 30,000     |
| Dividends payable   | 75,000     |
| Equipment   | 415,000    |
| Goodwill  | 300,000    |
| Income taxes payable  | 180,000    |
| Inventory   | 255,000    |
| Investment in Bonita Inc. stock (30% ownership), at equity                        | 900,000    |
| Land  | 780,000    |
| Notes payable (due 2013)  | 110,000    |
| Paid-in capital in excess of par—common stock                                     | 300,000    |
| Prepaid insurance   | 25,000     |
| Retained earnings   | 480,000    |
| Short-term investments, at fair value (and cost)                                  | 280,000    |

**Instructions**

Prepare a classified balance sheet at December 31, 2012.

Total assets \$4,290,000

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Comprehensive Problem: Chapters 12 to 16

**CP16 Part I** Mindy Feldkamp and her two colleagues, Oscar Lopez and Lori Melton, are personal trainers at an upscale health spa/resort in Tampa, Florida. They want to start a health club that specializes in health plans for people in the 50+ age range. The growing population in this age range and strong consumer interest in the health benefits of physical activity have convinced them they can profitably operate their own club. In addition to many other decisions, they need to determine what type of business organization they want. Oscar believes there are more advantages to the corporate form than a partnership, but he hasn't yet convinced Mindy and Lori. They have come to you, a small-business consulting specialist, seeking information and advice regarding the choice of starting a partnership versus a corporation.

**Instructions**

- (a)  Prepare a memo (dated May 26, 2011) that describes the advantages and disadvantages of both partnerships and corporations. Advise Mindy, Oscar, and Lori regarding which organizational form you believe would better serve their purposes. Make sure to include reasons supporting your advice.

**Part II** After deciding to incorporate, each of the three investors receives 20,000 shares of \$2 par common stock on June 12, 2011, in exchange for their co-owned building (\$200,000 fair value) and \$100,000 total cash they contributed to the business. The next decision that Mindy, Oscar, and Lori need to make is how to obtain financing for renovation and equipment. They understand the difference between equity securities and debt securities, but do not understand the tax, net income, and earnings per share consequences of equity versus debt financing on the future of their business.

#### Instructions

**(b)** Prepare notes for a discussion with the three entrepreneurs in which you will compare the consequences of using equity versus debt financing. As part of your notes, show the differences in interest and tax expense assuming \$1,400,000 is financed with common stock, and then alternatively with debt. Assume that when common stock is used, 140,000 shares will be issued. When debt is used, assume the interest rate on debt is 9%, the tax rate is 32%, and income before interest and taxes is \$300,000. (You may want to use an electronic spreadsheet.)

**Part III** During the discussion about financing, Lori mentions that one of her clients, Roberto Marino, has approached her about buying a significant interest in the new club. Having an interested investor sways the three to issue equity securities to provide the financing they need. On July 21, 2011, Mr. Marino buys 90,000 shares at a price of \$10 per share.

The club, LifePath Fitness, opens on January 12, 2012, and after a slow start, begins to produce the revenue desired by the owners. The owners decide to pay themselves a stock dividend, since cash has been less than abundant since they opened their doors. The 10% stock dividend is declared by the owners on July 27, 2012. The market price of the stock is \$3 on the declaration date. The date of record is July 31, 2012 (there have been no changes in stock ownership since the initial issuance), and the issue date is August 15, 2012. By the middle of the fourth quarter of 2012, the cash flow of LifePath Fitness has improved to the point that the owners feel ready to pay themselves a cash dividend. They declare a \$0.05 cash dividend on December 4, 2012. The record date is December 14, 2012, and the payment date is December 24, 2012.

#### Instructions

**(c)** (1) Record all of the transactions related to the common stock of LifePath Fitness during the years 2011 and 2012. (2) Indicate how many shares are issued and outstanding after the stock dividend is issued.

**Part IV** Since the club opened, a major concern has been the pool facilities. Although the existing pool is adequate, Mindy, Oscar, and Lori all desire to make LifePath a cutting-edge facility. Until the end of 2012, financing concerns prevented this improvement. However, because there has been steady growth in clientele, revenue, and income since the fourth quarter of 2012, the owners have explored possible financing options. They are hesitant to issue stock and change the ownership mix because they have been able to work together as a team with great effectiveness. They have formulated a plan to issue secured term bonds to raise the needed \$600,000 for the pool facilities. By the end of April 2013, everything was in place for the bond issue to go ahead. On June 1, 2013, the bonds were issued for \$548,000. The bonds pay semiannual interest of 3% (6% annual) on December 1 and June 1 of each year. The bonds mature in 10 years, and amortization is computed using the straight-line method.

#### Instructions

**(d)** Record (1) the issuance of the secured bonds, (2) the interest payment made on December 1, 2013, (3) the adjusting entry required at December 31, 2013, and (4) the interest payment made on June 1, 2014.

**Part V** Mr. Marino's purchase of the stock of LifePath Fitness was done through his business. The stock investment has always been accounted for using the cost method on his firm's books. However, early in 2014 he decided to take his company public. He is preparing an IPO (initial public offering), and he needs to have the firm's financial statements audited. One of the issues to be resolved is to restate the stock investment in LifePath Fitness using the equity method, since Mr. Marino's ownership percentage is greater than 20%.

**Instructions**

- (e) (1) Give the entries that would have been made on Marino's books if the equity method of accounting for investments had been used since the initial investment. Assume the following data for LifePath.

|                      | <u>2011</u> | <u>2012</u> | <u>2013</u> |
|----------------------|-------------|-------------|-------------|
| Net income           | \$30,000    | \$70,000    | \$105,000   |
| Total cash dividends | \$ 2,100    | \$20,000    | \$ 50,000   |

- (2) Compute the balance in the Stock Investment account (as it relates to LifePath Fitness) at the end of 2013.

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 15.)

**CCC16** Natalie has been approached by Ken Thornton, a shareholder of The Beanery Coffee Inc. Ken wants to retire and would like to sell his 1,000 shares in The Beanery Coffee, which represents 20% of all shares issued. The Beanery is currently operated by Ken's twin daughters, who each own 40% of the common shares. The Beanery not only operates a coffee shop but also roasts and sells beans to retailers, under the name "Rocky Mountain Beanery."

Ken has met with Curtis and Natalie to discuss the business operation. All have concluded that there would be many advantages for Cookie & Coffee Creations Inc. to acquire an interest in The Beanery Coffee. Despite the apparent advantages, however, Natalie and Curtis are still not convinced that they should participate in this business venture.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### Financial Reporting Problem: PepsiCo, Inc.

**BYP16-1** The annual report of PepsiCo is presented in Appendix A.

**Instructions**

- (a) See Note 1 to the financial statements and indicate what the consolidated financial statements include.
- (b) Using PepsiCo's consolidated statement of cash flows, determine how much was spent for capital acquisitions during the current year.

### Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

**BYP16-2** PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

**Instructions**

- (a) Based on the information contained in these financial statements, determine each of the following for each company.
- (1) Net cash used for investing (investment) activities for the current year (from the statement of cash flows).
  - (2) Cash used for capital expenditures during the current year.
- (b) Each of PepsiCo's financial statements is labeled "consolidated." What has been consolidated? That is, from the contents of PepsiCo's annual report, identify by name the corporations that have been consolidated (parent and subsidiaries).

## On the Web

**BYP16-3** Most publicly traded companies are analyzed by numerous analysts. These analysts often don't agree about a company's future prospects. In this exercise, you will find analysts' ratings about companies and make comparisons over time and across companies in the same industry. You will also see to what extent the analysts experienced "earnings surprises." Earnings surprises can cause changes in stock prices.

**Address:** [biz.yahoo.com/f](http://biz.yahoo.com/f), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

### Steps

1. Choose a company.
2. Use the index to find the company's name.
3. Choose **Research**.

### Instructions

- (a) How many analysts rated the company?
- (b) What percentage rated it a strong buy?
- (c) What was the average rating for the week?
- (d) Did the average rating improve or decline relative to the previous week?
- (e) What was the amount of the earnings surprise percentage during the last quarter?

## Critical Thinking

### Decision Making Across the Organization

**BYP16-4** At the beginning of the question and answer portion of the annual stockholders' meeting of Kemper Corporation, stockholder Mike Kerwin asks, "Why did management sell the holdings in UMW Company at a loss when this company has been very profitable during the period its stock was held by Kemper?"

Since president Tony Chavez has just concluded his speech on the recent success and bright future of Kemper, he is taken aback by this question and responds, "I remember we paid \$1,300,000 for that stock some years ago, and I am sure we sold that stock at a much higher price. You must be mistaken."

Kerwin retorts, "Well, right here in footnote number 7 to the annual report it shows that 240,000 shares, a 30% interest in UMW, were sold on the last day of the year. Also, it states that UMW earned \$520,000 this year and paid out \$160,000 in cash dividends. Further, a summary statement indicates that in past years, while Kemper held UMW stock, UMW earned \$1,240,000 and paid out \$440,000 in dividends. Finally, the income statement for this year shows a loss on the sale of UMW stock of \$180,000. So, I doubt that I am mistaken."

Red-faced, president Chavez turns to you.

### Instructions

With the class divided into groups, answer the following.

- (a) What dollar amount did Kemper receive upon the sale of the UMW stock?
- (b) Explain why both stockholder Kerwin and president Chavez are correct.

### Communication Activity

**BYP16-5** Bunge Corporation has purchased two securities for its portfolio. The first is a stock investment in Longley Corporation, one of its suppliers. Bunge purchased 10% of Longley with the intention of holding it for a number of years, but has no intention of purchasing more shares. The second investment was a purchase of debt securities. Bunge purchased the debt securities because its analysts believe that changes in market interest rates will cause these securities to increase in value in a short period of time. Bunge intends to sell the securities as soon as they have increased in value.

### Instructions

Write a memo to Max Scholes, the chief financial officer, explaining how to account for each of these investments. Explain what the implications for reported income are from this accounting treatment.

### Ethics Case

**BYP16-6** Bartlet Financial Services Company holds a large portfolio of debt and stock securities as an investment. The total fair value of the portfolio at December 31, 2012, is greater than total cost. Some securities have increased in value and others have decreased. Deb Faust, the financial vice

president, and Jan McCabe, the controller, are in the process of classifying for the first time the securities in the portfolio.

Faust suggests classifying the securities that have increased in value as trading securities in order to increase net income for the year. She wants to classify the securities that have decreased in value as long-term available-for-sale securities, so that the decreases in value will not affect 2012 net income.

McCabe disagrees. She recommends classifying the securities that have decreased in value as trading securities and those that have increased in value as long-term available-for-sale securities. McCabe argues that the company is having a good earnings year and that recognizing the losses now will help to smooth income for this year. Moreover, for future years, when the company may not be as profitable, the company will have built-in gains.

#### Instructions

- (a) Will classifying the securities as Faust and McCabe suggest actually affect earnings as each says it will?
- (b) Is there anything unethical in what Faust and McCabe propose? Who are the stakeholders affected by their proposals?
- (c) Assume that Faust and McCabe properly classify the portfolio. Assume, at year-end, that Faust proposes to sell the securities that will increase 2012 net income, and that McCabe proposes to sell the securities that will decrease 2012 net income. Is this unethical?

### “All About You” Activity

**BYP16-7** The **Securities and Exchange Commission** (SEC) is the primary regulatory agency of U.S. financial markets. Its job is to ensure that the markets remain fair for all investors. The following SEC sites provide useful information for investors.

**Address:** [www.sec.gov/answers.shtml](http://www.sec.gov/answers.shtml) and <http://www.sec.gov/investor/tools/quiz.htm>, or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt).

#### Instructions

- (a) Go to the first SEC site and find the definition of the following terms.
  - (i) Ask price.
  - (ii) Margin account.
  - (iii) Prospectus.
  - (iv) Index fund.
- (b) Go to the second SEC site and take the short quiz.

### FASB Codification Activity

**BYP16-8** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following.

- (a) What is the definition of a trading security?
- (b) What is the definition of an available-for-sale security?
- (c) What is definition of a holding gain or loss?

#### Answers to Insight and Accounting Across the Organization Questions

**p. 731 How Procter & Gamble Accounts for Gillette** **Q:** Where on Procter & Gamble’s balance sheet will you find its investment in Gillette Company? **A:** Because Procter & Gamble owns 9% of Gillette, Procter & Gamble does not report Gillette in the investment section of its balance sheet. Instead, Gillette’s assets and liabilities are included and commingled with the assets and liabilities of Procter & Gamble.

**p. 734 And the Correct Way to Report Investments Is... ?** **Q:** Why might the use of the equity method not lead to full disclosure in the financial statements? **A:** Under the equity method, the investment in common stock of another company is initially recorded at cost. After that, the investment account is adjusted at each reporting date to show the investor’s equity in the investee. However, on the investor’s balance sheet, only the investment account is shown. The pro-rata share of the investee’s assets and liabilities are not reported. Because the pro-rata share of the investee’s assets and liabilities are not shown, some argue that the full disclosure principle is violated.

#### Answers to Self-Test Questions

1. d 2. a 3. b 4. c 5. a 6. b  $\$300,000 + [25\% \times (\$160,000 - \$60,000)]$  7. c 8. d 9. a 10. c  
11. c  $(\$41,300 - \$39,800) + \$900$  12. b 13. c

# IFRS A Look at IFRS

Until recently, when the IASB issued *IFRS 9*, the accounting and reporting for investments under IFRS and GAAP were for the most part very similar. However, *IFRS 9* introduces new investment classifications and increases the situations when investments are accounted for at fair value, with gains and losses recorded in income.

## Key Points

- The basic accounting entries to record the acquisition of debt securities, the receipt of interest, and the sale of debt securities are the same under IFRS and GAAP.
- The basic accounting entries to record the acquisition of stock investments, the receipt of dividends, and the sale of stock securities are the same under IFRS and GAAP.
- Both IFRS and GAAP use the same criteria to determine whether the equity method of accounting should be used—that is, significant influence with a general guide of over 20 percent ownership, IFRS uses the term *associate investment* rather than equity investment to describe its investment under the equity method.
- Under IFRS, both the investor and an associate company should follow the same accounting policies. As a result, in order to prepare financial information, adjustments are made to the associate's policies to conform to the investor's books. GAAP does not have that requirement.
- The basis for consolidation under IFRS is control. Under GAAP, a bipolar approach is used, which is a risk-and-reward model (often referred to as a variable-entity approach) and a voting-interest approach. However, under both systems, for consolidation to occur, the investor company must generally own 50 percent of another company.
- In general, IFRS requires that companies determine how to measure their financial assets based on two criteria:
  - ◆ The company's business model for managing their financial assets; and
  - ◆ The contractual cash flow characteristics of the financial asset.

If a company has (1) a business model whose objective is to hold assets in order to collect contractual cash flows and (2) the contractual terms of the financial asset gives specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding, then the company should use cost (often referred to as amortized cost).

For example, assume that **Mitsubishi** purchases a bond investment that it intends to hold to maturity. Its business model for this type of investment is to collect interest and then principal at maturity. The payment dates for the interest rate and principal are stated on the bond. In this case, Mitsubishi accounts for the investment at cost. If, on the other hand, Mitsubishi purchased the bonds as part of a trading strategy to speculate on interest rate changes (a trading investment), then the debt investment is reported at fair value. As a result, only debt investments such as receivables, loans, and bond investments that meet the two criteria above are recorded at amortized cost. All other debt investments are recorded and reported at fair value.

- Equity investments are generally recorded and reported at fair value under IFRS. Equity investments do not have a fixed interest or principal payment schedule and therefore cannot be accounted for at amortized cost. In general, equity investments are valued at fair value, with all gains and losses reported in income.
- GAAP classifies investments as trading, available-for-sale (both debt and equity investments), and held-to-maturity (only for debt investments). IFRS uses held-for-collection (debt investments), trading (both debt and equity investments), and non-trading equity investment classifications. GAAP classifications are based on management's intent with respect to the investment. IFRS classifications are based on the business model used to manage the investments and the type of security.
- The accounting for trading investments is the same between GAAP and IFRS. Held-to-maturity (GAAP) and held-for-collection (IFRS) investments are accounted for at amortized

cost. Gains and losses related to available-for-sale securities (GAAP) and non-trading equity investments (IFRS) are reported in other comprehensive income.

- Unrealized gains and losses related to available-for-sale securities are reported in other comprehensive income under GAAP and IFRS. These gains and losses that accumulate are then reported in the balance sheet.
- IFRS does not use Other Revenues and Gains or Other Expenses and Losses in its income statement presentation. It will generally classify these items as unusual items or financial items.

## Looking to the Future

As indicated earlier, both the FASB and IASB have indicated that they believe that all financial instruments should be reported at fair value and that changes in fair value should be reported as part of net income. It seems likely, as more companies choose the fair value option for financial instruments, that we will eventually arrive at fair value measurement for all financial instruments.

## IFRS Self-Test Questions

1. The following asset is *not* considered a financial asset under IFRS:
  - a. trading securities.
  - b. equity securities.
  - c. held-for-collection securities.
  - d. inventories.
2. Under IFRS, the equity method of accounting for long-term investments in common stock should be used when the investor has significant influence over an investee and owns:
  - a. between 20% and 50% of the investee's common stock.
  - b. 30% or more of the investee's common stock.
  - c. more than 50% of the investee's common stock.
  - d. less than 20% of the investee's common stock.
3. Under IFRS, at the end of the first year of operations, the total cost of the trading investments portfolio is \$120,000. Total fair value is \$115,000. The financial statement should show:
  - a. a reduction of an asset of \$5,000 and an unrealized loss of \$5,000 in the income statement.
  - b. a reduction of an asset of \$5,000 and an unrealized loss of \$5,000 in the stockholders' equity section.
  - c. a reduction of an asset of \$5,000 in the current assets section and an unrealized loss of \$5,000 in other comprehensive income.
  - d. a reduction of an asset of \$5,000 in the current assets section and a realized loss of \$5,000 in the other expenses and losses.
4. Under IFRS, unrealized gains on non-trading stock investments should:
  - a. be reported as other revenues and gains in the income statement as part of net income.
  - b. be reported as other gains on the income statement as part of net income.
  - c. not be reported on the income statement or balance sheet.
  - d. be reported as other comprehensive income.
5. Under IFRS, the unrealized loss on trading investments should be reported:
  - a. as part of other comprehensive loss reducing net income.
  - b. on the income statement reducing net income.
  - c. as part of other comprehensive loss not affecting net income.
  - d. directly to stockholders' equity bypassing the income statement.

### Answers to IFRS Self-Test Questions

# CHAPTER 17

## Statement of Cash Flows

### Study Objectives

After studying this chapter, you should be able to:

- 1] Indicate the usefulness of the statement of cash flows.
- 2] Distinguish among operating, investing, and financing activities.
- 3] Prepare a statement of cash flows using the indirect method.
- 4] Analyze the statement of cash flows.

### Feature Story

#### GOT CASH?

In today's environment, companies must be ready to respond to changes quickly in order to survive and thrive. This requires that they manage their cash very carefully. One company that managed cash successfully in its early years was **Microsoft**. During those years, the company paid much of its payroll with stock options (rights to purchase company stock in the future at a given price) instead of cash. This strategy conserved cash and turned more than a thousand of its employees into millionaires during the company's first 20 years of business.

In recent years, Microsoft has had a different kind of cash problem. Now that it has reached a more "mature" stage in life, it generates so much cash—roughly \$1 billion per month—that it cannot always figure out what to do with it. At one time, Microsoft had accumulated \$60 billion.

The company said it was accumulating cash to invest in new opportunities, buy other companies, and pay off pending lawsuits. But for many years, the federal government blocked attempts by

Microsoft to buy anything other than small firms because it feared that purchase of a large firm would only increase Microsoft's monopolistic position.

Microsoft's stockholders have complained for years that holding all this cash was putting a drag on the company's profitability. Why? Because Microsoft had the cash invested in very low-yielding government securities. Stockholders felt that the company either should find new investment projects that would bring higher returns, or return some of the cash to stockholders.

Finally, Microsoft announced a plan to return cash to stockholders, by paying a special one-time \$32 billion dividend. This special dividend was so large that, according to the U.S. Commerce Department, it caused total personal income in the United States to rise by 3.7% in one month—the largest increase ever recorded by the agency. (It also made the holiday season brighter, especially for retailers in the Seattle area.) Microsoft also doubled its regular annual dividend to \$3.50 per share. Further, it announced that it would spend another \$30 billion buying treasury stock. In addition, Microsoft more recently offered to buy **Yahoo!** for \$44.6 billion (Yahoo! declined the offer). Dividends, stock buybacks, and acquisitions will help to deplete some of its massive cash horde, but as you will see in this chapter, for a cash-generating machine like Microsoft, the company will be anything but cash-starved.

Interestingly, in 2010 **Google** found itself in a position similar to Microsoft's. Its cash pile of \$26.5 billion was nearly 20% of the company's value. That's enough to pay a dividend of \$80 per share. Unless it can find large, worthwhile projects to invest in, Google will also need to return a big chunk of its cash to shareholders.

- **Ethics Insight: Cash Flow Isn't Always What It Seems** (p. 773)
- **Anatomy of a Fraud** (p. 778)

## Preview of CHAPTER 17

The balance sheet, income statement, and retained earnings statement do not always show the whole picture of the financial condition of a company or institution. In fact, looking at the financial statements of some well-known companies, a thoughtful investor might ask questions like these: How did **Eastman Kodak** finance cash dividends of \$649 million in a year in which it earned only \$17 million? How could **United Airlines** purchase new planes that cost \$1.9 billion in a year in which it reported a net loss of over \$2 billion? How did the companies that spent a combined fantastic \$3.4 trillion on mergers and acquisitions in a recent year finance those deals? Answers to these and similar questions can be found in this chapter, which presents the statement of cash flows.

The content and organization of this chapter are as follows.

## The Statement of Cash Flows: Usefulness and Format

The balance sheet, income statement, and retained earnings statement provide only limited information about a company's cash flows (cash receipts and cash payments). For example, comparative balance sheets show the increase in property, plant, and equipment during the year. But they do not show how the additions were financed or paid for. The income statement shows net income. But it does not indicate the amount of cash generated by operating activities. The retained earnings statement shows cash dividends declared but not the cash dividends paid during the year. None of these statements presents a detailed summary of where cash came from and how it was used.

### *Usefulness of the Statement of Cash Flows*

The **statement of cash flows** reports the cash receipts, cash payments, and net change in cash resulting from operating, investing, and financing activities during a period. The information in a statement of cash flows should help investors, creditors, and others assess:

- 1. The entity's ability to generate future cash flows.** By examining relationships between items in the statement of cash flows, investors can make predictions of the amounts, timing, and uncertainty of future cash flows better than they can from accrual basis data.
- 2. The entity's ability to pay dividends and meet obligations.** If a company does not have adequate cash, it cannot pay employees, settle debts, or pay dividends.

**Study Objective [1]**  
Indicate the usefulness of the statement of cash flows.

Employees, creditors, and stockholders should be particularly interested in this statement, because it alone shows the flows of cash in a business.

3. **The reasons for the difference between net income and net cash provided (used) by operating activities.** Net income provides information on the success or failure of a business enterprise. However, some financial statement users are critical of accrual-basis net income because it requires many estimates. As a result, users often challenge the reliability of the number. Such is not the case with cash. Many readers of the statement of cash flows want to know the reasons for the difference between net income and net cash provided by operating activities. Then they can assess for themselves the reliability of the income number.
4. **The cash investing and financing transactions during the period.** By examining a company's investing and financing transactions, a financial statement reader can better understand why assets and liabilities changed during the period.

#### Ethics Note

Though we would discourage reliance on cash flows to the exclusion of accrual accounting, comparing cash from operations to net income can reveal important information about the "quality" of reported net income. Such a comparison can reveal the extent to which net income provides a good measure of actual performance.

## Classification of Cash Flows

The statement of cash flows classifies cash receipts and cash payments as operating, investing, and financing activities. Transactions and other events characteristic of each kind of activity are as follows.

1. **Operating activities** include the cash effects of transactions that create revenues and expenses. They thus enter into the determination of net income.
2. **Investing activities** include (a) acquiring and disposing of investments and property, plant, and equipment, and (b) lending money and collecting the loans.
3. **Financing activities** include (a) obtaining cash from issuing debt and repaying the amounts borrowed, and (b) obtaining cash from stockholders, repurchasing shares, and paying dividends.

The operating activities category is the most important. It shows the cash provided by company operations. This source of cash is generally considered to be the best measure of a company's ability to generate sufficient cash to continue as a going concern.

Illustration 17-1 (page 764) lists typical cash receipts and cash payments within each of the three classifications. **Study the list carefully.** It will prove very useful in solving homework exercises and problems.

Note the following general guidelines:

1. Operating activities involve income statement items.
2. Investing activities involve cash flows resulting from changes in investments and long-term asset items.
3. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

Companies classify as operating activities some cash flows related to investing or financing activities. For example, receipts of investment revenue (interest and dividends) are classified as operating activities. So are payments of interest to lenders. Why are these considered operating activities? **Because companies report these items in the income statement, where results of operations are shown.**

#### Study Objective [2]

Distinguish among operating, investing, and financing activities.

**Illustration 17-1**

Typical receipt and payment classifications

### TYPES OF CASH INFLOWS AND OUTFLOWS

#### Operating activities—Income statement items

Cash inflows:

- From sale of goods or services.
- From interest received and dividends received.

Cash outflows:

- To suppliers for inventory.
- To employees for services.
- To government for taxes.
- To lenders for interest.
- To others for expenses.

#### Investing activities—Changes in investments and long-term assets

Cash inflows:

- From sale of property, plant, and equipment.
- From sale of investments in debt or equity securities of other entities.
- From collection of principal on loans to other entities.

Cash outflows:

- To purchase property, plant, and equipment.
- To purchase investments in debt or equity securities of other entities.
- To make loans to other entities.

#### Financing activities—Changes in long-term liabilities and stockholders' equity

Cash inflows:

- From sale of common stock.
- From issuance of long-term debt (bonds and notes).

Cash outflows:

- To stockholders as dividends.
- To redeem long-term debt or reacquire capital stock (treasury stock).

## Significant Noncash Activities

Not all of a company's significant activities involve cash. Examples of significant noncash activities are:

1. Direct issuance of common stock to purchase assets.
2. Conversion of bonds into common stock.
3. Direct issuance of debt to purchase assets.
4. Exchanges of plant assets.

**Companies do not report in the body of the statement of cash flows significant financing and investing activities that do not affect cash.** Instead, they report these activities in either a **separate schedule** at the bottom of the statement of cash flows or in a **separate note or supplementary schedule** to the financial statements. The reporting of these noncash activities in a separate schedule satisfies the **full disclosure principle**.

*In solving homework assignments you should present significant noncash investing and financing activities in a separate schedule at the bottom of the statement of cash flows. (See the last entry in Illustration 17-2, at the bottom of page 765, for an example.)*

### Helpful Hint

Do not include noncash investing and financing activities in the body of the statement of cash flows. Report this information in a separate schedule.

# ACCOUNTING ACROSS THE ORGANIZATION

## Net What?

Net income is not the same as net cash provided by operating activities. Below are some results from recent annual reports (dollars in millions). Note the wide disparity among these companies, all of which engaged in retail merchandising.

| Company                    | Net Income | Net Cash Provided by Operating Activities |
|----------------------------|------------|---|
| Kohl's Corporation         | \$ 1,083   | \$ 1,234                                  |
| Wal-Mart Stores, Inc.      | 11,284     | 20,169                                    |
| J. C. Penney Company, Inc. | 1,153      | 1,255                                     |
| Costco Wholesale Corp.     | 1,082      | 2,076                                     |
| Target Corporation         | 2,849      | 4,125                                     |

**?** In general, why do differences exist between net income and net cash provided by operating activities? (See page 819.)

## Format of the Statement of Cash Flows

The general format of the statement of cash flows presents the results of the three activities discussed previously—operating, investing, and financing—plus the significant noncash investing and financing activities. Illustration 17-2 shows a widely used form of the statement of cash flows.

| Company Name<br>Statement of Cash Flows<br>Period Covered |           |            |
|---|-----------|------------|
| <b>Cash flows from operating activities</b>               |           |            |
| (List of individual items)                                | <u>XX</u> |            |
| Net cash provided (used) by operating activities          |           | XXX        |
| <b>Cash flows from investing activities</b>               |           |            |
| (List of individual inflows and outflows)                 | <u>XX</u> |            |
| Net cash provided (used) by investing activities          |           | XXX        |
| <b>Cash flows from financing activities</b>               |           |            |
| (List of individual inflows and outflows)                 | <u>XX</u> |            |
| Net cash provided (used) by financing activities          |           | <u>XXX</u> |
| <b>Net increase (decrease) in cash</b>                    |           | XXX        |
| <b>Cash at beginning of period</b>                        |           | <u>XXX</u> |
| <b>Cash at end of period</b>                              |           | <u>XXX</u> |
| <b>Noncash investing and financing activities</b>         |           |            |
| (List of individual noncash transactions)                 |           | <u>XXX</u> |

**Illustration 17-2**  
Format of statement of cash flows

The cash flows from operating activities section always appears first, followed by the investing activities section and then the financing activities section. The sum of the operating, investing, and financing sections equals the net increase or decrease

in cash for the period. This amount is added to the beginning cash balance to arrive at the ending cash balance—the same amount reported on the balance sheet.

## Do it!

### Classification of Cash Flows

#### action plan

- ✓ Identify the three types of activities used to report all cash inflows and outflows.
- ✓ Report as operating activities the cash effects of transactions that create revenues and expenses and enter into the determination of net income.
- ✓ Report as investing activities transactions that (a) acquire and dispose of investments and long-term assets and (b) lend money and collect loans.
- ✓ Report as financing activities transactions that (a) obtain cash from issuing debt and repay the amounts borrowed and (b) obtain cash from stockholders and pay them dividends.

During its first week, Duffy & Stevenson Company had these transactions.

1. Issued 100,000 shares of \$5 par value common stock for \$800,000 cash.
2. Borrowed \$200,000 from Castle Bank, signing a 5-year note bearing 8% interest.
3. Purchased two semi-trailer trucks for \$170,000 cash.
4. Paid employees \$12,000 for salaries and wages.
5. Collected \$20,000 cash for services provided.

Classify each of these transactions by type of cash flow activity.

#### Solution

- |                       |                       |
|-----------------------|-----------------------|
| 1. Financing activity | 4. Operating activity |
| 2. Financing activity | 5. Operating activity |
| 3. Investing activity |                       |

## Preparing the Statement of Cash Flows

Companies prepare the statement of cash flows differently from the three other basic financial statements. First, it is not prepared from an adjusted trial balance. It requires detailed information concerning the changes in account balances that occurred between two points in time. An adjusted trial balance will not provide the necessary data. Second, the statement of cash flows deals with cash receipts and payments. As a result, the company **must adjust** the effects of the use of accrual accounting **to determine cash flows**.

The information to prepare this statement usually comes from three sources:

- **Comparative balance sheets.** Information in the comparative balance sheets indicates the amount of the changes in assets, liabilities, and stockholders' equities from the beginning to the end of the period.
- **Current income statement.** Information in this statement helps determine the amount of cash provided or used by operations during the period.
- **Additional information.** Such information includes transaction data that are needed to determine how cash was provided or used during the period.

Preparing the statement of cash flows from these data sources involves three major steps, explained in Illustration 17-3 on the next page.

**Illustration 17-3**  
Three major steps in preparing the statement of cash flows

## Indirect and Direct Methods

In order to perform step 1, a company **must convert net income from an accrual basis to a cash basis**. This conversion may be done by either of two methods: (1) the indirect method or (2) the direct method. **Both methods arrive at the same total amount** for “Net cash provided by operating activities.” They differ in **how** they arrive at the amount.

The **indirect method** adjusts net income for items that do not affect cash. A great majority of companies (99%) use this method, as shown in the nearby chart.<sup>1</sup> Companies favor the indirect method for two reasons: (1) It is easier and less costly to prepare, and (2) it focuses on the differences between net income and net cash flow from operating activities.

The **direct method** shows operating cash receipts and payments, making it more consistent with the objective of a statement of cash flows. The FASB has expressed a preference for the direct method, but allows the use of either method.

The next section illustrates the more popular indirect method. Appendix 17B illustrates the direct method.

<sup>1</sup> *Accounting Trends and Techniques—2009* (New York: American Institute of Certified Public Accountants, 2009).

## Preparing the Statement of Cash Flows—Indirect Method

### Study Objective [3]

Prepare a statement of cash flows using the indirect method.

#### Illustration 17-4

Comparative balance sheets, income statement, and additional information for Computer Services Company

To explain how to prepare a statement of cash flows using the indirect method, we use financial information from Computer Services Company. Illustration 17-4 presents Computer Services' current and previous-year balance sheets, its current-year income statement, and related financial information for the current year.

| <b>Computer Services Company</b>                   |                  |                  |  |
|--|------------------|------------------|--|
| Comparative Balance Sheets                         |                  |                  |  |
| December 31  |                  |                  |  |
| <u>Assets</u>                                      | <u>2012</u>      | <u>2011</u>      | <u>Change in Account Balance Increase/Decrease</u> |
| Current assets                                     |                  |                  |  |
| Cash   | \$ 55,000        | \$ 33,000        | \$ 22,000 Increase                                 |
| Accounts receivable                                | 20,000           | 30,000           | 10,000 Decrease                                    |
| Inventory  | 15,000           | 10,000           | 5,000 Increase                                     |
| Prepaid expenses                                   | 5,000            | 1,000            | 4,000 Increase                                     |
| Property, plant, and equipment                     |                  |                  |  |
| Land   | 130,000          | 20,000           | 110,000 Increase                                   |
| Buildings  | 160,000          | 40,000           | 120,000 Increase                                   |
| Accumulated depreciation—buildings                 | (11,000)         | (5,000)          | 6,000 Increase                                     |
| Equipment  | 27,000           | 10,000           | 17,000 Increase                                    |
| Accumulated depreciation—equipment                 | (3,000)          | (1,000)          | 2,000 Increase                                     |
| Total assets                                       | <u>\$398,000</u> | <u>\$138,000</u> |  |
| <b><u>Liabilities and Stockholders' Equity</u></b> |                  |                  |  |
| Current liabilities                                |                  |                  |  |
| Accounts payable                                   | \$ 28,000        | \$ 12,000        | \$ 16,000 Increase                                 |
| Income taxes payable                               | 6,000            | 8,000            | 2,000 Decrease                                     |

| Income tax expense                          |               | 47,000           |
| Net income                                  |               | <u>\$145,000</u> |

**Additional information for 2012:**

1. The company declared and paid a \$29,000 cash dividend.
2. Issued \$110,000 of long-term bonds in direct exchange for land.
3. A building costing \$120,000 was purchased for cash. Equipment costing \$25,000 was also purchased for cash.
4. The company sold equipment with a book value of \$7,000 (cost \$8,000, less accumulated depreciation \$1,000) for \$4,000 cash.
5. Issued common stock for \$20,000 cash.
6. Depreciation expense was comprised of \$6,000 for building and \$3,000 for equipment.

**Illustration 17-4**  
(continued)

We will now apply the three steps to the information provided for Computer Services Company.

### Step 1: Operating Activities

#### DETERMINE NET CASH PROVIDED/USED BY OPERATING ACTIVITIES BY CONVERTING NET INCOME FROM AN ACCRUAL BASIS TO A CASH BASIS

To determine net cash provided by operating activities under the indirect method, companies **adjust net income in numerous ways**. A useful starting point is to understand **why** net income must be converted to net cash provided by operating activities.

Under generally accepted accounting principles, most companies use the accrual basis of accounting. This basis requires that companies record revenue when earned and record expenses when incurred. Earned revenues may include credit sales for which the company has not yet collected cash. Expenses incurred may include some items that it has not yet paid in cash. Thus, under the accrual basis, net income is not the same as net cash provided by operating activities.

Therefore, under the **indirect method**, companies must adjust net income to convert certain items to the cash basis. The indirect method (or reconciliation method) starts with net income and converts it to net cash provided by operating activities. Illustration 17-5 lists the three types of adjustments.

|            |     |   |   |   |
|------------|-----|---|---|---|
| Net Income | +/- | Adjustments   | = | Net Cash Provided/<br>Used by Operating<br>Activities |
|            |     | <ul style="list-style-type: none"> <li>• <b>Add back noncash expenses</b>, such as depreciation expense, amortization, or depletion.</li> <li>• <b>Deduct gains and add losses</b> that resulted from investing and financing activities.</li> <li>• <b>Analyze changes</b> to noncash current asset and current liability accounts.</li> </ul> |   |   |

**Illustration 17-5**

Three types of adjustments to convert net income to net cash provided by operating activities

#### Helpful Hint

Depreciation is similar to any other expense in that it reduces net income. It differs in that it does not involve a current cash outflow; that is why it must be *added back* to net income to arrive at cash provided by operating activities.

We explain the three types of adjustments in the next three sections.

#### DEPRECIATION EXPENSE

Computer Services' income statement reports depreciation expense of \$9,000. Although depreciation expense reduces net income, it does not reduce cash. In other words, depreciation expense is a noncash charge. The company must add it back to

net income to arrive at net cash provided by operating activities. Computer Services reports depreciation expense in the statement of cash flows as shown below.

**Illustration 17-6**  
Adjustment for depreciation

|   |       |                  |
|---|-------|------------------|
| Cash flows from operating activities  |       |                  |
| Net income  |       | \$145,000        |
| Adjustments to reconcile net income to net cash provided by operating activities: |       |                  |
| Depreciation expense  | 9,000 |                  |
| Net cash provided by operating activities   |       | <u>\$154,000</u> |

As the first adjustment to net income in the statement of cash flows, companies frequently list depreciation and similar noncash charges such as amortization of intangible assets, depletion expense, and bad debt expense.

### LOSS ON SALE OF EQUIPMENT

Illustration 17-1 states that the investing activities section should report cash received from the sale of plant assets. Because of this, **companies must eliminate from net income all gains and losses related to the disposal of plant assets, to arrive at cash provided by operating activities.**

In our example, Computer Services' income statement reports a \$3,000 loss on the sale of equipment (book value \$7,000, less \$4,000 cash received from sale of equipment). The company's loss of \$3,000 should not be included in the operating activities section of the statement of cash flows. Illustration 17-7 shows that the \$3,000 loss is eliminated by adding \$3,000 back to net income to arrive at net cash provided by operating activities.

**Illustration 17-7**  
Adjustment for loss on sale of equipment

|   |              |                  |
|---|--------------|------------------|
| Cash flows from operating activities  |              |                  |
| Net income  |              | \$145,000        |
| Adjustments to reconcile net income to net cash provided by operating activities: |              |                  |
| Depreciation expense  | \$9,000      |                  |
| Loss on sale of equipment   | <u>3,000</u> | 12,000           |
| Net cash provided by operating activities   |              | <u>\$157,000</u> |

If a gain on sale occurs, the company deducts the gain from its net income in order to determine net cash provided by operating activities. **In the case of either a gain or a loss, companies report as a source of cash in the investing activities section of the statement of cash flows the actual amount of cash received from the sale.**

### CHANGES TO NONCASH CURRENT ASSET AND CURRENT LIABILITY ACCOUNTS

A final adjustment in reconciling net income to net cash provided by operating activities involves examining all changes in current asset and current liability accounts. The accrual accounting process records revenues in the period earned and expenses in the period incurred. For example, companies use Accounts Receivable to record amounts owed to the company for sales that have been made but for which cash collections have not yet been received. They use the Prepaid Insurance account to reflect insurance that has been paid for, but which has not yet expired, and therefore has not been expensed. Similarly, the Salaries and Wages Payable account reflects salaries and wages expense that has been incurred by the company but has not been paid.

As a result, we need to adjust net income for these accruals and prepayments to determine net cash provided by operating activities. Thus, we must analyze the change in each current asset and current liability account to determine its impact on net income and cash.

**CHANGES IN NONCASH CURRENT ASSETS.** The adjustments required for changes in noncash current asset accounts are as follows: **Deduct from net income increases in current asset accounts, and add to net income decreases in current asset accounts, to arrive at net cash provided by operating activities.** We can observe these relationships by analyzing the accounts of Computer Services Company.

**Decrease in Accounts Receivable.** Computer Services Company's accounts receivable decreased by \$10,000 (from \$30,000 to \$20,000) during the period. For Computer Services, this means that cash receipts were \$10,000 higher than sales revenue. The Accounts Receivable account in Illustration 17-8 shows that Computer Services Company had \$507,000 in sales revenue (as reported on the income statement), but it collected \$517,000 in cash.

|          |                      | Accounts Receivable |                                |
|----------|----------------------|---------------------|--------------------------------|
| 1/1/10   | Balance              | 30,000              |                                |
|          | <b>Sales revenue</b> | <b>507,000</b>      | <b>Receipts from customers</b> |
|          |                      |                     | <b>517,000</b>                 |
| 12/31/10 | Balance              | 20,000              |                                |

**Illustration 17-8**  
Analysis of accounts receivable

To adjust net income to net cash provided by operating activities, the company adds to net income the decrease of \$10,000 in accounts receivable (see Illustration 17-9, page 772). When the Accounts Receivable balance increases, cash receipts are lower than sales revenue earned under the accrual basis. Therefore, the company deducts from net income the amount of the increase in accounts receivable, to arrive at net cash provided by operating activities.

**Increase in Inventory.** Computer Services Company's Inventory balance increased \$5,000 (from \$10,000 to \$15,000) during the period. The change in the Inventory account reflects the difference between the amount of inventory purchased and the amount sold. For Computer Services, this means that the cost of merchandise purchased exceeded the cost of goods sold by \$5,000. As a result, cost of goods sold does not reflect \$5,000 of cash payments made for merchandise. The company deducts from net income this inventory increase of \$5,000 during the period, to arrive at net cash provided by operating activities (see Illustration 17-9, page 772). If inventory decreases, the company adds to net income the amount of the change, to arrive at net cash provided by operating activities.

**Increase in Prepaid Expenses.** Computer Services' prepaid expenses increased during the period by \$4,000. This means that cash paid for expenses is higher than expenses reported on an accrual basis. In other words, the company has made cash payments in the current period, but will not charge expenses to income until future periods (as charges to the income statement). To adjust net income to net cash provided by operating activities, the company deducts from net income the \$4,000 increase in prepaid expenses (see Illustration 17-9, page 772).

**Illustration 17-9**

Adjustments for changes in current asset accounts

|   |                |               |
|---|----------------|---------------|
| Cash flows from operating activities  |                |               |
| Net income  |                | \$145,000     |
| Adjustments to reconcile net income to net cash provided by operating activities: |                |               |
| Depreciation expense  | \$ 9,000       |               |
| Loss on sale of equipment   | 3,000          |               |
| <b>Decrease in accounts receivable</b>  | <b>10,000</b>  |               |
| <b>Increase in inventory</b>  | <b>(5,000)</b> |               |
| <b>Increase in prepaid expenses</b>   | <b>(4,000)</b> |               |
|   |                | <u>13,000</u> |
| Net cash provided by operating activities   |                | \$158,000     |

If prepaid expenses decrease, reported expenses are higher than the expenses paid. Therefore, the company adds to net income the decrease in prepaid expenses, to arrive at net cash provided by operating activities.

**CHANGES IN CURRENT LIABILITIES.** The adjustments required for changes in current liability accounts are as follows: **Add to net income increases in current liability accounts, and deduct from net income decreases in current liability accounts, to arrive at net cash provided by operating activities.**

**Increase in Accounts Payable.** For Computer Services Company, Accounts Payable increased by \$16,000 (from \$12,000 to \$28,000) during the period. That means the company received \$16,000 more in goods than it actually paid for. As shown in Illustration 17-10 (below), to adjust net income to determine net cash provided by operating activities, the company adds to net income the \$16,000 increase in Accounts Payable.

**Decrease in Income Taxes Payable.** When a company incurs income tax expense but has not yet paid its taxes, it records income tax payable. A change in the Income Taxes Payable account reflects the difference between income tax expense incurred and income tax actually paid. Computer Services' Income Taxes Payable account decreased by \$2,000. That means the \$47,000 of income tax expense reported on the income statement was \$2,000 less than the amount of taxes paid during the period of \$49,000. As shown in Illustration 17-10, to adjust net income to a cash basis, the company must reduce net income by \$2,000.

**Illustration 17-10**

Adjustments for changes in current liability accounts

|   |                |               |
|---|----------------|---------------|
| Cash flows from operating activities  |                |               |
| Net income  |                | \$145,000     |
| Adjustments to reconcile net income to net cash provided by operating activities: |                |               |
| Depreciation expense  | \$ 9,000       |               |
| Loss on sale of equipment   | 3,000          |               |
| Decrease in accounts receivable   | 10,000         |               |
| Increase in inventory   | (5,000)        |               |
| Increase in prepaid expenses  | (4,000)        |               |
| <b>Increase in accounts payable</b>   | <b>16,000</b>  |               |
| <b>Decrease in income taxes payable</b>   | <b>(2,000)</b> |               |
|   |                | <u>27,000</u> |
| Net cash provided by operating activities   |                | \$172,000     |

Illustration 17-10 shows that, after starting with net income of \$145,000, the sum of all of the adjustments to net income was \$27,000. This resulted in net cash provided by operating activities of \$172,000.

## Summary of Conversion to Net Cash Provided by Operating Activities—Indirect Method

As shown in the previous illustrations, the statement of cash flows prepared by the indirect method starts with net income. It then adds or deducts items to arrive at net cash provided by operating activities. The required adjustments are of three types:

1. Noncash charges such as depreciation, amortization, and depletion.
2. Gains and losses on the sale of plant assets.
3. Changes in noncash current asset and current liability accounts.

Illustration 17-11 provides a summary of these changes.

|  |                                       | <b>Adjustments Required<br/>to Convert Net Income<br/>to Net Cash Provided<br/>by Operating Activities</b> |
|--|---------------------------------------|--|
| <b>Noncash<br/>Charges</b>   | Depreciation expense                  | Add  |
|  | Patent amortization expense           | Add  |
|  | Depletion expense                     | Add  |
| <b>Gains<br/>and Losses</b>  | Loss on disposal of plant assets      | Add  |
|  | Gain on disposal of plant assets      | Deduct   |
| <b>Changes in<br/>Current Assets<br/>and<br/>Current Liabilities</b> | Increase in current asset account     | Deduct   |
|  | Decrease in current asset account     | Add  |
|  | Increase in current liability account | Add  |
|  | Decrease in current liability account | Deduct   |

### Illustration 17-11

Adjustments required to convert net income to net cash provided by operating activities

## ETHICS INSIGHT

### Cash Flow Isn't Always What It Seems

Some managers have taken actions that artificially increase cash flow from operating activities. They do this by moving negative amounts out of the operating section and into the investing or financing section.

For example, **WorldCom, Inc.** disclosed that it had improperly capitalized expenses: It had moved \$3.8 billion of cash outflows from the "Cash from operating activities" section of the cash flow statement to the "Investing activities" section, thereby greatly enhancing cash provided by operating activities. Similarly, **Dynegy, Inc.** restated its cash flow statement because it had improperly included in operating activities, instead of in financing activities, \$300 million from natural gas trading. The restatement resulted in a drop of 37% in cash flow from operating activities.

Source: Henny Sender, "Sadly, These Days Even Cash Flow Isn't Always What It Seems to Be," *Wall Street Journal* (May 8, 2002).

**?** For what reasons might managers at WorldCom and at Dynegy take the actions noted above? (See page 820.)

## Do it!

Josh's PhotoPlus reported net income of \$73,000 for 2012. Included in the income statement were depreciation expense of \$7,000 and a gain on sale of equipment of \$2,500. Josh's comparative balance sheets show the following balances.

### Cash From Operating Activities

**action plan**

- ✓ Add noncash charges such as depreciation back to net income to compute net cash provided by operating activities.
- ✓ Deduct from net income gains on the sale of plant assets, or add losses back to net income, to compute net cash provided by operating activities.
- ✓ Use changes in noncash current asset and current liability accounts to compute net cash provided by operating activities.

|                     | 12/31/11 | 12/31/12 |
|---------------------|----------|----------|
| Accounts receivable | \$17,000 | \$21,000 |
| Accounts payable    | 6,000    | 2,200    |

Calculate net cash provided by operating activities for Josh's PhotoPlus.

**Solution**

|   |                |                 |
|---|----------------|-----------------|
| Cash flows from operating activities  |                |                 |
| Net income  |                | \$73,000        |
| Adjustments to reconcile net income to net cash provided by operating activities: |                |                 |
| Depreciation expense  | \$ 7,000       |                 |
| Gain on sale of equipment   | (2,500)        |                 |
| Increase in accounts receivable   | (4,000)        |                 |
| Decrease in accounts payable  | <u>(3,800)</u> | <u>(3,300)</u>  |
| Net cash provided by operating activities   |                | <u>\$69,700</u> |

## Step 2: Investing and Financing Activities

### ANALYZE CHANGES IN NONCURRENT ASSET AND LIABILITY ACCOUNTS AND RECORD AS INVESTING AND FINANCING ACTIVITIES, OR AS NONCASH INVESTING AND FINANCING ACTIVITIES

**Increase in Land.** As indicated from the change in the Land account and the additional information, the company purchased land of \$110,000 through the issuance of long-term bonds. The issuance of bonds payable for land has no effect on cash. But it is a significant noncash investing and financing activity that merits disclosure in a separate schedule. (See Illustration 17-13 on page 775.)

**Increase in Buildings.** As the additional data indicate, Computer Services Company acquired an office building for \$120,000 cash. This is a cash outflow reported in the investing section. (See Illustration 17-13 on page 775.)

**Increase in Equipment.** The Equipment account increased \$17,000. The additional information explains that this was a net increase that resulted from two transactions: (1) a purchase of equipment of \$25,000, and (2) the sale for \$4,000 of equipment costing \$8,000. These transactions are investing activities. The company should report each transaction separately. Thus, it reports the purchase of equipment as an outflow of cash for \$25,000. It reports the sale as an inflow of cash for \$4,000. The T account below shows the reasons for the change in this account during the year.

**Illustration 17-12**  
Analysis of equipment

|          |                              | Equipment     |                        |
|----------|------------------------------|---------------|------------------------|
| 1/1/12   | Balance                      | 10,000        | Cost of equipment sold |
|          | <b>Purchase of equipment</b> | <b>25,000</b> | 8,000                  |
| 12/31/12 | Balance                      | 27,000        |                        |

The following entry shows the details of the equipment sale transaction.

|                                    |       |       |
|------------------------------------|-------|-------|
| Cash                               | 4,000 |       |
| Accumulated Depreciation—Equipment | 1,000 |       |
| Loss on Sale of Equipment          | 3,000 |       |
| Equipment                          |       | 8,000 |

|   |   |   |   |    |                   |
|---|---|---|---|----|-------------------|
| A | = | L | + | SE |                   |
|   |   |   |   |    | +4,000            |
|   |   |   |   |    | +1,000            |
|   |   |   |   |    | -3,000 Exp        |
|   |   |   |   |    | -8,000            |
|   |   |   |   |    | <b>Cash Flows</b> |
|   |   |   |   |    | +4,000            |

**Increase in Bonds Payable.** The Bonds Payable account increased \$110,000. As indicated in the additional information, the company acquired land from the issuance of these bonds. It reports this noncash transaction in a separate schedule at the bottom of the statement.

**Increase in Common Stock.** The balance sheet reports an increase in Common Stock of \$20,000. The additional information section notes that this increase resulted from the issuance of new shares of stock. This is a cash inflow reported in the financing section.

**Increase in Retained Earnings.** Retained earnings increased \$116,000 during the year. This increase can be explained by two factors: (1) Net income of \$145,000 increased retained earnings. (2) Dividends of \$29,000 decreased retained earnings. The company adjusts net income to net cash provided by operating activities in the operating activities section. Payment of the dividends (not the declaration) is a **cash outflow that the company reports as a financing activity**.

**Helpful Hint**

When companies issue stocks or bonds for cash, the actual proceeds will appear in the statement of cash flows as a financing inflow (rather than the par value of the stocks or face value of bonds).

**STATEMENT OF CASH FLOWS—2012**

Using the previous information, we can now prepare a statement of cash flows for 2012 for Computer Services Company as shown in Illustration 17-13.

**Step 3: Net Change in Cash**

**COMPARE THE NET CHANGE IN CASH ON THE STATEMENT OF CASH FLOWS WITH THE CHANGE IN THE CASH ACCOUNT REPORTED ON THE BALANCE SHEET TO MAKE SURE THE AMOUNTS AGREE**

Illustration 17-13 indicates that the net change in cash during the period was an increase of \$22,000. This agrees with the change in Cash account reported on the balance sheet in Illustration 17-4 (page 768).

| <b>Computer Services Company</b><br>Statement of Cash Flows—Indirect Method<br>For the Year Ended December 31, 2012 |          |           |
|---|----------|-----------|
| Cash flows from operating activities  |          |           |
| Net income  |          | \$145,000 |
| Adjustments to reconcile net income to net cash provided by operating activities:                                   |          |           |
| Depreciation expense  | \$ 9,000 |           |

| <b>Noncash investing and financing activities</b> |                 |                  |
| Issuance of bonds payable to purchase land        |                 | <u>\$110,000</u> |

## Do it!

### Indirect Method

Use the information below and on page 777 to prepare a statement of cash flows using the indirect method.

#### action plan

- ✓ Determine net cash provided/used by operating activities by adjusting net income for items that did not affect cash.
- ✓ Determine net cash provided/used by investing activities and financing activities.
- ✓ Determine the net increase/decrease in cash.

| Reynolds Company                            |                  |                  |                             |

**Reynolds Company**  
Income Statement  
For the Year Ended December 31, 2012

|                            |              |                  |
|----------------------------|--------------|------------------|
| Sales revenue              |              | \$890,000        |
| Cost of goods sold         | \$465,000    |                  |
| Operating expenses         | 221,000      |                  |
| Interest expense           | 12,000       |                  |
| Loss on sale of equipment  | <u>2,000</u> | <u>700,000</u>   |
| Income before income taxes |              | 190,000          |
| Income tax expense         |              | <u>65,000</u>    |
| Net income                 |              | <u>\$125,000</u> |

**Additional information:**

1. Operating expenses include depreciation expense of \$33,000 and charges from prepaid expenses of \$2,000.
2. Land was sold at its book value for cash.
3. Cash dividends of \$55,000 were declared and paid in 2012.
4. Interest expense of \$12,000 was paid in cash.
5. Equipment with a cost of \$166,000 was purchased for cash. Equipment with a cost of \$41,000 and a book value of \$36,000 was sold for \$34,000 cash.
6. Bonds of \$10,000 were redeemed at their face value for cash. Bonds of \$30,000 were converted into common stock.
7. Common stock (\$1 par) of \$130,000 was issued for cash.
8. Accounts payable pertain to merchandise suppliers.

**Reynolds Company**  
Statement of Cash Flows—Indirect Method  
For the Year Ended December 31, 2012

|   |                  |                 |
|---|------------------|-----------------|
| Cash flows from operating activities  |                  |                 |
| Net income  |                  | \$ 125,000      |
| Adjustments to reconcile net income to net cash provided by operating activities: |                  |                 |
| Depreciation expense  | \$ 33,000        |                 |
| Loss on sale of equipment   | 2,000            |                 |
| Increase in accounts receivable   | (42,000)         |                 |
| Increase in inventory   | (54,000)         |                 |
| Decrease in prepaid expenses  | 2,000            |                 |
| Decrease in accounts payable  | (17,000)         |                 |
| Increase in accrued expenses payable  | <u>10,000</u>    | <u>(66,000)</u> |
| Net cash provided by operating activities   |                  | 59,000          |
| Cash flows from investing activities  |                  |                 |
| Sale of land  | 25,000           |                 |
| Sale of equipment   | 34,000           |                 |
| Purchase of equipment   | <u>(166,000)</u> |                 |
| Net cash used by investing activities   |                  | (107,000)       |
| Cash flows from financing activities  |                  |                 |
| Redemption of bonds   | (10,000)         |                 |
| Sale of common stock  | 130,000          |                 |

**Helpful Hint**

1. Determine net cash provided/used by operating activities, recognizing that operating activities generally relate to changes in current assets and current liabilities.
2. Determine net cash provided/used by investing activities, recognizing that investing activities generally relate to changes in noncurrent assets.
3. Determine net cash provided/used by financing activities, recognizing that financing activities generally relate to changes in long-term liabilities and stockholders' equity accounts.

#### ANATOMY OF A FRAUD

For more than a decade, the top executives at the Italian dairy products company **Parmalat** engaged in multiple frauds which overstated cash and other assets by more than \$1 billion while understating liabilities by between \$8 and \$12 billion. Much of the fraud involved creating fictitious sources and uses of cash. Some of these activities incorporated sophisticated financial transactions with subsidiaries created with the help of large international financial institutions. However, much of the fraud employed very basic, even sloppy, forgery of documents. For example, when outside auditors requested confirmation of bank accounts (such as a fake \$4.8 billion account in the Cayman Islands), documents were created on scanners, with signatures that were cut and pasted from other documents. These were then passed through a fax machine numerous times to make them look real (if difficult to read). Similarly, fictitious bills were created in order to divert funds to other businesses owned by the Tanzi family (who controlled Parmalat).

Total take: Billions of dollars

#### THE MISSING CONTROL

**Independent internal verification.** Internal auditors at the company should have independently verified bank accounts and major transfers of cash to outside companies that were controlled by the Tanzi family.

## Using Cash Flows to Evaluate a Company

**Study Objective [4]**  
Analyze the statement of cash flows.

Traditionally, investors and creditors have most commonly used ratios based on accrual accounting. These days, cash-based ratios are gaining increased acceptance among analysts.

### Free Cash Flow

In the statement of cash flows, cash provided by operating activities is intended to indicate the cash-generating capability of the company. Analysts have noted, however, that **cash provided by operating activities fails to take into account**

that a company must invest in new fixed assets just to maintain its current level of operations. Companies also must at least **maintain dividends at current levels** to satisfy investors. The measurement of free cash flow provides additional insight regarding a company's cash-generating ability. **Free cash flow** describes the cash remaining from operations after adjustment for capital expenditures and dividends.

Consider the following example: Suppose that MPC produced and sold 10,000 personal computers this year. It reported \$100,000 cash provided by operating activities. In order to maintain production at 10,000 computers, MPC invested \$15,000 in equipment. It chose to pay \$5,000 in dividends. Its free cash flow was \$80,000 (\$100,000 – \$15,000 – \$5,000). The company could use this \$80,000 either to purchase new assets to expand the business or to pay an \$80,000 dividend and continue to produce 10,000 computers. In practice, free cash flow is often calculated with the formula in Illustration 17-14. (Alternative definitions also exist.)

$$\text{Free Cash Flow} = \text{Cash Provided by Operating Activities} - \text{Capital Expenditures} - \text{Cash Dividends}$$

**Illustration 17-14**  
Free cash flow

Illustration 17-15 provides basic information (in billions) excerpted from the 2009 statement of cash flows of **Microsoft Corporation**.

**Microsoft Corporation**  
Statement of Cash Flows (partial)  
2009

|                                       |            |          |
|---------------------------------------|------------|----------|
| Cash provided by operating activities |            | \$19,037 |

| Cash paid for dividends               |            | (4,468)  |

**Illustration 17-15**  
Microsoft cash flow information (\$ in millions)

Microsoft's free cash flow is calculated as shown in Illustration 17-16.

|  |                        |
|--|------------------------|
| Cash provided by operating activities                | \$19,037               |
| Less: Expenditures on property, plant, and equipment | 3,119                  |
| Dividends paid                                       | 4,468                  |
| <b>Free cash flow</b>                                | <b><u>\$11,450</u></b> |

**Illustration 17-16**  
Calculation of Microsoft's free cash flow (\$ in millions)

Microsoft generated approximately \$11.4 billion of free cash flow. This is a tremendous amount of cash generated in a single year. It is available for the acquisition of new assets, the retirement of stock or debt, or the payment of dividends.

Also note that Microsoft's cash from operations of \$19 billion exceeds its 2009 net income of \$14.6 billion. This lends additional credibility to Microsoft's income number as an indicator of potential future performance. If anything, Microsoft's net income might understate its actual performance.

**Oracle Corporation** is one of the world's largest sellers of database software and information management services. Like Microsoft, its success depends on continuing to improve its existing products while developing new products to keep pace with rapid changes in technology. Oracle's free cash flow for 2009 was \$7.5 billion. This is impressive but significantly less than Microsoft's amazing ability to generate cash.

## Do it!

### Free Cash Flow

Chicago Corporation issued the following statement of cash flows for 2012.

| <b>Chicago Corporation</b>  |          |                  |
|---|----------|------------------|
| Statement of Cash Flows—Indirect Method   |          |                  |
| For the Year Ended December 31, 2012  |          |                  |
| Cash flows from operating activities  |          |                  |
| Net income  |          | \$19,000         |
| Adjustments to reconcile net income to net cash provided by operating activities: |          |                  |
| Depreciation expense  | \$ 8,100 |                  |
| Loss on disposal of plant assets  | 1,300    |                  |
| Decrease in accounts receivable   | 6,900    |                  |
| Increase in inventory   | (4,000)  |                  |
| Decrease in accounts payable  | (2,000)  |                  |
|   |          | <u>10,300</u>    |
| Net cash provided by operating activities   |          | 29,300           |
| Cash flows from investing activities  |          |                  |
| Sale of investments   | 1,100    |                  |
| Purchase of equipment   | (19,000) |                  |
| Net cash used by investing activities   |          | (17,900)         |
| Cash flows from financing activities  |          |                  |
| Issuance of stock   | 10,000   |                  |
| Payment on long-term note payable   | (5,000)  |                  |
| Payment for dividends   | (9,000)  |                  |
| Net cash used by financing activities   |          | <u>(4,000)</u>   |
| Net increase in cash  |          | 7,400            |
| Cash at beginning of year   |          | <u>10,000</u>    |
| Cash at end of year   |          | <u>\$ 17,400</u> |

(a) Compute free cash flow for Chicago Corporation. (b) Explain why free cash flow often provides better information than “Net cash provided by operating activities.”

**Solution**

- (a) Free cash flow =  $\$29,300 - \$19,000 - \$9,000 = \$1,300$
- (b) Cash provided by operating activities fails to take into account that a company must invest in new plant assets just to maintain the current level of operations. Companies must also maintain dividends at current levels to satisfy investors. The measurement of free cash flow provides additional insight regarding a company's cash-generating ability.

**action plan**

✓ Compute free cash flow as:  
Cash provided by operating activities – Capital expenditures – Cash dividends.

The income statement for the year ended December 31, 2012, for Kosinski Manufacturing Company contains the following condensed information.

**KOSINSKI MANUFACTURING COMPANY**

## Income Statement

For the Year Ended December 31, 2012

|   |                |                   |
|---|----------------|-------------------|
| Sales revenue                               |                | \$6,583,000       |
| Operating expenses (excluding depreciation) | \$4,920,000    |                   |
| Depreciation expense                        | <u>880,000</u> | <u>5,800,000</u>  |
| Income before income taxes                  |                | 783,000           |
| Income tax expense                          |                | <u>353,000</u>    |
| Net income                                  |                | <u>\$ 430,000</u> |

Included in operating expenses is a \$24,000 loss resulting from the sale of machinery for \$270,000 cash. Machinery was purchased at a cost of \$750,000.

The following balances are reported on Kosinski's comparative balance sheets at December 31.

**KOSINSKI MANUFACTURING COMPANY**

## Comparative Balance Sheets (partial)

|                     | <u>2012</u> | <u>2011</u> |
|---------------------|-------------|-------------|
| Cash                | \$672,000   | \$130,000   |
| Accounts receivable | 775,000     | 610,000     |
| Inventory           | 834,000     | 867,000     |
| Accounts payable    | 521,000     | 501,000     |

Income tax expense of \$353,000 represents the amount paid in 2012. Dividends declared and paid in 2012 totaled \$200,000.

**action plan**

- ✓ Determine net cash from operating activities. Operating activities generally relate to changes in current assets and current liabilities.
- ✓ Determine net cash from investing activities. Investing activities generally relate to changes in noncurrent assets.
- ✓ Determine net cash from financing activities. Financing activities generally relate to changes in long-term liabilities and stockholders' equity accounts.

**Instructions**

Prepare the statement of cash flows using the indirect method.

**Solution to Comprehensive Do it! 1**

| Sale of machinery   | 270,000    |                   |
| Purchase of machinery   | (750,000)  |                   |
| Net cash used by investing activities   |            | (480,000)         |
| Cash flows from financing activities  |            |                   |
| Payment of cash dividends   |            | <u>(200,000)</u>  |
| Net increase in cash  |            | 542,000           |
| Cash at beginning of period   |            | <u>130,000</u>    |
| Cash at end of period   |            | <u>\$ 672,000</u> |

## Summary of Study Objectives

**[1] Indicate the usefulness of the statement of cash flows.** The statement of cash flows provides information about the cash receipts, cash payments, and net change in cash resulting from the operating, investing, and financing activities of a company during the period.

**[2] Distinguish among operating, investing, and financing activities.** Operating activities include the cash effects of transactions that enter into the determination of net income. Investing activities involve cash flows resulting from changes in investments and long-term asset items. Financing activities involve cash flows resulting from changes in long-term liability and stockholders' equity items.

**[3] Prepare a statement of cash flows using the indirect method.** The preparation of a statement of cash

flows involves three major steps: (1) Determine net cash provided/used by operating activities by converting net income from an accrual basis to a cash basis. (2) Analyze changes in noncurrent asset and liability accounts and record as investing and financing activities, or disclose as noncash transactions. (3) Compare the net change in cash on the statement of cash flows with the change in the cash account reported on the balance sheet to make sure the amounts agree.

**[4] Analyze the statement of cash flows.** Free cash flow indicates the amount of cash a company generated during the current year that is available for the payment of additional dividends or for expansion.

## Glossary

**Direct method** A method of determining net cash provided by operating activities by adjusting each item in the income statement from the accrual basis to the cash basis and which shows operating cash receipts and payments. (p. 767)

**Financing activities** Cash flow activities that include (a) obtaining cash from issuing debt and repaying the amounts borrowed and (b) obtaining cash from stockholders, repurchasing shares, and paying dividends. (p. 763).

**Free cash flow** Cash provided by operating activities adjusted for capital expenditures and dividends paid. (p. 779).

**Indirect method** A method of preparing a statement of cash flows in which net income is adjusted for items that do not affect cash, to determine net cash provided by operating activities. (pp. 767, 769).

**Investing activities** Cash flow activities that include (a) purchasing and disposing of investments and property, plant, and equipment using cash and (b) lending money and collecting the loans. (p. 763).

**Operating activities** Cash flow activities that include the cash effects of transactions that create revenues and expenses and thus enter into the determination of net income. (p. 763).

**Statement of cash flows** A basic financial statement that provides information about the cash receipts, cash payments, and net change in cash during a period, resulting from operating, investing, and financing activities. (p. 762).

## APPENDIX 17A

### Using a Worksheet to Prepare the Statement of Cash Flows—Indirect Method

When preparing a statement of cash flows, companies may need to make numerous adjustments of net income. In such cases, they often use a **worksheet to assemble and classify the data that will appear on the statement**. The worksheet is merely an aid in preparing the statement. Its use is optional. Illustration 17A-1 shows the skeleton format of the worksheet for preparation of the statement of cash flows.

The following guidelines are important in preparing a worksheet.

1. In the balance sheet accounts section, **list accounts with debit balances separately from those with credit balances**. This means, for example, that Accumulated Depreciation appears under credit balances and not as a contra account under debit balances. Enter the beginning and ending balances of each account in the

#### Study Objective [5]

Explain how to use a worksheet to prepare the statement of cash flows using the indirect method.

| 27 |   |                  |                          |               |                     |

Illustration 17A-1  
Format of worksheet

appropriate columns. Enter as reconciling items in the two middle columns the transactions that caused the change in the account balance during the year.

After all reconciling items have been entered, each line pertaining to a balance sheet account should “foot across.” That is, the beginning balance plus or minus the reconciling item(s) must equal the ending balance. When this agreement exists for all balance sheet accounts, all changes in account balances have been reconciled.

2. The bottom portion of the worksheet consists of the operating, investing, and financing activities sections. It provides the information necessary to prepare the formal statement of cash flows. **Enter inflows of cash as debits in the reconciling columns. Enter outflows of cash as credits in the reconciling columns.** Thus, in this section, the sale of equipment for cash at book value appears as a debit under investing activities. Similarly, the purchase of land for cash appears as a credit under investing activities.
3. **The reconciling items shown in the worksheet are not entered in any journal or posted to any account.** They do not represent either adjustments or corrections of the balance sheet accounts. They are used only to facilitate the preparation of the statement of cash flows.

### Preparing the Worksheet

As in the case of worksheets illustrated in earlier chapters, preparing a worksheet involves a series of prescribed steps. The steps in this case are:

1. Enter in the balance sheet accounts section the balance sheet accounts and their beginning and ending balances.
2. Enter in the reconciling columns of the worksheet the data that explain the changes in the balance sheet accounts other than cash and their effects on the statement of cash flows.
3. Enter on the cash line and at the bottom of the worksheet the increase or decrease in cash. This entry should enable the totals of the reconciling columns to be in agreement.

To illustrate the preparation of a worksheet, we will use the 2012 data for Computer Services Company. Your familiarity with these data (from the chapter) should help you understand the use of a worksheet. For ease of reference, the comparative balance sheets, income statement, and selected data for 2012 are presented in Illustration 17A-2.

#### DETERMINING THE RECONCILING ITEMS

Companies can use one of several approaches to determine the reconciling items. For example, they can first complete the changes affecting net cash provided by operating activities, and then can determine the effects of financing and investing transactions. Or, they can analyze the balance sheet accounts in the order in which they are listed on the worksheet. We will follow this latter approach for Computer Services, except for cash. As indicated in step 3, **cash is handled last**.

**Accounts Receivable.** The decrease of \$10,000 in accounts receivable means that cash collections from sales revenue are higher than the sales revenue reported in the income statement. To convert net income to net cash provided by operating activities, we add the decrease of \$10,000 to net income. The entry in the reconciling columns of the worksheet is:

|     |   |        |        |
|-----|---|--------|--------|
| (a) | Operating—Decrease in Accounts Receivable | 10,000 | 10,000 |
|     | Accounts Receivable                       |        |        |

Sheet 1 / Sheet 2

**Additional information for 2012:**

1. The company declared and paid a \$29,000 cash dividend.
2. Issued \$110,000 of long-term bonds in direct exchange for land.
3. A building costing \$120,000 was purchased for cash. Equipment costing \$25,000 was also purchased for cash.
4. The company sold equipment with a book value of \$7,000 (cost \$8,000, less accumulated depreciation \$1,000) for \$4,000 cash.
5. Issued common stock for \$20,000 cash.
6. Depreciation expense was comprised of \$6,000 for building and \$3,000 for equipment.

**Inventory.** Computer Services Company's inventory balance increases \$5,000 during the period. The Inventory account reflects the difference between the amount of inventory that the company purchased and the amount that it sold. For Computer Services, this means that the cost of merchandise purchased exceeds the cost of goods sold by \$5,000. As a result, cost of goods sold does not reflect \$5,000 of cash payments made for merchandise. We deduct this inventory increase of \$5,000 during the period from net income to arrive at net cash provided by operating activities. The worksheet entry is:

|     |                                 |       |       |
|-----|---------------------------------|-------|-------|
| (b) | Inventory                       | 5,000 |       |
|     | Operating—Increase in Inventory |       | 5,000 |

**Prepaid Expenses.** An increase of \$4,000 in prepaid expenses means that expenses deducted in determining net income are less than expenses that were paid in cash. We deduct the increase of \$4,000 from net income in determining net cash provided by operating activities. The worksheet entry is:

|     |  |       |       |
|-----|--|-------|-------|
| (c) | Prepaid Expenses                       | 4,000 |       |
|     | Operating—Increase in Prepaid Expenses |       | 4,000 |

### Helpful Hint

These amounts are asterisked in the worksheet to indicate that they result from a significant noncash transaction.

**Land.** The increase in land of \$110,000 resulted from a purchase through the issuance of long-term bonds. The company should report this transaction as a significant noncash investing and financing activity. The worksheet entry is:

|     |               |         |         |
|-----|---------------|---------|---------|
| (d) | Land          | 110,000 |         |
|     | Bonds Payable |         | 110,000 |

**Buildings.** The cash purchase of a building for \$120,000 is an investing activity cash outflow. The entry in the reconciling columns of the worksheet is:

|     |                                |         |         |
|-----|--------------------------------|---------|---------|
| (e) | Buildings                      | 120,000 |         |
|     | Investing—Purchase of Building |         | 120,000 |

**Equipment.** The increase in equipment of \$17,000 resulted from a cash purchase of \$25,000 and the sale of equipment costing \$8,000. The book value of the equipment was \$7,000, the cash proceeds were \$4,000, and a loss of \$3,000 was recorded. The worksheet entries are:

|     |                                 |        |        |
|-----|---------------------------------|--------|--------|
| (f) | Equipment                       | 25,000 |        |
|     | Investing—Purchase of Equipment |        | 25,000 |

|     |                                     |       |       |
|-----|-------------------------------------|-------|-------|
| (g) | Investing—Sale of Equipment         | 4,000 |       |
|     | Operating—Loss on Sale of Equipment | 3,000 |       |
|     | Accumulated Depreciation—Equipment  | 1,000 |       |
|     | Equipment                           |       | 8,000 |

**Accounts Payable.** We must add the increase of \$16,000 in accounts payable to net income to determine net cash provided by operating activities. The worksheet entry is:

|     |  |        |        |
|-----|--|--------|--------|
| (h) | Operating—Increase in Accounts Payable | 16,000 |        |
|     | Accounts Payable                       |        | 16,000 |

**Income Taxes Payable.** When a company incurs income tax expense but has not yet paid its taxes, it records income taxes payable. A change in the Income Taxes Payable account reflects the difference between income tax expense incurred and income tax actually paid. Computer Services' Income Taxes Payable account decreases by \$2,000.

That means the \$47,000 of income tax expense reported on the income statement was \$2,000 less than the amount of taxes paid during the period of \$49,000. To adjust net income to a cash basis, we must reduce net income by \$2,000. The worksheet entry is:

|     |  |       |       |
|-----|--|-------|-------|
| (i) | Income Taxes Payable                       | 2,000 |       |
|     | Operating—Decrease in Income Taxes Payable |       | 2,000 |

**Bonds Payable.** The increase of \$110,000 in this account resulted from the issuance of bonds for land. This is a significant noncash investing and financing activity. Worksheet entry (d) above is the only entry necessary.

**Common Stock.** The balance sheet reports an increase in Common Stock of \$20,000. The additional information section notes that this increase resulted from the issuance of new shares of stock. This is a cash inflow reported in the financing section. The worksheet entry is:

|     |                                    |        |        |
|-----|------------------------------------|--------|--------|
| (j) | Financing—Issuance of Common Stock | 20,000 |        |
|     | Common Stock                       |        | 20,000 |

**Accumulated Depreciation—Buildings, and Accumulated Depreciation—Equipment.** Increases in these accounts of \$6,000 and \$3,000, respectively, resulted from depreciation expense. Depreciation expense is a **noncash charge that we must add to net income** to determine net cash provided by operating activities. The worksheet entries are:

|     |                                    |       |       |
|-----|------------------------------------|-------|-------|
| (k) | Operating—Depreciation Expense     | 6,000 |       |
|     | Accumulated Depreciation—Buildings |       | 6,000 |
| (l) | Operating—Depreciation Expense     | 3,000 |       |
|     | Accumulated Depreciation—Equipment |       | 3,000 |

**Retained Earnings.** The \$116,000 increase in retained earnings resulted from net income of \$145,000 and the declaration and payment of a \$29,000 cash dividend. Net income is included in net cash provided by operating activities, and the dividends are a financing activity cash outflow. The entries in the reconciling columns of the worksheet are:

|     |                                |         |         |
|-----|--------------------------------|---------|---------|
| (m) | Operating—Net Income           | 145,000 |         |
|     | Retained Earnings              |         | 145,000 |
| (n) | Retained Earnings              | 29,000  |         |
|     | Financing—Payment of Dividends |         | 29,000  |

**Disposition of Change in Cash.** The firm's cash increased \$22,000 in 2012. The final entry on the worksheet, therefore, is:

|     |                  |        |        |
|-----|------------------|--------|--------|
| (o) | Cash             | 22,000 |        |
|     | Increase in Cash |        | 22,000 |

As shown in the worksheet, we enter the increase in cash in the reconciling credit column as a **balancing** amount. This entry should complete the reconciliation of the changes in the balance sheet accounts. Also, it should permit the totals of the reconciling columns to be in agreement. When all changes have been explained and the reconciling columns are in agreement, the reconciling columns are ruled to complete the worksheet. The completed worksheet for Computer Services Company is shown in Illustration 17A-3 (page 788).

## Summary of Study Objective for Appendix 17A

### [5] Explain how to use a worksheet to prepare the statement of cash flows using the indirect method.

When there are numerous adjustments, a worksheet can be a helpful tool in preparing the statement of cash flows. Key guidelines for using a worksheet are: (1) List accounts with debit balances separately from those with credit balances. (2) In the reconciling columns in the bottom portion of the work-

sheet, show cash inflows as debits and cash outflows as credits. (3) Do not enter reconciling items in any journal or account, but use them only to help prepare the statement of cash flows.

The steps in preparing the worksheet are: (1) Enter beginning and ending balances of balance sheet accounts. (2) Enter debits and credits in reconciling columns. (3) Enter the increase or decrease in cash in two places as a balancing amount.

# APPENDIX 17B

## Statement of Cash Flows—Direct Method

To explain and illustrate the direct method, we will use the transactions of Juarez Company for 2012, to prepare a statement of cash flows. Illustration 17B-1 presents information related to 2012 for Juarez Company.

### Study Objective [6]

Prepare a statement of cash flows using the direct method.

| <b>Juarez Company</b><br>Comparative Balance Sheets<br>December 31 |                  |                  |   |
|--|------------------|------------------|---|
| <u>Assets</u>  | <u>2012</u>      | <u>2011</u>      | <u>Change</u><br><u>Increase/Decrease</u> |
| Cash   | \$191,000        | \$159,000        | \$32,000 Increase                         |
| Accounts receivable  | 12,000           | 15,000           | 3,000 Decrease                            |
| Inventory  | 170,000          | 160,000          | 10,000 Increase                           |
| Prepaid expenses   | 6,000            | 8,000            | 2,000 Decrease                            |
| Land   | 140,000          | 80,000           | 60,000 Increase                           |

### Illustration 17B-1

Comparative balance sheets, income statement, and additional information for Juarez Company

| <b>Juarez Company</b><br>Income Statement<br>For the Year Ended December 31, 2012 |           |                  |
|---|-----------|------------------|
| Sales revenue   |           | \$975,000        |
| Cost of goods sold  | \$660,000 |                  |
| Operating expenses (excluding depreciation)                                       | 176,000   |                  |
| Depreciation expense  | 18,000    |                  |
| Loss on sale of equipment   | 1,000     | 855,000          |
| Income before income taxes  |           | 120,000          |
| Income tax expense  |           | 36,000           |
| Net income  |           | <u>\$ 84,000</u> |

### Additional information:

- In 2012, the company declared and paid a \$32,000 cash dividend.
- Bonds were issued at face value for \$130,000 in cash.
- Equipment costing \$180,000 was purchased for cash.
- Equipment costing \$20,000 was sold for \$17,000 cash when the book value of the equipment was \$18,000.
- Common stock of \$60,000 was issued to acquire land.

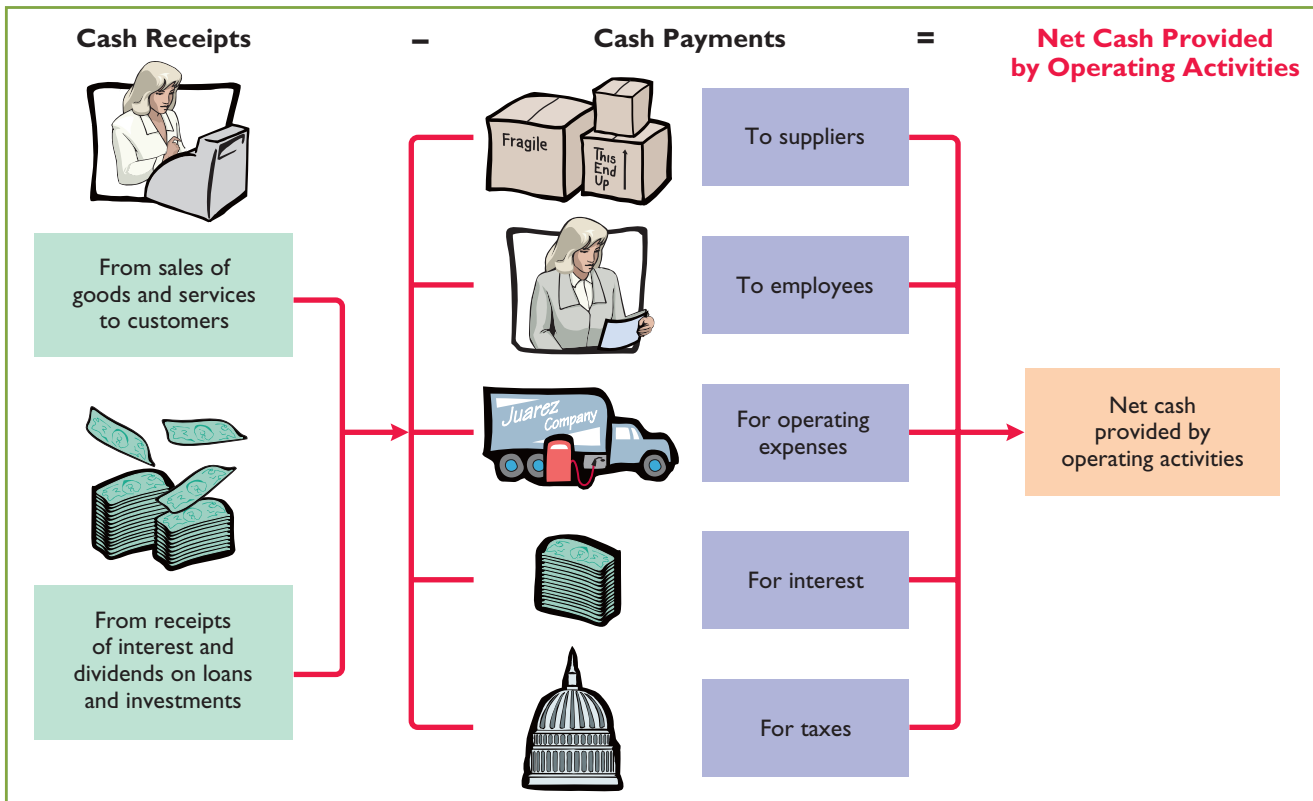

To prepare a statement of cash flows under the direct approach, we will apply the three steps outlined in Illustration 17-3 (page 767).

### Step 1: Operating Activities

#### DETERMINE NET CASH PROVIDED/USED BY OPERATING ACTIVITIES BY CONVERTING NET INCOME FROM AN ACCRUAL BASIS TO A CASH BASIS

Under the **direct method**, companies compute net cash provided by operating activities by **adjusting each item in the income statement** from the accrual basis to the cash basis. To simplify and condense the operating activities section, companies **report only major classes of operating cash receipts and cash payments**. For these major classes, the difference between cash receipts and cash payments is the net cash provided by operating activities. These relationships are as shown in Illustration 17B-2.

**Illustration 17B-2**  
Major classes of cash receipts and payments

**An efficient way to apply the direct method is to analyze the items reported in the income statement in the order in which they are listed.** We then determine cash receipts and cash payments related to these revenues and expenses. The following pages present the adjustments required to prepare a statement of cash flows for Juarez Company using the direct approach.

**Cash Receipts from Customers.** The income statement for Juarez Company reported revenues from customers of \$975,000. How much of that was cash receipts? To answer that, companies need to consider the change in accounts receivable during the year. When accounts receivable increase during the year, sales revenue on an

accrual basis is higher than cash receipts from customers. Operations led to sales revenue, but not all of this revenue resulted in cash receipts.

To determine the amount of cash receipts, the company deducts from sales revenues the increase in accounts receivable. On the other hand, there may be a decrease in accounts receivable. That would occur if cash receipts from customers exceeded sales revenues. In that case, the company adds to sales revenues the decrease in accounts receivable.

For Juarez Company, accounts receivable decreased \$3,000. Thus, cash receipts from customers were \$978,000, computed as shown in Illustration 17B-3.

|                                      |                         |
|--------------------------------------|-------------------------|
| Sales revenue                        | \$975,000               |
| Add: Decrease in accounts receivable | <u>3,000</u>            |
| <b>Cash receipts from customers</b>  | <b><u>\$978,000</u></b> |

**Illustration 17B-3**

Computation of cash receipts from customers

Juarez can also determine cash receipts from customers from an analysis of the Accounts Receivable account, as shown in Illustration 17B-4.

|          |               | Accounts Receivable |   |
|----------|---------------|---------------------|---|
| 1/1/12   | Balance       | 15,000              | <b>Receipts from customers</b> <b>978,000</b> |
|          | Sales revenue | 975,000             |   |
| 12/31/12 | Balance       | 12,000              |   |

**Illustration 17B-4**

Analysis of accounts receivable

Illustration 17B-5 shows the relationships among cash receipts from customers, sales revenue, and changes in accounts receivable.

|                                     |   |               |   |  |
|-------------------------------------|---|---------------|---|--|
| <b>Cash Receipts from Customers</b> | = | Sales Revenue | { | + Decrease in Accounts Receivable<br>or<br>– Increase in Accounts Receivable |
|-------------------------------------|---|---------------|---|--|

**Helpful Hint**

The T account shows that sales revenue plus decrease in receivables equals cash receipts.

**Illustration 17B-5**

Formula to compute cash receipts from customers—direct method

**Cash Payments to Suppliers.** Juarez Company reported cost of goods sold of \$660,000 on its income statement. How much of that was cash payments to suppliers? To answer that, it is first necessary to find purchases for the year. To find purchases, companies adjust cost of goods sold for the change in inventory. When inventory increases during the year, purchases for the year have exceeded cost of goods sold. As a result, to determine the amount of purchases, the company adds to cost of goods sold the increase in inventory.

In 2012, Juarez Company's inventory increased \$10,000. It computes purchases as follows.

|                            |                         |
|----------------------------|-------------------------|
| Cost of goods sold         | \$660,000               |
| Add: Increase in inventory | <u>10,000</u>           |
| <b>Purchases</b>           | <b><u>\$670,000</u></b> |

**Illustration 17B-6**

Computation of purchases

After computing purchases, a company can determine cash payments to suppliers. This is done by adjusting purchases for the change in accounts payable. When accounts payable increase during the year, purchases on an accrual basis are higher than they are on a cash basis. As a result, to determine cash payments to suppliers, a company deducts from purchases the increase in accounts payable. On

the other hand, if cash payments to suppliers exceed purchases, there will be a decrease in accounts payable. In that case, a company adds to purchases the decrease in accounts payable.

For Juarez Company, cash payments to suppliers were \$678,000, computed as follows.

**Illustration 17B-7**

Computation of cash payments to suppliers

|                                   |                         |
|-----------------------------------|-------------------------|
| Purchases                         | \$670,000               |
| Add: Decrease in accounts payable | <u>8,000</u>            |
| <b>Cash payments to suppliers</b> | <b><u>\$678,000</u></b> |

Juarez also can determine cash payments to suppliers from an analysis of the Accounts Payable account, as shown in Illustration 17B-8.

**Illustration 17B-8**

Analysis of accounts payable

| Accounts Payable             |                |                  |         |
|------------------------------|----------------|------------------|---------|
| <b>Payments to suppliers</b> | <b>678,000</b> | 1/1/12 Balance   | 60,000  |
|                              |                | Purchase         | 670,000 |
|                              |                | 12/31/12 Balance | 52,000  |

**Helpful Hint**

The T account shows that purchases plus decrease in accounts payable equals payments to suppliers.

Illustration 17B-9 shows the relationships among cash payments to suppliers, cost of goods sold, changes in inventory, and changes in accounts payable.

 - \text{ Increase in Accounts Payable}
 \end{array}
 \right\}$$

**Cash Payments for Operating Expenses.** Juarez reported on its income statement operating expenses of \$176,000. How much of that amount was cash paid for operating expenses? To answer that, we need to adjust this amount for any changes in prepaid expenses and accrued expenses payable. For example, if prepaid expenses increased during the year, cash paid for operating expenses is higher than operating expenses reported on the income statement. To convert operating expenses to cash payments for operating expenses, a company adds the increase to operating expenses. On the other hand, if prepaid expenses decrease during the year, it deducts the decrease from operating expenses.

Companies must also adjust operating expenses for changes in accrued expenses payable. When accrued expenses payable increase during the year, operating expenses on an accrual basis are higher than they are in a cash basis. As a result, to determine cash payments for operating expenses, a company deducts from operating expenses an increase in accrued expenses payable. On the other hand, a company adds to operating expenses a decrease in accrued expenses payable because cash payments exceed operating expenses.

Juarez Company's cash payments for operating expenses were \$179,000, computed as follows.

**Illustration 17B-10**

Computation of cash payments for operating expenses

|   |                         |
|---|-------------------------|
| Operating expenses                          | \$176,000               |
| Deduct: Decrease in prepaid expenses        | (2,000)                 |
| Add: Decrease in accrued expenses payable   | <u>5,000</u>            |
| <b>Cash payments for operating expenses</b> | <b><u>\$179,000</u></b> |

Illustration 17B-11 shows the relationships among cash payments for operating expenses, changes in prepaid expenses, and changes in accrued expenses payable.

|   |   |                               |   |  |   |  |
|---|---|-------------------------------|---|--|---|--|

|---|---|-------------------------------|---|--|---|--|

**Illustration 17B-11**  
Formula to compute cash payments for operating expenses—direct method

**Depreciation Expense and Loss on Sale of Equipment.** Companies show operating expenses exclusive of depreciation. Juarez's depreciation expense in 2012 was \$18,000. Depreciation expense is not shown on a statement of cash flows because it is a noncash charge. If the amount for operating expenses includes depreciation expense, the company must reduce operating expenses by the amount of depreciation to determine cash payments for operating expenses.

The loss on sale of equipment of \$1,000 is also a noncash charge. The loss on sale of equipment reduces net income, but it does not reduce cash. Thus, companies do not report on a statement of cash flows the loss on sale of equipment.

Other charges to expense that do not require the use of cash, such as the amortization of intangible assets, depletion expense, and bad debt expense, are treated in the same manner as depreciation.

**Cash Payments for Income Taxes.** Juarez reported income tax expense of \$36,000 on the income statement. Income taxes payable, however, increased \$12,000. This increase means that the company has not yet paid \$12,000 of the income taxes. As a result, income taxes paid were less than income taxes reported in the income statement. Cash payments for income taxes were, therefore, \$24,000 as shown below.

|  |                        |
|--|------------------------|
| Income tax expense                       | \$36,000               |
| Deduct: Increase in income taxes payable | <u>12,000</u>          |
| <b>Cash payments for income taxes</b>    | <b><u>\$24,000</u></b> |

**Illustration 17B-12**  
Computation of cash payments for income taxes

Illustration 17B-13 shows the relationships among cash payments for income taxes, income tax expense, and changes in income taxes payable.

|   |   |                               |   |  |   |
|---|---|-------------------------------|---|--|---|
| <b>Cash<br/>Payments for<br/>Income Taxes</b> | = | <b>Income Tax<br/>Expense</b> | { | + Decrease in Income Taxes Payable<br>or<br>– Increase in Income Taxes Payable | } |
|---|---|-------------------------------|---|--|---|

**Illustration 17B-13**  
Formula to compute cash payments for income taxes—direct method

The operating activities section of the statement of cash flows of Juarez Company is shown in Illustration 17B-14.

|   |               |                |
|---|---------------|----------------|
| Cash flows from operating activities      |               |                |
| Cash receipts from customers              |               | \$978,000      |
| Less: Cash payments:                      |               |                |
| To suppliers                              | \$678,000     |                |
| For operating expenses                    | 179,000       |                |
| For income taxes                          | <u>24,000</u> | <u>881,000</u> |
| Net cash provided by operating activities |               | \$ 97,000      |

**Illustration 17B-14**  
Operating activities section of the statement of cash flows

When a company uses the direct method, it must also provide in a **separate schedule** (not shown here) the net cash flows from operating activities as computed under the indirect method.

## Step 2: Investing and Financing Activities

### ANALYZE CHANGES IN NONCURRENT ASSET AND LIABILITY ACCOUNTS AND RECORD AS INVESTING AND FINANCING ACTIVITIES, OR AS SIGNIFICANT NONCASH TRANSACTIONS

**Increase in Land.** Juarez's land increased \$60,000. The additional information section indicates that the company issued common stock to purchase the land. The issuance of common stock for land has no effect on cash. But it is a **significant non-cash investing and financing transaction**. This transaction requires disclosure in a separate schedule at the bottom of the statement of cash flows.

**Increase in Equipment.** The comparative balance sheets show that equipment increased \$160,000 in 2012. The additional information in Illustration 17B-1 indicated that the increase resulted from two investing transactions: (1) Juarez purchased for cash equipment costing \$180,000. And (2) it sold for \$17,000 cash equipment costing \$20,000, whose book value was \$18,000. The relevant data for the statement of cash flows is the cash paid for the purchase and the cash proceeds from the sale. For Juarez Company, the investing activities section will show the following: The \$180,000 purchase of equipment as an outflow of cash, and the \$17,000 sale of equipment as an inflow of cash. The company **should not net** the two amounts. **Both individual outflows and inflows of cash should be shown.**

The analysis of the changes in equipment should include the related Accumulated Depreciation account. These two accounts for Juarez Company are shown in Illustration 17B-15.

**Illustration 17B-15**  
Analysis of equipment and related accumulated depreciation

|          |                      | Equipment      |                        |        |
|----------|----------------------|----------------|------------------------|--------|
| 1/1/12   | Balance              | –0–            | Cost of equipment sold | 20,000 |
|          | <b>Cash purchase</b> | <b>180,000</b> |                        |        |
| 12/31/12 | Balance              | 160,000        |                        |        |

| Accumulated Depreciation—Equipment |       |          |                      |        |
|------------------------------------|-------|----------|----------------------|--------|
| Sale of equipment                  | 2,000 | 1/1/12   | Balance              | –0–    |
|                                    |       |          | Depreciation expense | 18,000 |
|                                    |       | 12/31/12 | Balance              | 16,000 |

**Increase in Bonds Payable.** Bonds Payable increased \$130,000. The additional information in Illustration 17B-1 indicated that Juarez issued, for \$130,000 cash, bonds with a face value of \$130,000. The issuance of bonds is a financing activity. For Juarez Company, there is an inflow of cash of \$130,000 from the issuance of bonds.

**Increase in Common Stock.** The Common Stock account increased \$60,000. The additional information indicated that Juarez acquired land from the issuance of common stock. This transaction is a **significant noncash investing and financing**

**transaction** which the company should report separately at the bottom of the statement.

**Increase in Retained Earnings.** The \$52,000 net increase in Retained Earnings resulted from net income of \$84,000 and the declaration and payment of a cash dividend of \$32,000. Companies **do not report net income in the statement of cash flows under the direct method.** Cash dividends paid of \$32,000 are reported in the financing activities section as an outflow of cash.

### STATEMENT OF CASH FLOWS—2012

Illustration 17B-16 shows the statement of cash flows for Juarez.

| Juarez Company                                    |                 |                         |

| Cash at beginning of period                       |                 | <u>159,000</u>          |
| Cash at end of period                             |                 | <u><u>\$191,000</u></u> |
| <b>Noncash investing and financing activities</b> |                 |                         |
| Issuance of common stock to purchase land         |                 | <u>\$ 60,000</u>        |

**Illustration 17B-16**  
Statement of cash flows,  
2012—direct method

### Step 3: Net Change in Cash

#### COMPARE THE NET CHANGE IN CASH ON THE STATEMENT OF CASH FLOWS WITH THE CHANGE IN THE CASH ACCOUNT REPORTED ON THE BALANCE SHEET TO MAKE SURE THE AMOUNTS AGREE

Illustration 17B-16 indicates that the net change in cash during the period was an increase of \$32,000. This agrees with the change in balances in the cash account reported on the balance sheets in Illustration 17B-1 (page 789).

## Summary of Study Objective for Appendix 17B

**[6] Prepare a statement of cash flows using the direct method.** The preparation of the statement of cash flows involves three major steps: (1) Determine net cash provided/used by operating activities by converting net income from an accrual basis to a cash basis. (2) Analyze changes in noncurrent asset and liability accounts and record as invest-

ing and financing activities, or disclose as noncash transactions. (3) Compare the net change in cash on the statement of cash flows with the change in the cash account reported on the balance sheet to make sure the amounts agree. The direct method reports cash receipts less cash payments to arrive at net cash provided by operating activities.

## Glossary for Appendix 17B

**Direct method** A method of determining net cash provided by operating activities by adjusting each item in the

income statement from the accrual basis to the cash basis. (p. 790)

### COMPREHENSIVE

## Do it! 2

The income statement for Kosinski Manufacturing Company contains the following condensed information.

#### KOSINSKI MANUFACTURING COMPANY

##### Income Statement

For the Year Ended December 31, 2012

|  |                |                   |
|--|----------------|-------------------|
| Sales revenue                              |                | \$6,583,000       |
| Operating expenses, excluding depreciation | \$4,920,000    |                   |
| Depreciation expense                       | <u>880,000</u> | <u>5,800,000</u>  |
| Income before income taxes                 |                | 783,000           |
| Income tax expense                         |                | <u>353,000</u>    |
| Net income                                 |                | <u>\$ 430,000</u> |

Included in operating expenses is a \$24,000 loss resulting from the sale of machinery for \$270,000 cash. Machinery was purchased at a cost of \$750,000. The following balances are reported on Kosinski's comparative balance sheet at December 31.

#### KOSINSKI MANUFACTURING COMPANY

Comparative Balance Sheets (partial)

|                     | <u>2012</u> | <u>2011</u> |
|---------------------|-------------|-------------|
| Cash                | \$672,000   | \$130,000   |
| Accounts receivable | 775,000     | 610,000     |
| Inventory           | 834,000     | 867,000     |
| Accounts payable    | 521,000     | 501,000     |

Income tax expense of \$353,000 represents the amount paid in 2012. Dividends declared and paid in 2012 totaled \$200,000.

### Instructions

Prepare the statement of cash flows using the direct method.

**Solution to Comprehensive Do it! 2****KOSINSKI MANUFACTURING COMPANY**Statement of Cash Flows—Direct Method  
For the Year Ended December 31, 2012

|   |               |                   |
|---|---------------|-------------------|
| Cash flows from operating activities      |               |                   |
| Cash collections from customers           |               | \$6,418,000*      |
| Cash payments:                            |               |                   |
| For operating expenses                    | \$4,843,000** |                   |
| For income taxes                          | 353,000       | 5,196,000         |
| Net cash provided by operating activities |               | 1,222,000         |
| Cash flows from investing activities      |               |                   |
| Sale of machinery                         | 270,000       |                   |
| Purchase of machinery                     | (750,000)     |                   |
| Net cash used by investing activities     |               | (480,000)         |
| Cash flows from financing activities      |               |                   |
| Payment of cash dividends                 | (200,000)     |                   |
| Net cash used by financing activities     |               | (200,000)         |
| Net increase in cash                      |               | 542,000           |
| Cash at beginning of period               |               | 130,000           |
| Cash at end of period                     |               | <u>\$ 672,000</u> |

*Direct-Method Computations:*

\*Computation of cash collections from customers:

|   |                    |
|---|--------------------|
| Sales revenue per the income statement  | \$6,583,000        |
| Deduct: Increase in accounts receivable | (165,000)          |
| Cash collections from customers         | <u>\$6,418,000</u> |

\*\*Computation of cash payments for operating expenses:

|   |                    |
|---|--------------------|
| Operating expenses per the income statement | \$4,920,000        |
| Deduct: Loss from sale of machinery         | (24,000)           |
| Deduct: Decrease in inventories             | (33,000)           |
| Deduct: Increase in accounts payable        | (20,000)           |
| Cash payments for operating expenses        | <u>\$4,843,000</u> |

**action plan**

✓ Determine net cash from operating activities. Each item in the income statement must be adjusted to the cash basis.

✓ Determine net cash from investing activities. Investing activities generally relate to changes in noncurrent assets.

✓ Determine net cash from financing activities. Financing activities generally relate to changes in long-term liabilities and stockholders' equity accounts.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

**Note:** All Questions, Exercises, and Problems marked with an asterisk relate to material in the appendices to the chapter.

## Self-Test Questions

Answers are on page 820.

- (SO 1) 1. Which of the following is *incorrect* about the statement of cash flows?
- It is a fourth basic financial statement.
  - It provides information about cash receipts and cash payments of an entity during a period.
  - It reconciles the ending cash account balance to the balance per the bank statement.
  - It provides information about the operating, investing, and financing activities of the business.
2. Which of the following will *not* be reported in the statement of cash flows? (SO 1)

- c. debit in the investing section.
- d. debit in the financing section.

**Questions 18 and 19 apply only to the direct method.**

- (SO 6) \*18. The beginning balance in accounts receivable is \$44,000, the ending balance is \$42,000, and sales during the period are \$129,000. What are cash receipts from customers?
- a. \$127,000.
  - b. \$129,000.
  - c. \$131,000.
  - d. \$141,000.
- (SO 6) \*19. Which of the following items is reported on a cash flow statement prepared by the direct method?

- a. Loss on sale of building.
- b. Increase in accounts receivable.
- c. Depreciation expense.
- d. Cash payments to suppliers.

[www.wiley.com/college/veygandt](http://www.wiley.com/college/veygandt),  
 for additional Self-Test Questions.

## Questions

1. (a) What is a statement of cash flows?  
 (b) John Norris maintains that the statement of cash flows is an optional financial statement. Do you agree? Explain.
2. What questions about cash are answered by the statement of cash flows?
3. Distinguish among the three types of activities reported in the statement of cash flows.
4. (a) What are the major sources (inflows) of cash in a statement of cash flows?  
 (b) What are the major uses (outflows) of cash?
5. Why is it important to disclose certain noncash transactions? How should they be disclosed?
6. Wilma Flintstone and Barney Rublestone were discussing the format of the statement of cash flows of Hart Candy Co. At the bottom of Hart Candy's statement of cash flows was a separate section entitled "Noncash investing and financing activities." Give three examples of significant noncash transactions that would be reported in this section.
7. Why is it necessary to use comparative balance sheets, a current income statement, and certain transaction data in preparing a statement of cash flows?
8. Contrast the advantages and disadvantages of the direct and indirect methods of preparing the statement of cash flows. Are both methods acceptable? Which method is preferred by the FASB? Which method is more popular?
9. When the total cash inflows exceed the total cash outflows in the statement of cash flows, how and where is this excess identified?
10. Describe the indirect method for determining net cash provided (used) by operating activities.
11. Why is it necessary to convert accrual-based net income to cash-basis income when preparing a statement of cash flows?
12. The president of Ferneti Company is puzzled. During the last year, the company experienced a net loss of \$800,000, yet its cash increased \$300,000 during the same period of time. Explain to the president how this could occur.
13. Identify five items that are adjustments to convert net income to net cash provided by operating activities under the indirect method.
14. Why and how is depreciation expense reported in a statement prepared using the indirect method?
15. Why is the statement of cash flows useful?
16. During 2012, Doubleday Company converted \$1,700,000 of its total \$2,000,000 of bonds payable into common stock. Indicate how the transaction would be reported on a statement of cash flows, if at all.
- \*17. Why is it advantageous to use a worksheet when preparing a statement of cash flows? Is a worksheet required to prepare a statement of cash flows?
- \*18. Describe the direct method for determining net cash provided by operating activities.
- \*19. Give the formulas under the direct method for computing (a) cash receipts from customers and (b) cash payments to suppliers.
- \*20. Garcia Inc. reported sales of \$2 million for 2012. Accounts receivable decreased \$200,000 and accounts payable increased \$300,000. Compute cash receipts from customers, assuming that the receivable and payable transactions related to operations.
- \*21. In the direct method, why is depreciation expense not reported in the cash flows from operating activities section?
22. **PEPSICO** In its 2009 statement of cash flows, what amount did PepsiCo report for net cash (a) provided by operating activities, (b) used for investing activities, and (c) used for financing activities?

## Brief Exercises

**BE17-1** Each of the items on the next page must be considered in preparing a statement of cash flows for Alpha-Omega Co. for the year ended December 31, 2012. For each item, state how it should be shown in the statement of cash flows for 2012.

*Indicate statement presentation of selected transactions.*

(SO 2)

- (a) Issued bonds for \$200,000 cash.
- (b) Purchased equipment for \$150,000 cash.
- (c) Sold land costing \$20,000 for \$20,000 cash.
- (d) Declared and paid a \$50,000 cash dividend.

Classify items by activities.  
(SO 2)

**BE17-2** Classify each item as an operating, investing, or financing activity. Assume all items involve cash unless there is information to the contrary.

- (a) Purchase of equipment.
- (b) Sale of building.
- (c) Redemption of bonds.
- (d) Depreciation.
- (e) Payment of dividends.
- (f) Issuance of capital stock.

Identify financing activity transactions.  
(SO 2)

**BE17-3** The following T account is a summary of the cash account of Wiegman Company.

| Cash (Summary Form)                     |         |                                 |         |
|---|---------|---------------------------------|---------|
| Balance, Jan. 1                         | 8,000   |                                 |         |
| Receipts from customers                 | 364,000 | Payments for goods              | 200,000 |
| Dividends on stock investments          | 6,000   | Payments for operating expenses | 140,000 |
| Proceeds from sale of equipment         | 36,000  | Interest paid                   | 10,000  |
| Proceeds from issuance of bonds payable | 300,000 | Taxes paid                      | 8,000   |
|   |         | Dividends paid                  | 50,000  |
| Balance, Dec. 31                        | 306,000 |                                 |         |

What amount of net cash provided (used) by financing activities should be reported in the statement of cash flows?

Compute cash provided by operating activities—indirect method. (SO 3)

**BE17-4** Mokena, Inc. reported net income of \$2.5 million in 2012. Depreciation for the year was \$160,000, accounts receivable decreased \$350,000, and accounts payable decreased \$280,000. Compute net cash provided by operating activities using the indirect method.

Compute cash provided by operating activities—indirect method. (SO 3)

**BE17-5** The net income for Lodi Co. for 2012 was \$280,000. For 2012, depreciation on plant assets was \$70,000, and the company incurred a loss on sale of plant assets of \$12,000. Compute net cash provided by operating activities under the indirect method.

Compute net cash provided by operating activities—indirect method. (SO 3)

**BE17-6** The comparative balance sheets for Tobemory Company show these changes in non-cash current asset accounts: accounts receivable decrease \$80,000, prepaid expenses increase \$28,000, and inventories increase \$30,000. Compute net cash provided by operating activities using the indirect method assuming that net income is \$200,000.

Determine cash received from sale of equipment. (SO 3)

**BE17-7** The T accounts for Equipment and the related Accumulated Depreciation—Equipment for Ada Company at the end of 2012 are shown here.

| Equipment    |        |           |        | Accumulated Depreciation—Equipment |       |            |        |
|--------------|--------|-----------|--------|------------------------------------|-------|------------|--------|
| Beg. bal.    | 80,000 | Disposals | 22,000 | Disposals                          | 5,500 | Beg. bal.  | 44,500 |
| Acquisitions | 41,600 |           |        |                                    |       | Depr. exp. | 12,000 |
| End. bal.    | 99,600 |           |        |                                    |       | End. bal.  | 51,000 |

In addition, Ada Company’s income statement reported a loss on the sale of equipment of \$5,500. What amount was reported on the statement of cash flows as “cash flow from sale of equipment”?

Calculate free cash flow. (SO 4)

**BE17-8** In a recent year, **Cypress Semiconductor Corporation** reported cash provided by operating activities of \$155,793,000, cash used in investing of \$207,826,000, and cash used in financing of \$33,372,000. In addition, cash spent for fixed assets during the period was \$132,280,000. No dividends were paid. Calculate free cash flow.

Calculate free cash flow. (SO 4)

**BE17-9** Wruck Corporation reported cash provided by operating activities of \$360,000, cash used by investing activities of \$250,000, and cash provided by financing activities of \$70,000. In addition, cash spent for capital assets during the period was \$200,000. No dividends were paid. Calculate free cash flow.

Calculate free cash flow. (SO 4)

**BE17-10** In a recent quarter, **Alliance Atlantis Communications Inc.** reported cash provided by operating activities of \$45,600,000 and revenues of \$264,800,000. Cash spent on plant asset additions during the quarter was \$1,600,000. Calculate free cash flow.

Calculate and analyze free cash flow. (SO 4)

**BE17-11** The management of Russel Inc. is trying to decide whether it can increase its dividend. During the current year, it reported net income of \$875,000. It had cash provided by operating activities of \$734,000, paid cash dividends of \$70,000, and had capital expenditures of

\$280,000. Compute the company's free cash flow, and discuss whether an increase in the dividend appears warranted. What other factors should be considered?

**\*BE17-12** During the year, prepaid expenses decreased \$6,600, and accrued expenses increased \$2,400. Indicate how the changes in prepaid expenses and accrued expenses payable should be entered in the reconciling columns of a worksheet. Assume that beginning balances were: Prepaid expenses \$18,600 and Accrued expenses payable \$8,200.

**\*BE17-13** Columbia Sportswear Company had accounts receivable of \$206,024,000 at the beginning of a recent year, and \$267,653,000 at year-end. Sales revenues were \$1,095,307,000 for the year. What is the amount of cash receipts from customers?

**\*BE17-14** Kinsey Corporation reported income taxes of \$340,000,000 on its 2012 income statement and income taxes payable of \$277,000,000 at December 31, 2011, and \$522,000,000 at December 31, 2012. What amount of cash payments were made for income taxes during 2012?

**\*BE17-15** Yaddof Corporation reports operating expenses of \$80,000 excluding depreciation expense of \$15,000 for 2012. During the year, prepaid expenses decreased \$6,600 and accrued expenses payable increased \$4,400. Compute the cash payments for operating expenses in 2012.

Indicate entries in worksheet.

## Do it! Review

**Do it! 17-1** Piekarski Corporation had the following transactions.

1. Issued \$200,000 of bonds payable.
2. Paid utilities expense.
3. Issued 500 shares of preferred stock for \$45,000.
4. Sold land and a building for \$250,000.
5. Lent \$30,000 to Zarembski Corporation, receiving Zarembski's 1-year, 12% note.

Classify each of these transactions by type of cash flow activity (operating, investing, or financing).

Classify transactions by type of cash flow activity.  
(SO 2)

**Do it! 17-2** Jojo Photography reported net income of \$100,000 for 2012. Included in the income statement were depreciation expense of \$6,000, amortization expense of \$2,000, and a gain on sale of equipment of \$3,600. Jojo's comparative balance sheets show the following balances.

|                     | 12/31/11 | 12/31/12 |
|---------------------|----------|----------|
| Accounts receivable | \$27,000 | \$21,000 |
| Accounts payable    | 6,000    | 9,200    |

(SO 3)

Calculate net cash provided by operating activities for Jojo Photography.

**Do it! 17-3** Zielinski Corporation issued the following statement of cash flows for 2012.

Compute and discuss free cash flow.  
(SO 4)

### ZIELINSKI CORPORATION Statement of Cash Flows—Indirect Method For the Year Ended December 31, 2012

|   |          |               |
|---|----------|---------------|
| Cash flows from operating activities  |          |               |
| Net income  |          | \$59,000      |
| Adjustments to reconcile net income to net cash provided by operating activities: |          |               |
| Depreciation expense  | \$ 9,100 |               |
| Decrease in accounts receivable   | 9,500    |               |
| Loss on sale of equipment   | 3,300    |               |
| Increase in inventory   | (5,000)  |               |
| Decrease in accounts payable  | (2,200)  | <u>14,700</u> |
| Net cash provided by operating activities   |          | 73,700        |
| Cash flows from investing activities  |          |               |
| Sale of investments   | 3,100    |               |
| Purchase of equipment   | (27,000) |               |
| Net cash used by investing activities   |          | (23,900)      |

|                                       |                 |                 |
|---------------------------------------|-----------------|-----------------|
| Cash flows from financing activities  |                 |                 |
| Issuance of stock                     | 20,000          |                 |
| Payment on long-term note payable     | (10,000)        |                 |
| Payment for dividends                 | <u>(15,000)</u> |                 |
| Net cash used by financing activities |                 | <u>(5,000)</u>  |
| Net increase in cash                  |                 | 44,800          |
| Cash at beginning of year             |                 | <u>13,000</u>   |
| Cash at end of year                   |                 | <u>\$57,800</u> |

(a) Compute free cash flow for Zielinski Corporation. (b) Explain why free cash flow often provides better information than “Net cash provided by operating activities.”

## Exercises

Classify transactions by type of activity.

(SO 2)

**E17-1** Quarshee Corporation had these transactions during 2012.

- (a) Issued \$50,000 par value common stock for cash.
- (b) Purchased a machine for \$30,000, giving a long-term note in exchange.
- (c) Issued \$200,000 par value common stock upon conversion of bonds having a face value of \$200,000.
- (d) Declared and paid a cash dividend of \$18,000.
- (e) Sold a long-term investment with a cost of \$15,000 for \$15,000 cash.
- (f) Collected \$16,000 of accounts receivable.
- (g) Paid \$18,000 on accounts payable.

### Instructions

Analyze the transactions and indicate whether each transaction resulted in a cash flow from operating activities, investing activities, financing activities, or noncash investing and financing activities.

Classify transactions by type of activity.

(SO 2)

**E17-2** An analysis of comparative balance sheets, the current year’s income statement, and the general ledger accounts of Solomon Corp. uncovered the following items. Assume all items involve cash unless there is information to the contrary.

- (a) Payment of interest on notes payable.
- (b) Exchange of land for patent.
- (c) Sale of building at book value.
- (d) Payment of dividends.
- (e) Depreciation.
- (f) Receipt of dividends on investment in stock.
- (g) Receipt of interest on notes receivable.
- (h) Issuance of capital stock.
- (i) Amortization of patent.
- (j) Issuance of bonds for land.
- (k) Purchase of land.
- (l) Conversion of bonds into common stock.
- (m) Loss on sale of land.
- (n) Retirement of bonds.

### Instructions

Indicate how each item should be classified in the statement of cash flows using these four major classifications: operating activity (indirect method), investing activity, financing activity, and significant noncash investing and financing activity.

Prepare journal entry and determine effect on cash flows.

(SO 2)

**E17-3** Tim Latimer Corporation had the following transactions.

1. Sold land (cost \$12,000) for \$15,000.
2. Issued common stock for \$20,000.
3. Recorded depreciation on buildings for \$17,000.
4. Paid salaries of \$9,000.
5. Issued 1,000 shares of \$1 par value common stock for equipment worth \$8,000.
6. Sold equipment (cost \$10,000, accumulated depreciation \$7,000) for \$1,200.

### Instructions

For each transaction above, (a) prepare the journal entry, and (b) indicate how it would affect the statement of cash flows.

**E17-4** Bracewell Company reported net income of \$195,000 for 2012. Bracewell also reported depreciation expense of \$45,000 and a loss of \$5,000 on the sale of equipment. The comparative balance sheet shows a decrease in accounts receivable of \$15,000 for the year, a \$17,000 increase in accounts payable, and a \$4,000 decrease in prepaid expenses.

*Prepare the operating activities section—indirect method.*

(SO 3)

### Instructions

Prepare the operating activities section of the statement of cash flows for 2012. Use the indirect method.

**E17-5** The current sections of Nasreen Inc.'s balance sheets at December 31, 2011 and 2012, are presented here.

*Prepare the operating activities section—indirect method.*

(SO 3)

Nasreen's net income for 2012 was \$153,000. Depreciation expense was \$24,000.

|                           | <u>2012</u>      | <u>2011</u>      |
|---------------------------|------------------|------------------|
| Current assets            |                  |                  |
| Cash                      | \$105,000        | \$ 99,000        |
| Accounts receivable       | 110,000          | 89,000           |
| Inventory                 | 158,000          | 172,000          |
| Prepaid expenses          | 27,000           | 22,000           |
| Total current assets      | <u>\$400,000</u> | <u>\$382,000</u> |
| Current liabilities       |                  |                  |
| Accrued expenses payable  | \$ 15,000        | \$ 5,000         |
| Accounts payable          | 85,000           | 92,000           |
| Total current liabilities | <u>\$100,000</u> | <u>\$ 97,000</u> |

### Instructions

Prepare the net cash provided by operating activities section of the company's statement of cash flows for the year ended December 31, 2012, using the indirect method.

**E17-6** The three accounts shown below appear in the general ledger of Chaudry Corp. during 2012.

*Prepare partial statement of cash flows—indirect method.*

(SO 3)

| <u>Equipment</u>                          |  |              |               |                |

| Dec. 31                                   | Depreciation for year                      |              | 28,000        | 69,000         |
| <u>Retained Earnings</u>                  |  |              |               |                |
| <u>Date</u>                               |  | <u>Debit</u> | <u>Credit</u> | <u>Balance</u> |
| Jan. 1                                    | Balance                                    |              |               | 105,000        |
| Aug. 23                                   | Dividends (cash)                           | 14,000       |               | 91,000         |
| Dec. 31                                   | Net income                                 |              | 67,000        | 158,000        |

### Instructions

From the postings in the accounts, indicate how the information is reported on a statement of cash flows using the indirect method. The loss on sale of equipment was \$5,000. (*Hint:* Cost of equipment constructed is reported in the investing activities section as a decrease in cash of \$53,000.)

Prepare statement of cash flows and compute free cash flow.

(SO 3, 4)

**E17-7** Meera Corporation's comparative balance sheets are presented below.

**MEERA CORPORATION**  
Comparative Balance Sheets  
December 31

|                                    | <b>2012</b> | <b>2011</b> |
|------------------------------------|-------------|-------------|
| Cash                               | \$ 14,300   | \$ 10,700   |
| Accounts receivable                | 21,200      | 23,400      |
| Land                               | 20,000      | 26,000      |
| Buildings                          | 70,000      | 70,000      |
| Accumulated depreciation—buildings | (15,000)    | (10,000)    |
| Total                              | \$110,500   | \$120,100   |
| Accounts payable                   | \$ 12,370   | \$ 31,100   |
| Common stock                       | 75,000      | 69,000      |
| Retained earnings                  | 23,130      | 20,000      |
| Total                              | \$110,500   | \$120,100   |

Additional information:

1. Net income was \$22,630. Dividends declared and paid were \$19,500.
2. All other changes in noncurrent account balances had a direct effect on cash flows, except the change in accumulated depreciation. The land was sold for \$4,900.

**Instructions**

- (a) Prepare a statement of cash flows for 2012 using the indirect method.
- (b) Compute free cash flow.

Prepare a statement of cash flows—indirect method.

Additional information:

1. Net income for 2012 was \$125,000.
2. Cash dividends of \$60,000 were declared and paid.
3. Bonds payable amounting to \$50,000 were redeemed for cash \$50,000.
4. Common stock was issued for \$50,000 cash.
5. Depreciation expense was \$24,000.
6. Sales for the year were \$978,000.

Compute cash provided by operating activities—direct method.

(SO 6)

**Instructions**

Prepare a worksheet for a statement of cash flows for 2012 using the indirect method. Enter the reconciling items directly on the worksheet, using letters to cross-reference each entry.

**\*E17-11** Dumezweni Company completed its first year of operations on December 31, 2012. Its initial income statement showed that Dumezweni had revenues of \$192,000 and operating expenses of \$78,000. Accounts receivable and accounts payable at year-end were \$60,000 and \$23,000, respectively. Assume that accounts payable related to operating expenses. Ignore income taxes.

**Instructions**

Compute net cash provided by operating activities using the direct method.

Compute cash payments—direct method.

(SO 6)

**\*E17-12** A recent income statement for **McDonald's Corporation** shows cost of goods sold \$4,852.7 million and operating expenses (including depreciation expense of \$1,201 million) \$10,671.5 million. The comparative balance sheet for the year shows that inventory increased \$18.1 million, prepaid expenses increased \$56.3 million, accounts payable (merchandise suppliers) increased \$136.9 million, and accrued expenses payable increased \$160.9 million.

**Instructions**

Using the direct method, compute (a) cash payments to suppliers and (b) cash payments for operating expenses.

Compute cash flow from operating activities—direct method.

(SO 6)

**\*E17-13** The 2012 accounting records of Liz Ten Transport reveal these transactions and events.

|   |           |                                   |           |
|---|-----------|-----------------------------------|-----------|
| Payment of interest                         | \$ 10,000 | Collection of accounts receivable | \$182,000 |
| Cash sales                                  | 48,000    | Payment of salaries and wages     | 53,000    |
| Receipt of dividend revenue                 | 18,000    | Depreciation expense              | 16,000    |
| Payment of income taxes                     | 12,000    | Proceeds from sale of vehicles    | 12,000    |
| Net income                                  | 38,000    | Purchase of equipment for cash    | 22,000    |
| Payment of accounts payable for merchandise | 115,000   | Loss on sale of vehicles          | 3,000     |
| Payment for land                            | 74,000    | Payment of dividends              | 14,000    |
|   |           | Payment of operating expenses     | 28,000    |

**Instructions**

Prepare the cash flows from operating activities section using the direct method. (Not all of the items will be used.)

Calculate cash flows—direct method.

(SO 6)

**\*E17-14** The following information is taken from the 2012 general ledger of Okonedo Company.

|          |   |           |
|----------|---|-----------|
| Rent     | Rent expense                            | \$ 40,000 |
|          | Prepaid rent, January 1                 | 5,900     |
|          | Prepaid rent, December 31               | 9,000     |
| Salaries | Salaries and wages expense              | \$ 54,000 |
|          | Salaries and wages payable, January 1   | 10,000    |
|          | Salaries and wages payable, December 31 | 8,000     |
| Sales    | Sales revenue                           | \$170,000 |
|          | Accounts receivable, January 1          | 16,000    |
|          | Accounts receivable, December 31        | 7,000     |

**Instructions**

In each case, compute the amount that should be reported in the operating activities section of the statement of cash flows under the direct method.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

Distinguish among operating, investing, and financing activities. (SO 2)

**P17-1A** You are provided with the following transactions that took place during a recent fiscal year.

| <u>Transaction</u>                                      | <u>Statement of<br/>Cash Flow<br/>Activity Affected</u> | <u>Cash Inflow,<br/>Outflow, or<br/>No Effect?</u> |
|---|---|--|
| (a) Recorded depreciation expense on the plant assets.  |   |  |
| (b) Recorded and paid interest expense.                 |   |  |
| (c) Recorded cash proceeds from a sale of plant assets. |   |  |
| (d) Acquired land by issuing common stock.              |   |  |
| (e) Paid a cash dividend to preferred stockholders.     |   |  |
| (f) Paid a cash dividend to common stockholders.        |   |  |
| (g) Recorded cash sales.                                |   |  |
| (h) Recorded sales on account.                          |   |  |
| (i) Purchased inventory for cash.                       |   |  |
| (j) Purchased inventory on account.                     |   |  |

**Instructions**

Complete the table indicating whether each item (1) affects operating (O) activities, investing (I) activities, financing (F) activities, or is a noncash (NC) transaction reported in a separate schedule, and (2) represents a cash inflow or cash outflow or has no cash flow effect. Assume use of the indirect approach.

**P17-2A** The following account balances relate to the stockholders' equity accounts of Chipco Corp. at year-end.

*Determine cash flow effects of changes in equity accounts.*  
(SO 3)

|   | <u>2012</u> | <u>2011</u> |
|---|-------------|-------------|
| Common stock, 10,500 and 10,000 shares, respectively, for 2012 and 2011 | \$160,000   | \$140,000   |
| Preferred stock, 5,000 shares   | 125,000     | 125,000     |
| Retained earnings   | 300,000     | 260,000     |

A small stock dividend was declared and issued in 2012. The market value of the shares was \$10,500. Cash dividends were \$15,000 in both 2012 and 2011. The common stock has no par or stated value.

**Instructions**

- (a) What was the amount of net income reported by Chipco Corp. in 2012?
- (b) Determine the amounts of any cash inflows or outflows related to the common stock and dividend accounts in 2012.
- (c) Indicate where each of the cash inflows or outflows identified in (b) would be classified on the statement of cash flows.

(a) Net income \$65,500

**P17-3A** The income statement of Toby Zed Company is presented here.

*Prepare the operating activities section—indirect method.*  
(SO 3)

Prepare a worksheet for the statement of cash flows using the indirect method. Enter the reconciling items directly in the worksheet columns, using letters to cross-reference each entry.

Reconciling items total  
\$610,210

## Problems: Set B

*Distinguish among operating, investing, and financing activities.*

(SO 2)

**P17-1B** You are provided with the following transactions that took place during a recent fiscal year.

| <u>Transaction</u>   | <u>Statement of Cash Flow Activity Affected</u> | <u>Cash Inflow, Outflow, or No Effect?</u> |
|--|---|--|
| (a) Recorded depreciation expense on the plant assets.                               |   |  |
| (b) Incurred a loss on disposal of plant assets.                                     |   |  |
| (c) Acquired a building by paying cash.  |   |  |
| (d) Made principal repayments on a mortgage.   |   |  |
| (e) Issued common stock.   |   |  |
| (f) Purchased shares of another company to be held as a long-term equity investment. |   |  |
| (g) Paid cash dividends to common stockholders.                                      |   |  |
| (h) Sold inventory on credit. The company uses a perpetual inventory system.         |   |  |
| (i) Purchased inventory on credit.   |   |  |
| (j) Paid wages to employees.   |   |  |

### Instructions

Complete the table indicating whether each item (1) affects operating (O) activities, investing (I) activities, financing (F) activities, or is a noncash (NC) transaction reported in a separate schedule, and (2) represents a cash inflow or cash outflow or has no cash flow effect. Assume use of the indirect approach.

*Determine cash flow effects of changes in plant asset accounts.*

(SO 3)

**P17-2B** The following selected account balances relate to the plant asset accounts of Raji Inc. at year-end.

|                                    | <u>2012</u> | <u>2011</u> |
|------------------------------------|-------------|-------------|
| Accumulated depreciation—buildings | \$337,500   | \$300,000   |
| Accumulated depreciation—equipment | 144,000     | 96,000      |
| Buildings                          | 750,000     | 750,000     |
| Depreciation expense               | 101,500     | 85,500      |
| Equipment                          | 300,000     | 240,000     |
| Land                               | 100,000     | 70,000      |
| Loss on sale of equipment          | 8,000       | 0           |

Additional information:

- Raji purchased \$95,000 of equipment and \$30,000 of land for cash in 2012.
- Raji also sold equipment in 2012.
- Depreciation expense in 2012 was \$37,500 on building and \$64,000 on equipment.

### Instructions

(a) Cash proceeds \$11,000

- Determine the amounts of any cash inflows or outflows related to the plant asset accounts in 2012.
- Indicate where each of the cash inflows or outflows identified in (a) would be classified on the statement of cash flows.

*Prepare the operating activities section—indirect method.*

(SO 3)

**P17-3B** The income statement of Asquith Company is presented on the next page.

Additional information:

- Accounts receivable decreased \$320,000 during the year, and inventory increased \$120,000.
- Prepaid expenses increased \$175,000 during the year.

3. Accounts payable to merchandise suppliers increased \$50,000 during the year.  
 4. Accrued expenses payable increased \$155,000 during the year.

Additional data:

1. Dividends of \$23,000 were declared and paid.
2. During the year equipment was sold for \$10,000 cash. This equipment cost \$15,000 originally and had a book value of \$10,000 at the time of sale.
3. All depreciation expense, \$8,000, is in the operating expenses.
4. All sales and purchases are on account.
5. Additional equipment was purchased for \$7,000 cash.

**Instructions**

- (a) Prepare a statement of cash flows using the indirect method.
- (b) Compute free cash flow.

(a) Cash from operations  
\$1,000

Prepare a statement of cash flows—direct method, and compute free cash flow.

(SO 4, 6)

**\*P17-8B** Data for Rocastle Company are presented in P17-7B. Further analysis reveals the following.

1. Accounts payable pertains to merchandise creditors.
2. All operating expenses except for depreciation are paid in cash.

**Instructions**

- (a) Prepare a statement of cash flows using the direct method.
- (b) Compute free cash flow.

(a) Cash from operations  
\$1,000

**P17-9B** Condensed financial data of Minnie Hooper Company are shown below.

*Prepare a statement of cash flows—indirect method.*  
(SO 3)

**MINNIE HOOPER COMPANY**  
Comparative Balance Sheets  
December 31

| <u>Assets</u>                               | <u>2012</u>      | <u>2011</u>      |

**MINNIE HOOPER COMPANY**  
Income Statement  
For the Year Ended December 31, 2012

|  |          |                  |
|--|----------|------------------|
| Sales revenue                                      |          | \$297,500        |
| Gain on sale of plant assets                       |          | 5,000            |
|  |          | <u>302,500</u>   |
| Less:  |          |                  |
| Cost of goods sold                                 | \$99,460 |                  |
| Operating expenses, excluding depreciation expense | 19,670   |                  |
| Depreciation expense                               | 30,500   |                  |
| Income taxes                                       | 37,270   |                  |
| Interest expense                                   | 2,940    | 189,840          |
| Net income   |          | <u>\$112,660</u> |

Additional information:

1. New plant assets costing \$146,000 were purchased for cash during the year.
2. Investments were sold at cost.
3. Plant assets costing \$36,000 were sold for \$15,000, resulting in a gain of \$5,000.
4. A cash dividend of \$48,000 was declared and paid during the year.

Cash from operations  
\$95,800

**Instructions**

Prepare a statement of cash flows using the indirect method.

**\*P17-10B** Data for Minnie Hooper Company are presented in P17-9B. Further analysis reveals that accounts payable pertain to merchandise creditors.

*Prepare a statement of cash flows—direct method.*  
(SO 6)

**Instructions**

Prepare a statement of cash flows for Minnie Hooper Company using the direct method.

Cash from operations  
\$95,800

**P17-11B** Presented on next page are the comparative balance sheets for Vernet Company at December 31.

*Prepare a statement of cash flows—indirect method.*

| Accumulated depreciation—equipment                 | (70,000)    | (42,000)    |
| Buildings  | 250,000     | 250,000     |
| Accumulated depreciation—buildings                 | (70,000)    | (50,000)    |
| Total  | \$737,140   | \$760,540   |
| <b><u>Liabilities and Stockholders' Equity</u></b> |             |             |
| Accounts payable                                   | \$ 58,000   | \$ 45,000   |
| Bonds payable                                      | 235,000     | 265,000     |
| Common stock, \$1 par                              | 280,000     | 250,000     |
| Retained earnings                                  | 164,140     | 200,540     |
| Total  | \$737,140   | \$760,540   |

Additional information:

1. Operating expenses include depreciation expense \$55,000 and charges from prepaid expenses of \$4,400.
2. Land was sold for cash at cost.
3. Cash dividends of \$84,290 were paid.
4. Net income for 2012 was \$47,890.
5. Equipment was purchased for \$80,000 cash. In addition, equipment costing \$40,000 with a book value of \$33,000 was sold for \$37,000 cash.
6. Bonds were converted at face value by issuing 30,000 shares of \$1 par value common stock.

Cash from operations  
\$71,290

**Instructions**

Prepare a statement of cash flows for 2012 using the indirect method.

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/veygandt](http://www.wiley.com/college/veygandt), and choose the Student Companion site to access Problem Set C.

## Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 16.)

**CCC17** Natalie has prepared the balance sheet and income statement of Cookie & Coffee Creations Inc. and would like you to prepare the cash flow statement.

Go to the book's companion website, [www.wiley.com/college/veygandt](http://www.wiley.com/college/veygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Financial Reporting and Analysis

### Financial Reporting Problem: PepsiCo, Inc.

**BYP17-1** Refer to the financial statements of PepsiCo's, presented in Appendix A, and answer the following questions.

- (a) What was the amount of net cash provided by operating activities for the year ended December 26, 2009? For the year ended December 27, 2008?
- (b) What was the amount of increase or decrease in cash and cash equivalents for the year ended December 26, 2009? For the year ended December 27, 2008?
- (c) Which method of computing net cash provided by operating activities does PepsiCo use?
- (d) From your analysis of the 2009 statement of cash flows, did the change in accounts and notes receivable require or provide cash? Did the change in inventories require or provide cash? Did the change in accounts payable and other current liabilities require or provide cash?
- (e) What was the net outflow or inflow of cash from investing activities for the year ended December 26, 2009?
- (f) What was the amount of interest paid in the year ended December 26, 2009? What was the amount of income taxes paid in the year ended December 26, 2009? (See Note 14.)

### Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

**BYP17-2** PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

#### Instructions

- (a) Based on the information contained in these financial statements, compute free cash flow for each company.
- (b) What conclusions concerning the management of cash can be drawn from these data?

### On the Web

**BYP17-3** Purpose: Learn about the SEC.

**Address:** [www.sec.gov/index.html](http://www.sec.gov/index.html), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

From the SEC homepage, choose **About the SEC**.

#### Instructions

Answer the following questions.

- (a) How many enforcement actions does the SEC take each year against securities law violators? What are typical infractions?
- (b) After the Depression, Congress passed the Securities Acts of 1933 and 1934 to improve investor confidence in the markets. What two "common sense" notions are these laws based on?
- (c) Who was the President of the United States at the time of the creation of the SEC? Who was the first SEC Chairperson?

**BYP17-4** Purpose: Use the Internet to view SEC filings.

**Address:** [biz.yahoo.com/f](http://biz.yahoo.com/f), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

#### Steps:

1. Type in a company name.
2. Choose **Profile**.
3. Choose **SEC Filings**. (This will take you to Yahoo-Edgar Online.)

**Instructions**

Answer the following questions.

- (a) What company did you select?
- (b) Which filing is the most recent? What is the date?
- (c) What other recent SEC filings are available for your viewing?

## Critical Thinking

### Decision Making Across the Organization

**BYP17-5** Ron Nord and Lisa Smith are examining the following statement of cash flows for Carpino Company for the year ended January 31, 2012.

**CARPINO COMPANY**  
Statement of Cash Flows  
For the Year Ended January 31, 2012

|   |           |
|---|-----------|
| Sources of cash                                 |           |
| From sales of merchandise                       | \$380,000 |
| From sale of capital stock                      | 420,000   |
| From sale of investment (purchased below)       | 80,000    |
| From depreciation                               | 55,000    |
| From issuance of note for truck                 | 20,000    |
| From interest on investments                    | 6,000     |
| Total sources of cash                           | 961,000   |
| Uses of cash                                    |           |
| For purchase of fixtures and equipment          | 330,000   |
| For merchandise purchased for resale            | 258,000   |
| For operating expenses (including depreciation) | 160,000   |
| For purchase of investment                      | 75,000    |
| For purchase of truck by issuance of note       | 20,000    |
| For purchase of treasury stock                  | 10,000    |
| For interest on note payable                    | 3,000     |
| Total uses of cash                              | 856,000   |
| Net increase in cash                            | \$105,000 |

Ron claims that Carpino's statement of cash flows is an excellent portrayal of a superb first year with cash increasing \$105,000. Lisa replies that it was not a superb first year. Rather, she says, the year was an operating failure, that the statement is presented incorrectly, and that \$105,000 is not the actual increase in cash. The cash balance at the beginning of the year was \$140,000.

**Instructions**

With the class divided into groups, answer the following.

- (a) Using the data provided, prepare a statement of cash flows in proper form using the indirect method. The only noncash items in the income statement are depreciation and the gain from the sale of the investment.
- (b) With whom do you agree, Ron or Lisa? Explain your position.

### Communication Activity

**BYP17-6** Kyle Benson, the owner-president of Computer Services Company, is unfamiliar with the statement of cash flows that you, as his accountant, prepared. He asks for further explanation.

**Instructions**

Write him a brief memo explaining the form and content of the statement of cash flows as shown in Illustration 17-13 (page 775).

## Ethics Case

**BYP17-7** Tappit Corp. is a medium-sized wholesaler of automotive parts. It has 10 stockholders who have been paid a total of \$1 million in cash dividends for 8 consecutive years. The board's policy requires that, for this dividend to be declared, net cash provided by operating activities as reported in Tappit's current year's statement of cash flows must exceed \$1 million. President and CEO Willie Morton's job is secure so long as he produces annual operating cash flows to support the usual dividend.

At the end of the current year, controller Robert Jennings presents president Willie Morton with some disappointing news: The net cash provided by operating activities is calculated by the indirect method to be only \$970,000. The president says to Robert, "We must get that amount above \$1 million. Isn't there some way to increase operating cash flow by another \$30,000?" Robert answers, "These figures were prepared by my assistant. I'll go back to my office and see what I can do." The president replies, "I know you won't let me down, Robert."

Upon close scrutiny of the statement of cash flows, Robert concludes that he can get the operating cash flows above \$1 million by reclassifying a \$60,000, 2-year note payable listed in the financing activities section as "Proceeds from bank loan—\$60,000." He will report the note instead as "Increase in payables—\$60,000" and treat it as an adjustment of net income in the operating activities section. He returns to the president, saying, "You can tell the board to declare their usual dividend. Our net cash flow provided by operating activities is \$1,030,000." "Good man, Robert! I knew I could count on you," exults the president.

### Instructions

- Who are the stakeholders in this situation?
- Was there anything unethical about the president's actions? Was there anything unethical about the controller's actions?
- Are the board members or anyone else likely to discover the misclassification?

## "All About You" Activity

**BYP17-8** In this chapter, you learned that companies prepare a statement of cash flows in order to keep track of their sources and uses of cash and to help them plan for their future cash needs. Planning for your own short- and long-term cash needs is every bit as important as it is for a company.

### Instructions

Read the article ("Financial Uh-Oh? No Problem") provided at [www.fool.com/personal-finance/saving/index.aspx](http://www.fool.com/personal-finance/saving/index.aspx), and answer the following questions.

- Describe the three factors that determine how much money you should set aside for short-term needs.
- How many months of living expenses does the article suggest to set aside?
- Estimate how much you should set aside based upon your current situation. Are you closer to Cliff's scenario or to Prudence's?

## FASB Codification Activity

**BYP17-9** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Use the Master Glossary to determine the proper definitions.

- What are cash equivalents?
- What are financing activities?
- What are investing activities?
- What are operating activities?
- What is the primary objective for the statement of cash flow? Is working capital the basis for meeting this objective?
- Do companies need to disclose information about investing and financing activities that do not affect cash receipts or cash payments? If so, how should such information be disclosed?

### Answers to Insight and Accounting Across the Organization Questions

**p. 765 Net What?** **Q:** In general, why do differences exist between net income and net cash provided by operating activities? **A:** The differences are explained by differences in the timing of the reporting of

revenues and expenses under accrual accounting versus cash. Under accrual accounting, companies report revenues when earned, even if cash hasn't been received, and they report expenses when incurred, even if cash hasn't been paid.

**p. 773 Cash Flow Isn't Always What It Seems** **Q:** For what reasons might managers at WorldCom and at Dynegy take the actions noted above? **A:** Analysts increasingly use cash flow-based measures of income, such as cash flow provided by operations, in addition to net income. More investors now focus on cash flow from operations, and some compensation contracts now have bonuses tied to cash flow numbers. Thus, some managers have taken actions that artificially increase cash flow from operations.

## IFRS A Look at IFRS

As in GAAP, the statement of cash flows is a required statement for IFRS. In addition, the content and presentation of an IFRS statement of cash flows is similar to the one used for GAAP. However, the disclosure requirements related to the statement of cash flows are more extensive under GAAP. *IAS 7* ("Cash Flow Statements") provides the overall IFRS requirements for cash flow information.

### Key Points

- Companies preparing financial statements under IFRS must prepare a statement of cash flows as an integral part of the financial statements.
- Both IFRS and GAAP require that the statement of cash flows should have three major sections—operating, investing, and financing—along with changes in cash and cash equivalents.
- Similar to GAAP, the cash flow statement can be prepared using either the indirect or direct method under IFRS. In both U.S. and international settings, companies choose for the most part to use the indirect method for reporting net cash flows from operating activities.
- The definition of cash equivalents used in IFRS is similar to that used in GAAP. A major difference is that in certain situations, bank overdrafts are considered part of cash and cash equivalents under IFRS (which is not the case in GAAP). Under GAAP, bank overdrafts are classified as financing activities in the statement of cash flows and are reported as liabilities on the balance sheet.
- IFRS requires that noncash investing and financing activities be excluded from the statement of cash flows. Instead, these noncash activities should be reported elsewhere. This requirement is interpreted to mean that noncash investing and financing activities should be disclosed in the notes to the financial statements instead of in the financial statements. Under GAAP, companies may present this information on the face of the cash flow statement.
- One area where there can be substantial differences between IFRS and GAAP relates to the classification of interest, dividends, and taxes. The following table indicates the differences between the two approaches.

| Item               | IFRS  | GAAP      |
|--------------------|---|-----------|
| Interest paid      | Operating or financing  | Operating |
| Interest received  | Operating or investing  | Operating |
| Dividends paid     | Operating or financing  | Financing |
| Dividends received | Operating or investing  | Operating |
| Taxes paid         | Operating—unless specific identification with financing or investing activity | Operating |

- Under IFRS, some companies present the operating section in a single line item, with a full reconciliation provided in the notes to the financial statements. This presentation is not seen under GAAP.
- Similar to GAAP, under IFRS companies must disclose the amount of taxes and interest paid. Under GAAP, companies disclose this in the notes to the financial statements. Under IFRS, some companies disclose this information in the notes, but others provide individual line items on the face of the statement. In order to provide this information on the face of the statement, companies first add back the amount of interest expense and tax expense (similar to adding back depreciation expense) and then further down the statement they subtract the cash amount paid for interest and taxes. This treatment can be seen in the statement of cash flows provided for *Zetar* in Appendix C.

## Looking to the Future

Presently, the FASB and the IASB are involved in a joint project on the presentation and organization of information in the financial statements. One interesting approach, revealed in a published proposal from that project, is that in the future the income statement and balance sheet would adopt headings similar to those of the statement of cash flows. That is, the income statement and balance sheet would be broken into operating, investing, and financing sections.

With respect to the cash flow statement specifically, the notion of *cash equivalents* will probably not be retained. That is, cash equivalents will not be combined with cash but instead will be reported as a form of highly liquid, low-risk investment. The definition of cash in the existing literature would be retained, and the statement of cash flows would present information on changes in cash only. In addition, the FASB favors presentation of operating cash flows using the direct method only. However, the majority of IASB members express a preference for not requiring use of the direct method of reporting operating cash flows. The two Boards will have to resolve their differences in this area in order to issue a converged standard for the statement of cash flows.

## IFRS Self-Test Questions

1. Under IFRS, interest paid can be reported as:
  - (a) only a financing element.
  - (b) a financing element or an investing element.
  - (c) a financing element or an operating element.
  - (d) only an operating element.
2. IFRS requires that noncash items:
  - (a) be reported in the section to which they relate, that is, a noncash investing activity would be reported in the investing section.
  - (b) be disclosed in the notes to the financial statements.
  - (c) do not need to be reported.
  - (d) be treated in a fashion similar to cash equivalents.
3. In the future, it appears likely that:
  - (a) the income statement and balance sheet will have headings of operating, investing, and financing, much like the statement of cash flows.
  - (b) cash and cash equivalents will be combined in a single line item.
  - (c) the IASB will not allow companies to use the direct approach to the statement of cash flows.
  - (d) None of the above.

4. Under IFRS:
  - (a) taxes are always treated as an operating item.
  - (b) the income statement uses the headings operating, investing, and financing.
  - (c) dividends received can be either an operating or investing item.
  - (d) dividends paid can be either an operating or investing item.
5. Which of the following is *correct*?
  - (a) Under IFRS, the statement of cash flows is optional.
  - (b) IFRS requires use of the direct approach in preparing the statement of cash flows.
  - (c) The majority of companies following GAAP and the majority following IFRS employ the indirect approach to the statement of cash flows.
  - (d) Cash and cash equivalents are reported as separate line items under IFRS.

## IFRS Concepts and Application

**IFRS 17-1** Discuss the differences that exist in the treatment of bank overdrafts under GAAP and IFRS.

**IFRS 17-2** Describe the treatment of each of the following items under IFRS versus GAAP.

- (a) Interest paid.
- (b) Interest received.
- (c) Dividends paid.
- (d) Dividends received.

**IFRS 17-3** Explain how the treatment of cash equivalents will probably change in the future.

### **International Financial Reporting**

#### **Problem: Zetar plc**

**IFRS 17-4** The financial statements of **Zetar plc** are presented in Appendix C. The company's complete annual report, including the notes to its financial statements, is available at [www.zetarplc.com](http://www.zetarplc.com).

#### **Instructions**

Use the company's annual report to answer the following questions.

- (a) In which section (operating, investing, or financing) does Zetar report interest paid?
- (b) Explain why the amount that Zetar reports for cash and cash equivalents in its statement of cash flows is negative.
- (c) If Zetar reported under GAAP rather than IFRS, how would its treatment of bank overdrafts differ?
- (d) Zetar's statement of cash flows reports negative "net movement in working capital" in 2009 of £2,469 (in thousands). According to the statement of cash flows, what were the components of this "net movement"?

#### **Answers to IFRS Self-Test Questions**

# CHAPTER 18

## Financial Statement Analysis

### Study Objectives

After studying this chapter, you should be able to:

- 1 Discuss the need for comparative analysis.
- 2 Identify the tools of financial statement analysis.
- 3 Explain and apply horizontal analysis.
- 4 Describe and apply vertical analysis.
- 5 Identify and compute ratios used in analyzing a firm's liquidity, profitability, and solvency.
- 6 Understand the concept of earning power, and how irregular items are presented.
- 7 Understand the concept of quality of earnings.

### Feature Story

#### IT PAYS TO BE PATIENT

A recent issue of *Forbes* magazine listed Warren Buffett as the richest person in the world. His estimated wealth was \$62 billion, give or take a few million. How much is \$62 billion? If you invested \$62 billion in an investment earning just 4%, you could spend \$6.8 million per day—every day—forever. How did Mr. Buffett amass this wealth? Through careful investing.

However, if you think you might want to follow Mr. Buffett's example and transform your humble nest-egg into a mountain of cash, be warned: His techniques have been widely circulated and emulated, but never practiced with the same degree of success.

Mr. Buffett epitomizes a "value investor." To this day, he applies the same basic techniques he learned in the 1950s from the great value investor Benjamin Graham. That means he spends his time looking for companies that have good long-term potential

but are currently underpriced. He invests in companies that have low exposure to debt and that reinvest their earnings for future growth. He does not get caught up in fads or the latest trend.

Instead, he looks for companies in industries with sound economics and ones that have high returns on stockholders' equity. He looks for steady earnings trends and high margins.

Mr. Buffett sat out on the dot-com mania in the 1990s. When other investors put lots of money into fledgling high-tech firms, Mr. Buffett did not bite because he did not find dot-com companies that met his criteria. He didn't get to enjoy the stock price boom on the way up, but on the other hand, he didn't have to ride the price back down to Earth. Instead, when the dot-com bubble burst, and nearly everyone else was suffering from investment shock, he swooped in and scooped up deals on companies that he had been following for years.

So, how does Mr. Buffett spend his money? Basically, he doesn't! He still lives in the same house that he purchased in Omaha, Nebraska, in 1958 for \$31,500. He still drives his own car (a Cadillac DTS). And in case you were thinking that his kids are riding the road to Easy Street, think again. Mr. Buffett has committed to giving virtually all of his money to charity before he dies.

So, given that neither you nor anyone else will be inheriting Mr. Buffett's riches, you should probably start honing your financial analysis skills. A good way for you to begin your career as a successful investor is to master the fundamentals of financial analysis discussed in this chapter.

## Inside **CHAPTER 18**

- *Anatomy of a Fraud* (p. 834)
- *Investor Insight: How to Manage the Current Ratio* (p. 836)
- *Investor Insight: What Does "Non-Recurring" Really Mean?* (p. 848)

## Preview of CHAPTER 18

We can learn an important lesson from Warren Buffett. The lesson: Study companies carefully if you wish to invest. Do not get caught up in fads but instead find companies that are financially healthy. Using some of the basic decision tools presented in this book, you can perform a rudimentary analysis on any U.S. company and draw basic conclusions about its financial health. Although it would not be wise for you to bet your life savings on a company's stock relying solely on your current level of knowledge, we strongly encourage you to practice your new skills wherever possible. Only with practice will you improve your ability to interpret financial numbers.

Before unleashing you on the world of high finance, we will present a few more important concepts and techniques, as well as provide you with one more comprehensive review of corporate financial statements. We use all of the decision tools presented in this text to analyze a single company—**J.C. Penney Company**, one of the country's oldest and largest retail store chains.

The content and organization of Chapter 18 are as follows.

| Financial Statement Analysis   |  |   |   |  |
|--|--|---|---|--|

## Basics of Financial Statement Analysis

Analyzing financial statements involves evaluating three characteristics: a company's liquidity, profitability, and solvency. A **short-term creditor**, such as a bank, is primarily interested in liquidity—the ability of the borrower to pay obligations when they come due. The liquidity of the borrower is extremely important in evaluating the safety of a loan. A **long-term creditor**, such as a bondholder, looks to profitability and solvency measures that indicate the company's ability to survive over a long period of time. Long-term creditors consider such measures as the amount of debt in the company's capital structure and its ability to meet interest payments. Similarly, **stockholders** look at the profitability and solvency of the company. They want to assess the likelihood of dividends and the growth potential of the stock.

### *Need for Comparative Analysis*

Every item reported in a financial statement has significance. When **J.C. Penney Company, Inc.** reports cash and cash equivalents of \$3 billion on its balance sheet, we know the company had that amount of cash on the balance sheet date. But, we do not know whether the amount represents an increase over prior years, or whether it is adequate in relation to the company's need for cash. To obtain

**Study Objective [1]**  
Discuss the need for comparative analysis.

such information, we need to compare the amount of cash with other financial statement data.

Comparisons can be made on a number of different bases. Three are illustrated in this chapter.

- 1. Intracompany basis.** Comparisons within a company are often useful to detect changes in financial relationships and significant trends. For example, a comparison of **J.C. Penney's** current year's cash amount with the prior year's cash amount shows either an increase or a decrease. Likewise, a comparison of J.C. Penney's year-end cash amount with the amount of its total assets at year-end shows the proportion of total assets in the form of cash.
- 2. Industry averages.** Comparisons with industry averages provide information about a company's relative position within the industry. For example, financial statement readers can compare J.C. Penney's financial data with the averages for its industry compiled by financial rating organizations such as **Dun & Bradstreet**, **Moody's**, and **Standard & Poor's**, or with information provided on the Internet by organizations such as **Yahoo!** on its financial site.
- 3. Intercompany basis.** Comparisons with other companies provide insight into a company's competitive position. For example, investors can compare J.C. Penney's total sales for the year with the total sales of its competitors in retail, such as **Sears**.

## Tools of Analysis

We use various tools to evaluate the significance of financial statement data. Three commonly used tools are these:

- **Horizontal analysis** evaluates a series of financial statement data over a period of time.
- **Vertical analysis** evaluates financial statement data by expressing each item in a financial statement as a percent of a base amount.
- **Ratio analysis** expresses the relationship among selected items of financial statement data.

*Horizontal analysis* is used primarily in intracompany comparisons. Two features in published financial statements facilitate this type of comparison: First, each of the basic financial statements presents comparative financial data for a minimum of two years. Second, a summary of selected financial data is presented for a series of five to ten years or more. *Vertical analysis* is used in both intra- and intercompany comparisons. *Ratio analysis* is used in all three types of comparisons. In the following sections, we explain and illustrate each of the three types of analysis.

## Horizontal Analysis

**Horizontal analysis**, also called **trend analysis**, is a technique for evaluating a series of financial statement data over a period of time. Its purpose is to determine the increase or decrease that has taken place. This change may be expressed as either an amount or a percentage. For example, Illustration 18-1 (page 828) shows the recent net sales figures of **J.C. Penney Company**.

### Study Objective [2]

Identify the tools of financial statement analysis.

### Study Objective [3]

Explain and apply horizontal analysis.

**Illustration 18-1**  
J.C. Penney Company's  
Net Sales

| J.C. Penney Company<br>Net Sales (in millions) |          |          |
|--|----------|----------|
| 2009   | 2008     | 2007     |
| \$17,556                                       | \$18,486 | \$19,860 |

If we assume that 2007 is the base year, we can measure all percentage increases or decreases from this base period amount as follows.

**Illustration 18-2**  
Formula for horizontal analysis  
of changes since base period

$$\text{Change Since Base Period} = \frac{\text{Current Year Amount} - \text{Base Year Amount}}{\text{Base Year Amount}}$$

For example, we can determine that net sales for J.C. Penney decreased from 2007 to 2008 approximately 6.9%  $[(\$18,486 - \$19,860) \div \$19,860]$ . Similarly, we can determine that net sales decreased from 2007 to 2009 approximately 11.6%  $[(\$17,556 - \$19,860) \div \$19,860]$ .

Alternatively, we can express current year sales as a percentage of the base period. We do this by dividing the current year amount by the base year amount, as shown below.

**Illustration 18-3**  
Formula for horizontal analysis  
of current year in relation to  
base year

$$\text{Current Results in Relation to Base Period} = \frac{\text{Current Year Amount}}{\text{Base Year Amount}}$$

Illustration 18-4 presents this analysis for J.C. Penney for a three-year period using 2007 as the base period.

**Illustration 18-4**  
Horizontal analysis of  
J.C. Penney Company's  
net sales in relation to base  
period

| J.C. Penney Company<br>Net Sales (in millions)<br>in relation to base period 2007 |                   |                  |
|---|-------------------|------------------|
| 2009  | 2008              | 2007             |
| \$17,556<br>88.4%   | \$18,486<br>93.1% | \$19,860<br>100% |

## Balance Sheet

To further illustrate horizontal analysis, we will use the financial statements of Quality Department Store Inc., a fictional retailer. Illustration 18-5 presents a horizontal analysis of its two-year condensed balance sheets, showing dollar and percentage changes.

**Quality Department Store Inc.**

| Total assets                                  | <u>\$1,835,000</u> | <u>\$1,595,000</u> | <u>\$240,000</u>                      | <u>15.0%</u> |
| <b>Liabilities</b>                            |                    |                    |                                       |              |
| Current liabilities                           | \$ 344,500         | \$ 303,000         | \$ 41,500                             | 13.7%        |
| Long-term liabilities                         | 487,500            | 497,000            | (9,500)                               | (1.9%)       |
| Total liabilities                             | <u>832,000</u>     | <u>800,000</u>     | <u>32,000</u>                         | <u>4.0%</u>  |
| <b>Stockholders' Equity</b>                   |                    |                    |                                       |              |
| Common stock, \$1 par                         | 275,400            | 270,000            | 5,400                                 | 2.0%         |
| Retained earnings                             | 727,600            | 525,000            | 202,600                               | 38.6%        |
| Total stockholders' equity                    | <u>1,003,000</u>   | <u>795,000</u>     | <u>208,000</u>                        | <u>26.2%</u> |
| Total liabilities and<br>stockholders' equity | <u>\$1,835,000</u> | <u>\$1,595,000</u> | <u>\$240,000</u>                      | <u>15.0%</u> |

The comparative balance sheets in Illustration 18-5 show that a number of significant changes have occurred in Quality Department Store's financial structure from 2008 to 2009:

- In the assets section, plant assets (net) increased \$167,500, or 26.5%.
- In the liabilities section, current liabilities increased \$41,500, or 13.7%.
- In the stockholders' equity section, retained earnings increased \$202,600, or 38.6%.

These changes suggest that the company expanded its asset base during 2009 and **financed this expansion primarily by retaining income** rather than assuming additional long-term debt.

## Income Statement

Illustration 18-6 (page 830) presents a horizontal analysis of the two-year condensed income statements of Quality Department Store Inc. for the years 2009 and 2008. Horizontal analysis of the income statements shows the following changes:

- Net sales increased \$260,000, or 14.2% ( $\$260,000 \div \$1,837,000$ ).
- Cost of goods sold increased \$141,000, or 12.4% ( $\$141,000 \div \$1,140,000$ ).
- Total operating expenses increased \$37,000, or 11.6% ( $\$37,000 \div \$320,000$ ).

Overall, gross profit and net income were up substantially. Gross profit increased 17.1%, and net income, 26.5%. Quality's profit trend appears favorable.

**Illustration 18-6**Horizontal analysis of  
income statements**Helpful Hint**

Note that though the amount column is additive (the total is \$55,300), the percentage column is not additive (26.5% is not the total). A separate percentage has been calculated for each item.

| Net income   | <u>\$ 263,800</u> | <u>\$ 208,500</u> | <u><b>\$ 55,300</b></u>                       | <u><b>26.5%</b></u> |

**Retained Earnings Statement**

Illustration 18-7 presents a horizontal analysis of Quality Department Store's comparative retained earnings statements. Analyzed horizontally, net income increased \$55,300, or 26.5%, whereas dividends on the common stock increased only \$1,200, or 2%. We saw in the horizontal analysis of the balance sheet that ending retained earnings increased 38.6%. As indicated earlier, the company retained a significant portion of net income to finance additional plant facilities.

Horizontal analysis of changes from period to period is relatively straightforward and is quite useful. But complications can occur in making the computations. If an item has no value in a base year or preceding year but does have a value in the

next year, we cannot compute a percentage change. Similarly, if a negative amount appears in the base or preceding period and a positive amount exists the following year (or vice versa), no percentage change can be computed.

## Do it!

Summary financial information for Rosepatch Company is as follows.

|                    | <u>December 31, 2012</u> | <u>December 31, 2011</u> |
|--------------------|--------------------------|--------------------------|
| Current assets     | \$234,000                | \$180,000                |
| Plant assets (net) | 756,000                  | 420,000                  |
| Total assets       | <u>\$990,000</u>         | <u>\$600,000</u>         |

Compute the amount and percentage changes in 2012 using horizontal analysis, assuming 2011 is the base year.

### Solution

|                    | <u>Increase in 2012</u> |   |
|--------------------|-------------------------|---|
|                    | <u>Amount</u>           | <u>Percent</u>                            |
| Current assets     | \$ 54,000               | 30% [(\$234,000 - \$180,000) ÷ \$180,000] |
| Plant assets (net) | 336,000                 | 80% [(\$756,000 - \$420,000) ÷ \$420,000] |
| Total assets       | <u>\$390,000</u>        | 65% [(\$990,000 - \$600,000) ÷ \$600,000] |

## Horizontal Analysis

### action plan

- ✓ Find the percentage change by dividing the amount of the increase by the 2011 amount (base year).

## Vertical Analysis

**Vertical analysis**, also called **common-size analysis**, is a technique that expresses each financial statement item as a percent of a base amount. On a balance sheet we might say that current assets are 22% of total assets—*total assets* being the base amount. Or on an income statement, we might say that selling expenses are 16% of net sales—*net sales* being the base amount.

### Balance Sheet

Illustration 18-8 (page 832) presents the vertical analysis of Quality Department Store Inc.'s comparative balance sheets. The base for the asset items is **total assets**. The base for the liability and stockholders' equity items is **total liabilities and stockholders' equity**.

Vertical analysis shows the relative size of each category in the balance sheet. It also can show the **percentage change** in the individual asset, liability, and stockholders' equity items. For example, we can see that current assets decreased from 59.2% of total assets in 2008 to 55.6% in 2009 (even though the absolute dollar amount increased \$75,000 in that time). Plant assets (net) have increased from 39.7% to 43.6% of total assets. Retained earnings have increased from 32.9% to 39.7% of total liabilities and stockholders' equity. These results reinforce the earlier observations that **Quality is choosing to finance its growth through retention of earnings rather than through issuing additional debt**.

### Income Statement

Illustration 18-9 (page 832) shows vertical analysis of Quality's income statements. Cost of goods sold as a percentage of net sales declined 1% (62.1% vs. 61.1%), and

### Study Objective [4]

Describe and apply vertical analysis.

| Income before income taxes   | 432,000           | <b>20.6%</b>         | 347,500           | <b>18.9%</b>         |
| Income tax expense   | 168,200           | <b>8.0%</b>          | 139,000           | <b>7.5%</b>          |
| Net income   | <u>\$ 263,800</u> | <u><b>12.6%</b></u>  | <u>\$ 208,500</u> | <u><b>11.4%</b></u>  |

**Helpful Hint**

The formula for calculating these income statement percentages is:

$$\frac{\text{Each item on I/S}}{\text{Net sales}} = \%$$

total operating expenses declined 0.4% (17.4% vs. 17.0%). As a result, it is not surprising to see net income as a percent of net sales increase from 11.4% to 12.6%. Quality appears to be a profitable business that is becoming even more successful.

An associated benefit of vertical analysis is that it enables you to compare companies of different sizes. For example, Quality's main competitor is a JC Penney store in a nearby town. Using vertical analysis, we can compare the condensed income statements of Quality Department Store Inc. (a small retail company) with **J.C. Penney Company, Inc.** (a giant international retailer), as shown in Illustration 18-10.

| Condensed Income Statements<br>(in thousands)           |                                  |         |                                     |         |
|---|----------------------------------|---------|-------------------------------------|---------|

| Net sales   | \$2,097                          | 100.0%  | \$17,556,000                        | 100.0%  |
| Cost of goods sold                                      | 1,281                            | 61.1%   | 10,646,000                          | 60.6%   |
| Gross profit  | 816                              | 38.9%   | 6,910,000                           | 39.4%   |
| Selling and administrative expenses                     | 357                              | 17.0%   | 6,247,000                           | 35.7%   |
| Income from operations                                  | 459                              | 21.9%   | 663,000                             | 3.7%    |
| Other expenses and revenues<br>(including income taxes) | 195                              | 9.3%    | 412,000                             | 2.3%    |
| Net income  | \$ 264                           | 12.6%   | \$ 251,000                          | 1.4%    |

**Illustration 18-10**  
Intercompany income  
statement comparison

J.C. Penney's net sales are 8,372 times greater than the net sales of relatively tiny Quality Department Store. But vertical analysis eliminates this difference in size. The percentages show that Quality's and J.C. Penney's gross profit rates were comparable at 38.9% and 39.4%. However, the percentages related to income from operations were significantly different at 21.9% and 3.7%. This disparity can be attributed to Quality's selling and administrative expense percentage (17%) which is much lower than J.C. Penney's (35.7%). Although J.C. Penney earned net income more than 951 times larger than Quality's, J.C. Penney's net income as a **percent of each sales dollar** (1.4%) is only 11% of Quality's (12.6%).

## Ratio Analysis

**Ratio analysis** expresses the relationship among selected items of financial statement data. A **ratio** expresses the mathematical relationship between one quantity and another. The relationship is expressed in terms of either a percentage, a rate, or a simple proportion. To illustrate, in 2010 **Nike, Inc.**, had current assets of \$10,959.2 million and current liabilities of \$3,364.2 million. We can find the relationship between these two measures by dividing current assets by current liabilities. The alternative means of expression are:

- Percentage:** Current assets are 326% of current liabilities.
- Rate:** Current assets are 3.26 times current liabilities.
- Proportion:** The relationship of current assets to liabilities is 3.26:1.

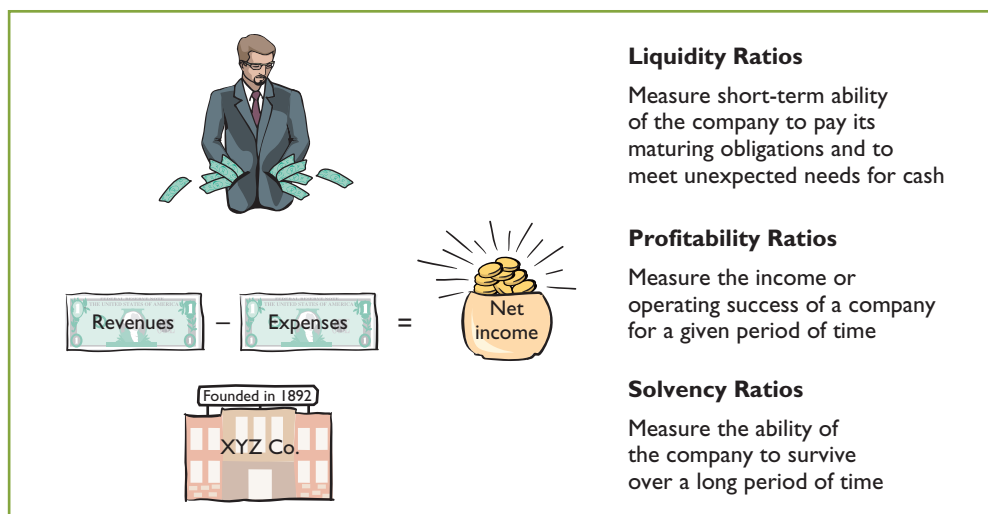

To analyze the primary financial statements, we can use ratios to evaluate liquidity, profitability, and solvency. Illustration 18-11 (page 834) describes these classifications.

<sup>1</sup>2009 Annual Report J.C. Penney Company, Inc. (Dallas, Texas).

### Study Objective [5]

Identify and compute ratios used in analyzing a firm's liquidity, profitability, and solvency.

**Illustration 18-11**  
Financial ratio classifications

Ratios can provide clues to underlying conditions that may not be apparent from individual financial statement components. However, a single ratio by itself is not very meaningful. Thus, in the discussion of ratios we will use the following types of comparisons.

1. **Intracompany comparisons** for two years for Quality Department Store.
2. **Industry average comparisons** based on median ratios for department stores.
3. **Intercompany comparisons** based on **J.C. Penney Company** as Quality Department Store's principal competitor.

#### ANATOMY OF A FRAUD

This final *Anatomy of a Fraud* box demonstrates that sometimes relationships between numbers can be used by companies to detect fraud. The numeric relationships that can reveal fraud can be such things as financial ratios that appear abnormal, or statistical abnormalities in the numbers themselves. For example, the fact that **WorldCom's** line costs, as a percentage of either total expenses or revenues, differed very significantly from its competitors should have alerted people to the possibility of fraud. Or, consider the case of a bank manager, who cooperated with a group of his friends to defraud the bank's credit card department. The manager's friends would apply for credit cards and then run up balances of slightly less than \$5,000. The bank had a policy of allowing bank personnel to write-off balances of less than \$5,000 without seeking supervisor approval. The fraud was detected by applying statistical analysis based on Benford's Law. Benford's Law states that in a random collection of numbers, the frequency of lower digits (e.g., 1, 2, or 3) should be much higher than higher digits (e.g., 7, 8, or 9). In this case, bank auditors analyzed the first two digits of amounts written off. There was a spike at 48 and 49, which was not consistent with what would be expected if the numbers were random.

Total take: Thousands of dollars

#### THE MISSING CONTROL

**Independent internal verification.** While it might be efficient to allow employees to write off accounts below a certain level, it is important that these write-offs be reviewed and verified periodically. Such a review would likely call attention to an employee with large amounts of write-offs, or in this case, write-offs that were frequently very close to the approval threshold.

Source: Mark J. Nigrini, "I've Got Your Number," *Journal of Accountancy Online* (May 1999).

## Liquidity Ratios

**Liquidity ratios** measure the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. Short-term creditors such as bankers and suppliers are particularly interested in assessing liquidity. The ratios we can use to determine the company's short-term debt-paying ability are the current ratio, the acid-test ratio, receivables turnover, and inventory turnover.

### 1. CURRENT RATIO

The **current ratio** is a widely used measure for evaluating a company's liquidity and short-term debt-paying ability. The ratio is computed by dividing current assets by current liabilities. Illustration 18-12 shows the 2009 and 2008 current ratios for Quality Department Store and comparative data.

|   |          |                               |          |
|---|----------|-------------------------------|----------|
| <b>Current Ratio</b> = $\frac{\text{Current Assets}}{\text{Current Liabilities}}$ |          |                               |          |
| Quality Department Store  |          |                               |          |
| <u>2009</u>   |          | <u>2008</u>                   |          |
| $\frac{\$1,020,000}{\$344,500}$   | = 2.96:1 | $\frac{\$945,000}{\$303,000}$ | = 3.12:1 |
| Industry average  |          | J.C. Penney Company           |          |
| <u>1.70:1</u>   |          | <u>2.05:1</u>                 |          |

### International Note

As more countries adopt international accounting standards, the ability of analysts to compare companies from different countries should improve. However, international standards are open to widely varying interpretations. In addition, some countries adopt international standards "with modifications." As a consequence, most cross-country comparisons are still not as transparent as within-country comparisons.

**Illustration 18-12**  
Current ratio

What does the ratio actually mean? The 2009 ratio of 2.96:1 means that for every dollar of current liabilities, Quality has \$2.96 of current assets. Quality's current ratio has decreased in the current year. But, compared to the industry average of 1.70:1, Quality appears to be reasonably liquid. J.C. Penney has a current ratio of 2.05:1, which indicates it has adequate current assets relative to its current liabilities.

The current ratio is sometimes referred to as the **working capital ratio**; **working capital** is current assets minus current liabilities. The current ratio is a more dependable indicator of liquidity than working capital. Two companies with the same amount of working capital may have significantly different current ratios.

The current ratio is only one measure of liquidity. It does not take into account the **composition** of the current assets. For example, a satisfactory current ratio does not disclose the fact that a portion of the current assets may be tied up in slow-moving inventory. A dollar of cash would be more readily available to pay the bills than a dollar of slow-moving inventory.

### 2. ACID-TEST RATIO

The **acid-test (quick) ratio** is a measure of a company's immediate short-term liquidity. We compute this ratio by dividing the sum of cash, short-term investments, and net receivables by current liabilities. Thus, it is an important complement to the current ratio. For example, assume that the current assets of Quality Department Store for 2009 and 2008 consist of the items shown in Illustration 18-13 (page 836).

### Helpful Hint

Can any company operate successfully without working capital? Yes, if it has very predictable cash flows and solid earnings. A number of companies (e.g., **Whirlpool**, **American Standard**, and **Campbell's Soup**) are pursuing this goal. The rationale: Less money tied up in working capital means more money to invest in the business.

**Illustration 18-13**

Current assets of Quality Department Store

| Quality Department Store Inc.<br>Balance Sheet (partial) |                    |                  |
|--|--------------------|------------------|
|  | 2009               | 2008             |
| Current assets   |                    |                  |
| <b>Cash</b>  | <b>\$ 100,000</b>  | <b>\$155,000</b> |
| <b>Short-term investments</b>                            | <b>20,000</b>      | <b>70,000</b>    |
| <b>Receivables (net*)</b>                                | <b>230,000</b>     | <b>180,000</b>   |
| Inventory  | 620,000            | 500,000          |
| Prepaid expenses   | 50,000             | 40,000           |
| Total current assets                                     | <u>\$1,020,000</u> | <u>\$945,000</u> |

\*Allowance for doubtful accounts is \$10,000 at the end of each year.

Cash, short-term investments, and receivables (net) are highly liquid compared to inventory and prepaid expenses. The inventory may not be readily saleable, and the prepaid expenses may not be transferable to others. Thus, the acid-test ratio measures **immediate** liquidity. The 2009 and 2008 acid-test ratios for Quality Department Store and comparative data are as follows.

**Illustration 18-14**

Acid-test ratio

| Acid-Test Ratio = $\frac{\text{Cash} + \text{Short-Term Investments} + \text{Receivables (Net)}}{\text{Current Liabilities}}$ |   |  |  |
|---|---|--|--|
| Quality Department Store  |   |  |  |
| <b>2009</b>   | <b>2008</b>   |  |  |
| $\frac{\$100,000 + \$20,000 + \$230,000}{\$344,500} = 1.02:1$   | $\frac{\$155,000 + \$70,000 + \$180,000}{\$303,000} = 1.34:1$ |  |  |
| Industry average<br><b>0.70:1</b>   | J.C. Penney Company<br><b>1.05:1</b>                          |  |  |

The ratio has declined in 2009. Is an acid-test ratio of 1.02:1 adequate? This depends on the industry and the economy. When compared with the industry average of 0.70:1 and J.C. Penney's of 1.05:1, Quality's acid-test ratio seems adequate.

**INVESTOR INSIGHT****How to Manage the Current Ratio**

The apparent simplicity of the current ratio can have real-world limitations because adding equal amounts to both the numerator and the denominator causes the ratio to decrease.

Assume, for example, that a company has \$2,000,000 of current assets and \$1,000,000 of current liabilities; its current ratio is 2:1. If it purchases \$1,000,000 of inventory on account, it will have \$3,000,000 of current assets and \$2,000,000 of current liabilities; its current ratio decreases to 1.5:1. If, instead, the company pays off \$500,000 of its current liabilities, it will have \$1,500,000 of current assets and \$500,000 of current liabilities; its current ratio increases to 3:1. Thus, any trend analysis should be done with care because the ratio is susceptible to quick changes and is easily influenced by management.

How might management influence a company's current ratio? (See page 873.)

### 3. RECEIVABLES TURNOVER

We can measure liquidity by how quickly a company can convert certain assets to cash. How liquid, for example, are the receivables? The ratio used to assess the liquidity of the receivables is **receivables turnover**. It measures the number of times, on average, the company collects receivables during the period. We compute receivables turnover by dividing net credit sales (net sales less cash sales) by the average net receivables. Unless seasonal factors are significant, average net receivables can be computed from the beginning and ending balances of the net receivables.<sup>2</sup>

Assume that all sales are credit sales. The balance of net receivables at the beginning of 2008 is \$200,000. Illustration 18-15 shows the receivables turnover for Quality Department Store and comparative data. Quality's receivables turnover improved in 2009. The turnover of 10.2 times is substantially lower than J.C. Penney's 37.2 times, and is also lower than the department store industry's average of 46.4 times.

| <b>Receivables Turnover</b>         |  | <b>=</b>     |  | <b>Net Credit Sales</b>             |  | <b>Average Net Receivables</b> |  |
|-------------------------------------|--|--------------|--|-------------------------------------|--|--------------------------------|--|
| Quality Department Store            |  |              |  |                                     |  |                                |  |
| <b>2009</b>                         |  |              |  | <b>2008</b>                         |  |                                |  |
| \$2,097,000                         |  |              |  | \$1,837,000                         |  |                                |  |
| $\frac{[\$180,000 + \$230,000]}{2}$ |  | = 10.2 times |  | $\frac{[\$200,000 + \$180,000]}{2}$ |  | = 9.7 times                    |  |
| Industry average                    |  |              |  | J.C. Penney Company                 |  |                                |  |
| <b>46.4 times</b>                   |  |              |  | <b>37.2 times</b>                   |  |                                |  |

**Illustration 18-15**  
Receivables turnover

**Average Collection Period.** A popular variant of the receivables turnover ratio is to convert it to an **average collection period** in terms of days. To do so, we divide the receivables turnover ratio into 365 days. For example, the receivables turnover of 10.2 times divided into 365 days gives an average collection period of approximately 36 days. This means that receivables are collected on average every 36 days, or about every 5 weeks. Analysts frequently use the average collection period to assess the effectiveness of a company's credit and collection policies. The general rule is that the collection period should not greatly exceed the credit term period (the time allowed for payment).

### 4. INVENTORY TURNOVER

**Inventory turnover** measures the number of times, on average, the inventory is sold during the period. Its purpose is to measure the liquidity of the inventory. We compute the inventory turnover by dividing cost of goods sold by the average inventory. Unless seasonal factors are significant, we can use the beginning and ending inventory balances to compute average inventory.

Assuming that the inventory balance for Quality Department Store at the beginning of 2008 was \$450,000, its inventory turnover and comparative data are as shown in Illustration 18-16 (page 838). Quality's inventory turnover declined slightly in

<sup>2</sup>If seasonal factors are significant, the average receivables balance might be determined by using monthly amounts.

2009. The turnover of 2.3 times is low compared with the industry average of 4.3 and J.C. Penney's 3.1. Generally, the faster the inventory turnover, the less cash a company has tied up in inventory and the less the chance of inventory obsolescence.

**Illustration 18-16**  
Inventory turnover

| <b>Inventory Turnover</b> = $\frac{\text{Cost of Goods Sold}}{\text{Average Inventory}}$ |  |
|--|--|
| Quality Department Store   |  |
| <u>2009</u>  | <u>2008</u>  |
| $\frac{\$1,281,000}{\left[ \frac{\$500,000 + \$620,000}{2} \right]} = 2.3 \text{ times}$ | $\frac{\$1,140,000}{\left[ \frac{\$450,000 + \$500,000}{2} \right]} = 2.4 \text{ times}$ |
| <u>Industry average</u>  | <u>J.C. Penney Company</u>   |
| <b>4.3 times</b>   | <b>3.1 times</b>   |

**Days in Inventory.** A variant of inventory turnover is the **days in inventory**. We calculate it by dividing the inventory turnover into 365. For example, Quality's 2009 inventory turnover of 2.3 times divided into 365 is approximately 159 days. An average selling time of 159 days is also high compared with the industry average of 84.9 days ( $365 \div 4.3$ ) and J.C. Penney's 117.7 days ( $365 \div 3.1$ ).

Inventory turnover ratios vary considerably among industries. For example, grocery store chains have a turnover of 17.1 times and an average selling period of 21 days. In contrast, jewelry stores have an average turnover of 0.80 times and an average selling period of 456 days.

## Profitability Ratios

**Profitability ratios** measure the income or operating success of a company for a given period of time. Income, or the lack of it, affects the company's ability to obtain debt and equity financing. It also affects the company's liquidity position and the company's ability to grow. As a consequence, both creditors and investors are interested in evaluating earning power—profitability. Analysts frequently use profitability as the ultimate test of management's operating effectiveness.

### 5. PROFIT MARGIN

**Profit margin** is a measure of the percentage of each dollar of sales that results in net income. We can compute it by dividing net income by net sales. Illustration 18-17 shows Quality Department Store's profit margin and comparative data.

#### Alternative Terminology

Profit margin is also called the *rate of return on sales*.

**Illustration 18-17**  
Profit margin

| <b>Profit Margin</b> = $\frac{\text{Net Income}}{\text{Net Sales}}$ |  |
|---|--|
| Quality Department Store  |  |
| <u>2009</u>   | <u>2008</u>                              |
| $\frac{\$263,800}{\$2,097,000} = 12.6\%$                            | $\frac{\$208,500}{\$1,837,000} = 11.4\%$ |
| <u>Industry average</u>   | <u>J.C. Penney Company</u>               |
| <b>8.0%</b>   | <b>1.4%</b>                              |

Quality experienced an increase in its profit margin from 2008 to 2009. Its profit margin is unusually high in comparison with the industry average of 8% and J.C. Penney's 1.4%.

High-volume (high inventory turnover) businesses, such as grocery stores (**Safeway** or **Kroger**) and discount stores (**Kmart** or **Wal-Mart**), generally experience low profit margins. In contrast, low-volume businesses, such as jewelry stores (**Tiffany & Co.**) or airplane manufacturers (**Boeing Co.**), have high profit margins.

## 6. ASSET TURNOVER

**Asset turnover** measures how efficiently a company uses its assets to generate sales. It is determined by dividing net sales by average assets. The resulting number shows the dollars of sales produced by each dollar invested in assets. Unless seasonal factors are significant, we can use the beginning and ending balance of total assets to determine average total assets. Assuming that total assets at the beginning of 2008 were \$1,446,000, the 2009 and 2008 asset turnover for Quality Department Store and comparative data are shown in Illustration 18-18.

| <b>Asset Turnover</b> = $\frac{\text{Net Sales}}{\text{Average Assets}}$   |   |
|--|---|
| Quality Department Store   |   |
| <p><b>2009</b></p> $\frac{\$2,097,000}{\left[ \frac{\$1,595,000 + \$1,835,000}{2} \right]} = 1.22 \text{ times}$ <p style="text-align: center;">Industry average<br/><b>1.40 times</b></p> | <p><b>2008</b></p> $\frac{\$1,837,000}{\left[ \frac{\$1,446,000 + \$1,595,000}{2} \right]} = 1.21 \text{ times}$ <p style="text-align: center;">J.C. Penney Company<br/><b>1.40 times</b></p> |

**Illustration 18-18**  
Asset turnover

Asset turnover shows that in 2009 Quality generated sales of \$1.22 for each dollar it had invested in assets. The ratio changed very little from 2008 to 2009. Quality's asset turnover is below both the industry average of 1.40 times and J.C. Penney's ratio of 1.40 times.

Asset turnover ratios vary considerably among industries. For example, a large utility company like **Consolidated Edison** (New York) has a ratio of 0.40 times, and the large grocery chain **Kroger Stores** has a ratio of 3.4 times.

## 7. RETURN ON ASSETS

An overall measure of profitability is **return on assets**. We compute this ratio by dividing net income by average assets. The 2009 and 2008 return on assets for Quality Department Store and comparative data are shown below.

| <b>Return on Assets</b> = $\frac{\text{Net Income}}{\text{Average Assets}}$  |   |
|--|---|
| Quality Department Store   |   |
| <p><b>2009</b></p> $\frac{\$263,800}{\left[ \frac{\$1,595,000 + \$1,835,000}{2} \right]} = 15.4\%$ <p style="text-align: center;">Industry average<br/><b>8.9%</b></p> | <p><b>2008</b></p> $\frac{\$208,500}{\left[ \frac{\$1,446,000 + \$1,595,000}{2} \right]} = 13.7\%$ <p style="text-align: center;">J.C. Penney Company<br/><b>2.4%</b></p> |

**Illustration 18-19**  
Return on assets

Quality's return on assets improved from 2008 to 2009. Its return of 15.4% is very high compared with the department store industry average of 8.9% and J.C. Penney's 2.4%.

### 8. RETURN ON COMMON STOCKHOLDERS' EQUITY

Another widely used profitability ratio is **return on common stockholders' equity**. It measures profitability from the common stockholders' viewpoint. This ratio shows how many dollars of net income the company earned for each dollar invested by the owners. We compute it by dividing net income by average common stockholders' equity. Assuming that common stockholders' equity at the beginning of 2008 was \$667,000, Illustration 18-20 shows the 2009 and 2008 ratios for Quality Department Store and comparative data.

**Illustration 18-20**  
Return on common stockholders' equity

| <b>Return on Common Stockholders' Equity</b>       |       | = | <b>Net Income</b>                                |       | Average Common Stockholders' Equity |  |
|--|-------|---|--|-------|-------------------------------------|--|
| Quality Department Store                           |       |   |  |       |                                     |  |
| <b>2009</b>  |       |   | <b>2008</b>                                      |       |                                     |  |
| \$263,800  |       |   | \$208,500  |       |                                     |  |
| $\left[ \frac{\$795,000 + \$1,003,000}{2} \right]$ |       | = | $\left[ \frac{\$667,000 + \$795,000}{2} \right]$ |       | =                                   |  |
|  | 29.3% |   |  | 28.5% |                                     |  |
| Industry average                                   |       |   | J.C. Penney Company                              |       |                                     |  |
| <b>18.3%</b>                                       |       |   | <b>6.4%</b>                                      |       |                                     |  |

Quality's rate of return on common stockholders' equity is high at 29.3%, considering an industry average of 18.3% and a rate of 6.4% for J.C. Penney.

**With Preferred Stock.** When a company has preferred stock, we must deduct **preferred dividend** requirements from net income to compute income available to common stockholders. Similarly, we deduct the par value of preferred stock (or call price, if applicable) from total stockholders' equity to determine the amount of common stockholders' equity used in this ratio. The ratio then appears as follows.

**Illustration 18-21**  
Return on common stockholders' equity with preferred stock

|  |   |   |  |                                     |
|--|---|---|--|-------------------------------------|
| <b>Return on Common Stockholders' Equity</b> | = | <b>Net Income – Preferred Dividends</b> |  | Average Common Stockholders' Equity |
|--|---|---|--|-------------------------------------|

Note that Quality's rate of return on stockholders' equity (29.3%) is substantially higher than its rate of return on assets (15.4%). The reason is that Quality has made effective use of **leverage**. **Leveraging** or **trading on the equity** at a gain means that the company has borrowed money at a lower rate of interest than it is able to earn by using the borrowed money. Leverage enables Quality Department Store to use money supplied by nonowners to increase the return to the owners. A comparison of the rate of return on total assets with the rate of interest paid for borrowed money indicates the profitability of trading on the equity. Quality Department Store earns more on its borrowed funds than it has to pay in the form of interest. Thus, the return to stockholders exceeds the return on the assets, due to benefits from the positive leveraging.

## 9. EARNINGS PER SHARE (EPS)

**Earnings per share (EPS)** is a measure of the net income earned on each share of common stock. It is computed by dividing net income by the number of weighted-average common shares outstanding during the year. A measure of net income earned on a per share basis provides a useful perspective for determining profitability. Assuming that there is no change in the number of outstanding shares during 2008 and that the 2009 increase occurred midyear, Illustration 18-22 shows the net income per share for Quality Department Store for 2009 and 2008.

| <b>Earnings per Share</b>     |  | = | <b>Net Income</b> |  | /                         |  | <b>Weighted-Average Common Shares Outstanding</b> |        |
|-------------------------------|--|---|-------------------|--|---------------------------|--|---|--------|
| Quality Department Store      |  |   |                   |  |                           |  |   |        |
| <u>2009</u>                   |  |   |                   |  | <u>2008</u>               |  |   |        |
| \$263,800                     |  |   |                   |  | \$208,500                 |  |   |        |
| $\frac{270,000 + 275,400}{2}$ |  | = | \$0.97            |  | $\frac{270,000}{270,000}$ |  | =   | \$0.77 |

**Illustration 18-22**  
Earnings per share

Note that no industry or J.C. Penney data are presented. Such comparisons are not meaningful because of the wide variations in the number of shares of outstanding stock among companies. The only meaningful EPS comparison is an intracompany trend comparison: Quality's earnings per share increased 20 cents per share in 2009. This represents a 26% increase over the 2008 earnings per share of 77 cents.

The terms "earnings per share" and "net income per share" refer to the amount of net income applicable to each share of **common stock**. Therefore, in computing EPS, if there are preferred dividends declared for the period, we must deduct them from net income to determine income available to the common stockholders.

## 10. PRICE-EARNINGS RATIO

The **price-earnings (P-E) ratio** is an oft-quoted measure of the ratio of the market price of each share of common stock to the earnings per share. The price-earnings (P-E) ratio reflects investors' assessments of a company's future earnings. We compute it by dividing the market price per share of the stock by earnings per share. Assuming that the market price of Quality Department Store Inc. stock is \$8 in 2008 and \$12 in 2009, the price-earnings ratio computation is as follows.

| <b>Price-Earnings Ratio</b>                   |  | = | <b>Market Price per Share of Stock</b> |  | /  |  | <b>Earnings per Share</b> |  |
|---|--|---|--|--|--|--|---------------------------|--|
| Quality Department Store                      |  |   |  |  |  |  |                           |  |
| <u>2009</u>                                   |  |   |  |  | <u>2008</u>                                  |  |                           |  |
| \$12.00                                       |  |   |  |  | \$8.00                                       |  |                           |  |
| $\frac{\$12.00}{\$0.97} = 12.4 \text{ times}$ |  |   |  |  | $\frac{\$8.00}{\$0.77} = 10.4 \text{ times}$ |  |                           |  |
| Industry average                              |  |   |  |  | J.C. Penney Company                          |  |                           |  |
| <b>21.3 times</b>                             |  |   |  |  | <b>17.2 times</b>                            |  |                           |  |

**Illustration 18-23**  
Price-earnings ratio

In 2009, each share of Quality's stock sold for 12.4 times the amount that the company earned on each share. Quality's price-earnings ratio is lower than the industry average of 21.3 times, and also lower than the ratio of 17.2 times for J.C. Penney. The

average price-earnings ratio for the stocks that constitute the Standard and Poor's 500 Index (500 largest U.S. firms) in early 2009 was approximately 19.1 times.

### 11. PAYOUT RATIO

The **payout ratio** measures the percentage of earnings distributed in the form of cash dividends. We compute it by dividing cash dividends by net income. Companies that have high growth rates generally have low payout ratios because they reinvest most of their net income into the business. The 2009 and 2008 payout ratios for Quality Department Store are computed as shown in Illustration 18-24.

**Illustration 18-24**  
Payout ratio

| <b>Payout Ratio = <math>\frac{\text{Cash Dividends}}{\text{Net Income}}</math></b> |                                       |                            |                                       |
|--|---------------------------------------|----------------------------|---------------------------------------|
| Quality Department Store   |                                       |                            |                                       |
|  | <u>2009</u>                           |                            | <u>2008</u>                           |
|  | $\frac{\$61,200}{\$263,800} = 23.2\%$ |                            | $\frac{\$60,000}{\$208,500} = 28.8\%$ |
| <u>Industry average</u>  | <b>16.1%</b>                          | <u>J.C. Penney Company</u> | <b>63.0%</b>                          |

Quality's payout ratio is higher than the industry average payout ratio of 16.1%. J.C. Penney's ratio is very high because its net income in 2009 was quite low.

## Solvency Ratios

**Solvency ratios** measure the ability of a company to survive over a long period of time. Long-term creditors and stockholders are particularly interested in a company's ability to pay interest as it comes due and to repay the face value of debt at maturity. Debt to total assets and times interest earned are two ratios that provide information about debt-paying ability.

### 12. DEBT TO TOTAL ASSETS RATIO

The **debt to total assets ratio** measures the percentage of the total assets that creditors provide. We compute it by dividing total debt (both current and long-term liabilities) by total assets. This ratio indicates the company's degree of leverage. It also provides some indication of the company's ability to withstand losses without impairing the interests of creditors. The higher the percentage of debt to total assets, the greater the risk that the company may be unable to meet its maturing obligations. The 2009 and 2008 ratios for Quality Department Store and comparative data are as follows.

**Illustration 18-25**  
Debt to total assets ratio

| <b>Debt to Total Assets Ratio = <math>\frac{\text{Total Debt}}{\text{Total Assets}}</math></b> |  |                            |  |
|--|--|----------------------------|--|
| Quality Department Store   |  |                            |  |
|  | <u>2009</u>                              |                            | <u>2008</u>                              |
|  | $\frac{\$832,000}{\$1,835,000} = 45.3\%$ |                            | $\frac{\$800,000}{\$1,595,000} = 50.2\%$ |
| <u>Industry average</u>  | <b>34.2%</b>                             | <u>J.C. Penney Company</u> | <b>62.0%</b>                             |

A ratio of 45.3% means that creditors have provided 45.3% of Quality Department Store's total assets. Quality's 45.3% is above the industry average of 34.2%. It

is considerably below the high 62.0% ratio of J.C. Penney. The lower the ratio, the more equity “buffer” there is available to the creditors. Thus, from the creditors’ point of view, a low ratio of debt to total assets is usually desirable.

The adequacy of this ratio is often judged in the light of the company’s earnings. Generally, companies with relatively stable earnings (such as public utilities) have higher debt to total assets ratios than cyclical companies with widely fluctuating earnings (such as many high-tech companies).

### 13. TIMES INTEREST EARNED

**Times interest earned** provides an indication of the company’s ability to meet interest payments as they come due. We compute it by dividing income before interest expense and income taxes by interest expense. Illustration 18-26 shows the 2009 and 2008 ratios for Quality Department Store and comparative data. Note that times interest earned uses income before income taxes and interest expense. This represents the amount available to cover interest. For Quality Department Store, the 2009 amount of \$468,000 is computed by taking the income before income taxes of \$432,000 and adding back the \$36,000 of interest expense.

| <b>Times Interest Earned</b> |            | = | <b>Income before Income Taxes and Interest Expense</b> |             | = | <b>Interest Expense</b> |  |
|------------------------------|------------|---|--|-------------|---|-------------------------|--|
| Quality Department Store     |            |   |  |             |   |                         |  |
| <b>2009</b>                  |            |   | <b>2008</b>  |             |   |                         |  |
| \$468,000                    |            |   | \$388,000  |             |   |                         |  |
| \$36,000                     | = 13 times |   | \$40,500   | = 9.6 times |   |                         |  |
| Industry average             |            |   | J.C. Penney Company                                    |             |   |                         |  |
| <b>16.1 times</b>            |            |   | <b>2.9 times</b>                                       |             |   |                         |  |

Quality’s interest expense is well covered at 13 times, compared with the industry average of 16.1 times and J.C. Penney’s 2.9 times.

## Summary of Ratios

Illustration 18-27 summarizes the ratios discussed in this chapter. The summary includes the formula and purpose or use of each ratio.

### Alternative Terminology

Times interest earned is also called *interest coverage*.

**Illustration 18-26**  
Times interest earned

**Illustration 18-27**  
Summary of liquidity, profitability, and solvency ratios

| Ratio                       | Formula   | Purpose or Use  |
|-----------------------------|---|---|
| <b>Liquidity Ratios</b>     |   |   |
| 1. Current ratio            | $\frac{\text{Current assets}}{\text{Current liabilities}}$  | Measures short-term debt-paying ability.                    |
| 2. Acid-test (quick) ratio  | $\frac{\text{Cash} + \text{Short-term investments} + \text{Receivables (net)}}{\text{Current liabilities}}$ | Measures immediate short-term liquidity.                    |
| 3. Receivables turnover     | $\frac{\text{Net credit sales}}{\text{Average net receivables}}$  | Measures liquidity of receivables.                          |
| 4. Inventory turnover       | $\frac{\text{Cost of goods sold}}{\text{Average inventory}}$  | Measures liquidity of inventory.                            |
| <b>Profitability Ratios</b> |   |   |
| 5. Profit margin            | $\frac{\text{Net income}}{\text{Net sales}}$  | Measures net income generated by each dollar of sales.      |
| 6. Asset turnover           | $\frac{\text{Net sales}}{\text{Average assets}}$  | Measures how efficiently assets are used to generate sales. |

| Ratio                                    | Formula  | Purpose or Use   |
|--|--|--|
| 7. Return on assets                      | $\frac{\text{Net income}}{\text{Average assets}}$  | Measures overall profitability of assets.                                  |
| 8. Return on common stockholders' equity | $\frac{\text{Net income} - \text{Preferred dividends}}{\text{Average common stockholders' equity}}$        | Measures profitability of owners' investment.                              |
| 9. Earnings per share (EPS)              | $\frac{\text{Net income} - \text{Preferred dividends}}{\text{Weighted-average common shares outstanding}}$ | Measures net income earned on each share of common stock.                  |
| 10. Price-earnings (P-E) ratio           | $\frac{\text{Market price per share of stock}}{\text{Earnings per share}}$                                 | Measures the ratio of the market price per share to earnings per share.    |
| 11. Payout ratio                         | $\frac{\text{Cash dividends}}{\text{Net income}}$  | Measures percentage of earnings distributed in the form of cash dividends. |
| <b>Solvency Ratios</b>                   |  |  |
| 12. Debt to total assets ratio           | $\frac{\text{Total debt}}{\text{Total assets}}$  | Measures the percentage of total assets provided by creditors.             |
| 13. Times interest earned                | $\frac{\text{Income before income taxes and interest expense}}{\text{Interest expense}}$                   | Measures ability to meet interest payments as they come due.               |

| Income before income taxes          | 697.4          | 608.0     |
| Income tax expense                  | 291.3          | 232.6     |
| Net income                          | \$ 406.1       | \$ 375.4  |

Compute the following ratios for 2012 and 2011.

- (a) Current ratio.
- (b) Inventory turnover. (Inventory on 6/30/10 was \$599.0.)
- (c) Profit margin ratio.
- (d) Return on assets. (Assets on 6/30/10 were \$3,349.9.)
- (e) Return on common stockholders' equity. (Stockholders' equity on 6/30/10 was \$1,795.9.)
- (f) Debt to total assets ratio.
- (g) Times interest earned.

**Solution**

|   | 2012       | 2011       |
|---|------------|------------|
| <b>(a) Current ratio:</b>                         |            |            |
| $\$2,302.6 \div \$1,497.7 =$                      | 1.5:1      |            |
| $\$2,199.2 \div \$1,322.0 =$                      |            | 1.7:1      |

## Earning Power and Irregular Items

### Study Objective [6]

Understand the concept of earning power, and how irregular items are presented.

Users of financial statements are interested in the concept of earning power. **Earning power** means the normal level of income to be obtained in the future. Earning power differs from actual net income by the amount of irregular revenues, expenses, gains, and losses. Users are interested in earning power because it helps them derive an estimate of future earnings without the “noise” of irregular items.

For users of financial statements to determine earning power or regular income, the “irregular” items are separately identified on the income statement. Companies report two types of “irregular” items.

1. Discontinued operations.
2. Extraordinary items.

These “irregular” items are reported net of income taxes. That is, the income statement first reports income tax on the income before “irregular” items. Then the amount of tax for each of the listed “irregular” items is computed. The general concept is “let the tax follow income or loss.”

### Discontinued Operations

**Discontinued operations** refers to the disposal of a **significant component** of a business, such as the elimination of a major class of customers, or an entire activity. For example, to downsize its operations, **General Dynamics Corp.** sold its missile business to **Hughes Aircraft Co.** for \$450 million. In its income statement, General Dynamics reported the sale in a separate section entitled “Discontinued operations.”

Following the disposal of a significant component, the company should report on its income statement both income from continuing operations and income (or loss) from discontinued operations. **The income (loss) from discontinued operations consists of two parts: the income (loss) from operations and the gain (loss) on disposal of the segment.**

To illustrate, assume that during 2012 Acro Energy Inc. has income before income taxes of \$800,000. During 2012, Acro discontinued and sold its unprofitable chemical division. The loss in 2012 from chemical operations (net of \$60,000 taxes) was \$140,000. The loss on disposal of the chemical division (net of \$30,000 taxes) was \$70,000. Assuming a 30% tax rate on income, Illustration 18-28 shows Acro’s income statement presentation.

#### Illustration 18-28

Statement presentation of discontinued operations

#### Helpful Hint

Observe the dual disclosures: (1) The results of operations of the discontinued division must be eliminated from the results of continuing operations. (2) The company must also report the disposal of the operation.

| <b>Acro Energy Inc.</b>                           |                  |                         |
|---|------------------|-------------------------|
| Income Statement (partial)                        |                  |                         |
| For the Year Ended December 31, 2012              |                  |                         |
| Income before income taxes                        |                  | \$800,000               |
| Income tax expense                                |                  | <u>240,000</u>          |
| Income from continuing operations                 |                  | 560,000                 |
| <b>Discontinued operations</b>                    |                  |                         |
| <b>Loss from operations of chemical division,</b> |                  |                         |
| <b>net of \$60,000 income tax saving</b>          | <b>\$140,000</b> |                         |
| <b>Loss from disposal of chemical division,</b>   |                  |                         |
| <b>net of \$30,000 income tax saving</b>          | <b>70,000</b>    | <b>210,000</b>          |
| Net income  |                  | <u><u>\$350,000</u></u> |

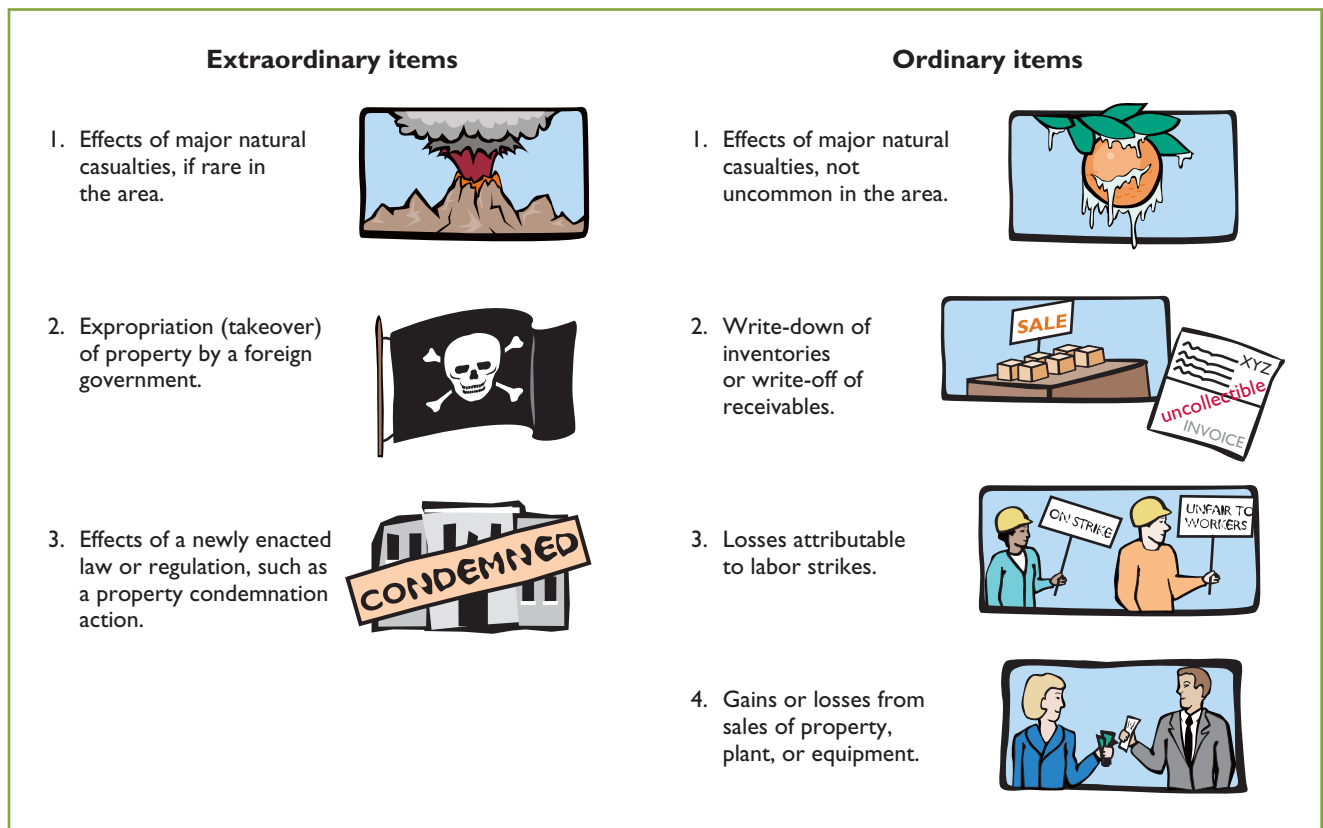

Note that the statement uses the caption “Income from continuing operations,” and adds a new section “Discontinued operations.” **The new section reports both**

the operating loss and the loss on disposal net of applicable income taxes. This presentation clearly indicates the separate effects of continuing operations and discontinued operations on net income.

## Extraordinary Items

**Extraordinary items** are events and transactions that meet two conditions: They are (1) **unusual in nature**, and (2) **infrequent in occurrence**. To be *unusual*, the item should be abnormal and only incidentally related to the company's customary activities. To be *infrequent*, the item should not be reasonably expected to recur in the foreseeable future.

A company must evaluate both criteria in terms of its operating environment. Thus, **Weyerhaeuser Co.** reported the \$36 million in damages to its timberland caused by the volcanic eruption of Mount St. Helens as an extraordinary item. The eruption was both unusual and infrequent. In contrast, **Florida Citrus Company** does not report frost damage to its citrus crop as an extraordinary item, because frost damage is not infrequent. Illustration 18-29 shows the classification of extraordinary and ordinary items.

**Illustration 18-29**

Examples of extraordinary and ordinary items

**Companies report extraordinary items net of taxes in a separate section of the income statement, immediately below discontinued operations.** To illustrate, assume that in 2012 a foreign government expropriated property held as an investment by Acro Energy Inc. If the loss is \$70,000 before applicable income taxes of \$21,000, the income statement will report a deduction of \$49,000, as shown in Illustration 18-30 (page 848). When there is an extraordinary item to report, the company adds the caption "Income before extraordinary item" immediately before the section for the extraordinary item. This presentation clearly indicates the effect of the extraordinary item on net income.

**Illustration 18-30**

Statement presentation of extraordinary items

**Helpful Hint**

If there are no discontinued operations, the third line of the income statement would be labeled "Income before extraordinary item."

**Acro Energy Inc.**  
Income Statement (partial)  
For the Year Ended December 31, 2012

|   |           |                  |
|---|-----------|------------------|
| Income before income taxes  |           | \$800,000        |
| Income tax expense  |           | 240,000          |
| Income from continuing operations   |           | 560,000          |
| Discontinued operations   |           |                  |
| Loss from operations of chemical division,<br>net of \$60,000 income tax saving | \$140,000 |                  |
| Loss from disposal of chemical division,<br>net of \$30,000 income tax saving   | 70,000    | 210,000          |
| Income before extraordinary item  |           | 350,000          |
| <b>Extraordinary item</b>   |           |                  |
| <b>Expropriation of investment, net of<br/>\$21,000 income tax saving</b>       |           | <b>49,000</b>    |
| Net income  |           | <b>\$301,000</b> |

What if a transaction or event meets one (but not both) of the criteria for an extraordinary item? In that case, the company reports it under either "Other revenues and gains" or "Other expenses and losses" at its gross amount (not net of tax). This is true, for example, of gains (losses) resulting from the sale of property, plant, and equipment, as explained in Chapter 10. It is quite common for companies to use the label "Non-recurring charges" for losses that do not meet the extraordinary item criteria.

## INVESTOR INSIGHT

### What Does "Non-Recurring" Really Mean?

Many companies incur restructuring charges as they attempt to reduce costs. They often label these items in the income statement as "non-recurring" charges to suggest that they are isolated events which are unlikely to occur in future periods. The question for analysts is, are these costs really one-time, "non-recurring" events, or do they reflect problems that the company will be facing for many periods in the future? If they are one-time events, they can be largely ignored when trying to predict future earnings.

But some companies report "one-time" restructuring charges over and over again. For example, toothpaste and other consumer-goods giant **Procter & Gamble Co.** reported a restructuring charge in 12 consecutive quarters. **Motorola** had "special" charges in 14-consecutive quarters. On the other hand, other companies have a restructuring charge only once in a five- or ten-year period. There appears to be no substitute for careful analysis of the numbers that comprise net income.

**?** If a company takes a large restructuring charge, what is the effect on the company's current income statement versus future ones? (See page 873.)

## Changes in Accounting Principle

For ease of comparison, users of financial statements expect companies to prepare such statements on a basis **consistent** with the preceding period. A **change in accounting principle** occurs when the principle used in the current year is different from the one used in the preceding year. Accounting rules permit a change when management can show that the new principle is preferable to the old principle. An example is a change in inventory costing methods (such as FIFO to average cost).

Companies report most changes in accounting principle retroactively. That is, they report both the current period and previous periods using the new principle. As a result the same principle applies in all periods. This treatment improves the ability to compare results across years.

## Comprehensive Income

The income statement reports most revenues, expenses, gains, and losses recognized during the period. However, over time, specific exceptions to this general practice have developed. Certain items now bypass income and are reported directly in stockholders' equity.

For example, in Chapter 16 you learned that companies do not include in income any unrealized gains and losses on available-for-sale securities. Instead, they report such gains and losses in the balance sheet as adjustments to stockholders' equity. Why are these gains and losses on available-for-sale securities excluded from net income? Because disclosing them separately (1) reduces the volatility of net income due to fluctuations in fair value, yet (2) informs the financial statement user of the gain or loss that would be incurred if the securities were sold at fair value.

Many analysts have expressed concern over the significant increase in the number of items that bypass the income statement. They feel that such reporting has reduced the usefulness of the income statement. To address this concern, in addition to reporting net income, a company must also report comprehensive income. **Comprehensive income** includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders. A number of alternative formats for reporting comprehensive income are allowed. These formats are discussed in advanced accounting courses.

### Ethics Note

Changes in accounting principle should result in financial statements that are more informative for statement users. They should *not* be used to artificially improve the reported performance or financial position of the corporation.

## Do it!

In its proposed 2012 income statement, AIR Corporation reports income before income taxes \$400,000, extraordinary loss due to earthquake \$100,000, income taxes \$120,000 (not including irregular items), loss on operation of discontinued flower division \$50,000, and loss on disposal of discontinued flower division \$90,000. The income tax rate is 30%. Prepare a correct income statement, beginning with "Income before income taxes."

### Solution

| <b>AIR CORPORATION</b>   |               |                         |
|--|---------------|-------------------------|
| Income Statement (partial)   |               |                         |
| For the Year Ended December 31, 2012                               |               |                         |
| Income before income taxes   |               | \$400,000               |
| Income tax expense   |               | <u>120,000</u>          |
| Income from continuing operations                                  |               | 280,000                 |
| Discontinued operations  |               |                         |
| Loss from operation of flower division, net of \$15,000 tax saving | \$35,000      |                         |
| Loss on disposal of flower division, net of \$27,000 tax saving    | <u>63,000</u> | <u>98,000</u>           |
| Income before extraordinary item                                   |               | 182,000                 |
| Extraordinary earthquake loss, net of \$30,000 tax saving          |               | <u>70,000</u>           |
| Net income   |               | <u><u>\$112,000</u></u> |

## Irregular Items

### action plan

- ✓ Recall that a loss is extraordinary if it is both unusual and infrequent.
- ✓ Disclose the income tax effect of each component of income, beginning with income before any irregular items.
- ✓ Show discontinued operations before extraordinary items.

Related exercise material: BE18-14, BE18-15, E18-12, E18-13, and **Do it!** 18-3.

## Quality of Earnings

### Study Objective [7]

Understand the concept of quality of earnings.

In evaluating the financial performance of a company, the quality of a company's earnings is of extreme importance to analysts. A company that has a high **quality of earnings** provides full and transparent information that will not confuse or mislead users of the financial statements.

The issue of quality of earnings has taken on increasing importance because recent accounting scandals suggest that some companies are spending too much time managing their income and not enough time managing their business. Here are some of the factors affecting quality of earnings.

### *Alternative Accounting Methods*

Variations among companies in the application of generally accepted accounting principles may hamper comparability and reduce quality of earnings. For example, one company may use the FIFO method of inventory costing, while another company in the same industry may use LIFO. If inventory is a significant asset to both companies, it is unlikely that their current ratios are comparable. For example, if **General Motors Corporation** had used FIFO instead of LIFO for inventory valuation, its inventories in a recent year would have been 26% higher, which significantly affects the current ratio (and other ratios as well).

In addition to differences in inventory costing methods, differences also exist in reporting such items as depreciation, depletion, and amortization. Although these differences in accounting methods might be detectable from reading the notes to the financial statements, adjusting the financial data to compensate for the different methods is often difficult, if not impossible.

### *Pro Forma Income*

Companies whose stock is publicly traded are required to present their income statement following generally accepted accounting principles (GAAP). In recent years, many companies have also reported a second measure of income, called pro forma income. **Pro forma income** usually excludes items that the company thinks are unusual or nonrecurring. For example, at one time, **Cisco Systems** (a high-tech company) reported a quarterly net loss under GAAP of \$2.7 billion. Cisco reported pro forma income for the same quarter as a profit of \$230 million. This large difference in profits between GAAP income numbers and pro forma income is not unusual these days. For example, during one 9-month period the 100 largest firms on the Nasdaq stock exchange reported a total pro forma income of \$19.1 billion, but a total loss as measured by GAAP of \$82.3 billion—a difference of about \$100 billion!

To compute pro forma income, companies generally can exclude any items they deem inappropriate for measuring their performance. Many analysts and investors are critical of the practice of using pro forma income because these numbers often make companies look better than they really are. As the financial press noted, pro forma numbers might be called EBS, which stands for “earnings before bad stuff.” Companies, on the other hand, argue that pro forma numbers more clearly indicate sustainable income because they exclude unusual and nonrecurring expenses. “Cisco’s technique gives readers of financial statements a clear picture of Cisco’s normal business activities,” the company said in a statement issued in response to questions about its pro forma income accounting.

The SEC has provided some guidance on how companies should present pro forma information. Stay tuned: Everyone seems to agree that pro forma numbers can be useful if they provide insights into determining a company’s sustainable income. However, many companies have abused the flexibility that pro forma numbers allow and have used the measure as a way to put their companies in a good light.

## Improper Recognition

Because some managers have felt pressure from Wall Street to continually increase earnings, they have manipulated the earnings numbers to meet these expectations. The most common abuse is the improper recognition of revenue. One practice that companies are using is *channel stuffing*: Offering deep discounts on their products to customers, companies encourage their customers to buy early (stuff the channel) rather than later. This lets the company report good earnings in the current period, but it often leads to a disaster in subsequent periods because customers have no need for additional goods. To illustrate, **Bristol-Myers Squibb** at one time indicated that it used sales incentives to encourage wholesalers to buy more drugs than needed to meet patients' demands. As a result, the company had to issue revised financial statements showing corrected revenues and income.

Another practice is the improper capitalization of operating expenses. The classic case is **WorldCom**. It capitalized over \$7 billion dollars of operating expenses so that it would report positive net income. In other situations, companies fail to report all their liabilities. **Enron** had promised to make payments on certain contracts if financial difficulty developed, but these guarantees were not reported as liabilities. In addition, disclosure was so lacking in transparency that it was impossible to understand what was happening at the company.

## Do it!

Match each of the following terms with the phrase that it best matches.

Comprehensive income  
Quality of earnings  
Solvency ratio

Vertical analysis  
Pro forma income  
Extraordinary item

1. \_\_\_\_\_ Measures the ability of the company to survive over a long period of time.
2. \_\_\_\_\_ Usually excludes items that a company thinks are unusual or non-recurring.
3. \_\_\_\_\_ Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.
4. \_\_\_\_\_ Indicates the level of full and transparent information provided to users of the financial statements.
5. \_\_\_\_\_ Describes events and transactions that are unusual in nature and infrequent in occurrence.
6. \_\_\_\_\_ Expresses each item within a financial statement as a percent of a base amount.

### Solution

1. Solvency ratio: Measures the ability of the company to survive over a long period of time.
2. Pro forma income: Usually excludes items that a company thinks are unusual or non-recurring.
3. Comprehensive income: Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.
4. Quality of earnings: Indicates the level of full and transparent information provided to users of the financial statements.

## Quality of Earnings, Financial Statement Analysis

### action plan

- ✓ Develop a sound understanding of basic methods used for financial reporting.
- ✓ Understand the use of fundamental analysis techniques.

5. Extraordinary item: Describes events and transactions that are unusual in nature and infrequent in occurrence.
6. Vertical analysis: Expresses each item within a financial statement as a percent of a base amount.

Related exercise material: **Do it!** 18-4.

## COMPREHENSIVE

### Do it!

The events and transactions of Dever Corporation for the year ending December 31, 2012, resulted in the following data.

|   |             |
|---|-------------|
| Cost of goods sold                              | \$2,600,000 |
| Net sales                                       | 4,400,000   |
| Other expenses and losses                       | 9,600       |
| Other revenues and gains                        | 5,600       |
| Selling and administrative expenses             | 1,100,000   |
| Income from operations of plastics division     | 70,000      |
| Gain from disposal of plastics division         | 500,000     |
| Loss from tornado disaster (extraordinary loss) | 600,000     |

Analysis reveals that:

1. All items are before the applicable income tax rate of 30%.
2. The plastics division was sold on July 1.
3. All operating data for the plastics division have been segregated.

#### Instructions

Prepare an income statement for the year.

#### action plan

- ✓ Report material items not typical of continuing operations in separate sections, net of taxes.
- ✓ Associate income taxes with the item that affects the taxes.
- ✓ Apply the corporate tax rate to income before income taxes to determine tax expense.
- ✓ Recall that all data presented in determining income before income taxes are the same as for unincorporated companies.

#### Solution to Comprehensive Do it!

##### DEVER CORPORATION Income Statement For the Year Ended December 31, 2012

|   |                |                   |
|---|----------------|-------------------|
| Net sales   |                | \$4,400,000       |
| Cost of goods sold  |                | <u>2,600,000</u>  |
| Gross profit  |                | 1,800,000         |
| Selling and administrative expenses                       |                | <u>1,100,000</u>  |
| Income from operations                                    |                | 700,000           |
| Other revenues and gains                                  | \$ 5,600       |                   |
| Other expenses and losses                                 | <u>9,600</u>   | <u>4,000</u>      |
| Income before income taxes                                |                | 696,000           |
| Income tax expense (\$696,000 × 30%)                      |                | <u>208,800</u>    |
| Income from continuing operations                         |                | 487,200           |
| Discontinued operations                                   |                |                   |
| Income from operations of plastics division, net of       |                |                   |
| \$21,000 income taxes (\$70,000 × 30%)                    | 49,000         |                   |
| Gain from disposal of plastics division, net of \$150,000 |                |                   |
| income taxes (\$500,000 × 30%)                            | <u>350,000</u> | <u>399,000</u>    |
| Income before extraordinary item                          |                | 886,200           |
| Extraordinary item  |                |                   |
| Tornado loss, net of \$180,000 income tax saving          |                |                   |
| (\$600,000 × 30%)   |                | <u>420,000</u>    |
| Net income  |                | <u>\$ 466,200</u> |

## Summary of Study Objectives

**[1] Discuss the need for comparative analysis.** There are three bases of comparison: (1) Intracompany, which compares an item or financial relationship with other data within a company. (2) Industry, which compares company data with industry averages. (3) Intercompany, which compares an item or financial relationship of a company with data of one or more competing companies.

**[2] Identify the tools of financial statement analysis.** Financial statements can be analyzed horizontally, vertically, and with ratios.

**[3] Explain and apply horizontal analysis.** Horizontal analysis is a technique for evaluating a series of data over a period of time to determine the increase or decrease that has taken place, expressed as either an amount or a percentage.

**[4] Describe and apply vertical analysis.** Vertical analysis is a technique that expresses each item within a financial statement in terms of a percentage of a relevant total or a base amount.

**[5] Identify and compute ratios used in analyzing a firm's liquidity, profitability, and solvency.** The formula and purpose of each ratio was presented in Illustration 18-27 (page 843).

**[6] Understand the concept of earning power, and how irregular items are presented.** Earning power refers to a company's ability to sustain its profits from operations. "Irregular items"—discontinued operations and extraordinary items—are presented net of tax below income from continuing operations to highlight their unusual nature.

**[7] Understand the concept of quality of earnings.** A high quality of earnings provides full and transparent information that will not confuse or mislead users of the financial statements. Issues related to quality of earnings are (1) alternative accounting methods, (2) pro forma income, and (3) improper recognition.

## Glossary

**Acid-test (quick) ratio** A measure of a company's immediate short-term liquidity; computed by dividing the sum of cash, short-term investments, and net receivables by current liabilities. (p. 835).

**Asset turnover** A measure of how efficiently a company uses its assets to generate sales; computed by dividing net sales by average assets. (p. 839).

**Change in accounting principle** The use of a principle in the current year that is different from the one used in the preceding year. (p. 848).

**Comprehensive income** Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders. (p. 849).

**Current ratio** A measure used to evaluate a company's liquidity and short-term debt-paying ability; computed by dividing current assets by current liabilities. (p. 835).

**Debt to total assets ratio** Measures the percentage of total assets provided by creditors; computed by dividing total debt by total assets. (p. 842).

**Discontinued operations** The disposal of a significant segment of a business. (p. 846).

**Earnings per share (EPS)** The net income earned on each share of common stock; computed by dividing net income minus preferred dividends (if any) by the number of weighted-average common shares outstanding. (p. 841).

**Extraordinary items** Events and transactions that are unusual in nature and infrequent in occurrence. (p. 847).

**Horizontal analysis** A technique for evaluating a series of financial statement data over a period of time, to determine the increase (decrease) that has taken place, expressed as either an amount or a percentage. (p. 827).

**Inventory turnover** A measure of the liquidity of inventory; computed by dividing cost of goods sold by average inventory. (p. 837).

**Leveraging** See *Trading on the equity*. (p. 840).

**Liquidity ratios** Measures of the short-term ability of the company to pay its maturing obligations and to meet unexpected needs for cash. (p. 835).

**Payout ratio** Measures the percentage of earnings distributed in the form of cash dividends; computed by dividing cash dividends by net income. (p. 842).

**Price-earnings (P-E) ratio** Measures the ratio of the market price of each share of common stock to the earnings per share; computed by dividing the market price of the stock by earnings per share. (p. 841).

**Profit margin** Measures the percentage of each dollar of sales that results in net income; computed by dividing net income by net sales. (p. 838).

**Profitability ratios** Measures of the income or operating success of a company for a given period of time. (p. 838).

**Pro forma income** A measure of income that usually excludes items that a company thinks are unusual or nonrecurring. (p. 850).

**Quality of earnings** Indicates the level of full and transparent information provided to users of the financial statements. (p. 850).

**Ratio** An expression of the mathematical relationship between one quantity and another. The relationship may be expressed either as a percentage, a rate, or a simple proportion. (p. 833).

**Ratio analysis** A technique for evaluating financial statements that expresses the relationship between selected financial statement data. (p. 833).

**Receivables turnover** A measure of the liquidity of receivables; computed by dividing net credit sales by average net receivables. (p. 837).

**Return on assets** An overall measure of profitability; computed by dividing net income by average assets. (p. 839).

**Return on common stockholders' equity** Measures the dollars of net income earned for each dollar invested by the owners; computed by dividing net income minus

preferred dividends (if any) by average common stockholders' equity. (p. 840).

**Solvency ratios** Measures of the ability of the company to survive over a long period of time. (p. 842).

**Times interest earned** Measures a company's ability to meet interest payments as they come due; computed by dividing income before interest expense and income taxes by interest expense. (p. 843).

**Trading on the equity** Borrowing money at a lower rate of interest than can be earned by using the borrowed money. (p. 840).

**Vertical analysis** A technique for evaluating financial statement data that expresses each item within a financial statement as a percent of a base amount. (p. 831).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 873.

- (SO 1) 1. Comparisons of data within a company are an example of the following comparative basis:
- Industry averages.
  - Intracompany.
  - Intercompany.
  - Both (b) and (c).

- (SO 3) 2. In horizontal analysis, each item is expressed as a percentage of the:
- net income amount.
  - stockholders' equity amount.
  - total assets amount.
  - base year amount.

- (SO 4) 3. In vertical analysis, the base amount for depreciation expense is generally:
- net sales.
  - depreciation expense in a previous year.
  - gross profit.
  - fixed assets.

- (SO 4) 4. The following schedule is a display of what type of analysis?

|                                   | <u>Amount</u>    | <u>Percent</u> |
|-----------------------------------|------------------|----------------|
| Current assets                    | \$200,000        | 25%            |
| Property, plant,<br>and equipment | <u>600,000</u>   | 75%            |
| Total assets                      | <u>\$800,000</u> |                |

- Horizontal analysis.
  - Differential analysis.
  - Vertical analysis.
  - Ratio analysis.
- (SO 3) 5. Sammy Corporation reported net sales of \$300,000, \$330,000, and \$360,000 in the years, 2010, 2011, and 2012, respectively. If 2010 is the base year, what is the trend percentage for 2012?
- 77%.
  - 108%.
  - 120%.
  - 130%.
- (SO 5) 6. Which of the following measures is an evaluation of a firm's ability to pay current liabilities?
- Acid-test ratio.
  - Current ratio.
  - Both (a) and (b).
  - None of the above.

7. A measure useful in evaluating the efficiency in managing inventories is:
- inventory turnover.
  - average days to sell inventory.
  - Both (a) and (b).
  - None of the above.

Use the following financial statement information as of the end of each year to answer Self-Test Questions 8–12.

|  | <u>2012</u> | <u>2011</u> |
|--|-------------|-------------|
| Inventory                                | \$ 54,000   | \$ 48,000   |
| Current assets                           | 81,000      | 106,000     |
| Total assets                             | 382,000     | 326,000     |
| Current liabilities                      | 27,000      | 36,000      |
| Total liabilities                        | 102,000     | 88,000      |
| Preferred stock                          | 40,000      | 40,000      |
| Common stockholders' equity              | 240,000     | 198,000     |
| Net sales                                | 784,000     | 697,000     |
| Cost of goods sold                       | 306,000     | 277,000     |
| Net income                               | 134,000     | 90,000      |
| Tax expense                              | 22,000      | 18,000      |
| Interest expense                         | 12,000      | 12,000      |
| Dividends paid to preferred stockholders | 4,000       | 4,000       |
| Dividends paid to common stockholders    | 15,000      | 10,000      |

8. Compute the days in inventory for 2012. (SO 5)
- 64.4 days.
  - 60.8 days.
  - 6 days.
  - 24 days.
9. Compute the current ratio for 2012. (SO 5)
- 1.26:1.
  - 3.0:1.
  - .80:1.
  - 3.75:1.
10. Compute the profit margin ratio for 2012. (SO 5)
- 17.1%.
  - 18.1%.
  - 37.9%.
  - 5.9%.
11. Compute the return on common stockholders' equity for 2012. (SO 5)
- 47.9%.
  - 51.7%.
  - 61.2%.
  - 59.4%.

- (SO 5) 12. Compute the times interest earned for 2012.
- 11.2 times.
  - 65.3 times.
  - 14.0 times.
  - 13.0 times.
- (SO 6) 13. In reporting discontinued operations, the income statement should show in a special section:
- gains and losses on the disposal of the discontinued segment.
  - gains and losses from operations of the discontinued segment.
  - Both (a) and (b).
  - Neither (a) nor (b).
- (SO 6) 14. Scout Corporation has income before taxes of \$400,000 and an extraordinary loss of \$100,000. If the income tax rate is 25% on all items, the income statement should show income before extraordinary items and extraordinary items, respectively, of:
- \$325,000 and \$100,000.
  - \$325,000 and \$75,000.
  - \$300,000 and \$100,000.
  - \$300,000 and \$75,000.
15. Which situation below might indicate a company has a low quality of earnings? (SO 7)
- The same accounting principles are used each year.
  - Revenue is recognized when earned.
  - Maintenance costs are expensed as incurred.
  - The company is continually reporting pro forma income numbers.

## Questions

- Juan Marichal believes that the analysis of financial statements is directed at two characteristics of a company: liquidity and profitability. Is Juan correct? Explain.
  - Are short-term creditors, long-term creditors, and stockholders interested primarily in the same characteristics of a company? Explain.
- Distinguish among the following bases of comparison: (1) intracompany, (2) industry averages, and (3) intercompany.
  - Give the principal value of using each of the three bases of comparison.
- Two popular methods of financial statement analysis are horizontal analysis and vertical analysis. Explain the difference between these two methods.
- If Leonard Company had net income of \$360,000 in 2012 and it experienced a 24.5% increase in net income for 2013, what is its net income for 2013?
  - If six cents of every dollar of Leonard revenue is net income in 2012, what is the dollar amount of 2012 revenue?
- What is a ratio? What are the different ways of expressing the relationship of two amounts? What information does a ratio provide?
- Name the major ratios useful in assessing (a) liquidity and (b) solvency.
- Raphael Ochoa is puzzled. His company had a profit margin of 10% in 2012. He feels that this is an indication that the company is doing well. Cindy Lore, his accountant, says that more information is needed to determine the firm's financial well-being. Who is correct? Why?
- What do the following classes of ratios measure? (a) Liquidity ratios. (b) Profitability ratios. (c) Solvency ratios.
- What is the difference between the current ratio and the acid-test ratio?
- Donte Company, a retail store, has a receivables turnover of 4.5 times. The industry average is 12.5 times. Does Donte have a collection problem with its receivables?
  - \$325,000 and \$100,000.
  - \$325,000 and \$75,000.
  - \$300,000 and \$100,000.
  - \$300,000 and \$75,000.
- Which ratios should be used to help answer the following questions?
  - How efficient is a company in using its assets to produce sales?
  - How near to sale is the inventory on hand?
  - How many dollars of net income were earned for each dollar invested by the owners?
  - How able is a company to meet interest charges as they fall due?
- The price-earnings ratio of **General Motors** (automobile builder) was 8, and the price-earnings ratio of **Microsoft** (computer software) was 38. Which company did the stock market favor? Explain.
- What is the formula for computing the payout ratio? Would you expect this ratio to be high or low for a growth company?
- Holding all other factors constant, indicate whether each of the following changes generally signals good or bad news about a company.
  - Increase in profit margin.
  - Decrease in inventory turnover.
  - Increase in the current ratio.
  - Decrease in earnings per share.
  - Increase in price-earnings ratio.
  - Increase in debt to total assets ratio.
  - Decrease in times interest earned.
- The return on assets for Tresh Corporation is 7.6%. During the same year, Tresh's return on common stockholders' equity is 12.8%. What is the explanation for the difference in the two rates?
- Which two ratios do you think should be of greatest interest to:
  - A pension fund considering the purchase of 20-year bonds?
  - A bank contemplating a short-term loan?
  - A common stockholder?
- Why must preferred stock dividends be subtracted from net income in computing earnings per share?

18. (a) What is meant by trading on the equity?  
(b) How would you determine the profitability of trading on the equity?
19. Hillman Inc. has net income of \$160,000, weighted-average shares of common stock outstanding of 50,000, and preferred dividends for the period of \$40,000. What is Hillman's earnings per share of common stock? Kate Hillman, the president of Hillman Inc., believes the computed EPS of the company is high. Comment.
20. Why is it important to report discontinued operations separately from income from continuing operations?
21. You are considering investing in Shawnee Transportation. The company reports 2012 earnings per share of \$6.50 on income before extraordinary items and \$4.75 on net income. Which EPS figure would you consider more relevant to your investment decision? Why?
22. STL Inc. reported 2011 earnings per share of \$3.20 and had no extraordinary items. In 2012, EPS on income before extraordinary items was \$2.99, and EPS on net income was \$3.49. Is this a favorable trend?
23. Indicate which of the following items would be reported as an extraordinary item in Mordica Corporation's income statement.
- Loss from damages caused by volcano eruption.
  - Loss from sale of temporary investments.
  - Loss attributable to a labor strike.
  - Loss caused when manufacture of a product was prohibited by the Food and Drug Administration.
  - Loss from flood damage. (The nearby Black River floods every 2 to 3 years.)
  - Write-down of obsolete inventory.
  - Expropriation of a factory by a foreign government.
24. Identify and explain factors that affect quality of earnings.
25.  **PEPSICO** Identify the specific sections in PepsiCo's 2009 annual report where horizontal and vertical analyses of financial data are presented.

## Brief Exercises

Discuss need for comparative analysis.

(SO 1)

Follow the rounding procedures used in the chapter.

**BE18-1** You recently received a letter from your Uncle Jimbo. A portion of the letter is presented below.

You know that I have a significant amount of money I saved over the years. I am thinking about starting an investment program. I want to do the investing myself, based on my own research and analysis of financial statements. I know that you are studying accounting, so I have a couple of questions for you. I have heard that different users of financial statements are interested in different characteristics of companies. Is this true, and, if so, why? Also, some of my friends, who are already investing, have told me that comparisons involving a company's financial data can be made on a number of different bases. Can you explain these bases to me?

### Instructions

 Write a letter to your Uncle Jimbo which answers his questions.

Identify and use tools of financial statement analysis.

(SO 2, 3, 4, 5)

**BE18-2** Abigail Naismith Corporation reported the following amounts in 2011, 2012, and 2013.

|                     | <u>2011</u> | <u>2012</u> | <u>2013</u> |
|---------------------|-------------|-------------|-------------|
| Current assets      | \$200,000   | \$230,000   | \$240,000   |
| Current liabilities | \$160,000   | \$168,000   | \$184,000   |
| Total assets        | \$500,000   | \$600,000   | \$620,000   |

### Instructions

(a) Identify and describe the three tools of financial statement analysis. (b) Perform each of the three types of analysis on Abigail Naismith's current assets.

Prepare horizontal analysis.

(SO 3)

**BE18-3** Using the following data from the comparative balance sheet of Doabe Company, illustrate horizontal analysis.

|                     | <u>December 31, 2013</u> | <u>December 31, 2012</u> |
|---------------------|--------------------------|--------------------------|
| Accounts receivable | \$ 520,000               | \$ 400,000               |
| Inventory           | \$ 840,000               | \$ 600,000               |
| Total assets        | \$3,000,000              | \$2,500,000              |

Prepare vertical analysis.

(SO 4)

**BE18-4** Using the same data presented above in BE18-3 for Doabe Company, illustrate vertical analysis.

Calculate percentage of change.

(SO 3)

**BE18-5** Net income was \$500,000 in 2011, \$450,000 in 2012, and \$522,000 in 2013. What is the percentage of change from (a) 2011 to 2012 and (b) 2012 to 2013? Is the change an increase or a decrease?

Calculate net income.

(SO 3)

**BE18-6** If Vansittart Company had net income of \$585,000 in 2013 and it experienced a 30% increase in net income over 2012, what was its 2012 net income?

**BE18-7** Horizontal analysis (trend analysis) percentages for Algy Company's sales, cost of goods sold, and expenses are shown below.

*Calculate change in net income.*  
(SO 3)

| <u>Horizontal Analysis</u> | <u>2013</u> | <u>2012</u> | <u>2011</u> |
|----------------------------|-------------|-------------|-------------|
| Sales                      | 96.2        | 106.8       | 100.0       |
| Cost of goods sold         | 102.0       | 97.0        | 100.0       |
| Expenses                   | 109.6       | 98.4        | 100.0       |

Did Algy's net income increase, decrease, or remain unchanged over the 3-year period?

**BE18-8** Vertical analysis (common size) percentages for Fagbenle Company's sales, cost of goods sold, and expenses are shown below.

*Calculate change in net income.*  
(SO 4)

| <u>Vertical Analysis</u> | <u>2013</u> | <u>2012</u> | <u>2011</u> |
|--------------------------|-------------|-------------|-------------|
| Sales                    | 100.0       | 100.0       | 100.0       |
| Cost of goods sold       | 59.2        | 62.4        | 64.5        |
| Expenses                 | 25.0        | 25.6        | 27.5        |

Did Fagbenle's net income as a percent of sales increase, decrease, or remain unchanged over the 3-year period? Provide numerical support for your answer.

**BE18-9** Selected condensed data taken from a recent balance sheet of Evangelista Inc. are as follows.

*Calculate liquidity ratios.*  
(SO 5)

**EVANGELISTA INC.**  
Balance Sheet (partial)

|                           |                     |
|---------------------------|---------------------|
| Cash                      | \$ 8,041,000        |
| Short-term investments    | 4,947,000           |
| Accounts receivable       | 12,545,000          |
| Inventory                 | 14,814,000          |
| Other current assets      | 5,571,000           |
| Total current assets      | <u>\$45,918,000</u> |
| Total current liabilities | <u>\$40,644,000</u> |

What are the (a) working capital, (b) current ratio, and (c) acid-test ratio?

**BE18-10** Constantine Corporation has net income of \$11.44 million and net revenue of \$80 million in 2012. Its assets are \$14 million at the beginning of the year and \$18 million at the end of the year. What are Constantine's (a) asset turnover and (b) profit margin?

*Calculate profitability ratios.*  
(SO 5)

**BE18-11** The following data are taken from the financial statements of Morganstern Company.

*Evaluate collection of accounts receivable.*

|  | <u>2013</u> | <u>2012</u> |
|--|-------------|-------------|
| Accounts receivable (net), end of year | \$ 550,000  | \$ 520,000  |
| Net sales on account                   | 3,960,000   | 3,100,000   |

Terms for all sales are 1/10, n/60.

(SO 5)

(a) Compute for each year (1) the receivables turnover and (2) the average collection period. At the end of 2011, accounts receivable (net) was \$480,000.

(b)  What conclusions about the management of accounts receivable can be drawn from these data?

**BE18-12** The following data are from the income statements of Davros Company.

*Evaluate management of inventory.*

|                     | <u>2013</u> | <u>2012</u> |
|---------------------|-------------|-------------|
| Sales               | \$6,420,000 | \$6,240,000 |
| Beginning inventory | 980,000     | 860,000     |
| Purchases           | 4,340,000   | 4,661,000   |
| Ending inventory    | 1,020,000   | 980,000     |

(SO 5)

(a) Compute for each year (1) the inventory turnover and (2) the average days to sell the inventory.

(b)  What conclusions concerning the management of the inventory can be drawn from these data?

**BE18-13** Boe Company has owners' equity of \$400,000 and net income of \$66,000. It has a payout ratio of 20% and a rate of return on assets of 15%. How much did Boe pay in cash dividends, and what were its average assets?

*Calculate profitability ratios.*  
(SO 5)

Prepare income statement including extraordinary items. (SO 6)

**BE18-14** An inexperienced accountant for Nerys Corporation showed the following in the income statement: income before income taxes and extraordinary item \$400,000, and extraordinary loss from flood (before taxes) \$70,000. The extraordinary loss and taxable income are both subject to a 30% tax rate. Prepare a correct income statement.

Prepare discontinued operations section of income statement. (SO 6)

**BE18-15** On June 30, Malohkeh Corporation discontinued its operations in Europe. During the year, the operating loss was \$300,000 before taxes. On September 1, Malohkeh disposed of its European facilities at a pretax loss of \$120,000. The applicable tax rate is 30%. Show the discontinued operations section of the income statement.

## Do it! Review

Prepare horizontal analysis. (SO 3)

**Do it! 18-1** Summary financial information for Talulah Company is as follows.

|                | <u>December 31, 2013</u> | <u>December 31, 2012</u> |
|----------------|--------------------------|--------------------------|
| Current assets | \$ 199,000               | \$ 220,000               |
| Plant assets   | <u>821,000</u>           | <u>780,000</u>           |
| Total assets   | <u>\$1,020,000</u>       | <u>\$1,000,000</u>       |

Compute the amount and percentage changes in 2013 using horizontal analysis, assuming 2012 is the base year.

Compute ratios. (SO 5)

**Do it! 18-2** The condensed financial statements of Ifeachor Company for the years 2011 and 2012 are presented below.

### IFEACHOR COMPANY

#### Balance Sheets December 31

|  | <u>2012</u>    | <u>2011</u>    |
|--|----------------|----------------|
| Current assets                             |                |                |
| Cash and cash equivalents                  | \$ 330         | \$ 360         |
| Accounts receivable (net)                  | 470            | 400            |
| Inventory                                  | 460            | 390            |
| Prepaid expenses                           | <u>120</u>     | <u>160</u>     |
| Total current assets                       | 1,380          | 1,310          |
| Property, plant, and equipment             | 420            | 380            |
| Investments                                | 10             | 10             |
| Intangibles and other assets               | <u>530</u>     | <u>510</u>     |
| Total assets                               | <u>\$2,340</u> | <u>\$2,210</u> |
| Current liabilities                        | \$ 900         | \$ 790         |
| Long-term liabilities                      | 410            | 380            |
| Stockholders' equity—common                | <u>1,030</u>   | <u>1,040</u>   |
| Total liabilities and stockholders' equity | <u>\$2,340</u> | <u>\$2,210</u> |

### IFEACHOR COMPANY

#### Income Statements For the Years Ended December 31

|                                   | <u>2012</u>   | <u>2011</u>  |
|-----------------------------------|---------------|--------------|
| Sales revenue                     | \$3,800       | \$3,460      |
| Costs and expenses                |               |              |
| Cost of goods sold                | 970           | 890          |
| Selling & administrative expenses | 2,400         | 2,330        |
| Interest expense                  | <u>10</u>     | <u>20</u>    |
| Total costs and expenses          | 3,380         | 3,240        |
| Income before income taxes        | 420           | 220          |
| Income tax expense                | 168           | 132          |
| Net income                        | <u>\$ 252</u> | <u>\$ 88</u> |

Compute the following ratios for 2012 and 2011.

- (a) Current ratio.
- (b) Inventory turnover. (Inventory on 12/31/10 was \$340.)
- (c) Profit margin ratio.
- (d) Return on assets. (Assets on 12/31/10 were \$1,900.)
- (e) Return on common stockholders' equity. (Equity on 12/31/10 was \$900.)
- (f) Debt to total assets ratio.
- (g) Times interest earned.

**Do it! 18-3** In its proposed 2012 income statement, DuToit Corporation reports income before income taxes \$500,000, extraordinary loss due to earthquake \$150,000, income taxes \$200,000 (not including irregular items), loss on operation of discontinued music division \$60,000, and gain on disposal of discontinued music division \$40,000. The income tax rate is 40%. Prepare a correct income statement, beginning with income before income taxes.

*Prepare income statement, including irregular items.*  
(SO 6)

**Do it! 18-4** Match each of the following terms with the phrase that it best matches.

|                     |                         |
|---------------------|-------------------------|
| Quality of earnings | Pro forma income        |
| Current ratio       | Discontinued operations |
| Horizontal analysis | Comprehensive income    |

*Match terms relating to quality of earnings and financial statement analysis.*  
(SO 3, 4, 5, 6, 7)

- \_\_\_\_\_ A measure used to evaluate a company's liquidity.
- \_\_\_\_\_ Usually excludes items that a company thinks are unusual or nonrecurring.
- \_\_\_\_\_ Indicates the level of full and transparent information provided to users of the financial statements.
- \_\_\_\_\_ The disposal of a significant segment of a business.
- \_\_\_\_\_ Determines increases or decreases in a series of financial statement data.
- \_\_\_\_\_ Includes all changes in stockholders' equity during a period except those resulting from investments by stockholders and distributions to stockholders.

## Exercises

Follow the rounding procedures used in the chapter.

**E18-1** Financial information for Sinead Inc. is presented below.

|                       | <u>December 31, 2013</u> | <u>December 31, 2012</u> |
|-----------------------|--------------------------|--------------------------|
| Current assets        | \$125,000                | \$100,000                |
| Plant assets (net)    | 396,000                  | 330,000                  |
| Current liabilities   | 91,000                   | 70,000                   |
| Long-term liabilities | 133,000                  | 95,000                   |
| Common stock, \$1 par | 161,000                  | 115,000                  |
| Retained earnings     | 136,000                  | 150,000                  |

*Prepare horizontal analysis.*  
(SO 3)

### Instructions

Prepare a schedule showing a horizontal analysis for 2013 using 2012 as the base year.

**E18-2** Operating data for Krystal Corporation are presented below.

|                         | <u>2013</u> | <u>2012</u> |
|-------------------------|-------------|-------------|
| Net sales               | \$750,000   | \$600,000   |
| Cost of goods sold      | 465,000     | 390,000     |
| Selling expenses        | 120,000     | 72,000      |
| Administrative expenses | 60,000      | 54,000      |
| Income tax expense      | 33,000      | 24,000      |
| Net income              | 72,000      | 60,000      |

*Prepare vertical analysis.*  
(SO 4)

### Instructions

Prepare a schedule showing a vertical analysis for 2013 and 2012.

Prepare horizontal and vertical analyses. **E18-3** The comparative condensed balance sheets of Monero Corporation are presented below.

(SO 3, 4)

**MONERO CORPORATION**  
Comparative Condensed Balance Sheets  
December 31

|  | 2013      | 2012      |
|--|-----------|-----------|
| Assets                                     |           |           |
| Current assets                             | \$ 74,000 | \$ 80,000 |
| Property, plant, and equipment (net)       | 99,000    | 90,000    |
| Intangibles                                | 27,000    | 40,000    |
| Total assets                               | \$200,000 | \$210,000 |
| Liabilities and stockholders' equity       |           |           |
| Current liabilities                        | \$ 42,000 | \$ 48,000 |
| Long-term liabilities                      | 143,000   | 150,000   |
| Stockholders' equity                       | 15,000    | 12,000    |
| Total liabilities and stockholders' equity | \$200,000 | \$210,000 |

**Instructions**

- (a) Prepare a horizontal analysis of the balance sheet data for Monero Corporation using 2012 as a base.
- (b) Prepare a vertical analysis of the balance sheet data for Monero Corporation in columnar form for 2013.

Prepare horizontal and vertical analyses.

(SO 3, 4)

**E18-4** The comparative condensed income statements of Indra Corporation are shown below.

**INDRA CORPORATION**  
Comparative Condensed Income Statements  
For the Years Ended December 31

|                    | 2013      | 2012      |
|--------------------|-----------|-----------|
| Net sales          | \$600,000 | \$500,000 |
| Cost of goods sold | 483,000   | 420,000   |
| Gross profit       | 117,000   | 80,000    |
| Operating expenses | 57,200    | 44,000    |
| Net income         | \$ 59,800 | \$ 36,000 |

**Instructions**

- (a) Prepare a horizontal analysis of the income statement data for Indra Corporation using 2012 as a base. (Show the amounts of increase or decrease.)
- (b) Prepare a vertical analysis of the income statement data for Indra Corporation in columnar form for both years.

Compute liquidity ratios and compare results.

(SO 5)

**E18-5** Nordstrom, Inc. operates department stores in numerous states. Selected financial statement data for the year ending January 30, 2010, are shown below.

| <b>Nordstrom, Inc.</b><br>Balance Sheet (partial) |             |                   |
|---|-------------|-------------------|
| (in millions)                                     | End-of-Year | Beginning-of-Year |
| Cash and cash equivalents                         | \$ 795      | \$ 72             |
| Accounts receivable (net)                         | 2,035       | 1,942             |
| Merchandise inventory                             | 898         | 900               |
| Prepaid expenses                                  | 88          | 93                |
| Other current assets                              | 238         | 210               |
| Total current assets                              | \$4,054     | \$3,217           |
| Total current liabilities                         | \$2,014     | \$1,601           |

For the year, net sales were \$8,258 and cost of goods sold was \$5,328 (in millions).

### Instructions

- (a) Compute the four liquidity ratios at the end of the year.
- (b) Using the data in the chapter, compare Nordstrom's liquidity with (1) that of **J.C. Penney Company**, and (2) the industry averages for department stores.

**E18-6** Ganesh Incorporated had the following transactions occur involving current assets and current liabilities during February 2012.

*Perform current and acid-test ratio analysis.*

(SO 5)

- Feb. 3 Accounts receivable of \$15,000 are collected.  
 7 Equipment is purchased for \$28,000 cash.  
 11 Paid \$3,000 for a 3-year insurance policy.  
 14 Accounts payable of \$12,000 are paid.  
 18 Cash dividends of \$5,000 are declared.

Additional information:

1. As of February 1, 2012, current assets were \$130,000, and current liabilities were \$50,000.
2. As of February 1, 2012, current assets included \$15,000 of inventory and \$2,000 of prepaid expenses.

### Instructions

- (a) Compute the current ratio as of the beginning of the month and after each transaction.
- (b) Compute the acid-test ratio as of the beginning of the month and after each transaction.

**E18-7** Bella Company has the following comparative balance sheet data.

*Compute selected ratios.*

(SO 5)

### BELLA COMPANY Balance Sheets December 31

|                        | <u>2013</u>      | <u>2012</u>      |
|------------------------|------------------|------------------|
| Cash                   | \$ 15,000        | \$ 30,000        |
| Receivables (net)      | 70,000           | 60,000           |
| Inventory              | 60,000           | 50,000           |
| Plant assets (net)     | 200,000          | 180,000          |
|                        | <u>\$345,000</u> | <u>\$320,000</u> |
| Accounts payable       | \$50,000         | \$60,000         |
| Mortgage payable (15%) | 100,000          | 100,000          |
| Common stock, \$10 par | 140,000          | 120,000          |
| Retained earnings      | 55,000           | 40,000           |
|                        | <u>\$345,000</u> | <u>\$320,000</u> |

Additional information for 2013:

1. Net income was \$25,000.
2. Sales on account were \$410,000. Sales returns and allowances were \$20,000.
3. Cost of goods sold was \$198,000.

### Instructions

Compute the following ratios at December 31, 2013.

- (a) Current.
- (b) Acid-test.
- (c) Receivables turnover.
- (d) Inventory turnover.

**E18-8** Selected comparative statement data for Navin Products Company are presented on the next page. All balance sheet data are as of December 31.

*Compute selected ratios.*

(SO 5)

|                                   | <u>2013</u> | <u>2012</u> |
|-----------------------------------|-------------|-------------|
| Net sales                         | \$760,000   | \$720,000   |
| Cost of goods sold                | 480,000     | 440,000     |
| Interest expense                  | 7,000       | 5,000       |
| Net income                        | 50,000      | 42,000      |
| Accounts receivable               | 120,000     | 100,000     |
| Inventory                         | 85,000      | 75,000      |
| Total assets                      | 580,000     | 500,000     |
| Total common stockholders' equity | 430,000     | 325,000     |

**Instructions**

Compute the following ratios for 2013.

- (a) Profit margin.
- (b) Asset turnover.
- (c) Return on assets.
- (d) Return on common stockholders' equity.

Compute selected ratios.  
(SO 5)

**E18-9** The income statement for Mary Hatch, Inc., appears below.

**MARY HATCH, INC.**  
Income Statement  
For the Year Ended December 31, 2012

|  |                  |
|--|------------------|
| Net sales  | \$400,000        |
| Cost of goods sold   | <u>230,000</u>   |
| Gross profit   | 170,000          |
| Expenses (including \$16,000 interest and \$24,000 income taxes) | <u>105,000</u>   |
| Net income   | <u>\$ 65,000</u> |

Additional information:

1. The weighted-average common shares outstanding in 2012 were 30,000 shares.
2. The market price of Mary Hatch, Inc. stock was \$13 in 2012.
3. Cash dividends of \$26,000 were paid, \$5,000 of which were to preferred stockholders.

**Instructions**

Compute the following ratios for 2012.

- (a) Earnings per share.
- (b) Price-earnings.
- (c) Payout.
- (d) Times interest earned.

Compute amounts from ratios.  
(SO 5)

**E18-10** George Bailey Corporation experienced a fire on December 31, 2013, in which its financial records were partially destroyed. It has been able to salvage some of the records and has ascertained the following balances.

|                         | <u>December 31, 2013</u> | <u>December 31, 2012</u> |
|-------------------------|--------------------------|--------------------------|
| Cash                    | \$ 30,000                | \$ 10,000                |
| Receivables (net)       | 72,500                   | 126,000                  |
| Inventory               | 200,000                  | 180,000                  |
| Accounts payable        | 50,000                   | 90,000                   |
| Notes payable           | 30,000                   | 60,000                   |
| Common stock, \$100 par | 400,000                  | 400,000                  |
| Retained earnings       | 113,500                  | 101,000                  |

Additional information:

1. The inventory turnover is 3.5 times.
2. The return on common stockholders' equity is 24%. The company had no additional paid-in capital.
3. The receivables turnover is 8.8 times.
4. The return on assets is 20%.
5. Total assets at December 31, 2012, were \$605,000.

**Instructions**

Compute the following for George Bailey Corporation.

- (a) Cost of goods sold for 2013.
- (b) Net sales (credit) for 2013.
- (c) Net income for 2013.
- (d) Total assets at December 31, 2013.

**E18-11** Stewart Corporation's comparative balance sheets are presented below.

Compute ratios.

(SO 5)

**STEWART CORPORATION**

Balance Sheets

December 31

|                                    | <u>2012</u>      | <u>2011</u>      |
|------------------------------------|------------------|------------------|
| Cash                               | \$ 4,300         | \$ 3,700         |
| Accounts receivable                | 21,200           | 23,400           |
| Inventory                          | 10,000           | 7,000            |
| Land                               | 20,000           | 26,000           |
| Buildings                          | 70,000           | 70,000           |
| Accumulated depreciation—buildings | (15,000)         | (10,000)         |
| Total                              | <u>\$110,500</u> | <u>\$120,100</u> |
| Accounts payable                   | \$ 12,370        | \$ 31,100        |
| Common stock                       | 75,000           | 69,000           |
| Retained earnings                  | 23,130           | 20,000           |
| Total                              | <u>\$110,500</u> | <u>\$120,100</u> |

Stewart's 2012 income statement included net sales of \$100,000, cost of goods sold of \$60,000, and net income of \$15,000.

**Instructions**

Compute the following ratios for 2012.

- (a) Current ratio.
- (b) Acid-test ratio.
- (c) Receivables turnover.
- (d) Inventory turnover.
- (e) Profit margin.
- (f) Asset turnover.
- (g) Return on assets.
- (h) Return on common stockholders' equity.
- (i) Debt to total assets ratio.

**E18-12** For its fiscal year ending October 31, 2012, Reed Corporation reports the following partial data shown below.

Prepare a correct income statement.

(SO 6)

|                                      |                  |
|--------------------------------------|------------------|
| Income before income taxes           | \$540,000        |
| Income tax expense (30% × \$390,000) | <u>117,000</u>   |
| Income before extraordinary items    | 423,000          |
| Extraordinary loss from flood        | <u>150,000</u>   |
| Net income                           | <u>\$273,000</u> |

The flood loss is considered an extraordinary item. The income tax rate is 30% on all items.

**Instructions**

- (a) Prepare a correct income statement, beginning with income before income taxes.
- (b)  Explain in memo form why the income statement data are misleading.

**E18-13** Potter Corporation has income from continuing operations of \$290,000 for the year ended December 31, 2012. It also has the following items (before considering income taxes).

Prepare income statement.

(SO 6)

1. An extraordinary loss of \$80,000.
2. A gain of \$30,000 on the discontinuance of a division.

3. A correction of an error in last year's financial statements that resulted in a \$20,000 understatement of 2011 net income.

Assume all items are subject to income taxes at a 30% tax rate.

#### Instructions

- (a) Prepare an income statement, beginning with income from continuing operations.  
 (b) Indicate the statement presentation of any item not included in (a) above.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems

Follow the rounding procedures used in the chapter.

Prepare vertical analysis and comment on profitability.

(SO 4, 5)

- P18-1** Comparative statement data for Lionel Company and Barrymore Company, two competitors, appear below. All balance sheet data are as of December 31, 2013, and December 31, 2012.

|                        | Lionel Company |           | Barrymore Company |           |
|------------------------|----------------|-----------|-------------------|-----------|

#### Instructions

- (a) Prepare a vertical analysis of the 2013 income statement data for Lionel Company and Barrymore Company in columnar form.  
 (b)  Comment on the relative profitability of the companies by computing the return on assets and the return on common stockholders' equity ratios for both companies.

Compute ratios from balance sheet and income statement.

(SO 5)

- P18-2** The comparative statements of Larker Tool Company are presented below.

#### LARKER TOOL COMPANY Income Statement For the Years Ended December 31

|                                    | 2013        | 2012        |

**CLARENCE CORPORATION**  
Income Statement  
For the Years Ended December 31

|   | <b>2013</b> | <b>2012</b> |
|---|-------------|-------------|
| Sales revenue                               | \$740,000   | \$700,000   |
| Less: Sales returns and allowances          | 40,000      | 50,000      |
| Net sales                                   | 700,000     | 650,000     |
| Cost of goods sold                          | 420,000     | 400,000     |
| Gross profit                                | 280,000     | 250,000     |
| Operating expenses (including income taxes) | 235,000     | 220,000     |
| Net income                                  | \$ 45,000   | \$ 30,000   |

Additional information:

1. The market price of Clarence's common stock was \$4.00, \$5.00, and \$8.00 for 2011, 2012, and 2013, respectively.
2. All dividends were paid in cash.

**Instructions**

- (a) Compute the following ratios for 2012 and 2013.
- (1) Profit margin.
  - (2) Asset turnover.
  - (3) Earnings per share. (Weighted-average common shares in 2013 were 32,000 and in 2012 were 31,000.)
  - (4) Price-earnings.
  - (5) Payout.
  - (6) Debt to total assets.
- (b)  Based on the ratios calculated, discuss briefly the improvement or lack thereof in financial position and operating results from 2012 to 2013 of Clarence Corporation.

*Compute ratios, and comment on overall liquidity and profitability.*

|  | \$684,000   | \$648,000   |

**ERNIE BISHOP COMPANY**  
Income Statement  
For the Years Ended December 31

|                    | <b>2013</b> | <b>2012</b> |
|--------------------|-------------|-------------|
| Net sales          | \$850,000   | \$790,000   |
| Cost of goods sold | 620,000     | 575,000     |
| Gross profit       | 230,000     | 215,000     |
| Operating expenses | 187,000     | 173,000     |
| Net income         | \$ 43,000   | \$ 42,000   |

Additional information:

1. Inventory at the beginning of 2012 was \$118,000.
2. Total assets at the beginning of 2012 were \$630,000.
3. No common stock transactions occurred during 2012 or 2013.
4. All sales were on account.

**Instructions**

- (a) Indicate, by using ratios, the change in liquidity and profitability of Ernie Bishop Company from 2012 to 2013. (*Note:* Not all profitability ratios can be computed.)
- (b) Given below are three independent situations and a ratio that may be affected. For each situation, compute the affected ratio (1) as of December 31, 2013, and (2) as of December 31, 2014, after giving effect to the situation. Net income for 2014 was \$50,000. Total assets on December 31, 2014, were \$700,000.

| Situation  | Ratio                                 |
|--|---------------------------------------|
| (1) 18,000 shares of common stock were sold at par on July 1, 2014.  | Return on common stockholders' equity |
| (2) All of the notes payable were paid in 2014. The only change in liabilities was that the notes payable were paid. | Debt to total assets                  |
| (3) Market price of common stock was \$9 on December 31, 2013, and \$12.80 on December 31, 2014.                     | Price-earnings ratio                  |

**P18-5** Selected financial data of **Target** and **Wal-Mart** for a recent year are presented here (in millions).

*Compute selected ratios, and compare liquidity, profitability, and solvency for two companies.*

| Current liabilities                        | \$11,782                                | \$ 58,454                    |
| Long-term debt                             | 17,471                                  | 40,452                       |
| Total stockholders' equity                 | 15,307                                  | 64,608                       |
| Total liabilities and stockholders' equity | \$44,560                                | \$163,514                    |

|   | <b>Target<br/>Corporation</b>     | <b>Wal-Mart<br/>Stores, Inc.</b> |
|---|-----------------------------------|----------------------------------|
|   | <b>Beginning-of-Year Balances</b> |                                  |
| Total assets                              | \$37,349                          | \$151,587                        |
| Total stockholders' equity                | 15,633                            | 61,573                           |
| Current liabilities                       | 11,117                            | 52,148                           |
| Total liabilities                         | 21,716                            | 90,014                           |
|   | <b>Other Data</b>                 |                                  |
| Average net receivables                   | \$ 7,124                          | \$ 3,247                         |
| Average inventory                         | 6,517                             | 34,433                           |
| Net cash provided by operating activities | 4,125                             | 20,354                           |

**Instructions**

- (a) For each company, compute the following ratios.
- |                                |  |
|--------------------------------|--|
| (1) Current.                   | (7) Asset turnover.                        |
| (2) Receivables turnover.      | (8) Return on assets.                      |
| (3) Average collection period. | (9) Return on common stockholders' equity. |
| (4) Inventory turnover.        | (10) Debt to total assets.                 |
| (5) Days in inventory.         | (11) Times interest earned.                |
| (6) Profit margin.             |  |
- (b) Compare the liquidity, profitability, and solvency of the two companies.

Compute numerous ratios.  
(SO 5)

**P18-6** The comparative statements of Beulah Company are presented below.

**BEULAH COMPANY**  
Income Statement  
For the Years Ended December 31

|                            | <b>2013</b>      | <b>2012</b>      |
|----------------------------|------------------|------------------|
| Net sales (all on account) | \$600,000        | \$520,000        |
| Expenses                   |                  |                  |

| Total liabilities and stockholders' equity  | <u><u>\$ ?</u></u> | <u><u>\$7,000,000</u></u> |

Additional information:

1. The receivables turnover for 2013 is 10 times.
2. All sales are on account.
3. The profit margin for 2013 is 14.5%.
4. Return on assets is 22% for 2013.
5. The current ratio on December 31, 2013, is 3.0.
6. The inventory turnover for 2013 is 4.8 times.

### Instructions

Compute the missing information given the ratios above. Show computations. (*Note:* Start with one ratio and derive as much information as possible from it before trying another ratio. List all missing amounts under the ratio used to find the information.)

Prepare income statement with discontinued operations and extraordinary loss.

(SO 6)

**P18-8** Violet Bick Corporation owns a number of cruise ships and a chain of hotels. The hotels, which have not been profitable, were discontinued on September 1, 2012. The 2012 operating results for the company were as follows.

|                    |                            |
|--------------------|----------------------------|
| Operating revenues | \$12,850,000               |
| Operating expenses | <u>8,700,000</u>           |
| Operating income   | <u><u>\$ 4,150,000</u></u> |

Analysis discloses that these data include the operating results of the hotel chain, which were: operating revenues \$2,000,000 and operating expenses \$2,400,000. The hotels were sold at a gain of \$200,000 before taxes. This gain is not included in the operating results. During the year, Violet Bick suffered an extraordinary loss of \$800,000 before taxes, which is not included in the operating results. In 2012, the company had other revenues and gains of \$100,000, which are not included in the operating results. The corporation is in the 30% income tax bracket.

### Instructions

Prepare a condensed income statement.

Prepare income statement with nontypical items.

(SO 6)

**P18-9** The ledger of Gower Corporation at December 31, 2012, contains the following summary data.

|                          |             |                           |             |
|--------------------------|-------------|---------------------------|-------------|
| Net sales                | \$1,700,000 | Cost of goods sold        | \$1,100,000 |
| Selling expenses         | 120,000     | Administrative expenses   | 150,000     |
| Other revenues and gains | 20,000      | Other expenses and losses | 28,000      |

Your analysis reveals the following additional information that is not included in the above data.

1. The entire puzzles division was discontinued on August 31. The income from operations for this division before income taxes was \$20,000. The puzzles division was sold at a loss of \$90,000 before income taxes.
2. On May 15, company property was expropriated for an interstate highway. The settlement resulted in an extraordinary gain of \$120,000 before income taxes.
3. The income tax rate on all items is 30%.

### Instructions

Prepare an income statement for the year ended December 31, 2012. Use the format illustrated in the Comprehensive **Do it!** (p. 852).

## Problems: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set B.

### Continuing Cookie Chronicle

(Note: This is a continuation of the Cookie Chronicle from Chapters 1 through 17.)

**CCC18** Natalie and Curtis have comparative balance sheets and income statements for Cookie & Coffee Creations Inc. They have been told that they can use these financial statements to prepare horizontal and vertical analyses, and to calculate financial ratios, to analyze how their business is doing and to make some decisions they have been considering.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

## BROADENING YOUR PERSPECTIVE

### Financial Reporting and Analysis

#### Financial Reporting Problem: PepsiCo, Inc.

**BYP18-1** Your parents are considering investing in PepsiCo common stock. They ask you, as an accounting expert, to make an analysis of the company for them. Fortunately, excerpts from a current annual report of PepsiCo are presented in Appendix A of this textbook. Note that all dollar amounts are in millions.

##### Instructions

(Follow the approach in the chapter for rounding numbers.)

- Make a 5-year trend analysis, using 2005 as the base year, of (1) net sales and (2) net income. Comment on the significance of the trend results.
- Compute for 2009 and 2008 the (1) profit margin, (2) asset turnover, (3) return on assets, and (4) return on common stockholders' equity. How would you evaluate PepsiCo's profitability? Total assets at December 31, 2007, were \$34,628 and total stockholders' equity at December 31, 2007, was \$17,325.
- Compute for 2009 and 2008 the (1) debt to total assets and (2) times interest earned ratio. How would you evaluate PepsiCo's long-term solvency?
- What information outside the annual report may also be useful to your parents in making a decision about PepsiCo, Inc.?

#### Comparative Analysis Problem: PepsiCo, Inc. vs. The Coca-Cola Company

**BYP18-2** PepsiCo's financial statements are presented in Appendix A. Financial statements of The Coca-Cola Company are presented in Appendix B.

##### Instructions

- Based on the information contained in these financial statements, determine each of the following for each company.
  - The percentage increase (decrease) in (i) net sales and (ii) net income from 2008 to 2009.
  - The percentage increase in (i) total assets and (ii) total common stockholders' (shareholders') equity from 2008 to 2009.
  - The basic earnings per share and price-earnings ratio for 2009. (For both PepsiCo and Coca-Cola, use the basic earnings per share.) Coca-Cola's common stock had a market price of \$56.06 at the end of fiscal-year 2009, and PepsiCo's common stock had a market price of \$60.07.
- What conclusions concerning the two companies can be drawn from these data?

## On the Web

**BYP18-3** The Management Discussion and Analysis section of an annual report addresses corporate performance for the year, and sometimes uses financial ratios to support its claims.

**Address:** [www.ibm.com/investor/tools/index.phtml](http://www.ibm.com/investor/tools/index.phtml) or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

### Steps

1. Choose **How to read annual reports** (in the Guides section).
2. Choose **Anatomy**.

### Instructions

Using the information from the above site, answer the following questions.

- (a) What are the optional elements that are often included in an annual report?
- (b) What are the elements of an annual report that are required by the SEC?
- (c) Describe the contents of the Management Discussion.
- (d) Describe the contents of the Auditors' Report.
- (e) Describe the contents of the Selected Financial Data.

## Critical Thinking

### Decision Making Across the Organization

**BYP18-4** As the CPA for Carismo Manufacturing Inc., you have been asked to develop some key ratios from the comparative financial statements. This information is to be used to convince creditors that the company is solvent and will continue as a going concern. The data requested and the computations developed from the financial statements follow.

|                    | <u>2012</u> | <u>2011</u> |
|--------------------|-------------|-------------|
| Current ratio      | 3.1 times   | 2.1 times   |
| Acid-test ratio    | .8 times    | 1.4 times   |
| Asset turnover     | 2.8 times   | 2.2 times   |
| Net income         | Up 32%      | Down 8%     |
| Earnings per share | \$3.30      | \$2.50      |

### Instructions

With the class divided into groups, complete the following.

Carismo Manufacturing Inc. asks you to prepare a list of brief comments stating how each of these items supports the solvency and going-concern potential of the business. The company wishes to use these comments to support its presentation of data to its creditors. You are to prepare the comments as requested, giving the implications and the limitations of each item separately. Then prepare a collective inference that may be drawn from the individual items about Carismo's solvency and going-concern potential.

### Communication Activity

**BYP18-5** Beth Harlan is the CEO of Lafferty's Electronics. Harlan is an expert engineer but a novice in accounting. She asks you to explain (1) the bases for comparison in analyzing Lafferty's financial statements, and (2) the factors affecting quality of earnings.

### Instructions

Write a letter to Beth Harlan that explains the bases for comparison and factors affecting quality of earnings.

### Ethics Case

**BYP18-6** Jack McClintock, president of McClintock Industries, wishes to issue a press release to bolster his company's image and maybe even its stock price, which has been gradually falling. As controller, you have been asked to provide a list of 20 financial ratios along with some other operating statistics relative to McClintock Industries' first quarter financials and operations.

Two days after you provide the ratios and data requested, Jeremy Phelps, the public relations director of McClintock, asks you to prove the accuracy of the financial and operating data contained in the press release written by the president and edited by Jeremy. In the press release, the president highlights the sales increase of 25% over last year's first quarter and the positive change in the current ratio from 1.5:1 last year to 3:1 this year. He also emphasizes that production was up 50% over the prior year's first quarter.

You note that the press release contains only positive or improved ratios and none of the negative or deteriorated ratios. For instance, no mention is made that the debt to total assets ratio has increased from 35% to 55%, that inventories are up 89%, and that while the current ratio improved, the acid-test ratio fell from 1:1 to .5:1. Nor is there any mention that the reported profit for the quarter would have been a loss had not the estimated lives of McClintock's plant and machinery been increased by 30%. Jeremy emphasized, "The prez wants this release by early this afternoon."

### Instructions

- (a) Who are the stakeholders in this situation?
- (b) Is there anything unethical in president McClintock's actions?
- (c) Should you as controller remain silent? Does Jeremy have any responsibility?

## "All About You" Activity

**BYP18-7** In this chapter, you learned how to use many tools for performing a financial analysis of a company. When making personal investments, however, it is most likely that you won't be buying stocks and bonds in individual companies. Instead, when most people want to invest in stock, they buy mutual funds. By investing in a mutual fund, you reduce your risk because the fund diversifies by buying the stock of a variety of different companies, bonds, and other investments, depending on the stated goals of the fund.

Before you invest in a fund, you will need to decide what type of fund you want. For example, do you want a fund that has the potential of high growth (but also high risk), or are you looking for lower risk and a steady stream of income? Do you want a fund that invests only in U.S. companies, or do you want one that invests globally? Many resources are available to help you with these types of decisions.

### Instructions

Go to <http://web.archive.org/web/20050210200843/http://www.cnb1.com/invallocmdl.htm> and complete the investment allocation questionnaire. Add up your total points to determine the type of investment fund that would be appropriate for you.

## FASB Codification Activity

**BYP18-8** If your school has a subscription to the FASB Codification, go to <http://aaahq.org/ascLogin.cfm> to log in and prepare responses to the following. Use the Master Glossary for determining the proper definitions.

- (a) Discontinued operations.
- (b) Extraordinary items.
- (c) Comprehensive income.

### Answers to Insight and Accounting Across the Organization Questions

**p. 836 How to Manage the Current Ratio** **Q:** How might management influence a company's current ratio? **A:** Management can affect the current ratio by speeding up or withholding payments on accounts payable just before the balance sheet date. Management can alter the cash balance by increasing or decreasing long-term assets or long-term debt, or by issuing or purchasing common stock.

**p. 848 What Does "Non-Recurring" Really Mean?** **Q:** If a company takes a large restructuring charge, what is the effect on the company's current income statement versus future ones? **A:** The current period's net income can be greatly diminished by a large restructuring charge. The net incomes in future periods can be enhanced because they are relieved of costs (i.e., depreciation and labor expenses) that would have been charged to them.

### Answers to Self-Test Questions

1. b 2. d 3. a 4. c 5. c  $(\$360,000 \div 300,000)$  6. c 7. c 8. b  $\$306,000 \div [(\$54,000 + \$48,000) \div 2] = 6; 365 \div 6$  9. b  $(\$81,000 \div \$27,000)$  10. a  $\$134,000 \div \$784,000$  11. d  $(\$134,000 - \$4,000) \div [(\$240,000 + \$198,000) \div 2]$  12. c  $(\$134,000 + \$22,000 + \$12,000) \div \$12,000$  13. c 14. d  $(\$400,000 - (25\% \times \$400,000)); \$100,000 - (25\% \times \$100,000)$  15. d

## IFRS A Look at IFRS

The first sections of this chapter, dealing with the tools of financial analysis, are the same throughout the world. Techniques such as vertical and horizontal analysis, for example, are tools used by analysts regardless of whether GAAP- or IFRS-related financial statements are being evaluated. In addition, the ratios provided in the textbook are the same ones that are used internationally.

The latter part of this chapter relates to the income statement and irregular items. As in GAAP, the income statement is a required statement under IFRS. In addition, the content and presentation of an IFRS income statement is similar to the one used for GAAP. *IAS 1* (revised), “Presentation of Financial Statements,” provides general guidelines for the reporting of income statement information. In general, the differences in the presentation of financial statement information are relatively minor.

### IFRS Additions to the Textbook

- The tools of financial statement analysis covered in this chapter are universal and therefore no significant differences exist in the analysis methods used.
- The basic objectives of the income statement are the same under both GAAP and IFRS. As indicated in the textbook, a very important objective is to ensure that users of the income statement can evaluate the earning power of the company. Earning power is the normal level of income to be obtained in the future. Thus, both the IASB and the FASB are interested in distinguishing normal levels of income from irregular items in order to better predict a company’s future profitability.
- The basic accounting for discontinued operations is the same under IFRS and GAAP.
- Under IFRS, there is no classification for extraordinary items. In other words, extraordinary item treatment is prohibited under IFRS. All revenue and expense items are considered ordinary in nature. Disclosure, however, is extensive for items that are considered material to the financial results. Examples are write-downs of inventory or plant assets, or gains and losses on the sale of plant assets.
- The accounting for changes in accounting principles and changes in accounting estimates are the same for both GAAP and IFRS.
- The income statement under IFRS is referred to as a *statement of comprehensive income*. The statement of comprehensive income can be prepared under the one-statement approach or the two-statement approach.
- The issues related to quality of earnings are the same under both GAAP and IFRS. It is hoped that by adopting a more principles-based approach, as found in IFRS, that many of the earnings’ quality issues will disappear.

### Looking to the Future

The FASB and the IASB are working on a project that would rework the structure of financial statements. Recently, the IASB decided to require a statement of comprehensive income, similar to what was required under GAAP. In addition, another part of this project addresses the issue of how to classify various items in the income statement. A main goal of this new approach is to provide information that better represents how businesses are run. In addition, the approach draws attention away from one number — net income.

### IFRS Self-Test Questions

1. The basic tools of financial analysis are the same under both GAAP and IFRS *except* that:
  - (a) horizontal analysis cannot be done because the format of the statements is sometimes different.

# CHAPTER 19

## Managerial Accounting

### Study Objectives

After studying this chapter, you should be able to:

- 1 Explain the distinguishing features of managerial accounting.
- 2 Identify the three broad functions of management.
- 3 Define the three classes of manufacturing costs.
- 4 Distinguish between product and period costs.
- 5 Explain the difference between a merchandising and a manufacturing income statement.
- 6 Indicate how cost of goods manufactured is determined.
- 7 Explain the difference between a merchandising and a manufacturing balance sheet.
- 8 Identify trends in managerial accounting.

### Feature Story

#### THINK FAST

The business world changes rapidly. To survive you must make well-informed, quick decisions. Consider this. In January 1998, **Compaq Computer** was the largest seller of personal computers and *Forbes* magazine's "company of the year." During the next two years, it lost \$2 billion and its CEO was out of a job.

Compaq fell victim to **Dell Computer**. Dell pioneered a new way of making and selling computers. It reengineered its supply chain so that it could produce computers with the exact features that customers ordered, ship them within 24 hours of taking the order, and invest almost no money in inventory. Compaq was not able to respond quickly enough. Ultimately, it merged with **Hewlett-Packard (HP)**.

After the merger of HP and Compaq, HP lost significant market share in the PC

market to Dell because its cost structure made it hard to compete with Dell on price. To make matters worse for HP, Dell then began selling computer printers, a business that HP had always

dominated. Many people predicted that Dell would soon reign supreme over the printer business as well.

Just when it appeared that Dell could not be beat, HP regained its footing and Dell stumbled. By June 2008, HP had accomplished a remarkable three-year turnaround. With more than \$100 billion in sales, HP had become the biggest technology company in the world. How did it do it? HP adopted “lean” manufacturing practices so it could compete with Dell on price. In addition, it developed exciting design innovations that it marketed successfully in retail stores, as compared to Dell’s online sales approach.

Perhaps most importantly, HP has expanded its consulting and data storage services. You can only sell a piece of equipment once. But consulting services provide ongoing, high-margin revenue that frequently results in additional hardware sales. To further expand its service revenue opportunities, in 2008 HP acquired Electronic Data Services (EDS) for \$13.9 billion. Although many industry analysts questioned the decision, HP says the move was based on a sound strategy. Now management must prove that it was the correct decision for the future.

- *Management Insight: How Many Labor Hours to Build a Car?* (p. 886)
- *Service Company Insight: Low Fares but Decent Profits* (p. 894)
- *Management Insight: Bananas Receive Special Treatment* (p. 897)

## Preview of CHAPTER 19

This chapter focuses on issues illustrated in the Feature Story about **Compaq Computer**, **Hewlett-Packard**, and **Dell**. These include determining and controlling the costs of material, labor, and overhead and the relationship between costs and profits. In previous chapters, you learned about the form and content of **financial statements for external users** of financial information, such as stockholders and creditors. These financial statements represent the principal product of financial accounting. Managerial accounting focuses primarily on the preparation of **reports for internal users** of financial information, such as the managers and officers of a company. In today's rapidly changing global environment, managers often make decisions that determine their company's fate—and their own. Managers are evaluated on the results of their decisions. Managerial accounting provides tools for assisting management in making decisions and for evaluating the effectiveness of those decisions.

The content and organization of this chapter are as follows.

| Managerial Accounting  |   |   |  |

## Managerial Accounting Basics

**Managerial accounting**, also called **management accounting**, is a field of accounting that provides economic and financial information for managers and other internal users. The activities that are part of managerial accounting (and the chapters in which they are discussed in this textbook) are as follows.

1. Explaining manufacturing and nonmanufacturing costs and how they are reported in the financial statements (Chapter 19).
2. Computing the cost of providing a service or manufacturing a product (Chapters 20 and 21).
3. Determining the behavior of costs and expenses as activity levels change and analyzing cost–volume–profit relationships within a company (Chapter 22).
4. Assisting management in profit planning and formalizing these plans in the form of budgets (Chapter 23).
5. Providing a basis for controlling costs and expenses by comparing actual results with planned objectives and standard costs (Chapters 24 and 25).
6. Accumulating and presenting data for management decision making (Chapter 26).

Managerial accounting applies to all types of businesses—service, merchandising, and manufacturing. It also applies to all forms of business organizations—proprietorships, partnerships, and corporations. Not-for-profit entities as well as profit-oriented enterprises need managerial accounting.

In the past, managerial accountants were primarily engaged in cost accounting—collecting and reporting costs to management. Recently that role has changed significantly. First as the business environment has become more automated, methods to determine the amount and type of cost in a product have changed. Second, managerial accountants are now held responsible for strategic cost management; that is, they assist in evaluating how well the company is employing its resources. As a result, managerial accountants now serve as team members alongside personnel from production, marketing, and engineering when the company makes critical strategic decisions.

Opportunities for managerial accountants to advance within the company are considerable. Financial executives must have a background that includes an understanding of managerial accounting concepts. Whatever your position in the company—marketing, sales, or production, knowledge of managerial accounting greatly improves your opportunities for advancement. As the CEO of **Microsoft** noted: “If you’re supposed to be making money in business and supposed to be satisfying customers and building market share, there are numbers that characterize those things. And if somebody can’t sort of speak to me quantitatively about it, then I’m nervous.”

## Comparing Managerial and Financial Accounting

There are both similarities and differences between managerial and financial accounting. First, each field of accounting deals with the economic events of a business. Thus, their interests overlap. For example, *determining* the unit cost of manufacturing a product is part of managerial accounting. *Reporting* the total cost of goods manufactured and sold is part of financial accounting. In addition, both managerial and financial accounting require that a company’s economic events be quantified and communicated to interested parties.

Illustration 19-1 illustrates the principal differences between financial accounting and managerial accounting. The need for various types of economic data is responsible for many of the differences.

### Study Objective [1]

Explain the distinguishing features of managerial accounting.

**Illustration 19-1**  
Differences between financial and managerial accounting

| Financial Accounting  |                                       | Managerial Accounting  |

**Study Objective [2]**

Identify the three broad functions of management.

## Management Functions

Managers' activities and responsibilities can be classified into three broad functions:

1. Planning.
2. Directing.
3. Controlling.

In performing these functions, managers make decisions that have a significant impact on the organization.

**Planning** requires managers to look ahead and to establish objectives. These objectives are often diverse: maximizing short-term profits and market share, maintaining a commitment to environmental protection, and contributing to social programs. For example, **Hewlett-Packard**, in an attempt to gain a stronger foothold in the computer industry, has greatly reduced its prices to compete with **Dell**. A key objective of management is to add **value** to the business under its control. Value is usually measured by the trading price of the company's stock and by the potential selling price of the company.

**Directing** involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. This function relates to implementing planned objectives and providing necessary incentives to motivate employees. For example, manufacturers such as **Campbell Soup Company**, **General Motors**, and **Dell** must coordinate purchasing, manufacturing, warehousing, and selling. Service corporations such as **American Airlines**, **FedEx**, and **AT&T** must coordinate scheduling, sales, service, and acquisitions of equipment and supplies. Directing also involves selecting executives, appointing managers and supervisors, and hiring and training employees.

## MANAGEMENT INSIGHT

### Even the Best Have to Get Better

**Louis Vuitton** is a French manufacturer of high-end handbags, wallets, and suitcases.

Its reputation for quality and style allows it to charge extremely high prices—for example, \$700 for a tote bag. But often in the past, when demand was hot, supply was nonexistent—shelves were empty, and would-be buyers left empty-handed.

Luxury-goods manufacturers used to consider stock-outs to be a good thing, but recently Louis Vuitton changed its attitude. The company adopted “lean” processes used by car manufacturers and electronics companies to speed up production of “hot” products. Work is done by flexible teams, with jobs organized based on how long a task takes. By reducing wasted time and eliminating bottlenecks, what used to take 20 to 30 workers eight days to do now takes 6 to 12 workers one day. Also, production employees who used to specialize on a single task on a single product are now multiskilled. This allows them to quickly switch products to meet demand.

To make sure that the factory is making the right products, within a week of a product launch, Louis Vuitton stores around the world feed sales information to the headquarters in France, and production is adjusted accordingly. Finally, the new production processes have also improved quality. Returns of some products are down by two-thirds, which makes quite a difference to the bottom line when the products are pricey.

Source: Christina Passariello, “Louis Vuitton Tries Modern Methods on Factory Lines,” *Wall Street Journal* (October 9, 2006).

**?** What are some of the steps that this company has taken in order to ensure that production meets demand? (See page 921.)

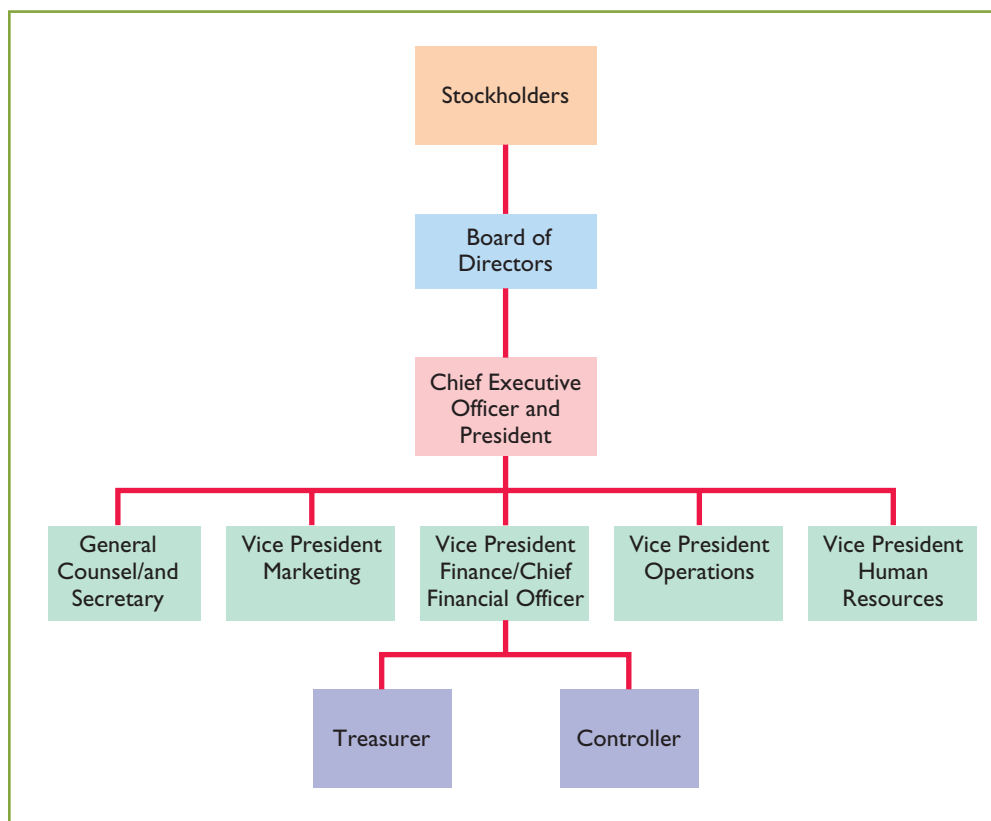

The third management function, **controlling**, is the process of keeping the company's activities on track. In controlling operations, managers determine whether planned goals are being met. When there are deviations from targeted objectives, managers must decide what changes are needed to get back on track. Scandals at companies like **Enron**, **Lucent**, and **Xerox** attest to the fact that companies must have adequate controls to ensure that the company develops and distributes accurate information.

How do managers achieve control? A smart manager in a small operation can make personal observations, ask good questions, and know how to evaluate the answers. But using this approach in a large organization would result in chaos. Unless there is some record of what has happened and what is expected to occur, imagine the president of **Dell** attempting to determine whether the company is meeting its planned objectives. Thus, large businesses typically use a formal system of evaluation. These systems include such features as budgets, responsibility centers, and performance evaluation reports—all of which are features of managerial accounting.

Decision making is not a separate management function. Rather, it is the outcome of the exercise of good judgment in planning, directing, and controlling.

## Organizational Structure

In order to assist in carrying out management functions, most companies prepare **organization charts** to show the interrelationships of activities and the delegation of authority and responsibility within the company. Illustration 19-2 shows a typical organization chart, which outlines the delegation of responsibility.

**Illustration 19-2**  
Corporation's organization chart

Stockholders own the corporation, but they manage it indirectly through a **board of directors** they elect. Even not-for-profit organizations have boards of directors. The board formulates the operating policies for the company or organization.

The board also selects officers, such as a president and one or more vice presidents, to execute policy and to perform daily management functions.

The **chief executive officer (CEO)** has overall responsibility for managing the business. Obviously, even in a small business, in order to accomplish organizational objectives, the company relies on delegation of responsibilities. As the organization chart in Illustration 19-2 (page 881) shows, the CEO delegates responsibilities to other officers. Each member of the organization has a clearly defined role to play.

Responsibilities within the company are frequently classified as either line or staff positions. Employees with **line positions** are directly involved in the company's primary revenue-generating operating activities. Examples of line positions include the vice president of operations, vice president of marketing, plant managers, supervisors, and production personnel. Employees with **staff positions** are involved in activities that support the efforts of the line employees. In a firm like **General Electric** or **ExxonMobile**, employees in finance, legal, and human resources have staff positions. While activities of staff employees are vital to the company, these employees are nonetheless there to serve the line employees who engage in the company's primary operations.

The **chief financial officer (CFO)** is responsible for all of the accounting and finance issues the company faces. The CFO is supported by the **controller** and the **treasurer**. The controller's responsibilities include (1) maintaining the accounting records, (2) maintaining an adequate system of internal control, and (3) preparing financial statements, tax returns, and internal reports. The treasurer has custody of the corporation's funds and is responsible for maintaining the company's cash position.

Also serving the CFO is the internal audit staff. The staff's responsibilities include reviewing the reliability and integrity of financial information provided by the controller and treasurer. Staff members also ensure that internal control systems are functioning properly to safeguard corporate assets. In addition, they investigate compliance with policies and regulations, and in many companies they determine whether resources are being used in the most economical and efficient fashion.

The vice president of operations oversees employees with line positions. For example, the company might have multiple plant managers, each of whom would report to the vice president of operations. Each plant would also have department managers, such as fabricating, painting, and shipping, each of whom would report to the plant manager.

## **Business Ethics**

As indicated throughout the textbook, all employees within an organization are expected to act ethically in their business activities. Given the importance of ethical behavior to corporations and their owners (stockholders), an increasing number of organizations provide codes of business ethics for their employees.

Despite these efforts, recent business scandals resulted in massive investment losses and numerous employee layoffs. A recent survey of fraud by international accounting firm KPMG reported a 13% increase in instances of corporate fraud compared to five years earlier. It noted that while employee fraud (such things as expense-account abuse, payroll fraud, and theft of assets) represented 60% of all instances of fraud, financial reporting fraud (the intentional misstatement of financial reports) was the most costly to companies. That should not be surprising given the long list of companies such as **Enron**, **Global Crossing**, **WorldCom**, and others that engaged in massive financial frauds which led to huge financial losses and thousands of lost jobs.

### **CREATING PROPER INCENTIVES**

Companies like **Motorola**, **IBM**, and **Nike** use complex systems to control and evaluate the actions of managers. They dedicate substantial resources to monitor and effectively evaluate the actions of employees. Unfortunately, these systems and

controls sometimes unwittingly create incentives for managers to take unethical actions. For example, companies prepare budgets to provide direction. Because the budget is also used as an evaluation tool, some managers try to “game” the budgeting process by underestimating their division’s predicted performance so that it will be easier to meet their performance targets. On the other hand, if the budget is set at unattainable levels, managers sometimes take unethical actions to meet the targets in order to receive higher compensation or, in some cases, to keep their jobs.

For example, in recent years, airline manufacturer **Boeing** was plagued by a series of scandals including charges of over-billing, corporate espionage, and illegal conflicts of interest. Some long-time employees of Boeing blame the decline in ethics on a change in the corporate culture that took place after Boeing merged with **McDonnell Douglas**. They suggest that evaluation systems implemented after the merger to monitor results and evaluate employee performance made employees believe they needed to succeed no matter what.

As another example, manufacturing companies need to establish production goals for their processes. Again, if controls are not effective and realistic, problems develop. To illustrate, **Schering-Plough**, a pharmaceutical manufacturer, found that employees were so concerned with meeting production standards that they failed to monitor the quality of the product, and as a result the dosages were often wrong.

### CODE OF ETHICAL STANDARDS

In response to ethical scandals in 2000 and 2001, the U.S. Congress enacted legislation to help prevent lapses in internal control. This legislation, referred to as the **Sarbanes-Oxley Act of 2002 (SOX)**, has important implications for the financial community. One result of SOX was to clarify top management’s responsibility for the company’s financial statements. CEOs and CFOs must now certify that financial statements give a fair presentation of the company’s operating results and its financial condition. In addition, top managers must certify that the company maintains an adequate system of internal controls to safeguard the company’s assets and ensure accurate financial reports.

Another result of Sarbanes-Oxley is that companies now pay more attention to the composition of the board of directors. In particular, the audit committee of the board of directors must be comprised entirely of independent members (that is, nonemployees) and must contain at least one financial expert.

Finally, to increase the likelihood of compliance with the rules that are part of the new legislation, the law substantially increases the penalties for misconduct.

To provide guidance for managerial accountants, the Institute of Management Accountants (IMA) has developed a code of ethical standards, entitled *IMA Statement of Ethical Professional Practice*. Management accountants should not commit acts in violation of these standards. Nor should they condone such acts by others within their organizations. We include the IMA code of ethical standards in Appendix F at the end of the book. Throughout the chapters on managerial accounting, we will address various ethical issues faced by managers.

## Do it!

Indicate whether the following statements are true or false.

1. Managerial accountants have a single role within an organization, collecting and reporting costs to management.
2. Financial accounting reports are general-purpose and intended for external users.
3. Managerial accounting reports are special-purpose and issued as frequently as needed.

## Managerial Accounting Concepts

**action plan**

- ✓ Understand that managerial accounting is a field of accounting that provides economic and financial information for managers and other internal users.
- ✓ Understand that financial accounting provides information for external users.
- ✓ Analyze which users require which different types of information.

4. Managers' activities and responsibilities can be classified into three broad functions: cost accounting, budgeting, and internal control.
5. As a result of the Sarbanes-Oxley Act of 2002, managerial accounting reports must now comply with generally accepted accounting principles (GAAP).
6. Top managers must certify that a company maintains an adequate system of internal controls.

**Solution**

1. False. Managerial accounts today must help determine the amount and type of a cost in product. In addition, managerial accountants are now held responsible for evaluating how well the company is employing its resources. As a result, when the company makes critical strategic decisions, managerial accountants now serve as team members alongside personnel from production, marketing, and engineering.
2. True.
3. True.
4. False. Managers' activities are classified into three broad functions: planning, directing, and controlling. Planning requires managers to look ahead to establish objectives. Directing involves coordinating a company's diverse activities and human resources to produce a smooth-running operation. Controlling is keeping the company's activities on track.
5. False. SOX clarifies top management's responsibility for the company's financial statements. In addition, top managers must certify that the company maintains an adequate system of internal control to safeguard the company's assets and ensure accurate financial reports.
6. True.

Related exercise material: BE19-1, BE19-2, BE19-3, E19-1, and **Do it!** 19-1.

## Managerial Cost Concepts

In order for managers at companies like **Dell** or **Hewlett-Packard** to plan, direct, and control operations effectively, they need good information. One very important type of information is related to costs. Managers should ask questions such as the following.

1. What costs are involved in making a product or providing a service?
2. If we decrease production volume, will costs decrease?
3. What impact will automation have on total costs?
4. How can we best control costs?

To answer these questions, managers need reliable and relevant cost information. We now explain and illustrate the various cost categories that companies use.

### **Manufacturing Costs**

**Manufacturing** consists of activities and processes that convert raw materials into finished goods. Contrast this type of operation with merchandising, which sells merchandise in the form in which it is purchased. Manufacturing costs are typically classified as shown in Illustration 19-3.

#### **Study Objective [3]**

Define the three classes of manufacturing costs.

**Illustration 19-3**  
Classifications of  
manufacturing costs

### DIRECT MATERIALS

To obtain the materials that will be converted into the finished product, the manufacturer purchases raw materials. **Raw materials** are the basic materials and parts used in the manufacturing process. For example, auto manufacturers such as **General Motors**, **Ford**, and **Toyota** use steel, plastics, and tires as raw materials in making cars.

Raw materials that can be physically and directly associated with the finished product during the manufacturing process are **direct materials**. Examples include flour in the baking of bread, syrup in the bottling of soft drinks, and steel in the making of automobiles. Direct materials for **Hewlett-Packard** and **Dell Computer** include plastic, glass, hard drives, and processing chips.

But some raw materials cannot be easily associated with the finished product. These are called indirect materials. **Indirect materials** have one of two characteristics: (1) They do not physically become part of the finished product (such as lubricants and polishing compounds). Or (2) they cannot be traced because their physical association with the finished product is too small in terms of cost (such as cotter pins and lock washers). Companies account for indirect materials as part of **manufacturing overhead**.

### DIRECT LABOR

The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is **direct labor**. Bottlers at **Coca-Cola**, bakers at **Sara Lee**, and typesetters at **Aptara Corp.** are employees whose activities are usually classified as direct labor. **Indirect labor** refers to the work of employees that has no physical association with the finished product, or for which it is impractical to trace costs to the goods produced. Examples include wages of maintenance people, time-keepers, and supervisors. Like indirect materials, companies classify indirect labor as **manufacturing overhead**.

### MANUFACTURING OVERHEAD

**Manufacturing overhead** consists of costs that are indirectly associated with the manufacture of the finished product. These costs may also be manufacturing costs that cannot be classified as direct materials or direct labor. Manufacturing overhead includes indirect materials, indirect labor, depreciation on factory buildings and machines, and insurance, taxes, and maintenance on factory facilities.

One study found the following magnitudes of the three different product costs as a percentage of the total product cost: direct materials 54%, direct labor 13%, and manufacturing overhead 33%. Note that the direct labor component is the smallest. This component of product cost is dropping substantially because of automation. Companies are working hard to increase productivity by decreasing labor.

A **Nissan Motor** plant in Tennessee produces Altima automobiles using only 15.74 labor hours per vehicle compared to 26 to 28 hours per vehicle at **Ford** and **Daimler** plants, for example. In some companies, direct labor has become as little as 5% of the total cost.

Allocating materials and labor costs to specific products is fairly straightforward. Good record keeping can tell a company how much plastic it used in making each type of gear, or how many hours of factory labor it took to assemble a part. But allocating overhead costs to specific products presents problems. How much of the purchasing agent's salary is attributable to the hundreds of different products made in the same plant? What about the grease that keeps the machines humming, or the computers that make sure paychecks come out on time? Boiled down to its simplest form, the question becomes: Which products cause the incurrence of which costs? In subsequent chapters, we show various methods of allocating overhead to products.

### Alternative Terminology

Some companies use terms such as *factory overhead*, *indirect manufacturing costs*, and *burden* instead of manufacturing overhead.

## MANAGEMENT INSIGHT

### How Many Labor Hours to Build a Car?

**Nissan** and **Toyota** were number 1 and 2 in a recent annual study of labor productivity in the auto industry. But U.S. auto manufacturers showed improvements. Labor represents about 15% of the total cost to make a vehicle. Since Nissan required only 28.46 labor hours per vehicle, it saves about \$300 to \$450 in labor costs to build a car relative to **Ford**, the least-efficient manufacturer. **General Motors (GM)** has shown steady improvement over the years. In 1998 it needed almost 17 more hours of labor than Toyota to build a car; it now needs only 4 more hours than Toyota. **Chrysler** says that much of its improvement in labor productivity has come from designing cars that are easier to build. For example, Chrysler noted that its Toledo Jeep Wrangler plant used 12.69 man-hours to produce the sport utility vehicles made there in 2008. That was an improvement over the prior year's figure of 13.57 man-hours.

Vellequette, "3 Metro Automotive Plants Again Tops in Productivity: But Industry Study Limits Touting of Performance," *Tribune Business News* (September 1, 2009).

? Why might Nissan production require significantly fewer labor hours? (See page 921.)

### Study Objective [4]

Distinguish between product and period costs.

### Alternative Terminology

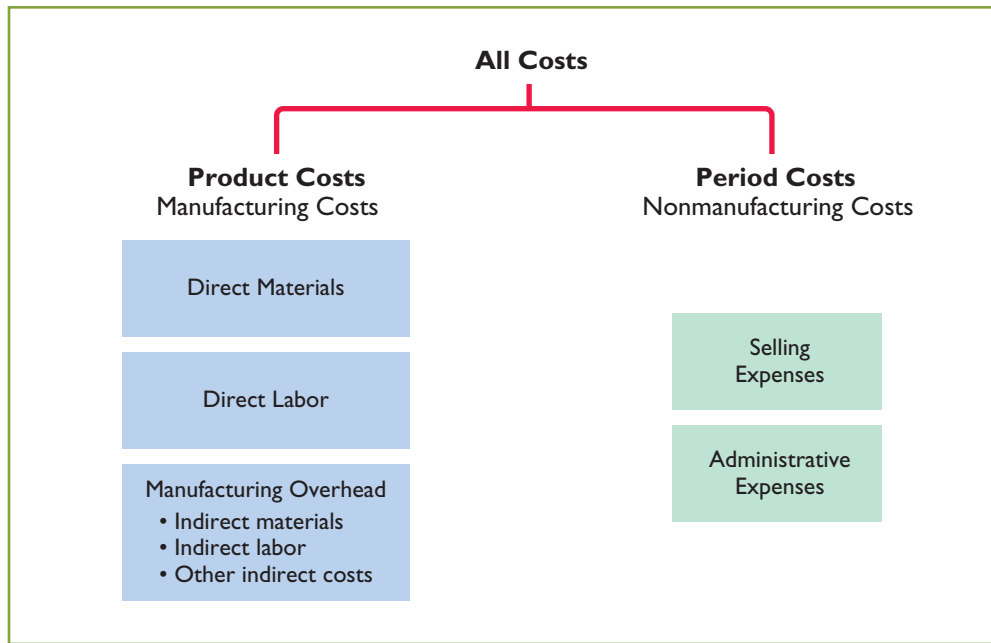

Product costs are also called *inventoriable costs*.

## Product versus Period Costs

Each of the manufacturing cost components—direct materials, direct labor, and manufacturing overhead—are product costs. As the term suggests, **product costs** are costs that are a necessary and integral part of producing the finished product. Companies record product costs, when incurred, as inventory. Under the matching principle, these costs do not become expenses until the company sells the finished goods inventory. At that point, the company records the expense as cost of goods sold.

**Period costs** are costs that are matched with the revenue of a specific time period rather than included as part of the cost of a salable product. These are non-manufacturing costs. Period costs include selling and administrative expenses. In order to determine net income, companies deduct these costs from revenues in the period in which they are incurred.

Illustration 19-4 summarizes these relationships and cost terms. Our main concern in this chapter is with product costs.

**Illustration 19-4**  
Product versus period costs

## Do it!

A bicycle company has these costs: tires, salaries of employees who put tires on the wheels, factory building depreciation, lubricants, spokes, salary of factory manager, handlebars, and salaries of factory maintenance employees. Classify each cost as direct materials, direct labor, or overhead.

### Solution

Tires, spokes, and handlebars are direct materials. Salaries of employees who put tires on the wheels are direct labor. All of the other costs are manufacturing overhead.

Related exercise material: BE19-4, BE19-5, BE19-6, BE19-7, E19-2, E19-3, E19-4, E19-5, E19-6, E19-7, and **Do it!** 19-2.

## Managerial Cost Concepts

### action plan

- ✓ Classify as direct materials any raw materials that can be physically and directly associated with the finished product.
- ✓ Classify as direct labor the work of factory employees that can be physically and directly associated with the finished product.
- ✓ Classify as manufacturing overhead any costs that are indirectly associated with the finished product.

# Manufacturing Costs in Financial Statements

The financial statements of a manufacturer are very similar to those of a merchandiser. For example, you will find many of the same sections and same accounts in the financial statements of **Procter & Gamble** that you find in the financial statements of **Dick's Sporting Goods**. The principal differences between their financial statements occur in two places: the cost of goods sold section in the income statement and the current assets section in the balance sheet.

## Income Statement

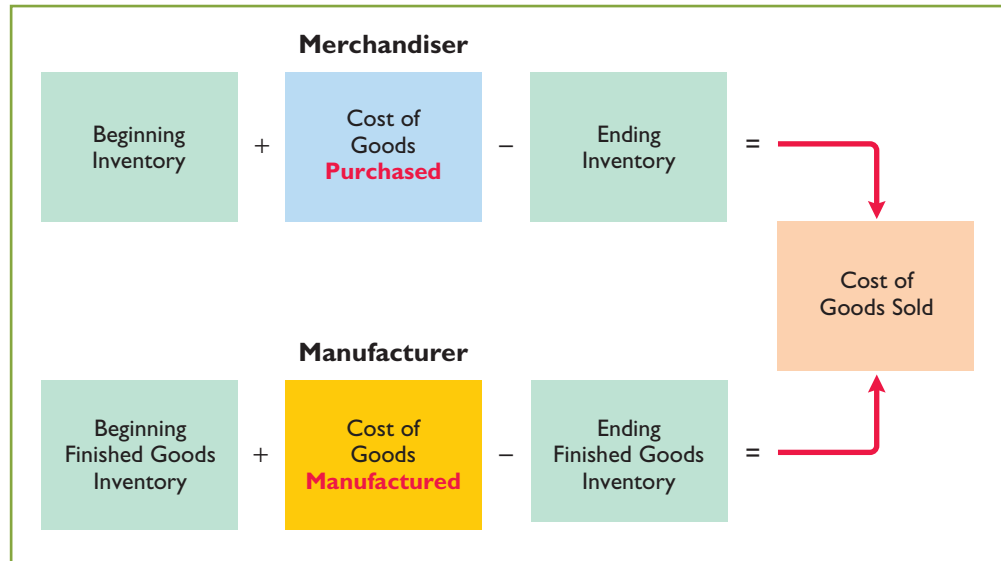

Under a periodic inventory system, the income statements of a merchandiser and a manufacturer differ in the cost of goods sold section. Merchandisers compute cost

### Study Objective [5]

Explain the difference between a merchandising and a manufacturing income statement.

of goods sold by adding the beginning inventory to the **cost of goods purchased** and subtracting the ending inventory. Manufacturers compute cost of goods sold by adding the beginning finished goods inventory to the **cost of goods manufactured** and subtracting the ending finished goods inventory. Illustration 19-5 shows these different methods.

**Illustration 19-5**  
Cost of goods sold components

**Helpful Hint**

We assume a periodic inventory system in this illustration.

A number of accounts are involved in determining the cost of goods manufactured. To eliminate excessive detail, income statements typically show only the total cost of goods manufactured. A separate statement, called a Cost of Goods Manufactured Schedule, presents the details. (For more information, see the discussion on page 889 and Illustration 19-8.)

**Illustration 19-6**  
Cost of goods sold sections of merchandising and manufacturing income statements

Illustration 19-6 shows the different presentations of the cost of goods sold sections for merchandising and manufacturing companies. The other sections of an income statement are similar for merchandisers and manufacturers.

**Cost of Goods Manufactured**

**Study Objective [6]**  
Indicate how cost of goods manufactured is determined.

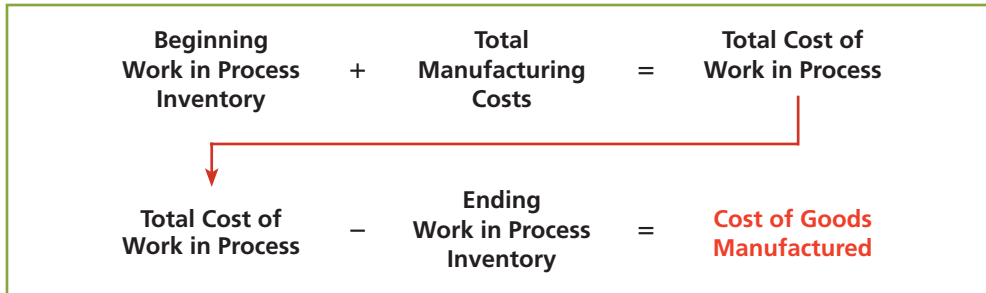

An example may help show how companies determine the cost of goods manufactured. Assume that HP has a number of computers in various stages of production on January 1. In total, these partially completed units are called **beginning work in process inventory**. The costs the company assigns to beginning work in process inventory are based on the **manufacturing costs incurred in the prior period**.

HP first uses the manufacturing costs incurred in the current year to complete the work that was in process on January 1. It then incurs manufacturing costs for production of new orders. The sum of the direct materials costs, direct

labor costs, and manufacturing overhead incurred in the current year is the **total manufacturing costs** for the current period.

We now have two cost amounts: (1) the cost of the beginning work in process and (2) the total manufacturing costs for the current period. The sum of these costs is the **total cost of work in process** for the year.

At the end of the year, HP may have some computers that are only partially completed. The costs of these units become the cost of the **ending work in process inventory**. To find the **cost of goods manufactured**, we subtract this cost from the total cost of work in process. Illustration 19-7 shows the formula for determining the cost of goods manufactured.

**Illustration 19-7**  
Cost of goods manufactured formula

### COST OF GOODS MANUFACTURED SCHEDULE

The **cost of goods manufactured schedule** reports cost elements used in calculating cost of goods manufactured. Illustration 19-8 shows the schedule for Olsen Manufacturing Company (using assumed data). The schedule presents detailed data for direct materials and for manufacturing overhead.

Review Illustration 19-7 and then examine the cost of goods manufactured schedule in Illustration 19-8. You should be able to distinguish between “Total

| Factory insurance   | <u>8,360</u>                   |
| Total manufacturing overhead  | <u>54,800</u>                  |
| <b>Total manufacturing costs</b>  | <b><u>376,800</u></b>          |
| Total cost of work in process   | 395,200                        |
| <b>Less: Work in process, December 31</b>                                   | <b><u>25,200</u></b>           |
| <b>Cost of goods manufactured</b>   | <b><u><u>\$370,000</u></u></b> |

**Illustration 19-8**  
Cost of goods manufactured schedule

manufacturing costs” and “Cost of goods manufactured.” The difference is the effect of the change in work in process during the period.

## Do it!

### Cost of Goods Manufactured

The following information is available for Keystone Manufacturing Company.

|                                 | <u>March 1</u> | <u>March 31</u> |
|---------------------------------|----------------|-----------------|
| Raw material inventory          | \$12,000       | \$10,000        |
| Work in process inventory       | 2,500          | 4,000           |
| Materials purchased in March    | \$ 90,000      |                 |
| Direct labor in March           | 75,000         |                 |
| Manufacturing overhead in March | 220,000        |                 |

Prepare the cost of goods manufactured schedule for the month of March.

#### action plan

- ✓ Start with beginning work in process as the first item in the cost of goods manufactured schedule.
- ✓ Sum direct materials used, direct labor, and total manufacturing overhead to determine total manufacturing costs.
- ✓ Sum beginning work in process and total manufacturing costs to determine total cost of work in process.
- ✓ Cost of goods manufactured is the total cost of work in process less ending work in process.

#### Solution

| <b>KEYSTONE MANUFACTURING COMPANY</b> |                |                |                         |

### Study Objective [7]

Explain the difference between a merchandising and a manufacturing balance sheet.

## Balance Sheet

The balance sheet for a merchandising company shows just one category of inventory. In contrast, the balance sheet for a manufacturer may have three inventory accounts, as shown in Illustration 19-9.

| Raw Materials Inventory   | Work in Process Inventory   | Finished Goods Inventory  |
|---|---|---|
|  |                         |  |
| Shows the cost of raw materials on hand.  | Shows the cost applicable to units that have been started into production but are only partially completed. | Shows the cost of completed goods on hand.  |

### Illustration 19-9

Inventory accounts for a manufacturer

Finished Goods Inventory is to a manufacturer what Inventory is to a merchandiser. Each of these classifications represents the goods that are available for sale.

The current assets sections presented in Illustration 19-10 contrast the presentations of inventories for merchandising and manufacturing companies. Manufacturing companies generally list their inventories in the order of their liquidity—the order in which they are expected to be realized in cash. Thus, finished goods inventory comes first. The remainder of the balance sheet is similar for the two types of companies.

| Merchandising Company<br>Balance Sheet<br>December 31, 2012 |                  | Manufacturing Company<br>Balance Sheet<br>December 31, 2012 |                  |
|---|------------------|---|------------------|
| Current assets  |                  | Current assets  |                  |
| Cash  | \$100,000        | Cash  | \$180,000        |
| Receivables (net)   | 210,000          | Receivables (net)   | 210,000          |
| <b>Inventory</b>  | <b>400,000</b>   | <b>Inventories</b>  |                  |
| Prepaid expenses  | 22,000           | <b>Finished goods</b>                                       | <b>\$80,000</b>  |
| Total current assets  | <u>\$732,000</u> | <b>Work in process</b>                                      | <b>25,200</b>    |
|   |                  | <b>Raw materials</b>  | <b>22,800</b>    |
|   |                  | Prepaid expenses  | 18,000           |
|   |                  | Total current assets  | <u>\$536,000</u> |

**Illustration 19-10**  
Current assets sections of merchandising and manufacturing balance sheets

Each step in the accounting cycle for a merchandiser applies to a manufacturer. For example, prior to preparing financial statements, manufacturers make adjusting entries. The adjusting entries are essentially the same as those of a merchandiser. The closing entries are also similar for manufacturers and merchandisers. *For expanded coverage, go to the Student Companion site and select Chapter 19, Accounting Cycle (Worksheet) for a Manufacturing Company.*

## Cost Concepts—A Review

You have learned a number of cost concepts in this chapter. Because many of these concepts are new, we provide here an extended example for review. Suppose you started your own snowboard factory, Terrain Park Boards. Think that's impossible? Burton Snowboards was started by Jake Burton Carpenter, when he was only 23 years old. Jake initially experimented with 100 different prototype designs before settling on a final design. Then Jake, along with two relatives and a friend, started making 50 boards per day in Londonderry, Vermont. Unfortunately, while they made a lot of boards in their first year, they were only able to sell 300 of them. To get by during those early years, Jake taught tennis and tended bar to pay the bills.

Here are some of the costs that your snowboard factory would incur.

1. The materials cost of each snowboard (wood cores, fiberglass, resins, metal screw holes, metal edges, and ink) is \$30.
2. The labor costs (for example, to trim and shape each board using jig saws and band saws) are \$40.
3. Depreciation on the factory building and equipment (for example, presses, grinding machines, and lacquer machines) used to make the snowboards is \$25,000 per year.
4. Property taxes on the factory building (where the snowboards are made) are \$6,000 per year.
5. Advertising costs (mostly online and catalogue) are \$60,000 per year.

6. Sales commissions related to snowboard sales are \$20 per snowboard.
7. Salaries for maintenance employees are \$45,000 per year.
8. The salary of the plant manager is \$70,000.
9. The cost of shipping is \$8 per snowboard.

Illustration 19-11 shows how Terrain Park Boards would assign these manufacturing and selling costs to the various categories.

#### Illustration 19-11

Assignment of costs to cost categories

| Cost Item  | Product Costs    |              |                        | Period Costs |
|--|------------------|--------------|------------------------|--------------|
|  | Direct Materials | Direct Labor | Manufacturing Overhead |              |
| 1. Material cost (\$30) per board                                | X                |              |                        |              |
| 2. Labor costs (\$40) per board                                  |                  | X            |                        |              |
| 3. Depreciation on factory equipment (\$25,000 per year)         |                  |              | X                      |              |
| 4. Property taxes on factory building (\$6,000 per year)         |                  |              | X                      |              |
| 5. Advertising costs (\$60,000 per year)                         |                  |              |                        | X            |
| 6. Sales commissions (\$20 per board)                            |                  |              |                        | X            |
| 7. Maintenance salaries (factory facilities) (\$45,000 per year) |                  |              | X                      |              |
| 8. Salary of plant manager (\$70,000)                            |                  |              | X                      |              |
| 9. Cost of shipping boards (\$8 per board)                       |                  |              |                        | X            |

Remember that total manufacturing costs are the sum of the **product costs**—direct materials, direct labor, and manufacturing overhead. If Terrain Park Boards produces 10,000 snowboards the first year, the total manufacturing costs would be \$846,000 as shown in Illustration 19-12.

#### Illustration 19-12

Computation of total manufacturing costs

| Cost Number and Item                         | Manufacturing Cost      |
|--|-------------------------|
| 1. Material cost ( $\$30 \times 10,000$ )    | \$300,000               |
| 2. Labor cost ( $\$40 \times 10,000$ )       | 400,000                 |
| 3. Depreciation on factory equipment         | 25,000                  |
| 4. Property taxes on factory building        | 6,000                   |
| 7. Maintenance salaries (factory facilities) | 45,000                  |
| 8. Salary of plant manager                   | 70,000                  |
| <b>Total manufacturing costs</b>             | <b><u>\$846,000</u></b> |

Knowing the total manufacturing costs, Terrain Park Boards can compute the manufacturing cost per unit. Assuming 10,000 units, the cost to produce one snowboard is \$84.60 ( $\$846,000 \div 10,000$  units).

In subsequent chapters, we will use extensively the cost concepts discussed in this chapter. Study Illustration 19-11 carefully. If you do not understand any of these classifications, go back and reread the appropriate section in this chapter.

## Product Costing for Service Industries

The Feature Story notes HP's belief that its greatest opportunities for growth are in technology services, not hardware. In fact, much of the U.S. economy has shifted toward an emphasis on services. Today, more than 50% of U.S. workers are employed by service companies. Airlines, marketing agencies, cable companies, and governmental agencies are just a few examples of service companies. How do service companies differ from manufacturing companies? One good way to differentiate these two different types of companies is by how quickly the product is used or consumed by the customer—services are consumed immediately. For example, when a restaurant produces a meal, that meal is not put in inventory, but it is instead consumed immediately. An airline uses special equipment to provide its product, but again, the output of that equipment is consumed immediately by the customer in the form of a flight. And a marketing agency performs services for its clients that are immediately consumed by the customer in the form of a marketing plan. For a manufacturing company, like **Boeing**, it often has a long lead time before its airplane is used or consumed by the customer.

In presenting our initial examples, we used manufacturing companies because accounting for the manufacturing environment requires the use of the broadest range of accounts. That is, the accounts used by service companies represent a subset of those used by manufacturers because service companies are not producing inventory. Neither the restaurant, the airline, or the marketing agency discussed above produces an inventoriable product. However, just like a manufacturer, each needs to keep track of the costs of its services in order to know whether it is generating a profit. A successful restaurateur needs to know the cost of each offering on the menu, an airline needs to know the cost of flight service to each destination, and a marketing agency needs to know the cost to develop a marketing plan. Thus, the techniques shown in this chapter, to accumulate manufacturing costs to determine manufacturing inventory, are equally useful for determining the costs of providing services.

For example, let's consider the costs that HP might incur on a consulting engagement. A significant portion of its costs would be salaries of consulting personnel. It might also incur travel costs, materials, software costs, and depreciation charges on equipment used by the employees to provide the consulting service. In the same way that it needs to keep track of the cost of manufacturing its computers and printers, HP needs to know what its costs are on each consulting job. It could prepare a cost of services provided schedule similar to the cost of goods manufactured schedule in Illustration 19-8. The structure would be essentially the same as the cost of goods manufactured schedule, but section headings would be reflective of the costs of the particular service organization.

Managers of service companies look to managerial accounting to answer many questions. In some instances, the managerial accountant may need to develop new systems for measuring the cost of serving individual customers. In others, companies may need new operating controls to improve the quality and efficiency of specific services. Many of the examples we present in subsequent chapters will be based on service companies. To highlight the relevance of the techniques used in this course for service companies, we have placed a service company icon next to those items in the text and end-of-chapter materials that relate to nonmanufacturing companies.

### Ethics Note

Do telecommunications companies have an obligation to provide service to remote or low-user areas for a fee that may be less than the cost of the service?

## SERVICE COMPANY INSIGHT

### Low Fares but Decent Profits

During 2008, when other airlines were cutting flight service due to the recession, **Allegiant Airlines** increased capacity by 21%. Sounds crazy, doesn't it? But it must know something, because while the other airlines were losing money, it was generating profits. Consider also that its average one-way fare is only \$83. So how does it make money? As a low-budget airline, it focuses on controlling costs. It purchases used planes for \$4 million each rather than new planes for \$40 million. It flies out of small towns, so wages are low and competition is nonexistent. It only flies a route if its 150-passenger planes are nearly full (it averages about 90% of capacity). If a route isn't filling up, it quits flying it as often or cancels it altogether. It adjusts its prices weekly. The bottom line is that it knows its costs to the penny. Knowing what your costs are might not be glamorous, but it sure beats losing money.

Source: Susan Carey, "For Allegiant, Getaways Mean Profits," *Wall Street Journal Online* (February 18, 2009).

**?** What are some of the line items that would appear in the cost of services provided schedule of an airline? (See page 921.)

# Managerial Accounting Today

**Study Objective [8]**  
Identify trends in managerial accounting.

In recent years, the competitive environment for U.S. business has changed significantly. For example, the airline, financial services, and telecommunications industries have been deregulated. Global competition has intensified. The world economy now has the European Union (EU), North American Free Trade Agreement (NAFTA), and Association of Southeast Asian Nations (ASEAN). Countries like China and India are becoming economic powerhouses. As indicated earlier, managerial accountants must be forward-looking, acting as advisors and information providers to different parts of the organization. Some of the issues they face are discussed below.

## The Value Chain

The **value chain** refers to all activities associated with providing a product or service. For a manufacturer these include research and development, product design, acquisition of raw materials, production, sales and marketing, delivery, customer relations, and subsequent service. Illustration 19-13 depicts the value chain for a manufacturer. In recent years, companies have made huge strides in analyzing all stages of the value chain in an effort to improve productivity and eliminate waste. Japanese automobile manufacturer **Toyota** pioneered many of these innovations.

**Illustration 19-13**  
A manufacturer's value chain

In the 1980s, many companies purchased giant machines to replace humans in the manufacturing process. These machines were designed to produce large batches of products. In recent years these large-batch manufacturing processes have been recognized as wasteful. They require vast amounts of inventory storage capacity and considerable movement of materials. Consequently, many companies have reengineered their manufacturing processes. As one example, the manufacturing company **Pratt and Whitney** has replaced many large machines with smaller, more flexible ones and has begun reorganizing its plants for more efficient flow of goods. Pratt and Whitney was able to reduce the time that its turbine engine blades spend in the grinding section of its factory from 10 days down to 2 hours. It cut the total amount of time spent making a blade from 22 days to 7 days. Analysis of the value chain has made companies far more responsive to customer needs and has improved profitability.

## Technological Change

Technology has played a large role in the value chain. Computerization and automation have permitted companies to be more effective in streamlining production and thus enhancing the value chain. For example, many companies now employ **enterprise resource planning (ERP)** software systems to manage their value chain. ERP systems provide a comprehensive, centralized, integrated source of information that companies can use to manage all major business processes, from purchasing to manufacturing to human resources.

In large companies, an ERP system might replace as many as 200 individual software packages. For example, an ERP system can eliminate the need for individual software packages for personnel, inventory management, receivables, and payroll. Because the value chain extends beyond the walls of the company, ERP systems enable a two-way flow of information between a company and its major suppliers, customers, and business partners. Such systems both collect and disperse information throughout the value chain. The largest ERP provider, German corporation **SAP AG**, has more than 36,000 customers worldwide.

Another example of technological change is **computer-integrated manufacturing (CIM)**. Using CIM, many companies can now manufacture products that are untouched by human hands. An example is the use of robotic equipment in the steel and automobile industries. Workers monitor the manufacturing process by watching instrument panels. Automation significantly reduces direct labor costs in many cases.

Also, the widespread use of computers has greatly reduced the cost of accumulating, storing, and reporting managerial accounting information. Computers now make it possible to do more detailed costing of products, processes, and services than was possible under manual processing.

Technology is also affecting the value chain through business-to-business (B2B) e-commerce on the Internet. The Internet has dramatically changed the way corporations do business with one another. Interorganizational information systems connected over the Internet enable suppliers to share information nearly instantaneously. The Internet has also changed the marketplace, often cutting out intermediaries. Industries such as the automobile, airline, hotel, and electronics industries have made commitments to purchase some or all of their supplies and raw materials in the huge B2B electronic marketplaces. For example, **Hilton Hotels** recently agreed to purchase as much as \$1.5 billion of bed sheets, pest control services, and other items from an online supplier, **PurchasePro.com**.

## Just-in-Time Inventory Methods

Many companies have significantly lowered inventory levels and costs using **just-in-time (JIT) inventory** methods. Under a just-in-time method, goods are manufactured or purchased just in time for use. As noted in the Feature Story, **Dell** is

### Ethics Note

Does just-in-time inventory justify “just-in-time” employees obtained through temporary employment services?

famous for having developed a system for making computers in response to individual customer requests. Even though each computer is custom-made to meet each customer’s specifications, it takes Dell less than 48 hours to assemble the computer and put it on a truck. By integrating its information systems with those of its suppliers, Dell reduced its inventories to nearly zero. This is a huge advantage in an industry where products become obsolete nearly overnight.

## Quality

JIT inventory systems require an increased emphasis on product quality. If products are produced only as they are needed, it is very costly for the company to have to stop production because of defects or machine breakdowns. Many companies have installed **total quality management (TQM)** systems to reduce defects in finished products. The goal is to achieve zero defects. These systems require timely data on defective products, rework costs, and the cost of honoring warranty contracts. Often, companies use this information to help redesign the product in a way that makes it less prone to defect. Or they may use the information to reengineer the production process to reduce setup time and decrease the potential for error. TQM systems also provide information on nonfinancial measures such as customer satisfaction, number of service calls, and time to generate reports. Attention to these measures, which employees can control, leads to increased profitability.

## Activity-Based Costing

As discussed earlier, overhead costs have become an increasingly large component of product and service costs. By definition, overhead costs cannot be directly traced to individual products. But to determine each product’s cost, overhead must be **allocated** to the various products. In order to obtain more accurate product costs, many companies now allocate overhead using **activity-based costing (ABC)**. Under ABC, companies allocate overhead based on each product’s use of activities in making the product. For example, companies can keep track of their cost of setting up machines for each batch of a production process. Then companies can allocate part of the total set-up cost to a particular product based on the number of set-ups that product required.

Activity-based costing is beneficial because it results in more accurate product costing and in more careful scrutiny of all activities in the value chain. For example, if a product’s cost is high because it requires a high number of set-ups, management will be motivated to determine how to produce the product using the optimal number of machine set-ups. Both manufacturing and service companies now widely use ABC. **Allied Signal** and **Coca-Cola** have both enjoyed improved results from ABC. **Fidelity Investments** uses ABC to identify which customers cost the most to serve.

## Theory of Constraints

All companies have certain aspects of their business that create “bottlenecks”—constraints that limit the company’s potential profitability. An important aspect of managing the value chain is identifying these constraints. The **theory of constraints** is a specific approach used to identify and manage constraints in order to achieve the company’s goals. Automobile manufacturer **General Motors** has implemented the theory of constraints in all of its North American plants. GM has found that it is most profitable when it focuses on fixing bottlenecks, rather than worrying about whether all aspects of the company are functioning at full capacity. It has greatly

improved the company's ability to effectively use overtime labor while meeting customer demand.

## MANAGEMENT INSIGHT

### Bananas Receive Special Treatment

When it comes to total quality management, few companies can compare with **Chiquita Brands International**. Grocery store customers are very picky about bananas—bad bananas are consistently the number one grocery store complaint. Because bananas often account for up to 3% of a grocery store's sales, Chiquita goes to great lengths to protect the popular fruit. While bananas are in transit from Central America, “black box” recording devices attached to shipping crates ensure that they are kept in an environment of 90% humidity and an unvarying 55-degree temperature. Upon arrival in the U.S., bananas are ripened in airtight warehouses that use carefully monitored levels of ethylene gas. Regular checks are made of each warehouse using ultrasonic detectors that can detect leaks the size of a pinhole. Says one grocery store executive, “No other item in the store has this type of attention and resources devoted to it.”

Source: Devon Spurgeon, “When Grocers in U.S. Go Bananas Over Bad Fruit, They Call Laubenthal,” *Wall Street Journal* (August 14, 2000), p. A1.

**?** Why is it important to keep track of costs that are incurred to improve product quality? (See page 921.)

## Balanced Scorecard

As companies implement various business practice innovations, managers sometimes focus too enthusiastically on the latest innovation, to the detriment of other areas of the business. For example, in focusing on improving quality, companies sometimes have lost sight of cost/benefit considerations. Similarly, in focusing on reducing inventory levels through just-in-time, companies sometimes have lost sales due to inventory shortages. The **balanced scorecard** is a performance-measurement approach that uses both financial and nonfinancial measures to evaluate all aspects of a company's operations in an **integrated** fashion. The performance measures are linked in a cause-and-effect fashion to ensure that they all tie to the company's overall objectives.

For example, the company may desire to increase its return on assets, a common financial performance measure (calculated as net income divided by average total assets). It will then identify a series of linked goals. If the company accomplishes each goal, the ultimate result will be an increase in return on assets. For example, in order to increase return on assets, sales must increase. In order to increase sales, customer satisfaction must be increased. In order to increase customer satisfaction, product defects must be reduced. In order to reduce product defects, employee training must be increased. Note the linkage, which starts with employee training and ends with return on assets. Each objective will have associated performance measures.

The use of the balanced scorecard is widespread among well-known and respected companies. For example, **Hilton Hotels Corporation** uses the balanced scorecard to evaluate the performance of employees at all of its hotel chains. **Wal-Mart** employs the balanced scorecard, and actually extends its use to evaluation of its suppliers. For example, Wal-Mart recently awarded **Welch Company** the “Dry Grocery Division Supplier of the Year Award” for its balanced scorecard results. We discuss the balanced scorecard further in Chapter 25.

**Do it!****Trends in Managerial Accounting****action plan**

✓ Develop a forward-looking view, in order to advise and provide information to various members of the organization.

✓ Understand current business trends and issues.

Match the descriptions that follow with the corresponding terms.

**Descriptions:**

- \_\_\_\_\_ All activities associated with providing a product or service.
- \_\_\_\_\_ A method of allocating overhead based on each product's use of activities in making the product.
- \_\_\_\_\_ Systems implemented to reduce defects in finished products with the goal of achieving zero defects.
- \_\_\_\_\_ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.
- \_\_\_\_\_ Inventory system in which goods are manufactured or purchased just as they are needed for use.

**Terms:**

- Activity-based costing
- Balanced scorecard
- Just-in-time (JIT) inventory
- Total quality management (TQM)
- Value chain

**COMPREHENSIVE****Do it! 1**

Giant Manufacturing Co. specializes in manufacturing different models of bicycles. Assume that the market has responded enthusiastically to a new model, the Jaguar. As a result, the company has established a separate manufacturing facility to produce these bicycles. The company produces 1,000 of these bicycles per month. Giant's monthly manufacturing cost and other expenses data related to these bicycles are as follows.

|  |                |
|--|----------------|
| 1. Rent on manufacturing equipment (lease cost)              | \$2,000/month  |
| 2. Insurance on manufacturing building                       | \$750/month    |
| 3. Raw materials (frames, tires, etc.)                       | \$80/bicycle   |
| 4. Utility costs for manufacturing facility                  | \$1,000/month  |
| 5. Supplies for administrative office                        | \$800/month    |
| 6. Wages for assembly line workers in manufacturing facility | \$30/bicycle   |
| 7. Depreciation on office equipment                          | \$650/month    |
| 8. Miscellaneous materials (lubricants, solders, etc.)       | \$1.20/bicycle |
| 9. Property taxes on manufacturing building                  | \$2,400/year   |
| 10. Manufacturing supervisor's salary                        | \$3,000/month  |
| 11. Advertising for bicycles                                 | \$30,000/year  |
| 12. Sales commissions  | \$10/bicycle   |
| 13. Depreciation on manufacturing building                   | \$1,500/month  |

**Instructions**

- (a) Prepare an answer sheet with the following column headings.

| Cost Item | Product Costs    |              |                        | Period Costs |
|-----------|------------------|--------------|------------------------|--------------|
|           | Direct Materials | Direct Labor | Manufacturing Overhead |              |

Enter each cost item on your answer sheet, placing an “X” under the appropriate headings.

- (b) Compute total manufacturing costs for the month.

**Solution to Comprehensive Do it! 1**

| (a) | Cost Item  | Product Costs    |              |                        | Period Costs |
|-----|--|------------------|--------------|------------------------|--------------|
|     |  | Direct Materials | Direct Labor | Manufacturing Overhead |              |
|     | 1. Rent on manufacturing equipment (\$2,000/month)         |                  |              | X                      |              |
|     | 2. Insurance on manufacturing building (\$750/month)       |                  |              | X                      |              |
|     | 3. Raw materials (\$80/bicycle)                            | X                |              |                        |              |
|     | 4. Manufacturing utilities (\$1,000/month)                 |                  |              | X                      |              |
|     | 5. Office supplies (\$800/month)                           |                  |              |                        | X            |
|     | 6. Wages for workers (\$30/bicycle)                        |                  | X            |                        |              |
|     | 7. Depreciation on office equipment (\$650/month)          |                  |              |                        | X            |
|     | 8. Miscellaneous materials (\$1.20/bicycle)                |                  |              | X                      |              |
|     | 9. Property taxes on manufacturing building (\$2,400/year) |                  |              | X                      |              |
|     | 10. Manufacturing supervisor's salary (\$3,000/month)      |                  |              | X                      |              |
|     | 11. Advertising cost (\$30,000/year)                       |                  |              |                        | X            |
|     | 12. Sales commissions (\$10/bicycle)                       |                  |              |                        | X            |
|     | 13. Depreciation on manufacturing building (\$1,500/month) |                  |              | X                      |              |

| (b) | Cost Item  | Manufacturing Cost |
|-----|--|--------------------|
|     | Rent on manufacturing equipment                                | \$ 2,000           |
|     | Insurance on manufacturing building                            | 750                |
|     | Raw materials ( $\$80 \times 1,000$ )                          | 80,000             |
|     | Manufacturing utilities  | 1,000              |
|     | Labor ( $\$30 \times 1,000$ )                                  | 30,000             |
|     | Miscellaneous materials ( $\$1.20 \times 1,000$ )              | 1,200              |
|     | Property taxes on manufacturing building ( $\$2,400 \div 12$ ) | 200                |
|     | Manufacturing supervisor's salary                              | 3,000              |
|     | Depreciation on manufacturing building                         | 1,500              |
|     | Total manufacturing costs                                      | <u>\$119,650</u>   |

## COMPREHENSIVE

## Do it! 2

Superior Manufacturing Company has the following cost and expense data for the year ending December 31, 2012.

|                           |           |                                  |           |
|---------------------------|-----------|----------------------------------|-----------|
| Raw materials, 1/1/12     | \$ 30,000 | Insurance, factory               | \$ 14,000 |
| Raw materials, 12/31/12   | 20,000    | Property taxes, factory building | 6,000     |
| Raw materials purchases   | 205,000   | Sales (net)                      | 1,500,000 |
| Indirect materials        | 15,000    | Delivery expenses                | 100,000   |
| Work in process, 1/1/12   | 80,000    | Sales commissions                | 150,000   |
| Work in process, 12/31/12 | 50,000    | Indirect labor                   | 90,000    |
| Finished goods, 1/1/12    | 110,000   | Factory machinery rent           | 40,000    |
| Finished goods, 12/31/12  | 120,000   | Factory utilities                | 65,000    |
| Direct labor              | 350,000   | Depreciation, factory building   | 24,000    |
| Factory manager's salary  | 35,000    | Administrative expenses          | 300,000   |

## Instructions

- Prepare a cost of goods manufactured schedule for Superior Company for 2012.
- Prepare an income statement for Superior Company for 2012.
- Assume that Superior Company's ledgers show the balances of the following current asset accounts: Cash \$17,000, Accounts Receivable (net) \$120,000, Prepaid Expenses \$13,000, and Short-term Investments \$26,000. Prepare the current assets section of the balance sheet for Superior Company as of December 31, 2012.

## action plan

- ✓ Start with beginning work in process as the first item in the cost of goods manufactured schedule.
- ✓ Sum direct materials used, direct labor, and total manufacturing overhead to determine total manufacturing costs.
- ✓ Sum beginning work in process and total manufacturing costs to determine total cost of work in process.
- ✓ Cost of goods manufactured is the total cost of work in process less ending work in process.
- ✓ In the cost of goods sold section of the income statement, show beginning and ending finished goods inventory and cost of goods manufactured.
- ✓ In the balance sheet, list manufacturing inventories in the order of their expected realization in cash, with finished goods first.

## Solution to Comprehensive Do it! 2

|---|-----------|-----------|------------------|
| <b>(a) SUPERIOR MANUFACTURING COMPANY</b> |           |           |                  |
| Cost of Goods Manufactured Schedule       |           |           |                  |
| For the Year Ended December 31, 2012      |           |           |                  |
| Work in process, 1/1                      |           |           | \$ 80,000        |
| Direct materials                          |           |           |                  |
| Raw materials inventory, 1/1              | \$ 30,000 |           |                  |
| Raw materials purchases                   | 205,000   |           |                  |
| Total raw materials available for use     | 235,000   |           |                  |
| Less: Raw materials inventory, 12/31      | 20,000    |           |                  |
| Direct materials used                     |           | \$215,000 |                  |
| Direct labor                              |           |           | 350,000          |
| Manufacturing overhead                    |           |           |                  |
| Indirect labor                            | 90,000    |           |                  |
| Factory utilities                         | 65,000    |           |                  |
| Factory machinery rent                    | 40,000    |           |                  |
| Factory manager's salary                  | 35,000    |           |                  |
| Depreciation on building                  | 24,000    |           |                  |
| Indirect materials                        | 15,000    |           |                  |
| Factory insurance                         | 14,000    |           |                  |
| Property taxes                            | 6,000     |           |                  |
| Total manufacturing overhead              |           | 289,000   |                  |
| Total manufacturing costs                 |           |           | 854,000          |
| Total cost of work in process             |           |           | 934,000          |
| Less: Work in process, 12/31              |           |           | 50,000           |
| Cost of goods manufactured                |           |           | <u>\$884,000</u> |

| <b>(b) SUPERIOR MANUFACTURING COMPANY</b> |                |                  |
|---|----------------|------------------|
| Income Statement                          |                |                  |
| For the Year Ended December 31, 2012      |                |                  |
| Sales (net)                               |                | \$1,500,000      |
| Cost of goods sold                        |                |                  |
| Finished goods inventory, January 1       | \$110,000      |                  |
| Cost of goods manufactured                | <u>884,000</u> |                  |
| Cost of goods available for sale          | 994,000        |                  |
| Finished goods inventory, December 31     | <u>120,000</u> |                  |
| Cost of goods sold                        |                | <u>874,000</u>   |
| Gross profit                              |                | 626,000          |
| Operating expenses                        |                |                  |
| Administrative expenses                   | 300,000        |                  |
| Sales commissions                         | 150,000        |                  |
| Delivery expenses                         | <u>100,000</u> |                  |
| Total operating expenses                  |                | <u>550,000</u>   |
| Net income                                |                | <u>\$ 76,000</u> |

| <b>(c) SUPERIOR MANUFACTURING COMPANY</b> |               |                  |
|---|---------------|------------------|
| Balance Sheet (partial)                   |               |                  |
| December 31, 2012                         |               |                  |
| Current assets                            |               |                  |
| Cash                                      |               | \$ 17,000        |
| Short-term investments                    |               | 26,000           |
| Accounts receivable (net)                 |               | 120,000          |
| Inventories                               |               |                  |
| Finished goods                            | \$120,000     |                  |
| Work in process                           | 50,000        |                  |
| Raw materials                             | <u>20,000</u> | 190,000          |
| Prepaid expenses                          |               | <u>13,000</u>    |
| Total current assets                      |               | <u>\$366,000</u> |

## Summary of Study Objectives

**[1] Explain the distinguishing features of managerial accounting.** The *primary users* of managerial accounting reports are internal users, who are officers, department heads, managers, and supervisors in the company. Managerial accounting issues internal reports as frequently as the need arises. The purpose of these reports is to provide special-purpose information for a particular user for a specific decision. The content of managerial accounting reports pertains to subunits of the business, may be very detailed, and may extend beyond the double-entry accounting system. The reporting standard is relevance to the decision being made. No independent audits are required in managerial accounting.

**[2] Identify the three broad functions of management.** The three functions are planning, directing, and controlling. Planning requires management to look ahead and to establish objectives. Directing involves coordinating the diverse activities and human resources of a company to produce a smooth-running

operation. Controlling is the process of keeping the activities on track.

**[3] Define the three classes of manufacturing costs.** Manufacturing costs are typically classified as either (1) direct materials, (2) direct labor, or (3) manufacturing overhead. Raw materials that can be physically and directly associated with the finished product during the manufacturing process are called direct materials. The work of factory employees that can be physically and directly associated with converting raw materials into finished goods is considered direct labor. Manufacturing overhead consists of costs that are indirectly associated with the manufacture of the finished product.

**[4] Distinguish between product and period costs.** Product costs are costs that are a necessary and integral part of producing the finished product. Product costs are also called inventoriable costs. Under the matching principle, these costs

do not become expenses until the company sells the finished goods inventory. Period costs are costs that are identified with a specific time period rather than with a salable product. These costs relate to nonmanufacturing costs and therefore are not inventoriable costs.

**[5] Explain the difference between a merchandising and a manufacturing income statement.** The difference between a merchandising and a manufacturing income statement is in the cost of goods sold section. A manufacturing cost of goods sold section shows beginning and ending finished goods inventories and the cost of goods manufactured.

**[6] Indicate how cost of goods manufactured is determined.** Companies add the cost of the beginning work in process to the total manufacturing costs for the current year to arrive at the total cost of work in process for the year. They then subtract the ending work in process from the total cost of work in process to arrive at the cost of goods manufactured.

**[7] Explain the difference between a merchandising and a manufacturing balance sheet.** The difference between a merchandising and a manufacturing balance sheet

is in the current assets section. The current assets section of a manufacturing company's balance sheet presents three inventory accounts: finished goods inventory, work in process inventory, and raw materials inventory.

**[8] Identify trends in managerial accounting.** Managerial accounting has experienced many changes in recent years. Among these are a shift toward addressing the needs of service companies and improving practices to better meet the needs of managers. Improved practices include a focus on managing the value chain through techniques such as just-in-time inventory and technological applications such as enterprise resource management, computer-integrated manufacturing, and B2B e-commerce. In addition, techniques such as just-in-time inventory, total quality management, activity-based costing, and theory of constraints are improving decision making. Finally, the balanced scorecard is now used by many companies in order to attain a more comprehensive view of the company's operations.

## Glossary

**Activity-based costing (ABC)** A method of allocating overhead based on each product's use of activities in making the product. (p. 896).

**Balanced scorecard** A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion. (p. 897).

**Board of directors** The group of officials elected by the stockholders of a corporation to formulate operating policies, select officers, and otherwise manage the company. (p. 881).

**Chief executive officer (CEO)** Corporate officer who has overall responsibility for managing the business and delegates responsibilities to other corporate officers. (p. 882).

**Chief financial officer (CFO)** Corporate officer who is responsible for all of the accounting and finance issues of the company. (p. 882).

**Controller** Financial officer responsible for a company's accounting records, system of internal control, and preparation of financial statements, tax returns, and internal reports. (p. 882).

**Cost of goods manufactured** Total cost of work in process less the cost of the ending work in process inventory. (p. 889).

**Direct labor** The work of factory employees that can be physically and directly associated with converting raw materials into finished goods. (p. 885).

**Direct materials** Raw materials that can be physically and directly associated with manufacturing the finished product. (p. 885).

**Enterprise resource planning (ERP) system** Software that provides a comprehensive, centralized, integrated

source of information used to manage all major business processes. (p. 895).

**Indirect labor** Work of factory employees that has no physical association with the finished product, or for which it is impractical to trace the costs to the goods produced. (p. 885).

**Indirect materials** Raw materials that do not physically become part of the finished product or cannot be traced because their physical association with the finished product is too small. (p. 885).

**Just-in-time (JIT) inventory** Inventory system in which goods are manufactured or purchased just in time for use. (p. 895).

**Line positions** Jobs that are directly involved in a company's primary revenue-generating operating activities. (p. 882).

**Managerial accounting** A field of accounting that provides economic and financial information for managers and other internal users. (p. 878).

**Manufacturing overhead** Manufacturing costs that are indirectly associated with the manufacture of the finished product. (p. 885).

**Period costs** Costs that are matched with the revenue of a specific time period and charged to expense as incurred. (p. 886).

**Product costs** Costs that are a necessary and integral part of producing the finished product. (p. 886).

**Sarbanes-Oxley Act of 2002 (SOX)** Law passed by Congress in 2002, intended to reduce unethical corporate behavior. (p. 883).

**Staff positions** Jobs that support the efforts of line employees. (p. 882).

**Theory of constraints** A specific approach used to identify and manage constraints in order to achieve the company's goals. (p. 896).

**Total cost of work in process** Cost of the beginning work in process plus total manufacturing costs for the current period. (p. 889).

**Total manufacturing costs** The sum of direct materials, direct labor, and manufacturing overhead incurred in the current period. (p. 889).

**Total quality management (TQM)** Systems implemented to reduce defects in finished products with the goal of achieving zero defects. (p. 896).

**Treasurer** Financial officer who has custody of the corporation's funds and is responsible for maintaining the company's cash position. (p. 882).

**Value chain** All activities associated with providing a product or service. (p. 894).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS

## Self-Test Questions

Answers are on page 921.

- (SO 1) 1. Managerial accounting:
- is governed by generally accepted accounting principles.
  - places emphasis on special-purpose information.
  - pertains to the entity as a whole and is highly aggregated.
  - is limited to cost data.
- (SO 2) 2. The management of an organization performs several broad functions. They are:
- planning, directing, and selling.
  - planning, directing, and controlling.
  - planning, manufacturing, and controlling.
  - directing, manufacturing, and controlling.
- (SO 2) 3. After passage of the Sarbanes-Oxley Act of 2002:
- reports prepared by managerial accountants must be audited by CPAs.
  - CEOs and CFOs must certify that financial statements give a fair presentation of the company's operating results.
  - the audit committee, rather than top management, is responsible for the company's financial statements.
  - reports prepared by managerial accountants must comply with generally accepted accounting principles (GAAP).
- (SO 3) 4. Direct materials are a:
- |    | Product Cost | Manufacturing Overhead | Period Cost |
|----|--------------|------------------------|-------------|
| a. | Yes          | Yes                    | No          |
| b. | Yes          | No                     | No          |
| c. | Yes          | Yes                    | Yes         |
| d. | No           | No                     | No          |
- (SO 3) 5. Which of the following costs would a computer manufacturer include in manufacturing overhead?
- The cost of the disk drives.
  - The wages earned by computer assemblers.
  - The cost of the memory chips.
  - Depreciation on testing equipment.
- (SO 3) 6. Which of the following is *not* an element of manufacturing overhead?
- Sales manager's salary.
  - Plant manager's salary.
  - Factory repairman's wages.
  - Product inspector's salary.
7. Indirect labor is a: (SO 4)
- nonmanufacturing cost.
  - raw material cost.
  - product cost.
  - period cost.
8. Which of the following costs are classified as a period cost? (SO 4)
- Wages paid to a factory custodian.
  - Wages paid to a production department supervisor.
  - Wages paid to a cost accounting department supervisor.
  - Wages paid to an assembly worker.
9. For the year, Redder Company has cost of goods manufactured of \$600,000, beginning finished goods inventory of \$200,000, and ending finished goods inventory of \$250,000. The cost of goods sold is: (SO 5)
- \$450,000.
  - \$500,000.
  - \$550,000.
  - \$600,000.
10. Cost of goods available for sale is reported on the income statement of: (SO 5)
- a merchandising company but not a manufacturing company.
  - a manufacturing company but not a merchandising company.
  - a merchandising company and a manufacturing company.
  - neither a manufacturing company nor a merchandising company.
11. A cost of goods manufactured schedule shows beginning and ending inventories for: (SO 6)
- raw materials and work in process only.
  - work in process only.
  - raw materials only.
  - raw materials, work in process, and finished goods.
12. The formula to determine the cost of goods manufactured is: (SO 6)
- Beginning raw materials inventory + Total manufacturing costs – Ending work in process inventory.
  - Beginning work in process inventory + Total manufacturing costs – Ending finished goods inventory.
  - Beginning finished good inventory + Total manufacturing costs – Ending finished goods inventory.
  - Beginning work in process inventory + Total manufacturing costs – Ending work in process inventory.

- (SO 7) 13. A manufacturer may report three inventories in its balance sheet: (1) raw materials, (2) work in process, and (3) finished goods. Indicate in what sequence these inventories generally appear on a balance sheet.
- a. (1), (2), (3)                      c. (3), (1), (2)  
b. (2), (3), (1)                      d. (3), (2), (1)
- (SO 8) 14. Which of the following managerial accounting techniques attempts to allocate manufacturing overhead in a more meaningful fashion?
- a. Just-in-time inventory.  
b. Total-quality management.  
c. Balanced scorecard.  
d. Activity-based costing.
- (SO 8) 15. Examples of recent trends in the economic environment of U.S. businesses are:

- a. increasing deregulation, decreasing global competition, and a shift toward providing services rather than goods.  
b. increasing deregulation, increasing global competition, and a shift toward providing goods rather than services.  
c. decreasing deregulation, decreasing global competition, and a shift toward providing services rather than goods.  
d. increasing deregulation, increasing global competition, and a shift toward providing services rather than goods.

for additional Self-Test Questions.

## Questions

- (a) "Managerial accounting is a field of accounting that provides economic information for all interested parties." Do you agree? Explain.  
(b) Jenny Gardner believes that managerial accounting serves only manufacturing firms. Is Jenny correct? Explain.
- Distinguish between managerial and financial accounting as to (a) primary users of reports, (b) types and frequency of reports, and (c) purpose of reports.
- How does the content of reports and the verification of reports differ between managerial and financial accounting?
- In what ways can the budgeting process create incentives for unethical behavior?
- Carla Pietro is studying for the next accounting mid-term examination. Summarize for Carla what she should know about management functions.
- "Decision making is management's most important function." Do you agree? Why or why not?
- What new rules were enacted under the Sarbanes-Oxley Act to address unethical accounting practices?
- Ken Taser is studying for his next accounting examination. Explain to Ken what he should know about the differences between the income statements for a manufacturing and for a merchandising company.
- Sheri Laine is unclear as to the difference between the balance sheets of a merchandising company and a manufacturing company. Explain the difference to Sheri.
- How are manufacturing costs classified?
- Vinh Yen claims that the distinction between direct and indirect materials is based entirely on physical association with the product. Is Vinh correct? Why?
- Sarah Limoges is confused about the differences between a product cost and a period cost. Explain the differences to Sarah.
- Identify the differences in the cost of goods sold section of an income statement between a merchandising company and a manufacturing company.
- The determination of the cost of goods manufactured involves the following factors: (A) beginning work in process inventory, (B) total manufacturing costs, and (C) ending work in process inventory. Identify the meaning of  $x$  in the following formulas:  
(a)  $A + B = x$   
(b)  $A + B - C = x$
- Hammen Manufacturing has beginning raw materials inventory \$12,000, ending raw materials inventory \$15,000, and raw materials purchases \$170,000. What is the cost of direct materials used?
- Conrad Manufacturing Inc. has beginning work in process \$26,000, direct materials used \$240,000, direct labor \$200,000, total manufacturing overhead \$180,000, and ending work in process \$32,000. What are total manufacturing costs?
- Using the data in question 16, what are (a) the total cost of work in process and (b) the cost of goods manufactured?
- In what order should manufacturing inventories be listed in a balance sheet?
- How do the products of manufacturing operations differ from those of service operations?
- Discuss whether the product costing techniques discussed in this chapter apply equally well to manufacturers and service companies.
- What is the value chain? Describe, in sequence, the main components of a manufacturer's value chain.
- What is an enterprise resource planning (ERP) system? What are its primary benefits?
- Why is product quality important for companies that implement a just-in-time inventory system?
- Explain what is meant by "balanced" in the balanced scorecard approach.
- What is activity-based costing, and what are its potential benefits?

# Brief Exercises

**BE19-1** Complete the following comparison table between managerial and financial accounting.

|                      | <u>Financial Accounting</u> | <u>Managerial Accounting</u> |
|----------------------|-----------------------------|------------------------------|
| Primary users        |                             |                              |
| Types of reports     |                             |                              |
| Frequency of reports |                             |                              |
| Purpose of reports   |                             |                              |
| Content of reports   |                             |                              |
| Verification         |                             |                              |

*Distinguish between managerial and financial accounting.*  
(SO 1)

**BE19-2** The Sarbanes-Oxley Act of 2002 (SOX) has important implications for the financial community. Explain two implications of SOX.

*Identify important regulatory changes.*  
(SO 2)

**BE19-3** Listed below are the three functions of the management of an organization.

1. Planning      2. Directing      3. Controlling

*Identify the three management functions.*  
(SO 2)

Identify which of the following statements best describes each of the above functions.

- (a) \_\_\_ requires management to look ahead and to establish objectives. A key objective of management is to add value to the business.
- (b) \_\_\_ involves coordinating the diverse activities and human resources of a company to produce a smooth-running operation. This function relates to the implementation of planned objectives.
- (c) \_\_\_ is the process of keeping the activities on track. Management must determine whether goals are being met and what changes are necessary when there are deviations.

**BE19-4** Determine whether each of the following costs should be classified as direct materials (DM), direct labor (DL), or manufacturing overhead (MO).

*Classify manufacturing costs.*  
(SO 3)

- (a) \_\_\_ Frames and tires used in manufacturing bicycles.
- (b) \_\_\_ Wages paid to production workers.
- (c) \_\_\_ Insurance on factory equipment and machinery.
- (d) \_\_\_ Depreciation on factory equipment.

**BE19-5** Indicate whether each of the following costs of an automobile manufacturer would be classified as direct materials, direct labor, or manufacturing overhead.

*Classify manufacturing costs.*  
(SO 3)

- (a) \_\_\_ Windshield.
- (b) \_\_\_ Engine.
- (c) \_\_\_ Wages of assembly line worker.
- (d) \_\_\_ Depreciation of factory machinery.
- (e) \_\_\_ Factory machinery lubricants.
- (f) \_\_\_ Tires.
- (g) \_\_\_ Steering wheel.
- (h) \_\_\_ Salary of painting supervisor.

**BE19-6** Identify whether each of the following costs should be classified as product costs or period costs.

*Identify product and period costs.*  
(SO 4)

- (a) \_\_\_ Manufacturing overhead.
- (b) \_\_\_ Selling expenses.
- (c) \_\_\_ Administrative expenses.
- (d) \_\_\_ Advertising expenses.
- (e) \_\_\_ Direct labor.
- (f) \_\_\_ Direct material.

**BE19-7** Presented below are Bennett Company’s monthly manufacturing cost data related to its personal computer products.

*Classify manufacturing costs.*  
(SO 3)

- (a) Utilities for manufacturing equipment      \$116,000
- (b) Raw material (CPU, chips, etc.)      \$ 85,000
- (c) Depreciation on manufacturing building      \$880,000
- (d) Wages for production workers      \$191,000

Enter each cost item in the following table, placing an “X” under the appropriate headings.

|     | <u>Product Costs</u>    |                     |                               |
|-----|-------------------------|---------------------|-------------------------------|
|     | <u>Direct Materials</u> | <u>Direct Labor</u> | <u>Manufacturing Overhead</u> |
| (a) |                         |                     |                               |
| (b) |                         |                     |                               |
| (c) |                         |                     |                               |
| (d) |                         |                     |                               |

Compute total manufacturing costs and total cost of work in process.

(SO 6)

Prepare current assets section.

(SO 7)

**BE19-8** Stahl Manufacturing Company has the following data: direct labor \$229,000, direct materials used \$180,000, total manufacturing overhead \$208,000, and beginning work in process \$25,000. Compute (a) total manufacturing costs and (b) total cost of work in process.

**BE19-9** In alphabetical order below are current asset items for Wallace Company's balance sheet at December 31, 2012. Prepare the current assets section (including a complete heading).

|                     |           |
|---------------------|-----------|
| Accounts receivable | \$200,000 |
| Cash                | 62,000    |
| Finished goods      | 71,000    |
| Prepaid expenses    | 38,000    |
| Raw materials       | 73,000    |
| Work in process     | 87,000    |

Determine missing amounts in computing total manufacturing costs.

(SO 6)

**BE19-10** Presented below are incomplete manufacturing cost data. Determine the missing amounts for three different situations.

|     | <b>Direct<br/>Materials<br/>Used</b> | <b>Direct<br/>Labor<br/>Used</b> | <b>Manufacturing<br/>Overhead</b> | <b>Total<br/>Manufacturing<br/>Costs</b> |
|-----|--------------------------------------|----------------------------------|-----------------------------------|--|
| (1) | \$25,000                             | \$61,000                         | \$ 50,000                         | ?  |
| (2) | ?                                    | \$75,000                         | \$140,000                         | \$296,000                                |
| (3) | \$55,000                             | ?                                | \$111,000                         | \$310,000                                |

Determine missing amounts in computing cost of goods manufactured.

(SO 6)

**BE19-11** Use the same data from BE19-10 above and the data below. Determine the missing amounts.

|     | <b>Total<br/>Manufacturing<br/>Costs</b> | <b>Work<br/>in Process<br/>(1/1)</b> | <b>Work<br/>in Process<br/>(12/31)</b> | <b>Cost of<br/>Goods<br/>Manufactured</b> |
|-----|--|--------------------------------------|--|---|
| (1) | ?  | \$120,000                            | \$82,000                               | ?   |
| (2) | \$296,000                                | ?                                    | \$98,000                               | \$321,000                                 |
| (3) | \$310,000                                | \$463,000                            | ?                                      | \$715,000                                 |

## Do it! Review

Identify managerial accounting concepts.

(SO 1, 2)

**Do it! 19-1** Indicate whether the following statements are true or false.

1. Managerial accountants explain and report manufacturing and nonmanufacturing costs, determine cost behaviors, and perform cost-volume-profit analysis, but are not involved in the budget process.
2. Financial accounting reports pertain to subunits of the business and are very detailed.
3. Managerial accounting reports must follow GAAP and are audited by CPAs.
4. Managers' activities and responsibilities can be classified into three broad functions: planning, directing, and controlling.
5. As a result of the Sarbanes-Oxley Act of 2002 (SOX), top managers must certify that the company maintains an adequate system of internal control.
6. Management accountants follow a code of ethics developed by the Institute of Management Accountants.

Identify managerial cost concepts.

(SO 3, 4)

**Do it! 19-2** A music company has these costs:

|                                 |   |
|---------------------------------|---|
| Advertising                     | Paper inserts for CD cases                    |
| Blank CDs                       | CD plastic cases                              |
| Depreciation of CD image burner | Salaries of sales representatives             |
| Salary of factory manager       | Salaries of factory maintenance employees     |
| Factory supplies used           | Salaries of employees who burn music onto CDs |

Classify each cost as a period or a product cost. Within the product cost category, indicate if the cost is part of direct materials (DM), direct labor (DL), or manufacturing overhead (MO).

**Do it! 19-3** The following information is available for Sanchez Manufacturing Company.

|                                 | <u>April 1</u> | <u>April 31</u> |
|---------------------------------|----------------|-----------------|
| Raw material inventory          | \$10,000       | \$14,000        |
| Work in process inventory       | 5,000          | 3,500           |
| Materials purchased in April    | \$ 98,000      |                 |
| Direct labor in April           | 60,000         |                 |
| Manufacturing overhead in April | 180,000        |                 |

*Prepare cost of goods manufactured schedule.*  
(SO 6)

Prepare the cost of goods manufactured schedule for the month of April.

**Do it! 19-4** Match the descriptions that follow with the corresponding terms.

*Identify trends in managerial accounting.*  
(SO 8)

Descriptions:

- \_\_\_\_\_ Inventory system in which goods are manufactured or purchased just as they are needed for use.
- \_\_\_\_\_ A method of allocating overhead based on each product's use of activities in making the product.
- \_\_\_\_\_ Systems that are especially important to firms adopting just-in-time inventory methods.
- \_\_\_\_\_ One part of the value chain for a manufacturing company.
- \_\_\_\_\_ The U.S. economy is trending toward this.
- \_\_\_\_\_ A performance-measurement approach that uses both financial and nonfinancial measures, tied to company objectives, to evaluate a company's operations in an integrated fashion.

Terms:

- Activity-based costing
- Balanced scorecard
- Total quality management (TQM)
- Research and development, and product design
- Service industries
- Just-in-time (JIT) inventory

## Exercises

**E19-1** Denis Mayer has prepared the following list of statements about managerial accounting and financial accounting.

*Identify distinguishing features of managerial accounting.*  
(SO 1)

- Financial accounting focuses on providing information to internal users.
- Analyzing cost-volume-profit relationships is part of managerial accounting.
- Preparation of budgets is part of financial accounting.
- Managerial accounting applies only to merchandising and manufacturing companies.
- Both managerial accounting and financial accounting deal with many of the same economic events.
- Managerial accounting reports are prepared only quarterly and annually.
- Financial accounting reports are general-purpose reports.
- Managerial accounting reports pertain to subunits of the business.
- Managerial accounting reports must comply with generally accepted accounting principles.
- Although managerial accountants are expected to behave ethically, there is no code of ethical standards for managerial accountants.

### Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

**E19-2** Presented below is a list of costs and expenses usually incurred by Gurule Corporation, a manufacturer of furniture, in its factory.

*Classify costs into three classes of manufacturing costs.*  
(SO 3)

- Salaries for assembly line inspectors.
- Insurance on factory machines.
- Property taxes on the factory building.
- Factory repairs.
- Upholstery used in manufacturing furniture.

6. Wages paid to assembly line workers.
7. Factory machinery depreciation.
8. Glue, nails, paint, and other small parts used in production.
9. Factory supervisors' salaries.
10. Wood used in manufacturing furniture.

**Instructions**

Classify the above items into the following categories: (a) direct materials, (b) direct labor, and (c) manufacturing overhead.

Identify types of cost and explain their accounting. (SO 3, 4)

**E19-3** Bacala Corporation incurred the following costs while manufacturing its product.

|                                      |           |                               |          |
|--------------------------------------|-----------|-------------------------------|----------|
| Materials used in product            | \$100,000 | Advertising expense           | \$45,000 |
| Depreciation on plant                | 60,000    | Property taxes on plant       | 14,000   |
| Property taxes on store              | 7,500     | Delivery expense              | 21,000   |
| Labor costs of assembly-line workers | 110,000   | Sales commissions             | 35,000   |
| Factory supplies used                | 13,000    | Salaries paid to sales clerks | 50,000   |

**Instructions**

- (a) Identify each of the costs as direct materials, direct labor, manufacturing overhead, or period costs.
- (b) Explain the basic difference in accounting for product costs and period costs.

Determine the total amount of various types of costs. (SO 3, 4)

**E19-4** Drew Company reports the following costs and expenses in May.

|                                   |           |                                    |          |
|-----------------------------------|-----------|------------------------------------|----------|
| Factory utilities                 | \$ 11,500 | Direct labor                       | \$69,100 |
| Depreciation on factory equipment | 12,650    | Sales salaries                     | 46,400   |
| Depreciation on delivery trucks   | 3,800     | Property taxes on factory building | 2,500    |
| Indirect factory labor            | 48,900    | Repairs to office equipment        | 1,300    |
| Indirect materials                | 80,800    | Factory repairs                    | 2,000    |
| Direct materials used             | 137,600   | Advertising                        | 18,000   |
| Factory manager's salary          | 8,000     | Office supplies used               | 2,640    |

**Instructions**

From the information, determine the total amount of:

- (a) Manufacturing overhead.
- (b) Product costs.
- (c) Period costs.

Classify various costs into different cost categories. (SO 3, 4)

**E19-5** Sami Company is a manufacturer of personal computers. Various costs and expenses associated with its operations are as follows.

1. Property taxes on the factory building.
2. Production superintendents' salaries.
3. Memory boards and chips used in assembling computers.
4. Depreciation on the factory equipment.
5. Salaries for assembly line quality control inspectors.
6. Sales commissions paid to sell personal computers.
7. Electrical components used in assembling computers.
8. Wages of workers assembling personal computers.
9. Soldering materials used on factory assembly lines.
10. Salaries for the night security guards for the factory building.

The company intends to classify these costs and expenses into the following categories: (a) direct materials, (b) direct labor, (c) manufacturing overhead, and (d) period costs.

**Instructions**

List the items (1) through (10). For each item, indicate the cost category to which it belongs.

Classify various costs into different cost categories. (SO 3)

**E19-6** The administrators of San Mateo County's Memorial Hospital are interested in identifying the various costs and expenses that are incurred in producing a patient's X-ray. A list of such costs and expenses is presented below.

1. Salaries for the X-ray machine technicians.
2. Wages for the hospital janitorial personnel.
3. Film costs for the X-ray machines.
4. Property taxes on the hospital building.

5. Salary of the X-ray technicians' supervisor.
6. Electricity costs for the X-ray department.
7. Maintenance and repairs on the X-ray machines.
8. X-ray department supplies.
9. Depreciation on the X-ray department equipment.
10. Depreciation on the hospital building.

The administrators want these costs and expenses classified as: (a) direct materials, (b) direct labor, or (c) service overhead.

**Instructions**

List the items (1) through (10). For each item, indicate the cost category to which the item belongs.

**E19-7** Speedi Delivery Service reports the following costs and expenses in June 2012.

|                                    |          |                             |          |
|------------------------------------|----------|-----------------------------|----------|
| Indirect materials                 | \$ 5,400 | Drivers' salaries           | \$11,000 |
| Depreciation on delivery equipment | 11,200   | Advertising                 | 1,600    |
| Dispatcher's salary                | 5,000    | Delivery equipment repairs  | 300      |
| Property taxes on office building  | 870      | Office supplies             | 650      |
| CEO's salary                       | 12,000   | Office utilities            | 990      |
| Gas and oil for delivery trucks    | 2,200    | Repairs on office equipment | 180      |

*Classify various costs into different cost categories.*

(SO 4)

**Instructions**

Determine the total amount of (a) delivery service (product) costs and (b) period costs.

**E19-8** Craig Corporation incurred the following costs while manufacturing its product.

|                                      |           |                               |          |
|--------------------------------------|-----------|-------------------------------|----------|
| Materials used in product            | \$100,000 | Advertising expense           | \$45,000 |
| Depreciation on plant                | 60,000    | Property taxes on plant       | 14,000   |
| Property taxes on store              | 7,500     | Delivery expense              | 21,000   |
| Labor costs of assembly-line workers | 110,000   | Sales commissions             | 35,000   |
| Factory supplies used                | 23,000    | Salaries paid to sales clerks | 50,000   |

*Compute cost of goods manufactured and sold.*

(SO 5, 6)

Work in process inventory was \$12,000 at January 1 and \$15,500 at December 31. Finished goods inventory was \$60,000 at January 1 and \$55,600 at December 31.

**Instructions**

- (a) Compute cost of goods manufactured.
- (b) Compute cost of goods sold.

**E19-9** An incomplete cost of goods manufactured schedule is presented below.

*Determine missing amounts in cost of goods manufactured schedule.*

(SO 6)

**ORLANDO MANUFACTURING COMPANY**  
 Cost of Goods Manufactured Schedule  
 For the Year Ended December 31, 2012

|                                       |                |                         |
|---------------------------------------|----------------|-------------------------|
| Work in process (1/1)                 |                | \$210,000               |
| Direct materials                      |                |                         |
| Raw materials inventory (1/1)         | \$ ?           |                         |
| Add: Raw materials purchases          | <u>158,000</u> |                         |
| Total raw materials available for use | ?              |                         |
| Less: Raw materials inventory (12/31) | <u>12,500</u>  |                         |
| Direct materials used                 |                | \$190,000               |
| Direct labor                          |                | ?                       |
| Manufacturing overhead                |                |                         |
| Indirect labor                        | \$ 18,000      |                         |
| Factory depreciation                  | 36,000         |                         |
| Factory utilities                     | <u>68,000</u>  |                         |
| Total overhead                        |                | <u>122,000</u>          |
| Total manufacturing costs             |                | ?                       |
| Total cost of work in process         |                | ?                       |
| Less: Work in process (12/31)         |                | <u>81,000</u>           |
| Cost of goods manufactured            |                | <u><u>\$510,000</u></u> |

**Instructions**

Complete the cost of goods manufactured schedule for Orlando Manufacturing Company.

Determine the missing amount of different cost items.

(SO 6)

**E19-10** Manufacturing cost data for Fortney Company are presented below.

|                               | <u>Case A</u> | <u>Case B</u> | <u>Case C</u> |
|-------------------------------|---------------|---------------|---------------|
| Direct materials used         | (a)           | \$58,400      | \$130,000     |
| Direct labor                  | \$ 57,000     | 86,000        | (g)           |
| Manufacturing overhead        | 46,500        | 81,600        | 102,000       |
| Total manufacturing costs     | 185,650       | (d)           | 253,700       |
| Work in process 1/1/12        | (b)           | 16,500        | (h)           |
| Total cost of work in process | 221,500       | (e)           | 337,000       |
| Work in process 12/31/12      | (c)           | 11,000        | 70,000        |
| Cost of goods manufactured    | 185,275       | (f)           | (i)           |

**Instructions**

Indicate the missing amount for each letter (a) through (i).

Determine the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule.

(SO 6)

**E19-11** Incomplete manufacturing cost data for Juego Company for 2012 are presented as follows for four different situations.

|     | <u>Direct<br/>Materials<br/>Used</u> | <u>Direct<br/>Labor<br/>Used</u> | <u>Manufacturing<br/>Overhead</u> | <u>Total<br/>Manufacturing<br/>Costs</u> | <u>Work in<br/>Process<br/>1/1</u> | <u>Work in<br/>Process<br/>12/31</u> | <u>Cost of<br/>Goods<br/>Manufactured</u> |
|-----|--------------------------------------|----------------------------------|-----------------------------------|--|------------------------------------|--------------------------------------|---|
| (1) | \$127,000                            | \$140,000                        | \$ 77,000                         | (a)                                      | \$33,000                           | (b)                                  | \$360,000                                 |
| (2) | (c)                                  | 200,000                          | 132,000                           | \$450,000                                | (d)                                | \$40,000                             | 470,000                                   |
| (3) | 80,000                               | 100,000                          | (e)                               | 245,000                                  | 60,000                             | 80,000                               | (f)                                       |
| (4) | 70,000                               | (g)                              | 75,000                            | 288,000                                  | 45,000                             | (h)                                  | 270,000                                   |

**Instructions**

(a) Indicate the missing amount for each letter.

(b) Prepare a condensed cost of goods manufactured schedule for situation (1) for the year ended December 31, 2012.

Prepare a cost of goods manufactured schedule and a partial income statement.

(SO 5, 6)

**E19-12** Troy Corporation has the following cost records for June 2012.

|                          |          |                                 |        |
|--------------------------|----------|---------------------------------|--------|
| Indirect factory labor   | \$ 4,500 | Factory utilities               | \$ 400 |
| Direct materials used    | 20,000   | Depreciation, factory equipment | 1,400  |
| Work in process, 6/1/12  | 3,000    | Direct labor                    | 30,000 |
| Work in process, 6/30/12 | 3,800    | Maintenance, factory equipment  | 1,800  |
| Finished goods, 6/1/12   | 5,000    | Indirect materials              | 2,200  |
| Finished goods, 6/30/12  | 7,500    | Factory manager's salary        | 3,000  |

**Instructions**

(a) Prepare a cost of goods manufactured schedule for June 2012.

(b) Prepare an income statement through gross profit for June 2012 assuming net sales are \$87,100.

Classify various costs into different categories and prepare cost of services provided schedule.

(SO 4, 5, 6)

**E19-13** Tiffany Pratt, the bookkeeper for Bush, Clinton, and Obama, a political consulting firm, has recently completed an accounting course at her local college. One of the topics covered in the course was the cost of goods manufactured schedule. Tiffany wondered if such a schedule could be prepared for her firm. She realized that, as a service-oriented company, it would have no work in process inventory to consider.

Listed below are the costs her firm incurred for the month ended August 31, 2012.

|  |          |
|--|----------|
| Supplies used on consulting contracts                | \$ 1,200 |
| Supplies used in the administrative offices          | 1,500    |
| Depreciation on equipment used for contract work     | 900      |
| Depreciation used on administrative office equipment | 1,050    |
| Salaries of professionals working on contracts       | 12,600   |
| Salaries of administrative office personnel          | 7,700    |
| Janitorial services for professional offices         | 400      |
| Janitorial services for administrative offices       | 500      |
| Insurance on contract operations                     | 800      |
| Insurance on administrative operations               | 900      |
| Utilities for contract operations                    | 1,400    |
| Utilities for administrative offices                 | 1,300    |

**Instructions**

- (a) Prepare a schedule of cost of contract services provided (similar to a cost of goods manufactured schedule) for the month.
- (b) For those costs not included in (a), explain how they would be classified and reported in the financial statements.

**E19-14** The following information is available for Xotchil Company.

|                           | <u>January 1, 2012</u> | <u>2012</u> | <u>December 31, 2012</u> |
|---------------------------|------------------------|-------------|--------------------------|
| Raw materials inventory   | \$21,000               |             | \$30,000                 |
| Work in process inventory | 13,500                 |             | 17,200                   |
| Finished goods inventory  | 27,000                 |             | 21,000                   |
| Materials purchased       |                        | \$150,000   |                          |
| Direct labor              |                        | 200,000     |                          |
| Manufacturing overhead    |                        | 180,000     |                          |
| Sales                     |                        | 900,000     |                          |

*Prepare a cost of goods manufactured schedule and a partial income statement.*  
(SO 5, 6, 7)

**Instructions**

- (a) Compute cost of goods manufactured.
- (b) Prepare an income statement through gross profit.
- (c) Show the presentation of the ending inventories on the December 31, 2012, balance sheet.
- (d) How would the income statement and balance sheet of a merchandising company be different from Xotchil's financial statements?

**E19-15** Yacob Manufacturing Company produces blankets. From its accounting records it prepares the following schedule and financial statements on a yearly basis.

- (a) Cost of goods manufactured schedule.
- (b) Income statement.
- (c) Balance sheet.

*Indicate in which schedule or financial statement(s) different cost items will appear.*  
(SO 5, 6, 7)

The following items are found in its ledger and accompanying data.

- |                                      |   |
|--------------------------------------|---|
| 1. Direct labor                      | 9. Factory maintenance salaries         |
| 2. Raw materials inventory, 1/1      | 10. Cost of goods manufactured          |
| 3. Work in process inventory, 12/31  | 11. Depreciation on delivery equipment  |
| 4. Finished goods inventory, 1/1     | 12. Cost of goods available for sale    |
| 5. Indirect labor                    | 13. Direct materials used               |
| 6. Depreciation on factory machinery | 14. Heat and electricity for factory    |
| 7. Work in process, 1/1              | 15. Repairs to roof of factory building |
| 8. Finished goods inventory, 12/31   | 16. Cost of raw materials purchases     |

**Instructions**

List the items (1)–(16). For each item, indicate by using the appropriate letter or letters, the schedule and/or financial statement(s) in which the item will appear.

**E19-16** An analysis of the accounts of Zuniga Manufacturing reveals the following manufacturing cost data for the month ended June 30, 2012.

| <u>Inventories</u> | <u>Beginning</u> | <u>Ending</u> |
|--------------------|------------------|---------------|
| Raw materials      | \$9,000          | \$13,100      |
| Work in process    | 5,000            | 7,000         |
| Finished goods     | 9,000            | 6,000         |

*Prepare a cost of goods manufactured schedule, and present the ending inventories of the balance sheet.*  
(SO 6, 7)

Costs incurred: Raw materials purchases \$54,000, direct labor \$57,000, manufacturing overhead \$19,900. The specific overhead costs were: indirect labor \$5,500, factory insurance \$4,000, machinery depreciation \$4,000, machinery repairs \$1,800, factory utilities \$3,100, miscellaneous factory costs \$1,500. Assume that all raw materials used were direct materials.

**Instructions**

- (a) Prepare the cost of goods manufactured schedule for the month ended June 30, 2012.
- (b) Show the presentation of the ending inventories on the June 30, 2012, balance sheet.

**E19-17** Pohl Motor Company manufactures automobiles. During September 2012 the company purchased 5,000 head lamps at a cost of \$9 per lamp. Todd withdrew 4,650 lamps from the warehouse during the month. Fifty of these lamps were used to replace the head lamps in autos

*Determine the amount of cost to appear in various accounts, and indicate in which financial statements these accounts would appear.*  
(SO 5, 6, 7)

used by traveling sales staff. The remaining 4,600 lamps were put in autos manufactured during the month.

Of the autos put into production during September 2012, 90% were completed and transferred to the company's storage lot. Of the cars completed during the month, 75% were sold by September 30.

#### Instructions

- (a) Determine the cost of head lamps that would appear in each of the following accounts at September 30, 2012: Raw Materials, Work in Process, Finished Goods, Cost of Goods Sold, and Selling Expenses.
- (b)  Write a short memo to the chief accountant, indicating whether and where each of the accounts in (a) would appear on the income statement or on the balance sheet at September 30, 2012.

Identify various managerial accounting practices.

(SO 8)

**E19-18** The following is a list of terms related to managerial accounting practices.

1. Activity-based costing.
2. Just-in-time inventory.
3. Balanced scorecard.
4. Value chain.

#### Instructions

Match each of the terms with the statement below that best describes the term.

- (a) \_\_\_ A performance-measurement technique that attempts to consider and evaluate all aspects of performance using financial and nonfinancial measures in an integrated fashion.
- (b) \_\_\_ The group of activities associated with providing a product or service.
- (c) \_\_\_ An approach used to reduce the cost associated with handling and holding inventory by reducing the amount of inventory on hand.
- (d) \_\_\_ A method used to allocate overhead to products based on each product's use of the activities that cause the incurrence of the overhead cost.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/wegandt](http://www.wiley.com/college/wegandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

Classify manufacturing costs into different categories and compute the unit cost.

(SO 3, 4)

**P19-1A** Fabila Company specializes in manufacturing a unique model of bicycle helmet. The model is well accepted by consumers, and the company has enough orders to keep the factory production at 10,000 helmets per month (80% of its full capacity). Fabila's monthly manufacturing cost and other expense data are as follows.

|  |          |
|--|----------|
| Rent on factory equipment                    | \$ 7,000 |
| Insurance on factory building                | 1,500    |
| Raw materials (plastics, polystyrene, etc.)  | 75,000   |
| Utility costs for factory                    | 900      |
| Supplies for general office                  | 300      |
| Wages for assembly line workers              | 43,000   |
| Depreciation on office equipment             | 800      |
| Miscellaneous materials (glue, thread, etc.) | 1,100    |
| Factory manager's salary                     | 5,700    |
| Property taxes on factory building           | 400      |
| Advertising for helmets                      | 14,000   |
| Sales commissions                            | 7,000    |
| Depreciation on factory building             | 1,500    |

**Instructions**

(a) Prepare an answer sheet with the following column headings.

| Cost Item | Product Costs    |              |                        | Period Costs |
|-----------|------------------|--------------|------------------------|--------------|
|           | Direct Materials | Direct Labor | Manufacturing Overhead |              |

Enter each cost item on your answer sheet, placing the dollar amount under the appropriate headings. Total the dollar amounts in each of the columns.

(b) Compute the cost to produce one helmet.

(a) DM \$75,000  
DL \$43,000  
MO \$18,100  
PC \$22,100

**P19-2A** Kabana Company, a manufacturer of stereo systems, started its production in October 2012. For the preceding 3 years Kabana had been a retailer of stereo systems. After a thorough survey of stereo system markets, Kabana decided to turn its retail store into a stereo equipment factory.

Raw materials cost for a stereo system will total \$74 per unit. Workers on the production lines are on average paid \$12 per hour. A stereo system usually takes 5 hours to complete. In addition, the rent on the equipment used to assemble stereo systems amounts to \$4,900 per month. Indirect materials cost \$5 per system. A supervisor was hired to oversee production; her monthly salary is \$3,000.

Factory janitorial costs are \$1,300 monthly. Advertising costs for the stereo system will be \$8,500 per month. The factory building depreciation expense is \$7,200 per year. Property taxes on the factory building will be \$9,000 per year.

*Classify manufacturing costs into different categories and compute the unit cost.*

(SO 3, 4)

**Instructions**

(a) Prepare an answer sheet with the following column headings.

| Cost Item | Product Costs    |              |                        | Period Costs |
|-----------|------------------|--------------|------------------------|--------------|
|           | Direct Materials | Direct Labor | Manufacturing Overhead |              |

Assuming that Kabana manufactures, on average, 1,300 stereo systems per month, enter each cost item on your answer sheet, placing the dollar amount per month under the appropriate headings. Total the dollar amounts in each of the columns.

(b) Compute the cost to produce one stereo system.

(a) DM \$96,200  
DL \$78,000  
MO \$17,050  
PC \$ 8,500

**P19-3A** Incomplete manufacturing costs, expenses, and selling data for two different cases are as follows.

|                                     | Case     |        |
|-------------------------------------|----------|--------|
|                                     | 1        | 2      |
| Direct Materials Used               | \$ 7,600 | \$ (g) |
| Direct Labor                        | 5,000    | 8,000  |
| Manufacturing Overhead              | 8,000    | 4,000  |
| Total Manufacturing Costs           | (a)      | 18,000 |
| Beginning Work in Process Inventory | 1,000    | (h)    |
| Ending Work in Process Inventory    | (b)      | 3,000  |
| Sales                               | 24,500   | (i)    |
| Sales Discounts                     | 2,500    | 1,400  |
| Cost of Goods Manufactured          | 17,000   | 22,000 |
| Beginning Finished Goods Inventory  | (c)      | 3,300  |
| Goods Available for Sale            | 18,000   | (j)    |
| Cost of Goods Sold                  | (d)      | (k)    |
| Ending Finished Goods Inventory     | 3,400    | 2,500  |
| Gross Profit                        | (e)      | 7,000  |
| Operating Expenses                  | 2,500    | (l)    |
| Net Income                          | (f)      | 5,000  |

*Indicate the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule, an income statement, and a partial balance sheet.*

(SO 5, 6, 7)

**Instructions**

(a) Indicate the missing amount for each letter.

(b) Prepare a condensed cost of goods manufactured schedule for Case 1.

(c) Prepare an income statement and the current assets section of the balance sheet for Case 1. Assume that in Case 1 the other items in the current assets section are as follows: Cash \$4,000, Receivables (net) \$15,000, Raw Materials \$600, and Prepaid Expenses \$400.

(b) Ending WIP \$4,600  
(c) Current assets \$28,000

Prepare a cost of goods manufactured schedule, a partial income statement, and a partial balance sheet.

(SO 5, 6, 7)

**P19-4A** The following data were taken from the records of Blumbey Manufacturing Company for the fiscal year ended June 30, 2012.

|                     |           |                          |          |
|---------------------|-----------|--------------------------|----------|
| Raw Materials       |           | Factory Insurance        | \$ 4,600 |
| Inventory 7/1/11    | \$ 48,000 | Factory Machinery        |          |
| Raw Materials       |           | Depreciation             | 16,000   |
| Inventory 6/30/12   | 39,600    | Factory Utilities        | 27,600   |
| Finished Goods      |           | Office Utilities Expense | 8,650    |
| Inventory 7/1/11    | 96,000    | Sales                    | 554,000  |
| Finished Goods      |           | Sales Discounts          | 4,200    |
| Inventory 6/30/12   | 95,900    | Plant Manager's Salary   | 29,000   |
| Work in Process     |           | Factory Property Taxes   | 9,600    |
| Inventory 7/1/11    | 19,800    | Factory Repairs          | 1,400    |
| Work in Process     |           | Raw Materials Purchases  | 96,400   |
| Inventory 6/30/12   | 18,600    | Cash                     | 32,000   |
| Direct Labor        | 149,250   |                          |          |
| Indirect Labor      | 24,460    |                          |          |
| Accounts Receivable | 27,000    |                          |          |

**Instructions**

(a) CGM \$367,910

(b) Gross profit \$181,790

(c) Current assets \$213,100

- (a) Prepare a cost of goods manufactured schedule. (Assume all raw materials used were direct materials.)
- (b) Prepare an income statement through gross profit.
- (c) Prepare the current assets section of the balance sheet at June 30, 2012.

Prepare a cost of goods manufactured schedule and a correct income statement.

(SO 5, 6)

**P19-5A** Dibene Company is a manufacturer of computers. Its controller resigned in October 2012. An inexperienced assistant accountant has prepared the following income statement for the month of October 2012.

**DIBENE COMPANY**  
Income Statement  
For the Month Ended October 31, 2012

|                                     |           |                   |
|-------------------------------------|-----------|-------------------|
| Sales (net)                         |           | \$780,000         |
| Less: Operating expenses            |           |                   |
| Raw materials purchases             | \$264,000 |                   |
| Direct labor cost                   | 190,000   |                   |
| Advertising expense                 | 90,000    |                   |
| Selling and administrative salaries | 75,000    |                   |
| Rent on factory facilities          | 60,000    |                   |
| Depreciation on sales equipment     | 45,000    |                   |
| Depreciation on factory equipment   | 31,000    |                   |
| Indirect labor cost                 | 28,000    |                   |
| Utilities expense                   | 12,000    |                   |
| Insurance expense                   | 8,000     | 803,000           |
| Net loss                            |           | <u>\$(23,000)</u> |

Prior to October 2012, the company had been profitable every month. The company's president is concerned about the accuracy of the income statement. As her friend, you have been asked to review the income statement and make necessary corrections. After examining other manufacturing cost data, you have acquired additional information as follows.

- 1. Inventory balances at the beginning and end of October were:

|                 | <u>October 1</u> | <u>October 31</u> |
|-----------------|------------------|-------------------|
| Raw materials   | \$18,000         | \$34,000          |
| Work in process | 16,000           | 14,000            |
| Finished goods  | 30,000           | 48,000            |

- 2. Only 70% of the utilities expense and 60% of the insurance expense apply to factory operations. The remaining amounts should be charged to selling and administrative activities.

**Instructions**

(a) CGM \$572,200

(b) NI \$ 9,000

- (a) Prepare a schedule of cost of goods manufactured for October 2012.
- (b) Prepare a correct income statement for October 2012.

## Problems: Set B

**P19-1B** Gazca Company specializes in manufacturing motorcycle helmets. The company has enough orders to keep the factory production at 1,000 motorcycle helmets per month. Gazca's monthly manufacturing cost and other expense data are as follows.

|  |          |
|--|----------|
| Maintenance costs on factory building        | \$ 1,500 |
| Factory manager's salary                     | 4,000    |
| Advertising for helmets                      | 8,000    |
| Sales commissions                            | 5,000    |
| Depreciation on factory building             | 700      |
| Rent on factory equipment                    | 6,000    |
| Insurance on factory building                | 3,000    |
| Raw materials (plastic, polystyrene, etc.)   | 20,000   |
| Utility costs for factory                    | 800      |
| Supplies for general office                  | 200      |
| Wages for assembly line workers              | 54,000   |
| Depreciation on office equipment             | 500      |
| Miscellaneous materials (glue, thread, etc.) | 2,000    |

*Classify manufacturing costs into different categories and compute the unit cost.*

(SO 3, 4)

### Instructions

(a) Prepare an answer sheet with the following column headings.

| Cost<br>Item | Product Costs       |                 |                           | Period<br>Costs |
|--------------|---------------------|-----------------|---------------------------|-----------------|
|              | Direct<br>Materials | Direct<br>Labor | Manufacturing<br>Overhead |                 |

Enter each cost item on your answer sheet, placing the dollar amount under the appropriate headings. Total the dollar amounts in each of the columns.

(b) Compute the cost to produce one motorcycle helmet.

(a) DM \$20,000  
DL \$54,000  
MO \$18,000  
PC \$13,700

**P19-2B** Vanessa Williams Company, a manufacturer of tennis rackets, started production in November 2012. For the preceding 5 years, Williams had been a retailer of sports equipment. After a thorough survey of tennis racket markets, Williams decided to turn its retail store into a tennis racket factory.

*Classify manufacturing costs into different categories and compute the unit cost.*

(SO 3, 4)

Raw materials cost for a tennis racket will total \$23 per racket. Workers on the production lines are paid on average \$13 per hour. A racket usually takes 2 hours to complete. In addition, the rent on the equipment used to produce rackets amounts to \$1,300 per month. Indirect materials cost \$3 per racket. A supervisor was hired to oversee production; her monthly salary is \$3,500.

Janitorial costs are \$1,400 monthly. Advertising costs for the rackets will be \$6,000 per month. The factory building depreciation expense is \$8,400 per year. Property taxes on the factory building will be \$7,200 per year.

### Instructions

(a) Prepare an answer sheet with the following column headings.

| Cost<br>Item | Product Costs       |                 |                           | Period<br>Costs |
|--------------|---------------------|-----------------|---------------------------|-----------------|
|              | Direct<br>Materials | Direct<br>Labor | Manufacturing<br>Overhead |                 |

Assuming that Williams manufactures, on average, 2,500 tennis rackets per month, enter each cost item on your answer sheet, placing the dollar amount per month under the appropriate headings. Total the dollar amounts in each of the columns.

(b) Compute the cost to produce one racket.

(a) DM \$57,500  
DL \$65,000  
MO \$15,000  
PC \$ 6,000

**P19-3B** Incomplete manufacturing costs, expenses, and selling data for two different cases are as follows.

*Indicate the missing amount of different cost items, and prepare a condensed cost of goods manufactured schedule, an income statement, and a partial balance sheet.*

(SO 5, 6, 7)

|                                     | Case     |        |
|-------------------------------------|----------|--------|
|                                     | A        | B      |
| Direct Materials Used               | \$ 6,300 | \$ (g) |
| Direct Labor                        | 3,000    | 4,000  |
| Manufacturing Overhead              | 6,000    | 5,000  |
| Total Manufacturing Costs           | (a)      | 16,000 |
| Beginning Work in Process Inventory | 1,000    | (h)    |

|                                    |        |        |
|------------------------------------|--------|--------|
| Ending Work in Process Inventory   | (b)    | 2,000  |
| Sales                              | 22,500 | (i)    |
| Sales Discounts                    | 1,500  | 1,200  |
| Cost of Goods Manufactured         | 15,800 | 20,000 |
| Beginning Finished Goods Inventory | (c)    | 5,000  |
| Goods Available for Sale           | 18,300 | (j)    |
| Cost of Goods Sold                 | (d)    | (k)    |
| Ending Finished Goods Inventory    | 1,200  | 2,500  |
| Gross Profit                       | (e)    | 6,000  |
| Operating Expenses                 | 2,700  | (l)    |
| Net Income                         | (f)    | 2,200  |

**Instructions**

- (a) Indicate the missing amount for each letter.
- (b) Prepare a condensed cost of goods manufactured schedule for Case A.
- (c) Prepare an income statement and the current assets section of the balance sheet for Case A. Assume that in Case A the other items in the current assets section are as follows: Cash \$3,000, Receivables (net) \$10,000, Raw Materials \$700, and Prepaid Expenses \$200.

(c) Current assets \$15,600

Prepare a cost of goods manufactured schedule, a partial income statement, and a partial balance sheet.

(SO 5, 6, 7)

**P19-4B** The following data were taken from the records of Goodman Manufacturing Company for the year ended December 31, 2012.

|                                    |           |                                |          |
|------------------------------------|-----------|--------------------------------|----------|
| Raw Materials Inventory 1/1/12     | \$ 47,000 | Factory Insurance              | \$ 7,400 |
| Raw Materials Inventory 12/31/12   | 44,200    | Factory Machinery Depreciation | 7,700    |
| Finished Goods Inventory 1/1/12    | 85,000    | Factory Utilities              | 12,900   |
| Finished Goods Inventory 12/31/12  | 67,800    | Office Utilities Expense       | 8,600    |
| Work in Process Inventory 1/1/12   | 9,500     | Sales                          | 465,000  |
| Work in Process Inventory 12/31/12 | 8,000     | Sales Discounts                | 2,500    |
| Direct Labor                       | 145,100   | Plant Manager's Salary         | 40,000   |
| Indirect Labor                     | 18,100    | Factory Property Taxes         | 6,100    |
| Accounts Receivable                | 27,000    | Factory Repairs                | 800      |
|                                    |           | Raw Materials Purchases        | 62,500   |
|                                    |           | Cash                           | 28,000   |

**Instructions**

- (a) Prepare a cost of goods manufactured schedule. (Assume all raw materials used were direct materials.)
- (b) Prepare an income statement through gross profit.
- (c) Prepare the current assets section of the balance sheet at December 31.

(a) CGM \$304,900

(b) Gross profit \$140,400

(c) Current assets \$175,000

Prepare a cost of goods manufactured schedule and a correct income statement.

(SO 5, 6)

**P19-5B** Quintana Company is a manufacturer of toys. Its controller resigned in August 2012. An inexperienced assistant accountant has prepared the following income statement for the month of August 2012.

**QUINTANA COMPANY**  
Income Statement  
For the Month Ended August 31, 2012

|                                     |           |                          |
|-------------------------------------|-----------|--------------------------|
| Sales (net)                         |           | \$675,000                |
| Less: Operating expenses            |           |                          |
| Raw materials purchases             | \$220,000 |                          |
| Direct labor cost                   | 160,000   |                          |
| Advertising expense                 | 75,000    |                          |
| Selling and administrative salaries | 70,000    |                          |
| Rent on factory facilities          | 60,000    |                          |
| Depreciation on sales equipment     | 50,000    |                          |
| Depreciation on factory equipment   | 35,000    |                          |
| Indirect labor cost                 | 20,000    |                          |
| Utilities expense                   | 10,000    |                          |
| Insurance expense                   | 5,000     |                          |
|                                     |           | <u>705,000</u>           |
| Net loss                            |           | <u><u>\$(30,000)</u></u> |

Prior to August 2012 the company had been profitable every month. The company's president is concerned about the accuracy of the income statement. As her friend, you have been asked to review the income statement and make necessary corrections. After examining other manufacturing cost data, you have acquired additional information as follows.

1. Inventory balances at the beginning and end of August were:

|                 | <u>August 1</u> | <u>August 31</u> |
|-----------------|-----------------|------------------|
| Raw materials   | \$19,500        | \$30,000         |
| Work in process | 25,000          | 21,000           |
| Finished goods  | 40,000          | 59,000           |

2. Only 50% of the utilities expense and 70% of the insurance expense apply to factory operations; the remaining amounts should be charged to selling and administrative activities.

#### Instructions

(a) Prepare a cost of goods manufactured schedule for August 2012.

(a) CGM \$497,000

(b) Prepare a correct income statement for August 2012.

(b) NL \$ (4,500)

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Waterways Continuing Problem

(Note: The Waterways Problem begins in Chapter 19 and continues in the remaining chapters. You can also find this problem at the book's Student Companion site.)

**WCP19** Waterways Corporation is a private corporation formed for the purpose of providing the products and the services needed to irrigate farms, parks, commercial projects, and private lawns. It has a centrally located factory in a U.S. city that manufactures the products it markets to retail outlets across the nation. It also maintains a division that provides installation and warranty servicing in six metropolitan areas.

The mission of Waterways is to manufacture quality parts that can be used for effective irrigation projects that also conserve water. By that effort, the company hopes to satisfy its customers, provide rapid and responsible service, and serve the community and the employees who represent them in each community.

The company has been growing rapidly, so management is considering new ideas to help the company continue its growth and maintain the high quality of its products.

Waterways was founded by Will Winkman, who is the company president and chief executive officer (CEO). Working with him from the company's inception was Will's brother, Ben, whose sprinkler designs and ideas about the installation of proper systems have been a major basis of the company's success. Ben is the vice president who oversees all aspects of design and production in the company.

The factory itself is managed by Todd Senter who hires his line managers to supervise the factory employees. The factory makes all of the parts for the irrigation systems. The purchasing department is managed by Hector Hines.

The installation and training division is overseen by vice president Henry Writer, who supervises the managers of the six local installation operations. Each of these local managers hires his or her own local service people. These service employees are trained by the home office under Henry Writer's direction because of the uniqueness of the company's products.

There is a small human resources department under the direction of Sally Fenton, a vice president who handles the employee paperwork, though hiring is actually performed by the separate departments. Sam Totter is the vice president who heads the sales and marketing area; he oversees 10 well-trained salespeople.

The accounting and finance division of the company is headed by Abe Headman, who is the chief financial officer (CFO) and a company vice president; he is a member of the Institute of Management Accountants and holds a certificate in management accounting. He has a small staff

*The Waterways Problem starts in this chapter and continues in the remaining chapters. You will find the complete problem for each chapter at the book's companion website.*

of Certified Public Accountants, including a controller and a treasurer, and a staff of accounting input operators who maintain the financial records.

A partial list of Waterways' accounts and their balances for the month of November follows.

|  |           |
|--|-----------|
| Accounts Receivable                    | \$290,000 |
| Advertising Expenses                   | 54,000    |
| Cash                                   | 260,000   |
| Depreciation—Factory Equipment         | 16,800    |
| Depreciation—Office Equipment          | 2,400     |
| Direct Labor                           | 22,000    |
| Factory Supplies Used                  | 16,000    |
| Factory Utilities                      | 10,200    |
| Finished Goods Inventory, November 30  | 68,800    |
| Finished Goods Inventory, October 31   | 72,550    |
| Indirect Labor                         | 48,000    |
| Office Supplies Expense                | 1,600     |
| Other Administrative Expenses          | 72,000    |
| Prepaid Expenses                       | 42,150    |
| Raw Materials Inventory, November 30   | 52,700    |
| Raw Materials Inventory, October 31    | 38,000    |
| Raw Materials Purchases                | 184,500   |
| Rent—Factory Equipment                 | 47,000    |
| Repairs—Factory Equipment              | 4,500     |
| Salaries Expense (administrative)      | 325,000   |
| Sales                                  | 1,350,000 |
| Sales Commissions                      | 40,500    |
| Work in Process Inventory, October 31  | 52,900    |
| Work in Process Inventory, November 30 | 42,000    |

#### Instructions

- Based on the information given, construct an organizational chart of Waterways Corporation.
- A list of accounts and their values are given above. From this information, prepare a cost of goods manufactured schedule, an income statement, and a partial balance sheet for Waterways Corporation for the month of November.

## BROADENING YOUR PERSPECTIVE

### Decision Making Across the Organization

**BYP19-1** Katy Perry Manufacturing Company specializes in producing fashion outfits. On July 31, 2012, a tornado touched down at its factory and general office. The inventories in the warehouse and the factory were completely destroyed as was the general office nearby. Next morning, through a careful search of the disaster site, however, Jim Craig, the company's controller, and Teresa Perry, the cost accountant, were able to recover a small part of manufacturing cost data for the current month.

"What a horrible experience," sighed Jim. "And the worst part is that we may not have enough records to use in filing an insurance claim."

"It was terrible," replied Teresa. "However, I managed to recover some of the manufacturing cost data that I was working on yesterday afternoon. The data indicate that our direct labor cost in July totaled \$240,000 and that we had purchased \$345,000 of raw materials. Also, I recall that the amount of raw materials used for July was \$350,000. But I'm not sure this information will help. The rest of our records are blown away."

"Well, not exactly," said Jim. "I was working on the year-to-date income statement when the tornado warning was announced. My recollection is that our sales in July were \$1,260,000 and our gross profit ratio has been 40% of sales. Also, I can remember that our cost of goods available for sale was \$770,000 for July."

"Maybe we can work something out from this information!" exclaimed Teresa. "My experience tells me that our manufacturing overhead is usually 60% of direct labor."

“Hey, look what I just found,” cried Teresa. “It’s a copy of this June’s balance sheet, and it shows that our inventories as of June 30 are Finished Goods \$38,000, Work in Process \$25,000, and Raw Materials \$19,000.”

“Super,” yelled Jim. “Let’s go work something out.”

In order to file an insurance claim, Katy Perry Company must determine the amount of its inventories as of July 31, 2012, the date of the tornado touchdown.

### Instructions

With the class divided into groups, determine the amount of cost in the Raw Materials, Work in Process, and Finished Goods inventory accounts as of the date of the tornado touchdown.

## Managerial Analysis

**BYP19-2** B.J. King is a fairly large manufacturing company located in the southern United States. The company manufactures tennis rackets, tennis balls, tennis clothing, and tennis shoes, all bearing the company’s distinctive logo, a large green question mark on a white-flocked tennis ball. The company’s sales have been increasing over the past 10 years.

The tennis racket division has recently implemented several advanced manufacturing techniques. Robot arms hold the tennis rackets in place while glue dries, and machine vision systems check for defects. The engineering and design team uses computerized drafting and testing of new products. The following managers work in the tennis racket division.

Andre Agassi, Sales Manager (supervises all sales representatives).

Serena Williams, technical specialist (supervises computer programmers).

Pete Sampras, cost accounting manager (supervises cost accountants).

Andy Roddick, production supervisor (supervises all manufacturing employees).

Venus Williams, engineer (supervises all new-product design teams).

### Instructions

- (a) What are the primary information needs of each manager?
- (b) Which, if any, financial accounting report(s) is each likely to use?
- (c) Name one special-purpose management accounting report that could be designed for each manager. Include the name of the report, the information it would contain, and how frequently it should be issued.

## Real-World Focus

**BYP19-3** **Anchor Glass Container Corporation**, the third largest manufacturer of glass containers in the United States, supplies beverage and food producers and consumer products manufacturers nationwide. Parent company **Consumers Packaging Inc.** (*Toronto Stock Exchange: CGC*) is a leading international designer and manufacturer of glass containers.

The following management discussion appeared in a recent annual report of Anchor Glass.

### Anchor Glass Container Corporation Management Discussion

**Cost of Products Sold** Cost of products sold as a percentage of net sales was 89.3% in the current year compared to 87.6% in the prior year. The increase in cost of products sold as a percentage of net sales principally reflected the impact of operational problems during the second quarter of the current year at a major furnace at one of the Company’s plants, higher downtime, and costs and expenses associated with an increased number of scheduled capital improvement projects, increases in labor, and certain other manufacturing costs (with no corresponding selling price increases in the current year). Reduced fixed costs from the closing of the Streator, Illinois, plant in June of the current year and productivity and efficiency gains partially offset these cost increases.

**Instructions**

What factors affect the costs of products sold at Anchor Glass Container Corporation?

**On the Web**

**BYP19-4** The Institute of Management Accountants (IMA) is an organization dedicated to excellence in the practice of management accounting and financial management.

**Address:** [www.imanet.org](http://www.imanet.org), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

**Instructions**

At the IMA's home page, locate the answers to the following questions.

- (a) How many members does the IMA have, and what are their job titles?
- (b) What are some of the benefits of joining the IMA as a student?
- (c) Use the chapter locator function to locate the IMA chapter nearest you, and find the name of the chapter president.

**Communication Activity**

**BYP19-5** Refer to Problem 19-5A and add the following requirement.

Prepare a letter to the president of the company, Gina Dibene, describing the changes you made. Explain clearly why net income is different after the changes. Keep the following points in mind as you compose your letter.

1. This is a letter to the president of a company, who is your friend. The style should be generally formal, but you may relax some requirements. For example, you may call the president by her first name.
2. Executives are very busy. Your letter should tell the president your main results first (for example, the amount of net income).
3. You should include brief explanations so that the president can understand the changes you made in the calculations.

**Ethics Case**

**BYP19-6** Steve Joyce, controller for Prather Industries, was reviewing production cost reports for the year. One amount in these reports continued to bother him—advertising. During the year, the company had instituted an expensive advertising campaign to sell some of its slower-moving products. It was still too early to tell whether the advertising campaign was successful.

There had been much internal debate as how to report advertising cost. The vice president of finance argued that advertising costs should be reported as a cost of production, just like direct materials and direct labor. He therefore recommended that this cost be identified as manufacturing overhead and reported as part of inventory costs until sold. Others disagreed. Joyce believed that this cost should be reported as an expense of the current period, based on the conservatism principle. Others argued that it should be reported as Prepaid Advertising and reported as a current asset.

The president finally had to decide the issue. He argued that these costs should be reported as inventory. His arguments were practical ones. He noted that the company was experiencing financial difficulty and expensing this amount in the current period might jeopardize a planned bond offering. Also, by reporting the advertising costs as inventory rather than as prepaid advertising, less attention would be directed to it by the financial community.

**Instructions**

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues involved in this situation?
- (c) What would you do if you were Steve Joyce?

**“All About You” Activity**

**BYP19-7** The primary purpose of managerial accounting is to provide information useful for management decisions. Many of the managerial accounting techniques that you learn in this course will be useful for decisions you make in your everyday life.

**Instructions**

For each of the following managerial accounting techniques, read the definition provided and then provide an example of a personal situation that would benefit from use of this technique.

- (a) Break-even analysis (page 1023).
- (b) Budgeting (page 1054).
- (c) Balanced scorecard (page 897).
- (d) Capital budgeting (page 1205).

**Answers to Insight and Accounting Across the Organization Questions**

**p. 880 Even the Best Have to Get Better** **Q:** What are some of the steps that this company has taken in order to ensure that production meets demand? **A:** The company has organized flexible teams, with jobs arranged by the amount of time a task takes. Employees now are multitasked, so they can switch between tasks and products. Also, the stores now provide sales data more quickly to the manufacturing facility, so that production levels can be changed more quickly to respond to demand.

**p. 886 How Many Labor Hours to Build a Car?** **Q:** Why might Nissan production require significantly fewer labor hours? **A:** Nissan's U.S. factories are probably newer than those of Daimler-Chrysler and Ford. Newer factories tend to be more highly automated with less reliance on production-line employees.

**p. 894 Low Fares but Decent Profits** **Q:** What are some of the cost items that would appear in the cost of services provided schedule of an airline? **A:** Some of the cost items that would appear in the cost of services provided schedule of an airline would be fuel, flight crew salaries, maintenance wages, depreciation on equipment, airport gate fees, and food-service costs.

**p. 897 Bananas Receive Special Treatment** **Q:** Why is it important to keep track of costs that are incurred to improve product quality? **A:** Most companies are concerned about product quality, but managers need to consider the cost/benefit trade-off. If you spend too much on improving product quality, your customers might not be willing to pay the price needed to recover costs. Therefore it is very important that Chiquita closely track all of the costs that it incurs to protect the bananas, to ensure that these costs are factored into the price that it ultimately charges for the bananas.

# CHAPTER 20

## Job Order Costing

### Study Objectives

After studying this chapter, you should be able to:

- 1 Explain the characteristics and purposes of cost accounting.
- 2 Describe the flow of costs in a job order costing system.
- 3 Explain the nature and importance of a job cost sheet.
- 4 Indicate how the predetermined overhead rate is determined and used.
- 5 Prepare entries for jobs completed and sold.
- 6 Distinguish between under- and overapplied manufacturing overhead.

### Feature Story

#### "... AND WE'D LIKE IT IN RED"

**Western States Fire Apparatus, Inc.**, of Cornelius, Oregon, is one of the few U.S. companies that makes fire trucks. The company builds about 25 trucks per year. Founded in 1941, the company is run by the children and grandchildren of the original founder.

"We buy the chassis, which is the cab and the frame," says Susan Scott, the company's bookkeeper. "In our computer, we set up an account into which all of the direct material that is purchased for that particular job is charged." Other direct materials include the water pump—which can cost \$10,000—the lights, the siren, ladders, and hoses.

As for direct labor, the production workers fill out time tickets that tell what jobs they worked on. Usually, the company is building four trucks at any one time. On payday, the controller allocates the payroll to the appropriate job record.

The company allocates indirect materials, such as nuts and bolts, wiring, lubricants, and abrasives, to each job in proportion to direct material dollars. It allocates other costs, such as

insurance and supervisors' salaries, based on direct labor hours. "We need to allocate overhead in order to know what kind of price we have to charge when we submit our bids," she says.

Western gets orders through a "blind-bidding" process. That is, Western submits its bid without knowing the bid prices made by its competitors. "If we bid too low, we won't make a profit. If we bid too high, we don't get the job."

Regardless of the final price for the truck, the quality had better be first-rate. "The fire departments let you know if they don't like what you did, and you usually end up fixing it."

- *Service Company Insight: Sales Are Nice, but Service Revenue Pays the Bills* (p. 938)
- *Ethics Insight: Working a 25-Hour Day* (p. 942)

# Preview of CHAPTER 20

The Feature Story about **Western States Fire Apparatus** describes the manufacturing costs used in making a fire truck. It demonstrates that accurate costing is critical to the company's success. For example, in order to submit accurate bids on new jobs and to know whether it profited from past jobs, the company needs a good costing system. This chapter illustrates how these manufacturing costs are assigned to specific jobs, such as the manufacture of individual fire trucks. We begin the discussion in this chapter with an overview of the flow of costs in a job order cost accounting system. We then use a case study to explain and illustrate the documents, entries, and accounts in this type of cost accounting system.

The content and organization of Chapter 20 are as follows.

| Job Order Costing  |   |  |

## Cost Accounting Systems

**Study Objective [1]**  
Explain the characteristics and purposes of cost accounting.

**Cost accounting** involves the measuring, recording, and reporting of product costs. From the data accumulated, companies determine both the total cost and the unit cost of each product. The accuracy of the product cost information produced by the cost accounting system is critical to the success of the company. Companies use this information to determine which products to produce, what price to charge, and the amounts to produce. Accurate product cost information is also vital for effective evaluation of employee performance.

A **cost accounting system** consists of accounts for the various manufacturing costs. These accounts are fully integrated into the general ledger of a company. An important feature of a cost accounting system is the use of a **perpetual inventory system**. Such a system **provides immediate, up-to-date information on the cost of a product**.

There are two basic types of cost accounting systems: (1) a job order cost system and (2) a process cost system. Although cost accounting systems differ widely from company to company, most involve one of these two traditional product costing systems.

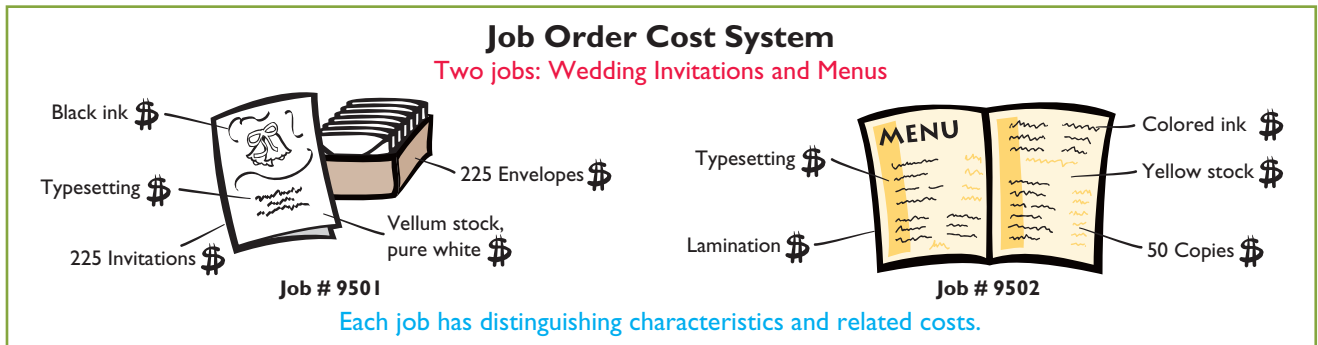

### Job Order Cost System

Under a **job order cost system**, the company assigns costs to each **job** or to each **batch** of goods. An example of a job is the manufacture of a mainframe computer by **IBM**, the production of a movie by **Disney**, or the making of a fire truck by **Western States**. An example of a batch is the printing of 225 wedding invitations by a local

print shop, or the printing of a weekly issue of *Fortune* magazine by a hi-tech printer such as **Quad Graphics**. Companies may complete jobs or batches to fill a specific customer order or to replenish inventory.

An important feature of job order costing is that each job or batch has its own distinguishing characteristics. For example, each house is custom built, each consulting engagement by a CPA firm is unique, and each printing job is different. **The objective is to compute the cost per job.** At each point in manufacturing a product or providing a service, the company can identify the job and its associated costs. A job order cost system measures costs for each completed job, rather than for set time periods. Illustration 20-1 shows the recording of costs in a job order cost system.

**Illustration 20-1**  
Job order cost system

### Process Cost System

A company uses a **process cost system** when it manufactures a large volume of similar products. Production is continuous. Examples of a process cost system are the manufacture of cereal by **Kellogg**, the refining of petroleum by **ExxonMobil**, and the production of automobiles by **General Motors**. Process costing accumulates product-related costs **for a period of time** (such as a week or a month) instead of assigning costs to specific products or job orders. In process costing, companies assign the costs to departments or processes for the specified period of time. Illustration 20-2 shows examples of the use of a process cost system. We will discuss the process cost system further in Chapter 21.

**Illustration 20-2**  
Process cost system

Can a company use both types of cost systems? Yes. For example, **General Motors** uses process cost accounting for its standard model cars, such as Buicks

and Corvettes, and job order cost accounting for a custom-made limousine for the President of the United States. The objective of both cost accounting systems is to provide unit cost information for product pricing, cost control, inventory valuation, and financial statement presentation.

## MANAGEMENT INSIGHT

### Jobs Won, Money Lost

Many companies suffer from poor cost accounting. As a result, they sometimes make products they should not be selling at all, or they buy other products that they could more profitably make themselves. Also, inaccurate cost data lead companies to misallocate capital and frustrate efforts by plant managers to improve efficiency.

For example, consider the case of a diversified company in the business of rebuilding diesel locomotives. The managers thought they were making money, but a consulting firm found that the company had seriously underestimated costs. The company bailed out of the business, and not a moment too soon. Says the consultant who advised the company, "The more contracts it won, the more money it lost." Given that situation, a company cannot stay in business very long!

**?** What type of costs do you think the company had been underestimating? (See page 962.)

## Job Order Cost Flow

### Study Objective [2]

Describe the flow of costs in a job order costing system.

The flow of costs (direct materials, direct labor, and manufacturing overhead) in job order cost accounting parallels the physical flow of the materials as they are converted into finished goods. As shown in Illustration 20-3, companies assign manufacturing costs to the Work in Process Inventory account. When a job is completed, the company transfers the cost of the job to Finished Goods Inventory. Later, when the goods are sold, the company transfers their cost to Cost of Goods Sold.

**Illustration 20-3**  
Flow of costs in job order costing

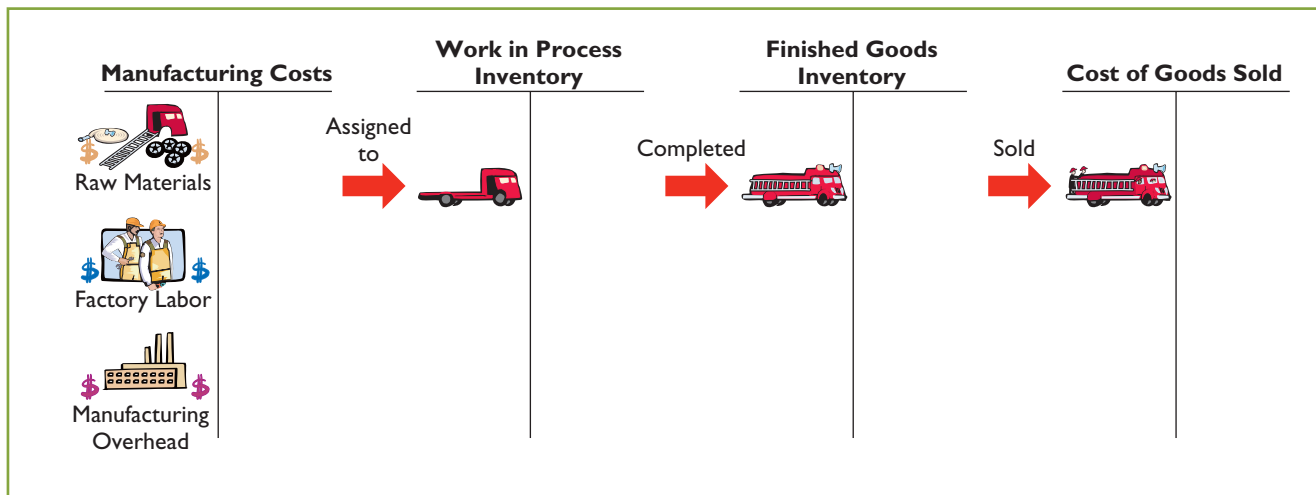

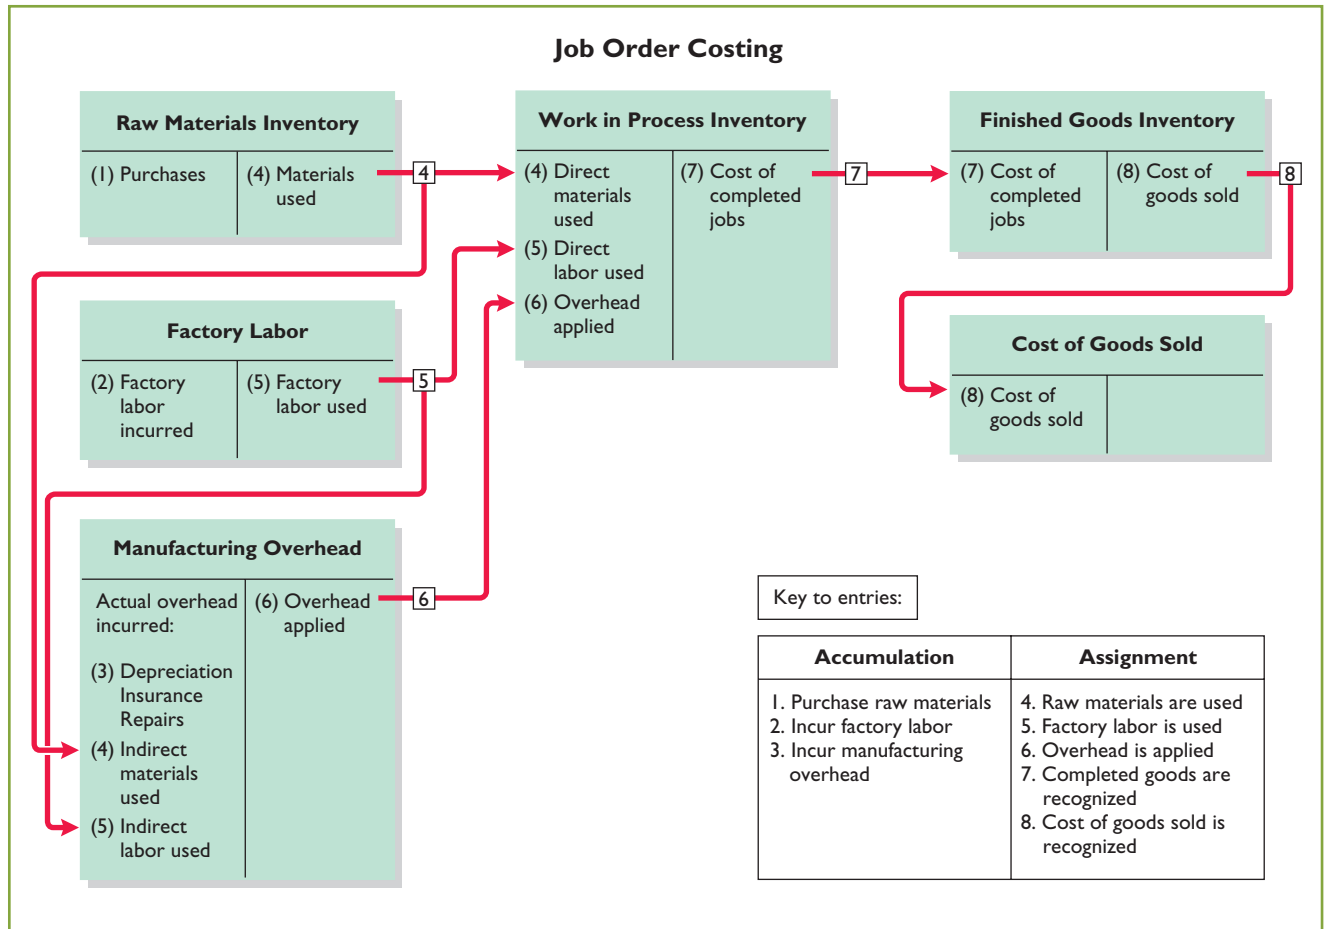

Illustration 20-3 provides a basic overview of the flow of costs in a manufacturing setting. A more detailed presentation of the flow of costs is shown in Illustration 20-4. The box in the lower-right corner of Illustration 20-4 indicates

**Illustration 20-4**  
Job order costing system

two major steps in the flow of costs: (1) *accumulating* the manufacturing costs incurred, and (2) *assigning* the accumulated costs to the work done. As shown, the company accumulates manufacturing costs incurred in entries 1–3 by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. When the company incurs these costs, it does not attempt to associate the costs with specific jobs. The remaining entries (entries 4–8) assign manufacturing costs incurred. In the remainder of this chapter, we will use a case study to explain how a job order system operates.

### Accumulating Manufacturing Costs

To illustrate a job order cost system, we will use the January transactions of Wallace Manufacturing Company, which makes machine tools.

**RAW MATERIALS COSTS**

When Wallace receives the raw materials it has purchased, **it debits the costs of the materials to Raw Materials Inventory**. The company would debit this account for the invoice cost of the raw materials and freight costs chargeable to the purchaser. It would credit the account for purchase discounts taken and purchase returns and allowances. Wallace makes **no effort at this point to associate the cost of materials with specific jobs or orders**.

To illustrate, assume that Wallace Manufacturing purchases 2,000 handles (Stock No. AA2746) at \$5 per unit (\$10,000) and 800 modules (Stock No. AA2850) at \$40 per unit (\$32,000) for a total cost of \$42,000 (\$10,000 + \$32,000). The entry to record this purchase on January 4 is:

|        |  |        |        |
|--------|--|--------|--------|
| (1)    |  |        |        |
| Jan. 4 | Raw Materials Inventory                | 42,000 |        |
|        | Accounts Payable                       |        | 42,000 |
|        | (Purchase of raw materials on account) |        |        |

As we will explain later in the chapter, the company subsequently assigns raw materials inventory to work in process and manufacturing overhead.

**FACTORY LABOR COSTS**

In a manufacturing company, the cost of factory labor consists of three costs: (1) gross earnings of factory workers, (2) employer payroll taxes on these earnings, and (3) fringe benefits (such as sick pay, pensions, and vacation pay) incurred by the employer. **Companies debit labor costs to Factory Labor as they incur those costs**.

To illustrate, assume that Wallace Manufacturing incurs \$32,000 of factory labor costs. Of that amount, \$27,000 relates to wages payable and \$5,000 relates to payroll taxes payable in January. The entry to record factory labor for the month is:

|         |                                 |        |        |
|---------|---------------------------------|--------|--------|
| (2)     |                                 |        |        |
| Jan. 31 | Factory Labor                   | 32,000 |        |
|         | Factory Wages Payable           |        | 27,000 |
|         | Employer Payroll Taxes Payable  |        | 5,000  |
|         | (To record factory labor costs) |        |        |

The company subsequently assigns factory labor to work in process and manufacturing overhead.

**MANUFACTURING OVERHEAD COSTS**

A company has many types of overhead costs. It may recognize these costs **daily**, as in the case of machinery repairs and the use of indirect materials and indirect labor. Or, it may record overhead costs **periodically** through adjusting entries. Companies record property taxes, depreciation, and insurance periodically, for example. This is done using a **summary entry**, which summarizes the totals from multiple transactions.

Using assumed data, the summary entry for manufacturing overhead in Wallace Manufacturing Company is:

|         |                                    |        |       |
|---------|------------------------------------|--------|-------|
| (3)     |                                    |        |       |
| Jan. 31 | Manufacturing Overhead             | 13,800 |       |
|         | Utilities Payable                  |        | 4,800 |
|         | Prepaid Insurance                  |        | 2,000 |
|         | Accounts Payable (for repairs)     |        | 2,600 |
|         | Accumulated Depreciation—Equipment |        | 3,000 |
|         | Property Taxes Payable             |        | 1,400 |
|         | (To record overhead costs)         |        |       |

The company subsequently assigns manufacturing overhead to work in process.

## Do it!

During the current month, Ringling Company incurs the following manufacturing costs:

- (a) Raw material purchases of \$4,200 on account.
- (b) Incurs factory labor of \$18,000. Of that amount, \$15,000 relates to wages payable and \$3,000 relates to payroll taxes payable.
- (c) Factory utilities of \$2,200 are payable, prepaid factory insurance of \$1,800 has expired, and depreciation on the factory building is \$3,500.

Prepare journal entries for each type of manufacturing cost.

### Solution

|   |        |        |
|---|--------|--------|
| (a) Raw Materials Inventory             | 42,000 |        |
| Accounts Payable                        |        | 4,200  |
| (Purchases of raw materials on account) |        |        |
| (b) Factory Labor                       | 18,000 |        |
| Factory Wages Payable                   |        | 15,000 |
| Employer Payroll Taxes Payable          |        | 3,000  |
| (To record factory labor costs)         |        |        |
| (c) Manufacturing Overhead              | 7,500  |        |
| Utilities Payable                       |        | 2,200  |
| Prepaid Insurance                       |        | 1,800  |
| Accumulated Depreciation                |        | 3,500  |
| (To record overhead costs)              |        |        |

Related exercise material: BE20-1, BE20-2, E20-1, E20-7, E20-8, E20-11, and **Do it!** 20-1.

## Manufacturing Costs

### action plan

✓ In accumulating manufacturing costs, debit at least one of three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.

✓ Manufacturing overhead costs may be recognized daily. Or manufacturing overhead may be recorded periodically through a summary entry.

## Assigning Manufacturing Costs to Work in Process

As Illustration 20-4 (page 927) shows, assigning manufacturing costs to work in process results in the following entries:

1. **Debits** made to Work in Process Inventory.
2. **Credits** made to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.

An essential accounting record in assigning costs to jobs is a **job cost sheet**, shown in Illustration 20-5 (page 930). A **job cost sheet** is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job.

Companies keep a separate job cost sheet for each job. The job cost sheets constitute the subsidiary ledger for the Work in Process Inventory account. A **subsidiary ledger** consists of individual records for each individual item—in this case, each job. The Work in Process account is referred to as a **control account** because it summarizes the detailed data regarding specific jobs contained in the job cost sheets. **Each entry to Work in Process Inventory must be accompanied by a corresponding posting to one or more job cost sheets.**

### Study Objective [3]

Explain the nature and importance of a job cost sheet.

**Illustration 20-5**  
Job cost sheet

| Job Cost Sheet   |                      |              |                        |                       |  |                  |          |              |       |                        |       |            |          |                                      |          |

**Helpful Hint**

In today's electronic environment, companies typically maintain job cost sheets as computer files.

**RAW MATERIALS COSTS**

**Companies assign raw materials costs when their materials storeroom issues the materials.** Requests for issuing raw materials are made on a prenumbered **materials requisition slip**. The materials issued may be used directly on a job, or they may be considered indirect materials. As Illustration 20-6 shows, the requisition should indicate the quantity and type of materials withdrawn and the account to be charged. The company will charge direct materials to Work in Process Inventory, and indirect materials to Manufacturing Overhead.

**Illustration 20-6**  
Materials requisition slip

| Wallace Manufacturing Company<br>Materials Requisition Slip  |                                  |           |               |               |                                  |                                 |                             |                                  |

| Requested by <u>Bruce Howard</u>   | Received by <u>Herb Crowley</u>  |           |               |               |                                  |                                 |                             |                                  |
| Approved by <u>Kap Shin</u>  | Costed by <u>Heather Remmers</u> |           |               |               |                                  |                                 |                             |                                  |

The company may use any of the inventory costing methods (FIFO, LIFO, or average-cost) in costing the requisitions **to the individual job cost sheets**.

Periodically, the company journalizes the requisitions. For example, if Wallace Manufacturing uses \$24,000 of direct materials and \$6,000 of indirect materials in January, the entry is:

**Ethics Note**

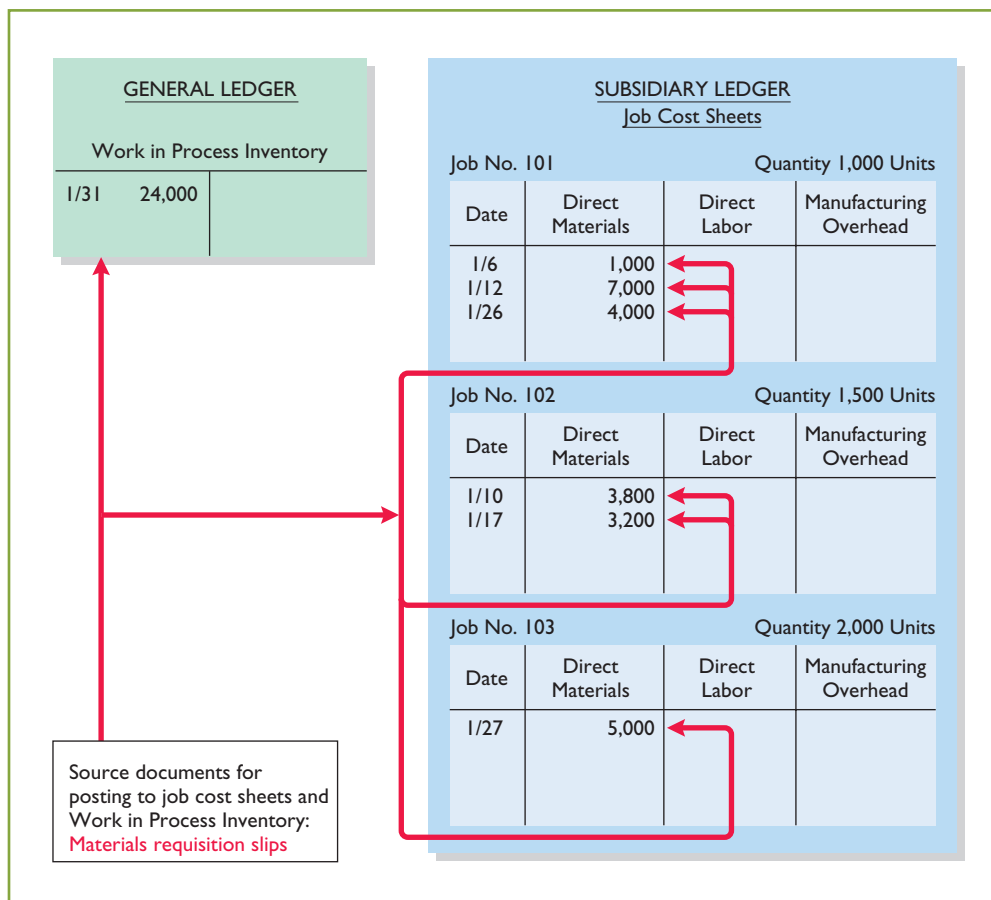

---

The internal control principle of documentation includes prenumbering to enhance accountability.

(4)

|         |  |  |                               |  |
|---------|--|--|-------------------------------|--|
| Jan. 31 |  | Work in Process Inventory<br>Manufacturing Overhead<br>Raw Materials Inventory<br>(To assign materials to jobs and overhead) | 24,000<br>6,000<br><br>30,000 |  |
|---------|--|--|-------------------------------|--|

Illustration 20-7 shows the posting of requisition slip R247 and other assumed postings to the job cost sheets for materials. The requisition slips provide the basis for total direct materials costs of \$12,000 for Job No. 101, \$7,000 for Job No. 102, and \$5,000 for Job No. 103. After the company has completed all postings, the sum of the direct materials columns of the job cost sheets (the subsidiary accounts) should equal the direct materials debited to Work in Process Inventory (the control account).

**Illustration 20-7**  
Job cost sheets—direct materials

**Helpful Hint**  
Companies post to control accounts monthly and post to job cost sheets daily.

**FACTORY LABOR COSTS**

Companies assign factory labor costs to jobs on the basis of time tickets prepared when the work is performed. The **time ticket** indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. Many companies

accumulate these data through the use of bar coding and scanning devices. When they start and end work, employees scan bar codes on their identification badges and bar codes associated with each job they work on. When direct labor is involved, the time ticket must indicate the job number, as shown in Illustration 20-8. The employee’s supervisor should approve all time tickets.

**Illustration 20-8**  
Time ticket

**Helpful Hint**

Some companies use different colored time tickets for direct and for indirect labor.

**Wallace Manufacturing Company  
Time Ticket**

Date: 1/6/12

Employee John Nash Employee No. 124  
 Charge to: Work in Process Job No. 101

| Time  |      |             | Hourly Rate | Total Cost |
|-------|------|-------------|-------------|------------|
| Start | Stop | Total Hours |             |            |
| 0800  | 1200 | 4           | 10.00       | 40.00      |

Approved by Bob Kadlec Costed by M. Chen

The time tickets are later sent to the payroll department, which applies the employee’s hourly wage rate and computes the total labor cost. Finally, the company journalizes the time tickets. It debits the account Work in Process Inventory for direct labor, and debits Manufacturing Overhead for indirect labor. For example, if the \$32,000 total factory labor cost consists of \$28,000 of direct labor and \$4,000 of indirect labor, the entry is:

|         |  |  |                           |  |
|---------|--|--|---------------------------|--|
| (5)     |  |  |                           |  |
| Jan. 31 |  | Work in Process Inventory<br>Manufacturing Overhead<br>Factory Labor<br>(To assign labor to jobs and overhead) | 28,000<br>4,000<br>32,000 |  |

As a result of this entry, Factory Labor has a zero balance, and gross earnings are assigned to the appropriate manufacturing accounts.

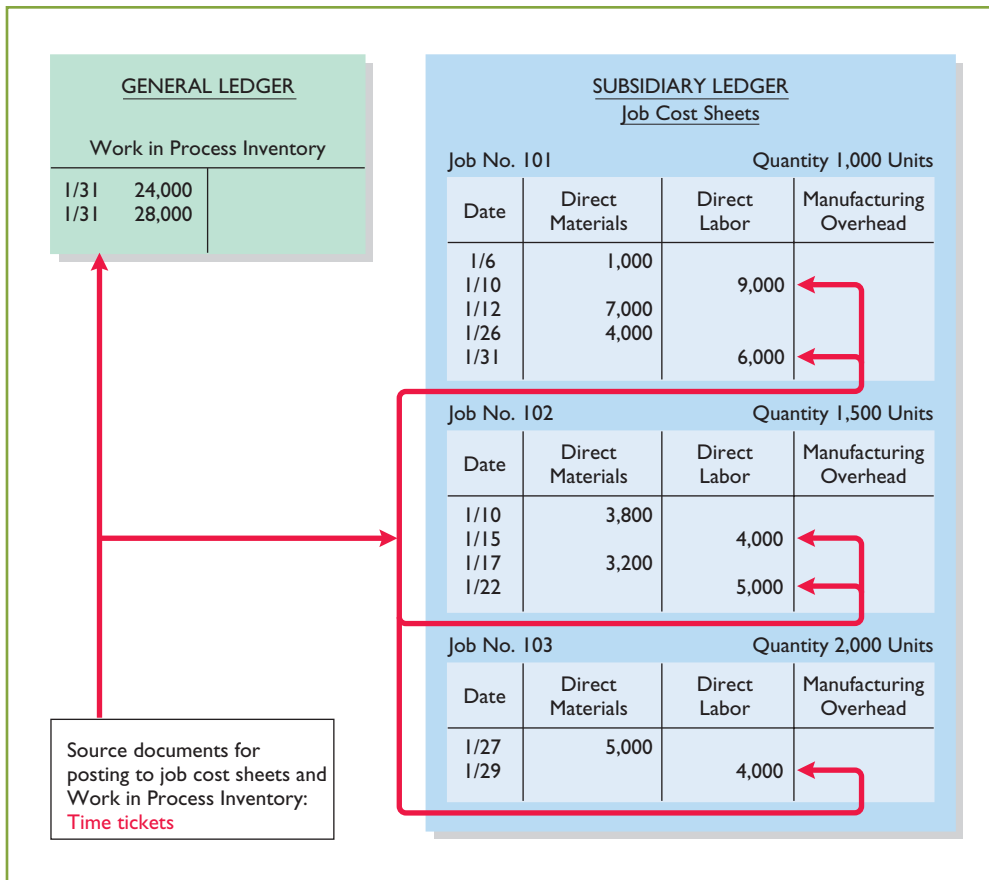

Let’s assume that the labor costs chargeable to Wallace’s three jobs are \$15,000, \$9,000, and \$4,000. Illustration 20-9 (next page) shows the Work in Process Inventory and job cost sheets after posting. As in the case of direct materials, the postings to the direct labor columns of the job cost sheets should equal the posting of direct labor to Work in Process Inventory.

**MANUFACTURING OVERHEAD COSTS**

Companies charge the actual costs of direct materials and direct labor to specific jobs. In contrast, manufacturing **overhead** relates to production operations **as a whole**. As a result, overhead costs cannot be assigned to specific jobs on the basis of actual costs incurred. Instead, companies assign manufacturing overhead to work in process and to specific jobs **on an estimated basis through the use of a predetermined overhead rate**.

**Study Objective [4]**

Indicate how the predetermined overhead rate is determined and used.

**Illustration 20-9**  
 Job cost sheets—direct labor

**Helpful Hint**

Prove the \$28,000 by totaling the charges by jobs:

|     |                 |
|-----|-----------------|
| 101 | \$15,000        |
| 102 | 9,000           |
| 103 | 4,000           |
|     | <u>\$28,000</u> |

The **predetermined overhead rate** is based on the relationship between estimated annual overhead costs and expected annual operating activity, expressed in terms of a common **activity base**. The company may state the activity in terms of direct labor costs, direct labor hours, machine hours, or any other measure that will provide an equitable basis for applying overhead costs to jobs. Companies establish the predetermined overhead rate at the beginning of the year. Small companies often use a single, company-wide predetermined overhead rate. Large companies often use rates that vary from department to department. The formula for a predetermined overhead rate is as follows.

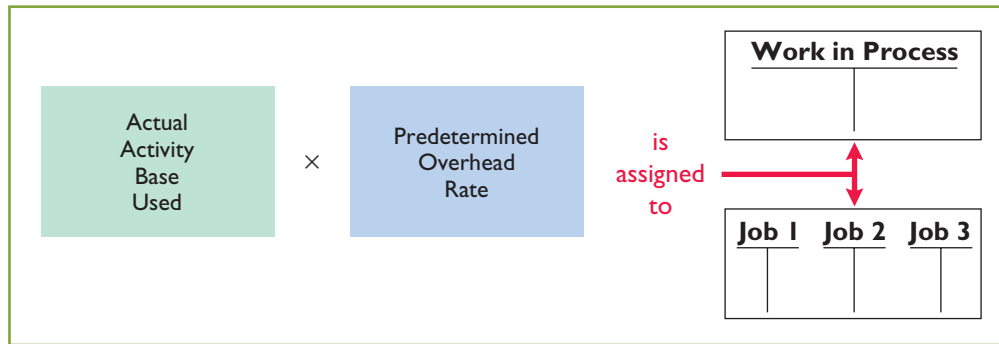

$$\text{Estimated Annual Overhead Costs} \div \text{Expected Annual Operating Activity} = \text{Predetermined Overhead Rate}$$

**Illustration 20-10**  
 Formula for predetermined overhead rate

Overhead relates to production operations as a whole. To know what “the whole” is, the logical thing is to wait until the end of the year’s operations. At that time the company knows all of its costs for the period. As a practical matter, though, managers cannot wait until the end of the year. To price products accurately, they need information about product costs of specific jobs completed during the year. Using a predetermined overhead rate enables a cost to be determined for the job

immediately. Illustration 20-11 indicates how manufacturing overhead is assigned to work in process.

**Illustration 20-11**  
Using predetermined overhead rates

Wallace Manufacturing uses direct labor cost as the activity base. Assuming that the company expects annual overhead costs to be \$280,000 and direct labor costs for the year to be \$350,000, the overhead rate is 80% of direct labor costs, computed as follows:

$$\$280,000 \div \$350,000 = 80\%$$

This means that for every dollar of direct labor, Wallace will assign 80 cents of manufacturing overhead to a job. The use of a predetermined overhead rate enables the company to determine the approximate total cost of each job **when it completes the job**.

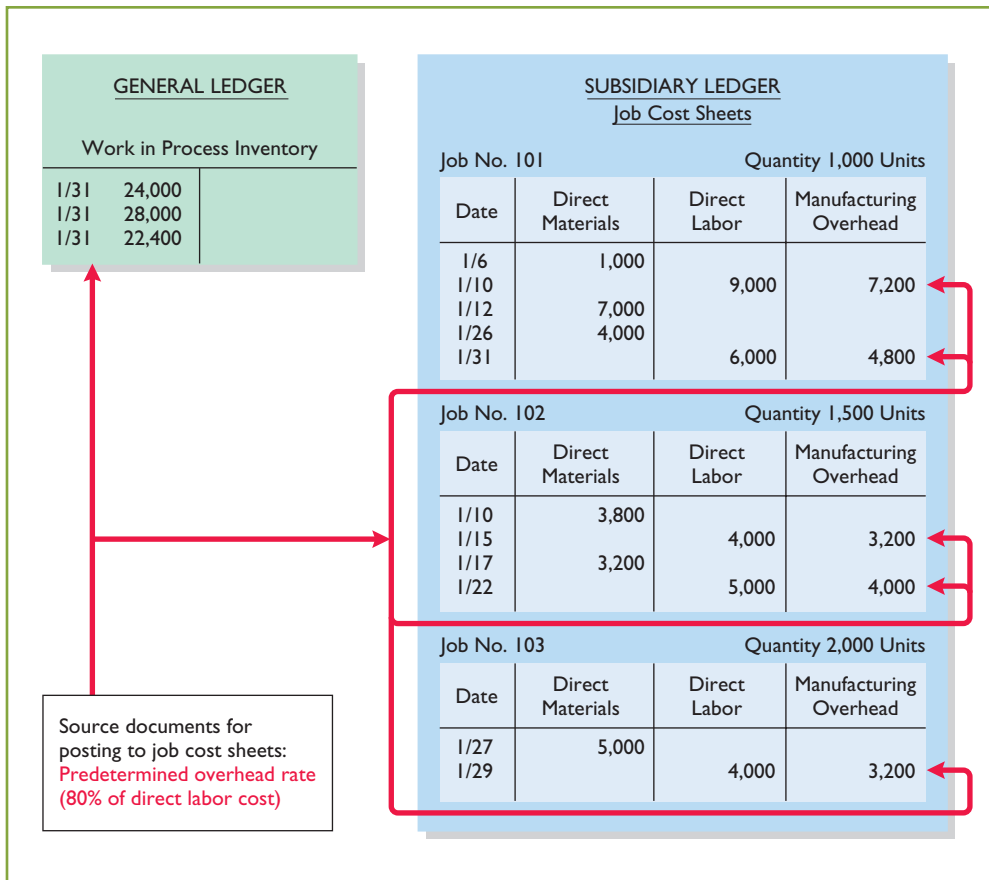

Historically, companies used direct labor costs or direct labor hours as the activity base. The reason was the relatively high correlation between direct labor and manufacturing overhead. Today more companies are using **machine hours as the activity base, due to increased reliance on automation in manufacturing operations**. Or, as mentioned in Chapter 19, many companies now use activity-based costing in an attempt to more accurately allocate overhead costs based on the activities that give rise to the costs.

A company may use more than one activity base. For example, if a job is manufactured in more than one factory department, each department may have its own overhead rate. In the Feature Story about fire trucks, **Western States Fire Apparatus** uses two bases in assigning overhead to jobs: direct materials dollars for indirect materials, and direct labor hours for such costs as insurance and supervisors' salaries.

Wallace Manufacturing applies manufacturing overhead to work in process when it assigns direct labor costs. It also applies manufacturing overhead to specific jobs at the same time. For Wallace Manufacturing, overhead applied for January is \$22,400 (direct labor cost of \$28,000 × 80%). The following entry records this application.

|         |  |   |                          |
|---------|--|---|--------------------------|
| (6)     |  |   |                          |
| Jan. 31 |  | Work in Process Inventory<br>Manufacturing Overhead<br>(To assign overhead to jobs) | 22,400<br><br><br>22,400 |

The overhead that Wallace applies to each job will be 80% of the direct labor cost of the job for the month. Illustration 20-12 shows the Work in Process Inventory account and the job cost sheets after posting. Note that the debit of \$22,400 to Work in Process Inventory equals the sum of the overhead applied to jobs: Job 101 \$12,000 + Job 102 \$7,200 + Job 103 \$3,200.

**Illustration 20-12**  
Job cost sheets—  
manufacturing overhead  
applied

At the end of each month, **the balance in Work in Process Inventory should equal the sum of the costs shown on the job cost sheets of unfinished jobs.** Illustration 20-13 presents proof of the agreement of the control and subsidiary accounts in Wallace Manufacturing. (It assumes that all jobs are still in process.)

| Work in Process Inventory |               | Job Cost Sheets |                 |
|---------------------------|---------------|-----------------|-----------------|
| Jan. 31                   | 24,000        | No. 101         | \$39,000        |
| 31                        | 28,000        | 102             | 23,200          |
| 31                        | 22,400        | 103             | 12,200          |
|                           | <b>74,400</b> |                 | <b>\$74,400</b> |

**Illustration 20-13**  
Proof of job cost sheets to  
work in process inventory

## Do it!

Danielle Company is working on two job orders. The job cost sheets show the following:

- Direct materials—Job 120 \$6,000, Job 121 \$3,600
- Direct labor—Job 120 \$4,000, Job 121 \$2,000
- Manufacturing overhead—Job 120 \$5,000, Job 121 \$2,500

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

## Work in Process

**action plan**

- ✓ Recognize that Work in Process Inventory is the control account for all unfinished job cost sheets.
- ✓ Debit Work in Process Inventory for the materials, labor, and overhead charged to the job cost sheets.
- ✓ Credit the accounts that were debited when the manufacturing costs were accumulated.

**Solution**

The three summary entries are:

|  |       |       |
|--|-------|-------|
| Work in Process Inventory (\$6,000 + \$3,600)            | 9,600 |       |
| Raw Materials Inventory<br>(To assign materials to jobs) |       | 9,600 |
| Work in Process Inventory (\$4,000 + \$2,000)            | 6,000 |       |
| Factory Labor<br>(To assign labor to jobs)               |       | 6,000 |
| Work in Process Inventory (\$5,000 + \$2,500)            | 7,500 |       |
| Manufacturing Overhead<br>(To assign overhead to jobs)   |       | 7,500 |

Related exercise material: BE20-3, BE20-4, BE20-5, E20-1, E20-2, E20-7, E20-8, and **Do it!** 20-2.

**Study Objective [5]**  
Prepare entries for jobs completed and sold.

## Assigning Costs to Finished Goods

**When a job is completed**, Wallace summarizes the costs and completes the lower portion of the applicable job cost sheet. For example, if we assume that Wallace completes Job No. 101 on January 31, the job cost sheet appears as shown in Illustration 20-14.

**Illustration 20-14**  
Completed job cost sheet

| Job Cost Sheet        |                  |                |                        |
|-----------------------|------------------|----------------|------------------------|
| Job No.               | 101              | Quantity       | 1,000                  |
| Item                  | Magnetic Sensors | Date Requested | February 5             |
| For                   | Tanner Company   | Date Completed | January 31             |
| Date                  | Direct Materials | Direct Labor   | Manufacturing Overhead |
| 1/6                   | \$ 1,000         |                |                        |
| 1/10                  |                  | \$ 9,000       | \$ 7,200               |
| 1/12                  | 7,000            |                |                        |
| 1/26                  | 4,000            |                |                        |
| 1/31                  |                  | 6,000          | 4,800                  |
|                       | \$12,000         | \$15,000       | \$12,000               |
| Cost of completed job |                  |                |                        |
|                       |                  | \$             | 12,000                 |
|                       |                  |                | 15,000                 |
|                       |                  |                | 12,000                 |
|                       |                  | \$             | 39,000                 |
|                       |                  | \$             | 39.00                  |

When a job is finished, Wallace makes an entry to transfer its total cost to finished goods inventory. The entry is as follows:

|         |  |  |                          |
|---------|--|--|--------------------------|
| (7)     |  |  |                          |
| Jan. 31 |  | Finished Goods Inventory<br>Work in Process Inventory<br>(To record completion of Job No. 101) | 39,000<br><br><br>39,000 |

**Finished Goods Inventory is a control account. It controls individual finished goods records** in a finished goods subsidiary ledger. The company posts directly from completed job cost sheets to the receipts columns. Illustration 20-15 shows the finished goods inventory record for Job No. 101.

| Finished Goods.xls                                  |                        |       |      |          |       |      |          |       |      |             |

**Illustration 20-15**  
Finished goods record

### Assigning Costs to Cost of Goods Sold

Companies recognize cost of goods sold when each sale occurs. To illustrate the entries a company makes when it sells a completed job, assume that on January 31 Wallace Manufacturing sells on account Job 101. The job cost \$39,000, and it sold for \$50,000. The entries to record the sale and recognize cost of goods sold are:

(8)

|         |                                 |        |        |
|---------|---------------------------------|--------|--------|
| Jan. 31 | Accounts Receivable             | 50,000 | 50,000 |
|         | Sales                           |        |        |
|         | (To record sale of Job No. 101) |        |        |
| 31      | Cost of Goods Sold              | 39,000 | 39,000 |
|         | Finished Goods Inventory        |        |        |
|         | (To record cost of Job No. 101) |        |        |

As Illustration 20-15 above shows, Wallace records, in the issues section of the finished goods record, the units sold, the cost per unit, and the total cost of goods sold for each job sold.

### Job Order Costing for Service Companies

Our extended job order costing example focuses on a manufacturer so that you see the flow of costs through the inventory accounts. It is important to understand, however, that job order costing is also commonly used by service companies. While service companies do not have inventory, the techniques of job order costing are still quite useful in many service-industry environments. Consider, for example, the **Mayo Clinic** (health care), **PriceWaterhouseCoopers** (accounting firm), and **Goldman Sachs** (financial services firm). These companies need to keep track of the cost of jobs performed for specific customers to evaluate the profitability of medical treatments, audits, or consulting engagements.

Many service organizations bill their customers using cost-plus contracts. Cost-plus contracts mean that the customer's bill is the sum of the costs incurred on the job, plus a profit amount that is calculated as a percentage of the costs incurred. In order to minimize conflict with customers and reduce potential contract disputes, service companies that use cost-plus contracts must maintain accurate and up-to-date costing records. Up-to-date cost records enable a service company to immediately

notify a customer of cost overruns due to customer requests for changes to the original plan or unexpected complications. Timely record-keeping allows the contractor and customer to consider alternatives before it is too late.

A service company that uses a job order costing system does not have inventory accounts. It does, however, use an account (often called Service Contracts in Process) to record job costs prior to completion. Job cost sheets for a service company keep track of the materials, labor, and overhead used on a particular job similar to a manufacturer. A number of the exercises at the end this chapter apply job order costing to service companies.

## SERVICE COMPANY INSIGHT

### Sales Are Nice, but Service Revenue Pays the Bills

Jet engines are one of the many products made by the industrial operations division of **General Electric (GE)**. At prices as high as \$30 million per engine, you can bet that GE does its best to keep track of costs. It might surprise you that GE doesn't make much profit on the sale of each engine. So why does it bother making them? Service revenue—during one recent year, about 75% of the division's revenues came from servicing its own products. One estimate is that the \$13 billion in aircraft engines sold during a recent three-year period will generate about \$90 billion in service revenue over the 30-year life of the engines. Because of the high product costs, both the engines themselves and the subsequent service are most likely accounted for using job order costing. Accurate service cost records are important because GE needs to generate high profit margins on its service jobs to make up for the low margins on the original sale. It also needs good cost records for its service jobs in order to control its costs. Otherwise, a competitor, such as **Pratt and Whitney**, might submit lower bids for service contracts and take lucrative jobs away from GE.

Source: Paul Glader, "GE's Focus on Service Faces Test," *Wall Street Journal Online* (March 3, 2009).

**?** Explain why GE would use job order costing to keep track of the cost of repairing a malfunctioning engine for a major airline. (See page 962.)

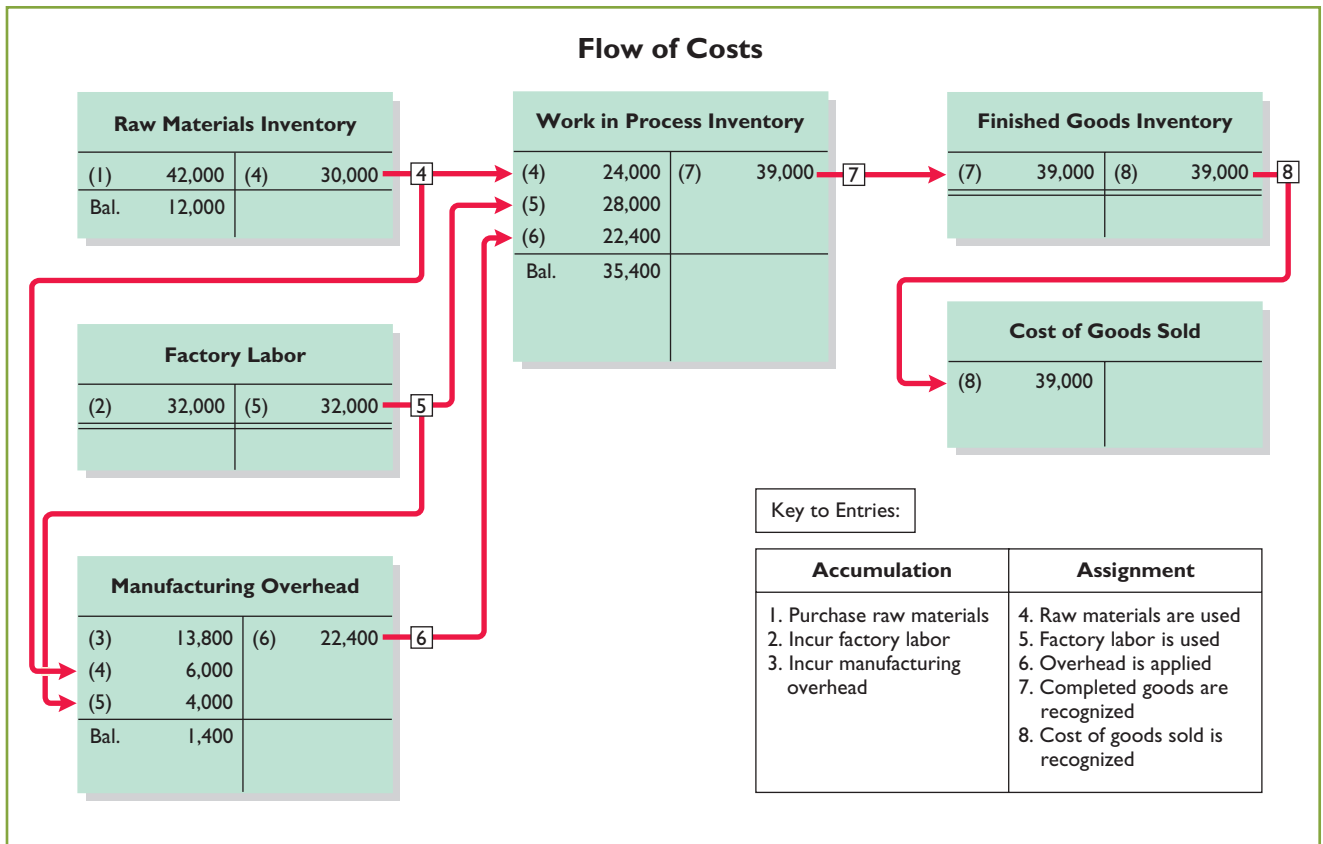

## Summary of Job Order Cost Flows

Illustration 20-16 shows a completed flow chart for a job order cost accounting system. All postings are keyed to entries 1–8 in Wallace Manufacturing's accounts presented in the cost flow graphic in Illustration 20-4 (page 927).

The cost flows in the diagram can be categorized as one of four types:

- **Accumulation:** The company first accumulates costs by (1) purchasing raw materials, (2) incurring labor costs, and (3) incurring manufacturing overhead costs.
- **Assignment to Jobs:** Once the company has incurred manufacturing costs, it must assign them to specific jobs. For example, as it uses raw materials on specific jobs (4), it assigns them to work in process, or treats them as manufacturing overhead if the raw materials cannot be associated with a specific job. Similarly, it either assigns factory labor (5) to work in process, or treats it as manufacturing overhead if the factory labor cannot be associated with a specific job. Finally it assigns manufacturing overhead (6) to work in process using a *predetermined overhead rate*. This deserves emphasis: **Do not assign overhead using actual overhead costs, but instead use a predetermined rate.**

**Illustration 20-16**

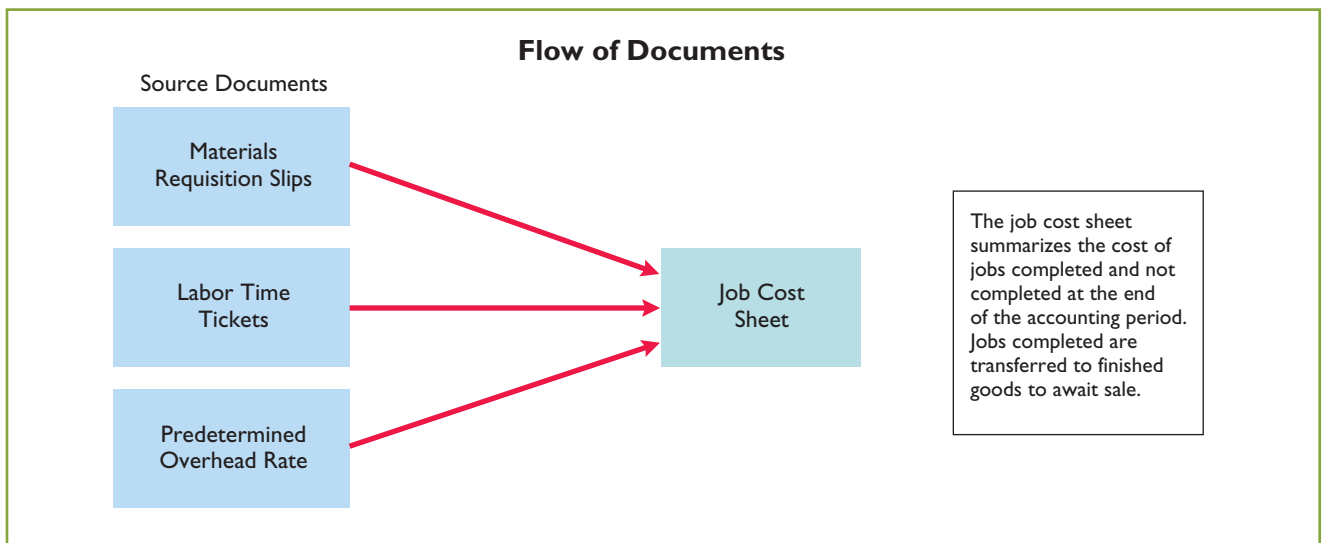

Flow of costs in a job order cost system

- **Completed Jobs:** As jobs are completed (7), the company transfers the cost of the completed job out of work in process inventory into finished goods inventory.
- **When Goods Are Sold:** As specific items are sold (8), the company transfers their cost out of finished goods inventory into cost of goods sold.

Illustration 20-17 summarizes the flow of documents in a job order cost system.

Flow of documents in a job order cost system

## Do it!

### Completion and Sale of Jobs

#### action plan

- ✓ Debit Finished Goods for the cost of completed jobs.
- ✓ Debit Cost of Goods Sold for the cost of jobs sold.

During the current month, Onyx Corporation completed Job 109 and Job 112. Job 109 cost \$19,000 and Job 112 costs \$27,000. Job 112 was sold on account for \$42,000. Journalize the entries for the completion of the two jobs and the sale of Job 112.

#### Solution

|  |        |  |        |
|--|--------|--|--------|
| Finished Goods Inventory   | 46,000 |  |        |
| Work in Process Inventory  |        |  | 46,000 |
| (To record completion of Job 109,<br>costing \$19,000 and Job 112, costing \$27,000) |        |  |        |
| Accounts Receivable  | 42,000 |  |        |
| Sales  |        |  | 42,000 |
| (To record sale of Job 112)  |        |  |        |
| Cost of Goods Sold   | 27,000 |  |        |
| Finished Goods Inventory   |        |  | 27,000 |
| (To record cost of goods sold for Job 112)   |        |  |        |

Related exercise material: BE20-8, E20-2, E20-3, E20-4, E20-6, E20-7, E20-10, and **Do it!** 20-3.

## Advantages and Disadvantages of Job Order Costing

An advantage of job order costing is it is more precise in assignment of costs to projects than process costing. For example, assume that Juan Company (home manufacturer) builds 10 custom homes a year at a total cost of \$2,000,000. One way to determine the cost of the homes is to divide the total construction cost incurred during the year by the number of homes produced during the year. For Juan Company, an average cost of \$200,000 ( $\$2,000,000 \div 10$ ) is computed. If the homes are identical, then this approach is adequate for purposes of determining profit per home. But if the homes vary in terms of size, style, and material types, using the average cost of \$200,000 to determine profit per home is inappropriate. Instead, Juan Company should use a job order costing system to determine the specific cost incurred to build each home and the amount of profit made on each. Thus, job order costing provides more useful information for determining the profitability of particular projects and for estimating costs when preparing bids on future jobs.

One disadvantage of job order costing is that it requires a significant amount of data entry. For Juan Company, it is much easier to simply keep track of total costs incurred during the year than it is to keep track of the costs incurred on each job (home built). Recording this information is time-consuming, and if the data is not entered accurately, then the product costs are not accurate. In recent years, technological advances, such as bar-coding devices for both labor costs and materials, have increased the accuracy and reduced the effort needed to record costs on specific jobs. These innovations expand the opportunities to apply job order costing in a wider variety of business settings, thus improving management's ability to control costs and make better informed decisions.

A common problem of all costing systems is how to allocate overhead to the finished product. Overhead often represents more than 50% of a product's cost, and this cost is often difficult to allocate meaningfully to the product. How, for example, is the salary of Juan Company's president allocated to the various homes that may differ in size, style, and materials used? The accuracy of the job order costing system is largely dependent on the accuracy of the overhead allocation process. Even if the company does a good job of keeping track of the specific amounts of materials and labor used on each job, if the overhead costs are not allocated to individual jobs in a meaningful way, the product costing information is not useful.

## Reporting Job Cost Data

At the end of a period, companies prepare financial statements that present aggregate data on all jobs manufactured and sold. The cost of goods manufactured schedule in job order costing is the same as in Chapter 19 with one exception: **The schedule shows manufacturing overhead applied, rather than actual overhead costs. The company adds manufacturing overhead applied to direct materials and direct labor to determine total manufacturing costs.**

Companies prepare the cost of goods manufactured schedule directly from the Work in Process Inventory account. Illustration 20-18 shows a condensed schedule for Wallace Manufacturing Company for January.

| Wallace Manufacturing Company<br>Cost of Goods Manufactured Schedule<br>For the Month Ended January 31, 2012 |                      |                        |
|--|----------------------|------------------------|
| Work in process, January 1   |                      | \$ -0-                 |
| Direct materials used  | \$24,000             |                        |
| Direct labor   | 28,000               |                        |
| <b>Manufacturing overhead applied</b>  | <b><u>22,400</u></b> |                        |
| Total manufacturing costs  |                      | <u>74,400</u>          |
| Total cost of work in process  |                      | 74,400                 |
| Less: Work in process, January 31  |                      | <u>35,400</u>          |
| Cost of goods manufactured   |                      | <u><u>\$39,000</u></u> |

Note that the cost of goods manufactured (\$39,000) agrees with the amount transferred from Work in Process Inventory to Finished Goods Inventory in journal entry no. 7 in Illustration 20-16 (page 939).

The income statement and balance sheet are the same as those illustrated in Chapter 19. For example, Illustration 20-19 shows the partial income statement for Wallace Manufacturing for the month of January.

| Wallace Manufacturing Company<br>Income Statement (partial)<br>For the Month Ending January 31, 2012 |                      |                        |
|--|----------------------|------------------------|
| Sales  |                      | \$50,000               |
| Cost of goods sold   |                      |                        |
| Finished goods inventory, January 1  | \$ -0-               |                        |
| <b>Cost of goods manufactured</b> (See Illustration 20-18)   | <b><u>39,000</u></b> |                        |
| Cost of goods available for sale   | 39,000               |                        |
| Less: Finished goods inventory, January 31   | <u>-0-</u>           |                        |
| Cost of goods sold   |                      | <u>39,000</u>          |
| Gross profit   |                      | <u><u>\$11,000</u></u> |

### Under- or Overapplied Manufacturing Overhead

When Manufacturing Overhead has a **debit balance**, overhead is said to be underapplied. **Underapplied overhead** means that the overhead assigned to work in process is less than the overhead incurred. Conversely, when manufacturing overhead has a **credit balance**, overhead is overapplied. **Overapplied overhead** means that the overhead assigned to work in process is greater than the overhead incurred. Illustration 20-20 (page 942) shows these concepts.

#### Helpful Hint

Monthly financial statements are usually prepared for management use only.

#### Illustration 20-18

Cost of goods manufactured schedule

#### Illustration 20-19

Partial income statement

#### Study Objective [6]

Distinguish between under- and overapplied manufacturing overhead.

**Illustration 20-20**  
Under- and overapplied overhead

**YEAR-END BALANCE**

At the end of the year, all manufacturing overhead transactions are complete. There is no further opportunity for offsetting events to occur. At this point, Wallace eliminates any balance in Manufacturing Overhead by an adjusting entry. It considers under- or overapplied overhead to be an **adjustment to cost of goods sold**. Thus, Wallace **debits underapplied overhead to Cost of Goods Sold**. It **credits overapplied overhead to Cost of Goods Sold**.

To illustrate, assume that Wallace Manufacturing has a \$2,500 credit balance in Manufacturing Overhead at December 31. The adjusting entry for the overapplied overhead is:

|         |   |       |       |
|---------|---|-------|-------|
| Dec. 31 | Manufacturing Overhead<br>Cost of Goods Sold<br>(To transfer overapplied overhead to<br>cost of goods sold) | 2,500 | 2,500 |
|---------|---|-------|-------|

After Wallace posts this entry, Manufacturing Overhead has a zero balance. In preparing an income statement for the year, Wallace reports cost of goods sold **after adjusting it** for either under- or overapplied overhead.

Conceptually, some argue, under- or overapplied overhead at the end of the year should be allocated among ending work in process, finished goods, and cost of goods sold. The discussion of this possible allocation approach is left to more advanced courses.

**ETHICS INSIGHT**

**Working a 25-Hour Day**

In some industries, companies bill jobs on a “cost plus profit” basis. For example, law offices bill their customers based upon the “billable hours” incurred by their legal staff. This creates an incentive for law offices to pad their bills—that is, to overstate the costs incurred on particular jobs so as to inflate their bills. In one survey, two-thirds of attorneys reported knowledge of bill padding.

Similarly, suppliers to the government have often been accused of overbilling by misstating their cost accounting records. For example, the government recently filed a lawsuit against **Northrop Grumman**. This suit accused the company of intentionally concealing cost-accounting and material-tracking problems related to radar-jamming devices that the company made for the U.S. government more than 20 years before. These problems, the suit alleged, resulted in the government overpaying by \$27 million. Company memos discussed strategies for training cost-accounting managers on how to conceal the problem from the government. One memo stated, “We can’t tell the truth.”

Sources: Nathan Koppel, “Lawyer’s Charge Opens Window on Bill Padding,” *Wall Street Journal* (August 30, 2006); and Andy Pasztor and Jonathan Karp, “Northrop Papers Indicate Coverup,” *Wall Street Journal* (April 19, 2004).

**?** What feature of these businesses creates an incentive to misstate cost accounting data on particular jobs? What can customers do to protect themselves from overbilling? (See page 962.)

## Do it!

For Karr Company, the predetermined overhead rate is 140% of direct labor cost. During the month, Karr incurred \$90,000 of factory labor costs, of which \$80,000 is direct labor and \$10,000 is indirect labor. Actual overhead incurred was \$119,000.

Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

### Solution

$$\begin{aligned} \text{Manufacturing overhead applied} &= (140\% \times \$80,000) = \$112,000 \\ \text{Underapplied manufacturing overhead} &= (\$119,000 - \$112,000) = \$7,000 \end{aligned}$$

Related exercise material: BE20-9, E20-5, E20-12, E20-13, and **Do it!** 20-4.

## Applied Manufacturing Overhead

### action plan

- ✓ Calculate the amount of overhead applied by multiplying the predetermined overhead rate by actual activity.
- ✓ If actual manufacturing overhead is greater than applied, manufacturing overhead is underapplied.
- ✓ If actual manufacturing overhead is less than applied, manufacturing overhead is overapplied.

## COMPREHENSIVE

## Do it!

During February, Cardella Manufacturing works on two jobs: A16 and B17. Summary data concerning these jobs are as follows.

### Manufacturing Overhead

Cardella Manufacturing uses a predetermined overhead rate with direct labor costs as the activity base. It expects annual overhead costs to be \$760,000 and direct labor costs for the year to be \$950,000.

### Manufacturing Costs Incurred

Purchased \$54,000 of raw materials on account.

Factory labor \$76,000, plus \$4,000 employer payroll taxes.

Manufacturing overhead exclusive of indirect materials and indirect labor \$59,800.

### Assignment of Costs

Direct materials: Job A16 \$27,000, Job B17 \$21,000

Indirect materials: \$3,000

Direct labor: Job A16 \$52,000, Job B17 \$26,000

Indirect labor: \$2,000

Job A16 was completed and sold on account for \$150,000. Job B17 was only partially completed.

### Instructions

- (a) Compute the predetermined overhead rate.
- (b) Journalize the February transactions in the sequence followed in the chapter.
- (c) What was the amount of under- or overapplied manufacturing overhead?

### Solution to Comprehensive Do it!

|                                     |   |                                    |   |                             |
|-------------------------------------|---|------------------------------------|---|-----------------------------|
| (a) Estimated annual overhead costs | ÷ | Expected annual operating activity | = | Predetermined overhead rate |
| \$760,000                           | ÷ | \$950,000                          | = | 80%                         |

### action plan

- ✓ Predetermined overhead rate = Estimated annual overhead costs ÷ Expected annual operating activity.
- ✓ In accumulating costs, debit three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead.
- ✓ When Work in Process Inventory is debited, credit one of the three accounts listed above.
- ✓ Debit Finished Goods Inventory for the cost of completed jobs. Debit Cost of Goods Sold for the cost of jobs sold.
- ✓ Overhead is underapplied when Manufacturing Overhead has a debit balance.

|            |  |         |         |
|------------|--|---------|---------|
| <b>(b)</b> |  |         |         |
|            | <b>1.</b>  |         |         |
| Feb. 28    | Raw Materials Inventory  | 54,000  |         |
|            | Accounts Payable   |         | 54,000  |
|            | (Purchase of raw materials on account)   |         |         |
|            | <b>2.</b>  |         |         |
| 28         | Factory Labor  | 80,000  |         |
|            | Factory Wages Payable  |         | 76,000  |
|            | Employer Payroll Taxes Payable   |         | 4,000   |
|            | (To record factory labor costs)  |         |         |
|            | <b>3.</b>  |         |         |
| 28         | Manufacturing Overhead   | 59,800  |         |
|            | Accounts Payable, Accumulated  |         |         |
|            | Depreciation, and Prepaid Insurance  |         | 59,800  |
|            | (To record overhead costs)   |         |         |
|            | <b>4.</b>  |         |         |
| 28         | Work in Process Inventory  | 48,000  |         |
|            | Manufacturing Overhead   | 3,000   |         |
|            | Raw Materials Inventory  |         | 51,000  |
|            | (To assign raw materials to production)  |         |         |
|            | <b>5.</b>  |         |         |
| Feb. 28    | Work in Process Inventory  | 78,000  |         |
|            | Manufacturing Overhead   | 2,000   |         |
|            | Factory Labor  |         | 80,000  |
|            | (To assign factory labor to production)  |         |         |
|            | <b>6.</b>  |         |         |
| 28         | Work in Process Inventory  | 62,400  |         |
|            | Manufacturing Overhead   |         | 62,400  |
|            | (To assign overhead to jobs—<br>80% × \$78,000)  |         |         |
|            | <b>7.</b>  |         |         |
| 28         | Finished Goods Inventory   | 120,600 |         |
|            | Work in Process Inventory  |         | 120,600 |
|            | (To record completion of Job A16: direct<br>materials \$27,000, direct labor \$52,000,<br>and manufacturing overhead \$41,600) |         |         |
|            | <b>8.</b>  |         |         |
| 28         | Accounts Receivable  | 150,000 |         |
|            | Sales  |         | 150,000 |
|            | (To record sale of Job A16)  |         |         |
| 28         | Cost of Goods Sold   | 120,600 |         |
|            | Finished Goods Inventory   |         | 120,600 |
|            | (To record cost of sale for Job A16)   |         |         |

(c) Manufacturing Overhead has a debit balance of \$2,400 as shown below.

| Manufacturing Overhead |        |     |        |
|------------------------|--------|-----|--------|
| (3)                    | 59,800 | (6) | 62,400 |
| (4)                    | 3,000  |     |        |
| (5)                    | 2,000  |     |        |
| Bal.                   | 2,400  |     |        |

Thus, manufacturing overhead is underapplied for the month.

## Summary of Study Objectives

**[1] Explain the characteristics and purposes of cost accounting.** Cost accounting involves the procedures for measuring, recording, and reporting product costs. From the data accumulated, companies determine the total cost and the unit cost of each product. The two basic types of cost accounting systems are job order cost and process cost.

**[2] Describe the flow of costs in a job order costing system.** In job order costing, manufacturing costs are first accumulated in three accounts: Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. The accumulated costs are then assigned to Work in Process Inventory and eventually to Finished Goods Inventory and Cost of Goods Sold.

**[3] Explain the nature and importance of a job cost sheet.** A job cost sheet is a form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. Job cost sheets constitute the subsidiary ledger for the Work in Process Inventory control account.

**[4] Indicate how the predetermined overhead rate is determined and used.** The predetermined overhead

rate is based on the relationship between estimated annual overhead costs and expected annual operating activity. This is expressed in terms of a common activity base, such as direct labor cost. The rate is used in assigning overhead costs to work in process and to specific jobs.

**[5] Prepare entries for jobs completed and sold.** When jobs are completed, the cost is debited to Finished Goods Inventory and credited to Work in Process Inventory. When a job is sold the entries are: (a) Debit Cash or Accounts Receivable and credit Sales for the selling price. And (b) debit Cost of Goods Sold and credit Finished Goods Inventory for the cost of the goods.

**[6] Distinguish between under- and overapplied manufacturing overhead.** Underapplied manufacturing overhead means that the overhead assigned to work in process is less than the overhead incurred. Overapplied overhead means that the overhead assigned to work in process is greater than the overhead incurred.

## Glossary

**Cost accounting** An area of accounting that involves measuring, recording, and reporting product costs. (p. 924).

**Cost accounting system** Manufacturing cost accounts that are fully integrated into the general ledger of a company. (p. 924).

**Job cost sheet** A form used to record the costs chargeable to a specific job and to determine the total and unit costs of the completed job. (p. 929).

**Job order cost system** A cost accounting system in which costs are assigned to each job or batch. (p. 924).

**Materials requisition slip** A document authorizing the issuance of raw materials from the storeroom to production. (p. 930).

**Overapplied overhead** A situation in which overhead assigned to work in process is greater than the overhead incurred. (p. 941).

**Predetermined overhead rate** A rate based on the relationship between estimated annual overhead costs and expected annual operating activity, expressed in terms of a common activity base. (p. 933).

**Process cost system** A system of accounting used when a large quantity of similar products are manufactured. (p. 925).

**Summary entry** A journal entry that summarizes the totals from multiple transactions. (p. 928).

**Time ticket** A document that indicates the employee, the hours worked, the account and job to be charged, and the total labor cost. (p. 931).

**Underapplied overhead** A situation in which overhead assigned to work in process is less than the overhead incurred. (p. 941).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 962.

- (SO 1) 1. Cost accounting involves the measuring, recording, and reporting of:
- product costs.
  - future costs.
  - manufacturing processes.
  - managerial accounting decisions.
2. A company is more likely to use a job costing system if: (SO 1)
- it manufactures a large volume of similar products.
  - its production is continuous.
  - it manufactures products with unique characteristics.
  - it uses a periodic inventory system.
3. In accumulating raw materials costs, the cost of raw materials purchased in a perpetual system is debited to: (SO 2)

- a. Raw Materials Purchases.  
b. Raw Materials Inventory.  
c. Purchases.  
d. Work in Process.
- (SO 2) 4. When incurred, factory labor costs are debited to:  
a. Work in Process.  
b. Factory Wages Expense.  
c. Factory Labor.  
d. Factory Wages Payable.
- (SO 2) 5. The flow of costs in job order costing:  
a. begins with work in process inventory and ends with finished goods inventory.  
b. begins as soon as a sale occurs.  
c. parallels the physical flow of materials as they are converted into finished goods.  
d. is necessary to prepare the cost of goods manufactured schedule.
- (SO 3) 6. Raw materials are assigned to a job when:  
a. the job is sold.  
b. the materials are purchased.  
c. the materials are received from the vendor.  
d. the materials are issued by the materials storeroom.
- (SO 3) 7. The source documents for assigning costs to job cost sheets are:  
a. invoices, time tickets, and the predetermined overhead rate.  
b. materials requisition slips, time tickets, and the actual overhead costs.  
c. materials requisition slips, payroll register, and the predetermined overhead rate.  
d. materials requisition slips, time tickets, and the predetermined overhead rate.
- (SO 3) 8. In recording the issuance of raw materials in a job order cost system, it would be *incorrect* to:  
a. debit Work in Process Inventory.  
b. debit Finished Goods Inventory.  
c. debit Manufacturing Overhead.  
d. credit Raw Materials Inventory.
- (SO 3) 9. The entry when direct factory labor is assigned to jobs is a debit to:  
a. Work in Process Inventory and a credit to Factory Labor.  
b. Manufacturing Overhead and a credit to Factory Labor.  
c. Factory Labor and a credit to Manufacturing Overhead.  
d. Factory Labor and a credit to Work in Process Inventory.
- (SO 4) 10. The formula for computing the predetermined manufacturing overhead rate is estimated annual overhead costs divided by an expected annual operating activity, expressed as:  
a. direct labor cost.                      c. machine hours.  
b. direct labor hours.                      d. Any of the above.
11. In Crawford Company, the predetermined overhead rate (SO 4) is 80% of direct labor cost. During the month, \$210,000 of factory labor costs are incurred, of which \$180,000 is direct labor and \$30,000 is indirect labor. Actual overhead incurred was \$200,000. The amount of overhead debited to Work in Process Inventory should be:  
a. \$120,000.                                      c. \$168,000.  
b. \$144,000.                                      d. \$160,000.
12. In Mynex Company, Job No. 26 is completed at a cost of (SO 5) \$4,500 and later sold for \$7,000 cash. A correct entry is:  
a. Debit Finished Goods Inventory \$7,000 and credit Work in Process Inventory \$7,000.  
b. Debit Cost of Goods Sold \$7,000 and credit Finished Goods Inventory \$7,000.  
c. Debit Finished Goods Inventory \$4,500 and credit Work in Process Inventory \$4,500.  
d. Debit Accounts Receivable \$7,000 and credit Sales \$7,000.
13. At the end of an accounting period, a company using a job (SO 5) costing system prepares the cost of goods manufactured schedule:  
a. from the job cost sheet.  
b. from the Work in Process Inventory account.  
c. by adding direct materials used, direct labor incurred, and manufacturing overhead incurred.  
d. from the Cost of Goods Sold account.
14. At end of the year, a company has a \$1,200 debit balance (SO 6) in Manufacturing Overhead. The company:  
a. makes an adjusting entry by debiting Manufacturing Overhead Applied for \$1,200 and crediting Manufacturing Overhead for \$1,200.  
b. makes an adjusting entry by debiting Manufacturing Overhead Expense for \$1,200 and crediting Manufacturing Overhead for \$1,200.  
c. makes an adjusting entry by debiting Cost of Goods Sold for \$1,200 and crediting Manufacturing Overhead for \$1,200.  
d. makes no adjusting entry because differences between actual overhead and the amount applied are a normal part of job costing and will average out over the next year.
15. Manufacturing overhead is underapplied if: (SO 6)  
a. actual overhead is less than applied.  
b. actual overhead is greater than applied.  
c. the predetermined rate equals the actual rate.  
d. actual overhead equals applied overhead.

for additional Self-Test Questions.

## Questions

- (a) Bill Meyer is not sure about the difference between cost accounting and a cost accounting system. Explain the difference to Bill. (b) What is an important feature of a cost accounting system?
- (a) Distinguish between the two types of cost accounting systems. (b) May a company use both types of cost accounting systems?

3. What type of industry is likely to use a job order cost system? Give some examples.
4. What type of industry is likely to use a process cost system? Give some examples.
5. Your roommate asks your help in understanding the major steps in the flow of costs in a job order cost system. Identify the steps for your roommate.
6. There are two inventory control accounts in a job order system. Identify the control accounts and their subsidiary ledgers.
7. What source documents are used in accumulating direct labor costs?
8. “Entries to Manufacturing Overhead normally are only made daily.” Do you agree? Explain.
9. Yuan Li is confused about the source documents used in assigning materials and labor costs. Identify the documents and give the entry for each document.
10. What is the purpose of a job cost sheet?
11. Indicate the source documents that are used in charging costs to specific jobs.
12. Explain how a “materials requisition slip” is used in a job order cost system.
13. Pham Hannah believes actual manufacturing overhead should be charged to jobs. Do you agree? Why or why not?
14. What relationships are involved in computing a predetermined overhead rate?
15. How can the agreement of Work in Process Inventory and job cost sheets be verified?
16. Tia Conn believes that the cost of goods manufactured schedule in job order cost accounting is the same as shown in Chapter 19. Is Tia correct? Explain.
17. Jeff Gillum is confused about under- and overapplied manufacturing overhead. Define the terms for Jeff, and indicate the balance in the manufacturing overhead account applicable to each term.
18. “At the end of the year, under- or overapplied overhead is closed to Income Summary.” Is this correct? If not, indicate the customary treatment of this amount.

## Brief Exercises

**BE20-1** Alomar Tool & Die begins operations on January 1. Because all work is done to customer specifications, the company decides to use a job order cost accounting system. Prepare a flow chart of a typical job order system with arrows showing the flow of costs. Identify the eight transactions.

*Prepare a flowchart of a job order cost accounting system, and identify transactions.*

(SO 2)

**BE20-2** During January, its first month of operations, Alomar Tool & Die accumulated the following manufacturing costs: raw materials \$4,000 on account, factory labor \$5,000 of which \$4,200 relates to factory wages payable and \$800 relates to payroll taxes payable, and utilities payable \$2,000. Prepare separate journal entries for each type of manufacturing cost.

*Prepare entries in accumulating manufacturing costs.*

(SO 2)

**BE20-3** In January, Alomar Tool & Die requisitions raw materials for production as follows: Job 1 \$900, Job 2 \$1,200, Job 3 \$700, and general factory use \$600. Prepare a summary journal entry to record raw materials used.

*Prepare entry for the assignment of raw materials costs.*

(SO 3)

**BE20-4** Factory labor data for Alomar Tool & Die is given in BE20-2. During January, time tickets show that the factory labor of \$5,000 was used as follows: Job 1 \$1,200, Job 2 \$1,600, Job 3 \$1,400, and general factory use \$800. Prepare a summary journal entry to record factory labor used.

*Prepare entry for the assignment of factory labor costs.*

(SO 3)

**BE20-5** Data pertaining to job cost sheets for Alomar Tool & Die are given in BE20-3 and BE20-4. Prepare the job cost sheets for each of the three jobs. (*Note:* You may omit the column for Manufacturing Overhead.)

*Prepare job cost sheets.*

(SO 3)

**BE20-6** Formu Company estimates that annual manufacturing overhead costs will be \$800,000. Estimated annual operating activity bases are: direct labor cost \$500,000, direct labor hours 50,000, and machine hours 100,000. Compute the predetermined overhead rate for each activity base.

*Compute predetermined overhead rates.*

(SO 4)

**BE20-7** During the first quarter, McKay Company incurs the following direct labor costs: January \$40,000, February \$30,000, and March \$50,000. For each month, prepare the entry to assign overhead to production using a predetermined rate of 90% of direct labor cost.

*Assign manufacturing overhead to production.*

(SO 4)

**BE20-8** In March, Samani Company completes Jobs 10 and 11. Job 10 cost \$25,000 and Job 11 \$30,000. On March 31, Job 10 is sold to the customer for \$35,000 in cash. Journalize the entries for the completion of the two jobs and the sale of Job 10.

*Prepare entries for completion and sale of completed jobs.*

(SO 5)

**BE20-9** At December 31, balances in Manufacturing Overhead are: Mair Company—debit \$1,500, Gitau Company—credit \$900. Prepare the adjusting entry for each company at December 31, assuming the adjustment is made to cost of goods sold.

*Prepare adjusting entries for under- and overapplied overhead.*

(SO 6)

## Do it! Review

Prepare journal entries for manufacturing costs.

(SO 2)

**Do it! 20-1** During the current month, Brady Company incurs the following manufacturing costs:

- Purchased raw materials of \$13,000 on account.
- Incurred factory labor of \$40,000. Of that amount, \$31,000 relates to wages payable and \$9,000 relates to payroll taxes payable.
- Factory utilities of \$3,100 are payable, prepaid factory property taxes of \$2,400 have expired, and depreciation on the factory building is \$9,500.

Prepare journal entries for each type of manufacturing cost. (Use a summary entry to record manufacturing overhead.)

Assign costs to work in process.

(SO 3, 4)

**Do it! 20-2** Francisco Company is working on two job orders. The job cost sheets show the following:

|                        | <u>Job 201</u> | <u>Job 202</u> |
|------------------------|----------------|----------------|
| Direct materials       | \$7,200        | \$9,000        |
| Direct labor           | 4,000          | 6,000          |
| Manufacturing overhead | 5,200          | 7,800          |

Prepare the three summary entries to record the assignment of costs to Work in Process from the data on the job cost sheets.

Prepare entries for completion and sale of jobs.

(SO 5)

**Do it! 20-3** During the current month, Weller Corporation completed Job 310 and Job 312. Job 310 cost \$60,000 and Job 312 cost \$40,000. Job 312 was sold on account for \$90,000. Journalize the entries for the completion of the two jobs and the sale of Job 312.

Apply manufacturing overhead and determine under- or overapplication.

(SO 6)

**Do it! 20-4** For FreeFall Company, the predetermined overhead rate is 150% of direct labor cost. During the month, FreeFall incurred \$100,000 of factory labor costs, of which \$85,000 is direct labor and \$15,000 is indirect labor. Actual overhead incurred was \$120,000.

Compute the amount of manufacturing overhead applied during the month. Determine the amount of under- or overapplied manufacturing overhead.

## Exercises

Prepare entries for factory labor.

(SO 2, 3)

**E20-1** The gross earnings of the factory workers for Zorn Company during the month of January are \$60,000. The employer's payroll taxes for the factory payroll are \$8,000. The fringe benefits to be paid by the employer on this payroll are \$4,000. Of the total accumulated cost of factory labor, 85% is related to direct labor and 15% is attributable to indirect labor.

### Instructions

- Prepare the entry to record the factory labor costs for the month of January.
- Prepare the entry to assign factory labor to production.

Prepare journal entries for manufacturing costs.

(SO 3, 4, 5)

**E20-2** Tiet Manufacturing uses a job order cost accounting system. On May 1, the company has a balance in Work in Process Inventory of \$3,200 and two jobs in process: Job No. 429 \$2,000, and Job No. 430 \$1,200. During May, a summary of source documents reveals the following.

| Job Number  | Materials         |                 | Labor        |                 |
|-------------|-------------------|-----------------|--------------|-----------------|
|             | Requisition Slips |                 | Time Tickets |                 |
| 429         | \$2,500           |                 | \$1,900      |                 |
| 430         | 3,500             |                 | 3,000        |                 |
| 431         | 4,400             | \$10,400        | 7,600        | \$12,500        |
| General use |                   | 800             |              | 1,200           |
|             |                   | <u>\$11,200</u> |              | <u>\$13,700</u> |

Tiet Manufacturing applies manufacturing overhead to jobs at an overhead rate of 80% of direct labor cost. Job No. 429 is completed during the month.

**Instructions**

- (a) Prepare summary journal entries on May 31 to record: (i) the requisition slips, (ii) the time tickets, (iii) the assignment of manufacturing overhead to jobs, and (iv) the completion of Job No. 429.
- (b) Post the entries to Work in Process Inventory, and prove the agreement of the control account with the job cost sheets of the unfinished jobs.

**E20-3** A job order cost sheet for Renshaw Company is shown below.

Analyze a job cost sheet and prepare entries for manufacturing costs.  
(SO 3, 4, 5)

| Job No. 92             |                              | For 2,000 Units |                        |
|------------------------|------------------------------|-----------------|------------------------|
| Date                   | Direct Materials             | Direct Labor    | Manufacturing Overhead |
| Beg. bal. Jan. 1       | 5,000                        | 6,000           | 4,500                  |
| 8                      | 6,000                        |                 |                        |
| 12                     |                              | 8,000           | 6,400                  |
| 25                     | 2,000                        |                 |                        |
| 27                     |                              | 4,000           | 3,200                  |
|                        | 13,000                       | 18,000          | 14,100                 |
| Cost of completed job: |                              |                 |                        |
|                        | Direct materials             |                 | \$13,000               |
|                        | Direct labor                 |                 | 18,000                 |
|                        | Manufacturing overhead       |                 | 14,100                 |
|                        | Total cost                   |                 | <u>\$45,100</u>        |
|                        | Unit cost (\$45,100 ÷ 2,000) |                 | <u><u>\$22.55</u></u>  |

**Instructions**

- (a)  On the basis of the foregoing data answer the following questions.
  - (1) What was the balance in Work in Process Inventory on January 1 if this was the only unfinished job?
  - (2) If manufacturing overhead is applied on the basis of direct labor cost, what overhead rate was used in each year?
- (b) Prepare summary entries at January 31 to record the current year's transactions pertaining to Job No. 92.

**E20-4** Manufacturing cost data for Meneses Company, which uses a job order cost system, are presented below.

Analyze costs of manufacturing and determine missing amounts.  
(SO 5)

|                                | Case A  | Case B    | Case C    |
|--------------------------------|---------|-----------|-----------|
| Direct materials used          | \$ (a)  | \$ 83,000 | \$ 63,150 |
| Direct labor                   | 50,000  | 120,000   | (h)       |
| Manufacturing overhead applied | 42,500  | (d)       | (i)       |
| Total manufacturing costs      | 155,650 | (e)       | 213,000   |
| Work in process 1/1/12         | (b)     | 15,500    | 18,000    |
| Total cost of work in process  | 201,500 | (f)       | (j)       |
| Work in process 12/31/12       | (c)     | 11,800    | (k)       |
| Cost of goods manufactured     | 192,300 | (g)       | 222,000   |

**Instructions**

Indicate the missing amount for each letter. Assume that in all cases manufacturing overhead is applied on the basis of direct labor cost and the rate is the same.

**E20-5** Hodgkiss Company applies manufacturing overhead to jobs on the basis of machine hours used. Overhead costs are expected to total \$305,000 for the year, and machine usage is estimated at 125,000 hours.

Compute the manufacturing overhead rate and under- or overapplied overhead.

For the year, \$322,000 of overhead costs are incurred and 130,000 hours are used.

(SO 4, 6)

**Instructions**

- (a) Compute the manufacturing overhead rate for the year.
- (b) What is the amount of under- or overapplied overhead at December 31?
- (c) Assuming the under- or overapplied overhead for the year is not allocated to inventory accounts, prepare the adjusting entry to assign the amount to cost of goods sold.

Analyze job cost sheet and prepare entry for completed job.

(SO 2, 3, 4, 5)

**E20-6** A job cost sheet of Fenter Company is given below.

| <b>Job Cost Sheet</b>          |                        |                            |                        |
|--------------------------------|------------------------|----------------------------|------------------------|
| JOB NO. <u>469</u>             |                        | Quantity <u>2,000</u>      |                        |
| ITEM <u>Snow Leopard Cages</u> |                        | Date Requested <u>7/2</u>  |                        |
| FOR <u>Mensa Company</u>       |                        | Date Completed <u>7/31</u> |                        |
| Date                           | Direct Materials       | Direct Labor               | Manufacturing Overhead |
| 7/10                           | 825                    |                            |                        |
| 12                             | 900                    |                            |                        |
| 15                             |                        | 440                        | 550                    |
| 22                             |                        | 380                        | 475                    |
| 24                             | 1,600                  |                            |                        |
| 27                             | 1,500                  |                            |                        |
| 31                             |                        | 540                        | 675                    |
| Cost of completed job:         |                        |                            |                        |
|                                | Direct materials       |                            | _____                  |
|                                | Direct labor           |                            | _____                  |
|                                | Manufacturing overhead |                            | _____                  |
|                                | Total cost             |                            | =====                  |
|                                | Unit cost              |                            | =====                  |

**Instructions**

- (a) Answer the following questions.
  - (1) What are the source documents for direct materials, direct labor, and manufacturing overhead costs assigned to this job?
  - (2) What is the predetermined manufacturing overhead rate?
  - (3) What are the total cost and the unit cost of the completed job?
- (b) Prepare the entry to record the completion of the job.

Prepare entries for manufacturing costs.

(SO 2, 3, 4, 5)

**E20-7** Cooke Corporation incurred the following transactions.

1. Purchased raw materials on account \$46,300.
2. Raw Materials of \$36,000 were requisitioned to the factory. An analysis of the materials requisition slips indicated that \$6,800 was classified as indirect materials.
3. Factory labor costs incurred were \$53,900, of which \$49,000 pertained to factory wages payable and \$4,900 pertained to employer payroll taxes payable.
4. Time tickets indicated that \$48,000 was direct labor and \$5,900 was indirect labor.
5. Overhead costs incurred on account were \$80,500.
6. Manufacturing overhead was applied at the rate of 150% of direct labor cost.
7. Goods costing \$88,000 were completed and transferred to finished goods.
8. Finished goods costing \$75,000 to manufacture were sold on account for \$103,000.

**Instructions**

Journalize the transactions. (Omit explanations.)

Prepare entries for manufacturing costs.

(SO 2, 3, 4, 5)

**E20-8** Benton Printing Corp. uses a job order cost system. The following data summarize the operations related to the first quarter's production.

1. Materials purchased on account \$192,000, and factory wages incurred \$87,300.
2. Materials requisitioned and factory labor used by job:

| <u>Job Number</u>   | <u>Materials</u> | <u>Factory Labor</u> |
|---------------------|------------------|----------------------|
| A20                 | \$ 35,240        | \$18,000             |
| A21                 | 42,920           | 22,000               |
| A22                 | 36,100           | 15,000               |
| A23                 | 39,270           | 25,000               |
| General factory use | 4,470            | 7,300                |
|                     | <u>\$158,000</u> | <u>\$87,300</u>      |

3. Manufacturing overhead costs incurred on account \$39,500.
4. Depreciation on equipment \$14,550.
5. Manufacturing overhead rate is 80% of direct labor cost.
6. Jobs completed during the quarter: A20, A21, and A23.

**Instructions**

Prepare entries to record the operations summarized above. (Prepare a schedule showing the individual cost elements and total cost for each job in item 6.)

**E20-9** At May 31, 2012, the accounts of Contreras Manufacturing Company show the following.

1. May 1 inventories—finished goods \$12,600, work in process \$14,700, and raw materials \$8,200.
2. May 31 inventories—finished goods \$9,500, work in process \$17,900, and raw materials \$7,100.
3. Debit postings to work in process were: direct materials \$62,400, direct labor \$32,000, and manufacturing overhead applied \$40,000.
4. Sales totaled \$200,000.

*Prepare a cost of goods manufactured schedule and partial financial statements.*  
(SO 2, 5)

**Instructions**

- (a) Prepare a condensed cost of goods manufactured schedule.
- (b) Prepare an income statement for May through gross profit.
- (c) Indicate the balance sheet presentation of the manufacturing inventories at May 31, 2012.

**E20-10** Forte Company begins operations on April 1. Information from job cost sheets shows the following.

*Compute work in process and finished goods from job cost sheets.*  
(SO 3, 5)

| <u>Job Number</u> | <u>Manufacturing Costs Assigned</u> |            |             | <u>Month Completed</u> |
|-------------------|-------------------------------------|------------|-------------|------------------------|
|                   | <u>April</u>                        | <u>May</u> | <u>June</u> |                        |
| 10                | \$5,200                             | \$4,400    |             | May                    |
| 11                | 4,100                               | 3,900      | \$3,000     | June                   |
| 12                | 1,200                               |            |             | April                  |
| 13                |                                     | 4,700      | 4,500       | June                   |
| 14                |                                     | 4,900      | 3,600       | Not complete           |

Job 12 was completed in April. Job 10 was completed in May. Jobs 11 and 13 were completed in June. Each job was sold for 25% above its cost in the month following completion.

**Instructions**

- (a) What is the balance in Work in Process Inventory at the end of each month?
- (b) What is the balance in Finished Goods Inventory at the end of each month?
- (c) What is the gross profit for May, June, and July?

**E20-11** Shown below are the job cost related accounts for the law firm of Han, Kung, and Ming and their manufacturing-company equivalents:

*Prepare entries for costs of services provided.*  
(SO 2, 4, 5)

| <u>Law Firm Accounts</u>            | <u>Manufacturing-Company Accounts</u> |
|-------------------------------------|---------------------------------------|
| Supplies                            | Raw Materials                         |
| Salaries and Wages Payable          | Factory Wages Payable                 |
| Operating Overhead                  | Manufacturing Overhead                |
| Service Contracts in Process        | Work in Process                       |
| Cost of Completed Service Contracts | Cost of Goods Sold                    |

Cost data for the month of March follow.

1. Purchased supplies on account \$1,500.
2. Issued supplies \$1,200 (60% direct and 40% indirect).
3. Time cards for the month indicated labor costs of \$50,000 (80% direct and 20% indirect).
4. Operating overhead costs incurred for cash totaled \$40,000.
5. Operating overhead is applied at a rate of 90% of direct attorney cost.
6. Work completed totaled \$70,000.

**Instructions**

- (a) Journalize the transactions for March. Omit explanations.
- (b) Determine the balance of the Work in Process account. Use a T account.

*Determine cost of jobs and ending balance in work in process and overhead accounts.*  
(SO 3, 4, 6)

**E20-12** Alma Ortiz and Associates, a CPA firm, uses job order costing to capture the costs of its audit jobs. There were no audit jobs in process at the beginning of November. Listed below are data concerning the three audit jobs conducted during November.

|                     | <u>Perez</u> | <u>Rivera</u> | <u>Sota</u> |
|---------------------|--------------|---------------|-------------|
| Direct materials    | \$600        | \$400         | \$200       |
| Auditor labor costs | \$5,400      | \$6,600       | \$3,375     |
| Auditor hours       | 72           | 88            | 45          |

Overhead costs are applied to jobs on the basis of auditor hours, and the predetermined overhead rate is \$55 per auditor hour. The Perez job is the only incomplete job at the end of November. Actual overhead for the month was \$12,000.

**Instructions**

- (a) Determine the cost of each job.
- (b) Indicate the balance of the Work in Process account at the end of November.
- (c) Calculate the ending balance of the Manufacturing Overhead account for November.

*Determine predetermined overhead rate, apply overhead, and determine whether balance is under- or overapplied.*  
(SO 4, 6)

**E20-13** Irma’s Interiors uses a job order costing system to collect the costs of its interior decorating business. Each client’s consultation is treated as a separate job. Overhead is applied to each job based on the number of decorator hours incurred. Listed below are data for the current year.

|                          |           |
|--------------------------|-----------|
| Budgeted overhead        | \$960,000 |
| Actual overhead          | \$982,800 |
| Budgeted decorator hours | 40,000    |
| Actual decorator hours   | 40,500    |

The company uses Operating Overhead in place of Manufacturing Overhead.

**Instructions**

- (a) Compute the predetermined overhead rate.
- (b) Prepare the entry to apply the overhead for the year.
- (c) Determine whether the overhead was under- or overapplied and by how much.

## Exercises: Set B

Visit the book’s companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

*Prepare entries in a job cost system and job cost sheets.*  
(SO 2, 3, 4, 5, 6)

**P20-1A** Bynum Manufacturing uses a job order cost system and applies overhead to production on the basis of direct labor costs. On January 1, 2012, Job No. 50 was the only job in process. The costs incurred prior to January 1 on this job were as follows: direct materials \$20,000, direct labor \$12,000, and manufacturing overhead \$16,000. As of January 1, Job No. 49 had been completed at a cost of \$90,000 and was part of finished goods inventory. There was a \$15,000 balance in the Raw Materials Inventory account.

During the month of January, Bynum Manufacturing began production on Jobs 51 and 52, and completed Jobs 50 and 51. Jobs 49 and 50 were also sold on account during the month for \$122,000 and \$158,000, respectively. The following additional events occurred during the month.

1. Purchased additional raw materials of \$90,000 on account.
2. Incurred factory labor costs of \$65,000. Of this amount, \$16,000 related to employer payroll taxes.
3. Incurred manufacturing overhead costs as follows: indirect materials \$17,000; indirect labor \$15,000; depreciation expense on equipment \$19,000; and various other manufacturing overhead costs on account \$20,000.
4. Assigned direct materials and direct labor to jobs as follows.

| <u>Job No.</u> | <u>Direct Materials</u> | <u>Direct Labor</u> |
|----------------|-------------------------|---------------------|
| 50             | \$10,000                | \$ 5,000            |
| 51             | 39,000                  | 25,000              |
| 52             | 30,000                  | 20,000              |

**Instructions**

- (a) Calculate the predetermined overhead rate for 2012, assuming Bynum Manufacturing estimates total manufacturing overhead costs of \$1,050,000, direct labor costs of \$700,000, and direct labor hours of 20,000 for the year.
- (b) Open job cost sheets for Jobs 50, 51, and 52. Enter the January 1 balances on the job cost sheet for Job No. 50.
- (c) Prepare the journal entries to record the purchase of raw materials, the factory labor costs incurred, and the manufacturing overhead costs incurred during the month of January.
- (d) Prepare the journal entries to record the assignment of direct materials, direct labor, and manufacturing overhead costs to production. In assigning manufacturing overhead costs, use the overhead rate calculated in (a). Post all costs to the job cost sheets as necessary.
- (e) Total the job cost sheets for any job(s) completed during the month. Prepare the journal entry (or entries) to record the completion of any job(s) during the month.
- (f) Prepare the journal entry (or entries) to record the sale of any job(s) during the month.
- (g) What is the balance in the Finished Goods Inventory account at the end of the month? What does this balance consist of?
- (h) What is the amount of over- or underapplied overhead?

(e) Job 50, \$70,500  
Job 51, \$101,500

**P20-2A** For the year ended December 31, 2012, the job cost sheets of Heimer Company contained the following data.

*Prepare entries in a job cost system and partial income statement.*

| <u>Job Number</u> | <u>Explanation</u>   | <u>Direct Materials</u> | <u>Direct Labor</u> | <u>Manufacturing Overhead</u> | <u>Total Costs</u> |
|-------------------|----------------------|-------------------------|---------------------|-------------------------------|--------------------|
| 7640              | Balance 1/1          | \$25,000                | \$24,000            | \$28,800                      | \$ 77,800          |
|                   | Current year's costs | 30,000                  | 36,000              | 43,200                        | 109,200            |
| 7641              | Balance 1/1          | 11,000                  | 18,000              | 21,600                        | 50,600             |
|                   | Current year's costs | 43,000                  | 48,000              | 57,600                        | 148,600            |
| 7642              | Current year's costs | 48,000                  | 55,000              | 66,000                        | 169,000            |

(SO 2, 3, 4, 5, 6)

Other data:

1. Raw materials inventory totaled \$15,000 on January 1. During the year, \$140,000 of raw materials were purchased on account.
2. Finished goods on January 1 consisted of Job No. 7638 for \$87,000 and Job No. 7639 for \$92,000.
3. Job No. 7640 and Job No. 7641 were completed during the year.
4. Jobs 7638, 7639, and 7641 were sold on account for \$530,000.
5. Manufacturing overhead incurred on account totaled \$120,000.
6. Other manufacturing overhead consisted of indirect materials \$14,000, indirect labor \$20,000, and depreciation on factory machinery \$8,000.

**Instructions**

- (a) Prove the agreement of Work in Process Inventory with job cost sheets pertaining to unfinished work. (*Hint:* Use a single T account for Work in Process Inventory.) Calculate each of the following, then post each to the T account: (1) beginning balance, (2) direct materials, (3) direct labor, (4) manufacturing overhead, and (5) completed jobs.

(a) \$169,000; Job 7642: \$169,000

954 **20** Job Order Costing

(b) Amount = \$4,800

(c) \$156,600

Prepare entries in a job cost system and cost of goods manufactured schedule.

(SO 2, 3, 4, 5)

- (b) Prepare the adjusting entry for manufacturing overhead, assuming the balance is allocated entirely to cost of goods sold.
- (c) Determine the gross profit to be reported for 2012.

**P20-3A** Skop Inc. is a construction company specializing in custom patios. The patios are constructed of concrete, brick, fiberglass, and lumber, depending upon customer preference. On June 1, 2012, the general ledger for Skop Inc. contains the following data.

|                           |         |                                 |          |
|---------------------------|---------|---------------------------------|----------|
| Raw Materials Inventory   | \$4,200 | Manufacturing Overhead Applied  | \$32,640 |
| Work in Process Inventory | \$5,540 | Manufacturing Overhead Incurred | \$31,650 |

Subsidiary data for Work in Process Inventory on June 1 are as follows.

| Cost Element           | Customer Job   |                |                |
|------------------------|----------------|----------------|----------------|
|                        | Gomes          | Innes          | Larsen         |
| Direct materials       | \$ 600         | \$ 800         | \$ 900         |
| Direct labor           | 320            | 540            | 580            |
| Manufacturing overhead | 400            | 675            | 725            |
|                        | <u>\$1,320</u> | <u>\$2,015</u> | <u>\$2,205</u> |

During June, raw materials purchased on account were \$3,900, and all wages were paid. Additional overhead costs consisted of depreciation on equipment \$700 and miscellaneous costs of \$400 incurred on account.

A summary of materials requisition slips and time tickets for June shows the following.

| Customer Job | Materials Requisition Slips | Time Tickets   |
|--------------|-----------------------------|----------------|
| Gomes        | \$ 800                      | \$ 450         |
| Franz        | 2,000                       | 800            |
| Innes        | 500                         | 360            |
| Larsen       | 1,300                       | 1,600          |
| Gomes        | 300                         | 390            |
|              | <u>4,900</u>                | <u>3,600</u>   |
| General use  | <u>1,500</u>                | <u>1,200</u>   |
|              | <u>\$6,400</u>              | <u>\$4,800</u> |

Overhead was charged to jobs at the same rate of \$1.25 per dollar of direct labor cost. The patios for customers Gomes, Innes, and Larsen were completed during June and sold for a total of \$18,900. Each customer paid in full.

**Instructions**

- (a) Journalize the June transactions: (i) for purchase of raw materials, factory labor costs incurred, and manufacturing overhead costs incurred; (ii) assignment of raw materials, labor, and overhead to production; and (iii) completion of jobs and sale of goods.
- (b) Post the entries to Work in Process Inventory.
- (c) Reconcile the balance in Work in Process Inventory with the costs of unfinished jobs.
- (d) Prepare a cost of goods manufactured schedule for June.

(d) Cost of goods manufactured \$14,740

Compute predetermined overhead rates, apply overhead, and calculate under- or overapplied overhead.

(SO 4, 6)

**P20-4A** Hsung Manufacturing Company uses a job order cost system in each of its three manufacturing departments. Manufacturing overhead is applied to jobs on the basis of direct labor cost in Department E, direct labor hours in Department G, and machine hours in Department I.

In establishing the predetermined overhead rates for 2012, the following estimates were made for the year.

|                        | Department  |             |           |
|------------------------|-------------|-------------|-----------|
|                        | E           | G           | I         |
| Manufacturing overhead | \$1,050,000 | \$1,500,000 | \$840,000 |
| Direct labor costs     | \$1,500,000 | \$1,250,000 | \$450,000 |
| Direct labor hours     | 100,000     | 125,000     | 40,000    |
| Machine hours          | 400,000     | 500,000     | 120,000   |

During January, the job cost sheets showed the following costs and production data.

|                                 | Department |           |          |
|---------------------------------|------------|-----------|----------|
|                                 | E          | G         | I        |
| Direct materials used           | \$140,000  | \$126,000 | \$78,000 |
| Direct labor costs              | \$120,000  | \$110,000 | \$37,500 |
| Manufacturing overhead incurred | \$ 89,000  | \$124,000 | \$74,000 |
| Direct labor hours              | 8,000      | 11,000    | 3,500    |
| Machine hours                   | 34,000     | 45,000    | 10,400   |

**Instructions**

- (a) Compute the predetermined overhead rate for each department.
- (b) Compute the total manufacturing costs assigned to jobs in January in each department.
- (c) Compute the under- or overapplied overhead for each department at January 31.

- (a) 70%, \$12, \$7.00
- (b) \$344,000, \$368,000, \$188,300
- (c) \$5,000, \$(8,000), \$1,200

**P20-5A** Sveta Corporation’s fiscal year ends on November 30. The following accounts are found in its job order cost accounting system for the first month of the new fiscal year.

Analyze manufacturing accounts and determine missing amounts.  
(SO 2, 3, 4, 5, 6)

| Raw Materials Inventory |                   |        |         |              |        |
|-------------------------|-------------------|--------|---------|--------------|--------|
| Dec. 1                  | Beginning balance | (a)    | Dec. 31 | Requisitions | 18,850 |

| 31                     | Other overhead     | 1,245 |         |                  |     |

Other data:

1. On December 1, two jobs were in process: Job No. 154 and Job No. 155. These jobs had combined direct materials costs of \$9,750 and direct labor costs of \$15,000. Overhead was applied at a rate that was 80% of direct labor cost.
2. During December, Job Nos. 156, 157, and 158 were started. On December 31, Job No. 158 was unfinished. This job had charges for direct materials \$3,800 and direct labor \$4,800, plus manufacturing overhead. All jobs, except for Job No. 158, were completed in December.
3. On December 1, Job No. 153 was in the finished goods warehouse. It had a total cost of \$5,000. On December 31, Job No. 157 was the only job finished that was not sold. It had a cost of \$4,000.
4. Manufacturing overhead was \$230 overapplied in December.

- (c) \$16,950
- (f) \$57,100
- (i) \$58,100

**Instructions**

List the letters (a) through (m) and indicate the amount pertaining to each letter.

## Problems: Set B

**P20-1B** Saeed Manufacturing uses a job order cost system and applies overhead to production on the basis of direct labor hours. On January 1, 2012, Job No. 25 was the only job in process. The costs incurred prior to January 1 on this job were as follows: direct materials \$10,000; direct

Prepare entries in a job cost system and job cost sheets.  
(SO 2, 3, 4, 5, 6)

labor \$6,000; and manufacturing overhead \$9,000. Job No. 23 had been completed at a cost of \$42,000 and was part of finished goods inventory. There was a \$5,000 balance in the Raw Materials Inventory account.

During the month of January, the company began production on Jobs 26 and 27, and completed Jobs 25 and 26. Jobs 23 and 25 were sold on account during the month for \$63,000 and \$74,000, respectively. The following additional events occurred during the month.

1. Purchased additional raw materials of \$40,000 on account.
2. Incurred factory labor costs of \$31,500. Of this amount, \$7,500 related to employer payroll taxes.
3. Incurred manufacturing overhead costs as follows: indirect materials \$10,000; indirect labor \$7,500; depreciation expense on equipment \$12,000; and various other manufacturing overhead costs on account \$11,000.
4. Assigned direct materials and direct labor to jobs as follows.

| <u>Job No.</u> | <u>Direct Materials</u> | <u>Direct Labor</u> |
|----------------|-------------------------|---------------------|
| 25             | \$ 5,000                | \$ 3,000            |
| 26             | 17,000                  | 12,000              |
| 27             | 13,000                  | 9,000               |

5. The company uses direct labor hours as the activity base to assign overhead. Direct labor hours incurred on each job were as follows: Job No. 25, 200; Job No. 26, 800; and Job No. 27, 600.

**Instructions**

- (a) Calculate the predetermined overhead rate for the year 2012, assuming Saeed Manufacturing estimates total manufacturing overhead costs of \$480,000, direct labor costs of \$300,000, and direct labor hours of 20,000 for the year.
- (b) Open job cost sheets for Jobs 25, 26, and 27. Enter the January 1 balances on the job cost sheet for Job No. 25.
- (c) Prepare the journal entries to record the purchase of raw materials, the factory labor costs incurred, and the manufacturing overhead costs incurred during the month of January.
- (d) Prepare the journal entries to record the assignment of direct materials, direct labor, and manufacturing overhead costs to production. In assigning manufacturing overhead costs, use the overhead rate calculated in (a). Post all costs to the job cost sheets as necessary.
- (e) Total the job cost sheets for any job(s) completed during the month. Prepare the journal entry (or entries) to record the completion of any job(s) during the month.
- (f) Prepare the journal entry (or entries) to record the sale of any job(s) during the month.
- (g) What is the balance in the Work in Process Inventory account at the end of the month? What does this balance consist of?
- (h) What is the amount of over- or underapplied overhead?

(e) Job 25, \$37,800  
Job 26, \$48,200

*Prepare entries in a job cost system and partial income statement.*

(SO 2, 3, 4, 5, 6)

**P20-2B** For the year ended December 31, 2012, the job cost sheets of Guo Company contained the following data.

| <u>Job Number</u> | <u>Explanation</u>   | <u>Direct Materials</u> | <u>Direct Labor</u> | <u>Manufacturing Overhead</u> | <u>Total Costs</u> |
|-------------------|----------------------|-------------------------|---------------------|-------------------------------|--------------------|
| 7650              | Balance 1/1          | \$18,000                | \$20,000            | \$25,000                      | \$ 63,000          |
|                   | Current year's costs | 32,000                  | 36,000              | 45,000                        | 113,000            |
| 7651              | Balance 1/1          | 12,000                  | 16,000              | 20,000                        | 48,000             |
|                   | Current year's costs | 30,000                  | 40,000              | 50,000                        | 120,000            |
| 7652              | Current year's costs | 45,000                  | 68,000              | 85,000                        | 198,000            |

Other data:

1. Raw materials inventory totaled \$20,000 on January 1. During the year, \$100,000 of raw materials were purchased on account.
2. Finished goods on January 1 consisted of Job No. 7648 for \$93,000 and Job No. 7649 for \$62,000.
3. Job No. 7650 and Job No. 7651 were completed during the year.
4. Job Nos. 7648, 7649, and 7650 were sold on account for \$490,000.
5. Manufacturing overhead incurred on account totaled \$135,000.
6. Other manufacturing overhead consisted of indirect materials \$12,000, indirect labor \$18,000, and depreciation on factory machinery \$19,500.

**Instructions**

- (a) Prove the agreement of Work in Process Inventory with job cost sheets pertaining to unfinished work. (*Hint:* Use a single T account for Work in Process Inventory.) Calculate each of the following, then post each to the T account: (1) beginning balance, (2) direct materials, (3) direct labor, (4) manufacturing overhead, and (5) completed jobs.
- (b) Prepare the adjusting entry for manufacturing overhead, assuming the balance is allocated entirely to cost of goods sold.
- (c) Determine the gross profit to be reported for 2012.

- (a) (1) \$111,000  
(4) \$180,000  
Unfinished job 7652,  
\$198,000
- (b) Amount = \$4,500
- (c) \$154,500

**P20-3B** Nami Yee is a contractor specializing in custom-built jacuzzis. On May 1, 2012, her ledger contains the following data.

|                           |             |
|---------------------------|-------------|
| Raw Materials Inventory   | \$30,000    |
| Work in Process Inventory | 12,200      |
| Manufacturing Overhead    | 2,500 (dr.) |

The Manufacturing Overhead account has debit totals of \$12,500 and credit totals of \$10,000. Subsidiary data for Work in Process Inventory on May 1 include:

**Job Cost Sheets**

| <u>Job<br/>by Customer</u> | <u>Direct Materials</u> | <u>Direct Labor</u> | <u>Manufacturing<br/>Overhead</u> |
|----------------------------|-------------------------|---------------------|-----------------------------------|
| Scott                      | \$2,500                 | \$2,000             | \$1,400                           |
| Condon                     | 2,000                   | 1,200               | 840                               |
| Keefe                      | 900                     | 800                 | 560                               |
|                            | <u>\$5,400</u>          | <u>\$4,000</u>      | <u>\$2,800</u>                    |

During May, the following costs were incurred: (a) raw materials purchased on account \$4,000, (b) labor paid \$7,600, and (c) manufacturing overhead paid \$1,400.

A summary of materials requisition slips and time tickets for the month of May reveals the following.

| <u>Job by Customer</u> | <u>Materials Requisition Slips</u> | <u>Time Tickets</u> |
|------------------------|------------------------------------|---------------------|
| Scott                  | \$ 500                             | \$ 400              |
| Condon                 | 600                                | 1,000               |
| Keefe                  | 2,300                              | 1,300               |
| Tarr                   | 1,900                              | 2,900               |
|                        | <u>5,300</u>                       | <u>5,600</u>        |
| General use            | 1,500                              | 2,000               |
|                        | <u>\$6,800</u>                     | <u>\$7,600</u>      |

Overhead was charged to jobs on the basis of \$0.70 per dollar of direct labor cost.

The jacuzzis for customers Scott, Condon, and Keefe were completed during May. Each jacuzzi was sold for \$12,000 cash.

**Instructions**

- (a) Prepare journal entries for the May transactions: (i) for purchase of raw materials, factory labor costs incurred, and manufacturing overhead costs incurred; (ii) assignment of raw materials, labor, and overhead to production; and (iii) completion of jobs and sale of goods.
- (b) Post the entries to Work in Process Inventory.
- (c) Reconcile the balance in Work in Process Inventory with the costs of unfinished jobs.
- (d) Prepare a cost of goods manufactured schedule for May.

- (d) Cost of goods manufactured \$20,190.

**P20-4B** Lyon Manufacturing uses a job order cost system in each of its three manufacturing departments. Manufacturing overhead is applied to jobs on the basis of direct labor cost in Department F, direct labor hours in Department G, and machine hours in Department H.

In establishing the predetermined overhead rates for 2012, the following estimates were made for the year.

- Compute predetermined overhead rates, apply overhead, and calculate under- or overapplied overhead.  
(SO 4, 6)

|                        | <u>Department</u> |           |           |
|------------------------|-------------------|-----------|-----------|
|                        | <u>F</u>          | <u>G</u>  | <u>H</u>  |
| Manufacturing overhead | \$780,000         | \$640,000 | \$750,000 |
| Direct labor cost      | \$600,000         | \$100,000 | \$600,000 |
| Direct labor hours     | 50,000            | 40,000    | 40,000    |
| Machine hours          | 100,000           | 120,000   | 150,000   |

During January, the job cost sheets showed the following costs and production data.

|                                 | Department |          |          |
|---------------------------------|------------|----------|----------|
|                                 | F          | G        | H        |
| Direct materials used           | \$92,000   | \$86,000 | \$64,000 |
| Direct labor cost               | \$48,000   | \$35,000 | \$50,400 |
| Manufacturing overhead incurred | \$66,000   | \$60,000 | \$62,100 |
| Direct labor hours              | 4,000      | 3,500    | 4,200    |
| Machine hours                   | 8,000      | 10,500   | 12,600   |

- (a) 130%, \$16, \$5
- (b) \$202,400, \$177,000, \$177,400
- (c) \$3,600, \$4,000, \$(900)

Analyze manufacturing accounts and determine missing amounts.

(SO 2, 3, 4, 5, 6)

**Instructions**

- (a) Compute the predetermined overhead rate for each department.
- (b) Compute the total manufacturing costs assigned to jobs in January in each department.
- (c) Compute the under- or overapplied overhead for each department at January 31.

**P20-5B** Angel Company’s fiscal year ends on June 30. The following accounts are found in its job order cost accounting system for the first month of the new fiscal year.

| Raw Materials Inventory |                   |        |                          |
|-------------------------|-------------------|--------|--------------------------|
| July 1                  | Beginning balance | 19,000 | July 31 Requisitions (a) |
| 31                      | Purchases         | 90,400 |                          |
| July 31                 | Ending balance    | (b)    |                          |

| Work in Process Inventory |                   |        |                            |
|---------------------------|-------------------|--------|----------------------------|
| July 1                    | Beginning balance | (c)    | July 31 Jobs completed (f) |
| 31                        | Direct materials  | 75,000 |                            |
| 31                        | Direct labor      | (d)    |                            |
| 31                        | Overhead          | (e)    |                            |
| July 31                   | Ending balance    | (g)    |                            |

| Finished Goods Inventory |                   |     |                                |
|--------------------------|-------------------|-----|--------------------------------|
| July 1                   | Beginning balance | (h) | July 31 Cost of goods sold (j) |
| 31                       | Completed jobs    | (i) |                                |
| July 31                  | Ending balance    | (k) |                                |

| Factory Labor |               |     |                            |
|---------------|---------------|-----|----------------------------|
| July 31       | Factory wages | (l) | July 31 Wages assigned (m) |

| Manufacturing Overhead |                    |        |                                  |
|------------------------|--------------------|--------|----------------------------------|
| July 31                | Indirect materials | 8,900  | July 31 Overhead applied 114,000 |
| 31                     | Indirect labor     | 16,000 |                                  |
| 31                     | Other overhead     | (n)    |                                  |

Other data:

1. On July 1, two jobs were in process: Job No. 4085 and Job No. 4086, with costs of \$19,000 and \$13,200, respectively.
2. During July, Job Nos. 4087, 4088, and 4089 were started. On July 31, only Job No. 4089 was unfinished. This job had charges for direct materials \$2,000 and direct labor \$1,500, plus manufacturing overhead. Manufacturing overhead was applied at the rate of 120% of direct labor cost.
3. On July 1, Job No. 4084, costing \$145,000, was in the finished goods warehouse. On July 31, Job No. 4088, costing \$138,000, was in finished goods.
4. Overhead was \$3,000 underapplied in July.

**Instructions**

List the letters (a) through (n) and indicate the amount pertaining to each letter. Show computations.

- (d) \$ 95,000
- (f) \$310,900
- (l) \$111,000

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

### Waterways Continuing Problem

(Note: This is a continuation of the Waterways Problem from Chapter 19.)

**WCP20** Waterways has two major public-park projects to provide with comprehensive irrigation in one of its service locations this month. Job J57 and Job K52 involve 15 acres of landscaped terrain which will require special-order sprinkler heads to meet the specifications of the project. This problem asks you to help Waterways use a job cost system to account for production of these parts.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

## BROADENING YOUR PERSPECTIVE

### Decision Making Across the Organization

**BYP20-1** Burgio Parts Company uses a job order cost system. For a number of months, there has been an ongoing rift between the sales department and the production department concerning a special-order product, TC-1. TC-1 is a seasonal product that is manufactured in batches of 1,000 units. TC-1 is sold at cost plus a markup of 40% of cost.

The sales department is unhappy because fluctuating unit production costs significantly affect selling prices. Sales personnel complain that this has caused excessive customer complaints and the loss of considerable orders for TC-1.

The production department maintains that each job order must be fully costed on the basis of the costs incurred during the period in which the goods are produced. Production personnel maintain that the only real solution to the problem is for the sales department to increase sales in the slack periods.

Alona Macarty, president of the company, asks you as the company accountant to collect quarterly data for the past year on TC-1. From the cost accounting system, you accumulate the following production quantity and cost data.

| Costs                  | Quarter          |                  |                  |                  |
|------------------------|------------------|------------------|------------------|------------------|
|                        | 1                | 2                | 3                | 4                |
| Direct materials       | \$100,000        | \$220,000        | \$ 80,000        | \$200,000        |
| Direct labor           | 60,000           | 132,000          | 48,000           | 120,000          |
| Manufacturing overhead | 105,000          | 123,000          | 97,000           | 125,000          |
| Total                  | <u>\$265,000</u> | <u>\$475,000</u> | <u>\$225,000</u> | <u>\$445,000</u> |
| Production in batches  | <u>5</u>         | <u>11</u>        | <u>4</u>         | <u>10</u>        |
| Unit cost (per batch)  | <u>\$ 53,000</u> | <u>\$ 43,182</u> | <u>\$ 56,250</u> | <u>\$ 44,500</u> |

#### Instructions

With the class divided into groups, answer the following questions.

- What manufacturing cost element is responsible for the fluctuating unit costs? Why?
- What is your recommended solution to the problem of fluctuating unit cost?
- Restate the quarterly data on the basis of your recommended solution.

## Managerial Analysis

**BYP20-2** In the course of routine checking of all journal entries prior to preparing year-end reports, Maria Ferreira discovered several strange entries. She recalled that the president's son Tom had come in to help out during an especially busy time and that he had recorded some journal entries. She was relieved that there were only a few of his entries, and even more relieved that he had included rather lengthy explanations. The entries Tom made were:

(1)

|                           |  |        |  |        |
|---------------------------|--|--------|--|--------|
| Work in Process Inventory |  | 25,000 |  |        |
| Cash                      |  |        |  | 25,000 |

(This is for materials put into process. I didn't find the record that we paid for these, so I'm crediting Cash, because I know we'll have to pay for them sooner or later.)

(2)

|                        |  |        |  |        |
|------------------------|--|--------|--|--------|
| Manufacturing Overhead |  | 12,000 |  |        |
| Cash                   |  |        |  | 12,000 |

(This is for bonuses paid to salespeople. I know they're part of overhead, and I can't find an account called "Non-factory Overhead" or "Other Overhead" so I'm putting it in Manufacturing Overhead. I have the check stubs, so I know we paid these.)

(3)

|               |  |         |  |         |
|---------------|--|---------|--|---------|
| Wages Expense |  | 120,000 |  |         |
| Cash          |  |         |  | 120,000 |

(This is for the factory workers' wages. I have a note that payroll taxes are \$15,000. I still think that's part of wages expense, and that we'll have to pay it all in cash sooner or later, so I credited Cash for the wages and the taxes.)

(4)

|                           |  |       |  |       |
|---------------------------|--|-------|--|-------|
| Work in Process Inventory |  | 3,000 |  |       |
| Raw Materials Inventory   |  |       |  | 3,000 |

(This is for the glue used in the factory. I know we used this to make the products, even though we didn't use very much on any one of the products. I got it out of inventory, so I credited an inventory account.)

### Instructions

- (a) How should Tom have recorded each of the four events?
- (b) If the entry was not corrected, which financial statements (income statement or balance sheet) would be affected? What balances would be overstated or understated?

## Real-World Focus

**BYP20-3** Founded in 1970, **Parlex Corporation** is a world leader in the design and manufacture of flexible interconnect products. Utilizing proprietary and patented technologies, Parlex produces custom flexible interconnects including flexible circuits, polymer thick film, laminated cables, and value-added assemblies for sophisticated electronics used in automotive, telecommunications, computer, diversified electronics, and aerospace applications. In addition to manufacturing sites in Methuen, Massachusetts; Salem, New Hampshire; Cranston, Rhode Island; San Jose, California; Shanghai, China; Isle of Wight, UK; and Empalme, Mexico, Parlex has logistic support centers and strategic alliances throughout North America, Asia, and Europe.

The following information was provided in the company's annual report.

### Parlex Company Notes to the Financial Statements

The Company's products are manufactured on a job order basis to customers' specifications. Customers submit requests for quotations on each job, and the Company prepares bids based on its own cost estimates. The Company attempts to reflect the impact of changing costs when establishing prices. However, during the past several years, the market conditions for flexible circuits and the resulting price sensitivity haven't always allowed this to transpire. Although still not satisfactory, the Company was able to reduce the cost of products sold as a percentage of sales to 85% this year versus 87% that was experienced in the two immediately preceding years. Management continues to focus on improving operational efficiency and further reducing costs.

#### Instructions

- (a) Parlex management discusses the job order cost system employed by their company. What are several advantages of using the job order approach to costing?
- (b) Contrast the products produced in a job order environment, like Parlex, to those produced when process cost systems are used.

### On the Web

**BYP20-4** The Institute of Management Accountants sponsors a certification for management accountants, allowing them to obtain the title of Certified Management Accountant.

**Address:** [www.imanet.org](http://www.imanet.org), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

#### Steps

1. Go to the site shown above.
2. Choose **Certification**, and then, **Getting Started**.

#### Instructions

- (a) What is the experience qualification requirement?
- (b) How many hours of continuing education are required, and what types of activities qualify?

### Communication Activity

**BYP20-5** You are the management accountant for Knowles Manufacturing. Your company does custom carpentry work and uses a job order cost accounting system. Knowles sends detailed job cost sheets to its customers, along with an invoice. The job cost sheets show the date materials were used, the dollar cost of materials, and the hours and cost of labor. A predetermined overhead application rate is used, and the total overhead applied is also listed.

Saira Ortiz is a customer who recently had custom cabinets installed. Along with her check in payment for the work done, she included a letter. She thanked the company for including the detailed cost information but questioned why overhead was estimated. She stated that she would be interested in knowing exactly what costs were included in overhead, and she thought that other customers would, too.

#### Instructions

Prepare a letter to Ms. Ortiz (address: 456 Maple Avenue, Boise, Idaho 83702) and tell her why you did not send her information on exact costs of overhead included in her job. Respond to her suggestion that you provide this information.

### Ethics Case

**BYP20-6** TKE Catering provides catering services to many different corporate clients. Although TKE bids most jobs, some jobs, particularly new ones, are negotiated on a "cost-plus" basis. Cost-plus means that the buyer is willing to pay the actual cost plus a return (profit) on these costs to TKE.

Anna Tsing, controller for TKE, has recently returned from a meeting where TKE's president stated that he wanted her to find a way to charge most costs to any project that was on a cost-plus basis. The president noted that the company needed more profits to meet its stated goals this period. By charging more costs to the cost-plus projects and therefore fewer costs to the jobs that were bid, the company should be able to increase its profit for the current year.

Anna knew why the president wanted to take this action. Rumors were that he was looking for a new position and if the company reported strong profit, the president's opportunities would be enhanced. Anna also recognized that she could probably increase the cost of certain jobs by changing the basis used to allocate manufacturing overhead.

#### Instructions

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues in this situation?
- (c) What would you do if you were Anna Tsing?

### "All About You" Activity

**BYP20-7** Many of you will work for a small business. As noted in the **All About You** feature (available on the book's companion website), some of you will even own your own business. In order to operate a small business you will need a good understanding of managerial accounting, as well as many other skills. Much information is available to assist people who are interested in starting a new business. A great place to start is the website provided by the Small Business Administration, which is an agency of the federal government whose purpose is to support small business.

#### Instructions

Go to [www.sba.gov](http://www.sba.gov) and in the "Starting Your Business" link, review the material under the "Are You Ready?" Answer the following questions.

- (a) What are some of the characteristics required of a small business owner?
- (b) What are the top 10 reasons given for business failure?

#### Answers to Insight and Accounting Across the Organization Questions

**p. 926 Jobs Won, Money Lost** **Q:** What type of costs do you think the company had been underestimating?

**A:** It is most likely that the company failed to estimate and track overhead. In a highly diversified company, overhead associated with the diesel locomotive jobs may have been "lost" in the total overhead pool for the entire company.

**p. 938 Sales Are Nice, but Service Revenue Pays the Bills** **Q:** Explain why GE would use job order costing to keep track of the cost of repairing a malfunctioning engine for a major airline. **A:** GE operates in a competitive environment. Other companies offer competing bids to win service contracts on GE airplane engines. GE needs to know what it costs to repair engines, so that it can present competitive bids while still generating a reasonable profit.

**p. 942 Working a 25-Hour Day** **Q:** What feature of these businesses creates an incentive to misstate cost accounting data on particular jobs? What can customers do to protect themselves from overbilling?

**A:** In these business situations, the compensation to the supplier depends on the costs incurred by the supplier. This so-called "cost-plus" arrangement creates an incentive for the supplier to overstate costs. Customers should stipulate that they have the right to have the suppliers' records audited.

#### Answers to Self-Test Questions

1. a 2. c 3. b 4. c 5. c 6. d 7. d 8. b 9. a 10. d 11. b ( $80\% \times \$180,000$ ) 12. c 13. b 14. c 15. b

# CHAPTER 21

## Process Costing

### Study Objectives

After studying this chapter, you should be able to:

- 1 Understand who uses process cost systems.
- 2 Explain the similarities and differences between job order cost and process cost systems.
- 3 Explain the flow of costs in a process cost system.
- 4 Make the journal entries to assign manufacturing costs in a process cost system.
- 5 Compute equivalent units.
- 6 Explain the four steps necessary to prepare a production cost report.
- 7 Prepare a production cost report.
- 8 Explain just-in-time (JIT) processing.
- 9 Explain activity-based costing (ABC).

### Feature Story

#### BEN & JERRY'S TRACKS ITS MIX-UPS

**Ben & Jerry's Homemade, Inc.** is one of the "hottest" and "coolest" U.S. companies. Based in Waterbury, Vermont, the ice cream company that started out of a garage in 1978 is now a public company.

Making ice cream is a process—a movement of product from a mixing department to a prepping department to a pint department. The mixing department is where the ice cream is created. In the prep area the production process adds extras such as cherries and walnuts to make plain ice cream into "Cherry Garcia," Ben & Jerry's most popular flavor, or fudge-covered waffle cone pieces and a swirl of caramel for "Stephen Colbert's Americone Dream," one of B & J's newest flavors. The pint department is where the ice cream is actually put into containers. As the product is processed from one department to the next, the appropriate materials, labor, and overhead are added to it.

“The incoming ingredients from the shipping and receiving departments are stored in certain locations, either in a freezer or dry warehouse,” says Beecher Eurich, staff accountant.

“As ingredients get added, so do the costs associated with them.” How much ice cream is produced? Running plants around the clock, the company produces 18 million gallons a year.

With the company’s process costing system, Eurich can tell you how much a certain batch of ice cream costs to make—its materials, labor, and overhead in each of the production departments. She generates reports for the production department heads, but makes sure not to overdo it.

“You can get bogged down in numbers,” says Eurich. “If you’re generating a report that no one can use, then that’s a waste of time.”

It’s more likely, though, Ben & Jerry’s production people want to know how efficient they are. Why? Many own stock in the company.

## InsideCHAPTER21

- *Management Insight: Choosing a Cost Driver* (p. 971)
- *Management Insight: Keeping Score for the Xbox* (p. 976)

# Preview of CHAPTER 21

The cost accounting system used by companies such as **Ben & Jerry's** is **process cost accounting**. In contrast to job order cost accounting, which focuses on the individual job, process cost accounting focuses on the *processes* involved in mass-producing products that are identical or very similar in nature. The primary objective of the chapter is to explain and illustrate process costing.

The content and organization of this chapter are as follows.

| Process Costing   |  |   |   |

## The Nature of Process Cost Systems

### Study Objective [1]

Understand who uses process cost systems.

### Uses of Process Cost Systems

Companies use **process cost systems** to apply costs to similar products that are mass-produced in a continuous fashion. **Ben & Jerry's** uses a process cost system: Production of the ice cream, once it begins, continues until the ice cream emerges, and the processing is the same for the entire run—with precisely the same amount of materials, labor, and overhead. Each finished pint of ice cream is indistinguishable from another.

A company such as **USX** uses process costing in the manufacturing of steel. **Kellogg** and **General Mills** use process costing for cereal production; **ExxonMobil** uses process costing for its oil refining; **Sherwin Williams** uses process costing for its paint products. At a bottling company like **Coca-Cola**, the manufacturing process begins with the blending of ingredients. Next, automated machinery moves the bottles into position and fills them. The production process then caps, packages, and forwards the bottles to the finished goods warehouse. Illustration 21-1 shows this process.

**Illustration 21-1**  
Manufacturing processes

For Coca-Cola, as well as the other companies just mentioned, once the production begins, it continues until the finished product emerges, and each unit of finished product is like every other unit.

In comparison, in a job order cost system companies assign costs to a *specific job*. Examples are the construction of a customized home, the making of a motion picture, or the manufacturing of a specialized machine. Illustration 21-2 provides examples of companies that primarily use either a process cost system or a job order cost system.

**Illustration 21-2**  
Process cost and job order cost companies and products

| Process Cost System Company   | Product  | Job Order Cost System Company           | Product  |
|-------------------------------|--|---|--|
| Coca-Cola, PepsiCo            | Soft drinks     | Young & Rubicam, Omnicom                | Advertising           |
| ExxonMobil, Royal Dutch Shell | Oil             | Walt Disney, Warner Brothers            | Motion pictures       |
| Intel, Advanced Micro Devices | Computer chips  | Center Ice Consultants, Ice Rink Events | Ice rinks             |
| Dow Chemical, DuPont          | Chemicals      | Kaiser Permanente, Mayo Clinic          | Patient health care  |

### Process Costing for Service Companies

Frequently, when we think of service companies, we think of specific, nonroutine tasks, such as rebuilding an automobile engine, providing consulting services on a business acquisition, or working on a major lawsuit. However, many service companies specialize in performing repetitive, routine aspects of a particular business. For example, auto-care vendors such as **Jiffy Lube** focus on the routine aspects of car care. **H&R Block** focuses on the routine aspects of basic tax practice, and many large law firms focus on routine legal services, such as uncomplicated divorces. Service companies that provide specific, nonroutine services will probably benefit from using a job order cost system. Those that perform routine, repetitive services will probably be better off with a process cost system.

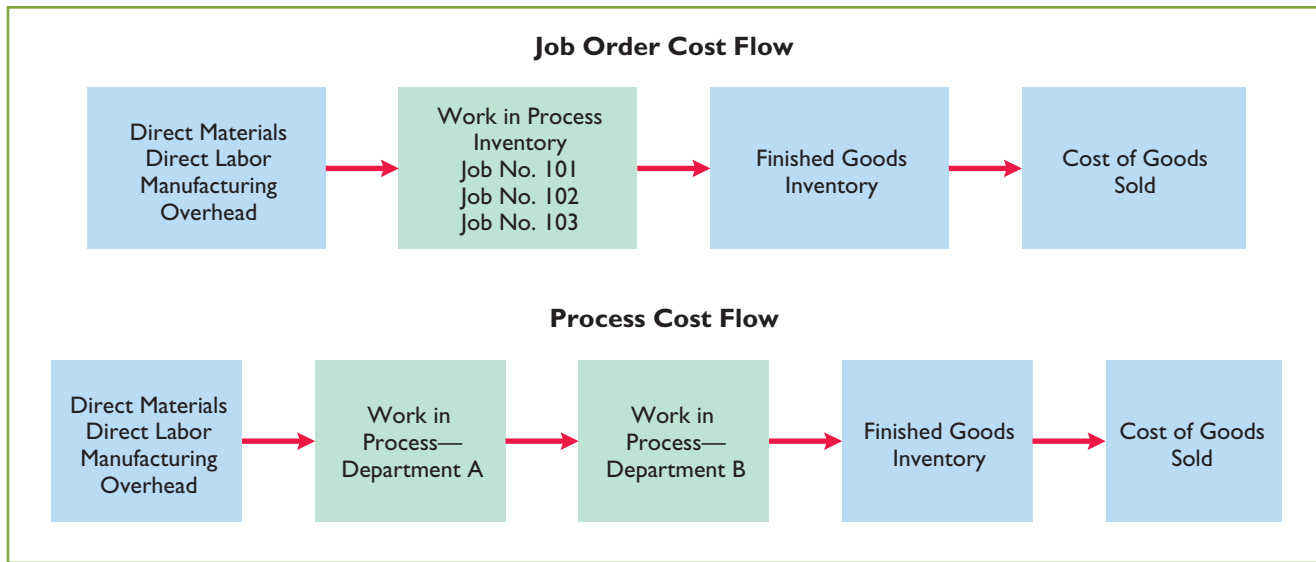

### Similarities and Differences Between Job Order Cost and Process Cost Systems

In a job order cost system, companies assign costs to each job. In a process cost system, companies track costs through a series of connected manufacturing processes or departments, rather than by individual jobs. Thus, companies use process cost systems when they produce a large volume of uniform or relatively homogeneous products. Illustration 21-3 (page 968) shows the basic flow of costs in these two systems.

**Study Objective [2]**

Explain the similarities and differences between job order cost and process cost systems.

**Illustration 21-3**  
Job order cost and process  
cost flow

### SIMILARITIES

Job order cost and process cost systems are similar in three ways:

- 1. The manufacturing cost elements.** Both costing systems track three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.
- 2. The accumulation of the costs of materials, labor, and overhead.** Both costing systems debit raw materials to Raw Materials Inventory; factory labor to Factory Labor; and manufacturing overhead costs to Manufacturing Overhead.
- 3. The flow of costs.** As noted above, both systems accumulate all manufacturing costs by debits to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. Both systems then assign these costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. **The methods of assigning costs, however, differ significantly.** These differences are explained and illustrated later in the chapter.

### DIFFERENCES

The differences between a job order cost and a process cost system are as follows.

- 1. The number of work in process accounts used.** A job order cost system uses only one Work in Process account. A process cost system uses multiple work in process accounts.
- 2. Documents used to track costs.** A job order cost system charges costs to individual jobs and summarizes them in a job cost sheet. A process cost system summarizes costs in a production cost report for each department.
- 3. The point at which costs are totaled.** A job order cost system totals costs when the job is completed. A process cost system totals costs at the end of a period of time.
- 4. Unit cost computations.** In a job order cost system, the unit cost is the total cost per job divided by the units produced. In a process cost system, the unit cost is total manufacturing costs for the period divided by the units produced during the period.

Illustration 21-4 summarizes the major differences between a job order cost and a process cost system.

| Features  | Job Order Cost System                           | Process Cost System  |
|---|---|--|
| <b>Work in process accounts</b>                   | • One work in process account                   | • Multiple work in process accounts                            |
| <b>Documents used</b>                             | • Job cost sheets                               | • Production cost reports                                      |
| <b>Determination of total manufacturing costs</b> | • Each job                                      | • Each period  |
| <b>Unit-cost computations</b>                     | • Cost of each job ÷ Units produced for the job | • Total manufacturing costs ÷ Units produced during the period |

**Illustration 21-4**  
Job order versus process cost systems

## Do it!

Indicate whether each of the following statements is true or false.

1. A law firm is likely to use process costing for major lawsuits.
2. A manufacturer of paintballs is likely to use process costing.
3. Both job order and process costing determine total costs at the end of a period of time.
4. Process costing does not keep track of manufacturing overhead.

### Solution

1. false.      2. true.      3. false.      4. false.

Related exercise material: E21-1 and **Do it!** 21-1.

## Compare Job Order and Process Cost Systems

### action plan

- ✓ Use job order costing in situations where unit costs are high, unit volume is low, and products are unique.
- ✓ Use process costing when there is a large volume of relatively homogeneous products.

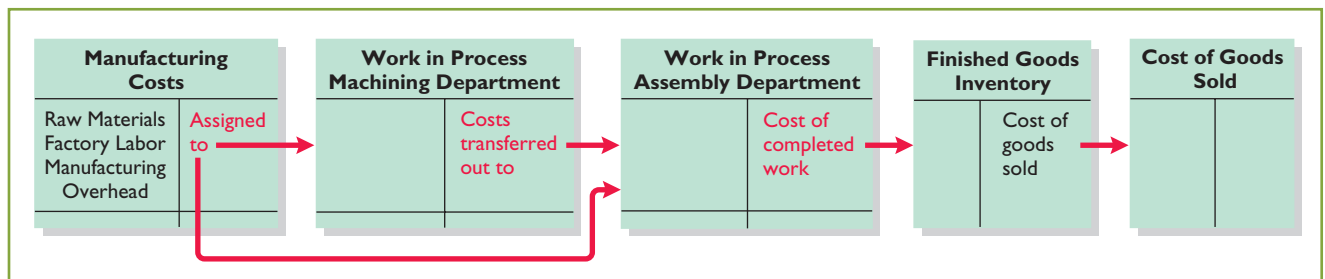

## Process Cost Flow

Illustration 21-5 shows the flow of costs in the process cost system for Tyler Company. Tyler Company manufactures automatic can openers that it sells to retail outlets. Manufacturing consists of two processes: machining and assembly. The Machining Department shapes, hones, and drills the raw materials. The Assembly Department assembles and packages the parts.

### Study Objective [3]

Explain the flow of costs in a process cost system.

**Illustration 21-5**  
Flow of costs in process cost system

As the flow of costs indicates, the company can add materials, labor, and manufacturing overhead in both the Machining and Assembly departments. When it finishes its work, the Machining Department transfers the partially completed

units to the Assembly Department. The Assembly Department finishes the goods and then transfers them to the finished goods inventory. Upon sale, Tyler removes the goods from the finished goods inventory. Within each department, a similar set of activities is performed on each unit processed.

### Assigning Manufacturing Costs—Journal Entries

As indicated, the accumulation of the costs of materials, labor, and manufacturing overhead is the same in a process cost system as in a job order cost system. That is, both systems follow these procedures:

- Companies debit all raw materials to Raw Materials Inventory at the time of purchase.
- They debit all factory labor to Factory Labor as the labor costs are incurred.
- They debit overhead costs to Manufacturing Overhead as these costs are incurred.

However, the assignment of the three manufacturing cost elements to Work in Process in a process cost system is different from a job order cost system. Here we'll look at how companies assign these manufacturing cost elements in a process cost system.

#### Study Objective [4]

Make the journal entries to assign manufacturing costs in a process cost system.

#### MATERIALS COSTS

All raw materials issued for production are a materials cost to the producing department. A process cost system may use materials requisition slips, but **it generally requires fewer requisitions than in a job order cost system, because the materials are used for processes rather than for specific jobs** and therefore typically are for larger quantities.

At the beginning of the first process, a company usually adds most of the materials needed for production. However, other materials may be added at various points. For example, in the manufacture of **Hershey** candy bars, the chocolate and other ingredients are added at the beginning of the first process, and the wrappers and cartons are added at the end of the packaging process. Tyler Company adds materials at the beginning of each process. Tyler makes the following entry to record the materials used:

|                            |      |      |
|----------------------------|------|------|
| Work in Process—Machining  | XXXX |      |
| Work in Process—Assembly   | XXXX |      |
| Raw Materials Inventory    |      | XXXX |
| (To record materials used) |      |      |

Ice cream maker **Ben & Jerry's** adds materials in three departments: milk and flavoring in the mixing department; extras such as cherries and walnuts in the prepping department; and cardboard containers in the pinting (packaging) department.

#### FACTORY LABOR COSTS

In a process cost system, as in a job order cost system, companies may use time tickets to determine the cost of labor assignable to production departments. Since they assign labor costs to a process rather than a job, they can obtain from the payroll register or departmental payroll summaries the labor cost chargeable to a process.

Labor costs for the Machining Department will include the wages of employees who shape, hone, and drill the raw materials. The entry to assign these costs for Tyler Company is:

|  |      |      |
|--|------|------|
| Work in Process—Machining                                | XXXX |      |
| Work in Process—Assembly                                 | XXXX |      |
| Factory Labor<br>(To assign factory labor to production) |      | XXXX |

**MANUFACTURING OVERHEAD COSTS**

The objective in assigning overhead in a process cost system is to allocate the overhead costs to the production departments on an objective and equitable basis. That basis is the activity that “drives” or causes the costs. A primary driver of overhead costs in continuous manufacturing operations is **machine time used**, not direct labor. Thus, companies **widely use machine hours** in allocating manufacturing overhead costs. Tyler’s entry to allocate overhead to the two processes is:

|  |      |      |
|--|------|------|
| Work in Process—Machining                                    | XXXX |      |
| Work in Process—Assembly                                     | XXXX |      |
| Manufacturing Overhead<br>(To assign overhead to production) |      | XXXX |

**MANAGEMENT INSIGHT**

**Choosing a Cost Driver**

In one of its automated cost centers, **Caterpillar** feeds work into the cost center, where robotic machines process it and transfer the finished job to the next cost center without human intervention. One person tends all of the machines and spends more time maintaining machines than operating them. In such cases, overhead rates based on direct labor hours may be misleading. Some companies continue to assign manufacturing overhead on the basis of direct labor despite the fact that there is no cause-and-effect relationship between labor and overhead.

**?** What is the result if a company uses the wrong “cost driver” to assign manufacturing overhead? (See page 1009.)

**TRANSFER TO NEXT DEPARTMENT**

At the end of the month, Tyler needs an entry to record the cost of the goods transferred out of the department. In this case, the transfer is to the Assembly Department, and Tyler makes the following entry.

|   |       |       |
|---|-------|-------|
| Work in Process—Assembly  | XXXXX |       |
| Work in Process—Machining<br>(To record transfer of units to the Assembly Department) |       | XXXXX |

**TRANSFER TO FINISHED GOODS**

When the Assembly Department completes the units, it transfers them to the finished goods warehouse. The entry for this transfer is as follows.

|   |       |       |
|---|-------|-------|
| Finished Goods Inventory  | XXXXX |       |
| Work in Process—Assembly<br>(To record transfer of units to finished goods) |       | XXXXX |

**TRANSFER TO COST OF GOODS SOLD**

When Tyler sells the finished goods, it records the cost of goods sold as follows.

|                                |        |        |
|--------------------------------|--------|--------|
| Cost of Goods Sold             | XXXXXX |        |
| Finished Goods Inventory       |        | XXXXXX |
| (To record cost of units sold) |        |        |

**Do it!**

**Manufacturing Costs in Process Costing**

**action plan**

- ✓ In process cost accounting, keep separate work in process accounts for each process.
- ✓ When the costs are assigned to production, debit the separate work in process accounts.
- ✓ Transfer cost of completed units to the next process or to Finished Goods.

Ruth Company manufactures ZEB0 through two processes: blending and bottling. In June, raw materials used were Blending \$18,000 and Bottling \$4,000. Factory labor costs were Blending \$12,000 and Bottling \$5,000. Manufacturing overhead costs were Blending \$6,000 and Bottling \$2,500. The company transfers units completed at a cost of \$19,000 in the Blending Department to the Bottling Department. The Bottling Department transfers units completed at a cost of \$11,000 to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

**Solution**

The entries are:

|  |        |        |
|--|--------|--------|
| Work in Process—Blending                                 | 18,000 |        |
| Work in Process—Bottling                                 | 4,000  |        |
| Raw Materials Inventory                                  |        | 22,000 |
| (To record materials used)                               |        |        |
| Work in Process—Blending                                 | 12,000 |        |
| Work in Process—Bottling                                 | 5,000  |        |
| Factory Labor  |        | 17,000 |
| (To assign factory labor to production)                  |        |        |
| Work in Process—Blending                                 | 6,000  |        |
| Work in Process—Bottling                                 | 2,500  |        |
| Manufacturing Overhead                                   |        | 8,500  |
| (To assign overhead to production)                       |        |        |
| Work in Process—Bottling                                 | 19,000 |        |
| Work in Process—Blending                                 |        | 19,000 |
| (To record transfer of units to the Bottling Department) |        |        |
| Finished Goods Inventory                                 | 11,000 |        |
| Work in Process—Bottling                                 |        | 11,000 |
| (To record transfer of units to finished goods)          |        |        |

Related exercise material: BE21-1, BE21-2, BE21-3, E21-2, E21-4, and **Do it!** 21-1.

**Equivalent Units**

**Study Objective [5]**  
 Compute equivalent units.

Suppose you have a work-study job in the office of your college’s president, and she asks you to compute the cost of instruction per full-time equivalent student at your college. The college’s vice president for finance provides the following information.

|                           |                    |
|---------------------------|--------------------|
| Costs:                    |                    |
| Total cost of instruction | <u>\$9,000,000</u> |
| Student population:       |                    |
| Full-time students        | 900                |
| Part-time students        | 1,000              |

**Illustration 21-6**  
Information for full-time student example

Part-time students take 60% of the classes of a full-time student during the year. To compute the number of full-time equivalent students per year, you would make the following computation.

|                       |   |   |   |                                  |
|-----------------------|---|---|---|----------------------------------|
| Full-time<br>Students | + | Equivalent Units<br>of Part-time Students | = | Full-time Equivalent<br>Students |
| 900                   | + | (60% × 1,000)                             | = | <b>1,500</b>                     |

**Illustration 21-7**  
Full-time equivalent unit computation

The cost of instruction per full-time equivalent student is therefore the total cost of instruction (\$9,000,000) divided by the number of full-time equivalent students (1,500), which is \$6,000 ( $\$9,000,000 \div 1,500$ ).

A process cost system uses the same idea, called equivalent units of production. **Equivalent units of production** measure the work done during the period, expressed in fully completed units. Companies use this measure to determine the cost per unit of completed product.

## Weighted-Average Method

The formula to compute equivalent units of production is as follows.

|  |   |  |   |                                   |
|--|---|--|---|-----------------------------------|
| Units Completed and<br>Transferred Out | + | Equivalent Units of<br>Ending Work in<br>Process | = | Equivalent Units of<br>Production |
|--|---|--|---|-----------------------------------|

**Illustration 21-8**  
Equivalent units of production formula

To better understand this concept of equivalent units, consider the following two separate examples.

**Example 1:** In a specific period the entire output of Sullivan Company's Blending Department consists of ending work in process of 4,000 units which are 60% complete as to materials, labor, and overhead. The equivalent units of production for the Blending Department are therefore 2,400 units ( $4,000 \times 60\%$ ).

**Example 2:** The output of Kori Company's Packaging Department during the period consists of 10,000 units completed and transferred out, and 5,000 units in ending work in process which are 70% completed. The equivalent units of production are therefore 13,500 [ $10,000 + (5,000 \times 70\%)$ ].

This method of computing equivalent units is referred to as the **weighted-average method**. It considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process. *Use the weighted-average method to compute equivalent units in the homework.*

## Refinements on the Weighted-Average Method

**Kellogg Company** has produced Eggo® Waffles since 1970. Three departments produce these waffles: Mixing, Baking, and Freezing/Packaging. The Mixing Department combines dry ingredients, including flour, salt, and baking powder, with liquid ingredients, including eggs and vegetable oil, to make waffle batter. Illustration 21-9 provides information related to the Mixing Department at the end of June.

**Illustration 21-9**  
Information for Mixing  
Department

| Mixing Department        |                       |                            |                         |
|--------------------------|-----------------------|----------------------------|-------------------------|
|                          | <u>Physical Units</u> | <u>Percentage Complete</u> |                         |
|                          |                       | <u>Materials</u>           | <u>Conversion Costs</u> |
| Work in process, June 1  | 100,000               | 100%                       | 70%                     |
| Started into production  | <u>800,000</u>        |                            |                         |
| Total units              | <u>900,000</u>        |                            |                         |
| Units transferred out    | <u>700,000</u>        |                            |                         |
| Work in process, June 30 | <u>200,000</u>        | 100%                       | 60%                     |
| Total units              | <u>900,000</u>        |                            |                         |

Illustration 21-9 indicates that the beginning work in process is 100% complete as to materials cost and 70% complete as to conversion costs. **Conversion costs are the sum of labor costs and overhead costs.** In other words, Kellogg adds both the dry and liquid ingredients (materials) at the beginning of the waffle-making process. The conversion costs (labor and overhead) related to the mixing of these ingredients are incurred uniformly and are 70% complete. The ending work in process is 100% complete as to materials cost and 60% complete as to conversion costs.

We then use the Mixing Department information to determine equivalent units. **In computing equivalent units, the beginning work in process is not part of the equivalent-units-of-production formula.** The units transferred out to the Baking Department are fully complete as to both materials and conversion costs. The ending work in process is fully complete as to materials, but only 60% complete as to conversion costs. We therefore need to make **two equivalent unit computations**: one for materials, and the other for conversion costs. Illustration 21-10 shows these computations.

**Illustration 21-10**  
Computation of equivalent  
units—Mixing Department

| Mixing Department        |                         |                         |
|--------------------------|-------------------------|-------------------------|
|                          | <u>Equivalent Units</u> |                         |
|                          | <u>Materials</u>        | <u>Conversion Costs</u> |
| Units transferred out    | 700,000                 | 700,000                 |
| Work in process, June 30 |                         |                         |
| 200,000 × 100%           | 200,000                 |                         |
| 200,000 × 60%            |                         | <u>120,000</u>          |
| Total equivalent units   | <u>900,000</u>          | <u>820,000</u>          |

We can refine the earlier formula used to compute equivalent units of production (Illustration 21-8) (page 973) to show the computations for materials and for conversion costs, as follows.

|  |   |   |   |   |
|--|---|---|---|---|
| Units Completed and Transferred Out—<br>Materials        | + | Equivalent Units of Ending Work in Process—Materials        | = | Equivalent Units of Production—<br>Materials        |
| Units Completed and Transferred Out—<br>Conversion Costs | + | Equivalent Units of Ending Work in Process—Conversion Costs | = | Equivalent Units of Production—<br>Conversion Costs |

**Illustration 21-11**

Refined equivalent units of production formula

## Do it!

The fabricating department has the following production and cost data for the current month.

| Beginning<br>Work in Process | Units<br>Transferred Out | Ending<br>Work in Process |
|------------------------------|--------------------------|---------------------------|
| –0–                          | 15,000                   | 10,000                    |

Materials are entered at the beginning of the process. The ending work in process units are 30% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

**Solution**

- (a) Since materials are entered at the beginning of the process, the equivalent units of ending work in process are 10,000. Thus, 15,000 units + 10,000 units = 25,000 equivalent units of production for materials.
- (b) Since ending work in process is only 30% complete as to conversion costs, the equivalent units of ending work in process are 3,000 (30% × 10,000 units). Thus, 15,000 units + 3,000 units = 18,000 equivalent units of production for conversion costs.

Related exercise material: BE21-5, BE21-10, E21-5, E21-6, E21-7, E21-8, E21-9, E21-10, E21-11, E21-13, and **Do it!** 21-2.

## Equivalent Units

**action plan**

- ✓ To measure the work done during the period, expressed in fully completed units, compute equivalent units of production.
- ✓ Use the appropriate formula: Units completed and transferred out + Equivalent units of ending work in process = Equivalent units of production.

## Production Cost Report

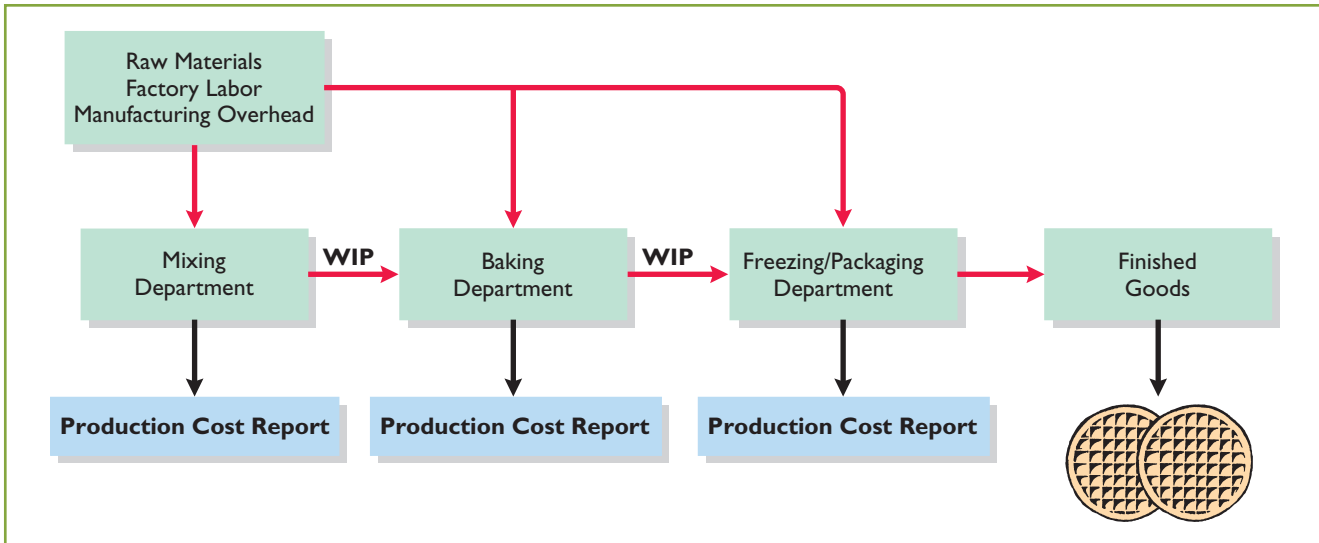

As mentioned earlier, companies prepare a production cost report for each department. A **production cost report** is the key document that management uses to understand the activities in a department; it shows the production quantity and cost data related to that department. For example, in producing Eggo<sup>®</sup> Waffles, Kellogg Company uses three production cost reports: Mixing, Baking, and Freezing/Packaging. Illustration 21-12 (page 976) shows the flow of costs to make an Eggo<sup>®</sup> Waffle and the related production cost reports for each department.

In order to complete a production cost report, the company must perform four steps, which as a whole, make up the process costing system.

1. Compute the physical unit flow.
2. Compute the equivalent units of production.

**Study Objective [6]**

Explain the four steps necessary to prepare a production cost report.

**Illustration 21-12**  
Flow of costs in making Eggo® Waffles

3. Compute unit production costs.
4. Prepare a cost reconciliation schedule.

The next section explores these steps in an extended example.

## MANAGEMENT INSIGHT

### Keeping Score for the Xbox

When you are as big and as profitable as **Microsoft**, you get to a point where continued rapid growth is very difficult. For example, many believe it is unlikely that Microsoft will see much growth in software sales. As a result, the company is looking for new markets, such as the video game market with its Xbox player.

Profitability in the video-game hardware market has been elusive. Microsoft has struggled to control the costs of both manufacturing and distribution. One analyst predicted that Microsoft's "snowballing" costs in the next period could exceed budget by \$2.4 billion. Microsoft's Chief Financial Officer blamed the high costs on unexpectedly high volumes, saying, "We pushed market volumes very high in the Xbox business. As a result of that we incurred some costs in the supply chain." Given these issues and, despite its incredible success as a software company, some observers question whether Microsoft will be able to make the changes that are required to become a successful hardware manufacturer.

Source: Robert A. Guth, "Microsoft Net Rises 16%, but Costs Damp Results," *Wall Street Journal Online* (April 28, 2006).

**?** In what ways has cost accounting probably become more critical for Microsoft in recent years? (See page 1009.)

## Comprehensive Example of Process Costing

Illustration 21-13 shows assumed data for the Mixing Department at **Kellogg Company** for the month of June. We will use this information to complete a production cost report for the Mixing Department.

| Mixing Department  |                  |
|--|------------------|
| <b>Units</b>   |                  |
| Work in process, June 1                                  | 100,000          |
| Direct materials: 100% complete                          |                  |
| Conversion costs: 70% complete                           |                  |
| Units started into production during June                | 800,000          |
| Units completed and transferred out to Baking Department | 700,000          |
| Work in process, June 30                                 | 200,000          |
| Direct materials: 100% complete                          |                  |
| Conversion costs: 60% complete                           |                  |
| <b>Costs</b>   |                  |
| Work in process, June 1                                  |                  |
| Direct materials: 100% complete                          | \$ 50,000        |
| Conversion costs: 70% complete                           | <u>35,000</u>    |
| Cost of work in process, June 1                          | <u>\$ 85,000</u> |
| Costs incurred during production in June                 |                  |
| Direct materials   | \$400,000        |
| Conversion costs   | <u>170,000</u>   |
| Costs incurred in June                                   | <u>\$570,000</u> |

**Illustration 21-13**  
Unit and cost data—Mixing Department

### Compute the Physical Unit Flow (Step 1)

**Physical units** are the actual units to be accounted for during a period, irrespective of any work performed. To keep track of these units, add the units started (or transferred) into production during the period to the units in process at the beginning of the period. This amount is referred to as the **total units to be accounted for**.

The total units then are accounted for by the output of the period. The output consists of units transferred out during the period and any units in process at the end of the period. This amount is referred to as the **total units accounted for**. Illustration 21-14 shows the flow of physical units for Kellogg's Mixing Department for the month of June.

| Mixing Department                     |                       |
|---------------------------------------|-----------------------|
|                                       | <u>Physical Units</u> |
| Units to be accounted for             |                       |
| Work in process, June 1               | 100,000               |
| Started (transferred) into production | <u>800,000</u>        |
| Total units                           | <u><b>900,000</b></u> |
| Units accounted for                   |                       |
| Completed and transferred out         | 700,000               |
| Work in process, June 30              | <u>200,000</u>        |
| Total units                           | <u><b>900,000</b></u> |

**Illustration 21-14**  
Physical unit flow—Mixing Department

The records indicate that the Mixing Department must account for 900,000 units. Of this sum, 700,000 units were transferred to the Baking Department and 200,000 units were still in process.

**Helpful Hint**

Materials are not always added at the beginning of the process. For example, materials are sometimes added uniformly during the process and at the end of the process.

**Illustration 21-15**  
Computation of equivalent units—Mixing Department

**Helpful Hint**

Remember that we ignore the beginning work in process in this computation.

**Compute Equivalent Units of Production (Step 2)**

Once the physical flow of the units is established, Kellogg must measure the Mixing Department’s productivity in terms of equivalent units of production. The Mixing Department adds materials at the beginning of the process, and incurs conversion costs uniformly during the process. Thus, we need two computations of equivalent units: one for materials and one for conversion costs. The equivalent unit computation is as follows.

|                               | Equivalent Units |                  |
|-------------------------------|------------------|------------------|
|                               | Materials        | Conversion Costs |
| Units transferred out         | 700,000          | 700,000          |
| Work in process, June 30      |                  |                  |
| 200,000 × 100%                | 200,000          |                  |
| 200,000 × 60%                 |                  | 120,000          |
| <b>Total equivalent units</b> | <b>900,000</b>   | <b>820,000</b>   |

**Compute Unit Production Costs (Step 3)**

Armed with the knowledge of the equivalent units of production, we can now compute the unit production costs. **Unit production costs** are costs expressed in terms of equivalent units of production. When equivalent units of production are different for materials and conversion costs, we compute three unit costs: (1) materials, (2) conversion, and (3) total manufacturing.

The computation of total materials cost related to Eggo® Waffles is as follows.

**Illustration 21-16**  
Total materials cost computation

|                                       |                  |
|---------------------------------------|------------------|
| Work in process, June 1               |                  |
| Direct materials cost                 | \$ 50,000        |
| Costs added to production during June |                  |
| Direct materials cost                 | 400,000          |
| <b>Total materials cost</b>           | <b>\$450,000</b> |

The computation of unit materials cost is as follows.

**Illustration 21-17**  
Unit materials cost computation

|                             |   |                                      |   |                            |
|-----------------------------|---|--------------------------------------|---|----------------------------|
| <b>Total Materials Cost</b> | ÷ | <b>Equivalent Units of Materials</b> | = | <b>Unit Materials Cost</b> |
| \$450,000                   | ÷ | 900,000                              | = | <b>\$0.50</b>              |

Illustration 21-18 shows the computation of total conversion costs.

**Illustration 21-18**  
Total conversion costs computation

|                                       |                  |
|---------------------------------------|------------------|
| Work in process, June 1               |                  |
| Conversion costs                      | \$ 35,000        |
| Costs added to production during June |                  |
| Conversion costs                      | 170,000          |
| <b>Total conversion costs</b>         | <b>\$205,000</b> |

The computation of unit conversion cost is as follows.

|                               |   |   |   |                             |
|-------------------------------|---|---|---|-----------------------------|
| <b>Total Conversion Costs</b> | ÷ | <b>Equivalent Units of Conversion Costs</b> | = | <b>Unit Conversion Cost</b> |
| \$205,000                     | ÷ | 820,000                                     | = | <b>\$0.25</b>               |

**Illustration 21-19**  
Unit conversion cost computation

Total manufacturing cost per unit is therefore computed as shown in Illustration 21-20.

|                            |   |                             |   |  |
|----------------------------|---|-----------------------------|---|--|
| <b>Unit Materials Cost</b> | + | <b>Unit Conversion Cost</b> | = | <b>Total Manufacturing Cost per Unit</b> |
| \$0.50                     | + | \$0.25                      | = | <b>\$0.75</b>                            |

**Illustration 21-20**  
Total manufacturing cost per unit

### Prepare a Cost Reconciliation Schedule (Step 4)

We are now ready to determine the cost of goods transferred out of the Mixing Department to the Baking Department and the costs in ending work in process. Kellogg charged total costs of \$655,000 to the Mixing Department in June, calculated as follows.

|                           |                         |
|---------------------------|-------------------------|
| Costs to be accounted for |                         |
| Work in process, June 1   | \$ 85,000               |
| Started into production   | <u>570,000</u>          |
| Total costs               | <b><u>\$655,000</u></b> |

**Illustration 21-21**  
Costs charged to Mixing Department

The company then prepares a cost reconciliation schedule to assign these costs to (a) units transferred out to the Baking Department and (b) ending work in process.

| Mixing Department<br>Cost Reconciliation Schedule |               |                         |
|---|---------------|-------------------------|
| Costs accounted for                               |               |                         |
| Transferred out (700,000 × \$0.75)                |               | \$525,000               |
| Work in process, June 30                          |               |                         |
| Materials (200,000 × \$0.50)                      | \$100,000     |                         |
| Conversion costs (120,000 × \$0.25)               | <u>30,000</u> | <u>130,000</u>          |
| Total costs                                       |               | <b><u>\$655,000</u></b> |

**Illustration 21-22**  
Cost reconciliation schedule—  
Mixing Department

Kellogg uses the total manufacturing cost per unit, \$0.75, in costing the **units completed** and transferred to the Baking Department. In contrast, the unit cost of materials and the unit cost of conversion are needed in costing **units in process**. The **cost reconciliation schedule** shows that the **total costs accounted for** (Illustration 21-22) equal the **total costs to be accounted for** (see Illustration 21-21).

## Preparing the Production Cost Report

### Study Objective [7]

Prepare a production cost report.

At this point, Kellogg is ready to prepare the production cost report for the Mixing Department. As indicated earlier, this report is an internal document for management that shows production quantity and cost data for a production department.

There are four steps in preparing a production cost report. They are:

- (1) Prepare a physical unit schedule.
- (2) Compute equivalent units.
- (3) Compute unit costs.
- (4) Prepare a cost reconciliation schedule.

Illustration 21-23 shows the production cost report for the Mixing Department. The report identifies the four steps.

**Illustration 21-23**  
Production cost report

| Mixing Department                   |                |                  |                         |                  |  |
|-------------------------------------|----------------|------------------|-------------------------|------------------|--|
| Production Cost Report              |                |                  |                         |                  |  |
| For the Month Ended June 30, 2012   |                |                  |                         |                  |  |
|                                     |                | Equivalent Units |                         |                  |  |
|                                     | Physical Units | Materials        | Conversion Costs        |                  |  |
| <b>QUANTITIES</b>                   | <b>Step 1</b>  | <b>Step 2</b>    |                         |                  |  |
| Units to be accounted for           |                |                  |                         |                  |  |
| Work in process, June 1             | 100,000        |                  |                         |                  |  |
| Started into production             | 800,000        |                  |                         |                  |  |
| <b>Total units</b>                  | <b>900,000</b> |                  |                         |                  |  |
| Units accounted for                 |                |                  |                         |                  |  |
| Transferred out                     | 700,000        | 700,000          | 700,000                 |                  |  |
| Work in process, June 30            | 200,000        | 200,000          | 120,000                 | (200,000 × 60%)  |  |
| <b>Total units</b>                  | <b>900,000</b> | <b>900,000</b>   | <b>820,000</b>          |                  |  |
| <b>COSTS</b>                        | <b>Step 3</b>  | <b>Materials</b> | <b>Conversion Costs</b> | <b>Total</b>     |  |
| Unit costs                          |                |                  |                         |                  |  |
| Costs in June                       | (a)            | \$450,000        | \$205,000               | \$655,000        |  |
| Equivalent units                    | (b)            | 900,000          | 820,000                 |                  |  |
| Unit costs [(a) ÷ (b)]              |                | \$0.50           | \$0.25                  | \$0.75           |  |

| Transferred out (700,000 × \$0.75)  |                |                  |                         | \$525,000        |  |
| Work in process, June 30            |                |                  |                         |                  |  |
| Materials (200,000 × \$0.50)        |                |                  | \$100,000               |                  |  |
| Conversion costs (120,000 × \$0.25) |                |                  | 30,000                  | 130,000          |  |
| <b>Total costs</b>                  |                |                  |                         | <b>\$655,000</b> |  |

Production cost reports provide a basis for evaluating the productivity of a department. In addition, managers can use the cost data to assess whether unit costs and total costs are reasonable. By comparing the quantity and cost data with predetermined goals, top management can also judge whether current performance is meeting planned objectives.

## Do it!

In March, Rodayo Manufacturing had the following unit production costs: materials \$6 and conversion costs \$9. On March 1, it had zero work in process. During March, Rodayo transferred out 12,000 units. As of March 31, 800 units that were 25% complete as to conversion costs and 100% complete as to materials were in ending work in process. Total costs to be accounted for are \$186,600.

- Compute the total units to be accounted for.
- Compute the equivalent units of production.
- Prepare a cost reconciliation schedule, including the costs of materials transferred out and the costs of materials in process.

### Solution

(a) 0 (work in process, March 1) + 12,800 (started into production) = 12,800 units

(b) Equivalent units of production:

|                           | <u>Materials</u> | <u>Conversion</u> |
|---------------------------|------------------|-------------------|
| Units transferred out     | 12,000           | 12,000            |
| Work in process, March 31 | 800              | 200 (800 × 25%)   |
| Total                     | 12,800           | 12,200            |

(c) Cost reconciliation schedule:

|                                 |         |                  |
|---------------------------------|---------|------------------|
| Costs accounted for             |         |                  |
| Transferred out (12,000 × \$15) |         | \$180,000        |
| Work in process, March 31       |         |                  |
| Materials (800 × \$6)           | \$4,800 |                  |
| Conversion costs (200 × \$9)    | 1,800   | 6,600            |
| Total costs                     |         | <u>\$186,600</u> |

Related exercise material: BE21-4, BE21-5, BE21-6, BE21-7, BE21-8, BE21-9, BE21-10, E21-5, E21-6, E21-8, E21-9, E21-10, E21-11, E21-12, E21-14, E21-15, E21-16, and **Do it!** 21-3.

## Cost Reconciliation Schedule

### action plan

- ✓ To find units to be accounted for, add the units started into production during the month to the units in process at the beginning of the month.
- ✓ Realize that equivalent units of production for materials will differ from equivalent units of production for conversion costs. The units in ending work in process are 100% complete as to materials but only 25% complete as to conversion costs.
- ✓ Assign the total manufacturing cost of \$15 per unit to the 12,000 units transferred out.
- ✓ Assign the materials cost and conversion costs based on equivalent units of production to units in process.

## Costing Systems—Final Comments

Companies often use a combination of a process cost and a job order cost system. Called **operations costing**, this hybrid system is similar to process costing in its assumption that standardized methods are used to manufacture the product. At the same time, the product may have some customized, individual features that require the use of a job order cost system.

Consider, for example, the automobile manufacturer **Ford Motor Company**. Each vehicle at a given plant goes through the same assembly line, but Ford uses different materials (such as seat coverings, paint, and tinted glass) for different vehicles. Similarly, **Kellogg's** Pop-Tarts Toaster Pastries® go through numerous standardized processes—mixing, filling, baking, frosting, and packaging. The pastry dough, though, comes in different flavors—plain, chocolate, and graham—and fillings include Smucker's® real fruit, chocolate fudge, vanilla creme, brown sugar cinnamon, and S'mores.

A cost-benefit tradeoff occurs as a company decides which costing system to use. A job order system, for example, provides detailed information related to the cost of the product. Because each job has its own distinguishing characteristics, the system can provide an accurate cost per job. This information is useful in

controlling costs and pricing products. However, the cost of implementing a job order cost system is often expensive because of the accounting costs involved.

On the other hand, for a company like **Intel**, which makes computer chips, is there a benefit in knowing whether the cost of the one hundredth chip produced is different from the one thousandth chip produced? Probably not. An average cost of the product will suffice for control and pricing purposes.

In summary, when deciding to use one of these systems, or a combination system, a company must weigh the costs of implementing the system against the benefits from the additional information provided.

## Contemporary Developments

As indicated in Chapter 19, two contemporary developments in managerial accounting are just-in-time processing and activity-based costing. We explain these innovations in the following sections.

### Just-In-Time Processing

**Study Objective [8]**  
Explain just-in-time (JIT) processing.

Traditionally, continuous process manufacturing has been based on a **just-in-case** philosophy: Companies hold inventories of raw materials *just in case* some items are of poor quality or a key supplier is shut down by a strike. They manufacture and store subassembly parts *just in case* these parts are needed later in the manufacturing process. Companies complete and store finished goods *just in case* they receive unexpected and rush customer orders. This philosophy often results in a “**push approach**”: Raw materials and subassembly parts are pushed through each process. Traditional processing often results in the buildup of extensive manufacturing inventories.

Primarily in response to foreign competition, many U.S. firms have switched to **just-in-time (JIT) processing**. JIT manufacturing is dedicated to having the right amount of materials, parts, or products just as they are needed. JIT first hit the United States in the early 1980s when automobile companies adopted it to compete with foreign automakers. Many companies, including **Dell**, **Caterpillar**, and **Harley-Davidson** now successfully use JIT. Under JIT processing, companies receive raw materials *just in time* for use in production, they complete subassembly parts *just in time* for use in finished goods, and they complete finished goods *just in time* to be sold. Illustration 21-24 shows the sequence of activities in just-in-time processing.

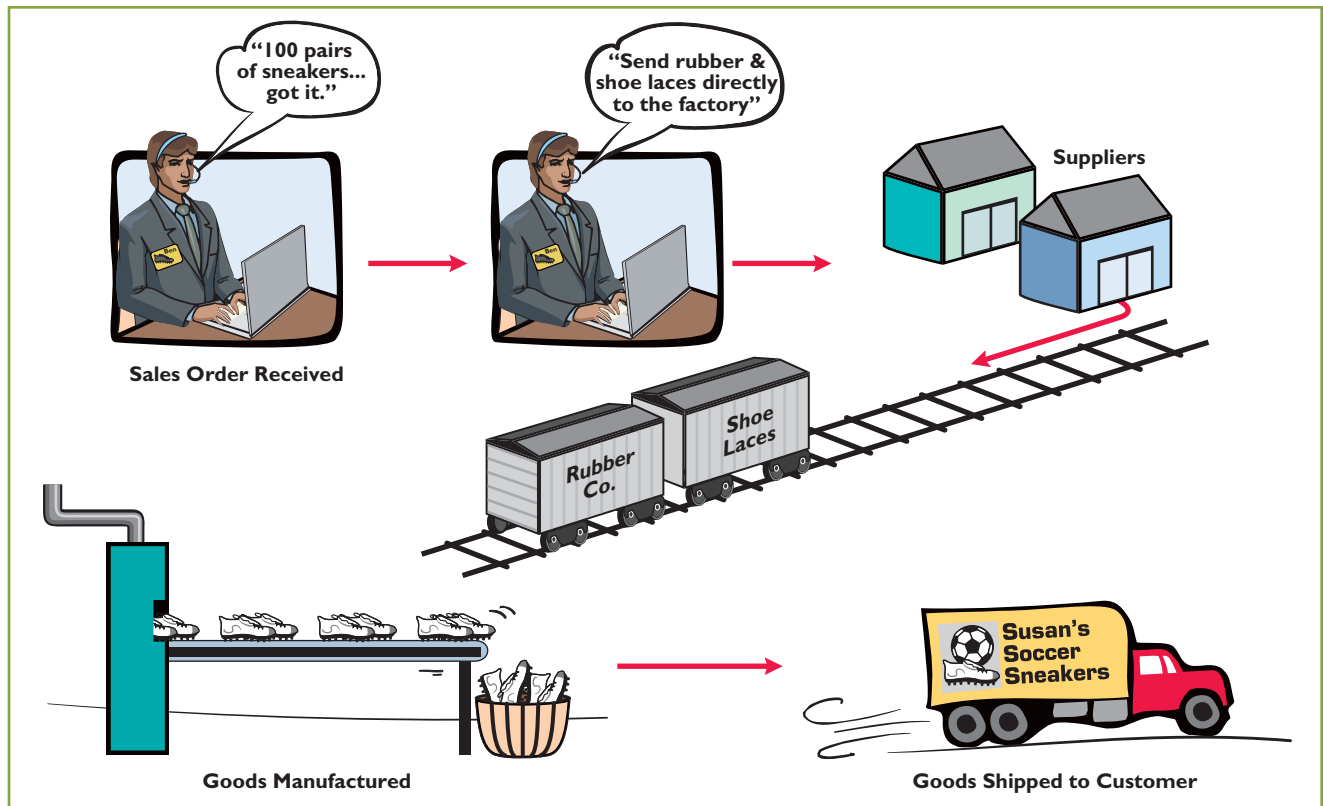

#### OBJECTIVE OF JIT PROCESSING

A primary objective of JIT is to eliminate all manufacturing inventories. Inventories have an adverse effect on net income because they tie up funds and storage space that could be put to more productive uses. JIT strives to eliminate inventories by using a “**pull approach**” in manufacturing. This approach begins with the customer placing an order with the company, which starts the process of pulling the product through the manufacturing process. A computer at the final work station sends a signal to the preceding work station. This signal indicates the exact materials (parts and subassemblies) needed to complete the production of a specified product for a specified time period, such as an eight-hour shift. The next preceding process, in turn, sends its signal to other processes back up the line. The goal is a smooth continuous flow in the manufacturing process and no buildup of inventories at any point.

#### ELEMENTS OF JIT PROCESSING

There are three important elements in JIT processing:

1. **Dependable suppliers.** Suppliers must be willing to deliver on short notice exact quantities of raw materials according to precise quality specifications

**Illustration 21-24**  
Just-in-time processing

(even including multiple deliveries within the same day). Suppliers must also be willing to deliver the raw materials at specified work stations rather than at a central receiving department. This type of purchasing requires constant and direct communication. Such communication is facilitated by an online computer linkage between the company and its suppliers.

2. A **multiskilled workforce**. Under JIT, machines are often strategically grouped around work cells or work stations. Much of the work is automated. As a result, one worker may have the responsibility to operate and maintain several different types of machines.
3. A **total quality control system**. The company must establish total quality control throughout the manufacturing operations. Total quality control means **no defects**. Since the **pull approach** signals only required quantities, any defects at any work station will shut down operations at subsequent work stations. Total quality control requires continuous monitoring by both employees and supervisors at each work station.

### BENEFITS OF JIT PROCESSING

The major benefits of JIT processing are:

1. Significant reduction or elimination of manufacturing inventories.
2. Enhanced product quality.
3. Reduction or elimination of rework costs and inventory storage costs.
4. Production cost savings from the improved flow of goods through the processes.

The effects in many cases have been dramatic. For example, after using JIT for two years, a major division of **Hewlett-Packard** found that work in process inventories (in dollars) were down 82%, scrap/rework costs were down 30%, space utilization improved by 40%, and labor efficiency improved 50%. As indicated, JIT not

only reduces inventory but also enables a manufacturer to produce a better product faster and with less waste.

One of the major accounting benefits of JIT is the elimination of raw materials and work in process inventory accounts. In place of these accounts is **one account**, Raw and In-Process Inventory. All materials and conversion costs are charged to this account. The reduction (or elimination) of in-process inventories results in a simplified computation of equivalent units of production.

### Activity-Based Costing

**Activity-based costing** focuses on the activities performed in producing a product. An ABC system is similar to conventional costing systems in accounting for direct materials and direct labor, but it differs in regard to manufacturing overhead.

A conventional cost system uses a **single unit-level** basis to allocate overhead costs to products. The basis may be direct labor or machine hours used to manufacture the product. The assumption in this approach is that as volume of units produced increases, so does the cost of overhead. However, in recent years the amount of direct labor used in many industries has greatly *decreased*, and total overhead costs resulting from depreciation on expensive equipment and machinery, utilities, repairs, and maintenance have significantly *increased*.

In ABC costing, the cost of a product is equal to the sum of the costs of all activities performed to manufacture it. ABC recognizes that to have accurate and meaningful cost data, **more than one basis** of allocating activity costs to products is needed.

In selecting the allocation basis, ABC seeks to identify the **cost drivers** that measure the activities performed on the product. A **cost driver** may be any factor or activity that has a direct cause–effect relationship with the resources consumed. Examples of activities and possible cost drivers are as follows.

**Study Objective [9]**  
Explain activity-based costing (ABC).

**Illustration 21-25**  
Activities and cost drivers in ABC

| Activity                                  | Cost Driver   |
|---|---|
| Ordering raw materials                    | Ordering hours; number of orders                            |
| Receiving raw materials                   | Receiving hours; number of shipments                        |
| Materials handling                        | Number of requisitions; weight of materials; handling hours |
| Production scheduling                     | Number of orders  |
| Machine setups                            | Setup hours; number of setups                               |
| Machining (fabricating, assembling, etc.) | Machine hours   |
| Quality control inspections               | Number of inspections                                       |
| Factory supervision                       | Number of employees   |

Two important assumptions must be met in order to obtain accurate product costs under ABC:

1. All overhead costs related to the activity must be driven by the cost driver used to assign costs to products.
2. All overhead costs related to the activity should respond proportionally to changes in the activity level of the cost driver.

For example, if there is little or no correlation between changes in the cost driver and consumption of the overhead cost, inaccurate product costs are inevitable. An example of the use of ABC is illustrated in the appendix at the end of this chapter.

Activity-based costing may be used with either a job order or a process cost accounting system. The primary benefit of ABC is more accurate and meaningful product costing. Also, improved cost data about an activity can lead to reduced costs for the activity. In sum, ABC makes managers realize that it is *activities*, and not products, that determine the profitability of a company—a realization that should lead to better management decisions.

## Do it!

Indicate whether each of the following statements is true or false.

1. Continuous process manufacturing often results in a reduction of inventory.
2. Companies that use just-in-time processing complete and store finished goods all the time to meet rush orders from customers.
3. A major benefit of just-in-time processing is production cost savings from the improved flow of goods through the processes.
4. An ABC system is similar to traditional costing systems in accounting for manufacturing costs but differs in regard to period costs.
5. The primary benefit of ABC is more accurate and meaningful costs.
6. In recent years, the amount of direct labor used in many industries has greatly increased and total overhead costs have significantly decreased.

### Solution

1. False. 2. False. 3. True. 4. False. 5. True. 6. False.

Related exercise material: BE21-11 and **Do it!** 21-4.

## JIT and ABC

### action plan

✓ JIT manufacturing is dedicated to having the right amounts of materials, parts, or products just as they are needed.

✓ ABC focuses on the activities performed in producing a product. It recognizes that to have accurate and meaningful cost data, more than one basis of allocating costs to products is needed.

## COMPREHENSIVE

## Do it!

Essence Company manufactures a high-end after-shave lotion, called Eternity, in 10-ounce plastic bottles. Because the market for after-shave lotion is highly competitive, the company is very concerned about keeping its costs under control. Eternity is manufactured through three processes: mixing, filling, and corking. Materials are added at the beginning of each of the processes, and labor and overhead are incurred uniformly throughout each process. The company uses a weighted-average method to cost its product. A partially completed production cost report for the month of May for the Mixing Department is shown below.

**ESSENCE COMPANY**  
Mixing Department  
Production Cost Report  
For the Month Ended May 31, 2012

| QUANTITIES                | Physical<br>Units | Equivalent Units |                     |

| Conversion costs for May   |  |  |              | <u>\$19,320</u> |
| Work in process, May 31, 800 units, 100% complete as to materials and 50% complete as to conversion costs. |  |  |              |                 |

**Instructions**

- (a) Prepare a production cost report for the Mixing Department for the month of May.
- (b) Prepare the journal entry to record the transfer of goods from the Mixing Department to the Filling Department.
- (c) Explain why Essence Company is using a process cost system to account for its costs.

**action plan**

- ✓ Compute the physical unit flow—that is, the total units to be accounted for.
- ✓ Compute the equivalent units of production.
- ✓ Compute the unit production costs, expressed in terms of equivalent units of production.
- ✓ Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.

**Solution to Comprehensive Do it!**

- (a) A completed production cost report for the Mixing Department is shown below. Computations to support the amounts reported follow the report.

**ESSENCE COMPANY**

| Work in Process—Mixing   |                   |                  | 131,780             |                  |
| (c) Companies use process cost systems to apply costs to similar products that are mass-produced in a continuous fashion. Essence Company uses a process cost system because production of the after-shave lotion, once it begins, continues until the after-shave lotion emerges. The processing is the same for the entire run—with precisely the same amount of materials, labor, and overhead. Each bottle of Eternity after-shave lotion is indistinguishable from another. |                   |                  |                     |                  |

## Summary of Study Objectives

### [1] Understand who uses process cost systems.

Companies that mass-produce similar products in a continuous fashion use process cost systems. Once production begins, it continues until the finished product emerges. Each unit of finished product is indistinguishable from every other unit.

### [2] Explain the similarities and differences between job order cost and process cost systems.

Job order cost systems are similar to process cost systems in three ways: (1) Both systems track the same cost elements—direct materials, direct labor, and manufacturing overhead. (2) Both accumulate costs in the same accounts—Raw Materials Inventory, Factory Labor, and Manufacturing Overhead. (3) Both assign

accumulated costs to the same accounts—Work in Process, Finished Goods Inventory, and Cost of Goods Sold. However, the method of assigning costs differs significantly.

There are four main differences between the two cost systems: (1) A process cost system uses separate accounts for each department or manufacturing process, rather than only one work in process account used in a job order cost system. (2) A process cost system summarizes costs in a production cost report for each department. A job cost system charges costs to individual jobs and summarizes them in a job cost sheet. (3) Costs are totaled at the end of a time period in a process cost system, but at the completion of a job in a job cost

system. (4) A process cost system calculates unit cost as: Total manufacturing costs for the period ÷ Units produced during the period. A job cost system calculates unit cost as: Total cost per job ÷ Units produced.

**[3] Explain the flow of costs in a process cost system.** A process cost system assigns manufacturing costs for raw materials, labor, and overhead to work in process accounts for various departments or manufacturing processes. It transfers the costs of units completed from one department to another as those units move through the manufacturing process. The system transfers the costs of completed work to Finished Goods Inventory. Finally, when inventory is sold, the system transfers costs to Cost of Goods Sold.

**[4] Make the journal entries to assign manufacturing costs in a process cost system.** Entries to assign the costs of raw materials, labor, and overhead consist of a credit to Raw Materials Inventory, Factory Labor, and Manufacturing Overhead, and a debit to Work in Process for each department. Entries to record the cost of goods transferred to another department are a credit to Work in Process for the department whose work is finished and a debit to the department to which the goods are transferred. The entry to record units completed and transferred to the warehouse is a credit for the department whose work is finished and a debit to Finished Goods Inventory. The entry to record the sale of goods is a credit to Finished Goods Inventory and a debit to Cost of Goods Sold.

**[5] Compute equivalent units.** Equivalent units of production measure work done during a period, expressed in fully completed units. Companies use this measure to determine

the cost per unit of completed product. Equivalent units are the sum of units completed and transferred out plus equivalent units of ending work in process.

**[6] Explain the four steps necessary to prepare a production cost report.** The four steps to complete a production cost report are: (1) Compute the physical unit flow—that is, the total units to be accounted for. (2) Compute the equivalent units of production. (3) Compute the unit production costs, expressed in terms of equivalent units of production. (4) Prepare a cost reconciliation schedule, which shows that the total costs accounted for equal the total costs to be accounted for.

**[7] Prepare a production cost report.** The production cost report contains both quantity and cost data for a production department. There are four sections in the report: (1) number of physical units, (2) equivalent units determination, (3) unit costs, and (4) cost reconciliation schedule.

**[8] Explain just-in-time (JIT) processing.** JIT is a manufacturing technique dedicated to producing the right products at the right time as needed. One of the principal accounting effects is that a Raw and In-Process Inventory account replaces both the raw materials and work in process inventory accounts.

**[9] Explain activity-based costing (ABC).** ABC is a method of product costing that focuses on the activities performed to produce products. It assigns the cost of the activities to products by using cost drivers that measure the activities performed. The primary objective of ABC is accurate and meaningful product costs.

## Glossary

**Activity-based costing** A cost accounting system that focuses on the activities performed in manufacturing a specific product. (p. 984).

**Conversion costs** The sum of labor costs and overhead costs. (p. 974).

**Cost driver** Any factor or activity that has a direct cause–effect relationship with the resources consumed. (p. 984).

**Cost reconciliation schedule** A schedule that shows that the total costs accounted for equal the total costs to be accounted for. (p. 979).

**Equivalent units of production** A measure of the work done during the period, expressed in fully completed units. (p. 973).

**Just-in-time processing** A processing system dedicated to producing the right products (or parts) as they are needed. (p. 982).

**Operations costing** A combination of a process cost and a job order cost system, in which products are manufactured primarily by standardized methods, with some customization. (p. 981).

**Physical units** Actual units to be accounted for during a period, irrespective of any work performed. (p. 977).

**Process cost systems** An accounting system used to apply costs to similar products that are mass-produced in a continuous fashion. (p. 966).

**Production cost report** An internal report for management that shows both production quantity and cost data for a production department. (p. 975).

**Total units (costs) accounted for** The sum of the units (costs) transferred out during the period plus the units (costs) in process at the end of the period. (pp. 977, 979).

**Total units (costs) to be accounted for** The sum of the units (costs) started (or transferred) into production during the period plus the units (costs) in process at the beginning of the period. (pp. 977, 979).

**Unit production costs** Costs expressed in terms of equivalent units of production. (p. 978).

**Weighted-average method** Method used to compute equivalent units of production which considers the degree of completion (weighting) of the units completed and transferred out and the ending work in process. (p. 973).

# APPENDIX 21A

## Example of Traditional Costing versus Activity-Based Costing

### Production and Cost Data

In this appendix we present an example that compares activity-based costing to traditional costing. Assume that Atlas Company produces two products, The Boot and The Club. The Boot is a high-volume item totaling 25,000 units annually. The Club is a low-volume item totaling only 5,000 units per year. Each product requires one hour of direct labor for completion. Therefore, total annual direct labor hours are 30,000 (25,000 + 5,000). Expected annual manufacturing overhead costs are \$900,000. The predetermined overhead rate is \$30 ( $\$900,000 \div 30,000$ ) per direct labor hour.

The direct materials cost per unit is \$40 for The Boot and \$30 for The Club. The direct labor cost is \$12 per unit for each product.

#### Study Objective [10]

Apply activity-based costing to specific company data.

### Unit Costs Under Traditional Costing

Illustration 21A-1 shows the unit cost for each product under traditional costing.

| Manufacturing Costs | Product     |             |
|---------------------|-------------|-------------|
|                     | The Boot    | The Club    |
| Direct materials    | \$40        | \$30        |
| Direct labor        | 12          | 12          |
| Overhead            | 30*         | 30*         |
| Total unit cost     | <b>\$82</b> | <b>\$72</b> |

\*Predetermined overhead rate  $\times$  Direct labor hours ( $\$30 \times 1 \text{ hr} = \$30$ )

**Illustration 21A-1**

Units costs—traditional costing

### Unit Costs Under ABC

Let's now calculate unit costs under ABC, in order to compare activity-based costing with a traditional costing system. The first step is to determine overhead rates under ABC.

#### DETERMINING OVERHEAD RATES UNDER ABC

Analysis reveals that Atlas Company's expected annual overhead costs of \$900,000 relate to three activities—machine setups, machining, and inspections. Illustration 21A-2 shows the cost driver and overhead rate for each activity.

| Activity       | Cost Driver           | Total Expected Overhead Cost | Total Expected Use of Driver | Activity Based Overhead Rate |
|----------------|-----------------------|------------------------------|------------------------------|------------------------------|
| Machine setups | Number of setups      | \$300,000                    | 1,500                        | <b>\$200</b> per setup       |
| Machining      | Machine hours         | 500,000                      | 50,000                       | <b>\$10</b> per machine hour |
| Inspections    | Number of inspections | 100,000                      | 2,000                        | <b>\$50</b> per inspection   |

**Illustration 21A-2**

Computing overhead rates—ABC

#### ASSIGNING OVERHEAD COSTS TO PRODUCTS UNDER ABC

In assigning costs, it is necessary to know the expected number of cost drivers for each product. Because of its low volume, The Club requires more setups and inspections than The Boot. The expected number of cost drivers for each product is as follows.

**Illustration 21A-3**

Expected number of cost drivers

| Cost Driver              | Product  |          | Total Usage |
|--------------------------|----------|----------|-------------|
|                          | The Boot | The Club |             |
| Number of machine setups | 500      | 1,000    | 1,500       |
| Machine hours            | 30,000   | 20,000   | 50,000      |
| Number of inspections    | 500      | 1,500    | 2,000       |

Using these data, Atlas can assign the expected annual overhead cost to each product as follows.

**Illustration 21A-4**

Assignment of overhead costs to products

| Activity                           | The Boot |                  | The Club |                  | Total Cost       |
|------------------------------------|----------|------------------|----------|------------------|------------------|
|                                    | Number   | Cost             | Number   | Cost             |                  |
| Machine setups (\$200)             | 500      | \$100,000        | 1,000    | \$200,000        | \$300,000        |
| Machining (\$10)                   | 30,000   | 300,000          | 20,000   | 200,000          | 500,000          |
| Inspections (\$50)                 | 500      | 25,000           | 1,500    | 75,000           | 100,000          |
| Total assigned costs (a)           |          | <u>\$425,000</u> |          | <u>\$475,000</u> | <u>\$900,000</u> |
| Units produced (b)                 |          | <u>25,000</u>    |          | <u>5,000</u>     |                  |
| Overhead cost per unit [(a) ÷ (b)] |          | <u>\$17</u>      |          | <u>\$95</u>      |                  |

These data show that under ABC, overhead costs are shifted from the high-volume product (The Boot) to the low-volume product (The Club). This shift results in more accurate costing for two reasons:

1. Low-volume products often require more special handling, such as more machine setups and inspections, than high-volume products. This is true for Atlas Company. Thus, the low-volume product frequently is responsible for more overhead costs per unit than a high-volume product.
2. Assigning overhead using ABC will usually increase the cost per unit for low-volume products as compared to a traditional overhead allocation. Therefore, traditional cost drivers such as direct labor hours are usually not appropriate for assigning overhead costs to low-volume products.

**Comparing Unit Costs**

A comparison of unit manufacturing costs under traditional costing and ABC shows the following significant differences.

**Illustration 21A-5**

Comparison of unit product costs

| Manufacturing Costs | The Boot               |             | The Club                |              |
|---------------------|------------------------|-------------|-------------------------|--------------|
|                     | Traditional Costing    | ABC         | Traditional Costing     | ABC          |
| Direct materials    | \$40                   | \$40        | \$30                    | \$30         |
| Direct labor        | 12                     | 12          | 12                      | 12           |
| Overhead            | 30                     | 17          | 30                      | 95           |
| Total cost per unit | <u>\$82</u>            | <u>\$69</u> | <u>\$72</u>             | <u>\$137</u> |
|                     | <b>Overstated \$13</b> |             | <b>Understated \$65</b> |              |

The comparison shows that unit costs under traditional costing have been significantly distorted. The cost of The Boot has been overstated \$13 per unit (\$82 – \$69). The cost of The Club has been understated \$65 per unit (\$137 – \$72). The differences are attributable to how Atlas Company assigns manufacturing overhead. A likely consequence of the differences is that Atlas has been overpricing The Boot

and possibly losing market share to competitors. It also has been sacrificing profitability by underpricing The Club.

As illustrated in the above case, ABC involves the following steps.

1. Identify the major activities that pertain to the manufacture of specific products.
2. Accumulate manufacturing overhead costs by activities.
3. Identify the cost driver(s) that accurately measure(s) each activity's contribution to the finished product.
4. Assign manufacturing overhead costs for each activity to products, using the cost driver(s).

## Benefits and Limitations of Activity-Based Costing

We have already seen that a primary benefit of ABC is more accurate product costing. In addition, ABC offers the following other benefits:

1. **Enhanced control over overhead costs.** Under ABC, companies can trace many overhead costs directly to activities—allowing some indirect costs to be identified as direct costs. Thus, managers have become more aware of their responsibility to control the activities that generate the costs.
2. **Better management decisions.** More accurate product costing should contribute to setting selling prices that can help achieve desired product profitability levels. In addition, more accurate cost data could be helpful in deciding whether to make or buy a component, and sometimes even whether to discontinue or expand a product.

The principal disadvantages of ABC generally focus on two factors. First, **the expense of obtaining the cost data** required by the system is relatively high. ABC requires data that are not normally generated within a company. Examples of such data are the number of setups, inspections, orders placed, and orders received. In addition, many computations are involved in assigning overhead costs to individual products.

Second, **ABC does not eliminate arbitrary assignments** of overhead. For example, plant-wide overhead costs such as depreciation, insurance, and property taxes on the factory building should be allocated to the activity centers in determining the cost of a product. With ABC, these allocations may be more difficult to do accurately because of the increased number of activity centers. As a result, accuracy of product costs could be adversely affected.

## Summary of Study Objective for Appendix 21A

**[10] Apply activity-based costing to specific company data.** In applying ABC, it is necessary to compute the overhead rate for each activity by dividing total expected

overhead by the total expected usage of the cost driver. The overhead cost for each activity is then assigned to products on the basis of each product's use of the cost driver.

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

\***Note:** All **asterisked** Questions, Exercises, and Problems relate to material contained in the appendix to the chapter.

## Self-Test Questions

Answers are on page 1009.

- (SO 1) 1. Which of the following items is *not* characteristic of a process cost system?
- a. Once production begins, it continues until the finished product emerges.
  - b. The products produced are heterogeneous in nature.

- c. The focus is on continually producing homogeneous products.  
 d. When the finished product emerges, all units have precisely the same amount of materials, labor, and overhead.
- (SO 2) 2. Indicate which of the following statements is *not* correct.  
 a. Both a job order and a process cost system track the same three manufacturing cost elements—direct materials, direct labor, and manufacturing overhead.  
 b. A job order cost system uses only one work in process account, whereas a process cost system uses multiple work in process accounts.  
 c. Manufacturing costs are accumulated the same way in a job order and in a process cost system.  
 d. Manufacturing costs are assigned the same way in a job order and in a process cost system.
- (SO 3) 3. In a process cost system, costs are assigned only:  
 a. to one work in process account.  
 b. to work in process and finished goods inventory.  
 c. to work in process, finished goods, and cost of goods sold.  
 d. to work in process accounts.
- (SO 4) 4. In making the journal entry to assign raw materials costs, a company:  
 a. debits Finished Goods Inventory.  
 b. often debits two or more work in process accounts.  
 c. generally credits two or more work in process accounts.  
 d. credits Finished Goods Inventory.
- (SO 4) 5. In a process cost system, manufacturing overhead:  
 a. is assigned to finished goods at the end of each accounting period.  
 b. is assigned to a work in process account for each job as the job is completed.  
 c. is assigned to a work in process account for each production department on the basis of a predetermined overhead rate.  
 d. is assigned to a work in process account for each production department as overhead costs are incurred.
- (SO 5) 6. Conversion costs are the sum of:  
 a. fixed and variable overhead costs.  
 b. labor costs and overhead costs.  
 c. direct material costs and overhead costs.  
 d. direct labor and indirect labor costs.
- (SO 5) 7. The Mixing Department's output during the period consists of 20,000 units completed and transferred out, and 5,000 units in ending work in process 60% complete as to materials and conversion costs. Beginning inventory is 1,000 units, 40% complete as to materials and conversion costs. The equivalent units of production are:  
 a. 22,600.                      c. 24,000.  
 b. 23,000.                      d. 25,000.
- (SO 6) 8. In RYZ Company, there are zero units in beginning work in process, 7,000 units started into production, and 500 units in ending work in process 20% completed. The physical units to be accounted for are:  
 a. 7,000.                      c. 7,600.  
 b. 7,360.                      d. 7,340.
9. Stock Company has 2,000 units in beginning work in process, 20% complete as to conversion costs, 23,000 units transferred out to finished goods, and 3,000 units in ending work in process 33 $\frac{1}{3}$ % complete as to conversion costs. The beginning and ending inventory is fully complete as to materials costs. Equivalent units for materials and conversion costs are, respectively:  
 a. 22,000, 24,000.                      c. 26,000, 24,000.  
 b. 24,000, 26,000.                      d. 26,000, 26,000.
10. Fortner Company has no beginning work in process; 9,000 units are transferred out and 3,000 units in ending work in process are one-third finished as to conversion costs and fully complete as to materials cost. If total materials cost is \$60,000, the unit materials cost is:  
 a. \$5.00.                      c. \$6.00.  
 b. \$5.45 rounded.                      d. No correct answer is given.
11. Largo Company has unit costs of \$10 for materials and \$30 for conversion costs. If there are 2,500 units in ending work in process, 40% complete as to conversion costs, and fully complete as to materials cost, the total cost assignable to the ending work in process inventory is:  
 a. \$45,000.                      c. \$75,000.  
 b. \$55,000.                      d. \$100,000.
12. A production cost report (SO 7)  
 a. is an external report.  
 b. shows costs charged to a department and costs accounted for.  
 c. shows equivalent units of production but not physical units.  
 d. contains six sections.
13. In a production cost report, units to be accounted for are calculated as: (SO 7)  
 a. Units started into production + Units in ending work in process.  
 b. Units started into production – Units in beginning work in process.  
 c. Units transferred out + Units in beginning work in process.  
 d. Units started into production + Units in beginning work in process.
14. Just-in-time processing (JIT): (SO 8)  
 a. strives to eliminate inventories.  
 b. uses a pull approach in manufacturing.  
 c. Neither of the above.  
 d. Both (a) and (b).
15. The sequence of activities in just-in-time processing begins when the manufacturer: (SO 8)  
 a. orders raw materials from a supplier.  
 b. issues raw materials to work in process inventory.  
 c. receives a sales order from a customer.  
 d. calculates its predetermined overhead rates.
16. Activity-based costing: (SO 9)  
 a. assumes that the cost of a product is equal to the sum of the costs of all activities performed to manufacture it.  
 b. has become more widespread as overhead costs have been decreasing relative to materials and labor costs.

- c. is similar to a conventional cost accounting system in accounting for direct labor and manufacturing overhead but differs in regard to direct materials.
- d. uses a single unit-level basis to allocate overhead costs to products.
- (SO 9) 17. Activity-based costing (ABC):
- can be used only in a process cost system.
  - focuses on units of production.
  - focuses on activities performed to produce a product.
  - uses only a single basis of allocation.
- \*18. The overhead rate for Machine Setups is \$100 per setup. (SO 10) Products A and B have 80 and 60 setups, respectively. The overhead assigned to each product is:
- Product A \$8,000, Product B \$8,000.
  - Product A \$8,000, Product B \$6,000.
  - Product A \$6,000, Product B \$6,000.
  - Product A \$6,000, Product B \$8,000.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), for additional Self-Test Questions.

## Questions

- Identify which costing system—job order or process cost—the following companies would primarily use: (a) **Quaker Oats**, (b) **Ford Motor Company**, (c) **Kinko's Print Shop**, and (d) **Warner Bros. Motion Pictures**.
- Contrast the primary focus of job order cost accounting and of process cost accounting.
- What are the similarities between a job order and a process cost system?
- Your roommate is confused about the features of process cost accounting. Identify and explain the distinctive features for your roommate.
- Sal Torre believes there are no significant differences in the flow of costs between job order cost accounting and process cost accounting. Is Torre correct? Explain.
- (a) What source documents are used in assigning (1) materials and (2) labor to production in a process cost system? (b) What criterion and basis are commonly used in allocating overhead to processes?
- At Dos Company, overhead is assigned to production departments at the rate of \$5 per machine hour. In July, machine hours were 3,000 in the Machining Department and 2,400 in the Assembly Department. Prepare the entry to assign overhead to production.
- Mary Watters is uncertain about the steps used to prepare a production cost report. State the procedures that are required in the sequence in which they are performed.
- Mitch Chorro is confused about computing physical units. Explain to Mitch how physical units to be accounted for and physical units accounted for are determined.
- What is meant by the term “equivalent units of production”?
- How are equivalent units of production computed?
- Samson Company had zero units of beginning work in process. During the period, 9,000 units were completed, and there were 600 units of ending work in process. What were the units started into production?
- Gratle Co. had zero units of beginning work in process. During the period, 12,000 units were completed, and there were 800 units of ending work in process one-fifth complete as to conversion cost and 100% complete as to materials cost. What were the equivalent units of production for (a) materials and (b) conversion costs?
- Mays Co. started 3,000 units during the period. Its beginning inventory is 500 units one-fourth complete as to conversion costs and 100% complete as to materials cost. Its ending inventory is 200 units one-fifth complete as to conversion cost and 100% complete as to materials costs. How many units were transferred out this period?
- Kira Company transfers out 14,000 units and has 2,000 units of ending work in process that are 25% complete. Materials are entered at the beginning of the process and there is no beginning work in process. Assuming unit materials costs of \$3 and unit conversion costs of \$6, what are the costs to be assigned to units (a) transferred out and (b) in ending work in process?
- (a) Adam Vadim believes the production cost report is an external report for stockholders. Is Adam correct? Explain. (b) Identify the sections in a production cost report.
- What purposes are served by a production cost report?
- At Stan Company, there are 800 units of ending work in process that are 100% complete as to materials and 40% complete as to conversion costs. If the unit cost of materials is \$4 and the costs assigned to the 800 units is \$6,000, what is the per-unit conversion cost?
- What is the difference between operations costing and a process costing system?
- How does a company decide whether to use a job order or a process cost system?
- (a) Describe the philosophy and approach of just-in-time processing. (b) Identify the major elements of JIT processing.
- (a) What are the principal differences between activity-based costing (ABC) and traditional product costing? (b) What assumptions must be met for ABC costing to be useful?
- Chopra Co. identifies the following activities that pertain to manufacturing overhead: Materials Handling, Machine Setups, Factory Machine Maintenance, Factory Supervision, and Quality Control. For each activity, identify an appropriate cost driver.
- (a) Identify the steps that pertain to activity-based costing. (b) What are the advantages of ABC costing?

## Brief Exercises

Journalize entries for accumulating costs.

(SO 4)

Journalize the assignment of materials and labor costs.

(SO 4)

Journalize the assignment of overhead costs.

(SO 4)

Compute physical units of production.

(SO 6)

**BE21-1** Mendez Manufacturing purchases \$45,000 of raw materials on account, and it incurs \$50,000 of factory labor costs. Journalize the two transactions on March 31 assuming the labor costs are not paid until April.

**BE21-2** Data for Mendez Manufacturing are given in BE21-1. Supporting records show that (a) the Assembly Department used \$24,000 of raw materials and \$30,000 of the factory labor, and (b) the Finishing Department used the remainder. Journalize the assignment of the costs to the processing departments on March 31.

**BE21-3** Factory labor data for Mendez Manufacturing are given in BE21-2. Manufacturing overhead is assigned to departments on the basis of 200% of labor costs. Journalize the assignment of overhead to the Assembly and Finishing Departments.

**BE21-4** Sawyer Manufacturing Company has the following production data for selected months.

| Month   | Beginning<br>Work in Process | Units<br>Transferred Out | Ending<br>Work in Process |                                     |
|---------|------------------------------|--------------------------|---------------------------|-------------------------------------|
|         |                              |                          | Units                     | % Complete as to<br>Conversion Cost |
| January | –0–                          | 30,000                   | 10,000                    | 40%                                 |
| March   | –0–                          | 40,000                   | 8,000                     | 75                                  |
| July    | –0–                          | 40,000                   | 16,000                    | 25                                  |

Compute the physical units for each month.

Compute equivalent units of production.

(SO 5)

Compute unit costs of production.

(SO 6)

Assign costs to units transferred out and in process.

(SO 6)

**BE21-5** Using the data in BE21-4, compute equivalent units of production for materials and conversion costs, assuming materials are entered at the beginning of the process.

**BE21-6** In Boca Company, total material costs are \$32,000, and total conversion costs are \$54,000. Equivalent units of production are materials 10,000 and conversion costs 12,000. Compute the unit costs for materials, conversion costs, and total manufacturing costs.

**BE21-7** Prya Company has the following production data for April: units transferred out 40,000, and ending work in process 5,000 units that are 100% complete for materials and 40% complete for conversion costs. If unit materials cost is \$4 and unit conversion cost is \$9, determine the costs to be assigned to the units transferred out and the units in ending work in process.

**BE21-8** Production costs chargeable to the Finishing Department in June in Huang Company are materials \$15,000, labor \$29,500, and overhead \$18,000. Equivalent units of production are materials 20,000 and conversion costs 19,000. Compute the unit costs for materials and conversion costs.

Compute unit costs.

(SO 6)

Prepare cost reconciliation schedule.

(SO 6)

**BE21-9** Data for Huang Company are given in BE21-8. Production records indicate that 18,000 units were transferred out, and 2,000 units in ending work in process were 50% complete as to conversion cost and 100% complete as to materials. Prepare a cost reconciliation schedule.

Compute equivalent units of production.

(SO 5)

**BE21-10** The Smelting Department of Caruso Manufacturing Company has the following production and cost data for November.

Production: Beginning work in process 2,000 units that are 100% complete as to materials and 20% complete as to conversion costs; units transferred out 8,000 units; and ending work in process 5,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

Compute the equivalent units of production for (a) materials and (b) conversion costs for the month of November.

Understand contemporary developments.

(SO 8, 9)

**BE21-11** Sam Snead has formulated the following list of statements about contemporary developments in managerial accounting.

1. Just-in-time processing results in a push approach; that is, raw materials are pushed through each process.
2. A primary objective of just-in-time processing is to eliminate all manufacturing inventories.

- A major disadvantage of just-in-time processing is lower product quality.
- A primary benefit of activity-based costing is more accurate and meaningful product costing.
- A major advantage of activity-based costing is that it uses a single unit-level basis, such as direct labor or machine hours, to allocate overhead.

Identify each statement as true or false. If false, indicate how to correct the statement to make it true.

**\*BE21-12** Meyers Company identifies three activities in its manufacturing process: machine setups, machining, and inspections. Estimated annual overhead cost for each activity is \$120,000, \$300,000, and \$70,000, respectively. The cost driver for each activity and the expected annual usage are: number of setups 1,000, machine hours 25,000, and number of inspections 2,000. Compute the overhead rate for each activity.

*Compute overhead rates for activities.*  
(SO 10)

## Do it! Review

**Do it! 21-1** Hutto Company manufactures CH-21 through two processes: Mixing and Packaging. In July, the following costs were incurred.

|                              | <u>Mixing</u> | <u>Packaging</u> |
|------------------------------|---------------|------------------|
| Raw Materials used           | \$10,000      | \$24,000         |
| Factory Labor costs          | 8,000         | 36,000           |
| Manufacturing Overhead costs | 12,000        | 54,000           |

Units completed at a cost of \$21,000 in the Mixing Department are transferred to the Packaging Department. Units completed at a cost of \$102,000 in the Packaging Department are transferred to Finished Goods. Journalize the assignment of these costs to the two processes and the transfer of units as appropriate.

*Assign and journalize manufacturing costs.*  
(SO 4)

**Do it! 21-2** The assembly department has the following production and cost data for the current month.

| <u>Beginning<br/>Work in Process</u> | <u>Units<br/>Transferred Out</u> | <u>Ending<br/>Work in Process</u> |
|--------------------------------------|----------------------------------|-----------------------------------|
| –0–                                  | 20,000                           | 16,000                            |

Materials are entered at the beginning of the process. The ending work in process units are 70% complete as to conversion costs. Compute the equivalent units of production for (a) materials and (b) conversion costs.

*Compute equivalent units.*  
(SO 5)

**Do it! 21-3** In March, Viren Manufacturing had the following unit production costs: materials \$10 and conversion costs \$8. On March 1, it had zero work in process. During March, Viren transferred out 22,000 units. As of March 31, 2,000 units that were 40% complete as to conversion costs and 100% complete as to materials were in ending work in process.

- Compute the total units to be accounted for.
- Compute the equivalent units of production.
- Prepare a cost reconciliation schedule, including the costs of units transferred out and the costs of units in process.

*Prepare cost reconciliation schedule.*  
(SO 6, 7)

**Do it! 21-4** Indicate whether each of the following statements is true or false.

- Just-in-time processing is also known as just-in-case processing.
- Companies that use just-in-time processing complete finished goods just in time to be sold.
- A major benefit of just-in-time processing is enhanced product quality.
- An ABC system is similar to conventional costing systems in accounting for period costs but differs in regard to manufacturing costs.
- The primary benefit of ABC is significant reduction or elimination of manufacturing inventories.
- In recent years, the amount of direct labor used in many industries has greatly decreased and total overhead costs have significantly increased.

*Answer questions about JIT and ABC.*  
(SO 8, 9)

## Exercises

Understand process cost accounting.

(SO 1, 2)

**E21-1** Greg Reid has prepared the following list of statements about process cost accounting.

1. Process cost systems are used to apply costs to similar products that are mass-produced in a continuous fashion.
2. A process cost system is used when each finished unit is indistinguishable from another.
3. Companies that produce soft drinks, motion pictures, and computer chips would all use process cost accounting.
4. In a process cost system, costs are tracked by individual jobs.
5. Job order costing and process costing track different manufacturing cost elements.
6. Both job order costing and process costing account for direct materials, direct labor, and manufacturing overhead.
7. Costs flow through the accounts in the same basic way for both job order costing and process costing.
8. In a process cost system, only one work in process account is used.
9. In a process cost system, costs are summarized in a job cost sheet.
10. In a process cost system, the unit cost is total manufacturing costs for the period divided by the units produced during the period.

### Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Journalize transactions.

(SO 4)

**E21-2** Lamas Company manufactures pizza sauce through two production departments: Cooking and Canning. In each process, materials and conversion costs are incurred evenly throughout the process. For the month of April, the work in process accounts show the following debits.

|                           | <b>Cooking</b> | <b>Canning</b> |
|---------------------------|----------------|----------------|
| Beginning work in process | \$ 0–          | \$ 4,000       |
| Materials                 | 21,000         | 6,000          |
| Labor                     | 8,500          | 7,000          |
| Overhead                  | 29,500         | 25,800         |
| Costs transferred in      |                | 53,000         |

### Instructions

Journalize the April transactions.

Answer questions on costs and production.

(SO 3, 5, 6)

**E21-3** The ledger of Penland Company has the following work in process account.

| <b>Work in Process—Painting</b> |           |       |      |                 |   |
|---------------------------------|-----------|-------|------|-----------------|---|
| 5/1                             | Balance   | 3,590 | 5/31 | Transferred out | ? |
| 5/31                            | Materials | 5,160 |      |                 |   |
| 5/31                            | Labor     | 2,740 |      |                 |   |
| 5/31                            | Overhead  | 1,650 |      |                 |   |
|                                 |           |       |      |                 |   |
| 5/31                            | Balance   | ?     |      |                 |   |

Production records show that there were 400 units in the beginning inventory, 30% complete, 1,100 units started, and 1,200 units transferred out. The beginning work in process had materials cost of \$2,040 and conversion costs of \$1,550. The units in ending inventory were 40% complete. Materials are entered at the beginning of the painting process.

### Instructions

- (a) How many units are in process at May 31?
- (b) What is the unit materials cost for May?
- (c) What is the unit conversion cost for May?
- (d) What is the total cost of units transferred out in May?
- (e) What is the cost of the May 31 inventory?

**E21-4** Kirk Manufacturing Company has two production departments: Cutting and Assembly. July 1 inventories are Raw Materials \$4,200, Work in Process—Cutting \$2,900, Work in Process—Assembly \$10,600, and Finished Goods \$31,000. During July, the following transactions occurred.

*Journalize transactions for two processes.*  
(SO 4)

1. Purchased \$62,500 of raw materials on account.
2. Incurred \$56,000 of factory labor. (Credit Wages Payable.)
3. Incurred \$70,000 of manufacturing overhead; \$40,000 was paid and the remainder is unpaid.
4. Requisitioned materials for Cutting \$15,700 and Assembly \$8,900.
5. Used factory labor for Cutting \$29,000 and Assembly \$27,000.
6. Applied overhead at the rate of \$15 per machine hour. Machine hours were Cutting 1,680 and Assembly 1,720.
7. Transferred goods costing \$67,600 from the Cutting Department to the Assembly Department.
8. Transferred goods costing \$134,900 from Assembly to Finished Goods.
9. Sold goods costing \$150,000 for \$200,000 on account.

**Instructions**

Journalize the transactions. (Omit explanations.)

**E21-5** In Macadoo Company, materials are entered at the beginning of each process. Work in process inventories, with the percentage of work done on conversion costs, and production data for its Sterilizing Department in selected months during 2012 are as follows.

*Compute physical units and equivalent units of production.*  
(SO 5, 6)

| Month   | Beginning Work in Process |                  | Units Transferred Out | Ending Work in Process |                  |
|---------|---------------------------|------------------|-----------------------|------------------------|------------------|
|         | Units                     | Conversion Cost% |                       | Units                  | Conversion Cost% |
| January | –0–                       | —                | 7,000                 | 2,000                  | 60               |
| March   | –0–                       | —                | 12,000                | 3,000                  | 30               |
| May     | –0–                       | —                | 16,000                | 5,000                  | 80               |
| July    | –0–                       | —                | 10,000                | 1,500                  | 40               |

**Instructions**

- (a) Compute the physical units for January and May.
- (b) Compute the equivalent units of production for (1) materials and (2) conversion costs for each month.

**E21-6** The Cutting Department of Hong Manufacturing has the following production and cost data for July.

*Determine equivalent units, unit costs, and assignment of costs.*  
(SO 5, 6)

| Production  | Costs                            |
|---|----------------------------------|
| 1. Transferred out 9,000 units.   | Beginning work in process \$ –0– |
| 2. Started 3,000 units that are 60% complete as to conversion costs and 100% complete as to materials at July 31. | Materials 45,000                 |
|   | Labor 16,200                     |
|   | Manufacturing overhead 18,900    |

Materials are entered at the beginning of the process. Conversion costs are incurred uniformly during the process.

**Instructions**

- (a) Determine the equivalent units of production for (1) materials and (2) conversion costs.
- (b) Compute unit costs and prepare a cost reconciliation schedule.

**E21-7** The Sanding Department of Saez Furniture Company has the following production and manufacturing cost data for March 2012, the first month of operation.

*Prepare a production cost report.*  
(SO 5, 6, 7)

*Production:* 12,000 units finished and transferred out; 3,000 units started that are 100% complete as to materials and 20% complete as to conversion costs.  
*Manufacturing costs:* Materials \$33,000; labor \$27,000; overhead \$36,000.

Determine equivalent units, unit costs, and assignment of costs.

(SO 5, 6)

**Instructions**

Prepare a production cost report.

**E21-8** The Blending Department of Peacock Company has the following cost and production data for the month of April.

|   |                           |
|---|---------------------------|
| Costs:                                    |                           |
| Work in process, April 1                  |                           |
| Direct materials: 100% complete           | \$100,000                 |
| Conversion costs: 20% complete            | <u>70,000</u>             |
| Cost of work in process, April 1          | <u>\$170,000</u>          |
| Costs incurred during production in April |                           |
| Direct materials                          | \$ 800,000                |
| Conversion costs                          | <u>362,000</u>            |
| Costs incurred in April                   | <u><u>\$1,162,000</u></u> |

Units transferred out totaled 14,000. Ending work in process was 1,000 units that are 100% complete as to materials and 40% complete as to conversion costs.

**Instructions**

- (a) Compute the equivalent units of production for (1) materials and (2) conversion costs for the month of April.
- (b) Compute the unit costs for the month.
- (c) Determine the costs to be assigned to the units transferred out and in ending work in process.

**E21-9** Eleby Company has gathered the following information.

|   |          |
|---|----------|
| Units in beginning work in process                              | –0–      |
| Units started into production                                   | 36,000   |
| Units in ending work in process                                 | 6,000    |
| Percent complete for conversion costs in ending work in process | 40%      |
| Costs incurred:   |          |
| Direct materials  | \$72,000 |
| Direct labor  | \$81,000 |
| Overhead  | \$97,200 |

**Instructions**

(All materials added at the beginning of the process.)

- (a) Compute equivalent units of production for materials and for conversion costs.
- (b) Determine the unit costs of production.
- (c) Show the assignment of costs to units transferred out and in process.

**E21-10** Red Sky Company has gathered the following information.

|   |           |
|---|-----------|
| Units in beginning work in process                              | 20,000    |
| Units started into production                                   | 72,000    |
| Units in ending work in process                                 | 24,000    |
| Percent complete for conversion costs in ending work in process | 60%       |
| Costs incurred (includes beginning work in process):            |           |
| Direct materials  | \$101,200 |
| Direct labor  | \$164,800 |
| Overhead  | \$123,600 |

**Instructions**

(All materials added at the beginning of the process.)

- (a) Compute equivalent units of production for materials and for conversion costs.
- (b) Determine the unit costs of production.
- (c) Show the assignment of costs to units transferred out and in process.

Determine equivalent units, unit costs, and assignment of costs.

(SO 5, 6)

Determine equivalent units, unit costs, and assignment of costs.

(SO 5, 6)

**E21-11** The Polishing Department of Burgoa Manufacturing Company has the following production and manufacturing cost data for September. Materials are entered at the beginning of the process.

*Production:* Beginning inventory 1,600 units that are 100% complete as to materials and 30% complete as to conversion costs; units started during the period are 18,400; ending inventory of 5,000 units 10% complete as to conversion costs.

*Manufacturing costs:* Beginning inventory costs, comprised of \$20,000 of materials and \$43,180 of conversion costs; materials costs added in Polishing during the month, \$177,200; labor and overhead applied in Polishing during the month, \$102,680 and \$257,140, respectively.

Compute equivalent units, unit costs, and costs assigned.

(SO 5, 6)

**Instructions**

- (a) Compute the equivalent units of production for materials and conversion costs for the month of September.
- (b) Compute the unit costs for materials and conversion costs for the month.
- (c) Determine the costs to be assigned to the units transferred out and in process.

**E21-12** Sid Vicious has recently been promoted to production manager, and so he has just started to receive various managerial reports. One of the reports he has received is the production cost report that you prepared. It showed that his department had 2,000 equivalent units in ending inventory. His department has had a history of not keeping enough inventory on hand to meet demand. He has come to you, very angry, and wants to know why you credited him with only 2,000 units when he knows he had at least twice that many on hand.

Explain the production cost report.

(SO 7)

**Instructions**

 Explain to him why his production cost report showed only 2,000 equivalent units in ending inventory. Write an informal memo. Be kind and explain very clearly why he is mistaken.

**E21-13** The Welding Department of Castro Manufacturing Company has the following production and manufacturing cost data for February 2012. All materials are added at the beginning of the process.

Prepare a production cost report.

(SO 5, 6, 7)

| Manufacturing Costs       |               |          | Production Data           |               |
|---------------------------|---------------|----------|---------------------------|---------------|
| Beginning work in process |               |          | Beginning work in process | 15,000 units  |
| Materials                 | \$18,000      |          |                           | 1/10 complete |
| Conversion costs          | <u>14,175</u> | \$32,175 | Units transferred out     | 49,000        |
| Materials                 |               | 180,000  | Units started             | 60,000        |
| Labor                     |               | 32,780   | Ending work in process    | 26,000 units  |
| Overhead                  |               | 61,445   |                           | 1/5 complete  |

**Instructions**

Prepare a production cost report for the Welding Department for the month of February.

**E21-14** Debrozzo Shipping, Inc. is contemplating the use of process costing to track the costs of its operations. The operation consists of three segments (departments): receiving, shipping, and delivery. Containers are received at Debrozzo’s docks and sorted according to the ship they will be carried on. The containers are loaded onto a ship, which carries them to the appropriate port of destination. The containers are then off-loaded and delivered to the receiving company.

Compute physical units and equivalent units of production.

(SO 5, 6)

Debrozzo Shipping wants to begin using process costing in the shipping department. Direct materials represent the fuel costs to run the ship, and “Containers in transit” represents work in process. Listed below is information about the shipping department’s first month’s activity.

|                                 |     |  |
|---------------------------------|-----|--|
| Containers in transit, April 1  | 0   |  |
| Containers loaded               | 800 |  |
| Containers in transit, April 30 | 350 | 40% of direct materials and<br>30% of conversion costs |

**Instructions**

- (a) Determine the physical flow of containers for the month.
- (b) Calculate the equivalent units for direct materials and conversion costs.

1000 **21** Process Costing

Determine equivalent units, unit costs, and assignment of costs.

(SO 5, 6)

**E21-15** Verber Mortgage Company uses a process costing system to accumulate costs in its loan application department. When an application is completed, it is forwarded to the loan department for final processing. The following processing and cost data pertain to September.

|   |   |
|---|---|
| <ol style="list-style-type: none"> <li>1. Applications in process on September 1, 100</li> <li>2. Applications started in September, 900</li> <li>3. Completed applications during September, 800</li> <li>4. Applications still in process at September 30 were 100% complete as to materials (forms) and 60% complete as to conversion costs</li> </ol> | Beginning WIP:<br>Direct materials           \$ 1,000<br>Conversion costs           4,000<br>September costs:<br>Direct materials           \$ 4,000<br>Direct labor                 12,000<br>Overhead                     9,400 |
|---|---|

Materials are the forms used in the application process, and these costs are incurred at the beginning of the process. Conversion costs are incurred uniformly during the process.

**Instructions**

- (a) Determine the equivalent units of service (production) for materials and conversion costs.
- (b) Compute the unit costs and prepare a cost reconciliation schedule.

Compute overhead rates and assign overhead using ABC.  
(SO 10)

**\*E21-16** Imelda Instrument Inc. manufactures two products: missile range instruments and space pressure gauges. During January, 50 range instruments and 300 pressure gauges were produced, and overhead costs of \$81,000 were incurred. An analysis of overhead costs reveals the following activities.

| <u>Activity</u>        | <u>Cost Driver</u>     | <u>Total Cost</u> |
|------------------------|------------------------|-------------------|
| 1. Materials handling  | Number of requisitions | \$30,000          |
| 2. Machine setups      | Number of setups       | 27,000            |
| 3. Quality inspections | Number of inspections  | 24,000            |

The cost driver volume for each product was as follows.

| <u>Cost Driver</u>     | <u>Instruments</u> | <u>Gauges</u> | <u>Total</u> |
|------------------------|--------------------|---------------|--------------|
| Number of requisitions | 400                | 600           | 1,000        |
| Number of setups       | 150                | 300           | 450          |
| Number of inspections  | 200                | 400           | 600          |

**Instructions**

- (a) Determine the overhead rate for each activity.
- (b) Assign the manufacturing overhead costs for January to the two products using activity-based costing.
- (c) Write a memo to the president of Imelda Instrument, explaining the benefits of activity-based costing.

Compute product cost using traditional costing and ABC.  
(SO 10)

**\*E21-17** Mathias Company manufactures a number of specialized machine parts. Part Bunkka-22 uses \$35 of direct materials and \$15 of direct labor per unit.

Mathias' estimated manufacturing overhead is as follows:

|                     |           |
|---------------------|-----------|
| Materials handling  | \$100,000 |
| Machining           | 200,000   |
| Factory supervision | 150,000   |
| Total               | \$450,000 |

Overhead is applied based on direct labor costs, which were estimated at \$200,000.

Mathias is considering adopting activity-based costing. The cost drivers are estimated at:

| <u>Activity</u>     | <u>Cost Driver</u>  | <u>Expected Use</u> |
|---------------------|---------------------|---------------------|
| Materials handling  | Weight of materials | 50,000 pounds       |
| Machining           | Machine hours       | 20,000 hours        |
| Factory supervision | Direct labor hours  | 12,000 hours        |

**Instructions**

- (a) Compute the cost of 1,000 units of Bunkka-22 using the current traditional costing system.  
 (b) Compute the cost of 1,000 units of Bunkka-22 using the proposed activity-based costing system. Assume the 1,000 units use 2,500 pounds of materials, 500 machine hours, and 1,000 direct labor hours.

**Exercises: Set B**

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

**Problems: Set A**

**P21-1A** Zou Company manufactures bowling balls through two processes: Molding and Packaging. In the Molding Department, the urethane, rubber, plastics, and other materials are molded into bowling balls. In the Packaging Department, the balls are placed in cartons and sent to the finished goods warehouse. All materials are entered at the beginning of each process. Labor and manufacturing overhead are incurred uniformly throughout each process. Production and cost data for the Molding Department during June 2012 are presented below.

*Complete four steps necessary to prepare a production cost report.*

(SO 5, 6, 7)

| <u>Production Data</u>            | <u>June</u>      |
|-----------------------------------|------------------|
| Beginning work in process units   | –0–              |
| Units started into production     | 20,000           |
| Ending work in process units      | 2,000            |
| Percent complete—ending inventory | 60%              |
| <br><u>Cost Data</u>              |                  |
| Materials                         | \$198,000        |
| Labor                             | 50,400           |
| Overhead                          | 112,800          |
| Total                             | <u>\$361,200</u> |

**Instructions**

- (a) Prepare a schedule showing physical units of production.  
 (b) Determine the equivalent units of production for materials and conversion costs.  
 (c) Compute the unit costs of production.  
 (d) Determine the costs to be assigned to the units transferred and in process for June.  
 (e) Prepare a production cost report for the Molding Department for the month of June.

**P21-2A** Chakos Industries Inc. manufactures in separate processes furniture for homes. In each process, materials are entered at the beginning, and conversion costs are incurred uniformly. Production and cost data for the first process in making two products in two different manufacturing plants are as follows.

*Complete four steps necessary to prepare a production cost report.*

(SO 5, 6, 7)

| <u>Production Data—July</u>      | <u>Cutting Department</u>           |                                     |
|----------------------------------|-------------------------------------|-------------------------------------|
|                                  | <u>Plant 1</u><br><u>T12-Tables</u> | <u>Plant 2</u><br><u>C10-Chairs</u> |
| Work in process units, July 1    | –0–                                 | –0–                                 |
| Units started into production    | 20,000                              | 16,000                              |
| Work in process units, July 31   | 3,000                               | 500                                 |
| Work in process percent complete | 60                                  | 80                                  |
| <br><u>Cost Data—July</u>        |                                     |                                     |
| Work in process, July 1          | \$ –0–                              | \$ –0–                              |
| Materials                        | 380,000                             | 288,000                             |
| Labor                            | 234,400                             | 125,900                             |
| Overhead                         | 104,000                             | 96,700                              |
| Total                            | <u>\$718,400</u>                    | <u>\$510,600</u>                    |

**Instructions**

- (a) For each plant:
  - (1) Compute the physical units of production.
  - (2) Compute equivalent units of production for materials and for conversion costs.
  - (3) Determine the unit costs of production.
  - (4) Show the assignment of costs to units transferred out and in process.
- (b) Prepare the production cost report for Plant 1 for July 2012.

**P21-3A** Dees Company manufactures its product, Vitadrink, through two manufacturing processes: Mixing and Packaging. All materials are entered at the beginning of each process. On October 1, 2012, inventories consisted of Raw Materials \$26,000, Work in Process—Mixing \$0, Work in Process—Packaging \$250,000, and Finished Goods \$289,000. The beginning inventory for Packaging consisted of 10,000 units that were 50% complete as to conversion costs and fully complete as to materials. During October, 50,000 units were started into production in the Mixing Department and the following transactions were completed.

*Journalize transactions.*  
(SO 3, 4)

1. Purchased \$300,000 of raw materials on account.
2. Issued raw materials for production: Mixing \$210,000 and Packaging \$45,000.
3. Incurred labor costs of \$248,900.
4. Used factory labor: Mixing \$182,500 and Packaging \$66,400.
5. Incurred \$790,000 of manufacturing overhead on account.
6. Applied manufacturing overhead on the basis of \$22 per machine hour. Machine hours were 28,000 in Mixing and 6,000 in Packaging.
7. Transferred 45,000 units from Mixing to Packaging at a cost of \$979,000.
8. Transferred 53,000 units from Packaging to Finished Goods at a cost of \$1,315,000.
9. Sold goods costing \$1,604,000 for \$2,500,000 on account.

**Instructions**

Journalize the October transactions.

*Assign costs and prepare production cost report.*  
(SO 5, 6, 7)

**P21-4A** Estrella Company has several processing departments. Costs charged to the Assembly Department for November 2012 totaled \$2,229,000 as follows.

|                             |          |           |
|-----------------------------|----------|-----------|
| Work in process, November 1 |          |           |
| Materials                   | \$69,000 |           |
| Conversion costs            | 48,150   | \$117,150 |
| Materials added             |          | 1,548,000 |
| Labor                       |          | 225,920   |
| Overhead                    |          | 337,930   |

Production records show that 35,000 units were in beginning work in process 30% complete as to conversion costs, 700,000 units were started into production, and 25,000 units were in ending work in process 40% complete as to conversion costs. Materials are entered at the beginning of each process.

**Instructions**

- (a) Determine the equivalent units of production and the unit production costs for the Assembly Department.
- (b) Determine the assignment of costs to goods transferred out and in process.
- (c) Prepare a production cost report for the Assembly Department.

*Determine equivalent units and unit costs and assign costs.*  
(SO 5, 6, 7)

**P21-5A** Fong Company manufactures basketballs. Materials are added at the beginning of the production process and conversion costs are incurred uniformly. Production and cost data for the month of July 2012 are as follows.

| Production Data—Basketballs    | Units | Percent Complete |
|--------------------------------|-------|------------------|
| Work in process units, July 1  | 500   | 60%              |
| Units started into production  | 1,000 |                  |
| Work in process units, July 31 | 600   | 30%              |
| <b>Cost Data—Basketballs</b>   |       |                  |
| Work in process, July 1        |       |                  |
| Materials                      | \$750 |                  |
| Conversion costs               | 600   | \$1,350          |
| Direct materials               |       | 2,400            |
| Direct labor                   |       | 1,580            |
| Manufacturing overhead         |       | 1,060            |

**Instructions**

- (a) Calculate the following.
  - (1) The equivalent units of production for materials and conversion.
  - (2) The unit costs of production for materials and conversion costs.
  - (3) The assignment of costs to units transferred out and in process at the end of the accounting period.
- (b) Prepare a production cost report for the month of July for the basketballs.

**P21-6A** Martine Processing Company uses a weighted-average process costing system and manufactures a single product—a premium rug shampoo and cleaner. The manufacturing activity for the month of October has just been completed. A partially completed production cost report for the month of October for the mixing and cooking department is shown below.

*Compute equivalent units and complete production cost report.*  
(SO 5, 7)

**Instructions**

- (a) Prepare a schedule that shows how the equivalent units were computed so that you can complete the “Quantities: Units accounted for” equivalent units section shown in the production cost report, and compute October unit costs.
- (b) Complete the “Cost Reconciliation Schedule” part of the production cost report below.

**MARTINE PROCESSING COMPANY**  
Mixing and Cooking Department  
Production Cost Report  
For the Month Ended October 31

|   | <u>Physical<br/>Units</u> | <u>Equivalent Units</u> |                             |                  |
|---|---------------------------|-------------------------|-----------------------------|------------------|
| <u>QUANTITIES</u>   | <u>          </u>         | <u>Materials</u>        | <u>Conversion<br/>Costs</u> |                  |
| Units to be accounted for   |                           |                         |                             |                  |
| Work in process, October 1  | 20,000                    |                         |                             |                  |

| Total costs   |                           |                         |                             | <u>?</u>         |

**\*P21-7A** Gerber Electronics manufactures two large-screen television models: the Royale, which sells for \$1,500, and a new model, the Majestic, which sells for \$1,200. The production cost per unit for each model in 2012 is shown on the next page.

*Assign overhead to products using ABC.*  
(SO 10)

|                                       | <u>Royale</u>  | <u>Majestic</u> |
|---------------------------------------|----------------|-----------------|
| Direct materials                      | \$ 700         | \$420           |
| Direct labor (\$20 per hour)          | 100            | 80              |
| Manufacturing overhead (\$40 per DLH) | 200            | 160             |
| Total per unit cost                   | <u>\$1,000</u> | <u>\$660</u>    |

In 2012, Gerber manufactured 30,000 units of the Royale and 10,000 units of the Majestic. The overhead rate of \$40 per direct labor hour was determined by dividing total expected manufacturing overhead of \$7,600,000 by the total direct labor hours (190,000) for the two models.

The gross profit on the model was: Royale \$500 (\$1,500 – \$1,000) and Majestic \$540 (\$1,200 – \$660). Because of this difference, management is considering phasing out the Royale model and increasing the production of the Majestic model.

Before finalizing its decision, management asks the controller, Sally Fields, to prepare an analysis using activity-based costing. Sally accumulates the following information about overhead for the year ended December 31, 2012.

| <u>Activity</u> | <u>Cost Driver</u>    | <u>Total Cost</u> | <u>Cost Driver Volume</u> | <u>Overhead Rate</u> |
|-----------------|-----------------------|-------------------|---------------------------|----------------------|
| Purchase orders | Number of orders      | \$1,200,000       | 30,000                    | \$40                 |
| Machine setups  | Number of setups      | 900,000           | 15,000                    | 60                   |
| Machining       | Machine hours         | 4,800,000         | 160,000                   | 30                   |
| Quality control | Number of inspections | 700,000           | 35,000                    | 20                   |

The cost driver volume for each product was:

| <u>Cost Driver</u> | <u>Royale</u> | <u>Majestic</u> | <u>Total</u> |
|--------------------|---------------|-----------------|--------------|
| Purchase orders    | 16,000        | 14,000          | 30,000       |
| Machine setups     | 5,000         | 10,000          | 15,000       |
| Machine hours      | 100,000       | 60,000          | 160,000      |
| Inspections        | 10,000        | 25,000          | 35,000       |

#### Instructions

- Assign the total 2012 manufacturing overhead costs to the two products using activity-based costing (ABC).
- What was the cost per unit and gross profit of each model using ABC costing?
- Are management's future plans for the two models sound?

## Problems: Set B

Complete four steps necessary to prepare a production cost report.

(SO 5, 6, 7)

**P21-1B** Rivers Corporation manufactures water skis through two processes: Molding and Packaging. In the Molding Department, fiberglass is heated and shaped into the form of a ski. In the Packaging Department, the skis are placed in cartons and sent to the finished goods warehouse. Materials are entered at the beginning of both processes. Labor and manufacturing overhead are incurred uniformly throughout each process. Production and cost data for the Molding Department for January 2012 are presented below.

| <u>Production Data</u>            | <u>January</u>   |
|-----------------------------------|------------------|
| Beginning work in process units   | –0–              |
| Units started into production     | 42,500           |
| Ending work in process units      | 2,500            |
| Percent complete—ending inventory | 40%              |
| <u>Cost Data</u>                  |                  |
| Materials                         | \$510,000        |
| Labor                             | 96,000           |
| Overhead                          | <u>150,000</u>   |
| Total                             | <u>\$756,000</u> |

**Instructions**

- (a) Compute the physical units of production.
- (b) Determine the equivalent units of production for materials and conversion costs.
- (c) Compute the unit costs of production.
- (d) Determine the costs to be assigned to the units transferred out and in process.
- (e) Prepare a production cost report for the Molding Department for the month of January.

**P21-2B** Klein Corporation manufactures in separate processes refrigerators and freezers for homes. In each process, materials are entered at the beginning and conversion costs are incurred uniformly. Production and cost data for the first process in making two products in two different manufacturing plants are as follows.

*Complete four steps necessary to prepare a production cost report.*  
(SO 5, 6, 7)

|                                  | <b>Stamping Department</b> |                     |

| <b>Cost Data—June</b>            |                            |                     |
| Work in process, June 1          | \$ –0–                     | \$ –0–              |
| Materials                        | 840,000                    | 720,000             |
| Labor                            | 220,000                    | 221,000             |
| Overhead                         | 420,000                    | 292,000             |
| Total                            | <u>\$1,480,000</u>         | <u>\$1,233,000</u>  |

**Instructions**

- (a) For each plant:
  - (1) Compute the physical units of production.
  - (2) Compute equivalent units of production for materials and for conversion costs.
  - (3) Determine the unit costs of production.
  - (4) Show the assignment of costs to units transferred out and in process.
- (b) Prepare the production cost report for Plant A for June 2012.

**P21-3B** Forrest Company manufactures a nutrient, Everlife, through two manufacturing processes: Blending and Packaging. All materials are entered at the beginning of each process. On August 1, 2012, inventories consisted of Raw Materials \$5,000, Work in Process—Blending \$0, Work in Process—Packaging \$3,945, and Finished Goods \$7,500. The beginning inventory for Packaging consisted of 500 units, two-fifths complete as to conversion costs and fully complete as to materials. During August, 9,000 units were started into production in Blending, and the following transactions were completed.

*Journalize transactions.*  
(SO 3, 4)

1. Purchased \$25,000 of raw materials on account.
2. Issued raw materials for production: Blending \$18,930 and Packaging \$9,140.
3. Incurred labor costs of \$23,770.
4. Used factory labor: Blending \$13,320 and Packaging \$10,450.
5. Incurred \$41,500 of manufacturing overhead on account.
6. Applied manufacturing overhead at the rate of \$25 per machine hour. Machine hours were Blending 900 and Packaging 300.
7. Transferred 8,200 units from Blending to Packaging at a cost of \$44,940.
8. Transferred 8,600 units from Packaging to Finished Goods at a cost of \$67,490.
9. Sold goods costing \$62,000 for \$90,000 on account.

**Instructions**

Journalize the August transactions.

**P21-4B** Ignatenko Company has several processing departments. Costs charged to the Assembly Department for October 2012 totaled \$1,249,500 as follows.

*Assign costs and prepare production cost report.*  
(SO 5, 6, 7)

|                            |               |           |
|----------------------------|---------------|-----------|
| Work in process, October 1 |               |           |
| Materials                  | \$29,000      |           |
| Conversion costs           | <u>16,500</u> | \$ 45,500 |
| Materials added            |               | 1,006,000 |
| Labor                      |               | 90,000    |
| Overhead                   |               | 108,000   |

Production records show that 25,000 units were in beginning work in process 40% complete as to conversion cost, 425,000 units were started into production, and 35,000 units were in ending work in process 40% complete as to conversion costs. Materials are entered at the beginning of each process.

**Instructions**

- (a) Determine the equivalent units of production and the unit production costs for the Assembly Department.
- (b) Determine the assignment of costs to goods transferred out and in process.
- (c) Prepare a production cost report for the Assembly Department.

*Determine equivalent units and unit costs and assign costs.*  
(SO 5, 6, 7)

**P21-5B** Forte Company manufactures bicycles and tricycles. For both products, materials are added at the beginning of the production process, and conversion costs are incurred uniformly. Production and cost data for the month of May are as follows.

| <u>Production Data—Bicycles</u> | <u>Units</u>  | <u>Percent Complete</u> |
|---------------------------------|---------------|-------------------------|
| Work in process units, May 1    | 500           | 80%                     |
| Units started in production     | 1,500         |                         |
| Work in process units, May 31   | 800           | 25%                     |
| <b>Cost Data—Bicycles</b>       |               |                         |
| Work in process, May 1          |               |                         |
| Materials                       | \$15,000      |                         |
| Conversion costs                | <u>18,000</u> | \$33,000                |
| Direct materials                |               | 50,000                  |
| Direct labor                    |               | 18,320                  |
| Manufacturing overhead          |               | 33,680                  |

**Instructions**

- (a) Calculate the following.
  - (1) The equivalent units of production for materials and conversion.
  - (2) The unit costs of production for materials and conversion costs.
  - (3) The assignment of costs to units transferred out and in process at the end of the accounting period.
- (b) Prepare a production cost report for the month of May for the bicycles.

*Compute equivalent units and complete production cost report.*  
(SO 5, 7)

**P21-6B** Thang Cleaner Company uses a weighted-average process costing system and manufactures a single product—an all-purpose liquid cleaner. The manufacturing activity for the month of March has just been completed. A partially completed production cost report for the month of March for the mixing and blending department is shown below.

**THANG CLEANER COMPANY**  
Mixing and Blending Department  
Production Cost Report  
For the Month Ended March 31

| <u>QUANTITIES</u>   | <u>Physical Units</u> | <u>Equivalent Units</u> |                         |
|---|-----------------------|-------------------------|-------------------------|
|   |                       | <u>Materials</u>        | <u>Conversion Costs</u> |

| Started into production   |                  | 245,300           |              |
| Total costs               |                  | \$254,000         |              |

#### COST RECONCILIATION SCHEDULE

|                           |   |      |
|---------------------------|---|------|
| Costs accounted for       |   |      |
| Transferred out           |   | \$ ? |
| Work in process, March 31 |   |      |
| Materials                 | ? |      |
| Conversion costs          | ? | ?    |
| Total costs               |   | ?    |

#### Instructions

- (a) Prepare a schedule that shows how the equivalent units were computed so that you can complete the “Quantities: Units accounted for” equivalent units section shown in the production cost report above, and compute March unit costs.
- (b) Complete the “Cost Reconciliation Schedule” part of the production cost report above.

## Problems: Set C

Visit the book’s companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Waterways Continuing Problem

(Note: This is a continuation of the Waterways Problem from Chapters 19 and 20.)

**WCP21** Because most of the parts for its irrigation systems are standard, Waterways handles the majority of its manufacturing as a process cost system. There are multiple process departments. Three of these departments are the Molding, Cutting, and Welding departments. All items eventually end up in the Packaging department which prepares items for sale in kits or individually. This problem asks you to help Waterways calculate equivalent units and prepare a production cost report.

Go to the book’s companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to find the remainder of this problem.

# BROADENING YOUR PERSPECTIVE

## Decision Making Across the Organization

**BYP21-1** Sea Breeze Beach Company manufactures suntan lotion, called Surtan, in 11-ounce plastic bottles. Surtan is sold in a competitive market. As a result, management is very cost-conscious. Surtan is manufactured through two processes: mixing and filling. Materials are entered at the beginning of each process and labor and manufacturing overhead occur uniformly throughout each process. Unit costs are based on the cost per gallon of Surtan using the weighted-average costing approach.

On June 30, 2012, Rita Jenz, the chief accountant for the past 20 years, opted to take early retirement. Her replacement, Neil Benton, had extensive accounting experience with motels in the area but only limited contact with manufacturing accounting. During July, Neil correctly accumulated the following production quantity and cost data for the Mixing Department.

**Production quantities:** Work in process, July 1, 8,000 gallons 75% complete; started into production 91,000 gallons; work in process, July 31, 5,000 gallons 20% complete. Materials are added at the beginning of the process.

**Production costs:** Beginning work in process \$88,000, comprised of \$21,000 of materials costs and \$67,000 of conversion costs; incurred in July: materials \$573,000, conversion costs \$769,000.

Neil then prepared a production cost report on the basis of physical units started into production. His report showed a production cost of \$15.71 per gallon of Surtan. The management of Sea Breeze Beach was surprised at the high unit cost. The president comes to you, as Rita's top assistant, to review Neil's report and prepare a correct report if necessary.

### Instructions

With the class divided into groups, answer the following questions.

- Show how Neil arrived at the unit cost of \$15.71 per gallon of Surtan.
- What error(s) did Neil make in preparing his production cost report?
- Prepare a correct production cost report for July.

## Managerial Analysis

**BYP21-2** Lorena Furniture Company manufactures living room furniture through two departments: Framing and Upholstering. Materials are entered at the beginning of each process. For May, the following cost data are obtained from the two work in process accounts.

|                         | <u>Framing</u> | <u>Upholstering</u> |
|-------------------------|----------------|---------------------|
| Work in process, May 1  | \$ -0-         | \$ ?                |
| Materials               | 420,000        | ?                   |
| Conversion costs        | 280,000        | 330,000             |
| Costs transferred in    | -0-            | 600,000             |
| Costs transferred out   | 600,000        | ?                   |
| Work in process, May 31 | 100,000        | ?                   |

### Instructions

Answer the following questions.

- If 3,000 sofas were started into production on May 1 and 2,500 sofas were transferred to Upholstering, what was the unit cost of materials for May in the Framing Department?
- Using the data in (a) above, what was the per unit conversion cost of the sofas transferred to Upholstering?
- Continuing the assumptions in (a) above, what is the percentage of completion of the units in process at May 31 in the Framing Department?

## On the Web

**BYP21-3** Search the Internet and find the websites of two manufacturers that you think are likely to use process costing. Are there any specifics included in their websites that confirm the use of process costing for each of these companies?

## Communication Activity

**BYP21-4** Meg Ryan was a good friend of yours in high school and is from your home town. While you chose to major in accounting when you both went away to college, she majored in marketing and management. You have recently been promoted to accounting manager for the Snack Foods Division of Tranh Enterprises, and your friend was promoted to regional sales manager for the same division of Tranh. Meg recently telephoned you. She explained that she was familiar with job cost sheets, which had been used by the Special Projects division where she had formerly worked. She was, however, very uncomfortable with the production cost reports prepared by your division. She emailed you a list of her particular questions:

- Since Tranh occasionally prepares snack foods for special orders in the Snack Foods Division, why don't we track costs of the orders separately?
- What is an equivalent unit?
- Why am I getting four production cost reports? Isn't there one Work in Process account?

### Instructions

Prepare a memo to Meg. Answer her questions, and include any additional information you think would be helpful. You may write informally, but do use proper grammar and punctuation.

## Ethics Case

**BYP21-5** E. E. Cummings Company manufactures a high-tech component that passes through two production processing departments, Molding and Assembly. Department managers are partially compensated on the basis of units of products completed and transferred out relative to units of product put into production. This was intended as encouragement to be efficient and to minimize waste.

Wendy Soo is the department head in the Molding Department, and Bart Fender is her quality control inspector. During the month of June, Wendy had three new employees who were not yet technically skilled. As a result, many of the units produced in June had minor molding defects. In order to maintain the department's normal high rate of completion, Wendy told Bart to pass through inspection and on to the Assembly Department all units that had defects nondetectable to the human eye. "Company and industry tolerances on this product are too high anyway," says Wendy. "Less than 2% of the units we produce are subjected in the market to the stress tolerance we've designed into them. The odds of those 2% being any of this month's units are even less. Anyway, we're saving the company money."

### Instructions

- Who are the potential stakeholders involved in this situation?
- What alternatives does Bart have in this situation? What might the company do to prevent this situation from occurring?

## "All About You" Activity

**BYP21-6** Many of you ultimately will work in service environments, such as medical facilities. Many service organizations have adopted activity-based management systems, which incorporate activity-based costing concepts throughout the organization.

Mt. Walton Hospital is a primary medical health-care facility and trauma center that serves 11 small, rural Midwestern communities within a 40-mile radius. The hospital offers all the medical/surgical services of a typical small hospital. It has a staff of 18 full-time doctors and 20 part-time visiting specialists. Mt. Walton has a payroll of 150 employees, consisting of nurses, technicians, therapists, dieticians, managers, directors, administrators, secretaries, data processors, and janitors.

### Instructions

- Using your existing knowledge (however limited, moderate, or in-depth) of a hospital's operations, identify as many *activities* as you can that would serve as the basis for implementing an activity-based costing system.
- For each of the activities listed in (a), identify a *cost driver* that would serve as a valid measure of the resources consumed in the activity.

### Answers to Insight and Accounting Across the Organization Questions

**p. 971 Choosing a Cost Driver** **Q:** What is the result if a company uses the wrong "cost driver" to assign manufacturing overhead? **A:** Incorrect application of manufacturing overhead will result in some products receiving too much overhead and others receiving too little.

**p. 976 Keeping Score for the Xbox** **Q:** In what ways has cost accounting probably become more critical for Microsoft in recent years? **A:** In the past Microsoft enjoyed very high profit margins on its software sales. As a consequence, it could afford to be less cost-conscious than most companies. In addition, in producing software, manufacturing costs represented a very small part of its total product cost. But the video-game hardware market is very competitive. In order to achieve its profitability goals, Microsoft will have to manufacture its product efficiently in order to meet its cost targets to ensure adequate margins. The information provided by process cost accounting will be critical to its efforts.

# CHAPTER 22

## Cost-Volume-Profit

### Study Objectives

After studying this chapter, you should be able to:

- 1 Distinguish between variable and fixed costs.
- 2 Explain the significance of the relevant range.
- 3 Explain the concept of mixed costs.
- 4 List the five components of cost-volume-profit analysis.
- 5 Indicate what contribution margin is and how it can be expressed.
- 6 Identify the three ways to determine the break-even point.
- 7 Give the formulas for determining sales required to earn target net income.
- 8 Define margin of safety, and give the formulas for computing it.
- 9 Describe the essential features of a cost-volume-profit income statement.

### Feature Story

#### UNDERSTANDING MEDICAL COSTS MIGHT LEAD TO BETTER HEALTH CARE

Dr. Brian Forrest was frustrated with the standard approach to the practice of medicine. He was forced to see too many patients for too few minutes per patient—so he did something about it. He started a small medical practice that flew directly in the face of virtually every accepted assumption of modern medicine. Today, his practice can break even on 4 patients per day.

How did he do it? First, he identified all non-value-adding expenditures. A normal medical practice needs lots of employees to collect money from insurance companies or from past-due accounts. Dr. Forrest completely eliminated the need for these employees (and thus eliminated these costs) by requiring patients to pay cash at the time of service.

Dr. Forrest's fees are significantly lower than a standard clinic. He charges a flat \$45 office visit fee (no matter how long he is with a patient), plus patients pay for lab and

supply costs, which average \$37 per visit. To keep his rate so low and still spend a lot of time with patients, he has to keep tight control of his costs. That is, to lower his break-even point, he needs to keep his fixed costs down. His overhead costs average

just 25 percent of revenue, compared to 40 to 60 percent of revenue for a standard practice. He buys his equipment from a hospital surplus store (e.g., \$100 for an exam table versus \$1,500 new) and tries to keep his office space to a minimum. Dr. Forrest saves about \$10,000 per year by not hiring a janitorial service. Instead, he and the other two employees share the cleaning tasks, and he takes out his own trash.

To increase his ability to service more patients, Dr. Forrest hired a nurse-practitioner. To keep his fixed costs down, she was hired on a “productivity basis,” that is, she is paid per patient. Thus, her cost to the practice represents a variable cost, as her wages are paid out of the incremental revenue that she produces. Interestingly, the nurse-practitioner has found that under this approach, she is able to spend more time with her patients than she did in other practices. Yet, she actually makes more money. This is an unusual approach because in most medical practices, nearly all of the labor costs are fixed.

Dr. Forrest originally anticipated that most of his patients would be people without insurance, since he is unwilling to accept payments from insurance companies. He expected that people with insurance would not be willing to incur out-of-pocket expenses for health care. However, because his patients appreciate that he spends much more time with them than a traditional doctor, more than 50% of his patients have insurance. He is happy, and so are his patients.

# Preview of CHAPTER 22

As the Feature Story indicates, to manage any size business you must understand how costs respond to changes in sales volume and the effect of costs and revenues on profits. A prerequisite to understanding cost-volume-profit (CVP) relationships is knowledge of how costs behave. In this chapter, we first explain the considerations involved in cost behavior analysis. Then we discuss and illustrate CVP analysis.

The content and organization of Chapter 22 are as follows.

| Cost-Volume-Profit   |   |
|--|---|

## Cost Behavior Analysis

**Cost behavior analysis** is the study of how specific costs respond to changes in the level of business activity. As you might expect, some costs change, and others remain the same. For example, for an airline company such as **Southwest** or **United**, the longer the flight the higher the fuel costs. On the other hand, **Massachusetts General Hospital**'s costs to staff the emergency room on any given night are relatively constant regardless of the number of patients treated. A knowledge of cost behavior helps management plan operations and decide between alternative courses of action. Cost behavior analysis applies to all types of entities, as the Feature Story about Dr. Forrest's medical practice indicates.

The starting point in cost behavior analysis is measuring the key business activities. Activity levels may be expressed in terms of sales dollars (in a retail company), miles driven (in a trucking company), room occupancy (in a hotel), or dance classes taught (by a dance studio). Many companies use more than one measurement base. A manufacturer, for example, may use direct labor hours or units of output for manufacturing costs and sales revenue or units sold for selling expenses.

For an activity level to be useful in cost behavior analysis, changes in the level or volume of activity should be correlated with changes in costs. The activity level selected is referred to as the activity (or volume) index. The **activity index** identifies the activity that causes changes in the behavior of costs. With an appropriate activity index, companies can classify the behavior of costs in response to changes in activity levels into three categories: variable, fixed, or mixed.

### Variable Costs

**Variable costs** are costs that vary **in total** directly and proportionately with changes in the activity level. If the level increases 10%, total variable costs will increase 10%. If the level of activity decreases by 25%, variable costs will decrease 25%.

#### Study Objective [1]

Distinguish between variable and fixed costs.

Examples of variable costs include direct materials and direct labor for a manufacturer; cost of goods sold, sales commissions, and freight-out for a merchandiser; and gasoline in airline and trucking companies. A variable cost may also be defined as a cost that **remains the same per unit at every level of activity**.

To illustrate the behavior of a variable cost, assume that Damon Company manufactures radios that contain a \$10 digital clock. The activity index is the number of radios produced. As Damon manufactures each radio, the total cost of the clocks increases by \$10. As part (a) of Illustration 22-1 shows, total cost of the clocks will be \$20,000 if Damon produces 2,000 radios, and \$100,000 when it produces 10,000 radios. We also can see that a variable cost remains the same per unit as the level of activity changes. As part (b) of Illustration 22-1 shows, the unit cost of \$10 for the clocks is the same whether Damon produces 2,000 or 10,000 radios.

**Illustration 22-1**  
Behavior of total and unit variable costs

**Helpful Hint**

True or false: Variable cost per unit changes directly and proportionately with changes in activity.  
Answer: False. Per unit cost remains constant at all levels of activity.

Companies that rely heavily on labor to manufacture a product, such as Nike or Reebok, or to provide a service, such as Hilton or Marriott, are likely to have many variable costs. In contrast, companies that use a high proportion of machinery and equipment in producing revenue, such as AT&T or Duke Energy Co., may have few variable costs.

**Fixed Costs**

**Fixed costs** are costs that **remain the same in total** regardless of changes in the activity level. Examples include property taxes, insurance, rent, supervisory salaries, and depreciation on buildings and equipment. Because total fixed costs remain constant as activity changes, it follows that **fixed costs per unit vary inversely with activity: As volume increases, unit cost declines, and vice versa**.

To illustrate the behavior of fixed costs, assume that Damon Company leases its productive facilities at a cost of \$10,000 per month. Total fixed costs of the facilities will remain constant at every level of activity, as part (a) of Illustration 22-2 (page 1014) shows. But, on a per unit basis, the cost of rent will decline as activity increases, as part (b) of Illustration 22-2 shows. At 2,000 units, the unit cost is \$5 (\$10,000 ÷ 2,000). When Damon produces 10,000 radios, the unit cost is only \$1 (\$10,000 ÷ 10,000).

**Illustration 22-2**

Behavior of total and unit fixed costs

The trend for many manufacturers is to have more fixed costs and fewer variable costs. This trend is the result of increased use of automation and less use of employee labor. As a result, depreciation and lease charges (fixed costs) increase, whereas direct labor costs (variable costs) decrease.

## MANAGEMENT INSIGHT

### Woodworker Runs an Efficient Operation for Producing Furniture

When Thomas Moser quit teaching communications at Bates College 25 years ago, he turned to what he loved doing—furniture woodworking. Today he has over 120 employees. In a business where profit margins are seldom thicker than wood shavings, cost control is everything. Moser keeps no inventory; he uses customers' 50% deposits on orders to buy the wood. Because computer-driven machines cut most of the standardized parts and joints, "we're free to be inefficient in assembly and finishing work, where the craft is most obviously expressed," says Moser. Direct labor costs are a manageable 30% of revenues. By keeping a tight lid on costs and running an efficient operation, Moser is free to spend most of his time doing what he enjoys most—designing furniture.

Source: Excerpts from "Out of the Woods," *Forbes* (April 5, 1999), p. 74.

**?** Are the costs associated with use of the computer-driven cutting machines fixed or variable? (See page 1050.)

## Relevant Range

In Illustration 22-1, part (a) (page 1013), a straight line is drawn throughout the entire range of the activity index for total variable costs. In essence, the assumption is that the costs are **linear**. If a relationship is linear (that is, straight-line), then changes in the activity index will result in a direct, proportional change in the variable cost. For example, if the activity level doubles, the cost doubles.

It is now necessary to ask: Is the straight-line relationship realistic? Does the linear assumption produce useful data for CVP analysis?

In most business situations, a straight-line relationship **does not exist** for variable costs throughout the entire range of possible activity. At abnormally low levels

### Study Objective [2]

Explain the significance of the relevant range.

of activity, it may be impossible to be cost-efficient. Small-scale operations may not allow the company to obtain quantity discounts for raw materials or to use specialized labor. In contrast, at abnormally high levels of activity, labor costs may increase sharply because of overtime pay. Also at high activity levels, materials costs may jump significantly because of excess spoilage caused by worker fatigue.

As a result, in the real world, the relationship between the behavior of a variable cost and changes in the activity level is often **curvilinear**, as shown in part (a) of Illustration 22-3. In the curved sections of the line, a change in the activity index will not result in a direct, proportional change in the variable cost. That is, a doubling of the activity index will not result in an exact doubling of the variable cost. The variable cost may more than double, or it may be less than double.

**Illustration 22-3**  
Nonlinear behavior of variable and fixed costs

Total fixed costs also do not have a straight-line relationship over the entire range of activity. Some fixed costs will not change. But it is possible for management to change other fixed costs. For example, in the Feature Story, Dr. Forrest changed the nurse-practitioner’s pay from a fixed cost to a variable cost. Illustration 22-3, part (b), shows an example of the behavior of total fixed costs through all potential levels of activity.

For most companies, operating at almost zero or at 100% capacity is the exception rather than the rule. Instead, companies often operate over a somewhat narrower range, such as 40–80% of capacity. The range over which a company expects to operate during a year is called the **relevant range** of the activity index. Within the relevant range, as both diagrams in Illustration 22-4 (page 1016) show, a straight-line relationship generally exists for both variable and fixed costs.

As you can see, although the linear (straight-line) relationship may not be completely realistic, **the linear assumption produces useful data for CVP analysis as long as the level of activity remains within the relevant range.**

## Mixed Costs

**Mixed costs** are costs that contain both a variable element and a fixed element. **Mixed costs, therefore, change in total but not proportionately with changes in the activity level.**

The rental of a **U-Haul** truck is a good example of a mixed cost. Assume that local rental terms for a 17-foot truck, including insurance, are \$50 per day plus

### Helpful Hint

Fixed costs that may be changeable include research, such as new product development, and management training programs.

### Alternative Terminology

The relevant range is also called the *normal* or *practical* range.

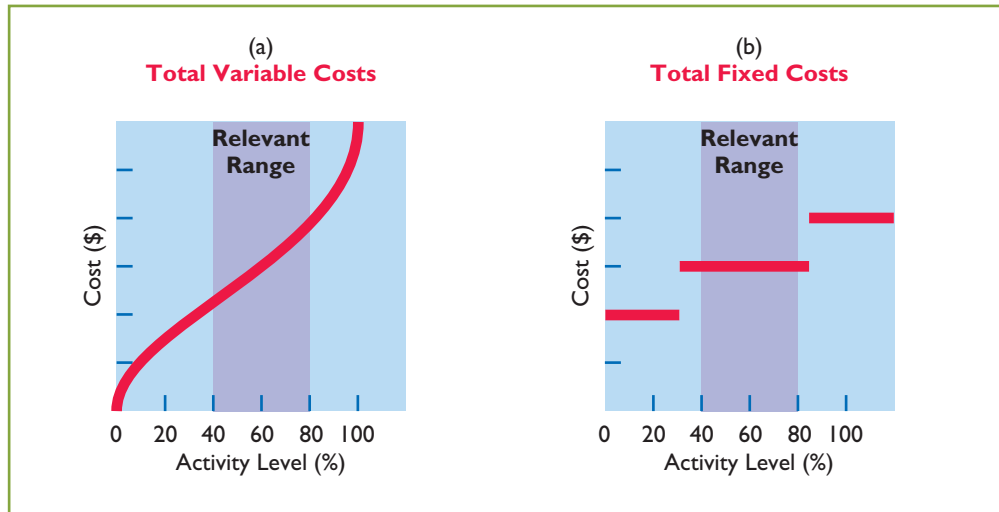

### Study Objective [3]

Explain the concept of mixed costs.

**Illustration 22-4**  
Linear behavior within relevant range

50 cents per mile. When determining the cost of a one-day rental, the per day charge is a fixed cost (with respect to miles driven), whereas the mileage charge is a variable cost. The graphic presentation of the rental cost for a one-day rental is as follows.

**Illustration 22-5**  
Behavior of a mixed cost

In this case, the fixed-cost element is the cost of having the service available. The variable-cost element is the cost of actually using the service. Another example of a mixed cost is utility costs (electric, telephone, and so on), where there is a flat service fee plus a usage charge.

For purposes of CVP analysis, **mixed costs must be classified into their fixed and variable elements**. How does management make the classification? One possibility is to determine the variable and fixed components each time a mixed cost is incurred. But because of time and cost constraints, this approach is rarely followed. Instead, the usual approach is to collect data on the behavior of the mixed costs at various levels of activity. Analysts then identify the fixed and variable cost components. Companies

use various types of analysis. One type of analysis, called the **high-low method**, is discussed in the next section. Other methods, such as the scatter diagram method and least squares regression analysis, are more appropriately explained in cost accounting courses.

## Do it!

Helena Company reports the following total costs at two levels of production.

|                    | <u>10,000 Units</u> | <u>20,000 Units</u> |
|--------------------|---------------------|---------------------|
| Direct materials   | \$20,000            | \$40,000            |
| Maintenance        | 8,000               | 10,000              |
| Direct labor       | 17,000              | 34,000              |
| Indirect materials | 1,000               | 2,000               |
| Depreciation       | 4,000               | 4,000               |
| Utilities          | 3,000               | 5,000               |
| Rent               | 6,000               | 6,000               |

Classify each cost as variable, fixed, or mixed.

### Solution

Variable costs: Direct materials, direct labor, and indirect materials are variable costs.

Fixed costs: Depreciation and rent are fixed costs.

Mixed costs: Maintenance and utilities are mixed costs.

Related exercise material: BE22-1, BE22-2, E22-1, E22-2, E22-3, and **Do it!** 22-1.

## Types of Costs

### action plan

- ✓ Recall that a variable cost varies in total directly and proportionately with each change in activity.
- ✓ Recall that a fixed cost remains the same in total with each change in activity.
- ✓ Recall that a mixed cost changes in total but not proportionately with each change in activity.

## HIGH-LOW METHOD

The **high-low method** uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. The difference in costs between the high and low levels represents variable costs, since only the variable cost element can change as activity levels change.

The steps in computing fixed and variable costs under this method are as follows.

### 1. Determine variable cost per unit from the following formula.

$$\frac{\text{Change in Total Costs}}{\text{High minus Low Activity Level}} = \text{Variable Cost per Unit}$$

### Illustration 22-6

Formula for variable cost per unit using high-low method

To illustrate, assume that Metro Transit Company has the following maintenance costs and mileage data for its fleet of buses over a 4-month period.

| <u>Month</u> | <u>Miles Driven</u> | <u>Total Cost</u> | <u>Month</u> | <u>Miles Driven</u> | <u>Total Cost</u> |
|--------------|---------------------|-------------------|--------------|---------------------|-------------------|
| January      | 20,000              | \$30,000          | March        | 35,000              | \$49,000          |
| February     | 40,000              | 48,000            | April        | 50,000              | 63,000            |

### Illustration 22-7

Assumed maintenance costs and mileage data

The high and low levels of activity are 50,000 miles in April and 20,000 miles in January. The maintenance costs at these two levels are \$63,000 and \$30,000, respectively. The difference in maintenance costs is \$33,000 (\$63,000 – \$30,000), and the

difference in miles is 30,000 (50,000 – 20,000). Therefore, for Metro Transit, variable cost per unit is \$1.10, computed as follows.

$$\$33,000 \div 30,000 = \$1.10$$

**2. Determine the fixed cost by subtracting the total variable cost at either the high or the low activity level from the total cost at that activity level.**

For Metro Transit, the computations are shown in Illustration 22-8.

**Illustration 22-8**  
High-low method computation  
of fixed costs

| Metro Transit.xls |                          |                 |                 |                 |
|-------------------|--------------------------|-----------------|-----------------|-----------------|
|                   | A                        | B               | C               | D               |
| 1                 | <b>METRO TRANSIT</b>     |                 |                 |                 |
| 2                 |                          |                 | Activity Level  |                 |
| 3                 |                          |                 | <b>High</b>     | <b>Low</b>      |
| 4                 | Total cost               |                 | \$63,000        | \$30,000        |
| 5                 | Less:                    | Variable costs  |                 |                 |
| 6                 |                          | 50,000 × \$1.10 | 55,000          |                 |
| 7                 |                          | 20,000 × \$1.10 |                 | 22,000          |
| 8                 | <b>Total fixed costs</b> |                 | <b>\$ 8,000</b> | <b>\$ 8,000</b> |

**Maintenance costs are therefore \$8,000 per month plus \$1.10 per mile.** This is represented by the following formula:

$$\text{Maintenance costs} = \text{Fixed costs} + (\$1.10 \times \text{miles driven})$$

For example, at 45,000 miles, estimated maintenance costs would be \$8,000 fixed and \$49,500 variable ( $\$1.10 \times 45,000$ ) for a total of \$57,500.

The high-low method generally produces a reasonable estimate for analysis. However, it does not produce a precise measurement of the fixed and variable elements in a mixed cost because it ignores other activity levels in the computation.

## MANAGEMENT INSIGHT

### Skilled Labor Is Truly Essential

The recession that started in 2008 had devastating implications for employment. But one surprise was that for some manufacturers, the number of jobs lost was actually lower than in previous recessions. One of the main explanations for this was that between 2000 and 2008, many factories adopted lean manufacturing practices. This meant that production relied less on large numbers of low-skilled workers, and more on machines and a few highly skilled workers. As a result of this approach, a single employee was supporting far more dollars in sales. Thus, it would require a larger decline in sales before an employee would need to be laid-off in order to continue to break even. Also, because the employees are highly skilled, employers are reluctant to lose them. Instead of lay-offs, many manufacturers have resorted to cutting employees hours.

Source: Timothy Appell and Justin Lahart, "Lean Factories Find It Hard to Cut Jobs Even in a Slump," *Wall Street Journal Online* (March 9, 2009).

Would you characterize labor costs as being a fixed cost, a variable cost, or something else in this situation? (See page 1050.)

## Importance of Identifying Variable and Fixed Costs

Why is it important to segregate costs into variable and fixed elements? The answer may become apparent if we look at the following four business decisions.

- If **American Airlines** is to make a profit when it reduces all domestic fares by 30%, what reduction in costs or increase in passengers will be required?  
**Answer:** To make a profit when it cuts domestic fares by 30%, American Airlines will have to increase the number of passengers or cut its variable costs for those flights. Its fixed costs will not change.
- If **Ford Motor Company** meets workers' demands for higher wages, what increase in sales revenue will be needed to maintain current profit levels?  
**Answer:** Higher wages at Ford Motor Company will increase the variable costs of manufacturing automobiles. To maintain present profit levels, Ford will have to cut other variable costs or increase the price of its automobiles.
- If **United States Steel Corp.**'s program to modernize plant facilities through significant equipment purchases reduces the work force by 50%, what will be the effect on the cost of producing one ton of steel?  
**Answer:** The modernizing of plant facilities at United States Steel Corp. changes the proportion of fixed and variable costs of producing one ton of steel. Fixed costs increase because of higher depreciation charges, whereas variable costs decrease due to the reduction in the number of steelworkers.
- What happens if **Kellogg Company** increases its advertising expenses but cannot increase prices because of competitive pressure?  
**Answer:** Sales volume must be increased to cover the increase in fixed advertising costs.

## Do it!

Byrnes Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

|       | <u>Units Produced</u> | <u>Total Cost</u> |
|-------|-----------------------|-------------------|
| March | 9,800                 | \$14,740          |
| April | 8,500                 | 13,250            |
| May   | 7,000                 | 11,100            |
| June  | 7,600                 | 12,000            |
| July  | 8,100                 | 12,460            |

- Compute the variable and fixed cost elements using the high-low method.
- Estimate the total cost if the company produces 6,000 units.

### Solution

- Variable cost:  $(\$14,740 - \$11,100) \div (9,800 - 7,000) = \$1.30$  per unit  
 Fixed cost:  $\$14,740 - \$12,740 (\$1.30 \times 9,800 \text{ units}) = \$2,000$   
 or  $\$11,100 - \$9,100 (\$1.30 \times 7,000) = \$2,000$
- Total cost to produce 6,000 units:  $\$2,000 + \$7,800 (\$1.30 \times 6,000) = \$9,800$

## High-Low Method

### action plan

- ✓ Determine the highest and lowest levels of activity.
- ✓ Compute variable cost per unit as: Change in total costs  $\div$  High - Low activity level = Variable cost per unit.
- ✓ Compute fixed cost as: Total cost - (Variable cost per unit  $\times$  Units produced) = Fixed cost.

# Cost-Volume-Profit Analysis

## Study Objective [4]

List the five components of cost-volume-profit analysis.

**Cost-volume-profit (CVP) analysis** is the study of the effects of changes in costs and volume on a company's profits. CVP analysis is important in profit planning. It also is a critical factor in such management decisions as setting selling prices, determining product mix, and maximizing use of production facilities.

## Basic Components

CVP analysis considers the interrelationships among the components shown in Illustration 22-9.

**Illustration 22-9**

Components of CVP analysis

The following assumptions underlie each CVP analysis.

1. The behavior of both costs and revenues is linear throughout the relevant range of the activity index.
2. Costs can be classified accurately as either variable or fixed.
3. Changes in activity are the only factors that affect costs.
4. All units produced are sold.
5. When more than one type of product is sold, the sales mix will remain constant. That is, the percentage that each product represents of total sales will stay the same. Sales mix complicates CVP analysis because different products will have different cost relationships. In this chapter we assume a single product.

When these assumptions are not valid, the CVP analysis may be inaccurate.

## CVP Income Statement

Because CVP is so important for decision making, management often wants this information reported in a **CVP income statement** format for internal use. The CVP income statement classifies costs as variable or fixed and computes a contribution margin. **Contribution margin** is the amount of revenue remaining after deducting variable costs. It is often stated both as a total amount and on a per unit basis.

We will use Vargo Video Company to illustrate a CVP income statement. Vargo Video produces a high-definition digital camcorder with a 15× optical zoom and a wide-screen, high-resolution LCD monitor. Relevant data for the camcorders sold by the company in June 2012 are as follows.

**Illustration 22-10**

Assumed selling and cost data for Vargo Video

|                                 |           |
|---------------------------------|-----------|
| Unit selling price of camcorder | \$500     |
| Unit variable costs             | \$300     |
| Total monthly fixed costs       | \$200,000 |
| Units sold                      | 1,600     |

## Study Objective [5]

Indicate what contribution margin is and how it can be expressed.

The CVP income statement for Vargo Video therefore would be reported as follows.

| <b>Vargo Video Company</b><br>CVP Income Statement<br>For the Month Ended June 30, 2012 |                  |                 |
|---|------------------|-----------------|
|   | <u>Total</u>     | <u>Per Unit</u> |
| Sales (1,600 camcorders)  | \$800,000        | \$500           |
| Variable costs  | 480,000          | 300             |
| <b>Contribution margin</b>  | <b>320,000</b>   | <b>\$200</b>    |
| Fixed costs   | 200,000          |                 |
| <b>Net income</b>   | <b>\$120,000</b> |                 |

**Illustration 22-11**  
CVP income statement, with net income

A traditional income statement and a CVP income statement both report the same net income of \$120,000. However, a traditional income statement does not classify costs as variable or fixed, and therefore it does not report a contribution margin. In addition, both a total and a per unit amount are often shown on a CVP income statement to facilitate CVP analysis.

In the applications of CVP analysis that follow, we assume that the term “cost” includes all costs and expenses related to production and sale of the product. That is, cost includes manufacturing costs plus selling and administrative expenses.

#### CONTRIBUTION MARGIN PER UNIT

Vargo Video’s CVP income statement shows a contribution margin of \$320,000, and a contribution margin per unit of \$200 (\$500 – \$300). The formula for **contribution margin per unit** and the computation for Vargo Video are:

|                           |   |                            |   |                                     |
|---------------------------|---|----------------------------|---|-------------------------------------|
| <b>Unit Selling Price</b> | – | <b>Unit Variable Costs</b> | = | <b>Contribution Margin Per Unit</b> |
| \$500                     | – | \$300                      | = | <b>\$200</b>                        |

**Illustration 22-12**  
Formula for contribution margin per unit

Contribution margin per unit indicates that for every camcorder sold, Vargo has \$200 to cover fixed costs and contribute to net income. Because Vargo Video has fixed costs of \$200,000, it must sell 1,000 camcorders ( $\$200,000 \div \$200$ ) before it earns any net income. Vargo’s CVP income statement, assuming a zero net income, is as follows.

| <b>Vargo Video Company</b><br>CVP Income Statement<br>For the Month Ended June 30, 2012 |                |                 |
|---|----------------|-----------------|
|   | <u>Total</u>   | <u>Per Unit</u> |
| Sales (1,000 camcorders)  | \$500,000      | \$500           |
| Variable costs  | 300,000        | 300             |
| <b>Contribution margin</b>  | <b>200,000</b> | <b>\$200</b>    |
| Fixed costs   | 200,000        |                 |
| <b>Net income</b>   | <b>\$ –0–</b>  |                 |

**Illustration 22-13**  
CVP income statement, with zero net income

It follows that for every camcorder sold above 1,000 units, net income increases \$200. For example, assume that Vargo sold one more camcorder, for a total of 1,001 camcorders sold. In this case Vargo reports net income of \$200 as shown in Illustration 22-14.

**Illustration 22-14**  
CVP income statement, with net income

| <b>Vargo Video Company</b><br>CVP Income Statement<br>For the Month Ended June 30, 2012 |                |                 |
|---|----------------|-----------------|
|   | <u>Total</u>   | <u>Per Unit</u> |
| Sales (1,001 camcorders)  | \$500,500      | \$500           |
| Variable costs  | 300,300        | 300             |
| <b>Contribution margin</b>  | <b>200,200</b> | <b>\$200</b>    |
| Fixed costs   | 200,000        |                 |
| <b>Net income</b>   | <b>\$ 200</b>  |                 |

### CONTRIBUTION MARGIN RATIO

Some managers prefer to use a contribution margin ratio in CVP analysis. The **contribution margin ratio** is the contribution margin per unit divided by the unit selling price. For Vargo Video, the ratio is shown in Illustration 22-15.

**Illustration 22-15**  
Formula for contribution margin ratio

|   |   |                               |   |                                      |
|---|---|-------------------------------|---|--------------------------------------|
| <b>Contribution Margin<br/>per Unit</b> | ÷ | <b>Unit Selling<br/>Price</b> | = | <b>Contribution Margin<br/>Ratio</b> |
| \$200                                   | ÷ | \$500                         | = | <b>40%</b>                           |

The contribution margin ratio of 40% means that \$0.40 of each sales dollar ( $\$1 \times 40\%$ ) is available to apply to fixed costs and to contribute to net income.

This expression of contribution margin is very helpful in determining the effect of changes in sales dollars on net income. For example, if sales increase \$100,000, net income will increase \$40,000 ( $40\% \times \$100,000$ ). Thus, by using the contribution margin ratio, managers can quickly determine increases in net income from any change in sales dollars.

We can also see this effect through a CVP income statement. Assume that Vargo Video's current sales are \$500,000 and it wants to know the effect of a \$100,000 increase in sales. Vargo prepares a comparative CVP income statement analysis as follows.

**Illustration 22-16**  
Comparative CVP income statements

| <b>Vargo Video Company</b><br>CVP Income Statement<br>For the Month Ended June 30, 2012 |                  |                 |                    |                 |
|---|------------------|-----------------|--------------------|-----------------|
|   | <u>No Change</u> |                 | <u>With Change</u> |                 |
|   | <u>Total</u>     | <u>Per Unit</u> | <u>Total</u>       | <u>Per Unit</u> |
| Sales   | \$500,000        | \$500           | \$600,000          | \$500           |
| Variable costs  | 300,000          | 300             | 360,000            | 300             |
| <b>Contribution margin</b>  | <b>200,000</b>   | <b>\$200</b>    | <b>240,000</b>     | <b>\$200</b>    |
| Fixed costs   | 200,000          |                 | 200,000            |                 |
| <b>Net income</b>   | <b>\$ -0-</b>    |                 | <b>\$ 40,000</b>   |                 |

Study these CVP income statements carefully. The concepts presented in these statements are used extensively in this and later chapters.

### Break-even Analysis

A key relationship in CVP analysis is the level of activity at which total revenues equal total costs (both fixed and variable). This level of activity is called the **break-even point**. At this volume of sales, the company will realize no income but will suffer no loss. The process of finding the break-even point is called **break-even analysis**. Knowledge of the break-even point is useful to management when it decides whether to introduce new product lines, change sales prices on established products, or enter new market areas.

The break-even point can be:

1. Computed from a mathematical equation.
2. Computed by using contribution margin.
3. Derived from a cost-volume-profit (CVP) graph.

The break-even point can be expressed either in **sales units** or **sales dollars**.

#### MATHEMATICAL EQUATION

Illustration 22-17 shows a common equation used for CVP analysis.

$$\text{Sales} = \text{Variable Costs} + \text{Fixed Costs} + \text{Net Income}$$

**Study Objective [6]**  
Identify the three ways to determine the break-even point.

**Illustration 22-17**  
Basic CVP equation

Identifying the break-even point is a special case of CVP analysis. Because at the break-even point net income is zero, **break-even occurs where total sales equal variable costs plus fixed costs**.

We can compute the break-even point **in units** directly from the equation by **using unit selling prices** and **unit variable costs**. The computation for Vargo Video is:

$$\begin{aligned} \text{Sales} &= \text{Variable Costs} + \text{Fixed Costs} + \text{Net Income} \\ \$500Q &= \$300Q + \$200,000 + \$0 \\ \$200Q &= \$200,000 \\ Q &= \mathbf{1,000 \text{ units}} \end{aligned}$$

where

- Q = sales volume in units
- \$500 = selling price
- \$300 = variable costs per unit
- \$200,000 = total fixed costs

**Illustration 22-18**  
Computation of break-even point

Thus, Vargo Video must sell 1,000 units to break even.

To find **sales dollars** required to break even, we multiply the units sold at the break-even point times the selling price per unit, as shown below.

$$1,000 \times \$500 = \$500,000 \text{ (break-even sales dollars)}$$

**CONTRIBUTION MARGIN TECHNIQUE**

We know that contribution margin equals total revenues less variable costs. It follows that at the break-even point, **contribution margin must equal total fixed costs**. On the basis of this relationship, we can compute the break-even point using either the contribution margin per unit or the contribution margin ratio.

When a company uses the contribution margin per unit, the formula to compute break-even point in units is fixed costs divided by contribution margin per unit. For Vargo Video, the computation is as follows.

**Illustration 22-19**

Formula for break-even point in units using contribution margin

|                   |   |                                     |   |                                  |
|-------------------|---|-------------------------------------|---|----------------------------------|
| <b>Fixed Cost</b> | ÷ | <b>Contribution Margin per Unit</b> | = | <b>Break-even Point in Units</b> |
| \$200,000         | ÷ | \$200                               | = | <b>1,000 units</b>               |

One way to interpret this formula is that Vargo Video generates \$200 of contribution margin with each unit that it sells. This \$200 goes to pay off fixed costs. Therefore, the company must sell 1,000 units to pay off \$200,000 in fixed costs.

When a company uses the contribution margin ratio, the formula to compute break-even point in dollars is fixed costs divided by the contribution margin ratio. We know that the contribution margin ratio for Vargo Video is 40% ( $\$200 \div \$500$ ), which means that every dollar of sales generates 40 cents to pay off fixed costs. Thus, the break-even point in dollars is:

**Illustration 22-20**

Formula for break-even point in dollars using contribution margin ratio

|                    |   |                                  |   |                                    |
|--------------------|---|----------------------------------|---|------------------------------------|
| <b>Fixed Costs</b> | ÷ | <b>Contribution Margin Ratio</b> | = | <b>Break-even Point in Dollars</b> |
| \$200,000          | ÷ | 40%                              | = | <b>\$500,000</b>                   |

**SERVICE COMPANY INSIGHT****Charter Flights Offer a Good Deal**

The Internet is wringing inefficiencies out of nearly every industry. While commercial aircraft spend roughly 4,000 hours a year in the air, chartered aircraft spend only 500 hours flying. That means that they are sitting on the ground—not making any money—about 90% of the time. One company, **FlightServe**, saw a business opportunity in that fact. For about the same cost as a first-class ticket, FlightServe decided to match up executives with charter flights in small “private jets.” The executive would get a more comfortable ride and could avoid the hassle of big airports. FlightServe noted that the average charter jet has eight seats. When all eight seats were full, the company would have an 80% profit margin. It would break even at an average of 3.3 full seats per flight.

Source: “Jet Set Go,” *The Economist* (March 18, 2000), p. 68.

**?** How did FlightServe determine that it would break even with 3.3 seats full per flight? (See page 1050.)

**GRAPHIC PRESENTATION**

An effective way to find the break-even point is to prepare a break-even graph. Because this graph also shows costs, volume, and profits, it is referred to as a **cost-volume-profit (CVP) graph**.

As the CVP graph in Illustration 22-21 shows, sales volume is recorded along the horizontal axis. This axis should extend to the maximum level of expected

sales. Both total revenues (sales) and total costs (fixed plus variable) are recorded on the vertical axis.

**Illustration 22-21**  
CVP graph

The construction of the graph, using the data for Vargo Video, is as follows.

1. Plot the total-sales line, starting at the zero activity level. For every camcorder sold, total revenue increases by \$500. For example, at 200 units, sales are \$100,000. At the upper level of activity (1,800 units), sales are \$900,000. The revenue line is assumed to be linear through the full range of activity.
2. Plot the total fixed cost using a horizontal line. For the camcorders, this line is plotted at \$200,000. The fixed cost is the same at every level of activity.
3. Plot the total-cost line. This starts at the fixed-cost line at zero activity. It increases by the variable cost at each level of activity. For each camcorder, variable costs are \$300. Thus, at 200 units, total variable cost is \$60,000, and the total cost is \$260,000. At 1,800 units total variable cost is \$540,000, and total cost is \$740,000. On the graph, the amount of the variable cost can be derived from the difference between the total cost and fixed cost lines at each level of activity.
4. Determine the break-even point from the intersection of the total-cost line and the total-revenue line. The break-even point in dollars is found by drawing a horizontal line from the break-even point to the vertical axis. The break-even point in units is found by drawing a vertical line from the break-even point to the horizontal axis. For the camcorders, the break-even point is \$500,000 of sales, or 1,000 units. At this sales level, Vargo Video will cover costs but make no profit.

The CVP graph also shows both the net income and net loss areas. Thus, the amount of income or loss at each level of sales can be derived from the total sales and total cost lines.

A CVP graph is useful because the effects of a change in any element in the CVP analysis can be quickly seen. For example, a 10% increase in selling price will change the location of the total revenue line. Likewise, the effects on total costs of wage increases can be quickly observed.

## Do it!

### Break-Even Analysis

#### action plan

✓ Apply the formula:  
Sales = Variable costs +  
Fixed costs + Net income.

✓ Apply the formula: Fixed  
costs ÷ Contribution margin  
per unit = Break-even point  
in units.

Lombardi Company has a unit selling price of \$400, variable costs per unit of \$240, and fixed costs of \$180,000. Compute the break-even point in units using (a) a mathematical equation and (b) contribution margin per unit.

#### Solution

(a) The formula is  $\$400Q = \$240Q + \$180,000$ . The break-even point in units is 1,125 ( $\$180,000 \div \$160$ ).

(b) The contribution margin per unit is \$160 ( $\$400 - \$240$ ). The formula therefore is  $\$180,000 \div \$160$ , and the break-even point in units is 1,125.

### Study Objective [7]

Give the formulas for determining sales required to earn target net income.

## Target Net Income

Rather than simply “breaking even,” management usually sets an income objective often called **target net income**. It indicates the sales necessary to achieve a specified level of income. Companies determine the sales necessary to achieve target net income by using one of the three approaches discussed earlier.

### MATHEMATICAL EQUATION

We know that at the break-even point no profit or loss results for the company. By adding an amount for target net income to the same basic equation, we obtain the following formula for determining required sales.

$$\text{Required Sales} = \text{Variable Costs} + \text{Fixed Costs} + \text{Target Net Income}$$

Required sales may be expressed in either **sales units** or **sales dollars**. Assuming that target net income is \$120,000 for Vargo Video, the computation of required sales in units is as follows.

#### Illustration 22-22

Formula for required sales to meet target net income

#### Illustration 22-23

Computation of required unit sales

$$\begin{array}{rclclcl} \text{Required Sales} & = & \text{Variable Costs} & + & \text{Fixed Costs} & + & \text{Target Net Income} \\ \$500Q & = & \$300Q & + & \$200,000 & + & \$120,000 \end{array}$$

$$\$200Q = \$320,000$$

$$Q = \mathbf{1,600}$$

where

Q = sales volume

\$500 = selling price

\$300 = variable cost per unit

\$200,000 = total fixed costs

\$120,000 = target net income

The sales dollars required to achieve the target net income is found by multiplying the units sold by the unit selling price [(1,600 × \$500) = \$800,000].

**CONTRIBUTION MARGIN TECHNIQUE**

As in the case of break-even sales, we can compute in either units or dollars the sales required to meet a target net income. The formula to compute required sales in units for Vargo Video using the contribution margin per unit is as follows.

|  |   |   |   |                                    |
|--|---|---|---|------------------------------------|
| <b>Fixed Costs +<br/>Target Net Income</b> | ÷ | <b>Contribution<br/>Margin Per Unit</b> | = | <b>Required Sales<br/>in Units</b> |
| (\$200,000 + \$120,000)                    | ÷ | \$200                                   | = | <b>1,600 units</b>                 |

**Illustration 22-24**

Formula for required sales in units using contribution margin per unit

This computation tells Vargo that to achieve its desired target net income of \$120,000, it must sell 1,600 camcorders.

The formula to compute the required sales in dollars for Vargo Video using the contribution margin ratio is as follows.

|  |   |                                      |   |                                      |
|--|---|--------------------------------------|---|--------------------------------------|
| <b>Fixed Costs +<br/>Target Net Income</b> | ÷ | <b>Contribution<br/>Margin Ratio</b> | = | <b>Required Sales<br/>in Dollars</b> |
| (\$200,000 + \$120,000)                    | ÷ | 40%                                  | = | <b>\$800,000</b>                     |

**Illustration 22-25**

Formula for required sales in dollars using contribution margin ratio

This computation tells Vargo that to achieve its desired target net income of \$120,000, it must generate sales of \$800,000.

**GRAPHIC PRESENTATION**

We also can use the CVP graph in Illustration 22-21 (on page 1025) to find the sales required to meet target net income. In the profit area of the graph, the distance between the sales line and the total cost line at any point equals net income. We can find required sales by analyzing the differences between the two lines until the desired net income is found.

For example, suppose Vargo Video sells 1,400 camcorders. Illustration 22-21 shows that a vertical line drawn at 1,400 units intersects the sales line at \$700,000 and the total cost line at \$620,000. The difference between the two amounts represents the net income (profit) of \$80,000.

**Margin of Safety**

The margin of safety is another relationship used in CVP analysis. **Margin of safety** is the difference between actual or expected sales and sales at the break-even point. This relationship measures the “cushion” that management has, allowing it to still break even if expected sales fail to materialize. The margin of safety is expressed in dollars or as a ratio.

The formula for stating the **margin of safety in dollars** is actual (or expected) sales minus break-even sales. Assuming that actual (expected) sales for Vargo Video are \$750,000, the computation is:

|                                    |   |                             |   |  |
|------------------------------------|---|-----------------------------|---|--|
| <b>Actual (Expected)<br/>Sales</b> | – | <b>Break-even<br/>Sales</b> | = | <b>Margin of Safety<br/>in Dollars</b> |
| \$750,000                          | – | \$500,000                   | = | <b>\$250,000</b>                       |

**Illustration 22-26**

Formula for margin of safety in dollars

**Study Objective [8]**  
Define margin of safety, and give the formulas for computing it.

Vargo’s margin of safety is \$250,000. Its sales must fall \$250,000 before it operates at a loss.

The **margin of safety ratio** is the margin of safety in dollars divided by actual (or expected) sales. The formula and computation for determining the margin of safety ratio are:

**Illustration 22-27**

Formula for margin of safety ratio

|                                |   |                            |   |                           |
|--------------------------------|---|----------------------------|---|---------------------------|
| Margin of Safety<br>in Dollars | ÷ | Actual (Expected)<br>Sales | = | Margin of Safety<br>Ratio |
| \$250,000                      | ÷ | \$750,000                  | = | 33%                       |

This means that the company’s sales could fall by 33% before it would be operating at a loss.

**The higher the dollars or the percentage, the greater the margin of safety.** Management continuously evaluates the adequacy of the margin of safety in terms of such factors as the vulnerability of the product to competitive pressures and to downturns in the economy.

**SERVICE COMPANY INSIGHT**

**How a Rolling Stones’ Tour Makes Money**

Computation of break-even and margin of safety is important for service companies as well. Consider how the promoter for a Rolling Stones’ tour used the break-even point and margin of safety. For example, one outdoor show should bring 70,000 individuals for a gross of \$2.45 million. The promoter guarantees \$1.2 million to the Rolling Stones. In addition, 20% of gross goes to the stadium in which the performance is staged. Add another \$400,000 for other expenses such as ticket takers, parking attendants, advertising, and so on. The promoter also shares in sales of T-shirts and memorabilia for which the promoter will net over \$7 million during the tour. From a successful Rolling Stones’ tour, the promoter could make \$35 million!

**?** What amount of sales dollars are required for the promoter to break even? (See page 1050.)

**CVP and Changes in the Business Environment**

When the personal computer was introduced, it sold for \$2,500; today similar computers sell for much less. Recently, when oil prices rose, the break-even point for airline companies such as **American** and **Northwest** rose dramatically. Because of lower prices for imported steel, the demand for domestic steel dropped significantly. The point should be clear: Business conditions change rapidly, and management must respond intelligently to these changes. CVP analysis can help.

To better understand how CVP analysis works, let’s look at three independent situations that might occur at Vargo Video. Each case uses the original camcorder sales and cost data, which were:

**Illustration 22-28**

Original camcorder sales and cost data

|                    |                          |
|--------------------|--------------------------|
| Unit selling price | \$500                    |
| Unit variable cost | \$300                    |
| Total fixed costs  | \$200,000                |
| Break-even sales   | \$500,000 or 1,000 units |

**Case 1.** A competitor is offering a 10% discount on the selling price of its camcorders. Management must decide whether to offer a similar discount.

**Question:** What effect will a 10% discount on selling price have on the break-even point for camcorders?

**Answer:** A 10% discount on selling price reduces the selling price per unit to \$450 [ $\$500 - (\$500 \times 10\%)$ ]. Variable costs per unit remain unchanged at \$300. Thus, the contribution margin per unit is \$150. Assuming no change in fixed costs, break-even point is 1,333 units, computed as follows.

|                    |   |   |   |                                      |
|--------------------|---|---|---|--------------------------------------|
| <b>Fixed Costs</b> | ÷ | <b>Contribution<br/>Margin per Unit</b> | = | <b>Break-even Point<br/>in Units</b> |
| \$200,000          | ÷ | \$150                                   | = | <b>1,333 units (rounded)</b>         |

**Illustration 22-29**  
Computation of break-even sales in units

For Vargo Video, this change requires monthly sales to increase by 333 units, or 33⅓%, in order to break even. In reaching a conclusion about offering a 10% discount to customers, management must determine how likely it is to achieve the increased sales. Also, management should estimate the possible loss of sales if the competitor’s discount price is not matched.

**Case 2.** To meet the threat of foreign competition, management invests in new robotic equipment that will lower the amount of direct labor required to make camcorders. The company estimates that total fixed costs will increase 30% and that variable cost per unit will decrease 30%.

**Question:** What effect will the new equipment have on the sales volume required to break even?

**Answer:** Total fixed costs become \$260,000 [ $\$200,000 + (30\% \times \$200,000)$ ]. The variable cost per unit becomes \$210 [ $\$300 - (30\% \times \$300)$ ]. The new break-even point is approximately 897 units, computed as follows.

|                    |   |   |   |                                      |
|--------------------|---|---|---|--------------------------------------|
| <b>Fixed Costs</b> | ÷ | <b>Contribution<br/>Margin per Unit</b> | = | <b>Break-even Point<br/>in Units</b> |
| \$260,000          | ÷ | (\$500 – \$210)                         | = | <b>897 units (rounded)</b>           |

**Illustration 22-30**  
Computation of break-even sales in units

These changes appear to be advantageous for Vargo Video. The break-even point is reduced by approximately 10%, or 100 units.

**Case 3.** Vargo’s principal supplier of raw materials has just announced a price increase. The higher cost is expected to increase the variable cost of camcorders by \$25 per unit. Management decides to hold the line on the selling price of the camcorders. It plans a cost-cutting program that will save \$17,500 in fixed costs per month. Vargo is currently realizing monthly net income of \$80,000 on sales of 1,400 camcorders.

**Question:** What increase in units sold will be needed to maintain the same level of net income?

**Answer:** The variable cost per unit increases to \$325 ( $\$300 + \$25$ ). Fixed costs are reduced to \$182,500 ( $\$200,000 - \$17,500$ ). Because of the change in variable cost, the contribution margin per unit becomes \$175 ( $\$500 - \$325$ ). The required number of units sold to achieve the target net income is computed as follows.

**Illustration 22-31**

Computation of required sales

|  |   |   |   |                                    |
|--|---|---|---|------------------------------------|
| <b>Fixed Costs + Target<br/>Net Income</b> | ÷ | <b>Contribution<br/>Margin per Unit</b> | = | <b>Required Sales<br/>in Units</b> |
| (\$182,500 + \$80,000)                     | ÷ | \$175                                   | = | <b>1,500</b>                       |

To achieve the required sales, Vargo will have to sell 1,500 camcorders, an increase of 100 units. If this does not seem to be a reasonable expectation, management will either have to make further cost reductions or accept less net income if the selling price remains unchanged.

### **CVP Income Statement Revisited**

Earlier in the chapter we presented a simple CVP income statement. When companies prepare a CVP income statement, they provide more detail about specific variable and fixed-cost items.

To illustrate a more detailed CVP income statement, we will assume that Vargo Video reaches its target net income of \$120,000 (see Illustration 22-23 on page 1026). The following information is obtained on the \$680,000 of costs that were incurred in June to produce and sell 1,600 units.

#### **Study Objective [9]**

Describe the essential features of a cost-volume-profit income statement.

**Illustration 22-32**

Assumed cost and expense data

|                         | <u>Variable</u>  | <u>Fixed</u>     | <u>Total</u>     |
|-------------------------|------------------|------------------|------------------|
| Cost of goods sold      | \$400,000        | \$120,000        | \$520,000        |
| Selling expenses        | 60,000           | 40,000           | 100,000          |
| Administrative expenses | 20,000           | 40,000           | 60,000           |
|                         | <u>\$480,000</u> | <u>\$200,000</u> | <u>\$680,000</u> |

The detailed CVP income statement for Vargo is shown below.

**Illustration 22-33**

Detailed CVP income statement

| <b>Vargo Video Company</b>               |                  |                 |

| <b>Contribution margin</b>               | <b>320,000</b>   | <b>\$200</b>    |
| Fixed expenses                           |                  |                 |
| Cost of goods sold                       | 120,000          |                 |
| Selling expenses                         | 40,000           |                 |
| Administrative expenses                  | 40,000           |                 |
| Total fixed expenses                     | <u>200,000</u>   |                 |
| <b>Net Income</b>                        | <b>\$120,000</b> |                 |

## Do it!

Mabo Company makes calculators that sell for \$20 each. For the coming year, management expects fixed costs to total \$220,000 and variable costs to be \$9 per unit.

- Compute break-even point in units using the mathematical equation.
- Compute break-even point in dollars using the contribution margin (CM) ratio.
- Compute the margin of safety percentage assuming actual sales are \$500,000.
- Compute the sales required in dollars to earn net income of \$165,000 using the mathematical equation.

### Solution

- (a) Sales = Variable costs + Fixed costs + Net income  
 $\$20Q = \$9Q + \$220,000 + \$0$   
 $\$11Q = \$220,000$   
 $Q = 20,000$  units
- (b) Contribution margin per unit = Unit selling price – Unit variable costs  
 $\$11 = \$20 - \$9$   
 Contribution margin ratio = Contribution margin per unit ÷ Unit selling price  
 $55\% = \$11 \div \$20$   
 Break-even point in dollars = Fixed cost ÷ Contribution margin ratio  
 $= \$220,000 \div 55\%$   
 $= \$400,000$
- (c) Margin of safety =  $\frac{\text{Actual sales} - \text{Break-even sales}}{\text{Actual sales}}$   
 $= \frac{\$500,000 - \$400,000}{\$500,000}$   
 $= 20\%$
- (d) Required sales = Variable costs + Fixed costs + Net income  
 $\$20Q = \$9Q + \$220,000 + \$165,000$   
 $\$11Q = \$385,000$   
 $Q = 35,000$  units  
 $35,000 \text{ units} \times \$20 = \$700,000$  required sales

## Margin of Safety; Required Sales

### action plan

- ✓ Know the formulas.
- ✓ Recognize that variable costs change with sales volume; fixed costs do not.
- ✓ Avoid computational errors.

## COMPREHENSIVE

## Do it!

B.T. Hernandez Company, maker of high-quality flashlights, has experienced steady growth over the last 6 years. However, increased competition has led Mr. Hernandez, the president, to believe that an aggressive campaign is needed next year to maintain the company's present growth. The company's accountant has presented Mr. Hernandez with the following data for the current year, 2012, for use in preparing next year's advertising campaign.

**Cost Schedules**

|   |                  |
|---|------------------|
| Variable costs                            |                  |
| Direct labor per flashlight               | \$ 8.00          |
| Direct materials                          | 4.00             |
| Variable overhead                         | <u>3.00</u>      |
| Variable cost per flashlight              | <u>\$15.00</u>   |
| Fixed costs                               |                  |
| Manufacturing                             | \$ 25,000        |
| Selling                                   | 40,000           |
| Administrative                            | <u>70,000</u>    |
| Total fixed costs                         | <u>\$135,000</u> |
| Selling price per flashlight              | \$25.00          |
| Expected sales, 2012 (20,000 flashlights) | \$500,000        |

Mr. Hernandez has set the sales target for the year 2013 at a level of \$550,000 (22,000 flashlights).

**Instructions**

(Ignore any income tax considerations.)

- What is the projected operating income for 2012?
- What is the contribution margin per unit for 2012?
- What is the break-even point in units for 2012?
- Mr. Hernandez believes that to attain the sales target in the year 2013, the company must incur an additional selling expense of \$10,000 for advertising in 2013, with all other costs remaining constant. What will be the break-even point in dollar sales for 2013 if the company spends the additional \$10,000?
- If the company spends the additional \$10,000 for advertising in 2013, what is the sales level in dollars required to equal 2012 operating income?

**action plan**

- ✓ Know the formulas.
- ✓ Recognize that variable costs change with sales volume; fixed costs do not.
- ✓ Avoid computational errors.

**Solution to Comprehensive Do it!**

|     |   |                  |
|-----|---|------------------|
| (a) | Expected sales                            | \$500,000        |
|     | Less:                                     |                  |
|     | Variable cost (20,000 flashlights × \$15) | \$300,000        |
|     | Fixed costs                               | <u>135,000</u>   |
|     | Projected operating income                | <u>\$ 65,000</u> |

|     |                              |             |
|-----|------------------------------|-------------|
| (b) | Selling price per flashlight | \$25        |
|     | Variable cost per flashlight | <u>15</u>   |
|     | Contribution margin per unit | <u>\$10</u> |

(c) Fixed costs ÷ Contribution margin per unit = Break-even point in units  
 $\$135,000 \div \$10 = 13,500$  units

(d) Fixed costs ÷ Contribution margin ratio = Break-even point in dollars  
 $\$145,000 \div 40\% = \$362,500$

|                                |                  |
|--------------------------------|------------------|
| Fixed costs (from 2012)        | \$135,000        |
| Additional advertising expense | <u>10,000</u>    |
| Fixed costs (2013)             | <u>\$145,000</u> |

Contribution margin per unit (b) \$10

Contribution margin ratio = Contribution margin per unit ÷ Unit selling price  
 $40\% = \$10 \div \$25$

(e) Required sales = (Fixed costs + Target net income) ÷ Contribution margin ratio  
 $\$525,000 = (\$145,000 + \$65,000) \div 40\%$

## Summary of Study Objectives

### [1] Distinguish between variable and fixed costs.

Variable costs are costs that vary in total directly and proportionately with changes in the activity index. Fixed costs are costs that remain the same in total regardless of changes in the activity index.

### [2] Explain the significance of the relevant range.

The relevant range is the range of activity in which a company expects to operate during a year. It is important in CVP analysis because the behavior of costs is assumed to be linear throughout the relevant range.

**[3] Explain the concept of mixed costs.** Mixed costs increase in total but not proportionately with changes in the activity level. For purposes of CVP analysis, mixed costs must be classified into their fixed and variable elements. One method that management may use to classify these costs is the high-low method.

**[4] List the five components of cost-volume-profit analysis.** The five components of CVP analysis are (a) volume or level of activity, (b) unit selling prices, (c) variable cost per unit, (d) total fixed costs, and (e) sales mix.

**[5] Indicate what contribution margin is and how it can be expressed.** Contribution margin is the amount of revenue remaining after deducting variable costs. It is identified in a CVP income statement, which classifies costs as variable or fixed. It can be expressed as a per unit amount or as a ratio.

**[6] Identify the three ways to determine the break-even point.** The break-even point can be (a) computed from a mathematical equation, (b) computed by using a contribution margin technique, and (c) derived from a CVP graph.

**[7] Give the formulas for determining sales required to earn target net income.** The general formula is: Required sales = Variable costs + Fixed costs + Target net income. Two other formulas are: Required sales in units = (Fixed costs + Target net income) ÷ Contribution margin per unit, and Required sales in dollars = (Fixed costs + Target net income) ÷ Contribution margin ratio.

**[8] Define margin of safety, and give the formulas for computing it.** Margin of safety is the difference between actual or expected sales and sales at the break-even point. The formulas for margin of safety are: Actual (expected) sales – Break-even sales = Margin of safety in dollars; Margin of safety in dollars ÷ Actual (expected) sales = Margin of safety ratio.

**[9] Describe the essential features of a cost-volume-profit income statement.** The CVP income statement classifies costs and expenses as variable or fixed and reports contribution margin in the body of the statement.

## Glossary

**Activity index** The activity that causes changes in the behavior of costs. (p. 1012).

**Break-even point** The level of activity at which total revenues equal total costs. (p. 1023).

**Contribution margin (CM)** The amount of revenue remaining after deducting variable costs. (p. 1020).

**Contribution margin per unit** The amount of revenue remaining per unit after deducting variable costs; calculated as unit selling price minus unit variable cost. (p. 1021).

**Contribution margin ratio** The percentage of each dollar of sales that is available to apply to fixed costs and contribute to net income; calculated as contribution margin per unit divided by unit selling price. (p. 1022).

**Cost behavior analysis** The study of how specific costs respond to changes in the level of business activity. (p. 1012).

**Cost-volume-profit (CVP) analysis** The study of the effects of changes in costs and volume on a company's profits. (p. 1020).

**Cost-volume-profit (CVP) graph** A graph showing the relationship between costs, volume, and profits. (p. 1024).

**Cost-volume-profit (CVP) income statement** A statement for internal use that classifies costs as fixed or variable and reports contribution margin in the body of the statement. (p. 1020).

**Fixed costs** Costs that remain the same in total regardless of changes in the activity level. (p. 1013).

**High-low method** A mathematical method that uses the total costs incurred at the high and low levels of activity to classify mixed costs into fixed and variable components. (p. 1017).

**Margin of safety** The difference between actual or expected sales and sales at the break-even point. (p. 1027).

**Mixed costs** Costs that contain both a variable and a fixed cost element and change in total but not proportionately with changes in the activity level. (p. 1015).

**Relevant range** The range of the activity index over which the company expects to operate during the year. (p. 1015).

**Target net income** The income objective set by management. (p. 1026).

**Variable costs** Costs that vary in total directly and proportionately with changes in the activity level. (p. 1012).

# APPENDIX 22A

## Variable Costing

### Study Objective [10]

Explain the difference between absorption costing and variable costing.

In earlier chapters, we classified both variable and fixed manufacturing costs as product costs. In job order costing, for example, a job is assigned the costs of direct materials, direct labor, and both variable and fixed manufacturing overhead. This costing approach is called **absorption costing** (or **full costing**). It is so named because all manufacturing costs are charged to, or absorbed by, the product. Absorption costing is the approach used for external reporting under GAAP.

An alternative approach is to use variable costing. Under **variable costing** only direct materials, direct labor, and variable manufacturing overhead costs are considered product costs. Companies recognize fixed manufacturing overhead costs as period costs (expenses) when incurred. Illustration 22A-1 shows the difference between absorption costing and variable costing.

### Illustration 22A-1

Difference between absorption costing and variable costing

Under both absorption and variable costing selling and administrative expenses are period costs. Companies may not use variable costing for external financial reports because GAAP requires that fixed manufacturing overhead be accounted for as a product cost.

To illustrate the computation of unit production cost under absorption and variable costing, assume that Premium Products Corporation manufactures a polyurethane sealant, called Fix-It, for car windshields. Relevant data for Fix-It in January 2012, the first month of production, are as follows.

### Illustration 22A-2

Sealant sales and cost data for Premium Products Corporation

|                     |   |
|---------------------|---|
| Selling price       | \$20 per unit.  |
| Units               | Produced 30,000; sold 20,000; beginning inventory zero.   |
| Variable unit costs | Manufacturing \$9 (direct materials \$5, direct labor \$3, and variable overhead \$1). Selling and administrative expenses \$2. |
| Fixed costs         | Manufacturing overhead \$120,000. Selling and administrative expenses \$15,000.   |

The per unit production cost of Fix-It under each costing approach is:

### Illustration 22A-3

Computation of per unit production cost

| Type of Cost  | Absorption Costing | Variable Costing  |
|---|--------------------|-------------------|
| Direct materials  | \$ 5               | \$5               |
| Direct labor  | 3                  | 3                 |
| Variable manufacturing overhead   | 1                  | 1                 |
| <b>Fixed manufacturing overhead</b><br><b>(\$120,000 ÷ 30,000 units produced)</b> | <b>4</b>           | <b>0</b>          |
| <b>Total unit cost</b>  | <b><u>\$13</u></b> | <b><u>\$9</u></b> |

The total unit cost is \$4 higher (\$13 – \$9) for absorption costing. This occurs because fixed manufacturing costs are a product cost under absorption costing. Under variable costing, they are, instead, a period cost, and so are expensed. Based

on these data, each unit sold and each unit remaining in inventory is costed at \$13 under absorption costing and at \$9 under variable costing.

## Effects of Variable Costing on Income

Illustrations 22A-4 and 22A-5 show the income statements under the two costing approaches. Absorption costing uses the traditional income statement format. Variable costing uses the cost-volume-profit format. We have inserted computations parenthetically in the statements to facilitate your understanding of the amounts.

| Premium Products Corporation<br>Income Statement<br>For the Month Ended January 31, 2012<br>(Absorption Costing) |                       |                         |
|--|-----------------------|-------------------------|
| Sales (20,000 units × \$20)  |                       | \$400,000               |
| Cost of goods sold   |                       |                         |
| Inventory, January 1   | \$ -0-                |                         |

Absorption costing income statement

### Helpful Hint

This is the traditional statement that would result from job order and processing costing explained in Chapters 20 and 21.

| Premium Products Corporation<br>Income Statement<br>For the Month Ended January 31, 2012<br>(Variable Costing) |                      |                         |
|--|----------------------|-------------------------|
| Sales (20,000 units × \$20)  |                      | \$400,000               |
| Variable expenses  |                      |                         |
| Variable cost of goods sold  |                      |                         |
| Inventory, January 1   | \$ -0-               |                         |
| Variable manufacturing costs (30,000 units × \$9)  | <u>270,000</u>       |                         |
| Cost of goods available for sale   | 270,000              |                         |
| <b>Inventory, January 31 (10,000 units × \$9)</b>  | <b><u>90,000</u></b> |                         |
| Variable cost of goods sold  |                      | <u>180,000</u>          |
| Variable selling and administrative expenses<br>(20,000 units × \$2)   |                      | <u>40,000</u>           |
| Total variable expenses  |                      | <u>220,000</u>          |
| Contribution margin  |                      | 180,000                 |
| Fixed expenses   |                      |                         |
| Manufacturing overhead   | 120,000              |                         |
| Selling and administrative expenses  | <u>15,000</u>        |                         |
| Total fixed expenses   |                      | <u>135,000</u>          |
| <b>Income from operations</b>  |                      | <b><u>\$ 45,000</u></b> |

**Illustration 22A-5**  
Variable costing income statement

### Helpful Hint

Note the difference in the computation of the ending inventory: \$9 per unit here, \$13 per unit in Illustration 22A-4.

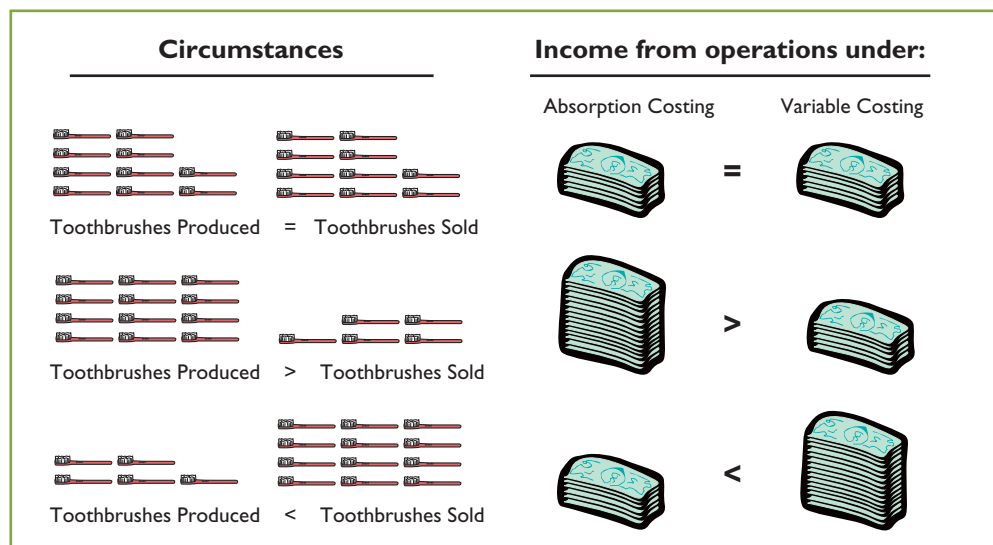

Income from operations under absorption costing (Illustration 22A-4) is \$40,000 (\$85,000 – \$45,000) higher than under variable costing (Illustration 22A-5). The reason: There is a \$40,000 difference in the ending inventories (\$130,000 under absorption costing versus \$90,000 under variable costing). Under absorption costing, the company defers \$40,000 of the fixed overhead costs (10,000 units × \$4) to a future period as a product cost. In contrast, under variable costing the company expenses the entire fixed manufacturing costs when incurred.

The following relationships apply:

- When units produced exceed units sold (as shown), income from operations under absorption costing is higher than variable costing.
- When units produced are less than units sold, income from operations under absorption costing is lower than variable costing.
- When units produced and sold are the same, income from operations will be equal under the two costing approaches. In this case, there is no increase in ending inventory. So fixed overhead costs of the current period are not deferred to future periods through the ending inventory.

Illustration 22A-6 summarizes the foregoing effects of the two costing approaches on income from operations.

**Illustration 22A-6**  
Summary of income effects

## Rationale for Variable Costing

The purpose of fixed manufacturing costs is **to have productive facilities available for use**. A company incurs these costs whether it operates at zero or at 100% of capacity. Thus, proponents of variable costing argue that these costs are period costs and therefore should be expensed when incurred.

Supporters of absorption costing defend the assignment of fixed manufacturing overhead costs to inventory. They say that these costs are as much a cost of getting a product ready for sale as direct materials or direct labor. Accordingly, they contend, these costs should not be matched with revenues until the product is sold.

The use of variable costing is acceptable **only for internal use by management**. It cannot be used in determining product costs in financial statements prepared in accordance with generally accepted accounting principles because it understates inventory costs. To comply with the matching principle, a company must use absorption costing for its work in process and finished goods inventories. Similarly, companies must use absorption costing for income tax purposes.

## Summary of Study Objective for Appendix 22A

**[10] Explain the difference between absorption costing and variable costing.** Under absorption costing,

fixed manufacturing costs are product costs. Under variable costing, fixed manufacturing costs are period costs.

## Glossary for Appendix 22A

**Absorption costing** A costing approach in which all manufacturing costs are charged to the product. (p. 1034).

**Variable costing** A costing approach in which only variable manufacturing costs are product costs, and fixed manufacturing costs are period costs (expenses). (p. 1034).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in WileyPLUS

\*Note: All asterisked Questions, Exercises, and Problems relate to material in the appendix to the chapter.

## Self-Test Questions

Answers are on page 1050.

- (SO 1) 1. Variable costs are costs that:
- vary in total directly and proportionately with changes in the activity level.
  - remain the same per unit at every activity level.
  - Neither of the above.
  - Both (a) and (b) above.
- (SO 2) 2. The relevant range is:
- the range of activity in which variable costs will be curvilinear.
  - the range of activity in which fixed costs will be curvilinear.
  - the range over which the company expects to operate during a year.
  - usually from zero to 100% of operating capacity.
- (SO 3) 3. Mixed costs consist of a:
- variable cost element and a fixed cost element.
  - fixed cost element and a controllable cost element.
  - relevant cost element and a controllable cost element.
  - variable cost element and a relevant cost element.
- (SO 3) 4. Your phone service provider offers a plan that is classified as a mixed cost. The cost per month for 1,000 minutes is \$50. If you use 2,000 minutes this month, your cost will be:
- \$50.
  - \$100.
  - more than \$100.
  - between \$50 and \$100.
- (SO 4) 5. One of the following is *not* involved in CVP analysis. That factor is:
- sales mix.
  - unit selling prices
  - fixed costs per unit.
  - volume or level of activity.
- (SO 5) 6. Contribution margin:
- is revenue remaining after deducting variable costs.
  - may be expressed as contribution margin per unit.
  - is selling price less cost of goods sold.
  - Both (a) and (b) above.
7. When comparing a traditional income statement to a CVP income statement:
- net income will always be greater on the traditional statement.
  - net income will always be less on the traditional statement.
  - net income will always be identical on both.
  - net income will be greater or less depending on the sales volume.
8. Brownstone Company's contribution margin ratio is 30%. If Brownstone's sales revenue is \$100 greater than its break-even sales in dollars, its net income:
- will be \$100.
  - will be \$70.
  - will be \$30.
  - cannot be determined without knowing fixed costs.
9. Gossen Company is planning to sell 200,000 pliers for \$4 per unit. The contribution margin ratio is 25%. If Gossen will break even at this level of sales, what are the fixed costs?
- \$100,000.
  - \$160,000.
  - \$200,000.
  - \$300,000.
10. The mathematical equation for computing required sales to obtain target net income is: Required sales =
- Variable costs + Target net income.
  - Variable costs + Fixed costs + Target net income.
  - Fixed costs + Target net income.
  - No correct answer is given.
11. Marshall Company had actual sales of \$600,000 when break-even sales were \$420,000. What is the margin of safety ratio?
- 25%.
  - 30%.
  - 33⅓%.
  - 45%.
12. Margin of safety is computed as:
- Actual sales – Break-even sales.
  - Contribution margin – Fixed costs.
  - Break-even sales – Variable costs.
  - Actual sales – Contribution margin.

- (SO 9) 13. On a CVP income statement:
- Sales – Cost of goods sold = Contribution margin.
  - Sales – Variable costs – Fixed costs = Contribution margin.
  - Sales – Variable costs = Contribution margin.
  - Sales – Fixed costs = Contribution margin.
- (SO 9) 14. Cournot Company sells 100,000 wrenches for \$12 a unit. Fixed costs are \$300,000, and net income is \$200,000. What should be reported as variable expenses in the CVP income statement?
- \$700,000.
  - \$900,000.
  - \$500,000.
  - \$1,000,000.
- \*15. Under variable costing, fixed manufacturing costs are classified as:
- period costs.
  - product costs.
  - both (a) and (b).
  - neither (a) nor (b).
- Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), for additional Self-Test Questions.

## Questions

- What is cost behavior analysis?
  - Why is cost behavior analysis important to management?
- Kenny Jerrad asks your help in understanding the term “activity index.” Explain the meaning and importance of this term for Kenny.
  - State the two ways that variable costs may be defined.
- Contrast the effects of changes in the activity level on total fixed costs and on unit fixed costs.
- S.V. Ayala claims that the relevant range concept is important only for variable costs.
  - Explain the relevant range concept.
  - Do you agree with S.V.’s claim? Explain.
- “The relevant range is indispensable in cost behavior analysis.” Is this true? Why or why not?
- Rick Yotts is confused. He does not understand why rent on his apartment is a fixed cost and rent on a Hertz rental truck is a mixed cost. Explain the difference to Rick.
- How should mixed costs be classified in CVP analysis? What approach is used to determine the appropriate classification?
- At the high and low levels of activity during the month, direct labor hours are 90,000 and 40,000, respectively. The related costs are \$160,000 and \$100,000. What are the fixed and variable costs at any level of activity?
- “Cost-volume-profit (CVP) analysis is based entirely on unit costs.” Do you agree? Explain.
- Bob Barker defines contribution margin as the amount of profit available to cover operating expenses. Is there any truth in this definition? Discuss.
- Tech Company’s Speedo calculator sells for \$40. Variable costs per unit are estimated to be \$28. What are the contribution margin per unit and the contribution margin ratio?
- “Break-even analysis is of limited use to management because a company cannot survive by just breaking even.” Do you agree? Explain.
- Total fixed costs are \$25,000 for Daaz Inc. It has a contribution margin per unit of \$15, and a contribution margin ratio of 25%. Compute the break-even sales in dollars.
- Peggy Sutton asks your help in constructing a CVP graph. Explain to Peggy (a) how the break-even point is plotted, and (b) how the level of activity and dollar sales at the break-even point are determined.
- Define the term “margin of safety.” If Cortez Company expects to sell 1,250 units of its product at \$12 per unit, and break-even sales for the product are \$12,000, what is the margin of safety ratio?
- Salsa Company’s break-even sales are \$600,000. Assuming fixed costs are \$180,000, what sales volume is needed to achieve a target net income of \$60,000?
- The traditional income statement for Eaton Company shows sales \$900,000, cost of goods sold \$500,000, and operating expenses \$200,000. Assuming all costs and expenses are 70% variable and 30% fixed, prepare a CVP income statement through contribution margin.
- Distinguish between absorption costing and variable costing.
- What is the major rationale for the use of variable costing?
  - Discuss why variable costing may not be used for financial reporting purposes.

## Brief Exercises

Classify costs as variable, fixed, or mixed.

(SO 1, 3)

**BE22-1** Monthly production costs in Provenza Company for two levels of production are as follows.

| Cost                 | 3,000 units | 6,000 units |
|----------------------|-------------|-------------|
| Indirect labor       | \$10,000    | \$20,000    |
| Supervisory salaries | 5,000       | 5,000       |
| Maintenance          | 4,000       | 7,000       |

Indicate which costs are variable, fixed, and mixed, and give the reason for each answer.

Diagram the behavior of costs within the relevant range.

(SO 2)

**BE22-2** For Brenda Company, the relevant range of production is 40–80% of capacity. At 40% of capacity, a variable cost is \$4,000 and a fixed cost is \$6,000. Diagram the behavior of each cost within the relevant range assuming the behavior is linear.

**BE22-3** For Lamar Company, a mixed cost is \$20,000 plus \$16 per direct labor hour. Diagram the behavior of the cost using increments of 500 hours up to 2,500 hours on the horizontal axis and increments of \$20,000 up to \$80,000 on the vertical axis.

*Diagram the behavior of a mixed cost.*

(SO 3)

**BE22-4** Moines Company accumulates the following data concerning a mixed cost, using miles as the activity level.

*Determine variable and fixed cost elements using the high-low method.*

(SO 3)

|          | <u>Miles Driven</u> | <u>Total Cost</u> |       | <u>Miles Driven</u> | <u>Total Cost</u> |
|----------|---------------------|-------------------|-------|---------------------|-------------------|
| January  | 8,000               | \$14,150          | March | 8,500               | \$15,000          |
| February | 7,500               | 13,600            | April | 8,200               | 14,490            |

Compute the variable and fixed cost elements using the high-low method.

**BE22-5** Determine the missing amounts.

*Determine missing amounts for contribution margin.*

(SO 5)

|    | <u>Unit Selling Price</u> | <u>Unit Variable Costs</u> | <u>Contribution Margin per Unit</u> | <u>Contribution Margin Ratio</u> |
|----|---------------------------|----------------------------|-------------------------------------|----------------------------------|
| 1. | \$250                     | \$170                      | (a)                                 | (b)                              |
| 2. | \$500                     | (c)                        | \$200                               | (d)                              |
| 3. | (e)                       | (f)                        | \$300                               | 30%                              |

**BE22-6** Leon Company has a unit selling price of \$400, variable costs per unit of \$260, and fixed costs of \$210,000. Compute the break-even point in units using (a) the mathematical equation and (b) contribution margin per unit.

*Compute the break-even point.*

(SO 6)

**BE22-7** For Longeis Company, variable costs are 70% of sales, and fixed costs are \$210,000. Management's net income goal is \$60,000. Compute the required sales needed to achieve management's target net income of \$60,000. (Use the mathematical equation approach.)

*Compute sales for target net income.*

(SO 7)

**BE22-8** For Amos Company, actual sales are \$1,200,000 and break-even sales are \$900,000. Compute (a) the margin of safety in dollars and (b) the margin of safety ratio.

*Compute the margin of safety and the margin of safety ratio.*

(SO 8)

**BE22-9** Sylvia Manufacturing Inc. had sales of \$1,800,000 for the first quarter of 2012. In making the sales, the company incurred the following costs and expenses.

*Prepare CVP income statement.*

(SO 9)

|                         | <u>Variable</u> | <u>Fixed</u> |
|-------------------------|-----------------|--------------|
| Cost of goods sold      | \$760,000       | \$540,000    |
| Selling expenses        | 95,000          | 60,000       |
| Administrative expenses | 79,000          | 66,000       |

Prepare a CVP income statement for the quarter ended March 31, 2012.

**\*BE22-10**  Alton Company's fixed overhead costs are \$3 per unit, and its variable overhead costs are \$8 per unit. In the first month of operations, 50,000 units are produced and 47,000 units are sold. Write a short memo to the chief financial officer explaining which costing approach will produce the higher income and what the difference will be.

*Compute net income under absorption and variable costing.*

(SO 10)

## Do it! Review

**Do it! 22-1** Wyoming Company reports the following total costs at two levels of production.

*Classify types of costs.*

(SO 1, 3)

|                  | <u>5,000 Units</u> | <u>10,000 Units</u> |
|------------------|--------------------|---------------------|
| Indirect labor   | \$ 3,000           | \$ 6,000            |
| Property taxes   | 7,000              | 7,000               |
| Direct labor     | 27,000             | 54,000              |
| Direct materials | 22,000             | 44,000              |
| Depreciation     | 4,000              | 4,000               |
| Utilities        | 3,000              | 5,000               |
| Maintenance      | 9,000              | 11,000              |

Classify each cost as variable, fixed, or mixed.

Compute costs using high-low method and estimate total cost. (SO 3)

**Do it! 22-2** Blakely Company accumulates the following data concerning a mixed cost, using units produced as the activity level.

|       | <u>Units Produced</u> | <u>Total Cost</u> |
|-------|-----------------------|-------------------|
| March | 10,000                | \$18,000          |
| April | 9,000                 | 16,650            |
| May   | 10,500                | 18,750            |
| June  | 8,800                 | 16,200            |
| July  | 9,500                 | 17,100            |

- (a) Compute the variable and fixed cost elements using the high-low method.  
 (b) Estimate the total cost if the company produces 8,500 units.

Compute break-even point in units. (SO 6)

**Do it! 22-3** Lombardi Company has a unit selling price of \$250, variable cost per unit of \$160, and fixed costs of \$135,000. Compute the break-even point in units using (a) a mathematical equation and (b) contribution margin per unit.

Compute margin of safety percentage and required sales. (SO 8, 9)

**Do it! 22-4** Wales Company makes radios that sell for \$30 each. For the coming year, management expects fixed costs to total \$200,000 and variable costs to be \$20 per unit.  
 (a) Compute the break-even point in dollars using the contribution margin (CM) ratio.  
 (b) Compute the margin of safety percentage assuming actual sales are \$750,000.  
 (c) Compute the sales required in dollars to earn net income of \$120,000.

## Exercises

Define and classify variable, fixed, and mixed costs. (SO 1, 3)

**E22-1** Pyle Company manufactures a single product. Annual production costs incurred in the manufacturing process are shown below for two levels of production.

| <u>Production in Units</u> | <u>Costs Incurred</u> |                  |                   |                  |
|----------------------------|-----------------------|------------------|-------------------|------------------|
|                            | <u>5,000</u>          |                  | <u>10,000</u>     |                  |
|                            | <u>Total Cost</u>     | <u>Cost/Unit</u> | <u>Total Cost</u> | <u>Cost/Unit</u> |
| <u>Production Costs</u>    |                       |                  |                   |                  |
| Direct materials           | \$8,250               | \$1.65           | \$16,500          | \$1.65           |
| Direct labor               | 9,500                 | 1.90             | 19,000            | 1.90             |
| Utilities                  | 1,500                 | 0.30             | 2,500             | 0.25             |
| Rent                       | 4,000                 | 0.80             | 4,000             | 0.40             |
| Maintenance                | 800                   | 0.16             | 1,100             | 0.11             |
| Supervisory salaries       | 1,000                 | 0.20             | 1,000             | 0.10             |

### Instructions

- (a) Define the terms variable costs, fixed costs, and mixed costs.  
 (b) Classify each cost above as either variable, fixed, or mixed.

Determine fixed and variable costs using the high-low method and prepare graph. (SO 1, 3)

**E22-2** The controller of Loran Industries has collected the following monthly expense data for use in analyzing the cost behavior of maintenance costs.

| <u>Month</u> | <u>Total Maintenance Costs</u> | <u>Total Machine Hours</u> |
|--------------|--------------------------------|----------------------------|
| January      | \$2,400                        | 300                        |
| February     | 3,000                          | 400                        |
| March        | 3,600                          | 600                        |
| April        | 4,500                          | 790                        |
| May          | 3,200                          | 500                        |
| June         | 4,900                          | 800                        |

### Instructions

- (a) Determine the fixed and variable cost components using the high-low method.  
 (b) Prepare a graph showing the behavior of maintenance costs, and identify the fixed and variable cost elements. Use 200 unit increments and \$1,000 cost increments.

Classify variable, fixed, and mixed costs. (SO 1, 3)

**E22-3** Blue's Sisters Furniture Corporation incurred the following costs.

- Wood used in the production of furniture.
- Fuel used in delivery trucks.

3. Straight-line depreciation on factory building.
4. Screws used in the production of furniture.
5. Sales staff salaries.
6. Sales commissions.
7. Property taxes.
8. Insurance on buildings.
9. Hourly wages of furniture craftsmen.
10. Salaries of factory supervisors.
11. Utilities expense.
12. Telephone bill.

**Instructions**

Identify the costs above as variable, fixed, or mixed.

**E22-4** Vic Taley wants Taley Company to use CVP analysis to study the effects of changes in costs and volume on the company. Taley has heard that certain assumptions must be valid in order for CVP analysis to be useful.

*Explain assumptions underlying CVP analysis.*  
(SO 4)

**Instructions**

Prepare a memo to Vic Taley concerning the assumptions that underlie CVP analysis.

**E22-5** In the month of June, Bonita Beauty Salon gave 2,700 haircuts, shampoos, and permanents at an average price of \$30. During the month, fixed costs were \$18,000 and variable costs were 70% of sales.

*Compute contribution margin, break-even point, and margin of safety.*  
(SO 5, 6, 8)

**Instructions**

- (a) Determine the contribution margin in dollars, per unit, and as a ratio.
- (b) Using the contribution margin technique, compute the break-even point in dollars and in units.
- (c) Compute the margin of safety in dollars and as a ratio.

**E22-6** Stuart Company estimates that variable costs will be 60% of sales, and fixed costs will total \$800,000. The selling price of the product is \$4.

*Prepare a CVP graph and compute break-even point and margin of safety.*  
(SO 6, 8)

**Instructions**

- (a) Prepare a CVP graph, assuming maximum sales of \$3,200,000. (Note: Use \$400,000 increments for sales and costs and 100,000 increments for units.)
- (b) Compute the break-even point in (1) units and (2) dollars.
- (c) Compute the margin of safety in (1) dollars and (2) as a ratio, assuming actual sales are \$2.5 million.

**E22-7** Green with Envy provides environmentally friendly lawn services for homeowners. Its operating costs are as follows.

|                         |                    |
|-------------------------|--------------------|
| Depreciation            | \$1,500 per month  |
| Advertising             | \$200 per month    |
| Insurance               | \$ 2,000 per month |
| Weed and feed materials | \$13 per lawn      |
| Direct labor            | \$12 per lawn      |
| Fuel                    | \$2 per lawn       |

*Compute break-even point in units and dollars.*  
(SO 5, 6)

Green with Envy charges \$60 per treatment for the average single-family lawn.

**Instructions**

Determine the company's break-even point in (a) number of lawns serviced per month and (b) dollars.

**E22-8** The Lake Shore Inn is trying to determine its break-even point. The inn has 50 rooms that it rents at \$60 a night. Operating costs are as follows.

*Compute break-even point.*  
(SO 5, 6)

|              |                   |
|--------------|-------------------|
| Salaries     | \$7,200 per month |
| Utilities    | \$1,500 per month |
| Depreciation | \$1,200 per month |
| Maintenance  | \$300 per month   |
| Maid service | \$8 per room      |
| Other costs  | \$28 per room     |

**Instructions**

Determine the inn's break-even point in (a) number of rented rooms per month and (b) dollars.

Compute contribution margin and break-even point.  
(SO 5, 6)

**E22-9** In the month of March, New Day Spa services 570 clients at an average price of \$120. During the month, fixed costs were \$21,000 and variable costs were 65% of sales.

**Instructions**

- (a) Determine the contribution margin in dollars, per unit, and as a ratio.
- (b) Using the contribution margin technique, compute the break-even point in dollars and in units.

Compute break-even point.  
(SO 5, 6)

**E22-10** Airport Connection provides shuttle service between four hotels near a medical center and an international airport. Airport Connection uses two 10-passenger vans to offer 12 round trips per day. A recent month's activity in the form of a cost-volume-profit income statement is shown below.

|                             |          |
|-----------------------------|----------|
| Fare revenues (1,440 fares) | \$36,000 |
| Variable costs              |          |
| Fuel                        | \$ 5,040 |
| Tolls and parking           | 3,100    |
| Maintenance                 | 500      |
|                             | 8,640    |
| Contribution margin         | 27,360   |
| Fixed costs                 |          |
| Salaries                    | 13,000   |
| Depreciation                | 1,300    |
| Insurance                   | 1,128    |
|                             | 15,428   |
| Net income                  | \$11,932 |

**Instructions**

- (a) Calculate the break-even point in (1) dollars and (2) number of fares.
- (b) Without calculations, determine the contribution margin at the break-even point.

Compute variable cost per unit, contribution margin ratio, and increase in fixed costs.  
(SO 5, 6)

**E22-11** In 2012, Paterno Company had a break-even point of \$350,000 based on a selling price of \$7 per unit and fixed costs of \$105,000. In 2013, the selling price and the variable cost per unit did not change, but the break-even point increased to \$420,000.

**Instructions**

- (a) Compute the variable cost per unit and the contribution margin ratio for 2012.
- (b) Compute the increase in fixed costs for 2013.

Prepare CVP income statements.  
(SO 5, 6)

**E22-12** CTU Company has the following information available for September 2012.

|   |          |
|---|----------|
| Unit selling price of video game consoles | \$ 400   |
| Unit variable costs                       | \$ 270   |
| Total fixed costs                         | \$52,000 |
| Units sold                                | 620      |

**Instructions**

- (a) Prepare a CVP income statement that shows both total and per unit amounts.
- (b) Compute CTU's break-even point in units.
- (c) Prepare a CVP income statement for the break-even point that shows both total and per unit amounts.

Compute various components to derive target net income under different assumptions.  
(SO 6, 7)

**E22-13** Manx Company had \$150,000 of net income in 2012 when the selling price per unit was \$150, the variable costs per unit were \$90, and the fixed costs were \$570,000. Management expects per unit data and total fixed costs to remain the same in 2013. The president of Manx Company is under pressure from stockholders to increase net income by \$60,000 in 2013.

**Instructions**

- (a) Compute the number of units sold in 2012.
- (b) Compute the number of units that would have to be sold in 2013 to reach the stockholders' desired profit level.
- (c) Assume that Manx Company sells the same number of units in 2013 as it did in 2012. What would the selling price have to be in order to reach the stockholders' desired profit level?

Compute net income under different alternatives.  
(SO 7)

**E22-14** Erin Company reports the following operating results for the month of August: Sales \$350,000 (units 5,000); variable costs \$210,000; and fixed costs \$90,000. Management is considering the following independent courses of action to increase net income.

1. Increase selling price by 10% with no change in total variable costs.
2. Reduce variable costs to 55% of sales.
3. Reduce fixed costs by \$10,000.

**Instructions**

Compute the net income to be earned under each alternative. Which course of action will produce the highest net income?

**E22-15** Yeltsin Company had sales in 2012 of \$1,500,000 on 60,000 units. Variable costs totaled \$840,000, and fixed costs totaled \$500,000.

A new raw material is available that will decrease the variable costs per unit by 20% (or \$2.80). However, to process the new raw material, fixed operating costs will increase by \$60,000. Management feels that one-half of the decline in the variable costs per unit should be passed on to customers in the form of a sales price reduction. The marketing department expects that this sales price reduction will result in a 7% increase in the number of units sold.

*Prepare a CVP income statement before and after changes in business environment.*

(SO 9)

**Instructions**

Prepare a CVP income statement for 2012, assuming the changes are made as described.

**\*E22-16** Titus Company manufactures and distributes industrial air compressors. The following costs are available for the year ended December 31, 2012. The company has no beginning inventory. In 2012, 1,500 units were produced, but only 1,300 units were sold. The unit selling price was \$4,500. Costs and expenses were:

*Compute total product cost and prepare an income statement using variable costing.*

(SO 10)

|  |             |
|--|-------------|
| Variable costs per unit                      |             |
| Direct materials                             | \$ 1,000    |
| Direct labor                                 | 1,500       |
| Variable manufacturing overhead              | 300         |
| Variable selling and administrative expenses | 70          |
| Annual fixed costs and expenses              |             |
| Manufacturing overhead                       | \$1,400,000 |
| Selling and administrative expenses          | 100,000     |

**Instructions**

(a) Compute the manufacturing cost of one unit of product using variable costing.

(b) Prepare a 2012 income statement for Titus Company using variable costing.

**\*E22-17** Symond Corporation produces one product. Its cost includes direct materials (\$10 per unit), direct labor (\$8 per unit), variable overhead (\$6 per unit), fixed manufacturing (\$250,000), and fixed selling and administrative (\$30,000). In October 2012, Symond produced 25,000 units and sold 20,000 at \$50 each.

*Prepare absorption cost and variable cost income statements.*

(SO 10)

**Instructions**

(a) Prepare an absorption costing income statement.

(b) Prepare a variable costing income statement.

(c) Explain the difference in net income in the two income statements.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

**P22-1A** Stan Loy owns the Vista Barber Shop. He employs five barbers and pays each a base rate of \$1,000 per month. One of the barbers serves as the manager and receives an extra \$500 per month. In addition to the base rate, each barber also receives a commission of \$5.50 per haircut.

Other costs are as follows.

|                 |   |
|-----------------|---|
| Advertising     | \$200 per month                         |
| Rent            | \$900 per month                         |
| Barber supplies | \$0.30 per haircut                      |
| Utilities       | \$175 per month plus \$0.20 per haircut |
| Magazines       | \$25 per month                          |

Stan currently charges \$10 per haircut.

*Determine variable and fixed costs, compute break-even point, prepare a CVP graph, and determine net income.*

(SO 1, 3, 5, 6)

**Instructions**

- (a) Determine the variable cost per haircut and the total monthly fixed costs.
- (b) Compute the break-even point in units and dollars.
- (c) Prepare a CVP graph, assuming a maximum of 1,800 haircuts in a month. Use increments of 300 haircuts on the horizontal axis and \$3,000 on the vertical axis.
- (d) Determine net income, assuming 1,900 haircuts are given in a month.

Prepare a CVP income statement, compute break-even point, contribution margin ratio, margin of safety ratio, and sales for target net income. (SO 5, 6, 7, 8, 9)

**P22-2A** Hytek Company bottles and distributes Livit, a diet soft drink. The beverage is sold for 50 cents per 16-ounce bottle to retailers, who charge customers 75 cents per bottle. For the year 2012, management estimates the following revenues and costs.

|                                 |             |                                  |          |
|---------------------------------|-------------|----------------------------------|----------|
| Net sales                       | \$1,800,000 | Selling expenses—variable        | \$70,000 |
| Direct materials                | 430,000     | Selling expenses—fixed           | 65,000   |
| Direct labor                    | 352,000     | Administrative expenses—variable | 20,000   |
| Manufacturing overhead—variable | 316,000     | Administrative expenses—fixed    | 60,000   |
| Manufacturing overhead—fixed    | 283,000     |                                  |          |

**Instructions**

- (a) Prepare a CVP income statement for 2012 based on management’s estimates.
- (b) Compute the break-even point in (1) units and (2) dollars.
- (c) Compute the contribution margin ratio and the margin of safety ratio. (Round to full percents.)
- (d) Determine the sales dollars required to earn net income of \$238,000.

Compute break-even point under alternative courses of action. (SO 5, 6)

**P22-3A** Magic Manufacturing’s sales slumped badly in 2012. For the first time in its history, it operated at a loss. The company’s income statement showed the following results from selling 600,000 units of product: Net sales \$2,400,000; total costs and expenses \$2,540,000; and net loss \$140,000. Costs and expenses consisted of the amounts shown below.

|                         | <u>Total</u>       | <u>Variable</u>    | <u>Fixed</u>     |
|-------------------------|--------------------|--------------------|------------------|
| Cost of goods sold      | \$2,100,000        | \$1,440,000        | \$660,000        |
| Selling expenses        | 240,000            | 72,000             | 168,000          |
| Administrative expenses | 200,000            | 48,000             | 152,000          |
|                         | <u>\$2,540,000</u> | <u>\$1,560,000</u> | <u>\$980,000</u> |

Management is considering the following independent alternatives for 2013.

1. Increase unit selling price 20% with no change in costs, expenses, and sales volume.
2. Change the compensation of salespersons from fixed annual salaries totaling \$150,000 to total salaries of \$60,000 plus a 3% commission on net sales.
3. Purchase new automated equipment that will change the proportion between variable and fixed cost of goods sold to 54% variable and 46% fixed.

**Instructions**

- (a) Compute the break-even point in dollars for 2012.
- (b) Compute the break-even point in dollars under each of the alternative courses of action. (Round all ratios to nearest full percent.) Which course of action do you recommend?

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment. (SO 6, 8, 9)

**P22-4A** Svetlana Pace is the advertising manager for Bargain Shoe Store. She is currently working on a major promotional campaign. Her ideas include the installation of a new lighting system and increased display space that will add \$34,000 in fixed costs to the \$270,000 currently spent. In addition, Svetlana is proposing that a 5% price decrease (\$40 to \$38) will produce a 20% increase in sales volume (20,000 to 24,000). Variable costs will remain at \$22 per pair of shoes. Management is impressed with Svetlana’s ideas but concerned about the effects that these changes will have on the break-even point and the margin of safety.

**Instructions**

- (a) Compute the current break-even point in units, and compare it to the break-even point in units if Svetlana’s ideas are used.
- (b) Compute the margin of safety ratio for current operations and after Svetlana’s changes are introduced. (Round to nearest full percent.)
- (c) Prepare a CVP income statement for current operations and after Svetlana’s changes are introduced. Would you make the changes suggested?

**P22-5A** Lopez Corporation has collected the following information after its first year of sales. Net sales were \$1,600,000 on 100,000 units; selling expenses \$240,000 (40% variable and 60% fixed); direct materials \$511,000; direct labor \$285,000; administrative expenses \$280,000 (20% variable and 80% fixed); manufacturing overhead \$360,000 (70% variable and 30% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 10% next year.

#### Instructions

- Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)
- Compute the break-even point in units and sales dollars for the current year.
- The company has a target net income of \$310,000. What is the required sales in dollars for the company to meet its target?
- If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?
- The company is considering a purchase of equipment that would reduce its direct labor costs by \$104,000 and would change its manufacturing overhead costs to 30% variable and 70% fixed (assume total manufacturing overhead cost is \$360,000, as above). It is also considering switching to a pure commission basis for its sales staff. This would change selling expenses to 90% variable and 10% fixed (assume total selling expense is \$240,000, as above). Assuming that net sales remain at first-year levels, compute (1) the contribution margin and (2) the contribution margin ratio, and recompute (3) the break-even point in sales dollars. Comment on the effect each of management's proposed changes has on the break-even point.

**\*P22-6A** BLT produces plastic that is used for injection molding applications such as gears for small motors. In 2012, the first year of operations, BLT produced 6,000 tons of plastic and sold 5,000 tons. In 2013, the production and sales results were exactly reversed. In each year, selling price per ton was \$1,000, variable manufacturing costs were 15% of the sales price of units produced, variable selling expenses were 10% of the selling price of units sold, fixed manufacturing costs were \$2,100,000, and fixed administrative expenses were \$500,000.

#### Instructions

- Prepare comparative income statements for each year using variable costing.
- Prepare comparative income statements for each year using absorption costing.
- Reconcile the differences each year in income from operations under the two costing approaches.
- Comment on the effects of production and sales on net income under the two costing approaches.

*Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.*

(SO 5, 6, 7, 8)

*Prepare income statements under absorption and variable costing.*

(SO 10)

## Problems: Set B

**P22-1B** The All Cuts Barber Shop employs four barbers. One barber, who also serves as the manager, is paid a salary of \$3,900 per month. The other barbers are paid \$1,900 per month. In addition, each barber is paid a commission of \$2 per haircut. Other monthly costs are: store rent \$700 plus 60 cents per haircut, depreciation on equipment \$500, barber supplies 40 cents per haircut, utilities \$300, and advertising \$100. The price of a haircut is \$10.

#### Instructions

- Determine the variable cost per haircut and the total monthly fixed costs.
- Compute the break-even point in units and dollars.
- Prepare a CVP graph, assuming a maximum of 1,800 haircuts in a month. Use increments of 300 haircuts on the horizontal axis and \$3,000 increments on the vertical axis.
- Determine the net income, assuming 1,700 haircuts are given in a month.

**P22-2B** Mobley Company bottles and distributes No-FIZZ, a fruit drink. The beverage is sold for 50 cents per 16-ounce bottle to retailers, who charge customers 70 cents per bottle. For the year 2012, management estimates the following revenues and costs.

*Determine variable and fixed costs, compute break-even point, prepare a CVP graph, and determine net income.*

(SO 1, 3, 5, 6)

*Prepare a CVP income statement, compute break-even point, contribution margin ratio, margin of safety ratio, and sales for target net income.*

(SO 5, 6, 7, 8, 9)

|                                 |             |                                  |           |
|---------------------------------|-------------|----------------------------------|-----------|
| Net sales                       | \$2,000,000 | Selling expenses—variable        | \$ 80,000 |
| Direct materials                | 360,000     | Selling expenses—fixed           | 150,000   |
| Direct labor                    | 450,000     | Administrative expenses—variable | 40,000    |
| Manufacturing overhead—variable | 270,000     | Administrative expenses—fixed    | 70,000    |
| Manufacturing overhead—fixed    | 280,000     |                                  |           |

**Instructions**

- Prepare a CVP income statement for 2012 based on management's estimates.
- Compute the break-even point in (1) units and (2) dollars.
- Compute the contribution margin ratio and the margin of safety ratio.
- Determine the sales dollars required to earn net income of \$390,000.

Compute break-even point under alternative courses of action.

(SO 5, 6)

**P22-3B** Werner Manufacturing had a bad year in 2012. For the first time in its history, it operated at a loss. The company's income statement showed the following results from selling 60,000 units of product: Net sales \$1,500,000; total costs and expenses \$1,890,000; and net loss \$390,000. Costs and expenses consisted of the amounts shown below.

|                         | <u>Total</u>       | <u>Variable</u>    | <u>Fixed</u>     |
|-------------------------|--------------------|--------------------|------------------|
| Cost of goods sold      | \$1,350,000        | \$ 930,000         | \$420,000        |
| Selling expenses        | 420,000            | 65,000             | 355,000          |
| Administrative expenses | 120,000            | 55,000             | 65,000           |
|                         | <u>\$1,890,000</u> | <u>\$1,050,000</u> | <u>\$840,000</u> |

Management is considering the following independent alternatives for 2013.

- Increase unit selling price 40% with no change in costs, expenses, and sales volume.
- Change the compensation of salespersons from fixed annual salaries totaling \$200,000 to total salaries of \$30,000 plus a 4% commission on net sales.
- Purchase new high-tech factory machinery that will change the proportion between variable and fixed cost of goods sold to 50:50.

**Instructions**

- Compute the break-even point in dollars for 2012.
- Compute the break-even point in dollars under each of the alternative courses of action. Which course of action do you recommend?

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

(SO 6, 8, 9)

**P22-4B** Kay Jo is the advertising manager for Costless Shoe Store. She is currently working on a major promotional campaign. Her ideas include the installation of a new lighting system and increased display space that will add \$24,000 in fixed costs to the \$210,000 currently spent. In addition, Kay is proposing that a 6½% price decrease (from \$30 to \$28) will produce an increase in sales volume from 16,000 to 20,000 units. Variable costs will remain at \$15 per pair of shoes. Management is impressed with Kay's ideas but concerned about the effects that these changes will have on the break-even point and the margin of safety.

**Instructions**

- Compute the current break-even point in units, and compare it to the break-even point in units if Kay's ideas are used.
- Compute the margin of safety ratio for current operations and after Kay's changes are introduced. (Round to nearest full percent.)
- Prepare a CVP income statement for current operations and after Kay's changes are introduced. Would you make the changes suggested?

Compute break-even point and margin of safety ratio, and prepare a CVP income statement before and after changes in business environment.

(SO 5, 6, 7, 8)

**P22-5B** Perkins Corporation has collected the following information after its first year of sales. Net sales were \$2,000,000 on 100,000 units; selling expenses \$400,000 (30% variable and 70% fixed); direct materials \$600,000; direct labor \$340,000; administrative expenses \$500,000 (30% variable and 70% fixed); manufacturing overhead \$480,000 (20% variable and 80% fixed). Top management has asked you to do a CVP analysis so that it can make plans for the coming year. It has projected that unit sales will increase by 20% next year.

**Instructions**

- Compute (1) the contribution margin for the current year and the projected year, and (2) the fixed costs for the current year. (Assume that fixed costs will remain the same in the projected year.)
- Compute the break-even point in units and sales dollars.

- (c) The company has a target net income of \$374,000. What is the required sales in dollars for the company to meet its target?
- (d) If the company meets its target net income number, by what percentage could its sales fall before it is operating at a loss? That is, what is its margin of safety ratio?
- (e) The company is considering a purchase of equipment that would reduce its direct labor costs by \$140,000 and would change its manufacturing overhead costs to 10% variable and 90% fixed (assume total manufacturing overhead cost is \$480,000, as above). It is also considering switching to a pure commission basis for its sales staff. This would change selling expenses to 80% variable and 20% fixed (assume total selling expense is \$400,000, as above). Compute (1) the contribution margin and (2) the contribution margin ratio, and recompute (3) the break-even point in sales dollars. Comment on the effect each of management's proposed changes has on the break-even point.

**\*P22-6B** Azul Metal Company produces the steel wire that goes into the production of paper clips. In 2012, the first year of operations, Azul produced 50,000 miles of wire and sold 45,000 miles. In 2013, the production and sales results were exactly reversed. In each year, selling price per mile was \$60, variable manufacturing costs were 20% of the sales price, variable selling expenses were \$8.00 per mile sold, fixed manufacturing costs were \$1,200,000, and fixed administrative expenses were \$230,000.

*Prepare income statements under absorption and variable costing.*

(SO 10)

#### Instructions

- (a) Prepare comparative income statements for each year using variable costing.
- (b) Prepare comparative income statements for each year using absorption costing.
- (c) Reconcile the differences each year in income from operations under the two costing approaches.
- (d) Comment on the effects of production and sales on net income under the two costing approaches.

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Waterways Continuing Problem

(Note: This is a continuation of the Waterways Problem from Chapters 19 through 21.)

**WCP22** The Vice President for Sales and Marketing at Waterways Corporation is planning for production needs to meet sales demand in the coming year. He is also trying to determine how the company's profits might be increased in the coming year. This problem asks you to use cost-volume-profit concepts to help Waterways understand contribution margins of some of its products and to decide whether to mass-produce certain products.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to see the completion of this problem.

# BROADENING YOUR PERSPECTIVE

## Decision Making Across the Organization

**BYP22-1** Zumello Company has decided to introduce a new product. The new product can be manufactured by either a capital-intensive method or a labor-intensive method. The manufacturing method will not affect the quality of the product. The estimated manufacturing costs by the two methods are as follows.

|                           | <u>Capital-<br/>Intensive</u> | <u>Labor-<br/>Intensive</u> |
|---------------------------|-------------------------------|-----------------------------|
| Direct materials          | \$5 per unit                  | \$5.50 per unit             |
| Direct labor              | \$6 per unit                  | \$8.00 per unit             |
| Variable overhead         | \$3 per unit                  | \$4.50 per unit             |
| Fixed manufacturing costs | \$2,508,000                   | \$1,538,000                 |

Zumello's market research department has recommended an introductory unit sales price of \$30. The incremental selling expenses are estimated to be \$502,000 annually plus \$2 for each unit sold, regardless of manufacturing method.

### Instructions

With the class divided into groups, answer the following.

- (a) Calculate the estimated break-even point in annual unit sales of the new product if Zumello Company uses the:
  - (1) Capital-intensive manufacturing method.
  - (2) Labor-intensive manufacturing method.
- (b) Determine the annual unit sales volume at which Zumello Company would be indifferent between the two manufacturing methods.
- (c) Explain the circumstance under which Zumello should employ each of the two manufacturing methods. (CMA adapted)

## Managerial Analysis

**BYP22-2** The condensed income statement for the Penn and Stiller partnership for 2012 is as follows.

| <b>PENN AND STILLER COMPANY</b>      |           |             |
|--------------------------------------|-----------|-------------|
| Income Statement                     |           |             |
| For the Year Ended December 31, 2012 |           |             |
| Sales (200,000 units)                |           | \$1,200,000 |
| Cost of goods sold                   |           | 800,000     |
|                                      |           | 400,000     |
| Gross profit                         |           | 400,000     |
| Operating expenses                   |           |             |
| Selling                              | \$280,000 |             |
| Administrative                       | 160,000   | 440,000     |
|                                      |           | 440,000     |
| Net loss                             |           | (\$40,000)  |

A cost behavior analysis indicates that 75% of the cost of goods sold are variable, 50% of the selling expenses are variable, and 25% of the administrative expenses are variable.

### Instructions

(Round to nearest unit, dollar, and percentage, where necessary. Use the CVP income statement format in computing profits.)

- (a) Compute the break-even point in total sales dollars and in units for 2012.
- (b) Penn has proposed a plan to get the partnership "out of the red" and improve its profitability. She feels that the quality of the product could be substantially improved by spending \$0.25 more per unit on better raw materials. The selling price per unit could be increased to only \$6.25 because of competitive pressures. Penn estimates that sales volume will increase by 30%. What effect would Penn's plan have on the profits and the break-even point in dollars of the partnership? (Round the contribution margin ratio to two decimal places.)
- (c) Stiller was a marketing major in college. She believes that sales volume can be increased only by intensive advertising and promotional campaigns. She therefore proposed the following plan as an alternative to Penn's: (1) Increase variable selling expenses to \$0.79 per unit, (2) lower the selling price per unit by \$0.30, and (3) increase fixed selling expenses by \$35,000. Stiller quoted an old marketing research report that said that sales volume would increase by 60% if these changes were made. What effect would Stiller's plan have on the profits and the break-even point in dollars of the partnership?
- (d) Which plan should be accepted? Explain your answer.

## Real-World Focus

**BYP22-3** The Coca-Cola Company hardly needs an introduction. A line taken from the cover of a recent annual report says it all: If you measured time in servings of Coca-Cola, "a billion Coca-Cola's ago was yesterday morning." On average, every U.S. citizen drinks 363 8-ounce servings of Coca-Cola products each year. Coca-Cola's primary line of business is the making and selling of syrup to bottlers. These bottlers then sell the finished bottles and cans of Coca-Cola to the consumer.

The annual report of Coca-Cola provided the following information.

### The Coca-Cola Company Management Discussion

Our gross margin declined to 61 percent this year from 62 percent in the prior year, primarily due to costs for materials such as sweeteners and packaging.

The increases [in selling expenses] in the last two years were primarily due to higher marketing expenditures in support of our Company's volume growth.

We measure our sales volume in two ways: (1) gallon shipments of concentrates and syrups and (2) unit cases of finished product (bottles and cans of Coke sold by bottlers).

#### Instructions

Answer the following questions.

- Are sweeteners and packaging a variable cost or a fixed cost? What is the impact on the contribution margin of an increase in the per unit cost of sweeteners or packaging? What are the implications for profitability?
- In your opinion, are marketing expenditures a fixed cost, variable cost, or mixed cost to The Coca-Cola Company? Give justification for your answer.
- Which of the two measures cited for measuring volume represents the activity index as defined in this chapter? Why might Coca-Cola use two different measures?

## On the Web

**BYP22-4** Ganong Bros. Ltd., located in St. Stephen, New Brunswick, is Canada's oldest independent candy company. Its products are distributed worldwide. In 1885, Ganong invented the popular "chicken bone," a cinnamon-flavored, pink, hard candy jacket over a chocolate center. The home page of Ganong, listed below, includes information about the company and its products.

**Address:** [www.ganong.com/retail/chicken\\_bones.html](http://www.ganong.com/retail/chicken_bones.html), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

#### Instructions

Read the description of "chicken bones" and answer the following.

- Describe the steps in making "chicken bones."
- Identify at least two variable and two fixed costs that are likely to affect the production of "chicken bones."

## Communication Activity

**BYP22-5** Your roommate asks your help on the following questions about CVP analysis formulas.

- How can the mathematical equation for break-even sales show both sales units and sales dollars?
- How do the formulas differ for contribution margin per unit and contribution margin ratio?
- How can contribution margin be used to determine break-even sales in units and in dollars?

#### Instructions

Write a memo to your roommate stating the relevant formulas and answering each question.

## Ethics Case

**BYP22-6** Harry Plimpton is an accountant for Handley Company. Early this year, Harry made a highly favorable projection of sales and profits over the next 3 years for Handley's hot-selling computer PLEX. As a result of the projections Harry presented to senior management, the company decided to expand production in this area. This decision led to dislocations of some plant personnel who were reassigned to one of the company's newer plants in another state. However, no one was fired, and in fact the company expanded its work force slightly.

Unfortunately, Harry rechecked his computations on the projections a few months later and found that he had made an error that would have reduced his projections substantially. Luckily, sales of PLEX have exceeded projections so far, and management is satisfied with its decision. Harry, however, is not sure

what to do. Should he confess his honest mistake and jeopardize his possible promotion? He suspects that no one will catch the error because sales of PLEX have exceeded his projections, and it appears that profits will materialize close to his projections.

### Instructions

- Who are the stakeholders in this situation?
- Identify the ethical issues involved in this situation.
- What are the possible alternative actions for Harry? What would you do in Harry's position?

## "All About You" Activity

**BYP22-7** In the **All About You** feature (available on the book's companion website), you learned that cost-volume-profit analysis can be used in making personal financial decisions. The purchase of a new car is one of your biggest personal expenditures. It is important that you carefully analyze your options.

Suppose that you are considering the purchase of a hybrid vehicle. Let's assume the following facts: The hybrid will initially cost an additional \$3,000 above the cost of a traditional vehicle. The hybrid will get 40 miles per gallon of gas, and the traditional car will get 25 miles per gallon. Also, assume that the cost of gas is \$4 per gallon.

### Instructions

Using the facts above, answer the following questions.

- What is the variable gasoline cost of going one mile in the hybrid car? What is the variable cost of going one mile in the traditional car?
- Using the information in part (a), if "miles" is your unit of measure, what is the "contribution margin" of the hybrid vehicle relative to the traditional vehicle? That is, express the variable cost savings on a per-mile basis.
- How many miles would you have to drive in order to break even on your investment in the hybrid car?
- What other factors might you want to consider?

### Answers to Insight and Accounting Across the Organization Questions

**p. 1014 Woodworker Runs an Efficient Operation for Producing Furniture** **Q:** Are the costs associated with use of the computer-driven cutting machine fixed or variable? **A:** The cost of the cutting machine that is recognized through depreciation expense is a fixed cost. The costs of operating (electricity) and maintaining the machine are variable.

**p. 1018 Skilled Labor Is Truly Essential** **Q:** Would you characterize labor costs as being a fixed cost, a variable cost, or something else in this situation? **A:** Because these labor costs are essentially unchanged for most levels of production, they are primarily fixed. However, it could be described as being a "step function." If production gets too far outside the normal range, workers' hours will change. If production goes too low, hours are cut, and if it goes too high, overtime hours are needed.

**p. 1024 Charter Flights Offer a Good Deal** **Q:** How did FlightServe determine that it would break even with 3.3 seats full per flight? **A:** FlightServe determined its break-even point with the following formula: Fixed costs  $\div$  Contribution margin per seat occupied = Break-even point in seats.

**p. 1028 How a Rolling Stones' Tour Makes Money** **Q:** What amount of sales dollars are required for the promoter to break even? **A:** Fixed costs = \$1,200,000 + \$400,000 = \$1,600,000; contribution margin ratio = 80%; and break-even sales = \$1,600,000  $\div$  .80 = \$2,000,000.

# CHAPTER 23

## Budgetary Planning

### Study Objectives

After studying this chapter, you should be able to:

- 1 Indicate the benefits of budgeting.
- 2 State the essentials of effective budgeting.
- 3 Identify the budgets that comprise the master budget.
- 4 Describe the sources for preparing the budgeted income statement.
- 5 Explain the principal sections of a cash budget.
- 6 Indicate the applicability of budgeting in nonmanufacturing companies.

### Feature Story

#### THE NEXT AMAZON.COM? NOT QUITE

The bursting of the dot-com bubble resulted in countless stories of dot-com failures. Many of these ventures were half-baked, get-rich-quick schemes, rarely based on sound business practices. Initially they saw money flowing in faster than they knew what to do with—which was precisely the problem. Without proper planning and budgeting, much of the money went to waste. In some cases, failure was actually brought on by rapid, uncontrolled growth.

One such example was online discount bookseller [www.Positively-You.com](http://www.Positively-You.com). One of the website's co-founders, Lyle Bowline, had never run a business. However, his experience as an assistant director of an entrepreneurial center had provided him with knowledge about the do's and don'ts of small business. To minimize costs, he started the company small and simple. He invested \$5,000 in computer equipment and ran the business

out of his basement. In the early months, even though sales were only about \$2,000 a month, the company actually made a profit because it kept its costs low (a feat few other dot-coms could boast of).

Things changed dramatically when the company received national publicity in the financial press. Suddenly the company's sales increased to \$50,000 a month—fully 25 times the previous level. The “simple” little business suddenly needed a business plan, a strategic plan, and a budget. It needed to rent office space and to hire employees.

Initially, members of a local book club donated time to help meet the sudden demand. Some put in so much time that eventually the company hired them. Quickly the number of paid employees ballooned. The sudden growth necessitated detailed planning and budgeting. The need for a proper budget was accentuated by the fact that the company's gross profit was only 16 cents on each dollar of goods sold. This meant that after paying for its inventory, the company had only 16 cents of every dollar to cover its remaining operating costs.

Unfortunately, the company never got things under control. Within a few months, sales had plummeted to \$12,000 per month. At this level of sales the company could not meet the mountain of monthly expenses that it had accumulated in trying to grow. Ironically, the company's sudden success, and the turmoil it created, appears to have been what eventually caused the company to fail.

## Preview of CHAPTER 23

As the Feature Story about [Positively-You.com](http://Positively-You.com) indicates, budgeting is critical to financial well-being. As a student, you budget your study time and your money. Families budget income and expenses. Governmental agencies budget revenues and expenditures. Business enterprises use budgets in planning and controlling their operations.

Our primary focus in this chapter is budgeting—specifically, how budgeting is used as a *planning tool* by management. Through budgeting, it should be possible for management to maintain enough cash to pay creditors, to have sufficient raw materials to meet production requirements, and to have adequate finished goods to meet expected sales.

The content and organization of Chapter 23 are as follows.

## Budgeting Basics

One of management's major responsibilities is planning. As explained in Chapter 19, **planning** is the process of establishing enterprise-wide objectives. A successful organization makes both long-term and short-term plans. These plans set forth the objectives of the company and the proposed way of accomplishing them.

A **budget** is a formal written statement of management's plans for a specified future time period, expressed in financial terms. It normally represents the primary method of communicating agreed-upon objectives throughout the organization. Once adopted, a budget becomes an important basis for evaluating performance. It promotes efficiency and serves as a deterrent to waste and inefficiency. We consider the role of budgeting as a **control device** in Chapter 24.

### *Budgeting and Accounting*

Accounting information makes major contributions to the budgeting process. From the accounting records, companies can obtain historical data on revenues, costs, and expenses. These data are helpful in formulating future budget goals.

Normally, accountants have the responsibility for presenting management's budgeting goals in financial terms. In this role, they translate management's plans and communicate the budget to employees throughout the company. They prepare periodic budget reports that provide the basis for measuring performance and

comparing actual results with planned objectives. The budget itself, and the administration of the budget, however, are entirely management responsibilities.

## The Benefits of Budgeting

The primary benefits of budgeting are:

1. It requires all levels of management to **plan ahead** and to formalize goals on a recurring basis.
2. It provides **definite objectives** for evaluating performance at each level of responsibility.
3. It creates an **early warning system** for potential problems so that management can make changes before things get out of hand.
4. It facilitates the **coordination of activities** within the business. It does this by correlating the goals of each segment with overall company objectives. Thus, the company can integrate production and sales promotion with expected sales.
5. It results in greater **management awareness** of the entity's overall operations and the impact on operations of external factors, such as economic trends.
6. It **motivates personnel** throughout the organization to meet planned objectives.

A budget is an aid to management; it is not a *substitute* for management. A budget cannot operate or enforce itself. Companies can realize the benefits of budgeting only when managers carefully administer budgets.

## Essentials of Effective Budgeting

Effective budgeting depends on a **sound organizational structure**. In such a structure, authority and responsibility for all phases of operations are clearly defined. Budgets based on **research and analysis** should result in realistic goals that will contribute to the growth and profitability of a company. And, the effectiveness of a budget program is directly related to its **acceptance by all levels of management**.

Once adopted, the budget should be an important tool for evaluating performance. Managers should systematically and periodically review variations between actual and expected results to determine their cause(s). However, individuals should not be held responsible for variations that are beyond their control.

## Length of the Budget Period

The budget period is not necessarily one year in length. **A budget may be prepared for any period of time**. Various factors influence the length of the budget period. These factors include the type of budget, the nature of the organization, the need for periodic appraisal, and prevailing business conditions. For example, cash may be budgeted monthly, whereas a plant expansion budget may cover a 10-year period.

The budget period should be long enough to provide an attainable goal under normal business conditions. Ideally, the time period should minimize the impact of seasonal or cyclical fluctuations. On the other hand, the budget period should not be so long that reliable estimates are impossible.

The **most common budget period is one year**. The annual budget, in turn, is often supplemented by monthly and quarterly budgets. Many companies use **continuous 12-month budgets**. These budgets drop the month just ended and add a future month. One advantage of continuous budgeting is that it keeps management planning a full year ahead.

## The Budgeting Process

The development of the budget for the coming year generally starts several months before the end of the current year. The budgeting process usually begins with the

### Study Objective [1]

Indicate the benefits of budgeting.

### Study Objective [2]

State the essentials of effective budgeting.

collection of data from each organizational unit of the company. Past performance is often the starting point from which future budget goals are formulated.

The budget is developed within the framework of a **sales forecast**. This forecast shows potential sales for the industry and the company's expected share of such sales. Sales forecasting involves a consideration of various factors: (1) general economic conditions, (2) industry trends, (3) market research studies, (4) anticipated advertising and promotion, (5) previous market share, (6) changes in prices, and (7) technological developments. The input of sales personnel and top management is essential to the sales forecast.

In small companies like **Positively-You.com**, the budgeting process is often informal. In larger companies, a **budget committee** has responsibility for coordinating the preparation of the budget. The committee ordinarily includes the president, treasurer, chief accountant (controller), and management personnel from each of the major areas of the company, such as sales, production, and research. The budget committee serves as a review board where managers can defend their budget goals and requests. Differences are reviewed, modified if necessary, and reconciled. The budget is then put in its final form by the budget committee, approved, and distributed.

## ACCOUNTING ACROSS THE ORGANIZATION

### Businesses Often Feel Too Busy to Plan for the Future

A study by Willard & Shullman Group Ltd. found that fewer than 14% of businesses with fewer than 500 employees prepare an annual budget or have a written business plan. In all, nearly 60% of these businesses have no plans on paper at all. For many small businesses the basic assumption is that, "As long as I sell as much as I can, and keep my employees paid, I'm doing OK." A few small business owners even say that they see no need for budgeting and planning. Most small business owners, though, say that they understand that budgeting and planning are critical for survival and growth. But given the long hours that they already work addressing day-to-day challenges, they also say that they are "just too busy to plan for the future."

**?** Describe a situation in which a business "sells as much as it can" but cannot "keep its employees paid." (See page 1095.)

### *Budgeting and Human Behavior*

A budget can have a significant impact on human behavior. It may inspire a manager to higher levels of performance. Or, it may discourage additional effort and pull down the morale of a manager. Why do these diverse effects occur? The answer is found in how the budget is developed and administered.

In developing the budget, each level of management should be invited to participate. This "bottom-to-top" approach is referred to as **participative budgeting**. The advantages of participative budgeting are, first, that lower-level managers have more detailed knowledge of their specific area and thus are able to provide more accurate budgetary estimates. Second, when lower-level managers participate in the budgeting process, they are more likely to perceive the resulting budget as fair. The overall goal is to reach agreement on a budget that the managers consider fair and achievable, but which also meets the corporate goals set by top management. When this goal is met, the budget will provide positive motivation for the managers. In contrast, if the managers view the budget as being unfair and unrealistic, they may feel discouraged and uncommitted to budget goals. The risk of having unrealistic budgets is generally greater when the budget is developed from top management down to lower management than vice versa.

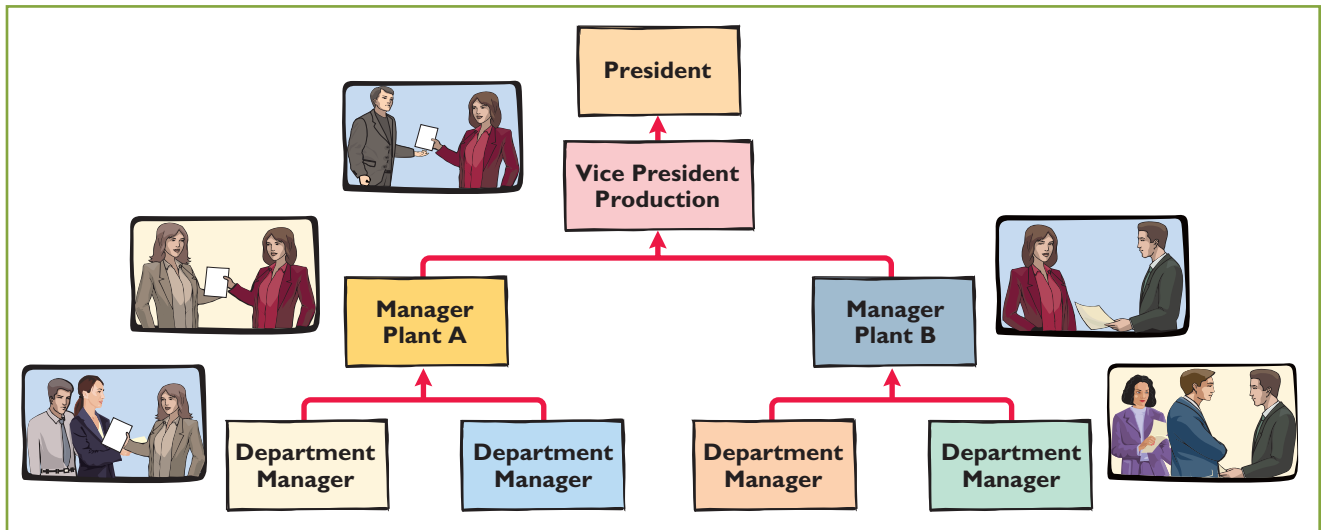

Participative budgeting does, however, have potential disadvantages. First, it is more time-consuming (and thus more costly) than a “top-down” approach, in which the budget is simply dictated to lower-level managers. A second disadvantage is that participative budgeting can foster budgetary “gaming” through budgetary slack. **Budgetary slack** occurs when managers intentionally underestimate budgeted revenues or overestimate budgeted expenses in order to make it easier to achieve budgetary goals. To minimize budgetary slack, higher-level managers must carefully review and thoroughly question the budget projections provided to them by employees whom they supervise. Illustration 23-1 graphically displays the appropriate flow of budget data from bottom to top in an organization.

### Ethics Note

Unrealistic budgets can lead to unethical employee behavior such as cutting corners on the job or distorting internal financial reports.

**Illustration 23-1**

Flow of budget data from lower levels of management to top levels

For the budget to be effective, top management must completely support the budget. The budget is an important basis for evaluating performance. It also can be used as a positive aid in achieving projected goals. The effect of an evaluation is positive when top management tempers criticism with advice and assistance. In contrast, a manager is likely to respond negatively if top management uses the budget exclusively to assess blame. A budget should not be used as a pressure device to force improved performance. In sum, a budget can be a manager’s friend or a foe.

## ACCOUNTING ACROSS THE ORGANIZATION

### Which Budget Approach Do You Prefer?

At one time, in an effort to revive its plummeting stock, **Time Warner’s** top management determined and publicly announced bold new financial goals for the coming year. Unfortunately, these goals were not reached.

The next year the company got a new CEO who promised, “We will not over promise, and we will deliver.” The new budgets were developed with each operating unit setting what it felt were optimistic but attainable goals. In the words of one manager, using this approach created a sense of teamwork: “We’re all going forward with our arms locked together.”

Source: Carol J. Loomis, “AOL Time Warner’s New Math,” *Fortune* (February 4, 2002), pp. 98–102.

**?** What approach did Time Warner use to prepare the old budget? What approach did it use to prepare the new budget? (See page 1095.)

**Helpful Hint**

In comparing a budget with a long-range plan:

- (1) Which has more detail?
- (2) Which is done for a longer period of time?
- (3) Which is more concerned with short-term goals?

Answers: (1) Budget.  
(2) Long-range plan.  
(3) Budget.

**Study Objective [3]**

Identify the budgets that comprise the master budget.

## Budgeting and Long-Range Planning

Budgeting and long-range planning are not the same. One important difference is the **time period involved**. The maximum length of a budget is usually one year, and budgets are often prepared for shorter periods of time, such as a month or a quarter. In contrast, long-range planning usually encompasses a period of at least five years.

A second significant difference is in **emphasis**. Budgeting focuses on achieving specific short-term goals, such as meeting annual profit objectives. **Long-range planning**, on the other hand, identifies long-term goals, selects strategies to achieve those goals, and develops policies and plans to implement the strategies. In long-range planning, management also considers anticipated trends in the economic and political environment and how the company should cope with them.

The final difference between budgeting and long-range planning relates to the **amount of detail presented**. Budgets, as you will see in this chapter, can be very detailed. Long-range plans contain considerably less detail. The data in long-range plans are intended more for a review of progress toward long-term goals than as a basis of control for achieving specific results. The primary objective of long-range planning is to develop the best strategy to maximize the company's performance over an extended future period.

## The Master Budget

The term "budget" is actually a shorthand term to describe a variety of budget documents. All of these documents are combined into a master budget. The **master budget** is a set of interrelated budgets that constitutes a plan of action for a specified time period.

The master budget contains two classes of budgets. **Operating budgets** are the individual budgets that result in the preparation of the budgeted income statement. These budgets establish goals for the company's sales and production personnel. In contrast, **financial budgets** are the capital expenditure budget, the cash budget, and the budgeted balance sheet. These budgets focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

Illustration 23-2 pictures the individual budgets included in a master budget, and the sequence in which they are prepared. The company first develops the operating budgets, beginning with the sales budget. Then it prepares the financial budgets. We will explain and illustrate each budget shown in Illustration 23-2 except the capital expenditure budget. That budget is discussed under the topic of capital budgeting in Chapter 26.

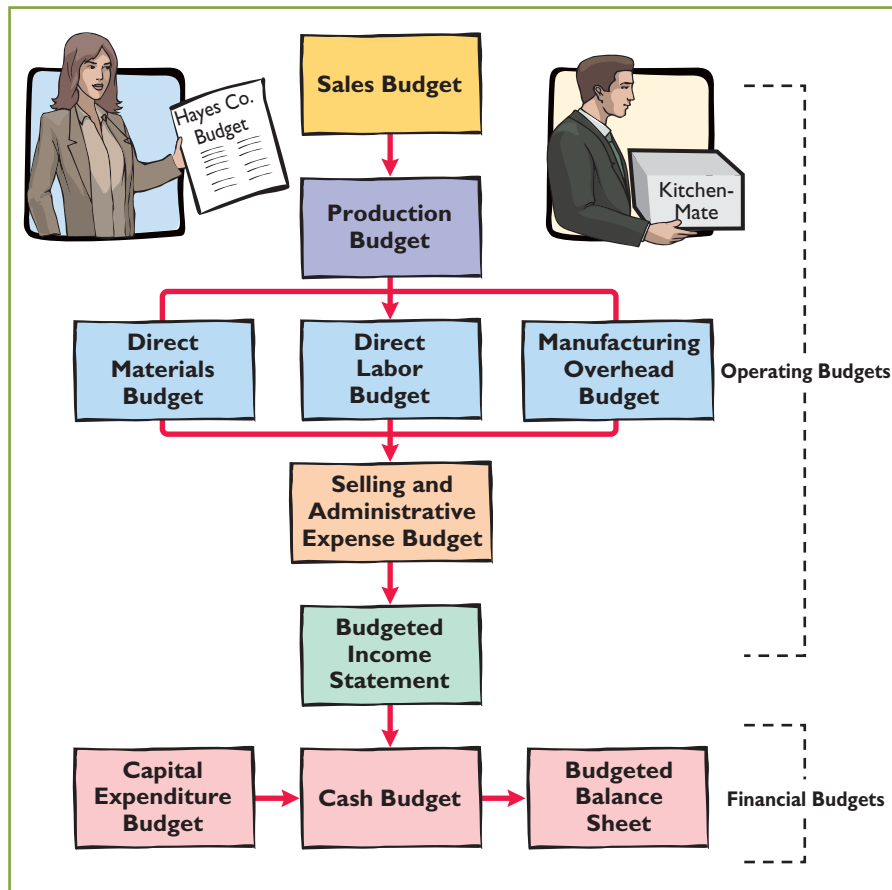

## Do it!

### Budget Terminology

Use this list of terms to complete the sentences that follow.

|                     |                         |
|---------------------|-------------------------|
| Long-range planning | Participative budgeting |
| Sales forecast      | Operating budgets       |
| Master budget       | Financial budgets       |

1. A \_\_\_\_\_ shows potential sales for the industry and a company's expected share of such sales.
2. \_\_\_\_\_ are used as the basis for the preparation of the budgeted income statement.
3. The \_\_\_\_\_ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
4. \_\_\_\_\_ identifies long-term goals, selects strategies to achieve these goals, and develops policies and plans to implement the strategies.

**Illustration 23-2**  
Components of the master budget

5. Lower-level managers are more likely to perceive results as fair and achievable under a \_\_\_\_\_ approach.
6. \_\_\_\_\_ focus primarily on the cash resources needed to fund expected operations and planned capital expenditures.

**Solution**

- |                       |                             |
|-----------------------|-----------------------------|
| 1. Sales forecast.    | 4. Long-range planning.     |
| 2. Operating budgets. | 5. Participative budgeting. |
| 3. Master budget.     | 6. Financial budgets.       |

Related exercise material: BE23-1, E23-1, and **Do it!** 23-1.

**action plan**

- ✓ Understand the budgeting process, including the importance of the sales forecast.
- ✓ Understand the difference between an operating and a financial budget.
- ✓ Differentiate budgeting from long-range planning.
- ✓ Realize that the master budget is a set of interrelated budgets.

## Preparing the Operating Budgets

We use a case study of Hayes Company in preparing the operating budgets. Hayes manufactures and sells a single product, Kitchen-Mate. The budgets are prepared by quarters for the year ending December 31, 2012. Hayes Company begins its annual budgeting process on September 1, 2011, and it completes the budget for 2012 by December 1, 2011.

### Sales Budget

As shown in the master budget in Illustration 23-2, **the sales budget is the first budget prepared.** Each of the other budgets depends on the sales budget. The **sales budget**

**Helpful Hint**

For a retail or manufacturing company, what is the starting point in preparing the master budget, and why?

Answer: The sales budget is the starting point for the master budget. It sets the level of activity for other functions such as production and purchasing.

is derived from the sales forecast. It represents management’s best estimate of sales revenue for the budget period. An inaccurate sales budget may adversely affect net income. For example, an overly optimistic sales budget may result in excessive inventories that may have to be sold at reduced prices. In contrast, an unduly conservative budget may result in loss of sales revenue due to inventory shortages.

For example, at one time **Amazon** significantly underestimated demand for its e-book reader, the Kindle. As a consequence, it did not produce enough units and was completely sold out well before the holiday shopping season. Not only did this represent a huge lost opportunity for Amazon, but it exposed it to potential competitors, who were eager to provide customers with alternatives to the Kindle.

Forecasting sales is challenging. For example, consider the forecasting challenges faced by major sports arenas, whose revenues depend on the success of the home team. **Madison Square Garden**’s revenues from April to June were \$193 million when the Knicks made the NBA playoffs. But revenues were only \$133.2 million a couple of years later when the team did not make the playoffs. Or consider the challenges faced by Hollywood movie producers in predicting the complicated revenue stream produced by a new movie. Movie theater ticket sales represent only 20% of total revenue. The bulk of revenue comes from global sales, DVDs, video-on-demand, merchandising products, and videogames, all of which are difficult to forecast.

The sales budget is prepared by multiplying the expected unit sales volume for each product by its anticipated unit selling price. Hayes Company expects sales volume to be 3,000 units in the first quarter, with 500-unit increases in each succeeding quarter. Illustration 23-3 shows the sales budget for the year, by quarters, based on a sales price of \$60 per unit.

**Illustration 23-3**  
Sales budget

| 2 | <b>Sales Budget</b>                          |                  |                  |                  |                  |                  |
| 3 | <b>For the Year Ending December 31, 2012</b> |                  |                  |                  |                  |                  |
| 4 |  | Quarter          |                  |                  |                  |                  |
| 5 |  | 1                | 2                | 3                | 4                | Year             |
| 6 | Expected unit sales                          | 3,000            | 3,500            | 4,000            | 4,500            | 15,000           |
| 7 | Unit selling price                           | × \$60           | × \$60           | × \$60           | × \$60           | × \$60           |
| 8 | <b>Total sales</b>                           | <b>\$180,000</b> | <b>\$210,000</b> | <b>\$240,000</b> | <b>\$270,000</b> | <b>\$900,000</b> |

Some companies classify the anticipated sales revenue as cash or credit sales and by geographical regions, territories, or salespersons.

**Production Budget**

The **production budget** shows the units to produce to meet anticipated sales. Production requirements are determined from the following formula.<sup>1</sup>

**Illustration 23-4**  
Production requirements formula

|                             |          |  |          |                                       |          |                                  |
|-----------------------------|----------|--|----------|---------------------------------------|----------|----------------------------------|
| <b>Budgeted Sales Units</b> | <b>+</b> | <b>Desired Ending Finished Goods Units</b> | <b>–</b> | <b>Beginning Finished Goods Units</b> | <b>=</b> | <b>Required Production Units</b> |
|-----------------------------|----------|--|----------|---------------------------------------|----------|----------------------------------|

<sup>1</sup>This formula ignores any work in process inventories, which are assumed to be nonexistent in Hayes Company.

**A realistic estimate of ending inventory is essential in scheduling production requirements.** Excessive inventories in one quarter may lead to cutbacks in production and employee layoffs in a subsequent quarter. On the other hand, inadequate inventories may result either in added costs for overtime work or in lost sales. Hayes Company believes it can meet future sales requirements by maintaining an ending inventory equal to 20% of the next quarter’s budgeted sales volume. For example, the ending finished goods inventory for the first quarter is 700 units (20% × anticipated second-quarter sales of 3,500 units). Illustration 23-5 shows the production budget.

**Illustration 23-5**  
Production budget

The production budget, in turn, provides the basis for the budgeted costs for each manufacturing cost element, as explained in the following pages.

### Direct Materials Budget

The **direct materials budget** shows both the quantity and cost of direct materials to be purchased. The quantities of direct materials are derived from the following formula.

|   |   |   |   |  |   |  |
|---|---|---|---|--|---|--|
| Direct<br>Materials Units<br>Required for<br>Production | + | Desired Ending<br>Direct<br>Materials Units | – | Beginning<br>Direct<br>Materials Units | = | Required<br>Direct Materials<br>Units to<br>Be Purchased |
|---|---|---|---|--|---|--|

**Illustration 23-6**  
Formula for direct materials quantities

The company then computes the budgeted cost of direct materials to be purchased by multiplying the required units of direct materials by the anticipated cost per unit.

**The desired ending inventory is again a key component in the budgeting process.** For example, inadequate inventories could result in temporary shutdowns of production. Because of its close proximity to suppliers, Hayes Company maintains an ending inventory of raw materials equal to 10% of the next quarter’s production requirements. The manufacture of each Kitchen-Mate requires 2 pounds of raw materials, and the expected cost per pound is \$4. Illustration 23-7 (page 1062) shows the direct materials budget. Assume that the desired ending direct materials amount is 1,020 pounds for the fourth quarter of 2012.

**Illustration 23-7**  
Direct materials budget

## Do it!

### Master Budget

Soriano Company is preparing its master budget for 2012. Relevant data pertaining to its sales, production, and direct materials budgets are as follows:

**Sales:** Sales for the year are expected to total 1,200,000 units. Quarterly sales are 20%, 25%, 30%, and 25% respectively. The sales price is expected to be \$50 per unit for the first three quarters and \$55 per unit beginning in the fourth quarter. Sales in the first quarter of 2013 are expected to be 10% higher than the budgeted sales for the first quarter of 2012.

**Production:** Management desires to maintain the ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

**Direct materials:** Each unit requires 3 pounds of raw materials at a cost of \$5 per pound. Management desires to maintain raw materials inventories at 5% of the next quarter's production requirements. Assume the production requirements for the first quarter of 2013 are 810,000 pounds.

#### action plan

- ✓ Know the form and content of the sales budget.
- ✓ Prepare the sales budget first, as the basis for the other budgets.
- ✓ Determine the units that must be produced to meet anticipated sales.
- ✓ Know how to compute the beginning and ending finished goods units.
- ✓ Determine the materials required to meet production needs.
- ✓ Know how to compute the beginning and ending direct materials units.

Prepare the sales, production, and direct materials budgets by quarters for 2012.

## Direct Labor Budget

Like the direct materials budget, the **direct labor budget** contains the quantity (hours) and cost of direct labor necessary to meet production requirements. The total direct labor cost is derived from the following formula.

|                      |   |                            |   |                            |   |                         |
|----------------------|---|----------------------------|---|----------------------------|---|-------------------------|
| Units to Be Produced | × | Direct Labor Time per Unit | × | Direct Labor Cost per Hour | = | Total Direct Labor Cost |
|----------------------|---|----------------------------|---|----------------------------|---|-------------------------|

**Illustration 23-8**  
Formula for direct labor cost

Direct labor hours are determined from the production budget. At Hayes Company, two hours of direct labor are required to produce each unit of finished goods. The anticipated hourly wage rate is \$10. Illustration 23-9 (page 1064) shows these data.

**Illustration 23-9**

|---|-----------------|-----------------|-----------------|-----------------|------------------|
|   | Quarter         |                 |                 |                 | Year             |
|   | 1               | 2               | 3               | 4               |                  |
| Units to be produced (Illustration 23-5)                                      | 3,100           | 3,600           | 4,100           | 4,600           |                  |
| Direct labor time (hours) per unit  | × 2             | × 2             | × 2             | × 2             |                  |
| Total required direct labor hours   | 6,200           | 7,200           | 8,200           | 9,200           |                  |
| Direct labor cost per hour  | × \$10          | × \$10          | × \$10          | × \$10          |                  |
| <b>Total direct labor cost</b>  | <b>\$62,000</b> | <b>\$72,000</b> | <b>\$82,000</b> | <b>\$92,000</b> | <b>\$308,000</b> |

**Helpful Hint**

An important assumption in Illustration 23-9 is that the company can add to and subtract from its work force as needed so that the \$10 per hour labor cost applies to a wide range of possible production activity.

The direct labor budget is critical in maintaining a labor force that can meet the expected levels of production.

**Manufacturing Overhead Budget**

The **manufacturing overhead budget** shows the expected manufacturing overhead costs for the budget period. As Illustration 23-10 shows, **this budget distinguishes between variable and fixed overhead costs**. Hayes Company expects variable costs to fluctuate with production volume on the basis of the following rates per direct labor hour: indirect materials \$1.00, indirect labor \$1.40, utilities \$0.40, and maintenance \$0.20. Thus, for the 6,200 direct labor hours to produce 3,100 units, budgeted indirect materials are \$6,200 (6,200 × \$1), and budgeted indirect labor is \$8,680 (6,200 × \$1.40). Hayes also recognizes that some maintenance is fixed. The amounts reported for fixed costs are assumed for our example. The accuracy of budgeted fixed overhead cost estimates can be greatly improved by employing activity-based costing.

**Illustration 23-10**  
Manufacturing overhead budget

| HAYES COMPANY<br>Manufacturing Overhead Budget<br>For the Year Ending December 31, 2012 |                 |                 |                 |                 |                  |

| <b>Variable costs</b>   |                 |                 |                 |                 |                  |
| Indirect materials (\$1.00/hour)  | \$ 6,200        | \$ 7,200        | \$ 8,200        | \$ 9,200        | \$ 30,800        |
| Indirect labor (\$1.40/hour)  | 8,680           | 10,080          | 11,480          | 12,880          | 43,120           |
| Utilities (\$0.40/hour)   | 2,480           | 2,880           | 3,280           | 3,680           | 12,320           |
| Maintenance (\$0.20/hour)   | 1,240           | 1,440           | 1,640           | 1,840           | 6,160            |
| <b>Total variable costs</b>   | <b>18,600</b>   | <b>21,600</b>   | <b>24,600</b>   | <b>27,600</b>   | <b>92,400</b>    |
| <b>Fixed costs</b>  |                 |                 |                 |                 |                  |
| Supervisory salaries  | 20,000          | 20,000          | 20,000          | 20,000          | 80,000           |
| Depreciation  | 3,800           | 3,800           | 3,800           | 3,800           | 15,200           |
| Property taxes and insurance  | 9,000           | 9,000           | 9,000           | 9,000           | 36,000           |
| Maintenance   | 5,700           | 5,700           | 5,700           | 5,700           | 22,800           |
| <b>Total fixed costs</b>  | <b>38,500</b>   | <b>38,500</b>   | <b>38,500</b>   | <b>38,500</b>   | <b>154,000</b>   |
| <b>Total manufacturing overhead</b>   | <b>\$57,100</b> | <b>\$60,100</b> | <b>\$63,100</b> | <b>\$66,100</b> | <b>\$246,400</b> |
| <b>Direct labor hours (Illustration 23-9)</b>   | <b>6,200</b>    | <b>7,200</b>    | <b>8,200</b>    | <b>9,200</b>    | <b>30,800</b>    |
| <b>Manufacturing overhead rate per direct labor hour (\$246,400 ÷ 30,800)</b>           |                 |                 |                 |                 | <b>\$ 8</b>      |

At Hayes Company, overhead is applied to production on the basis of direct labor hours. Thus, as Illustration 23-10 shows, the annual rate is \$8 per hour ( $\$246,400 \div 30,800$ ).

## Selling and Administrative Expense Budget

Hayes Company combines its operating expenses into one budget, the **selling and administrative expense budget**. This budget projects anticipated selling and administrative expenses for the budget period. This budget (Illustration 23-11) also classifies expenses as either variable or fixed. In this case, the variable expense rates per unit of sales are sales commissions \$3 and freight-out \$1. Variable expenses per quarter are based on the unit sales from the sales budget (Illustration 23-3). For example, Hayes expects sales in the first quarter to be 3,000 units. Thus, Sales Commissions Expense is \$9,000 ( $3,000 \times \$3$ ), and Freight-out is \$3,000 ( $3,000 \times \$1$ ). Fixed expenses are based on assumed data. Illustration 23-11 shows the selling and administrative expense budget.

|  | A               | B               | C               | D               | E                | F |
|--|-----------------|-----------------|-----------------|-----------------|------------------|---|

**Illustration 23-11**  
Selling and administrative expense budget

## Budgeted Income Statement

The **budgeted income statement** is the important end-product of the operating budgets. This budget indicates the expected profitability of operations for the budget period. The budgeted income statement provides the basis for evaluating company performance. Budgeted income statements often act as a call to action. For example, a board member at **XM Satellite Radio Holdings** felt that budgeted costs were too high relative to budgeted revenues. When management refused to cut its marketing and programming costs, the board member resigned; he felt that without the cuts, the company risked financial crisis.

As you would expect, the budgeted income statement is prepared from the various operating budgets. For example, to find the cost of goods sold, it is first necessary to determine the total unit cost of producing one Kitchen-Mate, as follows.

### Study Objective [4]

Describe the sources for preparing the budgeted income statement.

**Illustration 23-12**

Computation of total unit cost

| Cost Element           | Cost of One Kitchen-Mate |          |           | Total          |
|------------------------|--------------------------|----------|-----------|----------------|
|                        | Illustration             | Quantity | Unit Cost |                |
| Direct materials       | 23-7                     | 2 pounds | \$ 4.00   | \$ 8.00        |
| Direct labor           | 23-9                     | 2 hours  | \$10.00   | 20.00          |
| Manufacturing overhead | 23-10                    | 2 hours  | \$ 8.00   | 16.00          |
| <b>Total unit cost</b> |                          |          |           | <b>\$44.00</b> |

Hayes Company then determines cost of goods sold by multiplying the units sold by the unit cost. Its budgeted cost of goods sold is \$660,000 (15,000 × \$44). All data for the statement come from the individual operating budgets except the following: (1) interest expense is expected to be \$100, and (2) income taxes are estimated to be \$12,000. Illustration 23-13 shows the budgeted income statement.

**Illustration 23-13**

Budgeted income statement

| Hayes Company<br>Budgeted Income Statement<br>For the Year Ending December 31, 2012 |                  |
|---|------------------|
| Sales (Illustration 23-3)   | \$900,000        |
| Cost of goods sold (15,000 × \$44)  | <u>660,000</u>   |
| Gross profit  | 240,000          |
| Selling and administrative expenses (Illustration 23-11)                            | <u>180,000</u>   |
| Income from operations  | 60,000           |
| Interest expense  | <u>100</u>       |
| Income before income taxes  | 59,900           |
| Income tax expense  | <u>12,000</u>    |
| Net income  | <u>\$ 47,900</u> |

## Do it!

### Budgeted Income Statement

Soriano Company is preparing its budgeted income statement for 2012. Relevant data pertaining to its sales, production, and direct materials budgets can be found in the **Do it!** exercise on page 1062.

In addition, Soriano budgets 0.5 hours of direct labor per unit, labor costs at \$15 per hour, and manufacturing overhead at \$25 per direct labor hour. Its budgeted selling and administrative expenses for 2012 are \$12,000,000.

**action plan**

- ✓ Recall that total unit cost consists of direct materials, direct labor, and manufacturing overhead.
- ✓ Recall that direct materials costs are included in the direct materials budget.
- ✓ Know the form and content of the income statement.
- ✓ Use the total unit sales information from the sales budget to compute annual sales and cost of goods sold.

- (a) Calculate the budgeted total unit cost.
- (b) Prepare the budgeted income statement for 2012.

**Solution**

(a)

| Cost Element           | Quantity   | Unit Cost | Total          |
|------------------------|------------|-----------|----------------|
| Direct materials       | 3.0 pounds | \$ 5      | \$15.00        |
| Direct labor           | 0.5 hours  | \$15      | 7.50           |
| Manufacturing overhead | 0.5 hours  | \$25      | 12.50          |
| <b>Total unit cost</b> |            |           | <b>\$35.00</b> |

(b)

| Soriano Company<br>Budgeted Income Statement<br>For the Year Ending December 31, 2012 |                     |
|---|---------------------|
| Sales (1,200,000 units from sales budget, page 1062)                                  | \$61,500,000        |
| Cost of goods sold (1,200,000 × \$35.00/unit)   | 42,000,000          |
| Gross profit  | <u>19,500,000</u>   |
| Selling and administrative expenses   | <u>12,000,000</u>   |
| Net income  | <u>\$ 7,500,000</u> |

 Related exercise material: BE23-8, E23-11, and **Do it!** 23-3.

## Preparing the Financial Budgets

As shown in Illustration 23-2 (page 1059), the financial budgets consist of the capital expenditure budget, the cash budget, and the budgeted balance sheet. We will discuss the capital expenditure budget in Chapter 26; the other budgets are explained in the following sections.

### Cash Budget

The **cash budget** shows anticipated cash flows. Because cash is so vital, this budget is often considered to be the most important financial budget.

The cash budget contains three sections (cash receipts, cash disbursements, and financing) and the beginning and ending cash balances, as shown in Illustration 23-14.

| Any Company<br>Cash Budget                                    |                |
|---|----------------|
| Beginning cash balance  | \$X,XXX        |
| <b>Add: Cash receipts</b> (Itemized)                          | <u>X,XXX</u>   |
| Total available cash  | X,XXX          |
| <b>Less: Cash disbursements</b> (Itemized)                    | <u>X,XXX</u>   |
| Excess (deficiency) of available cash over cash disbursements | X,XXX          |
| <b>Financing</b>  | <u>X,XXX</u>   |
| Ending cash balance   | <u>\$X,XXX</u> |

The **cash receipts section** includes expected receipts from the company's principal source(s) of revenue. These are usually cash sales and collections from customers on credit sales. This section also shows anticipated receipts of interest and dividends, and proceeds from planned sales of investments, plant assets, and the company's capital stock.

### Study Objective [5]

Explain the principal sections of a cash budget.

**Illustration 23-14**  
Basic form of a cash budget

### Helpful Hint

Why is the cash budget prepared after the other budgets are prepared?  
Answer: Because the information generated by the other budgets dictates the expected inflows and outflows of cash.

The **cash disbursements section** shows expected cash payments. Such payments include direct materials, direct labor, manufacturing overhead, and selling and administrative expenses. This section also includes projected payments for income taxes, dividends, investments, and plant assets.

The **financing section** shows expected borrowings and the repayment of the borrowed funds plus interest. Companies need this section when there is a cash deficiency or when the cash balance is below management's minimum required balance.

Data in the cash budget are prepared in sequence. The ending cash balance of one period becomes the beginning cash balance for the next period. Companies obtain data for preparing the cash budget from other budgets and from information provided by management. In practice, cash budgets are often prepared for the year on a monthly basis.

To minimize detail, we will assume that Hayes Company prepares an annual cash budget by quarters. Hayes Company's cash budget is based on the following assumptions.

1. The January 1, 2012, cash balance is expected to be \$38,000.
2. Sales (Illustration 23-3, page 1060): 60% are collected in the quarter sold and 40% are collected in the following quarter. Accounts receivable of \$60,000 at December 31, 2011, are expected to be collected in full in the first quarter of 2012.
3. Short-term investments are expected to be sold for \$2,000 cash in the first quarter.
4. Direct materials (Illustration 23-7, page 1062): 50% are paid in the quarter purchased and 50% are paid in the following quarter. Accounts payable of \$10,600 at December 31, 2011, are expected to be paid in full in the first quarter of 2012.
5. Direct labor (Illustration 23-9, page 1064): 100% is paid in the quarter incurred.
6. Manufacturing overhead (Illustration 23-10, page 1064) and selling and administrative expenses (Illustration 23-11, page 1065): All items except depreciation are paid in the quarter incurred.
7. Management plans to purchase a truck in the second quarter for \$10,000 cash.
8. Hayes makes equal quarterly payments of its estimated annual income taxes.
9. Loans are repaid in the earliest quarter in which there is sufficient cash (that is, when the cash on hand exceeds the \$15,000 minimum required balance).

In preparing the cash budget, it is useful to prepare schedules for collections from customers (assumption No. 2, above) and cash payments for direct materials (assumption No. 4, above). These schedules are shown in Illustrations 23-15 and 23-16.

**Illustration 23-15**  
Collections from customers

**Illustration 23-16**  
Payments for direct materials

Illustration 23-17 shows the cash budget for Hayes Company. The budget indicates that Hayes will need \$3,000 of financing in the second quarter to maintain a minimum cash balance of \$15,000. Since there is an excess of available cash over disbursements of \$22,500 at the end of the third quarter, the borrowing, plus \$100 interest, is repaid in this quarter.

**Illustration 23-17**

| 27                                    | <sup>b</sup> \$42,000-\$1,000 depreciation                    |           |                     |           |           |  |

**A cash budget contributes to more effective cash management.** It shows managers when additional financing is necessary well before the actual need arises. And, it indicates when excess cash is available for investments or other purposes.

## SERVICE COMPANY INSIGHT

### Without a Budget, Can the Games Begin?

Behind the grandeur of the Olympic Games lies a huge financial challenge—how to keep budgeted costs in line with revenues. For example, the 2006 Winter Olympics in Turin, Italy, narrowly avoided going into bankruptcy before the Games even started. In order for the event to remain solvent, organizers cancelled glitzy celebrations and shifted promotional responsibilities to an Italian state-run agency. Despite these efforts, after the Games were over, the Italian government created a lottery game to cover its financial losses.

As another example, organizers of the 2002 Winter Olympics in Salt Lake City cut budgeted costs by \$200 million shortly before the events began. According to the chief operating and financial officer, the organizers went through every line item in the budget, sorting each one into “must have” versus “nice to have.” As a result, the Salt Lake City Games produced a surplus of \$100 million.

Source: Gabriel Kahn and Roger Thurow, “In Turin, Paying for Games Went Down to the Wire,” *Wall Street Journal* (February 10, 2006).

**?** Why does it matter whether the Olympic Games exceed their budget? (See page 1095.)

## Budgeted Balance Sheet

The **budgeted balance sheet** is a projection of financial position at the end of the budget period. This budget is developed from the budgeted balance sheet for the preceding year and the budgets for the current year. Pertinent data from the budgeted balance sheet at December 31, 2011, are as follows.

|                          |           |                   |           |
|--------------------------|-----------|-------------------|-----------|
| Buildings and equipment  | \$182,000 | Common stock      | \$225,000 |
| Accumulated depreciation | \$ 28,800 | Retained earnings | \$ 46,480 |

Illustration 23-18 shows Hayes Company’s budgeted balance sheet at December 31, 2012.

The computations and sources of the amounts are explained below.

**Cash:** Ending cash balance \$37,900, shown in the cash budget (Illustration 23-17, page 1069).

**Accounts receivable:** 40% of fourth-quarter sales \$270,000, shown in the schedule of expected collections from customers (Illustration 23-15, page 1068).

**Finished goods inventory:** Desired ending inventory 1,000 units, shown in the production budget (Illustration 23-5, page 1061) times the total unit cost \$44 (shown in Illustration 23-12, page 1066).

**Raw materials inventory:** Desired ending inventory 1,020 pounds, times the cost per pound \$4, shown in the direct materials budget (Illustration 23-7, page 1062).

**Buildings and equipment:** December 31, 2011, balance \$182,000, plus purchase of truck for \$10,000.

**Hayes Company**  
Budgeted Balance Sheet

|---|---------------|------------------|
| Cash  |               | \$ 37,900        |
| Accounts receivable                         |               | 108,000          |
| Finished goods inventory                    |               | 44,000           |
| Raw materials inventory                     |               | 4,080            |
| Buildings and equipment                     | \$192,000     |                  |
| Less: Accumulated depreciation              | <u>48,000</u> | <u>144,000</u>   |
| Total assets                                |               | <u>\$337,980</u> |
| <u>Liabilities and Stockholders' Equity</u> |               |                  |
| Accounts payable                            |               | \$ 18,600        |
| Common stock                                |               | 225,000          |
| Retained earnings                           |               | <u>94,380</u>    |
| Total liabilities and stockholders' equity  |               | <u>\$337,980</u> |

**Accumulated depreciation:** December 31, 2011, balance \$28,800, plus \$15,200 depreciation shown in manufacturing overhead budget (Illustration 23-10, page 1064) and \$4,000 depreciation shown in selling and administrative expense budget (Illustration 23-11, page 1065).

**Accounts payable:** 50% of fourth-quarter purchases \$37,200, shown in schedule of expected payments for direct materials (Illustration 23-16, page 1069).

**Common stock:** Unchanged from the beginning of the year.

**Retained earnings:** December 31, 2011, balance \$46,480, plus net income \$47,900, shown in budgeted income statement (Illustration 23-13, page 1066).

After budget data are entered into the computer, Hayes prepares the various budgets (sales, cash, etc.), as well as the budgeted financial statements. Using spreadsheets, management can also perform “what if” (sensitivity) analyses based on different hypothetical assumptions. For example, suppose that sales managers project that sales will be 10% higher in the coming quarter. What impact does this change have on the rest of the budgeting process and the financing needs of the business? The impact of the various assumptions on the budget is quickly determined by the spreadsheet. Armed with these analyses, managers make more informed decisions about the impact of various projects. They also anticipate future problems and business opportunities. As seen in this chapter, budgeting is an excellent use of electronic spreadsheets.

## Do it!

Martian Company management wants to maintain a minimum monthly cash balance of \$15,000. At the beginning of March, the cash balance is \$16,500, expected cash receipts for March are \$210,000, and cash disbursements are expected to be \$220,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

## Cash Budget

**action plan**

✓ Write down the basic form of the cash budget, starting with the beginning cash balance, adding cash receipts for the period, deducting cash disbursements, and identifying the needed financing to achieve the desired minimum ending cash balance.

✓ Insert the data given into the outlined form of the cash budget.

**Solution**

**MARTIAN COMPANY**  
Cash Budget  
For the Month Ending March 31, 2012

|  |           |
|--|-----------|
| Beginning cash balance                           | \$ 16,500 |
| Add: Cash receipts for March                     | 210,000   |
| Total available cash                             | 226,500   |
| Less: Cash disbursements for March               | 220,000   |
| Excess of available cash over cash disbursements | 6,500     |
| Financing  | 8,500     |
| Ending cash balance                              | \$ 15,000 |

To maintain the desired minimum cash balance of \$15,000, Martian Company must borrow \$8,500 cash.

## Budgeting in Nonmanufacturing Companies

### Study Objective [6]

Indicate the applicability of budgeting in nonmanufacturing companies.

Budgeting is not limited to manufacturers. Budgets are also used by merchandisers, service enterprises, and not-for-profit organizations.

### Merchandisers

As in manufacturing operations, the sales budget for a merchandiser is both the starting point and the key factor in the development of the master budget. The major differences between the master budgets of a merchandiser and a manufacturer are these:

1. A merchandiser **uses a merchandise purchases budget instead of a production budget.**
2. A merchandiser **does not use the manufacturing budgets (direct materials, direct labor, and manufacturing overhead).**

The **merchandise purchases budget** shows the estimated cost of goods to be purchased to meet expected sales. The formula for determining budgeted merchandise purchases is:

#### Illustration 23-19

Merchandise purchases formula

|  |   |   |   |  |   |   |
|--|---|---|---|--|---|---|
| <b>Budgeted<br/>Cost of<br/>Goods Sold</b> | + | <b>Desired Ending<br/>Merchandise<br/>Inventory</b> | – | <b>Beginning<br/>Merchandise<br/>Inventory</b> | = | <b>Required<br/>Merchandise<br/>Purchases</b> |
|--|---|---|---|--|---|---|

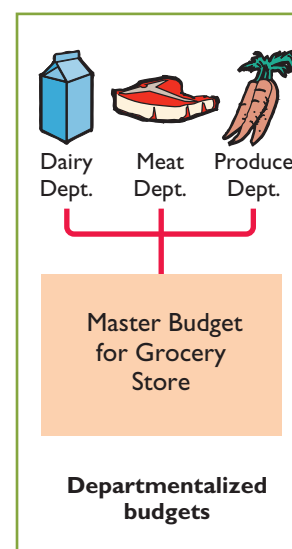

To illustrate, assume that the budget committee of Lima Company is preparing the merchandise purchases budget for July 2012. It estimates that budgeted sales will be \$300,000 in July and \$320,000 in August. Cost of goods sold is expected to be 70% of sales—that is, \$210,000 in July ( $.70 \times \$300,000$ ) and \$224,000 in August ( $.70 \times \$320,000$ ). Lima's desired ending inventory is 20% of the following month's

cost of goods sold. Required merchandise purchases for July are \$212,800, as shown in Illustration 23-20.

| <b>Lima Company</b><br>Merchandise Purchases Budget<br>For the Month Ending July 31, 2012 |                         |
|---|-------------------------|
| Budgeted cost of goods sold ( $\$300,000 \times 70\%$ )                                   | \$210,000               |
| Add: Desired ending merchandise inventory ( $\$224,000 \times 20\%$ )                     | 44,800                  |
| Total   | 254,800                 |
| Less: Beginning merchandise inventory ( $\$210,000 \times 20\%$ )                         | 42,000                  |
| <b>Required merchandise purchases for July</b>  | <b><u>\$212,800</u></b> |

**Illustration 23-20**  
Merchandise purchases budget

When a merchandiser is departmentalized, it prepares separate budgets for each department. For example, a grocery store prepares sales budgets and purchases budgets for each of its major departments, such as meats, dairy, and produce. The store then combines these budgets into a master budget for the store. When a retailer has branch stores, it prepares separate master budgets for each store. Then it incorporates these budgets into master budgets for the company as a whole.

## Service Enterprises

In a service enterprise, such as a public accounting firm, a law office, or a medical practice, the critical factor in budgeting is **coordinating professional staff needs with anticipated services**. If a firm is overstaffed, several problems may result: Labor costs are disproportionately high. Profits are lower because of the additional salaries. Staff turnover sometimes increases because of lack of challenging work. In contrast, if a service enterprise is understaffed, it may lose revenue because existing and prospective client needs for service cannot be met. Also, professional staff may seek other jobs because of excessive work loads.

Service enterprises can obtain budget data for service revenue from **expected output** or **expected input**. When output is used, it is necessary to determine the expected billings of clients for services provided. In a public accounting firm, for example, output is the sum of its billings in auditing, tax, and consulting services. When input data are used, each professional staff member projects his or her billable time. The firm then applies billing rates to billable time to produce expected service revenue.

## Not-for-Profit Organizations

Budgeting is just as important for not-for-profit organizations as for profit-oriented enterprises. The budget process, however, is different. In most cases, not-for-profit entities budget **on the basis of cash flows (expenditures and receipts), rather than on a revenue and expense basis**. Further, the starting point in the process is usually expenditures, not receipts. For the not-for-profit entity, management's task generally is to find the receipts needed to support the planned expenditures. The activity index is also likely to be significantly different. For example, in a not-for-profit entity, such as a university, budgeted faculty positions may be based on full-time equivalent students or credit hours expected to be taught in a department.

For some governmental units, voters approve the budget. In other cases, such as state governments and the federal government, legislative approval is required. After the budget is adopted, it must be followed. Overspending is often illegal.

In governmental budgets, authorizations tend to be on a line-by-line basis. That is, the budget for a municipality may have a specified authorization for police and fire protection, garbage collection, street paving, and so on. The line-item authorization of governmental budgets significantly limits the amount of discretion management can exercise. The city manager often cannot use savings from one line item, such as street paving, to cover increased spending in another line item, such as snow removal.

## SERVICE COMPANY INSIGHT

### Budget Shortfalls as Far as the Eye Can See

All organizations need to stick to budgets. The **Museum of Contemporary Art** in Los Angeles learned this the hard way. Over a 10-year period, its endowment shrunk from \$50 million to \$6 million as its newly hired director strove to build the museum's reputation through spending. The director consistently ran budget deficits, which eventually threatened the museum's survival.

The most recent recession has created budgeting challenges for nearly all governmental agencies. Tax revenues dropped rapidly as earnings declined and unemployment skyrocketed. At the same time, sources of debt financing dried up. To meet a projected shortfall of nearly \$50 billion, California proposed to cut the school year by five days, give state workers two unpaid days off per month, and raise the state's sales tax percentage. Even **Princeton University**, with the largest endowment per student of any U.S. university (\$2 million per student), experienced a 25% drop in the value of its endowment when the financial markets plunged. Because the endowment supports 45% of the university's \$1.25 billion budget, when the endowment fell the university had to make cuts. Many raises were capped at \$2,000, administrative budgets were cut by 5%, and major construction projects were put on hold.

Sources: Edward Wyatt and Jori Finkel, "Soaring in Art, Museum Trips Over Finances," *Wall Street Journal Online* (December 4, 2008); Stu Woo, "California's Plans to Close Gap Become More Drastic," *Wall Street Journal Online* (January 8, 2009); John Hechinger, "Princeton Cuts Budget as Endowment Slides," *Wall Street Journal Online* (January 9, 2009).

**?** Why would a university's budgeted scholarships probably fall when the stock market suffers a serious drop? (See page 1095.)

## COMPREHENSIVE

### Do it! 1

Barrett Company has completed all operating budgets other than the income statement for 2012. Selected data from these budgets follow.

Sales: \$300,000

Purchases of raw materials: \$145,000

Ending inventory of raw materials: \$15,000

Direct labor: \$40,000

Manufacturing overhead: \$73,000, including \$3,000 of depreciation expense

Selling and administrative expenses: \$36,000 including depreciation expense of \$1,000

Interest expense: \$1,000

Principal payment on note: \$2,000

Dividends declared: \$2,000

Income tax rate: 30%

## Other information:

Year-end accounts receivable: 4% of 2012 sales

Year-end accounts payable: 50% of ending inventory of raw materials

Interest, direct labor, manufacturing overhead, and selling and administrative expenses other than depreciation are paid as incurred.

Dividends declared and income taxes for 2012 will not be paid until 2013.

| <b>Barrett Company</b><br>Balance Sheet<br>December 31, 2011 |               |                 |
|--|---------------|-----------------|
| <b>Assets</b>  |               |                 |
| Cash   |               | \$20,000        |
| Raw materials inventory                                      |               | 10,000          |
| Equipment  | \$40,000      |                 |
| Less: Accumulated depreciation                               | <u>4,000</u>  | <u>36,000</u>   |
| Total assets   |               | <u>\$66,000</u> |
| <b>Liabilities and Stockholders' Equity</b>                  |               |                 |
| Accounts payable   | \$ 5,000      |                 |
| Notes payable  | <u>22,000</u> |                 |
| Total liabilities  |               | \$27,000        |
| Common stock   | 25,000        |                 |
| Retained earnings  | <u>14,000</u> | <u>39,000</u>   |
| Total liabilities and stockholders' equity                   |               | <u>\$66,000</u> |

**action plan**

- ✓ Recall that beginning raw materials inventory plus purchases less ending raw materials inventory equals direct materials used.
- ✓ Prepare the budgeted income statement before the budgeted balance sheet.
- ✓ Use the standard form of a cash budget to determine cash on the budgeted balance sheet.
- ✓ Add budgeted depreciation expense to accumulated depreciation at the beginning of the year to determine accumulated depreciation on the budgeted balance sheet.
- ✓ Add budgeted net income to retained earnings from the beginning of the year and subtract dividends declared to determine retained earnings on the budgeted balance sheet.
- ✓ Verify that total assets equal total liabilities and stockholders' equity on the budgeted balance sheet.

**Instructions**

- (a) Calculate budgeted cost of goods sold.
- (b) Prepare a budgeted income statement for the year ending December 31, 2012.
- (c) Prepare a budgeted balance sheet as of December 31, 2012.

**Solution to Comprehensive Do it! 1**

(a) Beginning raw materials + Purchases – Ending raw materials = Cost of direct materials used (\$10,000 + \$145,000 – \$15,000 = \$140,000)

Direct materials used + Direct labor + Manufacturing overhead = Cost of goods sold (\$140,000 + \$40,000 + \$73,000 = \$253,000)

(b)

**COMPREHENSIVE**  
**Do it! 2**

Asheville Company is preparing its master budget for 2012. Relevant data pertaining to its sales and production budgets are as follows:

Sales: Sales for the year are expected to total 1,200,000 units. Quarterly sales, as a percentage of total sales, are 20%, 25%, 30%, and 25%, respectively. The sales

price is expected to be \$50 per unit for the first three quarters and \$55 per unit beginning in the fourth quarter. Sales in the first quarter of 2013 are expected to be 10% higher than the budgeted sales volume for the first quarter of 2012.

Production: Management desires to maintain ending finished goods inventories at 25% of the next quarter's budgeted sales volume.

### Instructions

Prepare the sales budget and production budget by quarters for 2012.

<sup>1</sup>Estimated first-quarter 2013 sales volume  $240,000 + (240,000 \times 10\%) = 264,000$ ;  $264,000 \times 25\%$ .

<sup>2</sup>25% of estimated first-quarter 2012 sales units ( $240,000 \times 25\%$ ).

### action plan

- ✓ Know the form and content of the sales budget.
- ✓ Prepare the sales budget first as the basis for the other budgets.
- ✓ Determine the units that must be produced to meet anticipated sales.
- ✓ Know how to compute the beginning and ending finished goods units.

## Summary of Study Objectives

**[1] Indicate the benefits of budgeting.** The primary advantages of budgeting are that it (a) requires management to plan ahead, (b) provides definite objectives for evaluating performance, (c) creates an early warning system for potential problems, (d) facilitates coordination of activities, (e) results in greater management awareness, and (f) motivates personnel to meet planned objectives.

**[2] State the essentials of effective budgeting.** The essentials of effective budgeting are (a) sound organizational structure, (b) research and analysis, and (c) acceptance by all levels of management.

**[3] Identify the budgets that comprise the master budget.** The master budget consists of the following budgets: (a) sales, (b) production, (c) direct materials, (d) direct labor, (e) manufacturing overhead, (f) selling and administrative expense, (g) budgeted income statement, (h) capital expenditure budget, (i) cash budget, and (j) budgeted balance sheet.

**[4] Describe the sources for preparing the budgeted income statement.** The budgeted income statement is prepared from (a) the sales budget, (b) the budgets for direct materials, direct labor, and manufacturing overhead, and (c) the selling and administrative expense budget.

**[5] Explain the principal sections of a cash budget.** The cash budget has three sections (receipts, disbursements, and financing) and the beginning and ending cash balances.

**[6] Indicate the applicability of budgeting in nonmanufacturing companies.** Budgeting may be used by merchandisers for development of a master budget. In service enterprises budgeting is a critical factor in coordinating staff needs with anticipated services. In not-for-profit organizations, the starting point in budgeting is usually expenditures, not receipts.

## Glossary

- Budget** A formal written statement of management's plans for a specified future time period, expressed in financial terms. (p. 1054).
- Budget committee** A group responsible for coordinating the preparation of the budget. (p. 1056).
- Budgetary slack** The amount by which a manager intentionally underestimates budgeted revenues or overestimates budgeted expenses in order to make it easier to achieve budgetary goals. (p. 1057).
- Budgeted balance sheet** A projection of financial position at the end of the budget period. (p. 1070).
- Budgeted income statement** An estimate of the expected profitability of operations for the budget period. (p. 1065).
- Cash budget** A projection of anticipated cash flows. (p. 1067).
- Direct labor budget** A projection of the quantity and cost of direct labor necessary to meet production requirements. (p. 1063).
- Direct materials budget** An estimate of the quantity and cost of direct materials to be purchased. (p. 1061).
- Financial budgets** Individual budgets that focus primarily on the cash resources needed to fund expected operations and planned capital expenditures. (p. 1058).
- Long-range planning** A formalized process of selecting strategies to achieve long-term goals and developing policies and plans to implement the strategies. (p. 1058).
- Manufacturing overhead budget** An estimate of expected manufacturing overhead costs for the budget period. (p. 1064).
- Master budget** A set of interrelated budgets that constitutes a plan of action for a specific time period. (p. 1058).
- Merchandise purchases budget** The estimated cost of goods to be purchased by a merchandiser to meet expected sales. (p. 1072).
- Operating budgets** Individual budgets that result in a budgeted income statement. (p. 1058).
- Participative budgeting** A budgetary approach that starts with input from lower-level managers and works upward so that managers at all levels participate. (p. 1056).
- Production budget** A projection of the units that must be produced to meet anticipated sales. (p. 1060).
- Sales budget** An estimate of expected sales revenue for the budget period. (p. 1059).
- Sales forecast** The projection of potential sales for the industry and the company's expected share of such sales. (p. 1056).
- Selling and administrative expense budget** A projection of anticipated selling and administrative expenses for the budget period. (p. 1065).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 1095.

- (SO 1) 1. Which of the following is *not* a benefit of budgeting?
- Management can plan ahead.
  - An early warning system is provided for potential problems.
  - It enables disciplinary action to be taken at every level of responsibility.
  - The coordination of activities is facilitated.
- (SO 1) 2. A budget:
- is the responsibility of management accountants.
  - is the primary method of communicating agreed-upon objectives throughout an organization.
  - ignores past performance because it represents management's plans for a future time period.
  - may promote efficiency but has no role in evaluating performance.
- (SO 2) 3. The essentials of effective budgeting do *not* include:
- top-down budgeting.
  - management acceptance.
  - research and analysis.
  - sound organizational structure.
4. Compared to budgeting, long-range planning generally (SO 2) has the:
- same amount of detail.
  - longer time period.
  - same emphasis.
  - same time period.
5. A sales budget is: (SO 3)
- derived from the production budget.
  - management's best estimate of sales revenue for the year.
  - not the starting point for the master budget.
  - prepared only for credit sales.
6. The formula for the production budget is budgeted sales (SO 3) in units plus:
- desired ending merchandise inventory less beginning merchandise inventory.
  - beginning finished goods units less desired ending finished goods units.
  - desired ending direct materials units less beginning direct materials units.
  - desired ending finished goods units less beginning finished goods units.

- (SO 3) 7. Direct materials inventories are kept in pounds in Byrd Company, and the total pounds of direct materials needed for production is 9,500. If the beginning inventory is 1,000 pounds and the desired ending inventory is 2,200 pounds, the total pounds to be purchased is:
- 9,400.
  - 9,500.
  - 9,700.
  - 10,700.
- (SO 4) 8. The formula for computing the direct labor budget is to multiply the direct labor cost per hour by the:
- total required direct labor hours.
  - physical units to be produced.
  - equivalent units to be produced.
  - No correct answer is given.
- (SO 4) 9. Each of the following budgets is used in preparing the budgeted income statement *except* the:
- sales budget.
  - selling and administrative budget.
  - capital expenditure budget.
  - direct labor budget.
- (SO 4) 10. The budgeted income statement is:
- the end-product of the operating budgets.
  - the end-product of the financial budgets.
  - the starting point of the master budget.
  - dependent on cash receipts and cash disbursements.
- (SO 5) 11. The budgeted balance sheet is:
- developed from the budgeted balance sheet for the preceding year and the budgets for the current year.
  - the last operating budget prepared.
  - used to prepare the cash budget.
  - All of the above.
- (SO 5) 12. The format of a cash budget is:
- Beginning cash balance + Cash receipts + Cash from financing – Cash disbursements = Ending cash balance.
  - Beginning cash balance + Cash receipts – Cash disbursements +/- Financing = Ending cash balance.
  - Beginning cash balance + Net income – Cash dividends = Ending cash balance.
  - Beginning cash balance + Cash revenues – Cash expenses = Ending cash balance.
13. Expected direct materials purchases in Read Company are \$70,000 in the first quarter and \$90,000 in the second quarter. Forty percent of the purchases are paid in cash as incurred, and the balance is paid in the following quarter. The budgeted cash payments for purchases in the second quarter are:
- \$96,000.
  - \$90,000.
  - \$78,000.
  - \$72,000.
14. The budget for a merchandiser differs from a budget for a manufacturer because:
- a merchandise purchases budget replaces the production budget.
  - the manufacturing budgets are not applicable.
  - None of the above.
  - Both (a) and (b) above.
15. In most cases, not-for-profit entities:
- prepare budgets using the same steps as those used by profit-oriented enterprises.
  - know budgeted cash receipts at the beginning of a time period, so they budget only for expenditures.
  - begin the budgeting process by budgeting expenditures rather than receipts.
  - can ignore budgets because they are not expected to generate net income.

## Questions

- What is a budget?
  - How does a budget contribute to good management?
- Alex Mashiri and Dana Mendel are discussing the benefits of budgeting. They ask you to identify the primary advantages of budgeting. Comply with their request.
- June Hizemann asks your help in understanding the essentials of effective budgeting. Identify the essentials for June.
- “Accounting plays a relatively unimportant role in budgeting.” Do you agree? Explain.
  - What responsibilities does management have in budgeting?
- What criteria are helpful in determining the length of the budget period? What is the most common budget period?
- Denise Cruz maintains that the only difference between budgeting and long-range planning is time. Do you agree? Why or why not?
- What is participative budgeting? What are its potential benefits? What are its potential shortcomings?
- What is budgetary slack? What incentive do managers have to create budgetary slack?
- Distinguish between a master budget and a sales forecast.
- What budget is the starting point in preparing the master budget? What may result if this budget is inaccurate?
- “The production budget shows both unit production data and unit cost data.” Is this true? Explain.
- Lima Company has 15,000 beginning finished goods units. Budgeted sales units are 160,000. If management desires 20,000 ending finished goods units, what are the required units of production?
- In preparing the direct materials budget for Rudder Company, management concludes that required purchases are 64,000 units. If 52,000 direct materials units are required in production and there are 7,000 units of beginning direct materials, what is the desired units of ending direct materials?
- The production budget of Artest Company calls for 80,000 units to be produced. If it takes 30 minutes to make one

- unit and the direct labor rate is \$16 per hour, what is the total budgeted direct labor cost?
15. Ichiro Company's manufacturing overhead budget shows total variable costs of \$198,000 and total fixed costs of \$162,000. Total production in units is expected to be 160,000. It takes 15 minutes to make one unit, and the direct labor rate is \$15 per hour. Express the manufacturing overhead rate as (a) a percentage of direct labor cost, and (b) an amount per direct labor hour.
  16. Phat Company's variable selling and administrative expenses are 10% of net sales. Fixed expenses are \$50,000 per quarter. The sales budget shows expected sales of \$200,000 and \$250,000 in the first and second quarters, respectively. What are the total budgeted selling and administrative expenses for each quarter?
  17. For Nikoli Company, the budgeted cost for one unit of product is direct materials \$10, direct labor \$20, and manufacturing overhead 90% of direct labor cost. If 25,000 units are expected to be sold at \$69 each, what is the budgeted gross profit?
  18. Indicate the supporting schedules used in preparing a budgeted income statement through gross profit for a manufacturer.
  19. Identify the three sections of a cash budget. What balances are also shown in this budget?
  20. Bill Blass Company has credit sales of \$500,000 in January. Past experience suggests that 45% is collected in the month of sale, 50% in the month following the sale, and 5% in the second month following the sale. Compute the cash collections from January sales in January, February, and March.
  21. What is the formula for determining required merchandise purchases for a merchandiser?
  22. How may expected revenues in a service enterprise be computed?

## Brief Exercises

*Prepare a diagram of a master budget.*

(SO 3)

*Prepare a sales budget.*

(SO 3)

*Prepare a production budget for 2 quarters.*

(SO 3)

*Prepare a direct materials budget for 1 month.*

(SO 3)

*Prepare a direct labor budget for 3 quarters.*

(SO 3)

*Prepare a manufacturing overhead budget.*

(SO 3)

*Prepare a selling and administrative expense budget.*

(SO 3)

*Prepare a budgeted income statement for the year.*

(SO 4)

*Prepare data for a cash budget.*

(SO 5)

**BE23-1** Royalty Manufacturing Company uses the following budgets: Balance Sheet, Capital Expenditure, Cash, Direct Labor, Direct Materials, Income Statement, Manufacturing Overhead, Production, Sales, and Selling and Administrative. Prepare a diagram of the interrelationships of the budgets in the master budget. Indicate whether each budget is an operating or a financial budget.

**BE23-2** Moon Company estimates that unit sales will be 10,000 in quarter 1; 12,000 in quarter 2; 14,000 in quarter 3; and 18,000 in quarter 4. Using a sales price of \$80 per unit, prepare the sales budget by quarters for the year ending December 31, 2012.

**BE23-3** Sales budget data for Moon Company are given in BE23-2. Management desires to have an ending finished goods inventory equal to 20% of the next quarter's expected unit sales. Prepare a production budget by quarters for the first 6 months of 2012.

**BE23-4** Gutierrez Company has 1,600 pounds of raw materials in its December 31, 2012, ending inventory. Required production for January and February of 2013 are 4,000 and 5,500 units, respectively. Two pounds of raw materials are needed for each unit, and the estimated cost per pound is \$6. Management desires an ending inventory equal to 20% of next month's materials requirements. Prepare the direct materials budget for January.

**BE23-5** For Pickney Company, units to be produced are 5,000 in quarter 1 and 6,000 in quarter 2. It takes 1.5 hours to make a finished unit, and the expected hourly wage rate is \$14 per hour. Prepare a direct labor budget by quarters for the 6 months ending June 30, 2012.

**BE23-6** For Orville Inc., variable manufacturing overhead costs are expected to be \$20,000 in the first quarter of 2012 with \$4,000 increments in each of the remaining three quarters. Fixed overhead costs are estimated to be \$35,000 in each quarter. Prepare the manufacturing overhead budget by quarters and in total for the year.

**BE23-7** Jeter Company classifies its selling and administrative expense budget into variable and fixed components. Variable expenses are expected to be \$25,000 in the first quarter, and \$5,000 increments are expected in the remaining quarters of 2012. Fixed expenses are expected to be \$40,000 in each quarter. Prepare the selling and administrative expense budget by quarters and in total for 2012.

**BE23-8** Hawke Company has completed all of its operating budgets. The sales budget for the year shows 50,000 units and total sales of \$2,000,000. The total unit cost of making one unit of sales is \$22. Selling and administrative expenses are expected to be \$300,000. Income taxes are estimated to be \$150,000. Prepare a budgeted income statement for the year ending December 31, 2012.

**BE23-9** Apogee Industries expects credit sales for January, February, and March to be \$200,000, \$260,000, and \$310,000, respectively. It is expected that 70% of the sales will be collected in the

month of sale, and 30% will be collected in the following month. Compute cash collections from customers for each month.

**BE23-10** Naples Wholesalers is preparing its merchandise purchases budget. Budgeted sales are \$400,000 for April and \$475,000 for May. Cost of goods sold is expected to be 60% of sales. The company's desired ending inventory is 20% of the following month's cost of goods sold. Compute the required purchases for April.

*Determine required merchandise purchases for 1 month.*  
(SO 6)

## Do it! Review

**Do it! 23-1** Use this list of terms to complete the sentences that follow.

|                  |                         |
|------------------|-------------------------|
| Long-range plans | Participative budgeting |
| Sales forecast   | Operating budgets       |
| Master budget    | Financial budgets       |

- \_\_\_\_\_ establish goals for the company's sales and production personnel.
- The \_\_\_\_\_ is a set of interrelated budgets that constitutes a plan of action for a specified time period.
- \_\_\_\_\_ reduces the risk of having unrealistic budgets.
- \_\_\_\_\_ include the cash budget and the budgeted balance sheet.
- The budget is formed within the framework of a \_\_\_\_\_.
- \_\_\_\_\_ contain considerably less detail than budgets.

*Identify budget terminology.*  
(SO 2, 3)

**Do it! 23-2** Green River Company is preparing its master budget for 2012. Relevant data pertaining to its sales, production, and direct materials budgets are as follows.

*Sales:* Sales for the year are expected to total 1,000,000 units. Quarterly sales are 20%, 25%, 25%, and 30%, respectively. The sales price is expected to be \$40 per unit for the first three quarters and \$45 per unit beginning in the fourth quarter. Sales in the first quarter of 2013 are expected to be 10% higher than the budgeted sales for the first quarter of 2012.

*Production:* Management desires to maintain the ending finished goods inventories at 20% of the next quarter's budgeted sales volume.

*Direct materials:* Each unit requires 2 pounds of raw materials at a cost of \$10 per pound. Management desires to maintain raw materials inventories at 10% of the next quarter's production requirements. Assume the production requirements for first quarter of 2013 are 500,000 pounds.

Prepare the sales, production, and direct materials budgets by quarters for 2012.

*Prepare sales, production, and direct materials budgets.*  
(SO 3)

**Do it! 23-3** Green River Company is preparing its budgeted income statement for 2012. Relevant data pertaining to its sales, production, and direct materials budgets can be found in Do it! 23-2 above.

In addition, Green River budgets 0.3 hours of direct labor per unit, labor costs at \$14 per hour, and manufacturing overhead at \$20 per direct labor hour. Its budgeted selling and administrative expenses for 2012 are \$7,000,000.

- Calculate the budgeted total unit cost.
- Prepare the budgeted income statement for 2012.

*Calculate budgeted total unit cost and prepare budgeted income statement.*  
(SO 4)

**Do it! 23-4** Algerian Company management wants to maintain a minimum monthly cash balance of \$20,000. At the beginning of April, the cash balance is \$22,000, expected cash receipts for April are \$245,000, and cash disbursements are expected to be \$256,000. How much cash, if any, must be borrowed to maintain the desired minimum monthly balance?

*Determine amount of financing needed.*  
(SO 5)

## Exercises

**E23-1**  Rolling Stone Company has always done some planning for the future, but the company has never prepared a formal budget. Now that the company is growing larger, it is considering preparing a budget.

*Explain the concept of budgeting.*  
(SO 1, 2, 3)

**Instructions**

Write a memo to Mick Jagger, the president of Rolling Stone Company, in which you define budgeting, identify the budgets that comprise the master budget, identify the primary benefits of budgeting, and discuss the essentials of effective budgeting.

Prepare a sales budget for 2 quarters.

(SO 3)

**E23-2** Antwon Electronics Inc. produces and sells two models of pocket calculators, XQ-103 and XQ-104. The calculators sell for \$12 and \$25, respectively. Because of the intense competition Antwon faces, management budgets sales semiannually. Its projections for the first 2 quarters of 2012 are as follows.

| Product | Unit Sales |           |
|---------|------------|-----------|
|         | Quarter 1  | Quarter 2 |
| XQ-103  | 20,000     | 25,000    |
| XQ-104  | 12,000     | 15,000    |

No changes in selling prices are anticipated.

**Instructions**

Prepare a sales budget for the 2 quarters ending June 30, 2012. List the products and show for each quarter and for the 6 months, units, selling price, and total sales by product and in total.

Prepare a sales budget for four quarters.

(SO 3, 6)

**E23-3** Ernst and Anderson, CPAs, are preparing their service revenue (sales) budget for the coming year (2012). The practice is divided into three departments: auditing, tax, and consulting. Billable hours for each department, by quarter, are provided below.

| Department | Quarter 1 | Quarter 2 | Quarter 3 | Quarter 4 |
|------------|-----------|-----------|-----------|-----------|
| Auditing   | 2,200     | 1,600     | 2,000     | 2,400     |
| Tax        | 3,000     | 2,400     | 2,000     | 2,500     |
| Consulting | 1,500     | 1,500     | 1,500     | 1,500     |

Average hourly billing rates are: auditing \$80, tax \$90, and consulting \$100.

**Instructions**

Prepare the service revenue (sales) budget for 2012 by listing the departments and showing for each quarter and the year in total, billable hours, billable rate, and total revenue.

Prepare quarterly production budgets.

(SO 3)

**E23-4** Paulina Company produces and sells automobile batteries, the heavy-duty HD-240. The 2012 sales budget is as follows.

| Quarter | HD-240 |
|---------|--------|
| 1       | 5,000  |
| 2       | 7,000  |
| 3       | 8,000  |
| 4       | 10,000 |

The January 1, 2012, inventory of HD-240 is 2,500 units. Management desires an ending inventory each quarter equal to 50% of the next quarter's sales. Sales in the first quarter of 2013 are expected to be 30% higher than sales in the same quarter in 2012.

**Instructions**

Prepare quarterly production budgets for each quarter and in total for 2012.

Prepare a direct materials purchases budget.

(SO 3)

**E23-5** Paseo Industries has adopted the following production budget for the first 4 months of 2013.

| Month    | Units  | Month | Units |
|----------|--------|-------|-------|
| January  | 10,000 | March | 5,000 |
| February | 8,000  | April | 4,000 |

Each unit requires 3 pounds of raw materials costing \$2 per pound. On December 31, 2012, the ending raw materials inventory was 9,000 pounds. Management wants to have a raw materials inventory at the end of the month equal to 30% of next month's production requirements.

**Instructions**

Prepare a direct materials purchases budget by month for the first quarter.

**E23-6** On January 1, 2013 the Jorge Company budget committee has reached agreement on the following data for the 6 months ending June 30, 2013.

|                                  |  |
|----------------------------------|--|
| Sales units:                     | First quarter 5,000; second quarter 6,000; third quarter 7,000 |
| Ending raw materials inventory:  | 50% of the next quarter's production requirements              |
| Ending finished goods inventory: | 30% of the next quarter's expected sales units                 |
| Third-quarter production:        | 7,250 units  |

The ending raw materials and finished goods inventories at December 31, 2012, follow the same percentage relationships to production and sales that occur in 2013. Three pounds of raw materials are required to make each unit of finished goods. Raw materials purchased are expected to cost \$4 per pound.

*Prepare production and direct materials budgets by quarters for 6 months.*  
(SO 3)

**Instructions**

- (a) Prepare a production budget by quarters for the 6-month period ended June 30, 2013.
- (b) Prepare a direct materials budget by quarters for the 6-month period ended June 30, 2013.

**E23-7** Chung, Inc., is preparing its direct labor budget for 2012 from the following production budget based on a calendar year.

| <u>Quarter</u> | <u>Units</u> | <u>Quarter</u> | <u>Units</u> |
|----------------|--------------|----------------|--------------|
| 1              | 20,000       | 3              | 35,000       |
| 2              | 25,000       | 4              | 30,000       |

Each unit requires 1.6 hours of direct labor.

**Instructions**

Prepare a direct labor budget for 2012. Wage rates are expected to be \$15 for the first 2 quarters and \$16 for quarters 3 and 4.

**E23-8** Tye Company is preparing its manufacturing overhead budget for 2012. Relevant data consist of the following.

*Units to be produced (by quarters):* 10,000, 12,000, 14,000, 16,000.

*Direct labor:* Time is 1.5 hours per unit.

*Variable overhead costs per direct labor hour:* Indirect materials \$0.70; indirect labor \$1.20; and maintenance \$0.50.

*Fixed overhead costs per quarter:* Supervisory salaries \$35,000; depreciation \$16,000; and maintenance \$12,000.

*Prepare a direct labor budget.*  
(SO 3)

*Prepare a manufacturing overhead budget for the year.*  
(SO 3)

**Instructions**

Prepare the manufacturing overhead budget for the year, showing quarterly data.

**E23-9** Duke Company combines its operating expenses for budget purposes in a selling and administrative expense budget. For the first 6 months of 2012, the following data are available.

1. Sales: 20,000 units quarter 1; 22,000 units quarter 2.
2. Variable costs per dollar of sales: Sales commissions 5%, delivery expense 2%, and advertising 3%.
3. Fixed costs per quarter: Sales salaries \$10,000, office salaries \$6,000, depreciation \$4,200, insurance \$1,500, utilities \$800, and repairs expense \$600.
4. Unit selling price: \$20.

*Prepare a selling and administrative expense budget for 2 quarters.*  
(SO 3)

**Instructions**

Prepare a selling and administrative expense budget by quarters for the first 6 months of 2012.

**E23-10** Buddy Holly Company's sales budget projects unit sales of part 198Z of 10,000 units in January, 12,000 units in February, and 13,000 units in March. Each unit of part 198Z requires 2 pounds of materials, which cost \$3 per pound. Buddy Holly Company desires its ending raw materials inventory to equal 40% of the next month's production requirements, and its ending

*Prepare a production and a direct materials budget.*  
(SO 3)

finished goods inventory to equal 25% of the next month's expected unit sales. These goals were met at December 31, 2011.

**Instructions**

- (a) Prepare a production budget for January and February 2012.
- (b) Prepare a direct materials budget for January 2012.

Prepare a budgeted income statement for the year.  
(SO 3, 4)

**E23-11** Stan Company has accumulated the following budget data for the year 2012.

1. Sales: 30,000 units, unit selling price \$80.
2. Cost of one unit of finished goods: Direct materials 2 pounds at \$5 per pound, direct labor 3 hours at \$12 per hour, and manufacturing overhead \$6 per direct labor hour.
3. Inventories (raw materials only): Beginning, 10,000 pounds; ending, 15,000 pounds.
4. Raw materials cost: \$5 per pound.
5. Selling and administrative expenses: \$200,000.
6. Income taxes: 30% of income before income taxes.

**Instructions**

- (a) Prepare a schedule showing the computation of cost of goods sold for 2012.
- (b) Prepare a budgeted income statement for 2012.

Prepare a cash budget for 2 months.  
(SO 5)

**E23-12** Ming Company expects to have a cash balance of \$46,000 on January 1, 2012. Relevant monthly budget data for the first 2 months of 2012 are as follows.

*Collections from customers:* January \$85,000, February \$150,000.

*Payments for direct materials:* January \$50,000, February \$70,000.

*Direct labor:* January \$30,000, February \$45,000. Wages are paid in the month they are incurred.

*Manufacturing overhead:* January \$21,000, February \$25,000. These costs include depreciation of \$1,000 per month. All other overhead costs are paid as incurred.

*Selling and administrative expenses:* January \$15,000, February \$20,000. These costs are exclusive of depreciation. They are paid as incurred.

Sales of marketable securities in January are expected to realize \$10,000 in cash. Ming Company has a line of credit at a local bank that enables it to borrow up to \$25,000. The company wants to maintain a minimum monthly cash balance of \$20,000.

**Instructions**

Prepare a cash budget for January and February.

Prepare a cash budget.  
(SO 5)

**E23-13** Blue Lagoon Corporation is projecting a cash balance of \$31,000 in its December 31, 2011, balance sheet. Blue Lagoon's schedule of expected collections from customers for the first quarter of 2012 shows total collections of \$180,000. The schedule of expected payments for direct materials for the first quarter of 2012 shows total payments of \$41,000. Other information gathered for the first quarter of 2012 is: sale of equipment \$3,500, direct labor \$70,000, manufacturing overhead \$35,000, selling and administrative expenses \$45,000, and purchase of securities \$12,000. Blue Lagoon wants to maintain a balance of at least \$25,000 cash at the end of each quarter.

**Instructions**

Prepare a cash budget for the first quarter.

Prepare schedules of expected collections and payments.  
(SO 5)

**E23-14** AIM Company's budgeted sales and direct materials purchases are as follows.

|          | <u>Budgeted Sales</u> | <u>Budgeted D.M. Purchases</u> |
|----------|-----------------------|--------------------------------|
| January  | \$200,000             | \$30,000                       |
| February | 220,000               | 35,000                         |
| March    | 270,000               | 41,000                         |

AIM's sales are 40% cash and 60% credit. Credit sales are collected 10% in the month of sale, 50% in the month following sale, and 36% in the second month following sale; 4% are uncollectible. AIM's purchases are 50% cash and 50% on account. Purchases on account are paid 40% in the month of purchase, and 60% in the month following purchase.

**Instructions**

- (a) Prepare a schedule of expected collections from customers for March.
- (b) Prepare a schedule of expected payments for direct materials for March.

**E23-15** Home Exteriors Inc. is preparing its budget for the first quarter of 2012. The next step in the budgeting process is to prepare a cash receipts schedule and a cash payments schedule. To that end, the following information has been collected.

Clients usually pay 60% of their fee in the month that service is provided, 30% the month after, and 10% the second month after receiving service.

Actual service revenue for 2011 and expected service revenues for 2012 are: November 2011, \$90,000; December 2011, \$80,000; January 2012, \$100,000; February 2012, \$120,000; March 2012, \$130,000.

Purchases of landscaping supplies (direct materials) are paid 40% in the month of purchase and 60% the following month. Actual purchases for 2011 and expected purchases for 2012 are: December 2011, \$14,000; January 2012, \$12,000; February 2012, \$15,000; March 2012, \$18,000.

**Instructions**

- (a) Prepare the following schedules for each month in the first quarter of 2012 and for the quarter in total:
  - (1) Expected collections from clients.
  - (2) Expected payments for landscaping supplies.
- (b) Determine the following balances at March 31, 2012:
  - (1) Accounts receivable.
  - (2) Accounts payable.

*Prepare schedules for cash receipts and cash payments, and determine ending balances for balance sheet.*

(SO 5, 6)

**E23-16** Medina Dental Clinic is a medium-sized dental service specializing in family dental care. The clinic is currently preparing the master budget for the first 2 quarters of 2012. All that remains in this process is the cash budget. The following information has been collected from other portions of the master budget and elsewhere.

*Prepare a cash budget for two quarters.*

(SO 5, 6)

|   |           |
|---|-----------|
| Beginning cash balance  | \$ 30,000 |
| Required minimum cash balance                                     | 25,000    |
| Payment of income taxes (2nd quarter)                             | 4,000     |
| Professional salaries:  |           |
| 1st quarter   | 140,000   |
| 2nd quarter   | 140,000   |
| Interest from investments (2nd quarter)                           | 5,000     |
| Overhead costs:   |           |
| 1st quarter   | 75,000    |
| 2nd quarter   | 100,000   |
| Selling and administrative costs, including \$3,000 depreciation: |           |
| 1st quarter   | 50,000    |
| 2nd quarter   | 70,000    |
| Purchase of equipment (2nd quarter)                               | 50,000    |
| Sale of equipment (1st quarter)                                   | 15,000    |
| Collections from clients:   |           |
| 1st quarter   | 230,000   |
| 2nd quarter   | 380,000   |
| Interest payments (2nd quarter)                                   | 300       |

**Instructions**

Prepare a cash budget for each of the first two quarters of 2012.

**E23-17** In May 2012, the budget committee of Moseby Stores assembles the following data in preparation of budgeted merchandise purchases for the month of June.

*Prepare a purchases budget and budgeted income statement for a merchandiser.*

- 1. Expected sales: June \$500,000, July \$600,000.
- 2. Cost of goods sold is expected to be 70% of sales.
- 3. Desired ending merchandise inventory is 40% of the following (next) month's cost of goods sold.
- 4. The beginning inventory at June 1 will be the desired amount.

(SO 6)

**Instructions**

- (a) Compute the budgeted merchandise purchases for June.
- (b) Prepare the budgeted income statement for June through gross profit.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

Prepare budgeted income statement and supporting budget.

(SO 3, 4)

**P23-1A** Greene Farm Supply Company manufactures and sells a pesticide called Snare. The following data are available for preparing budgets for Snare for the first 2 quarters of 2013.

- Sales: Quarter 1, 28,000 bags; quarter 2, 42,000 bags. Selling price is \$60 per bag.
- Direct materials: Each bag of Snare requires 4 pounds of Gumm at a cost of \$4 per pound and 6 pounds of Tarr at \$1.50 per pound.
- Desired inventory levels:

| Type of Inventory | January 1 | April 1 | July 1 |
|-------------------|-----------|---------|--------|
| Snare (bags)      | 8,000     | 12,000  | 18,000 |
| Gumm (pounds)     | 9,000     | 10,000  | 13,000 |
| Tarr (pounds)     | 14,000    | 20,000  | 25,000 |

- Direct labor: Direct labor time is 15 minutes per bag at an hourly rate of \$14 per hour.
- Selling and administrative expenses are expected to be 15% of sales plus \$175,000 per quarter.
- Income taxes are expected to be 30% of income from operations.

Your assistant has prepared two budgets: (1) The manufacturing overhead budget shows expected costs to be 150% of direct labor cost. (2) The direct materials budget for Tarr shows the cost of Tarr purchases to be \$297,000 in quarter 1 and \$421,500 in quarter 2.

### Instructions

Prepare the budgeted income statement for the first 6 months and all required supporting budgets by quarters. (*Note:* Use variable and fixed in the selling and administrative expense budget.) Do not prepare the manufacturing overhead budget or the direct materials budget for Tarr.

**P23-2A** Tranh Inc. is preparing its annual budgets for the year ending December 31, 2013. Accounting assistants furnish the data shown below.

|  | Product<br>JB 50 | Product<br>JB 60 |
|--|------------------|------------------|
| Sales budget:                          |                  |                  |
| Anticipated volume in units            | 400,000          | 200,000          |
| Unit selling price                     | \$20             | \$25             |
| Production budget:                     |                  |                  |
| Desired ending finished goods units    | 25,000           | 15,000           |
| Beginning finished goods units         | 30,000           | 10,000           |
| Direct materials budget:               |                  |                  |
| Direct materials per unit (pounds)     | 2                | 3                |
| Desired ending direct materials pounds | 30,000           | 15,000           |
| Beginning direct materials pounds      | 40,000           | 10,000           |
| Cost per pound                         | \$3              | \$4              |
| Direct labor budget:                   |                  |                  |
| Direct labor time per unit             | 0.4              | 0.6              |
| Direct labor rate per hour             | \$12             | \$12             |
| Budgeted income statement:             |                  |                  |
| Total unit cost                        | \$12             | \$21             |

An accounting assistant has prepared the detailed manufacturing overhead budget and the selling and administrative expense budget. The latter shows selling expenses of \$660,000 for product JB 50 and \$360,000 for product JB 60, and administrative expenses of \$540,000 for product JB 50 and \$340,000 for product JB 60. Income taxes are expected to be 30%.

Net income \$600,250  
Cost per bag \$33.75

Prepare sales, production, direct materials, direct labor, and income statement budgets.

(SO 3, 4)

**Instructions**

Prepare the following budgets for the year. Show data for each product. You do not need to prepare quarterly budgets.

- (a) Sales
- (b) Production
- (c) Direct materials
- (d) Direct labor
- (e) Income statement (*Note:* Income taxes are not allocated to the products.)

**P23-3A** Remington Industries had sales in 2012 of \$6,400,000 and gross profit of \$1,100,000. Management is considering two alternative budget plans to increase its gross profit in 2013.

Plan A would increase the selling price per unit from \$8.00 to \$8.40. Sales volume would decrease by 5% from its 2012 level. Plan B would decrease the selling price per unit by \$0.50. The marketing department expects that the sales volume would increase by 150,000 units.

At the end of 2012, Remington has 40,000 units of inventory on hand. If Plan A is accepted, the 2013 ending inventory should be equal to 5% of the 2013 sales. If Plan B is accepted, the ending inventory should be equal to 50,000 units. Each unit produced will cost \$1.80 in direct labor, \$2.00 in direct materials, and \$1.20 in variable overhead. The fixed overhead for 2013 should be \$1,895,000.

**Instructions**

- (a) Prepare a sales budget for 2013 under each plan.
- (b) Prepare a production budget for 2013 under each plan.
- (c) Compute the production cost per unit under each plan. Why is the cost per unit different for each of the two plans? (Round to two decimals.)
- (d) Which plan should be accepted? (*Hint:* Compute the gross profit under each plan.)

**P23-4A** Singh Company prepares monthly cash budgets. Relevant data from operating budgets for 2013 are:

|                                     | <u>January</u> | <u>February</u> |
|-------------------------------------|----------------|-----------------|
| Sales                               | \$350,000      | \$400,000       |
| Direct materials purchases          | 110,000        | 130,000         |
| Direct labor                        | 90,000         | 100,000         |
| Manufacturing overhead              | 70,000         | 75,000          |
| Selling and administrative expenses | 79,000         | 86,000          |

All sales are on account. Collections are expected to be 50% in the month of sale, 30% in the first month following the sale, and 20% in the second month following the sale. Sixty percent (60%) of direct materials purchases are paid in cash in the month of purchase, and the balance due is paid in the month following the purchase. All other items above are paid in the month incurred except for selling and administrative expenses that include \$1,000 of depreciation per month.

Other data:

1. Credit sales: November 2012, \$260,000; December 2012, \$320,000.
2. Purchases of direct materials: December 2012, \$100,000.
3. Other receipts: January—Collection of December 31, 2012, notes receivable \$15,000; February—Proceeds from sale of securities \$6,000.
4. Other disbursements: February—Withdrawal of \$5,000 cash for personal use of owner, Dwight Yocum.

The company's cash balance on January 1, 2013, is expected to be \$60,000. The company wants to maintain a minimum cash balance of \$50,000.

**Instructions**

- (a) Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases.
- (b) Prepare a cash budget for January and February in columnar form.

**P23-5A** The budget committee of Earnhart Company collects the following data for its Del Fuego Store in preparing budgeted income statements for May and June 2013.

1. Sales for May are expected to be \$800,000. Sales in June and July are expected to be 10% higher than the preceding month.
2. Cost of goods sold is expected to be 75% of sales.
3. Company policy is to maintain ending merchandise inventory at 20% of the following month's cost of goods sold.

- (a) Total sales \$13,000,000
- (b) Required production units: JB 50, 395,000 JB 60, 205,000
- (c) Total cost of direct materials purchases \$4,820,000
- (d) Total direct labor cost \$3,372,000
- (e) Net income \$1,470,000

*Prepare sales and production budgets and compute cost per unit under two plans.*

(SO 3, 4)

- (c) Unit cost: Plan A \$7.50, Plan B \$6.97
- (d) Gross profit: Plan A \$684,000, Plan B \$503,500

*Prepare cash budget for 2 months.*

(SO 5)

- (a) January: collections \$323,000 payments \$106,000
- (b) Ending cash balance: January \$54,000, February \$50,000

*Prepare purchases and income statement budgets for a merchandiser.*

(SO 6)

4. Operating expenses are estimated to be:

|                   |                     |
|-------------------|---------------------|
| Sales salaries    | \$30,000 per month  |
| Advertising       | 5% of monthly sales |
| Delivery expense  | 3% of monthly sales |
| Sales commissions | 4% of monthly sales |
| Rent expense      | \$5,000 per month   |
| Depreciation      | \$800 per month     |
| Utilities         | \$600 per month     |
| Insurance         | \$500 per month     |

5. Income taxes are estimated to be 30% of income from operations.

- (a) Purchases:  
 May \$612,000  
 June \$673,200
- (b) Net income:  
 May \$46,970  
 June \$54,250

**Instructions**

- (a) Prepare the merchandise purchases budget for each month in columnar form.
- (b) Prepare budgeted income statements for each month in columnar form. Show in the statements the details of cost of goods sold.

Prepare budgeted income statement and balance sheet.  
 (SO 4, 5)

**P23-6A** Putin Industries' balance sheet at December 31, 2012, is presented below.

**PUTIN INDUSTRIES**  
 Balance Sheet  
 December 31, 2012

| <u>Assets</u>                               |          |           |
|---|----------|-----------|
| Current assets                              |          |           |
| Cash  |          | \$ 7,500  |
| Accounts receivable                         |          | 82,500    |
| Finished goods inventory (2,000 units)      |          | 30,000    |
| Total current assets                        |          | 120,000   |
| Property, plant, and equipment              |          |           |
| Equipment                                   | \$40,000 |           |
| Less: Accumulated depreciation—equip.       | 10,000   | 30,000    |
| Total assets                                |          | \$150,000 |
| <u>Liabilities and Stockholders' Equity</u> |          |           |
| Liabilities                                 |          |           |
| Notes payable                               |          | \$ 25,000 |
| Accounts payable                            |          | 45,000    |
| Total liabilities                           |          | 70,000    |
| Stockholders' equity                        |          |           |
| Common stock                                | \$50,000 |           |
| Retained earnings                           | 30,000   |           |
| Total stockholders' equity                  |          | 80,000    |
| Total liabilities and stockholders' equity  |          | \$150,000 |

Additional information accumulated for the budgeting process is as follows.  
 Budgeted data for the year 2013 include the following.

|                                     | <b>4th Qtr.<br/>of 2013</b> | <b>Year<br/>2013<br/>Total</b> |
|-------------------------------------|-----------------------------|--------------------------------|
| Sales budget (8,000 units at \$35)  | \$84,000                    | \$280,000                      |
| Direct materials used               | 17,000                      | 69,400                         |
| Direct labor                        | 12,500                      | 56,600                         |
| Manufacturing overhead applied      | 10,000                      | 54,000                         |
| Selling and administrative expenses | 18,000                      | 76,000                         |

To meet sales requirements and to have 3,000 units of finished goods on hand at December 31, 2013, the production budget shows 9,000 required units of output. The total unit cost of

production is expected to be \$20. Putin Industries uses the first-in, first-out (FIFO) inventory costing method. Selling and administrative expenses include \$4,000 for depreciation on equipment. Interest expense is expected to be \$3,500 for the year. Income taxes are expected to be 30% of income before income taxes.

All sales and purchases are on account. It is expected that 60% of quarterly sales are collected in cash within the quarter and the remainder is collected in the following quarter. Direct materials purchased from suppliers are paid 50% in the quarter incurred and the remainder in the following quarter. Purchases in the fourth quarter were the same as the materials used. In 2013, the company expects to purchase additional equipment costing \$19,000. It expects to pay \$8,000 on notes payable plus all interest due and payable to December 31 (included in interest expense \$3,500, above). Accounts payable at December 31, 2013, includes amounts due suppliers (see above) plus other accounts payable of \$5,700. In 2013, the company expects to declare and pay a \$5,000 cash dividend. Unpaid income taxes at December 31 will be \$5,000. The company's cash budget shows an expected cash balance of \$7,950 at December 31, 2013.

### Instructions

Prepare a budgeted income statement for 2013 and a budgeted balance sheet at December 31, 2013. In preparing the income statement, you will need to compute cost of goods manufactured (direct materials + direct labor + manufacturing overhead) and finished goods inventory (December 31, 2013).

Net income \$35,350  
Total assets \$146,550

## Problems: Set B

**P23-1B** Myagi Farm Supply Company manufactures and sells a fertilizer called Basic II. The following data are available for preparing budgets for Basic II for the first 2 quarters of 2012.

1. Sales: Quarter 1, 40,000 bags; quarter 2, 50,000 bags. Selling price is \$65 per bag.
2. Direct materials: Each bag of Basic II requires 6 pounds of Crup at a cost of \$4 per pound and 10 pounds of Dert at \$1.50 per pound.
3. Desired inventory levels:

| <u>Type of Inventory</u> | <u>January 1</u> | <u>April 1</u> | <u>July 1</u> |
|--------------------------|------------------|----------------|---------------|
| Basic II (bags)          | 10,000           | 15,000         | 20,000        |
| Crup (pounds)            | 9,000            | 12,000         | 15,000        |
| Dert (pounds)            | 15,000           | 20,000         | 25,000        |

4. Direct labor: Direct labor time is 15 minutes per bag at an hourly rate of \$10 per hour.
5. Selling and administrative expenses are expected to be 10% of sales plus \$160,000 per quarter.
6. Income taxes are expected to be 30% of income from operations.

Your assistant has prepared two budgets: (1) The manufacturing overhead budget shows expected costs to be 100% of direct labor cost. (2) The direct materials budget for Dert which shows the cost of Dert to be \$682,500 in quarter 1 and \$825,00 in quarter 2.

### Instructions

Prepare the budgeted income statement for the first 6 months of 2012 and all required supporting budgets by quarters. (*Note:* Use variable and fixed in the selling and administrative expense budget.) Do not prepare the manufacturing overhead budget or the direct materials budget for Dert.

**P23-2B** Raleigh Inc. is preparing its annual budgets for the year ending December 31, 2012. Accounting assistants furnish the following data.

|                                     | <u>Product<br/>LN 35</u> | <u>Product<br/>LN 40</u> |
|-------------------------------------|--------------------------|--------------------------|
| Sales budget:                       |                          |                          |
| Anticipated volume in units         | 400,000                  | 240,000                  |
| Unit selling price                  | \$25                     | \$35                     |
| Production budget:                  |                          |                          |

| Beginning finished goods units      | 20,000                   | 15,000                   |

Prepare budgeted income statement and supporting budgets.

(SO 3, 4)

Net income \$689,500  
Cost per bag \$44.00

Prepare sales, production, direct materials, direct labor, and income statement budgets.

(SO 3, 4)

|  |        |        |
|--|--------|--------|
| Direct materials budget:               |        |        |
| Direct materials per unit (pounds)     | 2      | 3      |
| Desired ending direct materials pounds | 50,000 | 20,000 |
| Beginning direct materials pounds      | 40,000 | 10,000 |
| Cost per pound                         | \$2    | \$3    |
| Direct labor budget:                   |        |        |
| Direct labor time per unit             | 0.5    | 0.75   |
| Direct labor rate per hour             | \$12   | \$12   |
| Budgeted income statement:             |        |        |
| Total unit cost                        | \$11   | \$20   |

An accounting assistant has prepared the detailed manufacturing overhead budget and the selling and administrative expense budget. The latter shows selling expenses of \$750,000 for product LN 35 and \$590,000 for product LN 40, and administrative expenses of \$420,000 for product LN 35 and \$380,000 for product LN 40. Income taxes are expected to be 30%.

- (a) Total sales \$18,400,000
- (b) Required production units: LN 35, 410,000
- (c) Total cost of direct materials purchases \$3,940,000
- (d) Total direct labor cost \$4,710,000
- (e) Net income \$4,942,000

Prepare sales and production budgets and compute cost per unit under two plans.

(SO 3, 4)

**Instructions**

Prepare the following budgets for the year. Show data for each product. You do not need to prepare quarterly budgets.

- (a) Sales
- (b) Production
- (c) Direct materials
- (d) Direct labor
- (e) Income statement (*Note:* Income taxes are not allocated to the products.)

**P23-3B** Mintz Industries has sales in 2012 of \$5,600,000 (800,000 units) and gross profit of \$1,344,000. Management is considering two alternative budget plans to increase its gross profit in 2013.

Plan A would increase the selling price per unit from \$7.00 to \$7.60. Sales volume would decrease by 10% from its 2012 level. Plan B would decrease the selling price per unit by 5%. The marketing department expects that the sales volume would increase by 100,000 units.

At the end of 2012, Mintz has 70,000 units on hand. If Plan A is accepted, the 2013 ending inventory should be equal to 90,000 units. If Plan B is accepted, the ending inventory should be equal to 100,000 units. Each unit produced will cost \$2.00 in direct materials, \$1.50 in direct labor, and \$0.50 in variable overhead. The fixed overhead for 2013 should be \$925,000.

**Instructions**

- (c) Unit cost: Plan A \$5.25  
Plan B \$4.99
- (d) Gross profit:  
Plan A \$1,692,000  
Plan B \$1,494,000

Prepare cash budget for 2 months.

(SO 5)

- (a) Prepare a sales budget for 2013 under (1) Plan A and (2) Plan B.
- (b) Prepare a production budget for 2013 under (1) Plan A and (2) Plan B.
- (c) Compute the cost per unit under (1) Plan A and (2) Plan B. Explain why the cost per unit is different for each of the two plans. (Round to two decimals.)
- (d) Which plan should be accepted? (*Hint:* Compute the gross profit under each plan.)

**P23-4B** Weiss Company prepares monthly cash budgets. Relevant data from operating budgets for 2013 are:

|                                     | <u>January</u> | <u>February</u> |
|-------------------------------------|----------------|-----------------|
| Sales                               | \$350,000      | \$400,000       |
| Direct materials purchases          | 120,000        | 110,000         |
| Direct labor                        | 85,000         | 115,000         |
| Manufacturing overhead              | 60,000         | 75,000          |
| Selling and administrative expenses | 75,000         | 80,000          |

All sales are on account. Collections are expected to be 60% in the month of sale, 30% in the first month following the sale, and 10% in the second month following the sale. Thirty percent (30%) of direct materials purchases are paid in cash in the month of purchase, and the balance due is paid in the month following the purchase. All other items above are paid in the month incurred. Depreciation has been excluded from manufacturing overhead and selling and administrative expenses.

Other data:

1. Credit sales: November 2012, \$200,000; December 2012, \$280,000.
2. Purchases of direct materials: December 2012, \$90,000.
3. Other receipts: January—Collection of December 31, 2012, interest receivable \$3,000; February—Proceeds from sale of securities \$5,000.
4. Other disbursements: February—payment of \$20,000 for land.

The company's cash balance on January 1, 2013, is expected to be \$50,000. The company wants to maintain a minimum cash balance of \$40,000.

**Instructions**

- (a) Prepare schedules for (1) expected collections from customers and (2) expected payments for direct materials purchases.
- (b) Prepare a cash budget for January and February in columnar form.

**P23-5B** The budget committee of Georg Company collects the following data for its Northgate Store in preparing budgeted income statements for July and August 2012.

1. Expected sales: July \$400,000, August \$450,000, September \$500,000.
2. Cost of goods sold is expected to be 60% of sales.
3. Company policy is to maintain ending merchandise inventory at 20% of the following month's cost of goods sold.
4. Operating expenses are estimated to be:

|                   |                     |
|-------------------|---------------------|
| Sales salaries    | \$50,000 per month  |
| Advertising       | 4% of monthly sales |
| Delivery expense  | 2% of monthly sales |
| Sales commissions | 3% of monthly sales |
| Rent expense      | \$3,000 per month   |
| Depreciation      | \$700 per month     |
| Utilities         | \$500 per month     |
| Insurance         | \$300 per month     |

5. Income taxes are estimated to be 30% of income from operations.

**Instructions**

- (a) Prepare the merchandise purchases budget for each month in columnar form.
- (b) Prepare budgeted income statements for each month in columnar form. Show the details of cost of goods sold in the statements.

- (a) January: collections \$314,000  
payments \$99,000
- (b) Ending cash balance: January \$48,000  
February \$40,000

*Prepare purchases and income statement budgets for a merchandiser.*

(SO 6)

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/veygandt](http://www.wiley.com/college/veygandt), and choose the Student Companion site to access Problem Set C.

## Waterways Continuing Problem

(This is a continuation of the Waterways Problem from Chapters 19 through 22.)

**WCP23** Waterways Corporation is preparing its budget for the coming year, 2013. The first step is to plan for the first quarter of that coming year. The company has gathered information from its managers in preparation of the budgeting process. This problem asks you to prepare the various budgets that comprise the master budget for 2013.

Go to the book's companion website, [www.wiley.com/college/veygandt](http://www.wiley.com/college/veygandt), to find the remainder of this problem.

# BROADENING YOUR PERSPECTIVE

## Decision Making Across the Organization

**BYP23-1** Bryant Corporation operates on a calendar-year basis. It begins the annual budgeting process in late August when the president establishes targets for the total dollar sales and net income before taxes for the next year.

The sales target is given first to the marketing department. The marketing manager formulates a sales budget by product line in both units and dollars. From this budget, sales quotas by product line in units and dollars are established for each of the corporation's sales districts. The marketing manager also estimates

the cost of the marketing activities required to support the target sales volume and prepares a tentative marketing expense budget.

The executive vice president uses the sales and profit targets, the sales budget by product line, and the tentative marketing expense budget to determine the dollar amounts that can be devoted to manufacturing and corporate office expense. The executive vice president prepares the budget for corporate expenses. She then forwards to the production department the product-line sales budget in units and the total dollar amount that can be devoted to manufacturing.

The production manager meets with the factory managers to develop a manufacturing plan that will produce the required units when needed within the cost constraints set by the executive vice president. The budgeting process usually comes to a halt at this point because the production department does not consider the financial resources allocated to be adequate.

When this standstill occurs, the vice president of finance, the executive vice president, the marketing manager, and the production manager meet together to determine the final budgets for each of the areas. This normally results in a modest increase in the total amount available for manufacturing costs and cuts in the marketing expense and corporate office expense budgets. The total sales and net income figures proposed by the president are seldom changed. Although the participants are seldom pleased with the compromise, these budgets are final. Each executive then develops a new detailed budget for the operations in his or her area.

None of the areas has achieved its budget in recent years. Sales often run below the target. When budgeted sales are not achieved, each area is expected to cut costs so that the president's profit target can be met. However, the profit target is seldom met because costs are not cut enough. In fact, costs often run above the original budget in all functional areas (marketing, production, and corporate office).

The president is disturbed that Bryant has not been able to meet the sales and profit targets. He hired a consultant with considerable experience with companies in Bryant's industry. The consultant reviewed the budgets for the past 4 years. He concluded that the product line sales budgets were reasonable and that the cost and expense budgets were adequate for the budgeted sales and production levels.

### Instructions

With the class divided into groups, answer the following.

- (a) Discuss how the budgeting process employed by Bryant Corporation contributes to the failure to achieve the president's sales and profit targets.
- (b) Suggest how Bryant Corporation's budgeting process could be revised to correct the problems.
- (c) Should the functional areas be expected to cut their costs when sales volume falls below budget? Explain your answer. (CMA adapted.)

## Managerial Analysis

**BYP23-2** Blog & Twitter Inc. manufactures ergonomic devices for computer users. Some of their more popular products include glare screens (for computer monitors), keyboard stands with wrist rests, and carousels that allow easy access to magnetic disks. Over the past 5 years, it experienced rapid growth, with sales of all products increasing 20% to 50% each year.

Last year, some of the primary manufacturers of computers began introducing new products with some of the ergonomic designs, such as glare screens and wrist rests, already built in. As a result, sales of Blog & Twitter's accessory devices have declined somewhat. The company believes that the disk carousels will probably continue to show growth, but that the other products will probably continue to decline. When the next year's budget was prepared, increases were built in to research and development so that replacement products could be developed or the company could expand into some other product line. Some product lines being considered are general-purpose ergonomic devices including back supports, foot rests, and sloped writing pads.

The most recent results have shown that sales decreased more than was expected for the glare screens. As a result, the company may have a shortage of funds. Top management has therefore asked that all expenses be reduced 10% to compensate for these reduced sales. Summary budget information is as follows.

|                                   |                  |
|-----------------------------------|------------------|
| Direct materials                  | \$240,000        |
| Direct labor                      | 110,000          |
| Insurance                         | 50,000           |
| Depreciation                      | 90,000           |
| Machine repairs                   | 30,000           |
| Sales salaries                    | 50,000           |
| Office salaries                   | 80,000           |
| Factory salaries (indirect labor) | 50,000           |
| Total                             | <u>\$700,000</u> |

**Instructions**

Using the information above, answer the following questions.

- (a) What are the implications of reducing each of the costs? For example, if the company reduces direct materials costs, it may have to do so by purchasing lower-quality materials. This may affect sales in the long run.
- (b) Based on your analysis in (a), what do you think is the best way to obtain the \$70,000 in cost savings requested? Be specific. Are there any costs that cannot or should not be reduced? Why?

**Real-World Focus**

**BYP23-3** **Network Computing Devices, Inc.** was founded in 1988 in Mountain View, California. The company develops software products such as X-terminals, Z-mail, PC X-ware, and related hardware products. Presented below is a discussion by management in its annual report.

**Network Computing Devices, Inc.**  
Management Discussion

The Company's operating results have varied significantly, particularly on a quarterly basis, as a result of a number of factors, including general economic conditions affecting industry demand for computer products, the timing and market acceptance of new product introductions by the Company and its competitors, the timing of significant orders from large customers, periodic changes in product pricing and discounting due to competitive factors, and the availability of key components, such as video monitors and electronic subassemblies, some of which require substantial order lead times. The Company's operating results may fluctuate in the future as a result of these and other factors, including the Company's success in developing and introducing new products, its product and customer mix, and the level of competition which it experiences. The Company operates with a small backlog. Sales and operating results, therefore, generally depend on the volume and timing of orders received, which are difficult to forecast. The Company has experienced slowness in orders from some customers during the first quarter of each calendar year due to budgeting cycles common in the computer industry. In addition, sales in Europe typically are adversely affected in the third calendar quarter as many European customers reduce their business activities during the month of August.

Due to the Company's rapid growth rate and the effect of new product introductions on quarterly revenues, these seasonal trends have not materially impacted the Company's results of operations to date. However, as the Company's product lines mature and its rate of revenue growth declines, these seasonal factors may become more evident. Additionally, the Company's international sales are denominated in U.S. dollars, and an increase or decrease in the value of the U.S. dollar relative to foreign currencies could make the Company's products less or more competitive in those markets.

**Instructions**

- (a) Identify the factors that affect the budgeting process at Network Computing Devices, Inc.
- (b) Explain the additional budgeting concerns created by the international operations of the company.

**Communication Activity**

**BYP23-4** In order to better serve their rural patients, Drs. Greg and Don Kaye (brothers) began giving safety seminars. Especially popular were their "emergency-preparedness" talks given to farmers. Many people asked whether the "kit" of materials the doctors recommended for common farm emergencies was commercially available.

After checking with several suppliers, the doctors realized that no other company offered the supplies they recommended in their seminars, packaged in the way they described. Their wives, Jo and Jan, agreed

to make a test package by ordering supplies from various medical supply companies and assembling them into a “kit” that could be sold at the seminars. When these kits proved a runaway success, the sisters-in-law decided to market them. At the advice of their accountant, they organized this venture as a separate company, called First Aid Products (FAP), with Jo Kaye as CEO and Jan Kaye as Secretary-Treasurer.

FAP soon started receiving requests for the kits from all over the country, as word spread about their availability. Even without advertising, FAP was able to sell its full inventory every month. However, the company was becoming financially strained. Jo and Jan had about \$100,000 in savings, and they invested about half that amount initially. They believed that this venture would allow them to make money. However, at the present time, only about \$30,000 of the cash remains, and the company is constantly short of cash.

Jo has come to you for advice. She does not understand why the company is having cash flow problems. She and Jan have not even been withdrawing salaries. However, they have rented a local building and have hired two more full-time workers to help them cope with the increasing demand. They do not think they could handle the demand without this additional help.

Jo is also worried that the cash problems mean that the company may not be able to support itself. She has prepared the cash budget shown below. All seminar customers pay for their products in full at the time of purchase. In addition, several large companies have ordered the kits for use by employees who work in remote sites. They have requested credit terms and have been allowed to pay in the month following the sale. These large purchasers amount to about 25% of the sales at the present time. FAP purchases the materials for the kits about 2 months ahead of time. Jo and Jan are considering slowing the growth of the company by simply purchasing less materials, which will mean selling fewer kits.

The workers are paid in cash weekly. Jo and Jan need about \$15,000 cash on hand at the beginning of the month to pay for purchases of raw materials. Right now they have been using cash from their savings, but as noted, only \$30,000 is left.

### Instructions

Write a response to Jo Kaye. Explain why FAP is short of cash. Will this company be able to support itself? Explain your answer. Make any recommendations you deem appropriate.

#### FIRST AID PRODUCTS Cash Budget For the Quarter Ending June 30, 2013

|                         | <u>April</u>    | <u>May</u>      | <u>June</u>     |
|-------------------------|-----------------|-----------------|-----------------|
| Cash balance, beginning | \$15,000        | \$15,000        | \$15,000        |
| Cash received           |                 |                 |                 |
| From prior month sales  | 5,000           | 7,500           | 12,500          |
| From current sales      | 15,000          | 22,500          | 37,500          |
| Total cash on hand      | <u>35,000</u>   | <u>45,000</u>   | <u>65,000</u>   |
| Cash payments           |                 |                 |                 |
| To employees            | 3,000           | 3,000           | 3,000           |
| For products            | 25,000          | 35,000          | 45,000          |
| Miscellaneous expenses  | 5,000           | 6,000           | 7,000           |
| Postage                 | 1,000           | 1,000           | 1,000           |
| Total cash payments     | <u>34,000</u>   | <u>45,000</u>   | <u>56,000</u>   |
| Cash balance            | <u>\$ 1,000</u> | <u>\$ 0</u>     | <u>\$ 9,000</u> |
| Borrow from savings     | <u>\$14,000</u> | <u>\$15,000</u> | <u>\$ 1,000</u> |
| Borrow from bank?       | <u>\$ 0</u>     | <u>\$ 0</u>     | <u>\$ 5,000</u> |

### Ethics Case

**BYP23-5** You are an accountant in the budgetary, projections, and special projects department of Tech Components, Inc., a large manufacturing company. The president, Sam White, asks you on very short notice to prepare some sales and income projections covering the next 2 years of the company’s much heralded new product lines. He wants these projections for a series of speeches he is making while on a 2-week trip to eight East Coast brokerage firms. The president hopes to bolster Tech’s stock sales and price.

You work 23 hours in 2 days to compile the projections, hand deliver them to the president, and are swiftly but graciously thanked as he departs. A week later, you find time to go over some of your

computations and discover a miscalculation that makes the projections grossly overstated. You quickly inquire about the president's itinerary and learn that he has made half of his speeches and has half yet to make. You are in a quandary as to what to do.

### Instructions

- (a) What are the consequences of telling the president of your gross miscalculations?
- (b) What are the consequences of not telling the president of your gross miscalculations?
- (c) What are the ethical considerations to you and the president in this situation?

## "All About You" Activity

**BYP23-6** The **All About You** feature (available on the book's companion website) emphasizes that in order to get your personal finances under control, you need to prepare a personal budget. Assume that you have compiled the following information regarding your expected cash flows for a typical month.

|                     |        |                              |       |
|---------------------|--------|------------------------------|-------|
| Rent payment        | \$ 400 | Miscellaneous costs          | \$110 |
| Interest income     | 50     | Savings                      | 50    |
| Income tax withheld | 300    | Eating out                   | 150   |
| Electricity bill    | 22     | Telephone and Internet costs | 90    |
| Groceries           | 80     | Student loan payments        | 275   |
| Wages earned        | 2,000  | Entertainment costs          | 250   |
| Insurance           | 100    | Transportation costs         | 150   |

### Instructions

Using the information above, prepare a personal budget. In preparing this budget, use the format found at <http://financialplan.about.com/cs/budgeting/l/blbudget.htm>. Just skip any unused line items.

### Answers to Insight and Accounting Across the Organization Questions

**p. 1056 Businesses Often Feel Too Busy to Plan for the Future** **Q:** Describe a situation in which a business "sells as much as it can" but cannot "keep its employees paid." **A:** If sales are made to customers on credit and collection is slow, the company may find that it does not have enough cash to pay employees or suppliers. Without these resources, the company will fail to survive.

**p. 1057 Which Budget Approach Do You Prefer?** **Q:** What approach did Time Warner use to prepare the old budget? What approach did it use to prepare the new budget? **A:** Time Warner used a "top-down" approach to prepare the old budget since its goals were determined by top management. It used a participative approach to prepare the new budget since each operating unit set goals.

**p. 1070 Without a Budget, Can the Games Begin?** **Q:** Why does it matter whether the Olympic Games exceed their budget? **A:** If the Olympic Games exceed their budget, taxpayers of the sponsoring community and country will end up footing the bill. Depending on the size of the losses, and the resources of the community, this could produce a substantial burden. As a result, other communities might be reluctant to host the Olympics in the future.

**p. 1074 Budget Shortfalls as Far as the Eye Can See** **Q:** Why would a university's budgeted scholarships probably fall when the stock market suffers a serious drop? **A:** Scholarships typically cannot be paid out of the "principal" portion of donations made to scholarship endowment funds. Instead, scholarships are usually funded through earnings generated by endowment investments. Any excess earnings above current-year scholarship needs can be used for scholarships in subsequent years. But a serious drop in the value of endowment investments can wipe out previous earnings, in some cases completely eliminating funds available for scholarships.

# CHAPTER 24

## Budgetary Control and Responsibility Accounting

### Study Objectives

After studying this chapter, you should be able to:

- 1 Describe the concept of budgetary control.
- 2 Evaluate the usefulness of static budget reports.
- 3 Explain the development of flexible budgets and the usefulness of flexible budget reports.

### Feature Story

#### TURNING TRASH INTO TREASURE

Vancouver teenager Brian Scudamore needed to raise money to pay his way through college. With \$700 and a strong desire to do it on his own, he established his own junk-removal company. Fifteen years later, **1-800-GOT-JUNK?** had 113 franchise partners across Canada and the United States, and projected revenues of more than \$60 million.

“It was a high-school business project that was out of control,” says Cameron Herold, vice president of operations.

While the exponential growth of 1-800-GOT-JUNK? may seem unwieldy (at one point it had five consecutive years of 100-percent compounded growth), it has in fact involved sound financial planning, budgeting, and cash management. The company follows a “zero-based budget,” says Mr. Herold. That is, it only spends

money it has; it has no outside investors or debt.

Managing this growth involves forecasting everything by creating a “painted picture” of what the company will look like in three years.

The company knows its staffing plans, training requirements, and overhead and office-space needs well in advance. “That filters back to our budgeting process,” Mr. Herold says. “We’ll sit down and say, ‘If this is where we’re going, what are all the components of that?’ . . . Then we bring it back to zero and say, ‘What’s it going to cost us? Where does it fit into the budget?’”

Key to the company’s growth management was the introduction of franchising. “We chose franchising because our franchise partners would actually finance our growth,” Mr. Herold says. In addition to the initial franchise fee, franchisees pay the head office 8 percent of their sales, plus another 7 percent to run the centralized call center.

While the company has used franchising to manage growth, a frugal approach to day-to-day costs has also been integral to its budgeting success. “We’re always looking for ways to cut costs,” Mr. Herold says. This includes establishing strategic relationships with the local coffee shop, doing regular cost analyses of office equipment and changing suppliers when needed, and buying office furniture in bulk from liquidators at 10 cents on the dollar. “All those little things start to really add up,” he says.

# Preview of CHAPTER 24

In contrast to Chapter 23, we now consider how budgets are used by management to control operations. In the Feature Story on 1-800-GOT-JUNK?, we saw that management tries to use the budget to adapt to the business environment. This chapter focuses on two aspects of management control: (1) budgetary control and (2) responsibility accounting.

The content and organization of Chapter 24 are as follows.

| Budgetary Control and Responsibility Accounting   |  |  |  |  |
|---|--|--|--|--|

## The Concept of Budgetary Control

**Study Objective [1]**  
Describe the concept of budgetary control.

One of management's major functions is to control company operations. Control consists of the steps taken by management to see that planned objectives are met. We now ask: How do budgets contribute to control of operations?

The use of budgets in controlling operations is known as **budgetary control**. Such control takes place by means of **budget reports** that compare actual results with planned objectives. The use of budget reports is based on the belief that planned objectives lose much of their potential value without some monitoring of progress along the way. Just as your professors give midterm exams to evaluate your progress, so top management requires periodic reports on the progress of department managers toward their planned objectives.

Budget reports provide management with feedback on operations. The feedback for a crucial objective, such as having enough cash on hand to pay bills, may be made daily. For other objectives, such as meeting budgeted annual sales and operating expenses, monthly budget reports may suffice. Budget reports are prepared as frequently as needed. From these reports, management analyzes any differences between actual and planned results and determines their causes. Management then takes corrective action, or it decides to modify future plans.

Budgetary control involves activities shown in Illustration 24-1. Budgetary control works best when a company has a formalized reporting system. The system does the following:

1. Identifies the name of the budget report, such as the sales budget or the manufacturing overhead budget.
2. States the frequency of the report, such as weekly or monthly.
3. Specifies the purpose of the report.
4. Indicates the primary recipient(s) of the report.

**Illustration 24-1**  
Budgetary control activities

Illustration 24-2 provides a partial budgetary control system for a manufacturing company. Note the frequency of the reports and their emphasis on control. For example, there is a daily report on scrap and a weekly report on labor.

**Illustration 24-2**  
Budgetary control reporting system

| <u>Name of Report</u>              | <u>Frequency</u>      | <u>Purpose</u>                                    | <u>Primary Recipient(s)</u>                                     |
|------------------------------------|-----------------------|---|---|
| <b>Sales</b>                       | Weekly                | Determine whether sales goals are being met       | Top management and sales manager                                |
| <b>Labor</b>                       | Weekly                | Control direct and indirect labor costs           | Vice president of production and production department managers |
| <b>Scrap</b>                       | Daily                 | Determine efficient use of materials              | Production manager  |
| <b>Departmental overhead costs</b> | Monthly               | Control overhead costs                            | Department manager  |
| <b>Selling expenses</b>            | Monthly               | Control selling expenses                          | Sales manager   |
| <b>Income statement</b>            | Monthly and quarterly | Determine whether income objectives are being met | Top management  |

## Static Budget Reports

You learned in Chapter 23 that the master budget formalizes management’s planned objectives for the coming year. When used in budgetary control, each budget included in the master budget is considered to be static. A **static budget** is a projection of budget data at **one level of activity**. These budgets do not consider data for different levels of activity. As a result, companies always compare actual results with budget data at the activity level that was used in developing the master budget.

**Study Objective [2]**  
Evaluate the usefulness of static budget reports.

### Examples

To illustrate the role of a static budget in budgetary control, we will use selected data prepared for Hayes Company in Chapter 23. Budget and actual sales data for the Kitchen-Mate product in the first and second quarters of 2012 are as follows.

| <u>Sales</u> | <u>First Quarter</u> | <u>Second Quarter</u> | <u>Total</u> |
|--------------|----------------------|-----------------------|--------------|
| Budgeted     | \$180,000            | \$210,000             | \$390,000    |
| Actual       | 179,000              | 199,500               | 378,500      |
| Difference   | \$ 1,000             | \$ 10,500             | \$ 11,500    |

**Illustration 24-3**  
Budget and actual sales data

The sales budget report for Hayes Company’s first quarter is shown below. The right-most column reports the difference between the budgeted and actual amounts.

**Illustration 24-4**  
Sales budget report—first quarter

| Hayes Company<br>Sales Budget Report<br>For the Quarter Ended March 31, 2012 |           |           |                              |
|--|-----------|-----------|------------------------------|
| Product Line   | Budget    | Actual    | Difference                   |
|  |           |           | Favorable F<br>Unfavorable U |
| Kitchen-Mate <sup>a</sup>  | \$180,000 | \$179,000 | <b>\$1,000 U</b>             |

<sup>a</sup>In practice, each product line would be included in the report.

**Alternative Terminology**

The difference between budget and actual is sometimes called a *budget variance*.

The report shows that sales are \$1,000 under budget—an unfavorable result. This difference is less than 1% of budgeted sales ( $\$1,000 \div \$180,000 = .0056$ ). Top management’s reaction to unfavorable differences is often influenced by the materiality (significance) of the difference. Since the difference of \$1,000 is immaterial in this case, we assume that Hayes Company management takes no specific corrective action.

Illustration 24-5 shows the budget report for the second quarter. It contains one new feature: cumulative year-to-date information. This report indicates that sales for the second quarter are \$10,500 below budget. This is 5% of budgeted sales ( $\$10,500 \div \$210,000$ ). Top management may now conclude that the difference between budgeted and actual sales requires investigation.

**Illustration 24-5**  
Sales budget report—second quarter

| Hayes Company<br>Sales Budget Report<br>For the Quarter Ended June 30, 2012 |                |           |  |              |           |  |
|---|----------------|-----------|--|--------------|-----------|--|
| Product Line  | Second Quarter |           |  | Year-to-Date |           |  |
|   | Budget         | Actual    | Difference<br>Favorable F<br>Unfavorable U | Budget       | Actual    | Difference<br>Favorable F<br>Unfavorable U |
| Kitchen-Mate  | \$210,000      | \$199,500 | <b>\$10,500 U</b>                          | \$390,000    | \$378,500 | <b>\$11,500 U</b>                          |

Management’s analysis should start by asking the sales manager the cause(s) of the shortfall. Managers should consider the need for corrective action. For example, management may decide to spur sales by offering sales incentives to customers or by increasing the advertising of Kitchen-Mates. Or, if management concludes that a downturn in the economy is responsible for the lower sales, it may modify planned sales and profit goals for the remainder of the year.

**Uses and Limitations**

From these examples, you can see that a master sales budget is useful in evaluating the performance of a sales manager. It is now necessary to ask: Is the master budget appropriate for evaluating a manager’s performance in controlling costs? Recall

that in a static budget, data are not modified or adjusted, regardless of changes in activity. It follows, then, that a static budget is appropriate in evaluating a manager's effectiveness in controlling costs when:

1. The actual level of activity closely approximates the master budget activity level, and/or
2. The behavior of the costs in response to changes in activity is fixed.

A static budget report is, therefore, appropriate for **fixed manufacturing costs** and for **fixed selling and administrative expenses**. But, as you will see shortly, static budget reports may not be a proper basis for evaluating a manager's performance in controlling variable costs.

## Flexible Budgets

In contrast to a static budget, which is based on one level of activity, a **flexible budget** projects budget data for various levels of activity. In essence, **the flexible budget is a series of static budgets at different levels of activity**. The flexible budget recognizes that the budgetary process is more useful if it is adaptable to changed operating conditions.

Flexible budgets can be prepared for each of the types of budgets included in the master budget. For example, **Marriott Hotels** can budget revenues and net income on the basis of 60%, 80%, and 100% of room occupancy. Similarly, **American Van Lines** can budget its operating expenses on the basis of various levels of truck miles driven. **Duke Energy** can budget revenue and net income on the basis of estimated billions of kwh (kilowatt hours) of residential, commercial, and industrial electricity generated. In the following pages, we will illustrate a flexible budget for manufacturing overhead.

### Why Flexible Budgets?

Assume that you are the manager in charge of manufacturing overhead in the Forging Department of Barton Steel. In preparing the manufacturing overhead budget for 2012, you prepare the following static budget based on a production volume of 10,000 units of steel ingots.

### Study Objective [3]

Explain the development of flexible budgets and the usefulness of flexible budget reports.

| <b>Barton Steel</b><br>Manufacturing Overhead Static Budget<br>Forging Department<br>For the Year Ended December 31, 2012 |                    |
|---|--------------------|
| Budgeted production in units (steel ingots)   | 10,000             |
| Budgeted costs  |                    |
| Indirect materials  | \$ 250,000         |
| Indirect labor  | 260,000            |
| Utilities   | 190,000            |
| Depreciation  | 280,000            |
| Property taxes  | 70,000             |
| Supervision   | 50,000             |
|   | <u>\$1,100,000</u> |

**Illustration 24-6**  
Static overhead budget

### Helpful Hint

The static budget is the master budget described in Chapter 23.

Fortunately for the company, the demand for steel ingots has increased, and Barton produces and sells 12,000 units during the year, rather than 10,000. You are elated: Increased sales means increased profitability, which should mean a bonus or a raise for you and the employees in your department. Unfortunately, a comparison of Forging Department actual and budgeted costs has put you on the spot. The budget report is shown below.

**Illustration 24-7**  
Static overhead budget report

|    | A  | B           | C           | D               | E |
|----|--|-------------|-------------|-----------------|---|
| 1  | <b>BARTON STEEL</b>                                |             |             |                 |   |
| 2  | <b>Manufacturing Overhead Static Budget Report</b> |             |             |                 |   |
| 3  | <b>For the Year Ended December 31, 2012</b>        |             |             |                 |   |
| 4  |  |             |             | Difference      |   |
| 5  |  | Budget      | Actual      | Favorable - F   |   |
| 6  | Production in units                                | 10,000      | 12,000      | Unfavorable - U |   |
| 7  |  |             |             |                 |   |
| 8  | Costs  |             |             |                 |   |
| 9  | Indirect materials                                 | \$ 250,000  | \$ 295,000  | \$ 45,000       | U |
| 10 | Indirect labor                                     | 260,000     | 312,000     | 52,000          | U |
| 11 | Utilities  | 190,000     | 225,000     | 35,000          | U |
| 12 | Depreciation                                       | 280,000     | 280,000     | 0               |   |
| 13 | Property taxes                                     | 70,000      | 70,000      | 0               |   |
| 14 | Supervision  | 50,000      | 50,000      | 0               |   |
| 15 |  | \$1,100,000 | \$1,232,000 | \$132,000       | U |
| 16 |  |             |             |                 |   |

**Helpful Hint**

A static budget is not useful for performance evaluation if a company has substantial variable costs.

This comparison uses budget data based on the original activity level (10,000 steel ingots). It indicates that the Forging Department is significantly **over budget** for three of the six overhead costs. And, there is a total unfavorable difference of \$132,000, which is 12% over budget ( $\$132,000 \div \$1,100,000$ ). Your supervisor is very unhappy! Instead of sharing in the company’s success, you may find yourself looking for another job. What went wrong?

When you calm down and carefully examine the manufacturing overhead budget, you identify the problem: The budget data are not relevant! At the time the budget was developed, the company anticipated that only 10,000 units of steel ingots would be produced, **not** 12,000. Comparing actual with budgeted variable costs is meaningless. As production increases, the budget allowances for variable costs should increase proportionately. The variable costs in this example are indirect materials, indirect labor, and utilities.

Analyzing the budget data for these costs at 10,000 units, you arrive at the following per unit results.

**Illustration 24-8**  
Variable costs per unit

| <u>Item</u>        | <u>Total Cost</u> | <u>Per Unit</u> |
|--------------------|-------------------|-----------------|
| Indirect materials | \$250,000         | \$25            |
| Indirect labor     | 260,000           | 26              |
| Utilities          | 190,000           | 19              |
|                    | <u>\$700,000</u>  | <u>\$70</u>     |

Illustration 24-9 calculates the budgeted variable costs at 12,000 units.

| <u>Item</u>        | <u>Computation</u>   | <u>Total</u>     |
|--------------------|----------------------|------------------|
| Indirect materials | $\$25 \times 12,000$ | \$300,000        |
| Indirect labor     | $26 \times 12,000$   | 312,000          |
| Utilities          | $19 \times 12,000$   | 228,000          |
|                    |                      | <u>\$840,000</u> |

**Illustration 24-9**  
Budgeted variable costs,  
12,000 units

Because fixed costs do not change in total as activity changes, the budgeted amounts for these costs remain the same. Illustration 24-10 shows the budget report based on the flexible budget for **12,000 units** of production. (Compare this with Illustration 24-7, on page 1102.)

|                      | Budget      | Actual      | Difference      |   |
|----------------------|-------------|-------------|-----------------|---|
|                      |             |             | Favorable - F   |   |
|                      |             |             | Unfavorable - U |   |
| Production in units  | 12,000      | 12,000      |                 |   |
| Variable costs       |             |             |                 |   |
| Indirect materials   | \$ 300,000  | \$ 295,000  | \$5,000         | F |
| Indirect labor       | 312,000     | 312,000     | 0               |   |
| Utilities            | 228,000     | 225,000     | 3,000           | F |
| Total variable costs | 840,000     | 832,000     | 8,000           | F |
| Fixed costs          |             |             |                 |   |
| Depreciation         | 280,000     | 280,000     | 0               |   |
| Property taxes       | 70,000      | 70,000      | 0               |   |
| Supervision          | 50,000      | 50,000      | 0               |   |
| Total fixed costs    | 400,000     | 400,000     | 0               |   |
| Total costs          | \$1,240,000 | \$1,232,000 | \$8,000         | F |

**Illustration 24-10**  
Flexible overhead budget  
report

This report indicates that the Forging Department is *below budget*—a favorable difference. Instead of worrying about being fired, you may be in line for a bonus or a raise after all! As this analysis shows, the only appropriate comparison is between actual costs at 12,000 units of production and budgeted costs at 12,000 units. Flexible budget reports provide this comparison.

## Developing the Flexible Budget

The flexible budget uses the master budget as its basis. To develop the flexible budget, management uses the following steps.

1. Identify the activity index and the relevant range of activity.
2. Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost.
3. Identify the fixed costs, and determine the budgeted amount for each cost.
4. Prepare the budget for selected increments of activity within the relevant range.

The activity index chosen should significantly influence the costs being budgeted. For manufacturing overhead costs, for example, the activity index is usually the same as the index used in developing the predetermined overhead rate—that is, direct labor hours or machine hours. For selling and administrative expenses, the activity index usually is sales or net sales.

The choice of the increment of activity is largely a matter of judgment. For example, if the relevant range is 8,000 to 12,000 direct labor hours, increments of 1,000 hours may be selected. The flexible budget is then prepared for each increment within the relevant range.

### Flexible Budget—A Case Study

To illustrate the flexible budget, we use Fox Manufacturing Company. Fox’s management uses a **flexible budget for monthly comparisons** of actual and budgeted manufacturing overhead costs of the Finishing Department. The master budget for the year ending December 31, 2012, shows expected annual operating capacity of 120,000 direct labor hours and the following overhead costs.

**Illustration 24-11**  
Master budget data

| Variable Costs     |                  | Fixed Costs    |                  |
|--------------------|------------------|----------------|------------------|
| Indirect materials | \$180,000        | Depreciation   | \$180,000        |
| Indirect labor     | 240,000          | Supervision    | 120,000          |
| Utilities          | 60,000           | Property taxes | 60,000           |
| Total              | <u>\$480,000</u> | Total          | <u>\$360,000</u> |

The four steps for developing the flexible budget are applied as follows.

- STEP 1. **Identify the activity index and the relevant range of activity.** The activity index is direct labor hours. The relevant range is 8,000–12,000 direct labor hours per month.
- STEP 2. **Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost.** There are three variable costs. The variable cost per unit is found by dividing each total budgeted cost by the direct labor hours used in preparing the master budget (120,000 hours). For Fox Manufacturing, the computations are:

**Illustration 24-12**  
Computation of variable costs per direct labor hour

| Variable Cost      | Computation         | Variable Cost per Direct Labor Hour |
|--------------------|---------------------|-------------------------------------|
| Indirect materials | \$180,000 ÷ 120,000 | <b>\$1.50</b>                       |
| Indirect labor     | \$240,000 ÷ 120,000 | <b>2.00</b>                         |
| Utilities          | \$ 60,000 ÷ 120,000 | <b>0.50</b>                         |
| Total              |                     | <u><b>\$4.00</b></u>                |

- STEP 3. **Identify the fixed costs, and determine the budgeted amount for each cost.** There are three fixed costs. Since Fox desires **monthly budget data**, it divides each annual budgeted cost by 12 to find the monthly amounts. For Fox Manufacturing, the monthly budgeted fixed costs are: depreciation \$15,000, supervision \$10,000, and property taxes \$5,000.
- STEP 4. **Prepare the budget for selected increments of activity within the relevant range.** Management prepares the budget in increments of 1,000 direct labor hours.

| 14  | Supervision          | 10,000   | 10,000   | 10,000   | 10,000   | 10,000   |
| 15  | Property taxes       | 5,000    | 5,000    | 5,000    | 5,000    | 5,000    |
| 16  | Total fixed costs    | 30,000   | 30,000   | 30,000   | 30,000   | 30,000   |
| 17  | Total costs          | \$62,000 | \$66,000 | \$70,000 | \$74,000 | \$78,000 |
| 18  |                      |          |          |          |          |          |

**Illustration 24-13**  
Monthly overhead flexible budget

Fox uses the formula below to determine total budgeted costs at any level of activity.

|                    |   |                        |   |                             |
|--------------------|---|------------------------|---|-----------------------------|
| <b>Fixed Costs</b> | + | <b>Variable Costs*</b> | = | <b>Total Budgeted Costs</b> |
|--------------------|---|------------------------|---|-----------------------------|

\*Total variable cost per unit of activity × Activity level.

**Illustration 24-14**  
Formula for total budgeted costs

For Fox, fixed costs are \$30,000, and total variable cost per direct labor hour is \$4. At 9,000 direct labor hours, total budgeted costs are \$66,000 [ $\$30,000 + (\$4 \times 9,000)$ ]. At 8,622 direct labor hours, total budgeted costs are \$64,488 [ $\$30,000 + (\$4 \times 8,622)$ ]. Total budgeted costs can also be shown graphically, as in Illustration 24-15.

**Helpful Hint**  
Using the data given for Fox, what amount of total costs would be budgeted for 10,600 direct labor hours?  
Answer: \$30,000 fixed + \$42,400 variable ( $10,600 \times \$4$ ) = \$72,400 total.

**Illustration 24-15**  
Flexible budget graph highlighting 10,000 and 12,000 hours of activity levels

In the graph, the horizontal axis represents the activity index, and costs are indicated on the vertical axis. The graph highlights two activity levels (10,000 and 12,000). As shown, total budgeted costs at these activity levels are \$70,000 [ $\$30,000 + (\$4 \times 10,000)$ ] and \$78,000 [ $\$30,000 + (\$4 \times 12,000)$ ], respectively.

## Do it!

### Flexible Budgets

#### action plan

✓ Apply the formula: Fixed costs + Variable costs (Total variable costs per unit  $\times$  Activity level) = Total budgeted costs.

In Strassel Company’s flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at \$36,000. The total budgeted cost line is \$186,000 at an activity level of 50,000 direct labor hours. Compute total budgeted costs at 30,000 direct labor hours.

#### Solution

Using the graph, fixed costs are \$36,000, and variable costs are \$3 per direct labor hour [ $(\$186,000 - \$36,000) \div 50,000$ ]. Thus, at 30,000 direct labor hours, total budgeted costs are \$126,000 [ $\$36,000 + (\$3 \times 30,000)$ ].

## Flexible Budget Reports

As shown in Illustration 24-10 (page 1103), the flexible budget report consists of two sections: (1) production data for a selected activity index, such as direct labor hours, and (2) cost data for variable and fixed costs. The report provides a basis for evaluating a manager’s performance in two areas: production control and cost control. Flexible budget reports are widely used in production and service departments.

Illustration 24-16 shows a budget report for the Finishing Department of Fox Company for the month of January. In this month, 9,000 hours are worked.

**Illustration 24-16**  
Overhead flexible budget report

| Total variable costs                          | 36,000    | 35,600          | 400           | F               |
| Fixed costs                                   |           |                 |               |                 |
| Depreciation                                  | 15,000    | 15,000          | 0             |                 |
| Supervision                                   | 10,000    | 10,000          | 0             |                 |
| Property taxes                                | 5,000     | 5,000           | 0             |                 |
| Total fixed costs                             | 30,000    | 30,000          | 0             |                 |
| Total costs                                   | \$66,000  | \$65,600        | \$ 400        | F               |

The budget data are therefore based on the flexible budget for 9,000 hours in Illustration 24-13 (page 1105). The actual cost data are assumed.

How appropriate is this report in evaluating the Finishing Department manager's performance in controlling overhead costs? The report clearly provides a reliable basis. Both actual and budget costs are based on the activity level worked during January. Since variable costs generally are incurred directly by the department, the difference between the budget allowance for those hours and the actual costs is the responsibility of the department manager.

In subsequent months, Fox Manufacturing will prepare other flexible budget reports. For each month, the budget data are based on the actual activity level attained. In February that level may be 11,000 direct labor hours, in July 10,000, and so on.

Note that this flexible budget is based on a single cost driver. A more accurate budget often can be developed using the activity-based costing concepts explained in Chapter 21.

## SERVICE COMPANY INSIGHT

### Budgets and the Exotic Newcastle Disease

Exotic Newcastle Disease, one of the most infectious bird diseases in the world, kills so swiftly that many victims die before any symptoms appear. When it broke out in Southern California in 2003, it could have spelled disaster for the **San Diego Zoo**. "We have one of the most valuable collections of birds in the world, if not the most valuable," says Paula Brock, CFO of the Zoological Society of San Diego, which operates the zoo.

Bird exhibits were closed to the public for several months (the disease, which is harmless to humans, can be carried on clothes and shoes). The tires of arriving delivery trucks were sanitized, as were the shoes of anyone visiting the zoo's nonpublic areas. Zookeeper uniforms had to be changed and cleaned daily. And ultimately, the zoo, with \$150 million in revenues, spent almost half a million dollars on quarantine measures in 2003.

It worked: No birds got sick. Better yet, the damage to the rest of the zoo's budget was minimized by another protective measure: the monthly budget reforecast. "When we get a hit like this, we still have to find a way to make our bottom line," says Brock. Thanks to a new planning process Brock had introduced a year earlier, the zoo's scientists were able to raise the financial alarm as they redirected resources to ward off the disease. "Because we had timely awareness," she says, "we were able to make adjustments to weather the storm."

Budget reforecasting is nothing new. (The San Diego Zoo's annual static budget was behind the times before Brock took over as CFO in 2001.) But the reaction of the zoo's staff shows the benefits of Brock's immediate efforts to link strategy to the process. It's a move long touted by consultants as a key way to improve people's involvement in budgeting.

"To keep your company on a path, it has to have some kind of map," says Brock. "The budgeting-and-planning process is that map. I cannot imagine an organization feeling in control if it didn't have that sort of discipline."

**?** What is the major benefit of tying a budget to the overall goals of the company? (See page 1145.)

## Management by Exception

**Management by exception** means that top management's review of a budget report is focused either entirely or primarily on differences between actual results and planned objectives. This approach enables top management to focus on problem areas. For example, many companies now use online reporting systems for employees to file their travel and entertainment expense reports. In addition to cutting reporting time in half, the online system enables managers to quickly analyze variances from travel budgets. This enables companies to cut down on expense account "padding" such as spending too much on meals or falsifying documents for costs that were never actually incurred.

Management by exception does not mean that top management will investigate every difference. For this approach to be effective, there must be guidelines for identifying an exception. The usual criteria are materiality and controllability.

### MATERIALITY

Without quantitative guidelines, management would have to investigate every budget difference regardless of the amount. Materiality is usually expressed as a percentage difference from budget. For example, management may set the percentage difference at 5% for important items and 10% for other items. Managers will investigate all differences either over or under budget by the specified percentage. Costs over budget warrant investigation to determine why they were not controlled. Likewise, costs under budget merit investigation to determine whether costs critical to profitability are being curtailed. For example, if maintenance costs are budgeted at \$80,000 but only \$40,000 is spent, major unexpected breakdowns in productive facilities may occur in the future.

Alternatively, a company may specify a single percentage difference from budget for all items and supplement this guideline with a minimum dollar limit. For example, the exception criteria may be stated at 5% of budget or more than \$10,000.

### CONTROLLABILITY OF THE ITEM

Exception guidelines are more restrictive for controllable items than for items the manager cannot control. In fact, there may be no guidelines for noncontrollable items. For example, a large unfavorable difference between actual and budgeted property tax expense may not be flagged for investigation because the only possible causes are an unexpected increase in the tax rate or in the assessed value of the property. An investigation into the difference would be useless: the manager cannot control either cause.

## Do it!

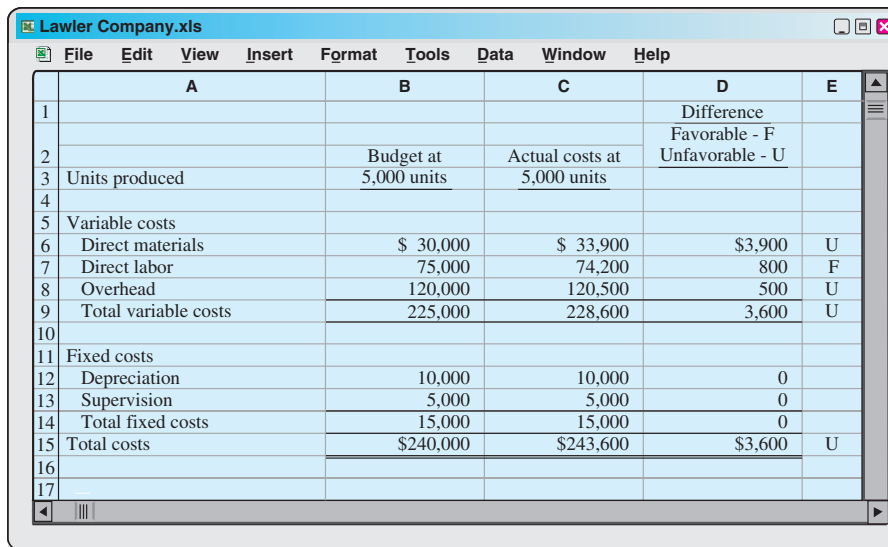

### Flexible Budget Reports

Lawler Company expects to produce 40,000 units of product CV93 during the current year. Budgeted variable manufacturing costs per unit are direct materials \$6, direct labor \$15, and overhead \$24. Annual budgeted fixed manufacturing overhead costs are \$120,000 for depreciation and \$60,000 for supervision.

In the current month, Lawler produced 5,000 units and incurred the following costs: direct materials \$33,900, direct labor \$74,200, variable overhead \$120,500, depreciation \$10,000, and supervision \$5,000.

Prepare a flexible budget report. (*Note:* You do not have to prepare the heading.) Were costs controlled?

## Solution

| 13 | Supervision          | 5,000                    | 5,000                          | 0               |   |
| 14 | Total fixed costs    | 15,000                   | 15,000                         | 0               |   |
| 15 | Total costs          | \$240,000                | \$243,600                      | \$3,600         | U |
| 16 |                      |                          |                                |                 |   |
| 17 |                      |                          |                                |                 |   |

The responsibility report indicates that actual direct labor was only about 1% different from the budget, and overhead was less than half a percent different. Both appear to have been well controlled.

This was not the case for direct materials. Its 13% unfavorable difference should probably be investigated.

Actual fixed costs had no difference from budget and were well controlled.

## The Concept of Responsibility Accounting

Like budgeting, responsibility accounting is an important part of management accounting. **Responsibility accounting** involves accumulating and reporting costs (and revenues, where relevant) on the basis of the manager who has the authority to make the day-to-day decisions about the items. Under responsibility accounting, a manager's performance is evaluated on matters directly under that manager's control. Responsibility accounting can be used at every level of management in which the following conditions exist.

1. Costs and revenues can be directly associated with the specific level of management responsibility.
2. The costs and revenues can be controlled by employees at the level of responsibility with which they are associated.
3. Budget data can be developed for evaluating the manager's effectiveness in controlling the costs and revenues.

Illustration 24-17 (page 1110) depicts levels of responsibility for controlling costs.

Under responsibility accounting, any individual who controls a specified set of activities can be a responsibility center. Thus, responsibility accounting may extend from the lowest level of control to the top strata of management. Once responsibility is established, the company first measures and reports the effectiveness of the individual's performance for the specified activity. It then reports that measure upward throughout the organization.

Responsibility accounting is especially valuable in a decentralized company. **Decentralization** means that the control of operations is delegated to many

### action plan

- ✓ Use budget for actual units produced.
- ✓ Classify each cost as variable or fixed.
- ✓ Determine monthly fixed costs by dividing annual amounts by 12.
- ✓ Classify the difference as favorable or unfavorable.
- ✓ Determine the difference in total variable costs, total fixed costs, and total costs.

### Study Objective [4]

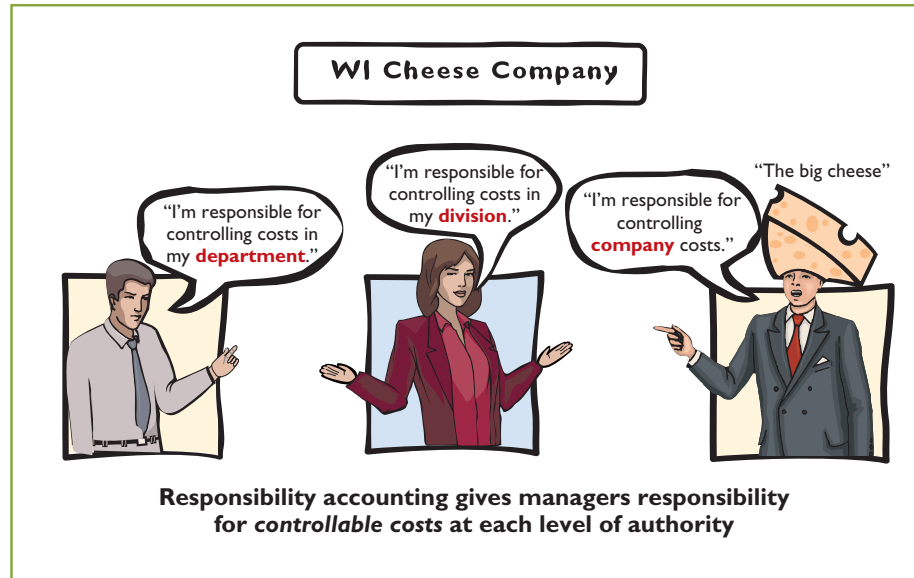

Describe the concept of responsibility accounting.

### Helpful Hint

All companies use responsibility accounting. Without some form of responsibility accounting, there would be chaos in discharging management's control function.

**Illustration 24-17**

Responsibility for controllable costs at varying levels of management

managers throughout the organization. The term **segment** is sometimes used to identify an area of responsibility in decentralized operations. Under responsibility accounting, companies prepare segment reports periodically, such as monthly, quarterly, and annually, to evaluate managers' performance.

Responsibility accounting is an essential part of any effective system of budgetary control. The reporting of costs and revenues under responsibility accounting differs from budgeting in two respects:

1. A distinction is made between controllable and noncontrollable items.
2. Performance reports either emphasize or include only items controllable by the individual manager.

Responsibility accounting applies to both profit and not-for-profit entities. For-profit entities seek to maximize net income. Not-for-profit entities wish to provide services as efficiently as possible.

## MANAGEMENT INSIGHT

### Competition versus Collaboration

Many compensation and promotion programs encourage competition among employees for pay raises. To get ahead you have to perform better than your fellow employees. While this may encourage hard work, it does not foster collaboration, and it can lead to distrust and disloyalty. Such results have led some companies to believe that cooperation and collaboration are essential in order to succeed in today's environment. For example, division managers might increase collaboration (and reduce costs) by sharing design and marketing resources or by jointly negotiating with suppliers. In addition, companies can reduce the need to hire and lay off employees by sharing employees across divisions as human resource needs increase and decrease.

As a consequence, many companies now explicitly include measures of collaboration in their performance measures. For example, **Procter & Gamble** measures collaboration in employees' annual performance reviews. At **Cisco Systems** the assessment of an employee's teamwork can affect the annual bonus by as much as 20%.

Source: Carol Hymowitz, "Rewarding Competitors Over Collaboration No Longer Makes Sense," *Wall Street Journal* (February 13, 2006).

How might managers of separate divisions be able to reduce division costs through collaboration? (See page 1145.)

## Controllable versus Noncontrollable Revenues and Costs

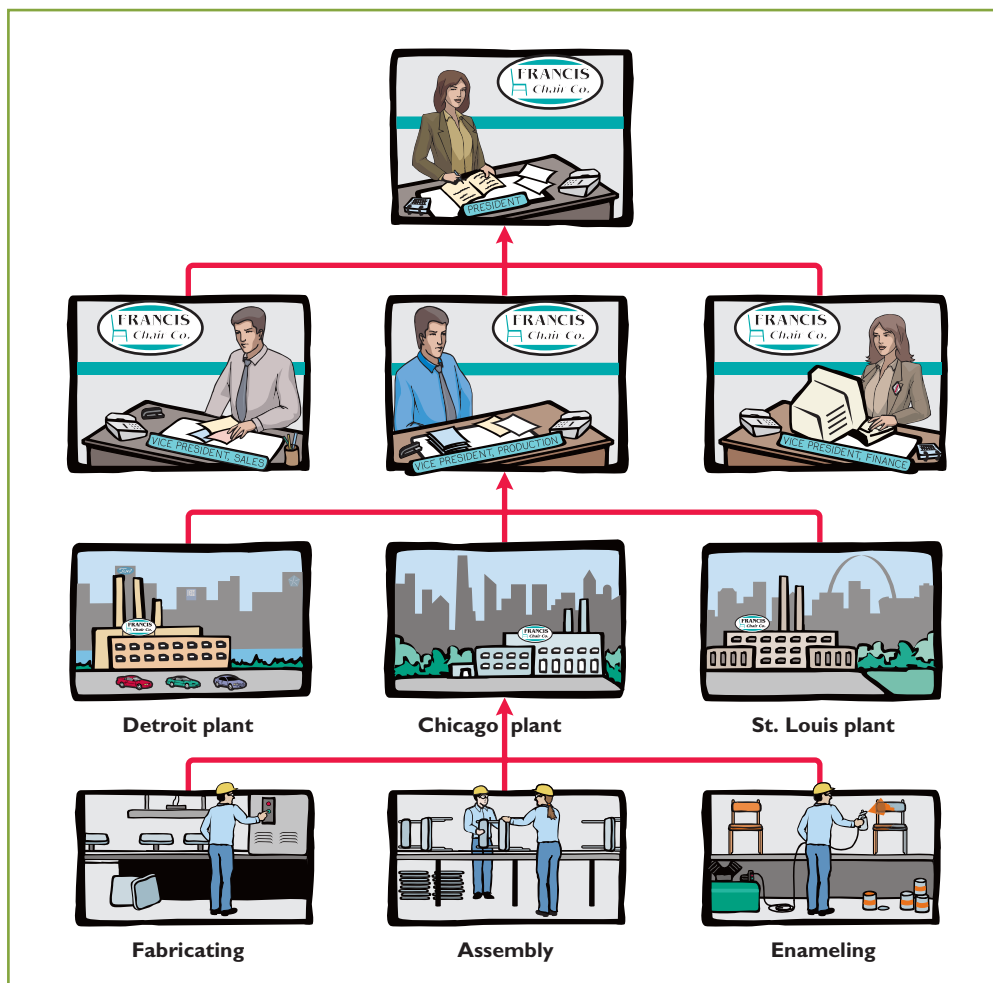

All costs and revenues are controllable at some level of responsibility within a company. This truth underscores the adage by the CEO of any organization that “the buck stops here.” Under responsibility accounting, the critical issue is **whether the cost or revenue is controllable at the level of responsibility with which it is associated**. A cost over which a manager has control is called a **controllable cost**. From this definition, it follows that:

1. All costs are controllable by top management because of the broad range of its authority.
2. Fewer costs are controllable as one moves down to each lower level of managerial responsibility because of the manager’s decreasing authority.

In general, **costs incurred directly by a level of responsibility are controllable at that level**. In contrast, costs incurred indirectly and allocated to a responsibility level are **noncontrollable costs** at that level.

## Responsibility Reporting System

A **responsibility reporting system** involves the preparation of a report for each level of responsibility in the company’s organization chart. To illustrate such a system, we use the partial organization chart and production departments of Francis Chair Company in Illustration 24-18.

### Helpful Hint

Are there more or fewer controllable costs as you move to higher levels of management?  
 Answer: More.

### Helpful Hint

The longer the time span, the more likely that the cost becomes controllable.

**Illustration 24-18**  
 Partial organization chart

**Report A**  
 President sees summary data of vice presidents.

**Report B**  
 Vice president sees summary of controllable costs in his/her functional area.

**Report C**  
 Plant manager sees summary of controllable costs for each department in the plant.

**Report D**  
 Department manager sees controllable costs of his/her department.

The responsibility reporting system begins with the lowest level of responsibility for controlling costs and moves upward to each higher level. Illustration 24-19 (page 1113) details the connections between levels. A brief description of the four reports for Francis Chair Company is as follows.

- 1. Report D** is typical of reports that go to managers at the lowest level of responsibility shown in the organization chart—department managers. Similar reports are prepared for the managers of the Fabricating, Assembly, and Enameling Departments.
- 2. Report C** is an example of reports that are sent to plant managers. It shows the costs of the Chicago plant that are controllable at the second level of responsibility. In addition, Report C shows summary data for each department that is controlled by the plant manager. Similar reports are prepared for the Detroit and St. Louis plant managers.
- 3. Report B** illustrates the reports at the third level of responsibility. It shows the controllable costs of the vice president of production and summary data on the three assembly plants for which this officer is responsible. Similar reports are prepared for the vice presidents of sales and finance.
- 4. Report A** is typical of reports that go to the top level of responsibility—the president. It shows the controllable costs and expenses of this office and summary data on the vice presidents that are accountable to the president.

A responsibility reporting system permits management by exception at each level of responsibility. And, each higher level of responsibility can obtain the detailed report for each lower level of responsibility. For example, the vice president of production in the Francis Chair Company may request the Chicago plant manager's report because this plant is \$5,300 over budget.

This type of reporting system also permits comparative evaluations. In Illustration 24-19, the Chicago plant manager can easily rank the department managers' effectiveness in controlling manufacturing costs. Comparative rankings provide further incentive for a manager to control costs.

## Types of Responsibility Centers

There are three basic types of responsibility centers: cost centers, profit centers, and investment centers. These classifications indicate the degree of responsibility the manager has for the performance of the center.

A **cost center** incurs costs (and expenses) but does not directly generate revenues. Managers of cost centers have the authority to incur costs. They are evaluated on their ability to control costs. **Cost centers are usually either production departments or service departments.** Production departments participate directly in making the product. Service departments provide only support services. In a **Ford Motor Company** automobile plant, the welding, painting, and assembling departments are production departments. Ford's maintenance, cafeteria, and human resources departments are service departments. All of them are cost centers.

A **profit center** incurs costs (and expenses) and also generates revenues. Managers of profit centers are judged on the profitability of their centers. Examples of profit centers include the individual departments of a retail store, such as clothing, furniture, and automotive products, and branch offices of banks.

Like a profit center, an **investment center** incurs costs (and expenses) and generates revenues. In addition, an investment center has control over decisions regarding the assets available for use. Investment center managers are evaluated on both the profitability of the center and the rate of return earned on the funds invested. Investment centers are often associated with subsidiary companies. Utility **Duke Energy**

### Helpful Hint

(1) Is the jewelry department of **Macy's** department store a profit center or a cost center? (2) Is the props department of a movie studio a profit center or a cost center?

Answers: (1) Profit center.  
(2) Cost center.

### Responsibility Accounting for Cost Centers

**Study Objective [5]**  
Indicate the features of responsibility reports for cost centers.

The evaluation of a manager’s performance for cost centers is based on his or her ability to meet budgeted goals for controllable costs. **Responsibility reports for cost centers compare actual controllable costs with flexible budget data.**

Illustration 24-21 shows a responsibility report. The report is adapted from the flexible budget report for Fox Manufacturing Company in Illustration 24-16 on page 1106. It assumes that the Finishing Department manager is able to control all manufacturing overhead costs except depreciation, property taxes, and his own monthly salary of \$6,000. The remaining \$4,000 (\$10,000 – \$6,000) of supervision costs are assumed to apply to other supervisory personnel within the Finishing Department, whose salaries are controllable by the manager.

**Illustration 24-21**  
Responsibility report for a cost center

| FOX MANUFACTURING COMPANY            |              |              |                 |   |
|--------------------------------------|--------------|--------------|-----------------|---|
| Finishing Department                 |              |              |                 |   |
| Responsibility Report                |              |              |                 |   |
| For the Month Ended January 31, 2012 |              |              |                 |   |
|                                      | Budget       | Actual       | Difference      |   |
| Controllable Cost                    |              |              | Favorable - F   |   |
|                                      |              |              | Unfavorable - U |   |
| Indirect materials                   | \$13,500     | \$14,000     | \$ 500          | U |
| Indirect labor                       | 18,000       | 17,000       | \$1,000         | F |
| Utilities                            | 4,500        | 4,600        | 100             | U |
| <b>Supervision</b>                   | <b>4,000</b> | <b>4,000</b> | <b>0</b>        |   |
|                                      | \$40,000     | \$39,600     | \$ 400          | F |

The report in Illustration 24-21 includes **only controllable costs**, and no distinction is made between variable and fixed costs. The responsibility report continues the concept of management by exception. In this case, top management may request an explanation of the \$1,000 favorable difference in indirect labor and/or the \$500 unfavorable difference in indirect materials.

## Responsibility Accounting for Profit Centers

To evaluate the performance of a profit center manager, upper management needs detailed information about both controllable revenues and controllable costs. The operating revenues earned by a profit center, such as sales, are controllable by the manager. All variable costs (and expenses) incurred by the center are also controllable by the manager because they vary with sales. However, to determine the controllability of fixed costs, it is necessary to distinguish between direct and indirect fixed costs.

### Study Objective [6]

Identify the content of responsibility reports for profit centers.

### DIRECT AND INDIRECT FIXED COSTS

A profit center may have both direct and indirect fixed costs. **Direct fixed costs** relate specifically to one center and are incurred for the sole benefit of that center. Examples of such costs include the salaries established by the profit center manager for supervisory personnel and the cost of a timekeeping department for the center's employees. Since these fixed costs can be traced directly to a center, they are also called **traceable costs**. **Most direct fixed costs are controllable by the profit center manager.**

In contrast, **indirect fixed costs** pertain to a company's overall operating activities and are incurred for the benefit of more than one profit center. Management allocates indirect fixed costs to profit centers on some type of equitable basis. For example, property taxes on a building occupied by more than one center may be allocated on the basis of square feet of floor space used by each center. Or, the costs of a company's human resources department may be allocated to profit centers on the basis of the number of employees in each center. Because these fixed costs apply to more than one center, they are also called **common costs**. **Most indirect fixed costs are not controllable by the profit center manager.**

### RESPONSIBILITY REPORT

The responsibility report for a profit center shows budgeted and actual **controllable revenues and costs**. The report is prepared using the cost-volume-profit income statement explained in Chapter 22. In the report:

1. Controllable fixed costs are deducted from contribution margin.
2. The excess of contribution margin over controllable fixed costs is identified as **controllable margin**.
3. Noncontrollable fixed costs are not reported.

Illustration 24-22 (page 1116) shows the responsibility report for the manager of the Marine Division, a profit center of Mantle Manufacturing Company. For the year, the Marine Division also had \$60,000 of indirect fixed costs that were not controllable by the profit center manager.

Controllable margin is considered to be the best measure of the manager's performance **in controlling revenues and costs**. The report in Illustration 24-22 shows that the manager's performance was below budgeted expectations by 10% ( $\$36,000 \div \$360,000$ ). Top management would likely investigate the causes of this unfavorable result. Note that the report does not show the Marine Division's noncontrollable fixed costs of \$60,000. These costs would be included in a report on the profitability of the profit center.

**Illustration 24-22**  
Responsibility report for profit center

|                                 | Budget            | Actual            | Difference      |          |
|---------------------------------|-------------------|-------------------|-----------------|----------|
|                                 |                   |                   | Favorable - F   |          |
|                                 |                   |                   | Unfavorable - U |          |
| Sales                           | \$1,200,000       | \$1,150,000       | \$50,000        | U        |
| Variable costs                  |                   |                   |                 |          |
| Cost of goods sold              | 500,000           | 490,000           | 10,000          | F        |
| Selling and administrative      | 160,000           | 156,000           | 4,000           | F        |
| Total                           | 660,000           | 646,000           | 14,000          | F        |
| Contribution margin             | 540,000           | 504,000           | 36,000          | U        |
| <b>Controllable fixed costs</b> |                   |                   |                 |          |
| Cost of goods sold              | 100,000           | 100,000           | 0               |          |
| Selling and administrative      | 80,000            | 80,000            | 0               |          |

| <b>Controllable margin</b>      | <b>\$ 360,000</b> | <b>\$ 324,000</b> | <b>\$36,000</b> | <b>U</b> |

Management also may choose to see monthly responsibility reports for profit centers. In addition, responsibility reports may include cumulative year-to-date results.

## Do it!

### Responsibility Reports for Profit Centers

Midwest Division operates as a profit center. It reports the following for the year.

|                             | Budgeted    | Actual      |
|-----------------------------|-------------|-------------|
| Sales                       | \$1,500,000 | \$1,700,000 |
| Variable costs              | 700,000     | 800,000     |
| Controllable fixed costs    | 400,000     | 400,000     |
| Noncontrollable fixed costs | 200,000     | 200,000     |

#### action plan

- ✓ Deduct variable costs from sales to show contribution margin.
- ✓ Deduct controllable fixed costs from the contribution margin to show controllable margin.
- ✓ Do not report noncontrollable fixed costs.

Prepare a responsibility report for the Midwest Division for December 31, 2012.

#### Solution

|                          | Budget            | Actual            | Difference         |
|--------------------------|-------------------|-------------------|--------------------|
|                          |                   |                   | Favorable F        |
|                          |                   |                   | Unfavorable U      |
| Sales                    | \$1,500,000       | \$1,700,000       | \$200,000 F        |
| Variable costs           | 700,000           | 800,000           | 100,000 U          |
| Contribution margin      | 800,000           | 900,000           | 100,000 F          |
| Controllable fixed costs | 400,000           | 400,000           | —0—                |
| Controllable margin      | <u>\$ 400,000</u> | <u>\$ 500,000</u> | <u>\$100,000 F</u> |

## Responsibility Accounting for Investment Centers

As explained earlier, an investment center manager can control or significantly influence the investment funds available for use. Thus, the primary basis for evaluating the performance of a manager of an investment center is **return on investment (ROI)**. The return on investment is considered to be a useful performance measurement because it shows the **effectiveness of the manager in utilizing the assets at his or her disposal**.

### Study Objective [7]

Explain the basis and formula used in evaluating performance in investment centers.

### RETURN ON INVESTMENT (ROI)

The formula for computing ROI for an investment center, together with assumed illustrative data, is shown in Illustration 24-23.

|                     |   |                          |   |                            |
|---------------------|---|--------------------------|---|----------------------------|
| Controllable Margin | ÷ | Average Operating Assets | = | Return on Investment (ROI) |
| \$1,000,000         | ÷ | \$5,000,000              | = | 20%                        |

**Illustration 24-23**  
ROI formula

Both factors in the formula are controllable by the investment center manager. Operating assets consist of current assets and plant assets used in operations by the center and controlled by the manager. Nonoperating assets such as idle plant assets and land held for future use are excluded. Average operating assets are usually based on the cost or book value of the assets at the beginning and end of the year.

### RESPONSIBILITY REPORT

The scope of the investment center manager's responsibility significantly affects the content of the performance report. Since an investment center is an independent entity for operating purposes, **all fixed costs are controllable by its manager**. For example, the manager is responsible for depreciation on investment center assets. Therefore, more fixed costs are identified as controllable in the performance report for an investment center manager than in a performance report for a profit center manager. The report also shows budgeted and actual ROI below controllable margin.

To illustrate this responsibility report, we will now assume that the Marine Division of Mantle Manufacturing Company is an investment center. It has budgeted and actual average operating assets of \$2,000,000. The manager can control \$60,000 of fixed costs that were not controllable when the division was a profit center. Illustration 24-24 (page 1118) shows the division's responsibility report.

The report shows that the manager's performance based on ROI was below budget expectations by 1.8% (15.0% versus 13.2%). Top management would likely want an explanation of the reasons for this unfavorable result.

### JUDGMENTAL FACTORS IN ROI

The return on investment approach includes two judgmental factors:

- 1. Valuation of operating assets.** Operating assets may be valued at acquisition cost, book value, appraised value, or fair value. The first two bases are readily available from the accounting records.
- 2. Margin (income) measure.** This measure may be controllable margin, income from operations, or net income.

Each of the alternative values for operating assets can provide a reliable basis for evaluating a manager's performance as long as it is consistently applied between reporting periods. However, the use of income measures other than controllable

**Illustration 24-24**  
Responsibility report for investment center

|                                      | (a)               | (b)               | (c)              |          |
|                                      | (a) \$ 300,000    | (b) \$ 264,000    | (c) \$ 36,000    |          |
|                                      | \$2,000,000       | \$2,000,000       | \$2,000,000      |          |

margin will not result in a valid basis for evaluating the performance of an investment center manager.

**IMPROVING ROI**

The manager of an investment center can improve ROI in two ways: (1) increase controllable margin, and/or (2) reduce average operating assets. To illustrate, we will use the following assumed data for the Laser Division of Berra Manufacturing.

**Illustration 24-25**  
Assumed data for Laser Division

|                                |                   |
|--------------------------------|-------------------|
| Sales                          | \$2,000,000       |
| Variable costs                 | <u>1,100,000</u>  |
| Contribution margin (45%)      | 900,000           |
| Controllable fixed costs       | <u>300,000</u>    |
| Controllable margin (a)        | <u>\$ 600,000</u> |
| Average operating assets (b)   | \$5,000,000       |
| Return on investment (a) ÷ (b) | <b>12%</b>        |

**Increasing Controllable Margin.** Controllable margin can be increased by increasing sales or by reducing variable and controllable fixed costs as follows.

- 1. Increase sales 10%.** Sales will increase \$200,000 (\$2,000,000 × .10). Assuming no change in the contribution margin percentage of 45%, contribution margin will increase \$90,000 (\$200,000 × .45). Controllable margin will increase by the same amount because controllable fixed costs will not change. Thus, controllable margin becomes \$690,000 (\$600,000 + \$90,000). The new ROI is 13.8%, computed as follows.

**Illustration 24-26**  
ROI computation—increase in sales

$$ROI = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$690,000}{\$5,000,000} = \mathbf{13.8\%}$$

An increase in sales benefits both the investment center and the company if it results in new business. It would not benefit the company if the increase was achieved at the expense of other investment centers.

- 2. Decrease variable and fixed costs 10%.** Total costs decrease \$140,000  $[(\$1,100,000 + \$300,000) \times .10]$ . This reduction results in a corresponding increase in controllable margin. Thus, controllable margin becomes \$740,000  $(\$600,000 + \$140,000)$ . The new ROI is 14.8%, computed as follows.

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$740,000}{\$5,000,000} = \mathbf{14.8\%}$$

**Illustration 24-27**

ROI computation—decrease in costs

This course of action is clearly beneficial when waste and inefficiencies are eliminated. But, a reduction in vital costs such as required maintenance and inspections is not likely to be acceptable to top management.

**Reducing Average Operating Assets.** Assume that average operating assets are reduced 10% or \$500,000  $(\$5,000,000 \times .10)$ . Average operating assets become \$4,500,000  $(\$5,000,000 - \$500,000)$ . Since controllable margin remains unchanged at \$600,000, the new ROI is 13.3%, computed as follows.

$$\text{ROI} = \frac{\text{Controllable margin}}{\text{Average operating assets}} = \frac{\$600,000}{\$4,500,000} = \mathbf{13.3\%}$$

**Illustration 24-28**

ROI computation—decrease in operating assets

Reductions in operating assets may or may not be prudent. It is beneficial to eliminate overinvestment in inventories and to dispose of excessive plant assets. However, it is unwise to reduce inventories below expected needs or to dispose of essential plant assets.

## ACCOUNTING ACROSS THE ORGANIZATION

### Does Hollywood Look at ROI?

If Hollywood were run like a real business, where things like return on investment mattered, there would be one unchallenged, sacred principle that studio chiefs would never violate: Make lots of G-rated movies.

No matter how you slice the movie business—by star vehicles, by budget levels, by sequels or franchises—by far the best return on investment comes from the not-so-glamorous world of G-rated films. The problem is, these movies represent only 3% of the total films made in a typical year.

Take 2003: According to Motion Picture Association of America statistics, of the 940 movies released that year, only 29 were G-rated. Yet the highest-grossing movie of the year, *Finding Nemo*, was G-rated. . . . On the flip side are the R-rated films, which dominate the total releases and yet yield the worst return on investment. A whopping 646 R-rated films were released in 2003—69% of the total output—but only four of the top-20 grossing movies of the year were R-rated films.

This trend—G-rated movies are good for business but underproduced; R-rated movies are bad for business, and yet overdone—is something that has been driving economists batty for the past several years.

Source: Grainger, David, "The Dysfunctional Family-Film Business," *Fortune* (January 10, 2005), pp. 20–21.

**?** What might be the reason that movie studios do not produce G-rated movies as often as R-rated ones? (See page 1145.)

## ***Principles of Performance Evaluation***

Performance evaluation is at the center of responsibility accounting. **Performance evaluation** is a management function that compares actual results with budget goals. It involves both behavioral and reporting principles.

### **BEHAVIORAL PRINCIPLES**

The human factor is critical in evaluating performance. Behavioral principles include the following.

- 1. Managers of responsibility centers should have direct input into the process of establishing budget goals of their area of responsibility.** Without such input, managers may view the goals as unrealistic or arbitrarily set by top management. Such views adversely affect the managers' motivation to meet the targeted objectives.
- 2. The evaluation of performance should be based entirely on matters that are controllable by the manager being evaluated.** Criticism of a manager on matters outside his or her control reduces the effectiveness of the evaluation process. It leads to negative reactions by a manager and to doubts about the fairness of the company's evaluation policies.
- 3. Top management should support the evaluation process.** As explained earlier, the evaluation process begins at the lowest level of responsibility and extends upward to the highest level of management. Managers quickly lose faith in the process when top management ignores, overrules, or bypasses established procedures for evaluating a manager's performance.
- 4. The evaluation process must allow managers to respond to their evaluations.** Evaluation is not a one-way street. Managers should have the opportunity to defend their performance. Evaluation without feedback is both impersonal and ineffective.
- 5. The evaluation should identify both good and poor performance.** Praise for good performance is a powerful motivating factor for a manager. This is especially true when a manager's compensation includes rewards for meeting budget goals.

### **REPORTING PRINCIPLES**

Performance evaluation under responsibility accounting should be based on certain reporting principles. These principles pertain primarily to the internal reports that provide the basis for evaluating performance. Performance reports should:

- 1.** Contain only data that are controllable by the manager of the responsibility center.
- 2.** Provide accurate and reliable budget data to measure performance.
- 3.** Highlight significant differences between actual results and budget goals.
- 4.** Be tailor-made for the intended evaluation.
- 5.** Be prepared at reasonable intervals.

In recent years companies have come under increasing pressure from influential shareholder groups to do a better job of linking executive pay to corporate performance. For example, software maker **Siebel Systems** unveiled a new incentive plan after lengthy discussions with the California Public Employees' Retirement System. One unique feature of the plan is that managers' targets will be publicly disclosed at the beginning of each year for investors to evaluate.

## MANAGEMENT INSIGHT

### Flexible Manufacturing Requires Flexible Accounting

Flexible budgeting is useful because it enables managers to evaluate performance in light of changing conditions. But the ability to react quickly to changing conditions is even more important. Among automobile manufacturing facilities in the U.S., nobody has more flexible plants than **Honda**. The manufacturing facilities of some auto companies can make slight alterations to the features of a vehicle in response to changes in demand for particular features. But for most plants, to switch from production of one type of vehicle to a completely different type of vehicle, when demand for types of vehicles shifts, typically takes months and costs hundreds of millions of dollars. But at the Honda plant, the switch takes minutes. For example, it takes about five minutes to install different hand-like parts on the robots so they can switch from making Civic compacts to the longer, taller CR-V crossover. This ability to adjust quickly to changing demand gave Honda a huge advantage when gas prices surged and demand for more fuel-efficient cars increased quickly.

Source: Kate Linebaugh, "Honda's Flexible Plants Provide Edge," *Wall Street Journal Online* (September 23, 2008).

**?** What implications do these improvements in production capabilities have for management accounting information and performance evaluation within the organization? (See page 1145.)

## Do it!

The service division of Metro Industries reported the following results for 2012.

|                          |           |
|--------------------------|-----------|
| Sales                    | \$400,000 |
| Variable costs           | 320,000   |
| Controllable fixed costs | 40,800    |
| Average operating assets | 280,000   |

Management is considering the following independent courses of action in 2013 in order to maximize the return on investment for this division.

1. Reduce average operating assets by \$80,000, with no change in controllable margin.
  2. Increase sales \$80,000, with no change in the contribution margin percentage.
- (a) Compute the controllable margin and the return on investment for 2012.  
 (b) Compute the controllable margin and the expected return on investment for each proposed alternative.

### Solution

(a) Return on investment for 2012

|                          |                  |
|--------------------------|------------------|
| Sales                    | \$400,000        |
| Variable costs           | 320,000          |
| Contribution margin      | 80,000           |
| Controllable fixed costs | 40,800           |
| Controllable margin      | <u>\$ 39,200</u> |

$$\text{Return on investment} = \frac{\$39,200}{\$280,000} = 14\%$$

## Performance Evaluation

### action plan

- ✓ Recall key formulas:  
Sales – Variable costs = Contribution margin.
- ✓ Contribution margin ÷ Sales = Contribution margin percentage.
- ✓ Contribution margin – Controllable fixed costs = Controllable margin.
- ✓ Return on investment = Controllable margin ÷ Average operating assets.

(b) Expected return on investment for alternative 1:

$$\frac{\$39,200}{\$200,000} = 19.6\%$$

Expected return on investment for alternative 2:

|  |                  |
|--|------------------|
| Sales (\$400,000 + 80,000)                     | \$480,000        |
| Variable costs (\$320,000/400,000 × \$480,000) | 384,000          |
| Contribution margin                            | <u>96,000</u>    |
| Controllable fixed costs                       | 40,800           |
| Controllable margin                            | <u>\$ 55,200</u> |

|                      |                 |   |       |
|----------------------|-----------------|---|-------|
| Return on investment | <u>\$55,200</u> | = | 19.7% |
|                      | \$280,000       |   |       |

## COMPREHENSIVE

### Do it! 1

#### action plan

- ✓ Compute the cost per direct labor hour for all variable costs.
- ✓ Use budget data for actual direct labor hours worked.
- ✓ Classify each cost as variable or fixed.
- ✓ Determine the difference between budgeted and actual costs.
- ✓ Identify the difference as favorable or unfavorable.
- ✓ Determine the difference in total variable costs, total fixed costs, and total costs.

Glenda Company uses a flexible budget for manufacturing overhead based on direct labor hours. For 2012, the master overhead budget for the Packaging Department based on 300,000 direct labor hours was as follows.

| Variable Costs          |                  | Fixed Costs    |                  |
|-------------------------|------------------|----------------|------------------|
| Indirect labor          | \$360,000        | Supervision    | \$ 60,000        |
| Supplies and lubricants | 150,000          | Depreciation   | 24,000           |
| Maintenance             | 210,000          | Property taxes | 18,000           |
| Utilities               | 120,000          | Insurance      | 12,000           |
|                         | <u>\$840,000</u> |                | <u>\$114,000</u> |

During July, 24,000 direct labor hours were worked. The company incurred the following variable costs in July: indirect labor \$30,200, supplies and lubricants \$11,600, maintenance \$17,500, and utilities \$9,200. Actual fixed overhead costs were the same as monthly budgeted fixed costs.

#### Instructions

Prepare a flexible budget report for the Packaging Department for July.

#### Solution to Comprehensive Do it! 1

## COMPREHENSIVE

### Do it! 2

The manufacturing overhead budget for Reebles Company contains the following items:

|                        |                 |
|------------------------|-----------------|
| Variable costs         |                 |
| Indirect materials     | \$25,000        |
| Indirect labor         | 12,000          |
| Maintenance expenses   | 10,000          |
| Manufacturing supplies | <u>6,000</u>    |
| Total variable         | <u>\$53,000</u> |
| Fixed costs            |                 |
| Supervision            | \$17,000        |
| Inspection costs       | 1,000           |
| Insurance expenses     | 2,000           |
| Depreciation           | <u>15,000</u>   |
| Total fixed            | <u>\$35,000</u> |

The budget was based on an estimated 2,000 units being produced. During November, 1,500 units were produced, and the following costs incurred.

|                        |                 |
|------------------------|-----------------|
| Variable costs         |                 |
| Indirect materials     | \$25,000        |
| Indirect labor         | 13,500          |
| Maintenance expenses   | 8,200           |
| Manufacturing supplies | <u>5,100</u>    |
| Total variable         | <u>\$52,000</u> |
| Fixed costs            |                 |
| Supervision            | \$19,300        |
| Inspection costs       | 1,200           |
| Insurance expenses     | 2,200           |
| Depreciation           | <u>14,700</u>   |
| Total fixed            | <u>\$37,400</u> |

#### Instructions

- Determine which items would be controllable by Ed Lopat, the production manager. (Assume “supervision” excludes Lopat’s own salary.)
- How much should have been spent during the month for the manufacture of the 1,500 units?
- Prepare a flexible manufacturing overhead budget report for Mr. Lopat.
- Prepare a responsibility report. Include only the costs that would have been controllable by Mr. Lopat. In an attached memo, describe clearly for Mr. Lopat the areas in which his performance needs to be improved.

**Solution to Comprehensive Do it! 2**

- (a) Ed Lopat should be able to control all the variable costs and the fixed costs of supervision and inspection. Insurance and depreciation ordinarily are not the responsibility of the department manager.
- (b) The total variable cost per unit is \$26.50 ( $\$53,000 \div 2,000$ ). The total budgeted cost during the month to manufacture 1,500 units is variable costs \$39,750 ( $1,500 \times \$26.50$ ) plus fixed costs (\$35,000), for a total of \$74,750 ( $\$39,750 + \$35,000$ ).

To: Mr. Ed Lopat, Production Manager  
 From: \_\_\_\_\_, Vice President of Production  
 Subject: Performance Evaluation for the Month of November

Your performance in controlling costs that are your responsibility was very disappointing in the month of November. As indicated in the accompanying responsibility report, total costs were \$14,750 over budget. On a percentage basis, costs were 26% over budget. As you can see, actual costs were over budget for every cost item. In three instances, costs were significantly over budget (indirect materials 34%, indirect labor 50%, and supervision 14%).

Ed, it is imperative that you get costs under control in your department as soon as possible.

I think we need to talk about ways to implement more effective cost control measures. I would like to meet with you in my office at 9 a.m. on Wednesday to discuss possible alternatives.

## Summary of Study Objectives

**[1] Describe the concept of budgetary control.** Budgetary control consists of (a) preparing periodic budget reports that compare actual results with planned objectives, (b) analyzing the differences to determine their causes, (c) taking appropriate corrective action, and (d) modifying future plans, if necessary.

**[2] Evaluate the usefulness of static budget reports.** Static budget reports are useful in evaluating the progress toward planned sales and profit goals. They are also appropriate in assessing a manager's effectiveness in controlling costs when (a) actual activity closely approximates the master budget activity level, and/or (b) the behavior of the costs in response to changes in activity is fixed.

**[3] Explain the development of flexible budgets and the usefulness of flexible budget reports.** To develop the flexible budget it is necessary to: (a) Identify the activity index and the relevant range of activity. (b) Identify the variable costs, and determine the budgeted variable cost per unit of activity for each cost. (c) Identify the fixed costs, and determine the budgeted amount for each cost. (d) Prepare the budget for selected increments of activity within the relevant range. Flexible budget reports permit an evaluation of a manager's performance in controlling production and costs.

**[4] Describe the concept of responsibility accounting.** Responsibility accounting involves accumulating and reporting

revenues and costs on the basis of the individual manager who has the authority to make the day-to-day decisions about the items. The evaluation of a manager's performance is based on the matters directly under the manager's control. In responsibility accounting, it is necessary to distinguish between controllable and noncontrollable fixed costs and to identify three types of responsibility centers: cost, profit, and investment.

**[5] Indicate the features of responsibility reports for cost centers.** Responsibility reports for cost centers compare actual costs with flexible budget data. The reports show only controllable costs, and no distinction is made between variable and fixed costs.

**[6] Identify the content of responsibility reports for profit centers.** Responsibility reports show contribution margin, controllable fixed costs, and controllable margin for each profit center.

**[7] Explain the basis and formula used in evaluating performance in investment centers.** The primary basis for evaluating performance in investment centers is return on investment (ROI). The formula for computing ROI for investment centers is: Controllable margin  $\div$  Average operating assets.

## Glossary

**Budgetary control** The use of budgets to control operations. (p. 1098).

**Controllable cost** A cost over which a manager has control. (p. 1111).

**Controllable margin** Contribution margin less controllable fixed costs. (p. 1115).

**Cost center** A responsibility center that incurs costs but does not directly generate revenues. (p. 1112).

**Decentralization** Control of operations is delegated to many managers throughout the organization. (p. 1109).

**Direct fixed costs** Costs that relate specifically to a responsibility center and are incurred for the sole benefit of the center. (p. 1115).

**Flexible budget** A projection of budget data for various levels of activity. (p. 1101).

**Indirect fixed costs** Costs that are incurred for the benefit of more than one profit center. (p. 1115).

**Investment center** A responsibility center that incurs costs, generates revenues, and has control over decisions regarding the assets available for use. (p. 1112).

**Management by exception** The review of budget reports by top management focused entirely or primarily on differences between actual results and planned objectives. (p. 1108).

**Noncontrollable costs** Costs incurred indirectly and allocated to a responsibility center that are not controllable at that level. (p. 1111).

**Profit center** A responsibility center that incurs costs and also generates revenues. (p. 1112).

**Responsibility accounting** A part of management accounting that involves accumulating and reporting revenues and costs on the basis of the manager who has the authority to make the day-to-day decisions about the items. (p. 1109).

**Responsibility reporting system** The preparation of reports for each level of responsibility in the company's organization chart. (p. 1111).

**Return on investment (ROI)** A measure of management's effectiveness in utilizing assets at its disposal in an investment center. (p. 1117).

**Segment** An area of responsibility in decentralized operations. (p. 1110).

**Static budget** A projection of budget data at one level of activity. (p. 1099).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

## Self-Test Questions

Answers are on page 1145.

- (SO 1) 1. Budgetary control involves all but one of the following:
- modifying future plans.
  - analyzing differences.
  - using static budgets.
  - determining differences between actual and planned results.
- (SO 1) 2. Budget reports are prepared:
- daily.
  - weekly.
  - monthly.
  - All of the above.
- (SO 1) 3. A production manager in a manufacturing company would most likely receive a:
- sales report.
  - income statement.
  - scrap report.
  - shipping department overhead report.
- (SO 2) 4. A static budget is:
- a projection of budget data at several levels of activity within the relevant range of activity.
  - a projection of budget data at a single level of activity.
  - compared to a flexible budget in a budget report.
  - never appropriate in evaluating a manager's effectiveness in controlling costs.
- (SO 2) 5. A static budget is useful in controlling costs when cost behavior is:
- mixed.
  - fixed.
  - variable.
  - linear.
- (SO 3) 6. At zero direct labor hours in a flexible budget graph, the total budgeted cost line intersects the vertical axis at \$30,000. At 10,000 direct labor hours, a horizontal line drawn from the total budgeted cost line intersects the vertical axis at \$90,000. Fixed and variable costs may be expressed as:
- \$30,000 fixed plus \$6 per direct labor hour variable.
  - \$30,000 fixed plus \$9 per direct labor hour variable.
  - \$60,000 fixed plus \$3 per direct labor hour variable.
  - \$60,000 fixed plus \$6 per direct labor hour variable.
7. At 9,000 direct labor hours, the flexible budget for indirect materials is \$27,000. If \$28,000 of indirect materials costs are incurred at 9,200 direct labor hours, the flexible budget report should show the following difference for indirect materials:
- \$1,000 unfavorable.
  - \$1,000 favorable.
  - \$400 favorable.
  - \$400 unfavorable.
8. Under responsibility accounting, the evaluation of a manager's performance is based on matters that the manager:
- directly controls.
  - directly and indirectly controls.
  - indirectly controls.
  - has shared responsibility for with another manager.
9. Responsibility centers include:
- cost centers.
  - profit centers.
  - investment centers.
  - All of the above.
10. Responsibility reports for cost centers:
- distinguish between fixed and variable costs.
  - use static budget data.
  - include both controllable and noncontrollable costs.
  - include only controllable costs.

- (SO 5) 11. The accounting department of a manufacturing company is an example of:  
**a.** a cost center.                      **c.** an investment center.  
**b.** a profit center.                    **d.** a contribution center.
- (SO 6) 12. To evaluate the performance of a profit center manager, upper management needs detailed information about:  
**a.** controllable costs.  
**b.** controllable revenues.  
**c.** controllable costs and revenues.  
**d.** controllable costs and revenues and average operating assets.
- (SO 6) 13. In a responsibility report for a profit center, controllable fixed costs are deducted from contribution margin to show:  
**a.** profit center margin.  
**b.** controllable margin.  
**c.** net income.  
**d.** income from operations.
14. In the formula for return on investment (ROI), the factors for controllable margin and operating assets are, respectively:  
**a.** controllable margin percentage and total operating assets.  
**b.** controllable margin dollars and average operating assets.  
**c.** controllable margin dollars and total assets.  
**d.** controllable margin percentage and average operating assets.
15. A manager of an investment center can improve ROI by:  
**a.** increasing average operating assets.  
**b.** reducing sales.  
**c.** increasing variable costs.  
**d.** reducing variable and/or controllable fixed costs.

## Questions

- (a)** What is budgetary control?  
**(b)** Finn Berge is describing budgetary control. What steps should be included in Finn's description?
- The following purposes are part of a budgetary reporting system: (a) Determine efficient use of materials. (b) Control overhead costs. (c) Determine whether income objectives are being met. For each purpose, indicate the name of the report, the frequency of the report, and the primary recipient(s) of the report.
- How may a budget report for the second quarter differ from a budget report for the first quarter?
- Mai Ling questions the usefulness of a master sales budget in evaluating sales performance. Is there justification for Mai's concern? Explain.
- Under what circumstances may a static budget be an appropriate basis for evaluating a manager's effectiveness in controlling costs?
- "A flexible budget is really a series of static budgets." Is this true? Why?
- The static manufacturing overhead budget based on 40,000 direct labor hours shows budgeted indirect labor costs of \$54,000. During March, the department incurs \$65,000 of indirect labor while working 45,000 direct labor hours. Is this a favorable or unfavorable performance? Why?
- A static overhead budget based on 40,000 direct labor hours shows Factory Insurance \$6,500 as a fixed cost. At the 50,000 direct labor hours worked in March, factory insurance costs were \$6,200. Is this a favorable or unfavorable performance? Why?
- Ken Holder is confused about how a flexible budget is prepared. Identify the steps for Ken.
- Moises Company has prepared a graph of flexible budget data. At zero direct labor hours, the total budgeted cost line intersects the vertical axis at \$25,000. At 10,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at \$85,000. How may the fixed and variable costs be expressed?
- The flexible budget formula is fixed costs \$40,000 plus variable costs of \$4 per direct labor hour. What is the total budgeted cost at (a) 9,000 hours and (b) 12,345 hours?
- What is management by exception? What criteria may be used in identifying exceptions?
- What is responsibility accounting? Explain the purpose of responsibility accounting.
- Anna Hsung is studying for an accounting examination. Describe for Anna what conditions are necessary for responsibility accounting to be used effectively.
- Distinguish between controllable and noncontrollable costs.
- How do responsibility reports differ from budget reports?
- What is the relationship, if any, between a responsibility reporting system and a company's organization chart?
- Distinguish among the three types of responsibility centers.
- (a) What costs are included in a performance report for a cost center? (b) In the report, are variable and fixed costs identified?
- How do direct fixed costs differ from indirect fixed costs? Are both types of fixed costs controllable?
- Rigo Beeto is confused about controllable margin reported in an income statement for a profit center. How is this margin computed, and what is its primary purpose?
- What is the primary basis for evaluating the performance of the manager of an investment center? Indicate the formula for this basis.
- Explain the ways that ROI can be improved.
- Indicate two behavioral principles that pertain to (a) the manager being evaluated and (b) top management.

## Brief Exercises

Prepare static budget report.  
(SO 2)

**BE24-1** For the quarter ended March 31, 2012, Meine Company accumulates the following sales data for its product, Garden-Tools: \$310,000 budget; \$304,000 actual. Prepare a static budget report for the quarter.

Prepare static budget report for 2 quarters.  
(SO 2)

**BE24-2** Data for Meine Company are given in BE24-1. In the second quarter, budgeted sales were \$380,000, and actual sales were \$383,000. Prepare a static budget report for the second quarter and for the year to date.

Show usefulness of flexible budgets in evaluating performance.  
(SO 3)

**BE24-3** In Giletto Company, direct labor is \$20 per hour. The company expects to operate at 10,000 direct labor hours each month. In January 2012, direct labor totaling \$203,000 is incurred in working 10,400 hours. Prepare (a) a static budget report and (b) a flexible budget report. Evaluate the usefulness of each report.

Prepare a flexible budget for variable costs.  
(SO 3)

**BE24-4** Myles Company expects to produce 1,200,000 units of Product XX in 2012. Monthly production is expected to range from 80,000 to 120,000 units. Budgeted variable manufacturing costs per unit are: direct materials \$4, direct labor \$6, and overhead \$8. Budgeted fixed manufacturing costs per unit for depreciation are \$2 and for supervision are \$1. Prepare a flexible manufacturing budget for the relevant range value using 20,000 unit increments.

Prepare flexible budget report.  
(SO 3)

**BE24-5** Data for Myles Company are given in BE24-4. In March 2012, the company incurs the following costs in producing 100,000 units: direct materials \$425,000, direct labor \$590,000, and variable overhead \$805,000. Prepare a flexible budget report for March. Were costs controlled?

Prepare a responsibility report for a cost center.  
(SO 5)

**BE24-6** In the Assembly Department of Mantle Company, budgeted and actual manufacturing overhead costs for the month of April 2012 were as follows.

|                    | <u>Budget</u> | <u>Actual</u> |
|--------------------|---------------|---------------|
| Indirect materials | \$15,000      | \$14,300      |
| Indirect labor     | 20,000        | 20,600        |
| Utilities          | 10,000        | 10,750        |
| Supervision        | 5,000         | 5,000         |

All costs are controllable by the department manager. Prepare a responsibility report for April for the cost center.

Prepare a responsibility report for a profit center.  
(SO 6)

**BE24-7** Maris Manufacturing Company accumulates the following summary data for the year ending December 31, 2012, for its Water Division which it operates as a profit center: sales—\$2,000,000 budget, \$2,080,000 actual; variable costs—\$1,000,000 budget, \$1,050,000 actual; and controllable fixed costs—\$300,000 budget, \$310,000 actual. Prepare a responsibility report for the Water Division.

Prepare a responsibility report for an investment center.  
(SO 7)

**BE24-8** For the year ending December 31, 2012, Ruth Company accumulates the following data for the Plastics Division which it operates as an investment center: contribution margin—\$700,000 budget, \$715,000 actual; controllable fixed costs—\$300,000 budget, \$309,000 actual. Average operating assets for the year were \$2,000,000. Prepare a responsibility report for the Plastics Division beginning with contribution margin.

Compute return on investment using the ROI formula.  
(SO 7)

**BE24-9** For its three investment centers, Jackson Company accumulates the following data:

|                          | <u>I</u>    | <u>II</u>   | <u>III</u>   |
|--------------------------|-------------|-------------|--------------|
| Sales                    | \$2,000,000 | \$3,000,000 | \$ 4,000,000 |
| Controllable margin      | 1,200,000   | 2,000,000   | 3,200,000    |
| Average operating assets | 5,000,000   | 8,000,000   | 10,000,000   |

Compute the return on investment (ROI) for each center.

Compute return on investment under changed conditions.  
(SO 7)

**BE24-10** Data for the investment centers for Jackson Company are given in BE24-9. The centers expect the following changes in the next year: (I) increase sales 15%; (II) decrease costs \$200,000; (III) decrease average operating assets \$400,000. Compute the expected return on investment (ROI) for each center. Assume center I has a contribution margin percentage of 75%.

## Do it! Review

**Do it! 24-1** In Brown Company's flexible budget graph, the fixed cost line and the total budgeted cost line intersect the vertical axis at \$90,000. The total budgeted cost line is \$330,000 at an activity level of 60,000 direct labor hours. Compute total budgeted costs at 70,000 direct labor hours.

Compute total budgeted costs in flexible budget.  
(SO 3)

**Do it! 24-2** Favre Company expects to produce 50,000 units of product IOA during the current year. Budgeted variable manufacturing costs per unit are direct materials \$7, direct labor \$12, and overhead \$18. Annual budgeted fixed manufacturing overhead costs are \$96,000 for depreciation and \$45,000 for supervision.

Prepare and evaluate a flexible budget report.  
(SO 3)

In the current month, Favre produced 6,000 units and incurred the following costs: direct materials \$38,900, direct labor \$70,200, variable overhead \$116,500, depreciation \$8,000, and supervision \$4,000.

Prepare a flexible budget report. (Note: You do not need to prepare the heading.) Were costs controlled?

**Do it! 24-3** The Far West Division operates as a profit center. It reports the following for the year.

Prepare a responsibility report.  
(SO 6)

|                             | <u>Budgeted</u> | <u>Actual</u> |
|-----------------------------|-----------------|---------------|
| Sales                       | \$2,000,000     | \$1,800,000   |
| Variable costs              | 800,000         | 750,000       |
| Controllable fixed costs    | 550,000         | 550,000       |
| Noncontrollable fixed costs | 250,000         | 250,000       |

Prepare a responsibility report for the Far West Division at December 31, 2012.

**Do it! 24-4** The service division of Brady Industries reported the following results for 2012.

|                          |           |
|--------------------------|-----------|
| Sales                    | \$500,000 |
| Variable costs           | 300,000   |
| Controllable fixed costs | 75,000    |
| Average operating assets | 450,000   |

Compute ROI and expected return on investments.  
(SO 7)

Management is considering the following independent courses of action in 2013 in order to maximize the return on investment for this division.

1. Reduce average operating assets by \$50,000, with no change in controllable margin.
2. Increase sales \$100,000, with no change in the contribution margin percentage.

(a) Compute the controllable margin and the return on investment for 2012. (b) Compute the controllable margin and the expected return on investment for each proposed alternative.

## Exercises

**E24-1** Bruce Willis has prepared the following list of statements about budgetary control.

Understand the concept of budgetary control.  
(SO 1, 2, 3)

1. Budget reports compare actual results with planned objectives.
2. All budget reports are prepared on a weekly basis.
3. Management uses budget reports to analyze differences between actual and planned results and determine their causes.
4. As a result of analyzing budget reports, management may either take corrective action or modify future plans.
5. Budgetary control works best when a company has an informal reporting system.
6. The primary recipients of the sales report are the sales manager and the vice president of production.
7. The primary recipient of the scrap report is the production manager.
8. A static budget is a projection of budget data at one level of activity.
9. Top management's reaction to unfavorable differences is not influenced by the materiality of the difference.

10. A static budget is not appropriate in evaluating a manager's effectiveness in controlling costs unless the actual activity level approximates the static budget activity level or the behavior of the costs is fixed.

**Instructions**

Identify each statement as true or false. If false, indicate how to correct the statement.

Prepare and evaluate static budget report.  
(SO 2)

**E24-2** Valenzuela Company budgeted selling expenses of \$30,000 in January, \$35,000 in February, and \$40,000 in March. Actual selling expenses were \$31,000 in January, \$34,500 in February, and \$47,000 in March.

**Instructions**

- (a) Prepare a selling expense report that compares budgeted and actual amounts by month and for the year to date.
- (b) What is the purpose of the report prepared in (a), and who would be the primary recipient?
- (c)  What would be the likely result of management's analysis of the report?

Prepare manufacturing flexible overhead budget.  
(SO 3)

**E24-3** Rooney Company uses a flexible budget for manufacturing overhead based on direct labor hours. Variable manufacturing overhead costs per direct labor hour are as follows.

|                    |        |
|--------------------|--------|
| Indirect labor     | \$1.00 |
| Indirect materials | 0.50   |
| Utilities          | 0.40   |

Fixed overhead costs per month are: Supervision \$4,000, Depreciation \$1,500, and Property Taxes \$800. The company believes it will normally operate in a range of 7,000–10,000 direct labor hours per month.

**Instructions**

Prepare a monthly manufacturing overhead flexible budget for 2012 for the expected range of activity, using increments of 1,000 direct labor hours.

Prepare flexible budget reports for manufacturing overhead costs, and comment on findings.  
(SO 3)

**E24-4** Using the information in E24-3, assume that in July 2012, Rooney Company incurs the following manufacturing overhead costs.

| Variable Costs     |         | Fixed Costs    |         |
|--------------------|---------|----------------|---------|
| Indirect labor     | \$8,700 | Supervision    | \$4,000 |
| Indirect materials | 4,300   | Depreciation   | 1,500   |
| Utilities          | 3,200   | Property taxes | 800     |

**Instructions**

- (a) Prepare a flexible budget performance report, assuming that the company worked 9,000 direct labor hours during the month.
- (b) Prepare a flexible budget performance report, assuming that the company worked 8,500 direct labor hours during the month.
- (c)  Comment on your findings.

Prepare flexible selling expense budget.  
(SO 3)

**E24-5** Russell Company uses flexible budgets to control its selling expenses. Monthly sales are expected to range from \$170,000 to \$200,000. Variable costs and their percentage relationship to sales are: Sales Commissions 5%, Advertising 4%, Traveling 3%, and Delivery 2%. Fixed selling expenses will consist of Sales Salaries \$34,000, Depreciation on Delivery Equipment \$7,000, and Insurance on Delivery Equipment \$1,000.

**Instructions**

Prepare a monthly flexible budget for each \$10,000 increment of sales within the relevant range for the year ending December 31, 2012.

Prepare flexible budget reports for selling expenses.  
(SO 3)

**E24-6** The actual selling expenses incurred in March 2012 by Russell Company are as follows.

| Variable Expenses |         | Fixed Expenses |          |
|-------------------|---------|----------------|----------|
| Sales commissions | \$9,200 | Sales salaries | \$34,000 |
| Advertising       | 7,000   | Depreciation   | 7,000    |
| Travel            | 5,100   | Insurance      | 1,000    |
| Delivery          | 3,500   |                |          |

**Instructions**

- (a) Prepare a flexible budget performance report for March using the budget data in E24-5, assuming that March sales were \$170,000. Expected and actual sales are the same.
- (b) Prepare a flexible budget performance report, assuming that March sales were \$180,000. Expected sales and actual sales are the same.
- (c)  Comment on the importance of using flexible budgets in evaluating the performance of the sales manager.

**E24-7** Byrd Company's manufacturing overhead budget for the first quarter of 2012 contained the following data.

| Variable Costs     |          | Fixed Costs                  |          |
|--------------------|----------|------------------------------|----------|
| Indirect materials | \$12,000 | Supervisory salaries         | \$36,000 |
| Indirect labor     | 10,000   | Depreciation                 | 7,000    |
| Utilities          | 8,000    | Property taxes and insurance | 8,000    |
| Maintenance        | 6,000    | Maintenance                  | 5,000    |

Actual variable costs were: indirect materials \$13,800, indirect labor \$9,600, utilities \$8,700, and maintenance \$4,900. Actual fixed costs equaled budgeted costs except for property taxes and insurance, which were \$8,200.

All costs are considered controllable by the production department manager except for depreciation, and property taxes and insurance.

**Instructions**

- (a) Prepare a manufacturing overhead flexible budget report for the first quarter.
- (b) Prepare a responsibility report for the first quarter.

**E24-8** As sales manager, Magic Johnson was given the following static budget report for selling expenses in the Clothing Department of Lakers Company for the month of October.

**LAKERS COMPANY**  
Clothing Department  
Selling Expense Budget Report  
For the Month Ended October 31, 2012

|                                  | <u>Budget</u> | <u>Actual</u> | <u>Difference</u>            |
|----------------------------------|---------------|---------------|------------------------------|
|                                  |               |               | Favorable F<br>Unfavorable U |
| Sales in units                   | 8,000         | 10,000        | 2,000 F                      |
| Variable expenses                |               |               |                              |
| Sales commissions                | \$ 2,000      | \$ 2,600      | \$ 600 U                     |
| Advertising expense              | 800           | 850           | 50 U                         |
| Travel expense                   | 3,600         | 4,000         | 400 U                        |
| Free samples given out           | 1,600         | 1,300         | 300 F                        |
| Total variable                   | 8,000         | 8,750         | 750 U                        |
| Fixed expenses                   |               |               |                              |
| Rent                             | 1,500         | 1,500         | —0—                          |
| Sales salaries                   | 1,200         | 1,200         | —0—                          |
| Office salaries                  | 800           | 800           | —0—                          |
| Depreciation—autos (sales staff) | 500           | 500           | —0—                          |
| Total fixed                      | 4,000         | 4,000         | —0—                          |
| Total expenses                   | \$12,000      | \$12,750      | \$ 750 U                     |

As a result of this budget report, Magic was called into the president's office and congratulated on his fine sales performance. He was reprimanded, however, for allowing his costs to get out of control. Magic knew something was wrong with the performance report that he had been given. However, he was not sure what to do, and comes to you for advice.

**Instructions**

- (a) Prepare a budget report based on flexible budget data to help Magic.
- (b) Should Magic have been reprimanded? Explain.

*Prepare flexible budget and responsibility report for manufacturing overhead.*  
(SO 3, 5)

*Prepare flexible budget report, and answer question.*  
(SO 2, 3)

Prepare and discuss a responsibility report.

(SO 3, 5)

**E24-9** Manning Plumbing Company is a newly formed company specializing in plumbing services for home and business. The owner, Peyton Manning, had divided the company into two segments: Home Plumbing Services and Business Plumbing Services. Each segment is run by its own supervisor, while basic selling and administrative services are shared by both segments.

Peyton has asked you to help him create a performance reporting system that will allow him to measure each segment's performance in terms of its profitability. To that end, the following information has been collected on the Home Plumbing Services segment for the first quarter of 2012.

|                        | <u>Budgeted</u> | <u>Actual</u> |
|------------------------|-----------------|---------------|
| Service revenue        | \$25,000        | \$26,000      |
| Allocated portion of:  |                 |               |
| Building depreciation  | 11,000          | 11,000        |
| Advertising            | 5,000           | 4,200         |
| Billing                | 3,500           | 3,000         |
| Property taxes         | 1,200           | 1,000         |
| Material and supplies  | 1,500           | 1,200         |
| Supervisory salaries   | 9,000           | 9,400         |
| Insurance              | 4,000           | 3,500         |
| Wages                  | 3,000           | 3,300         |
| Gas and oil            | 2,700           | 3,400         |
| Equipment depreciation | 1,600           | 1,300         |

#### Instructions

- (a) Prepare a responsibility report for the first quarter of 2012 for the Home Plumbing Services segment.
- (b)  Write a memo to Peyton Manning discussing the principles that should be used when preparing performance reports.

State total budgeted cost formulas, and prepare flexible budget graph.

(SO 3)

**E24-10** Brees Company has two production departments, Fabricating and Assembling. At a department managers' meeting, the controller uses flexible budget graphs to explain total budgeted costs. Separate graphs based on direct labor hours are used for each department. The graphs show the following.

1. At zero direct labor hours, the total budgeted cost line and the fixed cost line intersect the vertical axis at \$40,000 in the Fabricating Department and \$30,000 in the Assembling Department.
2. At normal capacity of 50,000 direct labor hours, the line drawn from the total budgeted cost line intersects the vertical axis at \$150,000 in the Fabricating Department, and \$110,000 in the Assembling Department.

#### Instructions

- (a) State the total budgeted cost formula for each department.
- (b) Compute the total budgeted cost for each department, assuming actual direct labor hours worked were 53,000 and 47,000, in the Fabricating and Assembling Departments, respectively.
- (c) Prepare the flexible budget graph for the Fabricating Department, assuming the maximum direct labor hours in the relevant range is 100,000. Use increments of 10,000 direct labor hours on the horizontal axis and increments of \$50,000 on the vertical axis.

Prepare reports in a responsibility reporting system.

(SO 4)

**E24-11** Bush Company's organization chart includes the president; the vice president of production; three assembly plants—New Orleans, Houston, and Mobile; and two departments within each plant—Machining and Finishing. Budget and actual manufacturing cost data for July 2012 are as follows:

*Finishing Department—New Orleans:* Direct materials \$41,500 actual, \$45,000 budget; direct labor \$83,000 actual, \$82,000 budget; manufacturing overhead \$51,000 actual, \$49,200 budget.

*Machining Department—New Orleans:* Total manufacturing costs \$220,000 actual, \$216,000 budget.

*Houston Plant:* Total manufacturing costs \$424,000 actual, \$421,000 budget.

*Mobile Plant:* Total manufacturing costs \$494,000 actual, \$496,500 budget.

The New Orleans plant manager's office costs were \$95,000 actual and \$92,000 budget. The vice president of production's office costs were \$132,000 actual and \$130,000 budget. Office costs are not allocated to departments and plants.

**Instructions**

Using the format on page 1113, prepare the reports in a responsibility system for:

- (a) The Finishing Department—New Orleans.
- (b) The plant manager—New Orleans.
- (c) The vice president of production.

**E24-12** The Mixing Department manager of Vikings Company is able to control all overhead costs except rent, property taxes, and salaries. Budgeted monthly overhead costs for the Mixing Department, in alphabetical order, are:

|                    |          |                |          |
|--------------------|----------|----------------|----------|
| Indirect labor     | \$12,000 | Property taxes | \$ 1,000 |
| Indirect materials | 7,500    | Rent           | 1,800    |
| Lubricants         | 1,700    | Salaries       | 10,000   |
| Maintenance        | 3,500    | Utilities      | 5,000    |

Actual costs incurred for January 2012 are indirect labor \$12,200; indirect materials \$10,200; lubricants \$1,650; maintenance \$3,500; property taxes \$1,100; rent \$1,800; salaries \$10,000; and utilities \$6,500.

**Instructions**

- (a) Prepare a responsibility report for January 2012.
- (b) What would be the likely result of management's analysis of the report?

**E24-13** Maguire Manufacturing Inc. has three divisions which are operated as profit centers. Actual operating data for the divisions listed alphabetically are as follows.

| <u>Operating Data</u>    | <u>Women's Shoes</u> | <u>Men's Shoes</u> | <u>Children's Shoes</u> |
|--------------------------|----------------------|--------------------|-------------------------|
| Contribution margin      | \$240,000            | (3)                | \$180,000               |
| Controllable fixed costs | 100,000              | (4)                | (5)                     |
| Controllable margin      | (1)                  | \$ 90,000          | 96,000                  |
| Sales                    | 600,000              | 450,000            | (6)                     |
| Variable costs           | (2)                  | 330,000            | 250,000                 |

**Instructions**

- (a) Compute the missing amounts. Show computations.
- (b) Prepare a responsibility report for the Women's Shoes Division assuming (1) the data are for the month ended June 30, 2012, and (2) all data equal budget except variable costs which are \$10,000 over budget.

**E24-14** The Sports Equipment Division of Bob Gibson Company is operated as a profit center. Sales for the division were budgeted for 2012 at \$900,000. The only variable costs budgeted for the division were cost of goods sold (\$440,000) and selling and administrative (\$60,000). Fixed costs were budgeted at \$100,000 for cost of goods sold, \$90,000 for selling and administrative, and \$70,000 for noncontrollable fixed costs. Actual results for these items were:

|                            |           |
|----------------------------|-----------|
| Sales                      | \$880,000 |
| Cost of goods sold         |           |
| Variable                   | 409,000   |
| Fixed                      | 105,000   |
| Selling and administrative |           |
| Variable                   | 61,000    |
| Fixed                      | 67,000    |
| Noncontrollable fixed      | 80,000    |

**Instructions**

- (a) Prepare a responsibility report for the Sports Equipment Division for 2012.
- (b) Assume, instead, the division is an investment center, and average operating assets were \$1,000,000. Compute ROI.

**E24-15** The Red Division of Tarkington Company reported the following data for the current year.

|                          |             |
|--------------------------|-------------|
| Sales                    | \$3,000,000 |
| Variable costs           | 1,950,000   |
| Controllable fixed costs | 600,000     |
| Average operating assets | 5,000,000   |

*Prepare a responsibility report for a cost center.*

(SO 5)

*Compute missing amounts in responsibility reports for three profit centers, and prepare a report.*

(SO 6)

*Prepare a responsibility report for a profit center, and compute ROI.*

(SO 6, 7)

*Compute ROI for current year and for possible future changes.*

(SO 7)

Top management is unhappy with the investment center's return on investment (ROI). It asks the manager of the Red Division to submit plans to improve ROI in the next year. The manager believes it is feasible to consider the following independent courses of action.

1. Increase sales by \$320,000 with no change in the contribution margin percentage.
2. Reduce variable costs by \$100,000.
3. Reduce average operating assets by 4%.

#### Instructions

- (a) Compute the return on investment (ROI) for the current year.
- (b) Using the ROI formula, compute the ROI under each of the proposed courses of action. (Round to one decimal.)

Prepare a responsibility report for an investment center.

(SO 7)

**E24-16** The Nung Dental Clinic provides both preventive and orthodontic dental services. The two owners, Chris Thao and Kim Long, operate the clinic as two separate investment centers: Preventive Services and Orthodontic Services. Each of them is in charge of one of the centers: Chris for Preventive Services and Kim for Orthodontic Services. Each month they prepare an income statement on the two centers to evaluate performance and make decisions about how to improve the operational efficiency and profitability of the clinic.

Recently, they have been concerned about the profitability of the Preventive Services operations. For several months, it has been reporting a loss. Shown below is the responsibility report for the month of May 2012.

|  | <b>Actual</b>     | <b>Difference<br/>from<br/>Budget</b> |
|--|-------------------|---------------------------------------|
| Service revenue                            | \$40,000          | \$1,000 F                             |
| Variable costs:                            |                   |                                       |
| Filling materials                          | 5,000             | 100 U                                 |
| Novocain                                   | 4,000             | 200 U                                 |
| Supplies                                   | 2,000             | 250 F                                 |
| Dental assistant wages                     | 2,500             | –0–                                   |
| Utilities                                  | 500               | 50 U                                  |
| Total variable costs                       | <u>14,000</u>     | <u>100 U</u>                          |
| Fixed costs:                               |                   |                                       |
| Allocated portion of receptionist's salary | 3,000             | 200 U                                 |
| Dentist salary                             | 10,000            | 500 U                                 |
| Equipment depreciation                     | 6,000             | –0–                                   |
| Allocated portion of building depreciation | 15,000            | 1,000 U                               |
| Total fixed costs                          | <u>34,000</u>     | <u>1,700 U</u>                        |
| Operating income (loss)                    | <u>\$ (8,000)</u> | <u>\$ 800 U</u>                       |

In addition, the owners know that the investment in operating assets at the beginning of the month was \$82,400, and it was \$77,600 at the end of the month. They have asked for your assistance in evaluating their current performance reporting system.

#### Instructions

- (a) Prepare a responsibility report for an investment center as illustrated in the chapter.
- (b)  Write a memo to the owners discussing the deficiencies of their current reporting system.

Prepare missing amounts in responsibility reports for three investment centers.

(SO 7)

**E24-17** The Panamerican Transportation Company uses a responsibility reporting system to measure the performance of its three investment centers: Planes, Taxis, and Limos. Segment performance is measured using a system of responsibility reports and return on investment calculations. The allocation of resources within the company and the segment managers' bonuses are based in part on the results shown in these reports.

Recently, the company was the victim of a computer virus that deleted portions of the company's accounting records. This was discovered when the current period's responsibility reports were being prepared. The printout of the actual operating results appeared as follows.

|                          | <u>Planes</u> | <u>Taxis</u> | <u>Limos</u> |
|--------------------------|---------------|--------------|--------------|
| Service revenue          | \$ ?          | \$500,000    | \$ ?         |
| Variable costs           | 5,500,000     | ?            | 320,000      |
| Contribution margin      | ?             | 200,000      | 480,000      |
| Controllable fixed costs | 1,500,000     | ?            | ?            |
| Controllable margin      | ?             | 80,000       | 240,000      |
| Average operating assets | 25,000,000    | ?            | 1,600,000    |
| Return on investment     | 12%           | 10%          | ?            |

**Instructions**

Determine the missing pieces of information above.

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

**P24-1A** Chamberlin Company estimates that 360,000 direct labor hours will be worked during the coming year, 2012, in the Packaging Department. On this basis, the following budgeted manufacturing overhead cost data are computed for the year.

| <u>Fixed Overhead Costs</u> |                  | <u>Variable Overhead Costs</u> |                  |
|-----------------------------|------------------|--------------------------------|------------------|
| Supervision                 | \$ 90,000        | Indirect labor                 | \$126,000        |
| Depreciation                | 60,000           | Indirect materials             | 90,000           |
| Insurance                   | 30,000           | Repairs                        | 54,000           |
| Rent                        | 24,000           | Utilities                      | 72,000           |
| Property taxes              | 18,000           | Lubricants                     | 18,000           |
|                             | <u>\$222,000</u> |                                | <u>\$360,000</u> |

It is estimated that direct labor hours worked each month will range from 27,000 to 36,000 hours.

During October, 27,000 direct labor hours were worked and the following overhead costs were incurred.

*Fixed overhead costs:* Supervision \$7,500, Depreciation \$5,000, Insurance \$2,470, Rent \$2,000, and Property taxes \$1,500.

*Variable overhead costs:* Indirect labor \$10,360, Indirect materials, \$6,400, Repairs \$4,000, Utilities \$5,700, and Lubricants \$1,640.

**Instructions**

- (a) Prepare a monthly manufacturing overhead flexible budget for each increment of 3,000 direct labor hours over the relevant range for the year ending December 31, 2012.
- (b) Prepare a flexible budget report for October.
- (c)  Comment on management's efficiency in controlling manufacturing overhead costs in October.

*Prepare flexible budget and budget report for manufacturing overhead.*

(SO 3)

(a) Total costs: DLH 27,000, \$45,500; DLH 36,000, \$54,500

(b) Total \$1,070 U

**P24-2A** Taylor Company manufactures tablecloths. Sales have grown rapidly over the past 2 years. As a result, the president has installed a budgetary control system for 2012. The following data were used in developing the master manufacturing overhead budget for the Ironing Department, which is based on an activity index of direct labor hours.

| <u>Variable costs</u> | <u>Rate per Direct Labor Hour</u> | <u>Annual Fixed Costs</u> |          |
|-----------------------|-----------------------------------|---------------------------|----------|
| Indirect labor        | \$0.40                            | Supervision               | \$42,000 |
| Indirect materials    | 0.50                              | Depreciation              | 18,000   |
| Factory utilities     | 0.30                              | Insurance                 | 12,000   |
| Factory repairs       | 0.20                              | Rent                      | 24,000   |

*Prepare flexible budget, budget report, and graph for manufacturing overhead.*

(SO 3)

The master overhead budget was prepared on the expectation that 480,000 direct labor hours will be worked during the year. In June, 42,000 direct labor hours were worked. At that level of activity, actual costs were as shown below.

*Variable—per direct labor hour:* Indirect labor \$0.43, Indirect materials \$0.49, Factory utilities \$0.32, and Factory repairs \$0.24.

*Fixed:* same as budgeted.

**Instructions**

- (a) Total costs: 35,000 DLH, \$57,000; 50,000 DLH, \$78,000
- (b) Budget \$66,800  
Actual \$70,160

- (a) Prepare a monthly manufacturing overhead flexible budget for the year ending December 31, 2012, assuming production levels range from 35,000 to 50,000 direct labor hours. Use increments of 5,000 direct labor hours.
- (b) Prepare a budget report for June comparing actual results with budget data based on the flexible budget.
- (c) Were costs effectively controlled? Explain.
- (d) State the formula for computing the total budgeted costs for Taylor Company.
- (e) Prepare the flexible budget graph, showing total budgeted costs at 35,000 and 45,000 direct labor hours. Use increments of 5,000 direct labor hours on the horizontal axis and increments of \$10,000 on the vertical axis.

State total budgeted cost formula, and prepare flexible budget reports for 2 time periods.

(SO 2, 3)

**P24-3A** Buckner Company uses budgets in controlling costs. The August 2012 budget report for the company’s Assembling Department is as follows.

**BUCKNER COMPANY**  
Budget Report  
Assembling Department  
For the Month Ended August 31, 2012

| <u>Manufacturing Costs</u> | <u>Budget</u>    | <u>Actual</u>    | <u>Difference</u><br><u>Favorable F</u><br><u>Unfavorable U</u> |
|----------------------------|------------------|------------------|---|
| Variable costs             |                  |                  |   |
| Direct materials           | \$ 48,000        | \$ 47,000        | \$1,000 F   |
| Direct labor               | 54,000           | 51,300           | 2,700 F   |
| Indirect materials         | 24,000           | 24,200           | 200 U   |
| Indirect labor             | 18,000           | 17,500           | 500 F   |
| Utilities                  | 15,000           | 14,900           | 100 F   |
| Maintenance                | 9,000            | 9,200            | 200 U   |
| Total variable             | <u>168,000</u>   | <u>164,100</u>   | <u>3,900 F</u>  |
| Fixed costs                |                  |                  |   |
| Rent                       | 12,000           | 12,000           | –0–   |
| Supervision                | 17,000           | 17,000           | –0–   |
| Depreciation               | 7,000            | 7,000            | –0–   |
| Total fixed                | <u>36,000</u>    | <u>36,000</u>    | <u>–0–</u>  |
| Total costs                | <u>\$204,000</u> | <u>\$200,100</u> | <u>\$3,900 F</u>  |

The monthly budget amounts in the report were based on an expected production of 60,000 units per month or 720,000 units per year. The Assembling Department manager is pleased with the report and expects a raise, or at least praise for a job well done. The company president, however, is unhappy with the results for August because only 58,000 units were produced.

**Instructions**

- (b) Budget \$198,400
- (c) Budget \$215,200  
Actual \$216,510

- (a) State the total monthly budgeted cost formula.
- (b) Prepare a budget report for August using flexible budget data. Why does this report provide a better basis for evaluating performance than the report based on static budget data?
- (c) In September, 64,000 units were produced. Prepare the budget report using flexible budget data, assuming (1) each variable cost was 10% higher than its actual cost in August, and (2) fixed costs were the same in September as in August.

Prepare responsibility report for a profit center.

(SO 6)

**P24-4A** Johnson Manufacturing Inc. operates the Patio Furniture Division as a profit center. Operating data for this division for the year ended December 31, 2012, are as shown on the next page.

|                             | <u>Budget</u> | <u>Difference<br/>from Budget</u> |
|-----------------------------|---------------|-----------------------------------|
| Sales                       | \$2,500,000   | \$60,000 F                        |
| Cost of goods sold          |               |                                   |
| Variable                    | 1,300,000     | 41,000 F                          |
| Controllable fixed          | 200,000       | 6,000 U                           |
| Selling and administrative  |               |                                   |
| Variable                    | 220,000       | 7,000 U                           |
| Controllable fixed          | 50,000        | 2,000 U                           |
| Noncontrollable fixed costs | 70,000        | 4,000 U                           |

In addition, Johnson Manufacturing incurs \$180,000 of indirect fixed costs that were budgeted at \$175,000. Twenty percent (20%) of these costs are allocated to the Patio Furniture Division.

**Instructions**

- (a) Prepare a responsibility report for the Patio Furniture Division for the year.
- (b)  Comment on the manager's performance in controlling revenues and costs.
- (c) Identify any costs excluded from the responsibility report and explain why they were excluded.

(a) Contribution margin  
\$94,000 F  
Controllable margin  
\$86,000 F

**P24-5A** Namath Manufacturing Company manufactures a variety of tools and industrial equipment. The company operates through three divisions. Each division is an investment center. Operating data for the Home Division for the year ended December 31, 2012, and relevant budget data are as follows.

Prepare responsibility report for an investment center, and compute ROI.  
(SO 7)

|  | <u>Actual</u> | <u>Comparison with Budget</u> |
|--|---------------|-------------------------------|
| Sales  | \$1,500,000   | \$100,000 favorable           |
| Variable cost of goods sold                            | 700,000       | 60,000 unfavorable            |
| Variable selling and administrative expenses           | 125,000       | 25,000 unfavorable            |
| Controllable fixed cost of goods sold                  | 170,000       | On target                     |
| Controllable fixed selling and administrative expenses | 80,000        | On target                     |

Average operating assets for the year for the Home Division were \$2,500,000 which was also the budgeted amount.

**Instructions**

- (a) Prepare a responsibility report (in thousands of dollars) for the Home Division.
- (b) Evaluate the manager's performance. Which items will likely be investigated by top management?
- (c) Compute the expected ROI in 2013 for the Home Division, assuming the following independent changes to actual data.
  - (1) Variable cost of goods sold is decreased by 6%.
  - (2) Average operating assets are decreased by 10%.
  - (3) Sales are increased by \$200,000, and this increase is expected to increase contribution margin by \$90,000.

(a) Controllable margin:  
Budget \$410;  
Actual \$425

**P24-6A** Niekro Company uses a responsibility reporting system. It has divisions in Portland, Tacoma, and San Francisco. Each division has three production departments: Cutting, Shaping, and Finishing. The responsibility for each department rests with a manager who reports to the division production manager. Each division manager reports to the vice president of production. There are also vice presidents for marketing and finance. All vice presidents report to the president.

Prepare reports for cost centers under responsibility accounting, and comment on performance of managers.  
(SO 4)

In January 2012, controllable actual and budget manufacturing overhead cost data for the departments and divisions were as shown below.

| <u>Manufacturing Overhead</u>              | <u>Actual</u>    | <u>Budget</u>    |
|--|------------------|------------------|
| Individual costs—Cutting Department—Tacoma |                  |                  |
| Indirect labor                             | \$ 73,000        | \$ 70,000        |
| Indirect materials                         | 47,700           | 46,000           |
| Maintenance                                | 20,500           | 18,000           |
| Utilities                                  | 20,100           | 17,000           |
| Supervision                                | 22,000           | 20,000           |
|  | <u>\$183,300</u> | <u>\$171,000</u> |

|                             |           |           |
|-----------------------------|-----------|-----------|
| Total costs                 |           |           |
| Shaping Department—Tacoma   | \$158,000 | \$148,000 |
| Finishing Department—Tacoma | 210,000   | 206,000   |
| Denver division             | 676,000   | 673,000   |
| San Diego division          | 722,000   | 715,000   |

Additional overhead costs were incurred as follows: Tacoma division production manager—actual costs \$52,500, budget \$51,000; vice president of production—actual costs \$65,000, budget \$64,000; president—actual costs \$76,400, budget \$74,200. These expenses are not allocated.

The vice presidents who report to the president, other than the vice president of production, had the following expenses.

| <u>Vice President</u> | <u>Actual</u> | <u>Budget</u> |
|-----------------------|---------------|---------------|
| Marketing             | \$133,600     | \$130,000     |
| Finance               | 109,000       | 105,000       |

**Instructions**

- (a) (1) \$12,300 U
- (2) \$27,800 U
- (3) \$38,800 U
- (4) \$48,600 U

- (a) Using the format on page 1113, prepare the following responsibility reports.
  - (1) Manufacturing overhead—Cutting Department manager—Tacoma division.
  - (2) Manufacturing overhead—Tacoma division manager.
  - (3) Manufacturing overhead—vice president of production.
  - (4) Manufacturing overhead and expenses—president.
- (b) Comment on the comparative performances of:
  - (1) Department managers in the Tacoma division.
  - (2) Division managers.
  - (3) Vice presidents.

## Problems: Set B

Prepare flexible budget and budget report for manufacturing overhead.

(SO 3)

**P24-1B** Cobb Company estimates that 240,000 direct labor hours will be worked during 2012 in the Assembly Department. On this basis, the following budgeted manufacturing overhead data are computed.

| <u>Variable Overhead Costs</u> |                  | <u>Fixed Overhead Costs</u> |                  |
|--------------------------------|------------------|-----------------------------|------------------|
| Indirect labor                 | \$ 72,000        | Supervision                 | \$ 75,000        |
| Indirect materials             | 48,000           | Depreciation                | 30,000           |
| Repairs                        | 36,000           | Insurance                   | 12,000           |
| Utilities                      | 26,400           | Rent                        | 9,000            |
| Lubricants                     | 9,600            | Property taxes              | 6,000            |
|                                | <u>\$192,000</u> |                             | <u>\$132,000</u> |

It is estimated that direct labor hours worked each month will range from 18,000 to 24,000 hours.

During January, 20,000 direct labor hours were worked and the following overhead costs were incurred.

| <u>Variable Overhead Costs</u> |                 | <u>Fixed Overhead Costs</u> |                 |
|--------------------------------|-----------------|-----------------------------|-----------------|
| Indirect labor                 | \$ 6,200        | Supervision                 | \$ 6,250        |
| Indirect materials             | 3,600           | Depreciation                | 2,500           |
| Repairs                        | 2,400           | Insurance                   | 1,000           |
| Utilities                      | 1,700           | Rent                        | 850             |
| Lubricants                     | 830             | Property taxes              | 500             |
|                                | <u>\$14,730</u> |                             | <u>\$11,100</u> |

**Instructions**

- (a) Total costs: 18,000 DLH, \$25,400; 24,000 DLH, \$30,200
- (b) Budget \$27,000 Actual, \$25,830

- (a) Prepare a monthly manufacturing overhead flexible budget for each increment of 2,000 direct labor hours over the relevant range for the year ending December 31, 2012.
- (b) Prepare a manufacturing overhead budget report for January.
- (c) Comment on management's efficiency in controlling manufacturing overhead costs in January.

**P24-2B** Lombardi Manufacturing Company produces one product, Olpe. Because of wide fluctuations in demand for Olpe, the Assembly Department experiences significant variations in monthly production levels.

The annual master manufacturing overhead budget is based on 300,000 direct labor hours. In July, 27,500 labor hours were worked. The master manufacturing overhead budget for the year and the actual overhead costs incurred in July are as follows.

*Prepare flexible budget, budget report, and graph for manufacturing overhead.*  
(SO 3)

| <u>Overhead Costs</u> | <u>Master Budget<br/>(annual)</u> | <u>Actual<br/>in July</u> |
|-----------------------|-----------------------------------|---------------------------|
| Variable              |                                   |                           |
| Indirect labor        | \$330,000                         | \$29,000                  |
| Indirect materials    | 180,000                           | 14,000                    |
| Utilities             | 90,000                            | 8,100                     |
| Maintenance           | 60,000                            | 5,400                     |
| Fixed                 |                                   |                           |
| Supervision           | 150,000                           | 12,500                    |
| Depreciation          | 96,000                            | 8,000                     |
| Insurance and taxes   | 60,000                            | 5,000                     |
| Total                 | <u>\$966,000</u>                  | <u>\$82,000</u>           |

**Instructions**

- (a) Prepare a monthly overhead flexible budget for the year ending December 31, 2012, assuming monthly production levels range from 22,500 to 30,000 direct labor hours. Use increments of 2,500 direct labor hours.
- (b) Prepare a budget report for the month of July 2012 comparing actual results with budget data based on the flexible budget.
- (c)  Were costs effectively controlled? Explain.
- (d) State the formula for computing the total monthly budgeted costs in the Lombardi Manufacturing Company.
- (e) Prepare the flexible budget graph showing total budgeted costs at 25,000 and 27,500 direct labor hours. Use increments of 5,000 on the horizontal axis and increments of \$10,000 on the vertical axis.

(a) Total costs: 22,500 DLH, \$75,000; 30,000 DLH, \$91,500  
(b) Budget \$86,000 Actual \$82,000

**P24-3B** Jordan Company uses budgets in controlling costs. The May 2012 budget report for the company's Packaging Department is as follows.

*State total budgeted cost formula, and prepare flexible budget reports for 2 time periods.*

**JORDAN COMPANY**  
Budget Report  
Packaging Department  
For the Month Ended May 31, 2012

(SO 2, 3)

| <u>Manufacturing Costs</u> | <u>Budget</u>    | <u>Actual</u>    | <u>Difference</u><br><u>Favorable F</u><br><u>Unfavorable U</u> |
|----------------------------|------------------|------------------|---|
| Variable costs             |                  |                  |   |
| Direct materials           | \$ 40,000        | \$ 41,000        | \$1,000 U   |
| Direct labor               | 45,000           | 47,000           | 2,000 U   |
| Indirect materials         | 15,000           | 15,200           | 200 U   |
| Indirect labor             | 12,500           | 13,000           | 500 U   |
| Utilities                  | 10,000           | 9,600            | 400 F   |
| Maintenance                | 5,000            | 5,200            | 200 U   |
| Total variable             | <u>127,500</u>   | <u>131,000</u>   | <u>3,500 U</u>  |
| Fixed costs                |                  |                  |   |
| Rent                       | 10,000           | 10,000           | –0–   |
| Supervision                | 7,000            | 7,000            | –0–   |
| Depreciation               | 5,000            | 5,000            | –0–   |
| Total fixed                | <u>22,000</u>    | <u>22,000</u>    | <u>–0–</u>  |
| Total costs                | <u>\$149,500</u> | <u>\$153,000</u> | <u>\$3,500 U</u>  |

The monthly budget amounts in the report were based on an expected production of 50,000 units per month or 600,000 units per year.

The company president was displeased with the department manager's performance. The department manager, who thought he had done a good job, could not understand the unfavorable results. In May, 55,000 units were produced.

**Instructions**

(b) Budget \$162,250

(c) Budget \$124,000  
Actual \$126,800

Prepare responsibility report for a profit center.

(SO 6)

- (a) State the total budgeted cost formula.
- (b) Prepare a budget report for May using flexible budget data. Why does this report provide a better basis for evaluating performance than the report based on static budget data?
- (c) In June, 40,000 units were produced. Prepare the budget report using flexible budget data, assuming (1) each variable cost was 20% less in June than its actual cost in May, and (2) fixed costs were the same in the month of June as in May.

**P24-4B** Collins Manufacturing Inc. operates the Home Appliance Division as a profit center. Operating data for this division for the year ended December 31, 2012, are shown below.

|                             | <u>Budget</u> | <u>Difference<br/>from Budget</u> |
|-----------------------------|---------------|-----------------------------------|
| Sales                       | \$2,400,000   | \$100,000 U                       |
| Cost of goods sold          |               |                                   |
| Variable                    | 1,200,000     | 60,000 U                          |
| Controllable fixed          | 200,000       | 8,000 F                           |
| Selling and administrative  |               |                                   |
| Variable                    | 240,000       | 8,000 F                           |
| Controllable fixed          | 60,000        | 4,000 U                           |
| Noncontrollable fixed costs | 50,000        | 2,000 U                           |

In addition, Collins Manufacturing incurs \$150,000 of indirect fixed costs that were budgeted at \$155,000. Twenty percent (20%) of these costs are allocated to the Home Appliance Division. None of these costs are controllable by the division manager.

**Instructions**

(a) Contribution margin  
\$152,000 U  
Controllable margin  
\$148,000 U

Prepare responsibility report for an investment center, and compute ROI.

(SO 7)

- (a) Prepare a responsibility report for the Home Appliance Division (a profit center) for the year.
- (b)  Comment on the manager's performance in controlling revenues and costs.
- (c) Identify any costs excluded from the responsibility report and explain why they were excluded.

**P24-5B** Ryan Manufacturing Company manufactures a variety of garden and lawn equipment. The company operates through three divisions. Each division is an investment center. Operating data for the Lawnmower Division for the year ended December 31, 2012, and relevant budget data are as follows.

|  | <u>Actual</u> | <u>Comparison with Budget</u> |
|--|---------------|-------------------------------|
| Sales  | \$2,900,000   | \$120,000 unfavorable         |
| Variable cost of goods sold                            | 1,400,000     | 90,000 unfavorable            |
| Variable selling and administrative expenses           | 300,000       | 50,000 favorable              |
| Controllable fixed cost of goods sold                  | 270,000       | On target                     |
| Controllable fixed selling and administrative expenses | 140,000       | On target                     |

Average operating assets for the year for the Lawnmower Division were \$5,000,000 which was also the budgeted amount.

**Instructions**

(a) Controllable margin:  
Budget \$950  
Actual \$790

- (a) Prepare a responsibility report (in thousands of dollars) for the Lawnmower Division.
- (b) Evaluate the manager's performance. Which items will likely be investigated by top management?
- (c) Compute the expected ROI in 2013 for the Lawnmower Division, assuming the following independent changes.
- (1) Variable cost of goods sold is decreased by 15%.
  - (2) Average operating assets are decreased by 20%.
  - (3) Sales are increased by \$500,000 and this increase is expected to increase contribution margin by \$210,000.

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Waterways Continuing Problem

(Note: This is a continuation of the Waterways Problem from Chapters 19 through 23.)

**WCP24** Waterways Corporation is continuing its budget preparations. This problem gives you static budget information as well as actual overhead costs and asks you to calculate amounts related to budgetary control and responsibility accounting.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to find the completion of this problem.

## BROADENING YOUR PERSPECTIVE

### Decision Making Across the Organization

**BYP24-1** Organic Pastures is a 400-acre farm on the outskirts of the Kentucky Bluegrass, specializing in the boarding of broodmares and their foals. A recent economic downturn in the thoroughbred industry has led to a decline in breeding activities, and it has made the boarding business extremely competitive. To meet the competition, Organic Pastures planned in 2012 to entertain clients, advertise more extensively, and absorb expenses formerly paid by clients such as veterinary and blacksmith fees.

The budget report for 2012 is presented below. As shown, the static income statement budget for the year is based on an expected 21,900 boarding days at \$25 per mare. The variable expenses per mare per day were budgeted: Feed \$5, Veterinary fees \$3, Blacksmith fees \$0.30, and Supplies \$0.55. All other budgeted expenses were either semifixed or fixed.

During the year, management decided not to replace a worker who quit in March, but it did issue a new advertising brochure and did more entertaining of clients.<sup>1</sup>

**ORGANIC PASTURES**  
Static Budget Income Statement  
Year Ended December 31, 2012

|                         | <u>Actual</u>    | <u>Master<br/>Budget</u> | <u>Difference</u> |
|-------------------------|------------------|--------------------------|-------------------|
| Number of mares per day | 52               | 60                       | 8*                |
| Number of boarding days | 18,980           | 21,900                   | 2,920*            |
| Sales                   | \$379,600        | \$547,500                | \$167,900*        |
| Less variable expenses: |                  |                          |                   |
| Feed                    | 104,390          | 109,500                  | 5,110             |
| Veterinary fees         | 58,838           | 65,700                   | 6,862             |
| Blacksmith fees         | 6,074            | 6,570                    | 496               |
| Supplies                | 10,178           | 12,045                   | 1,867             |
| Total variable expenses | 179,480          | 193,815                  | 14,335            |
| Contribution margin     | 200,120          | 353,685                  | 153,565*          |
| Less fixed expenses:    |                  |                          |                   |
| Depreciation            | 40,000           | 40,000                   | –0–               |
| Insurance               | 11,000           | 11,000                   | –0–               |
| Utilities               | 12,000           | 14,000                   | 2,000             |
| Repairs and maintenance | 10,000           | 11,000                   | 1,000             |
| Labor                   | 88,000           | 96,000                   | 8,000             |

| Entertainment           | 7,000            | 5,000                    | 2,000*            |
| Total fixed expenses    | 180,000          | 185,000                  | 5,000             |
| Net income              | <u>\$ 20,120</u> | <u>\$168,685</u>         | <u>\$148,565*</u> |

\*Unfavorable.

<sup>1</sup>Data for this case are based on Hans Sprohge and John Talbott, "New Applications for Variance Analysis," *Journal of Accountancy* (AICPA, New York), April 1989, pp. 137–141.

**Instructions**

With the class divided into groups, answer the following.

- (a) Based on the static budget report:
- (1) What was the primary cause(s) of the loss in net income?
  - (2) Did management do a good, average, or poor job of controlling expenses?
  - (3) Were management's decisions to stay competitive sound?
- (b) Prepare a flexible budget report for the year based on boarding days.
- (c) Based on the flexible budget report, answer the three questions in part (a) above.
- (d) What course of action do you recommend for the management of Organic Pastures?

## Managerial Analysis

**BYP24-2** Rambis Company manufactures expensive watch cases sold as souvenirs. Three of its sales departments are: Retail Sales, Wholesale Sales, and Outlet Sales. The Retail Sales Department is a profit center. The Wholesale Sales Department is a cost center. Its managers merely take orders from customers who purchase through the company's wholesale catalog. The Outlet Sales Department is an investment center, because each manager is given full responsibility for an outlet store location. The manager can hire and discharge employees; purchase, maintain, and sell equipment; and in general is fairly independent of company control.

Maria Diego is a manager in the Retail Sales Department. Phil Jackson manages the Wholesale Sales Department. Dan Hsu manages the Golden Gate Club outlet store in San Francisco. The following are the budget responsibility reports for each of the three departments.

|                      | <b>Budget</b>           |                            |                         |
|----------------------|-------------------------|----------------------------|-------------------------|
|                      | <b>Retail<br/>Sales</b> | <b>Wholesale<br/>Sales</b> | <b>Outlet<br/>Sales</b> |
| Sales                | \$ 750,000              | \$ 400,000                 | \$200,000               |
| Variable costs       |                         |                            |                         |
| Cost of goods sold   | 150,000                 | 100,000                    | 25,000                  |
| Advertising          | 100,000                 | 30,000                     | 5,000                   |
| Sales salaries       | 75,000                  | 15,000                     | 3,000                   |
| Printing             | 10,000                  | 20,000                     | 5,000                   |
| Travel               | 20,000                  | 30,000                     | 2,000                   |
| Fixed costs          |                         |                            |                         |

| Investment in assets | \$1,000,000             | \$1,200,000                | \$800,000               |

|                      | <b>Actual Results</b>   |                            |                         |
|----------------------|-------------------------|----------------------------|-------------------------|
|                      | <b>Retail<br/>Sales</b> | <b>Wholesale<br/>Sales</b> | <b>Outlet<br/>Sales</b> |
| Sales                | \$ 750,000              | \$ 400,000                 | \$200,000               |
| Variable costs       |                         |                            |                         |
| Cost of goods sold   | 195,000                 | 120,000                    | 26,250                  |
| Advertising          | 100,000                 | 30,000                     | 5,000                   |
| Sales salaries       | 75,000                  | 15,000                     | 3,000                   |
| Printing             | 10,000                  | 20,000                     | 5,000                   |
| Travel               | 15,000                  | 20,000                     | 1,500                   |
| Fixed costs          |                         |                            |                         |
| Rent                 | 40,000                  | 50,000                     | 12,000                  |
| Insurance            | 5,000                   | 2,000                      | 1,000                   |
| Depreciation         | 80,000                  | 90,000                     | 60,000                  |
| Investment in assets | \$1,000,000             | \$1,200,000                | \$800,000               |

**Instructions**

- (a) Determine which of the items should be included in the responsibility report for each of the three managers.
- (b) Compare the actual results with the budget. Decide which results should be called to the attention of each manager.

**Real-World Focus**

**BYP24-3** **Computer Associates International, Inc.**, the world's leading business software company, delivers the end-to-end infrastructure to enable e-business through innovative technology, services, and education. Computer Associates has 19,000 employees worldwide and recently had revenue of over \$6 billion.

Presented below is information from the company's annual report.

**Computer Associates International**  
Management Discussion

The Company has experienced a pattern of business whereby revenue for its third and fourth fiscal quarters reflects an increase over first- and second-quarter revenue. The Company attributes this increase to clients' increased spending at the end of their calendar year budgetary periods and the culmination of its annual sales plan. Since the Company's costs do not increase proportionately with the third- and fourth-quarters' increase in revenue, the higher revenue in these quarters results in greater profit margins and income. Fourth-quarter profitability is traditionally affected by significant new hirings, training, and education expenditures for the succeeding year.

**Instructions**

- (a) Why don't the company's costs increase proportionately as the revenues increase in the third and fourth quarters?
- (b) What type of budgeting seems appropriate for the Computer Associates situation?

**On the Web**

**BYP24-4** There are many useful resources regarding budgeting available on websites. The following activity investigates the results of a comprehensive budgeting study.

**Address:**

[http://www.accountingweb.com/whitepapers/centage\\_ioma.pdf](http://www.accountingweb.com/whitepapers/centage_ioma.pdf), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

**Instructions**

Go the address above and then answer the following questions.

- (a) What are cited as the two most common "pain points" of budgeting?
- (b) What percentage of companies that participated in the survey said that they prepare annual budgets? Of those that prepare budgets, what percentage say that they start the budgeting process by first generating sales projections?
- (c) What is the most common amount of time for the annual budgeting process?
- (d) When evaluating variances from budgeted amounts, what was the most commonly defined range of acceptable tolerance levels?
- (e) The study defines three types of consequences for varying from budgeted amounts. How does it describe "severe" consequences?

## Communication Activity

**BYP24-5** The manufacturing overhead budget for Barkley Company contains the following items.

| Variable costs         |                 | Fixed costs       |                 |
|------------------------|-----------------|-------------------|-----------------|
| Indirect materials     | \$24,000        | Supervision       | \$18,000        |
| Indirect labor         | 12,000          | Inspection costs  | 1,000           |
| Maintenance expense    | 10,000          | Insurance expense | 2,000           |
| Manufacturing supplies | 6,000           | Depreciation      | 15,000          |
| Total variable         | <u>\$52,000</u> | Total fixed       | <u>\$36,000</u> |

The budget was based on an estimated 2,000 units being produced. During the past month, 1,500 units were produced, and the following costs incurred.

| Variable costs         |                 | Fixed costs       |                 |
|------------------------|-----------------|-------------------|-----------------|
| Indirect materials     | \$24,200        | Supervision       | \$19,300        |
| Indirect labor         | 13,500          | Inspection costs  | 1,200           |
| Maintenance expense    | 8,200           | Insurance expense | 2,200           |
| Manufacturing supplies | 5,100           | Depreciation      | 14,700          |
| Total variable         | <u>\$51,000</u> | Total fixed       | <u>\$37,400</u> |

### Instructions

- Determine which items would be controllable by Bart Starr, the production manager.
- How much should have been spent during the month for the manufacture of the 1,500 units?
- Prepare a manufacturing overhead flexible budget report for Mr. Starr.
- Prepare a responsibility report. Include only the costs that would have been controllable by Mr. Starr. Assume that the supervision cost above includes Mr. Starr's salary of \$10,000, both at budget and actual. In an attached memo, describe clearly for Mr. Starr the areas in which his performance needs to be improved.

## Ethics Case

**BYP24-6** Continental Products Corporation participates in a highly competitive industry. In order to meet this competition and achieve profit goals, the company has chosen the decentralized form of organization. Each manager of a decentralized investment center is measured on the basis of profit contribution, market penetration, and return on investment. Failure to meet the objectives established by corporate management for these measures has not been acceptable and usually has resulted in demotion or dismissal of an investment center manager.

An anonymous survey of managers in the company revealed that the managers feel the pressure to compromise their personal ethical standards to achieve the corporate objectives. For example, at certain plant locations there was pressure to reduce quality control to a level which could not assure that all unsafe products would be rejected. Also, sales personnel were encouraged to use questionable sales tactics to obtain orders, including gifts and other incentives to purchasing agents.

The chief executive officer is disturbed by the survey findings. In his opinion, such behavior cannot be condoned by the company. He concludes that the company should do something about this problem.

### Instructions

- Who are the stakeholders (the affected parties) in this situation?
  - Identify the ethical implications, conflicts, or dilemmas in the above described situation.
  - What might the company do to reduce the pressures on managers and decrease the ethical conflicts?
- (CMA adapted)

## "All About You" Activity

**BYP24-7** It is one thing to prepare a personal budget; it is another thing to stick to it. Financial planners have suggested various mechanisms to provide support for enforcing personal budgets. One approach is called "envelope budgeting."

**Instructions**

Read the article provided at [http://en.wikipedia.org/wiki/Envelope\\_budgeting](http://en.wikipedia.org/wiki/Envelope_budgeting), and answer the following questions.

- (a) Summarize the process of envelope budgeting.
- (b) Evaluate whether you think you would benefit from envelope budgeting. What do you think are its strengths and weaknesses relative to your situation?

**Answers to Insight and Accounting Across the Organization Questions**

**p. 1107 Budgets and the Exotic Newcastle Disease** **Q:** What is the major benefit of tying a budget to the overall goals of the company? **A:** People working on a budgeting process that is clearly guided and focused by strategic goals spend less time arguing about irrelevant details and more time focusing on the items that matter.

**p. 1110 Competition versus Collaboration** **Q:** How might managers of separate divisions be able to reduce division costs through collaboration? **A:** Division managers might reduce costs by sharing design and marketing resources or by jointly negotiating with suppliers. In addition, they can reduce the need to hire and lay off employees by sharing staff across divisions as human resource needs change.

**p. 1119 Does Hollywood Look at ROI?** **Q:** What might be the reason that movie studios do not produce G-rated movies as often as R-rated movies? **A:** Perhaps Hollywood believes that big-name stars or large budgets, both of which are typical of R-rated movies, sell movies. However, one study recently concluded, “We can’t find evidence that stars help movies, and we can’t find evidence that bigger budgets increase return on investment.” Some film companies are going out of their way to achieve at least a PG rating.

**p. 1121 Flexible Manufacturing Requires Flexible Accounting** **Q:** What implications do these improvements in production capabilities have for management accounting information and performance evaluation within the organization? **A:** In order to maximize the potential of flexible manufacturing facilities, managers need to be supplied with information on a more frequent basis. In turn, the tools used to evaluate performance need to take into account what information management had at its disposal, and what decisions were made in response to this information.

**Answers to Self-Test Questions**

1. c 2. d 3. c 4. b 5. b 6. a  $(\$90,000 - \$30,000) \div (10,000 - 0)$  7. d  $(\$27,000 \div 9,000 = \$3DLH)$ ;  $[\$28,000 - (9,200 \times \$3)]$  8. a 9. d 10. d 11. a 12. c 13. b 14. b 15. d

# CHAPTER 25

## Standard Costs and Balanced Scorecard

### Study Objectives

After studying this chapter, you should be able to:

- 1 Distinguish between a standard and a budget.
- 2 Identify the advantages of standard costs.
- 3 Describe how companies set standards.
- 4 State the formulas for determining direct materials and direct labor variances.
- 5 State the formula for determining the total manufacturing overhead variance.
- 6 Discuss the reporting of variances.
- 7 Prepare an income statement for management under a standard costing system.
- 8 Describe the balanced scorecard approach to performance evaluation.

### Feature Story

#### HIGHLIGHTING PERFORMANCE EFFICIENCY

There's a very good chance that the highlighter you're holding in your hand was made by **Sanford**, a maker of permanent markers and other writing instruments. Sanford, headquartered in Illinois, annually sells hundreds of millions of dollars' worth of Accent<sup>®</sup> highlighters, fine-point pens, Sharpie permanent markers, Expo dry-erase markers for overhead projectors, and other writing instruments.

Since Sanford makes literally billions of writing utensils per year, the company must keep tight control over manufacturing costs. A very important part of Sanford's manufacturing process is determining how much direct materials, labor, and overhead should cost. The company then compares these costs to actual costs to assess performance efficiency. Raw materials for Sanford's markers include a barrel, plug, cap, ink reservoir, and a nib (tip). Machines

assemble these parts to produce thousands of units per hour. A major component of manufacturing overhead is machine maintenance—some fixed, some variable.

“Labor costs are associated with material handling and equipment maintenance functions. Although the assembly process is highly automated, labor is still required to move raw materials to the machine and to package the finished product. In addition, highly skilled technicians are required to service and maintain each piece of equipment,” says Mike Orr, vice president, operations.

Labor rates are predictable because the hourly workers are covered by a union contract. The story is the same with the fringe benefits and some supervisory salaries. Even volume levels are fairly predictable—demand for the product is high—so fixed overhead is efficiently absorbed. Raw material standard costs are based on the previous year’s actual prices plus any anticipated inflation. For the past several years, though, inflation had been so low that the company was considering any price increase in raw material to be unfavorable because its standards remained unchanged.

- *Accounting Across the Organization: How Do Standards Help a Business?* (p. 1150)
- *Management Insight: How Can We Make Susan’s Chili Profitable?* (p. 1153)
- *Service Company Insight: It May Be Time to Fly United Again* (p. 1164)

# Preview of CHAPTER 25

Standards are a fact of life. You met the admission standards for the school you are attending. The vehicle that you drive had to meet certain governmental emissions standards. The hamburgers and salads you eat in a restaurant have to meet certain health and nutritional standards before they can be sold. As described in our Feature Story, **Sanford Corp.** has standards for the costs of its materials, labor, and overhead. The reason for standards in these cases is very simple: They help to ensure that overall product quality is high while keeping costs under control.

In this chapter, we continue the study of controlling costs. You will learn how to evaluate performance using standard costs and a balanced scorecard.

The content and organization of Chapter 25 are as follows.

| Standard Costs and Balanced Scorecard  |  |  |  |
|--|--|--|--|
| The Need for Standards   | Setting Standard Costs   | Analyzing and Reporting Variances from Standards   | Balanced Scorecard   |
| <ul style="list-style-type: none"> <li>Standards vs. budgets</li> <li>Why standard costs?</li> </ul> | <ul style="list-style-type: none"> <li>Ideal vs. normal</li> <li>Case study</li> </ul> | <ul style="list-style-type: none"> <li>Direct materials variances</li> <li>Direct labor variances</li> <li>Manufacturing overhead variance</li> <li>Reporting variances</li> <li>Statement presentation</li> </ul> | <ul style="list-style-type: none"> <li>Financial perspective</li> <li>Customer perspective</li> <li>Internal process perspective</li> <li>Learning and growth perspective</li> </ul> |

## The Need for Standards

Standards are common in business. Those imposed by government agencies are often called **regulations**. They include the Fair Labor Standards Act, the Equal Employment Opportunity Act, and a multitude of environmental standards. Standards established internally by a company may extend to personnel matters, such as employee absenteeism and ethical codes of conduct, quality control standards for products, and standard costs for goods and services. In managerial accounting, **standard costs** are predetermined unit costs, which companies use as measures of performance.

We will focus on manufacturing operations in this chapter. But you should also recognize that standard costs also apply to many types of service businesses as well. For example, a fast-food restaurant such as **McDonald's** knows the price it should pay for pickles, beef, buns, and other ingredients. It also knows how much time it should take an employee to flip hamburgers. If the company pays too much for pickles or if employees take too much time to prepare Big Macs, McDonald's notices the deviations and takes corrective action. Not-for-profit enterprises such as universities, charitable organizations, and governmental agencies also may use standard costs.

### Study Objective [1]

Distinguish between a standard and a budget.

### *Distinguishing between Standards and Budgets*

Both **standards** and **budgets** are predetermined costs, and both contribute to management planning and control. There is a difference, however, in the way the terms are expressed. A standard is a **unit** amount. A budget is a **total** amount. Thus, it is

customary to state that the **standard cost** of direct labor for a unit of product is, say, \$10. If the company produces 5,000 units of the product, the \$50,000 of direct labor is the **budgeted** labor cost. A standard is the budgeted **cost per unit** of product. A standard is therefore concerned with each individual cost component that makes up the entire budget.

There are important accounting differences between budgets and standards. Except in the application of manufacturing overhead to jobs and processes, budget data are not journalized in cost accounting systems. In contrast, as we illustrate in the appendix to this chapter, standard costs may be incorporated into cost accounting systems. Also, a company may report its inventories at standard cost in its financial statements, but it would not report inventories at budgeted costs.

### Why Standard Costs?

Standard costs offer a number of advantages to an organization, as shown in Illustration 25-1.

**Study Objective [2]**

Identify the advantages of standard costs.

**Advantages of standard costs**

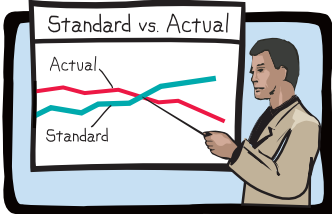

Facilitate management planning

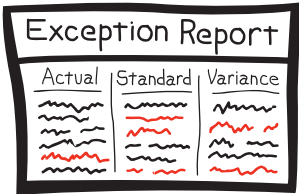

Promote greater economy by making employees more "cost-conscious"

Useful in setting selling prices

Contribute to management control by providing basis for evaluation of cost control

Useful in highlighting variances in management by exception

Simplify costing of inventories and reduce clerical costs

The organization will realize these advantages only when standard costs are carefully established and prudently used. Using standards solely as a way to place blame can have a negative effect on managers and employees. To minimize this effect, many companies offer wage incentives to those who meet the standards.

**Illustration 25-1**  
Advantages of standard costs

## Setting Standard Costs—A Difficult Task

### Study Objective [3]

Describe how companies set standards.

The setting of standard costs to produce a unit of product is a difficult task. It requires input from all persons who have responsibility for costs and quantities. To determine the standard cost of direct materials, management consults purchasing agents, product managers, quality control engineers, and production supervisors. In setting the cost standard for direct labor, managers obtain pay rate data from the payroll department. Industrial engineers generally determine the labor time requirements. The managerial accountant provides important input for the standard-setting process by accumulating historical cost data and by knowing how costs respond to changes in activity levels.

To be effective in controlling costs, standard costs need to be current at all times. Thus, standards are under continuous review. They should change whenever managers determine that the existing standard is not a good measure of performance. Circumstances that warrant revision of a standard include changed wage rates resulting from a new union contract, a change in product specifications, or the implementation of a new manufacturing method.

### Ideal versus Normal Standards

Companies set standards at one of two levels: ideal or normal. **Ideal standards** represent optimum levels of performance under perfect operating conditions. **Normal standards** represent efficient levels of performance that are attainable under expected operating conditions.

Some managers believe ideal standards will stimulate workers to ever-increasing improvement. However, most managers believe that ideal standards lower the morale of the entire workforce because they are difficult, if not impossible, to meet. Very few companies use ideal standards.

Most companies that use standards set them at a normal level. Properly set, normal standards should be **rigorous but attainable**. Normal standards allow for rest periods, machine breakdowns, and other “normal” contingencies in the production process. In the remainder of this chapter we will assume that standard costs are set at a normal level.

#### Ethics Note

When standards are set too high, employees sometimes feel pressure to consider unethical practices to meet these standards.

## ACCOUNTING ACROSS THE ORGANIZATION

### How Do Standards Help a Business?

A number of organizations, including corporations, consultants, and governmental agencies, have agreed to share information regarding performance standards in an effort to create a standard set of measures for thousands of business processes.

The group, referred to as the Open Standards Benchmarking Collaborative, includes **IBM**, **Procter and Gamble**, the **U.S. Navy**, and the **World Bank**. Companies that are interested in participating can go to the group's website and enter their information.

Source: William M. Bulkeley, “Business, Agencies to Standardize Their Benchmarks,” *Wall Street Journal* (May 19, 2004).

**?** How will the creation of such standards help a business or organization? (See page 1190.)

### A Case Study

To establish the standard cost of producing a product, it is necessary to establish standards for each manufacturing cost element—direct materials, direct labor,

and manufacturing overhead. The standard for each element is derived from the standard price to be paid and the standard quantity to be used.

To illustrate, we look at a case study of how standard costs are set. In this extended example, we assume that Xonic, Inc. wishes to use standard costs to measure performance in filling an order for 1,000 gallons of Weed-O, a liquid weed killer.

### DIRECT MATERIALS

The **direct materials price standard** is the cost per unit of direct materials that should be incurred. This standard should be based on the purchasing department's best estimate of the **cost of raw materials**. This cost is frequently based on current purchase prices. The price standard also includes an amount for related costs such as receiving, storing, and handling. The materials price standard per pound of material for Xonic's weed killer is:

| Item   | Price                |
|--|----------------------|
| Purchase price, net of discounts                 | \$2.70               |
| Freight  | 0.20                 |
| Receiving and handling                           | 0.10                 |
| <b>Standard direct materials price per pound</b> | <b><u>\$3.00</u></b> |

#### Illustration 25-2

Setting direct materials price standard

The **direct materials quantity standard** is the quantity of direct materials that should be used per unit of finished goods. This standard is expressed as a physical measure, such as pounds, barrels, or board feet. In setting the standard, management considers both the quality and quantity of materials required to manufacture the product. The standard includes allowances for unavoidable waste and normal spoilage. The standard quantity per unit for Xonic, Inc. is as follows.

| Item   | Quantity (Pounds) |
|--|-------------------|
| Required materials                                 | 3.5               |
| Allowance for waste                                | 0.4               |
| Allowance for spoilage                             | 0.1               |
| <b>Standard direct materials quantity per unit</b> | <b><u>4.0</u></b> |

#### Illustration 25-3

Setting direct materials quantity standard

**The standard direct materials cost per unit is the standard direct materials price times the standard direct materials quantity.** For Xonic, Inc., the standard direct materials cost per gallon of Weed-O is \$12.00 ( $\$3.00 \times 4.0$  pounds).

### DIRECT LABOR

The **direct labor price standard** is the rate per hour that should be incurred for direct labor. This standard is based on current wage rates, adjusted for anticipated changes such as cost of living adjustments (COLAs). The price standard also generally includes employer payroll taxes and fringe benefits, such as paid holidays and vacations. For Xonic, Inc., the direct labor price standard is as follows.

| Item                                       | Price                 |
|--|-----------------------|
| Hourly wage rate                           | \$ 7.50               |
| COLA                                       | 0.25                  |
| Payroll taxes                              | 0.75                  |
| Fringe benefits                            | 1.50                  |
| <b>Standard direct labor rate per hour</b> | <b><u>\$10.00</u></b> |

#### Alternative Terminology

The direct labor price standard is also called the *direct labor rate standard*.

#### Illustration 25-4

Setting direct labor price standard

**Alternative Terminology**

The direct labor quantity standard is also called the *direct labor efficiency standard*.

The **direct labor quantity standard** is the time that should be required to make one unit of the product. This standard is especially critical in labor-intensive companies. Allowances should be made in this standard for rest periods, cleanup, machine setup, and machine downtime. For Xonic, Inc., the direct labor quantity standard is as follows.

**Illustration 25-5**

Setting direct labor quantity standard

| Item  | Quantity<br>(Hours) |
|---|---------------------|
| Actual production time                      | 1.5                 |
| Rest periods and cleanup                    | 0.2                 |
| Setup and downtime                          | 0.3                 |
| <b>Standard direct labor hours per unit</b> | <b><u>2.0</u></b>   |

**The standard direct labor cost per unit is the standard direct labor rate times the standard direct labor hours.** For Xonic, Inc., the standard direct labor cost per gallon of Weed-O is \$20 ( $\$10.00 \times 2.0$  hours).

**MANUFACTURING OVERHEAD**

For manufacturing overhead, companies use a **standard predetermined overhead rate** in setting the standard. This overhead rate is determined by dividing budgeted overhead costs by an expected standard activity index. For example, the index may be standard direct labor hours or standard machine hours.

As discussed in Chapter 21, many companies employ activity-based costing (ABC) to allocate overhead costs. Because ABC uses multiple activity indices to allocate overhead costs, it results in a better correlation between activities and costs incurred than do other methods. As a result, the use of ABC can significantly improve the usefulness of standard costing for management decision making.

Xonic, Inc. uses standard direct labor hours as the activity index. The company expects to produce 13,200 gallons of Weed-O during the year at normal capacity. **Normal capacity** is the average activity output that a company should experience in the long run. Since it takes 2 direct labor hours for each gallon, total standard direct labor hours are 26,400 ( $13,200 \text{ gallons} \times 2 \text{ hours}$ ).

At normal capacity of 26,400 direct labor hours, overhead costs are expected to be \$132,000. Of that amount, \$79,200 are variable and \$52,800 are fixed. Illustration 25-6 shows computation of the standard predetermined overhead rates for Xonic, Inc.

**Illustration 25-6**

Computing predetermined overhead rates

| Budgeted Overhead Costs | Amount           | ÷ | Standard Direct Labor Hours | = | Overhead Rate per Direct Labor Hour |
|-------------------------|------------------|---|-----------------------------|---|-------------------------------------|
| Variable                | \$ 79,200        |   | 26,400                      |   | \$3.00                              |
| Fixed                   | 52,800           |   | 26,400                      |   | 2.00                                |
| Total                   | <u>\$132,000</u> |   | 26,400                      |   | <b><u>\$5.00</u></b>                |

**The standard manufacturing overhead rate per unit is the predetermined overhead rate times the activity index quantity standard.** For Xonic, Inc., which uses direct labor hours as its activity index, the standard manufacturing overhead rate per gallon of Weed-O is \$10 ( $\$5 \times 2 \text{ hours}$ ).

**TOTAL STANDARD COST PER UNIT**

After a company has established the standard quantity and price per unit of product, it can determine the total standard cost. The total standard cost per unit is the sum

of the standard costs of direct materials, direct labor, and manufacturing overhead. For Xonic, Inc., the total standard cost per gallon of Weed-O is \$42, as shown on the following standard cost card.

| <b>Product: Weed-O</b>             |                          | <b>Unit Measure: Gallon</b> |                        |  |
|------------------------------------|--------------------------|-----------------------------|------------------------|--|
| <b>Manufacturing Cost Elements</b> | <b>Standard Quantity</b> | <b>× Standard Price</b>     | <b>= Standard Cost</b> |  |
| Direct materials                   | 4 pounds                 | \$ 3.00                     | \$ 12.00               |  |
| Direct labor                       | 2 hours                  | \$ 10.00                    | \$ 20.00               |  |
| Manufacturing overhead             | 2 hours                  | \$ 5.00                     | \$ 10.00               |  |
|                                    |                          |                             | <u>\$ 42.00</u>        |  |
|                                    |                          |                             | <u>\$ 42.00</u>        |  |

**Illustration 25-7**  
Standard cost per gallon of Weed-O

The company prepares a standard cost card for each product. This card provides the basis for determining variances from standards.

## MANAGEMENT INSIGHT

### How Can We Make Susan's Chili Profitable?

Setting standards can be difficult. Consider **Susan's Chili Factory**, which manufactures and sells chili. The cost of manufacturing Susan's chili consists of the costs of raw materials, labor to convert the basic ingredients to chili, and overhead. We will use materials cost as an example. Managers need to develop three standards: (1) What should be the formula (mix) of ingredients for one gallon of chili? (2) What should be the normal wastage (or shrinkage) for the individual ingredients? (3) What should be the standard cost for the individual ingredients that go into the chili?

Susan's Chili Factory also illustrates how managers can use standard costs in controlling costs. Suppose that summer droughts have reduced crop yields. As a result, prices have doubled for beans, onions, and peppers. In this case, actual costs will be significantly higher than standard costs, which will cause management to evaluate the situation. Similarly, assume that poor maintenance caused the onion-dicing blades to become dull. As a result, usage of onions to make a gallon of chili tripled. Because this deviation is quickly highlighted through standard costs, managers can take corrective action promptly.

Source: Adapted from David R. Beran, "Cost Reduction Through Control Reporting," *Management Accounting* (April 1982), pp. 29–33.

**?** How might management use this raw material cost information? (See page 1190.)

## Do it!

Ridette Inc. accumulated the following standard cost data concerning product Cty31.

Materials per unit: 1.5 pounds at \$4 per pound

Labor per unit: 0.25 hours at \$13 per hour.

Manufacturing overhead: Predetermined rate is 120% of direct labor cost.

Compute the standard cost of one unit of product Cty31.

## Standard Costs

### action plan

✓ Know that standard costs are predetermined unit costs.

**action plan (cont.)**

✓ To establish the standard cost of producing a product, establish the standard for each manufacturing cost element—direct materials, direct labor, and manufacturing overhead.

✓ Compute the standard cost for each element from the standard price to be paid and the standard quantity to be used.

**Solution**

| <u>Manufacturing Cost Element</u> | <u>Standard Quantity</u> | × | <u>Standard Price</u> | = | <u>Standard Cost</u> |
|-----------------------------------|--------------------------|---|-----------------------|---|----------------------|
| Direct materials                  | 1.5 pounds               |   | \$4.00                |   | \$ 6.00              |
| Direct labor                      | 0.25 hours               |   | \$13.00               |   | 3.25                 |
| Manufacturing overhead            | 120%                     |   | \$3.25                |   | 3.90                 |
| Total                             |                          |   |                       |   | <u>\$13.15</u>       |

Related exercise material: BE25-2, E25-1, E25-2, E25-3, and **Do it!** 25-1.

## Analyzing and Reporting Variances from Standards

**Alternative Terminology**

In business, the term *variance* is also used to indicate differences between total budgeted and total actual costs.

**Illustration 25-8**

Actual production costs

One of the major management uses of standard costs is to identify variances from standards. **Variances** are the differences between total actual costs and total standard costs.

To illustrate, we will assume that in producing 1,000 gallons of Weed-O in the month of June, Xonic, Inc. incurred the following costs.

|                    |                 |
|--------------------|-----------------|
| Direct materials   | \$13,020        |
| Direct labor       | 20,580          |
| Variable overhead  | 6,500           |
| Fixed overhead     | 4,400           |
| Total actual costs | <u>\$44,500</u> |

Companies determine total standard costs by multiplying the units produced by the standard cost per unit. The total standard cost of Weed-O is \$42,000 (1,000 gallons × \$42). Thus, the total variance is \$2,500, as shown below.

**Illustration 25-9**

Computation of total variance

|                       |                        |
|-----------------------|------------------------|
| Actual costs          | \$44,500               |
| Less: Standard costs  | <u>42,000</u>          |
| <b>Total variance</b> | <b><u>\$ 2,500</u></b> |

Note that the variance is expressed in total dollars, and not on a per unit basis.

When actual costs exceed standard costs, the variance is **unfavorable**. The \$2,500 variance in June for Weed-O is unfavorable. An unfavorable variance has a negative connotation. It suggests that the company paid too much for one or more of the manufacturing cost elements or that it used the elements inefficiently.

If actual costs are less than standard costs, the variance is **favorable**. A favorable variance has a positive connotation. It suggests efficiencies in incurring manufacturing costs and in using direct materials, direct labor, and manufacturing overhead.

However, be careful: A favorable variance could be obtained by using inferior materials. In printing wedding invitations, for example, a favorable variance could result from using an inferior grade of paper. Or, a favorable variance might be achieved in installing tires on an automobile assembly line by tightening only half of the lug bolts. A variance is not favorable if the company has sacrificed quality control standards.

## Direct Materials Variances

In completing the order for 1,000 gallons of Weed-O, Xonic used 4,200 pounds of direct materials. These were purchased at a cost of \$3.10 per unit. Illustration 25-10 shows the formula for the **total materials variance** and the calculation for Xonic, Inc.

|   |   |   |   |   |
|---|---|---|---|---|
| <b>Actual Quantity</b><br>× <b>Actual Price</b><br><b>(AQ) × (AP)</b> | – | <b>Standard Quantity</b><br>× <b>Standard Price</b><br><b>(SQ) × (SP)</b> | = | <b>Total Materials</b><br><b>Variance</b><br><b>(TMV)</b> |
| (4,200 × \$3.10)  | – | (4,000 × \$3.00)  | = | <b>\$1,020 U</b>  |

### Study Objective [4]

State the formulas for determining direct materials and direct labor variances.

#### Illustration 25-10

Formula for total materials variance

Thus, for Xonic, the total materials variance is \$1,020 (\$13,020 – \$12,000) unfavorable.

Next, the company analyzes the total variance to determine the amount attributable to price (costs) and to quantity (use). The **materials price variance** for Xonic, Inc. is computed from the following formula.<sup>1</sup>

|   |   |   |   |   |
|---|---|---|---|---|
| <b>Actual Quantity</b><br>× <b>Actual Price</b><br><b>(AQ) × (AP)</b> | – | <b>Actual Quantity</b><br>× <b>Standard Price</b><br><b>(AQ) × (SP)</b> | = | <b>Materials Price</b><br><b>Variance</b><br><b>(MPV)</b> |
| (4,200 × \$3.10)  | – | (4,200 × \$3.00)  | = | <b>\$420 U</b>  |

#### Illustration 25-11

Formula for materials price variance

For Xonic, the materials price variance is \$420 (\$13,020 – \$12,600) unfavorable.

The price variance can also be computed by multiplying the actual quantity purchased by the difference between the actual and standard price per unit. The computation in this case is  $4,200 \times (\$3.10 - \$3.00) = \$420 \text{ U}$ .

Illustration 25-12 shows the formula for the **materials quantity variance** and the calculation for Xonic, Inc.

|   |   |   |   |  |
|---|---|---|---|--|
| <b>Actual Quantity</b><br>× <b>Standard Price</b><br><b>(AQ) × (SP)</b> | – | <b>Standard Quantity</b><br>× <b>Standard Price</b><br><b>(SQ) × (SP)</b> | = | <b>Materials Quantity</b><br><b>Variance</b><br><b>(MQV)</b> |
| (4,200 × \$3.00)  | – | (4,000 × \$3.00)  | = | <b>\$600 U</b>   |

### Helpful Hint

The alternative formula is:

$$\boxed{\text{AQ}} \times \boxed{\text{AP} - \text{SP}} = \boxed{\text{MPV}}$$

#### Illustration 25-12

Formula for materials quantity variance

Thus, for Xonic, Inc., the materials quantity variance is \$600 (\$12,600 – \$12,000) unfavorable.

The price variance can also be computed by applying the standard price to the difference between actual and standard quantities used. The computation in this example is  $\$3.00 \times (4,200 - 4,000) = \$600 \text{ U}$ .

The total materials variance of \$1,020 U, therefore, consists of the following.

|                                 |                         |
|---------------------------------|-------------------------|
| Materials price variance        | \$ 420 U                |
| Materials quantity variance     | 600 U                   |
| <b>Total materials variance</b> | <b><u>\$1,020 U</u></b> |

### Helpful Hint

The alternative formula is:

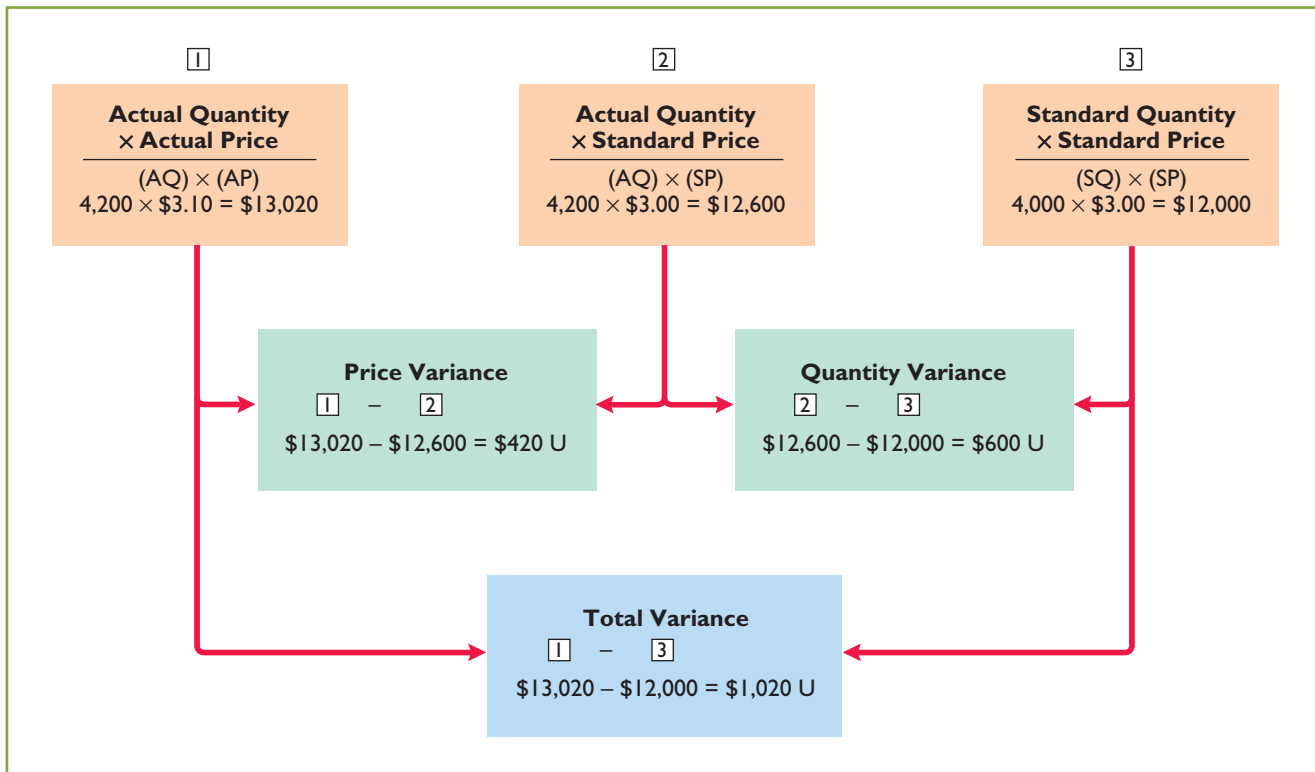

$$\boxed{\text{SP}} \times \boxed{\text{AQ} - \text{SQ}} = \boxed{\text{MQV}}$$

#### Illustration 25-13

Summary of materials variances

<sup>1</sup>We will assume that all materials purchased during the period are used in production and that no units remain in inventory at the end of the period.

Companies sometimes use a matrix to analyze a variance. **When the matrix is used, a company computes the formulas for each cost element first and then computes the variances.** Illustration 25-14 shows the completed matrix for the direct materials variance for Xonic, Inc. The matrix provides a convenient structure for determining each variance.

**Illustration 25-14**  
Matrix for direct materials  
variances

### CAUSES OF MATERIALS VARIANCES

What are the causes of a variance? The causes may relate to both internal and external factors. The investigation of a **materials price variance usually begins in the purchasing department.** Many factors affect the price paid for raw materials. These include availability of quantity and cash discounts, the quality of the materials requested, and the delivery method used. To the extent that these factors are considered in setting the price standard, the purchasing department is responsible for any variances.

However, a variance may be beyond the control of the purchasing department. Sometimes, for example, prices may rise faster than expected. Moreover, actions by groups over which the company has no control, such as the OPEC nations' oil price increases, may cause an unfavorable variance. There are also times when a production department may be responsible for the price variance. This may occur when a rush order forces the company to pay a higher price for the materials.

The starting point for determining the cause(s) of an unfavorable **materials quantity variance is in the production department.** If the variances are due to inexperienced workers, faulty machinery, or carelessness, the production department is responsible. However, if the materials obtained by the purchasing department were of inferior quality, then the purchasing department is responsible.

## Do it!

The standard cost of Product XX includes two units of direct materials at \$8.00 per unit. During July, the company buys 22,000 units of direct materials at \$7.50 and uses those materials to produce 10,000 units. Compute the total, price, and quantity variances for materials.

### Solution

Standard quantity =  $10,000 \times 2$ .

Substituting amounts into the formulas, the variances are:

$$\begin{array}{l} \text{Total materials} \\ \text{variance} \end{array} = (22,000 \times \$7.50) - (20,000 \times \$8.00) = \$5,000 \text{ unfavorable.}$$

$$\begin{array}{l} \text{Materials price} \\ \text{variance} \end{array} = (22,000 \times \$7.50) - (22,000 \times \$8.00) = \$11,000 \text{ favorable.}$$

$$\begin{array}{l} \text{Materials quantity} \\ \text{variance} \end{array} = (22,000 \times \$8.00) - (20,000 \times \$8.00) = \$16,000 \text{ unfavorable.}$$

Related exercise material: BE25-4, E25-5, and **Do it!** E25-2.

## Materials Variances

### action plan

✓ Use the formulas for computing each of the materials variances:

$$\text{Total materials variance} = (\text{AQ} \times \text{AP}) - (\text{SQ} \times \text{SP})$$

$$\text{Materials price variance} = (\text{AQ} \times \text{AP}) - (\text{AQ} \times \text{SP})$$

$$\text{Materials quantity variance} = (\text{AQ} \times \text{SP}) - (\text{SQ} \times \text{SP})$$

## Direct Labor Variances

The process of determining direct labor variances is the same as for determining the direct materials variances. In completing the Weed-O order, Xonic, Inc. incurred 2,100 direct labor hours at an average hourly rate of \$9.80. The standard hours allowed for the units produced were 2,000 hours (1,000 gallons  $\times$  2 hours). The standard labor rate was \$10 per hour. Illustration 25-15 shows the formula for the **total labor variance** and its calculation for Xonic, Inc.

|                                      |   |                                      |   |                    |
|--------------------------------------|---|--------------------------------------|---|--------------------|
| <b>Actual Hours</b>                  |   | <b>Standard Hours</b>                |   | <b>Total Labor</b> |
| $\times$ Actual Rate                 | – | $\times$ Standard Rate               | = | <b>Variance</b>    |
| <b>(AH) <math>\times</math> (AR)</b> |   | <b>(SH) <math>\times</math> (SR)</b> |   | <b>(TLV)</b>       |
| (2,100 $\times$ \$9.80)              | – | (2,000 $\times$ \$10.00)             | = | <b>\$580 U</b>     |

### Illustration 25-15

Formula for total labor variance

Thus, the total labor variance is \$580 (\$20,580 – \$20,000) unfavorable.

The formula for the **labor price variance** and the calculation for Xonic, Inc. are as follows.

|                                      |   |                                      |   |                    |
|--------------------------------------|---|--------------------------------------|---|--------------------|
| <b>Actual Hours</b>                  |   | <b>Actual Hours</b>                  |   | <b>Labor Price</b> |
| $\times$ Actual Rate                 | – | $\times$ Standard Rate               | = | <b>Variance</b>    |
| <b>(AH) <math>\times</math> (AR)</b> |   | <b>(AH) <math>\times</math> (SR)</b> |   | <b>(LPV)</b>       |
| (2,100 $\times$ \$9.80)              | – | (2,100 $\times$ \$10.00)             | = | <b>\$420 F</b>     |

### Illustration 25-16

Formula for labor price variance

For Xonic, Inc., the labor price variance is \$420 (\$20,580 – \$21,000) favorable.

The labor price variance can also be computed by multiplying actual hours worked by the difference between the actual pay rate and the standard pay rate. The computation in this example is  $2,100 \times (\$10.00 - \$9.80) = \$420 \text{ F}$ .

Illustration 25-17 (page 1158) shows the formula for the **labor quantity variance** and its calculation for Xonic, Inc.

### Helpful Hint

The alternative formula is:

$$\boxed{\text{AH}} \times \boxed{\text{AR} - \text{SR}} = \boxed{\text{LPV}}$$

**Illustration 25-17**

Formula for labor quantity variance

|  |   |  |   |  |
|--|---|--|---|--|
| <b>Actual Hours</b><br>× <b>Standard Rate</b><br><b>(AH) × (SR)</b><br>(2,100 × \$10.00) | – | <b>Standard Hours</b><br>× <b>Standard Rate</b><br><b>(SH) × (SR)</b><br>(2,000 × \$10.00) | = | <b>Labor Quantity</b><br><b>Variance</b><br><b>(LQV)</b><br><b>\$1,000 U</b> |
|--|---|--|---|--|

Thus, for Xonic, Inc., the labor quantity variance is \$1,000 (\$21,000 – \$20,000) unfavorable.

**Helpful Hint**

The alternative formula is:

$$SR \times AH - SH = LQV$$

The same result can be obtained by multiplying the standard rate by the difference between actual hours worked and standard hours allowed. In this case, the computation is  $\$10.00 \times (2,100 - 2,000) = \$1,000 \text{ U}$ .

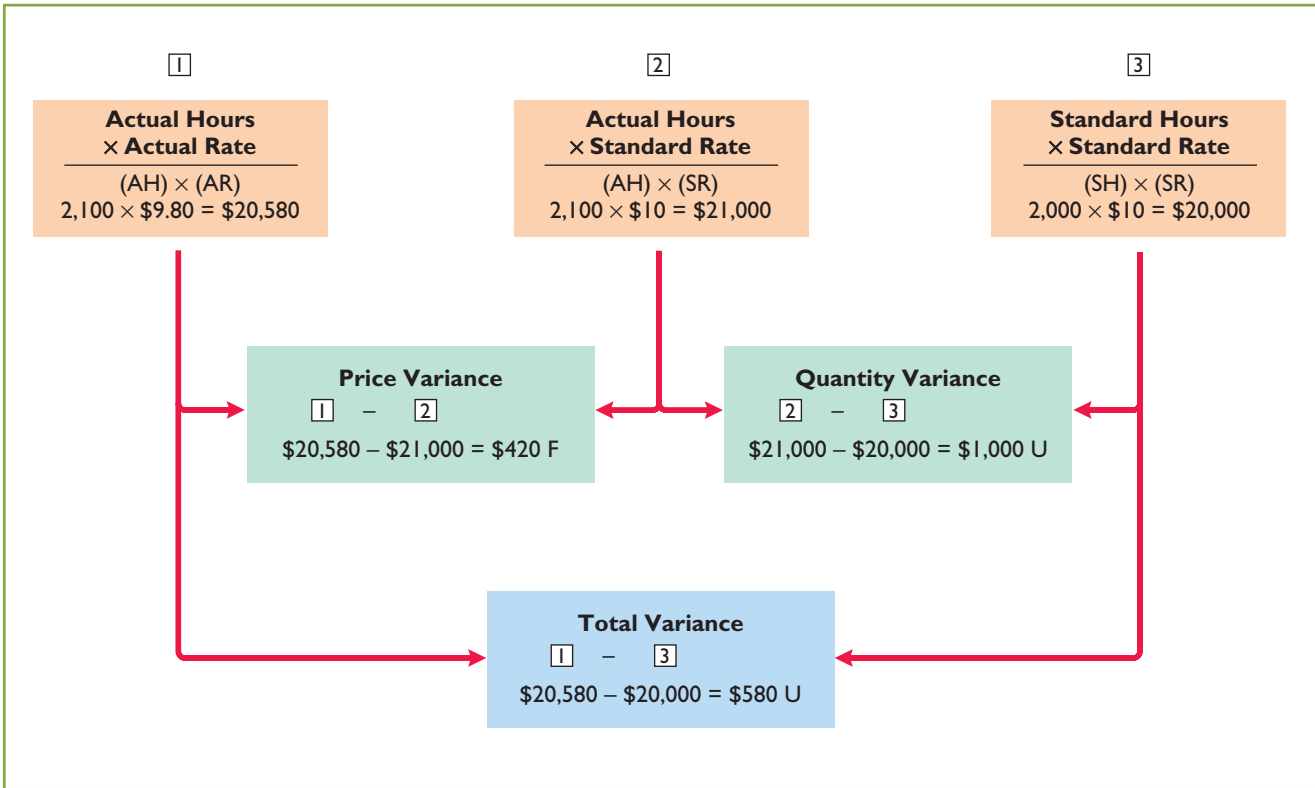

The total direct labor variance of \$580 U, therefore, consists of:

**Illustration 25-18**

Summary of labor variances

|                                    |                        |
|------------------------------------|------------------------|
| Labor price variance               | \$ 420 F               |
| Labor quantity variance            | <u>1,000 U</u>         |
| <b>Total direct labor variance</b> | <b><u>\$ 580 U</u></b> |

These results can also be obtained from the matrix in Illustration 25-19.

**Illustration 25-19**

Matrix for direct labor variances

**Causes of Labor Variances**

**Labor price variances** usually result from two factors: (1) paying workers **higher wages than expected**, and (2) **misallocation of workers**. In companies where pay rates are determined by union contracts, labor price variances should be infrequent. When workers are not unionized, there is a much higher likelihood of such variances. The responsibility for these variances rests with the manager who authorized the wage increase.

Misallocation of the workforce refers to using skilled workers in place of unskilled workers and vice versa. The use of an inexperienced worker instead of an experienced one will result in a favorable price variance because of the lower pay

rate of the unskilled worker. An unfavorable price variance would result if a skilled worker were substituted for an inexperienced one. The production department generally is responsible for labor price variances resulting from misallocation of the workforce.

**Labor quantity variances** relate to the **efficiency of workers**. The cause of a quantity variance generally can be traced to the production department. The causes of an unfavorable variance may be poor training, worker fatigue, faulty machinery, or carelessness. These causes are the responsibility of the **production department**. However, if the excess time is due to inferior materials, the responsibility falls outside the production department.

## Manufacturing Overhead Variance

The **total overhead variance** is the difference between the actual overhead costs and overhead costs applied based on standard hours allowed. As indicated in Illustration 25-8, Xonic incurred overhead costs of \$10,900 (\$6,500 + \$4,400) to produce 1,000 gallons of Weed-O in June. The computation of the actual overhead is comprised of a variable and a fixed component. Illustration 25-20 shows this computation.

|                              |                        |
|------------------------------|------------------------|
| Variable overhead            | \$ 6,500               |
| Fixed overhead               | 4,400                  |
| <b>Total actual overhead</b> | <b><u>\$10,900</u></b> |

**Study Objective [5]**  
 State the formula for determining the total manufacturing overhead variance.

**Illustration 25-20**  
Actual overhead costs

We then determine the overhead costs applied based on standard hours allowed times the predetermined overhead rate. **Standard hours allowed** are the hours that *should* have been worked for the units produced. Because it takes two hours of direct labor to produce one gallon of Weed-O, for the 1,000-gallon Weed-O order, the standard hours allowed are 2,000 hours (1,000 gallons × 2 hours). We then apply the predetermined overhead rate to the 2,000 standard hours allowed.

The predetermined rate for Weed-O is \$5, comprised of a variable overhead rate of \$3 and a fixed rate of \$2. Recall from Illustration 25-6 that the amount of budgeted overhead costs at normal capacity of \$132,000 was divided by normal capacity of 26,400 direct labor hours, to arrive at a predetermined overhead rate of \$5 (\$132,000 ÷ 26,400). The predetermined rate of \$5 is then multiplied by the 2,000 standard hours allowed, to determine the overhead costs applied.

Illustration 25-21 shows the formula for the total overhead variance and the calculation for Xonic, Inc. for the month of June.

|                        |   |                          |   |                                |
|------------------------|---|--------------------------|---|--------------------------------|
| <b>Actual Overhead</b> | – | <b>Overhead Applied*</b> | = | <b>Total Overhead Variance</b> |
| \$10,900               | – | \$10,000                 | = | \$900 U                        |
| (\$6,500 + \$4,400)    |   | (\$5 × 2,000 hours)      |   |                                |

\*Based on standard hours allowed.

**Illustration 25-21**  
Formula for total overhead variance

Thus, for Xonic, Inc. the total overhead variance is \$900 unfavorable.

The overhead variance is generally analyzed through a price and quantity variance. The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**. Appendix 25B discusses how the total overhead variance can be broken down into these two variances.

**CAUSES OF MANUFACTURING OVERHEAD VARIANCES**

One reason for an overhead variance relates to over- or underspending on overhead items. For example, overhead may include indirect labor for which a company paid wages higher than the standard labor price allowed. Or the price of electricity to run the company's machines increased, and the company did not anticipate this additional cost. Companies should investigate any spending variances, to determine whether they will continue in the future. Generally, the responsibility for these variances rests with the production department.

The overhead variance can also result from the inefficient use of overhead. For example, because of poor maintenance, a number of the manufacturing machines are experiencing breakdowns on a consistent basis, leading to reduced production. Or the flow of materials through the production process is impeded because of a lack of skilled labor to perform the necessary production tasks, due to a lack of planning. In both of these cases, the production department is responsible for the cause of these variances. On the other hand, overhead can also be underutilized because of a lack of sales orders. When the cause is a lack of sales orders, the responsibility rests outside the production department.

**Do it!****Labor and Manufacturing Overhead Variances****action plan**

✓ Use the formulas for computing each of the variances:

$$\text{Total labor variance} = (\text{AH} \times \text{AR}) - (\text{SH} \times \text{SR})$$

$$\text{Labor price variance} = (\text{AH} \times \text{AR}) - (\text{AH} \times \text{SR})$$

$$\text{Labor quantity variance} = (\text{AH} \times \text{SR}) - (\text{SH} \times \text{SR})$$

$$\text{Total overhead variance} = \text{Actual overhead} - \text{Overhead applied}^*$$

\*Based on standard hours allowed.

The standard cost of Product YY includes 3 hours of direct labor at \$12.00 per hour. The predetermined overhead rate is \$20.00 per direct labor hour. During July, the company incurred 3,500 hours of direct labor at an average rate of \$12.40 per hour and \$71,300 of manufacturing overhead costs. It produced 1,200 units.

**(a)** Compute the total, price, and quantity variances for labor. **(b)** Compute the total overhead variance.

**Solution**

Substituting amounts into the formulas, the variances are:

$$\text{Total labor variance} = (3,500 \times \$12.40) - (3,600 \times \$12.00) = \$200 \text{ Unfavorable}$$

$$\text{Labor price variance} = (3,500 \times \$12.40) - (3,500 \times \$12.00) = \$1,400 \text{ Unfavorable}$$

$$\text{Labor quantity variance} = (3,500 \times \$12.00) - (3,600 \times \$12.00) = \$1,200 \text{ Favorable}$$

$$\text{Total overhead variance} = \$71,300 - \$72,000^* = \$700 \text{ Favorable}$$

$$^*3,600 \text{ hours} \times \$20.00$$

**Study Objective [6]**  
Discuss the reporting of variances.

**Reporting Variances**

All variances should be reported to appropriate levels of management as soon as possible. The sooner managers are informed, the sooner they can evaluate problems and take corrective action.

The form, content, and frequency of variance reports vary considerably among companies. One approach is to prepare a weekly report for each department that has primary responsibility for cost control. Under this approach, materials price variances are reported to the purchasing department, and all other variances are reported to the production department that did the work. Illustration 25-22 is a materials price variance report for Xonic, Inc., with the materials for the Weed-O order listed first.

| <b>Xonic, Inc.</b>   |                       |                 |                   |                       |                            |
|--|-----------------------|-----------------|-------------------|-----------------------|----------------------------|
| Variance Report — Purchasing Department<br>For Week Ended June 8, 2012 |                       |                 |                   |                       |                            |
| Type of<br>Materials   | Quantity<br>Purchased | Actual<br>Price | Standard<br>Price | Price<br>Variance     | Explanation                |
| X100   | 4,200 lbs.            | \$3.10          | \$3.00            | \$420 U               | Rush order                 |
| X142   | 1,200 units           | 2.75            | 2.80              | 60 F                  | Quantity discount          |
| A85  | 600 doz.              | 5.20            | 5.10              | 60 U                  | Regular supplier on strike |
| <b>Total price variance</b>  |                       |                 |                   | <b><u>\$420 U</u></b> |                            |

**Illustration 25-22**  
Materials price variance  
report

The explanation column is completed after consultation with the purchasing department manager.

Variance reports facilitate the principle of “management by exception” explained in Chapter 24. For example, the vice president of purchasing can use the report shown above to evaluate the effectiveness of the purchasing department manager. Or, the vice president of production can use production department variance reports to determine how well each production manager is controlling costs. In using variance reports, top management normally looks for **significant variances**. These may be judged on the basis of some quantitative measure, such as more than 10% of the standard or more than \$1,000.

### Statement Presentation of Variances

In income statements **prepared for management** under a standard cost accounting system, **cost of goods sold is stated at standard cost and the variances are disclosed separately**. Illustration 25-23 shows this format. Based entirely on the production and sale of Weed-O, it assumes selling and administrative costs of \$3,000. Observe that each variance is shown, as well as the total net variance. In this example, variations from standard costs reduced net income by \$2,500.

#### Study Objective [7]

Prepare an income statement for management under a standard costing system.

| <b>Xonic, Inc.</b>                                    |                        |
|---|------------------------|
| Income Statement<br>For the Month Ended June 30, 2012 |                        |
| Sales   | \$60,000               |
| Cost of goods sold (at standard)                      | <u>42,000</u>          |
| Gross profit (at standard)                            | 18,000                 |
| <b>Variances</b>                                      |                        |
| <b>Materials price</b>                                | <b>\$ 420 U</b>        |
| <b>Materials quantity</b>                             | <b>600 U</b>           |
| <b>Labor price</b>                                    | <b>420 F</b>           |
| <b>Labor quantity</b>                                 | <b>1,000 U</b>         |
| <b>Overhead variance</b>                              | <b><u>900 U</u></b>    |
| <b>Total variance unfavorable</b>                     | <b><u>2,500</u></b>    |
| Gross profit (actual)                                 | 15,500                 |
| Selling and administrative expenses                   | <u>3,000</u>           |
| Net income  | <u><u>\$12,500</u></u> |

**Illustration 25-23**  
Variances in income statement  
for management

Standard costs may be used in financial statements prepared for stockholders and other external users. The costing of inventories at standard costs is in accordance with generally accepted accounting principles when there are no significant differences between actual costs and standard costs. **Hewlett-Packard** and **Jostens, Inc.**, for example, report their inventories at standard costs. However, if there are significant differences between actual and standard costs, the financial statements must report inventories and cost of goods sold at actual costs.

It is also possible to show the variances in an income statement prepared in the variable costing (CVP) format. To do so, it is necessary to analyze the overhead variances into variable and fixed components. This type of analysis is explained in cost accounting textbooks.

## Balanced Scorecard

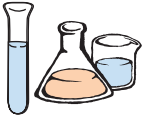

### Study Objective [8]

Describe the balanced scorecard approach to performance evaluation.

Financial measures (measurement of dollars), such as variance analysis and return on investment (ROI), are useful tools for evaluating performance. However, many companies now supplement these financial measures with nonfinancial measures to better assess performance and anticipate future results. For example, airlines, like **Delta**, **American**, and **United**, use capacity utilization as an important measure to understand and predict future performance. Newspaper publishers, such as the *New York Times* and the *Chicago Tribune*, use circulation figures as another measure by which to assess performance. Illustration 25-24 lists some key nonfinancial measures used in various industries.

### Illustration 25-24

Nonfinancial measures used in various industries

| Industry                |   | Measure   |
|-------------------------|---|---|
| <b>Automobiles</b>      |  | Capacity utilization of plants.<br>Average age of key assets.<br>Impact of strikes.<br>Brand-loyalty statistics.  |
| <b>Computer Systems</b> |  | Market profile of customer end-products.<br>Number of new products.<br>Employee stock ownership percentages.<br>Number of scientists and technicians used in R&D.   |
| <b>Chemicals</b>        |  | Customer satisfaction data.<br>Factors affecting customer product selection.<br>Number of patents and trademarks held.<br>Customer brand awareness.   |
| <b>Regional Banks</b>   |  | Number of ATMs by state.<br>Number of products used by average customer.<br>Percentage of customer service calls handled by interactive voice response units.<br>Personnel cost per employee.<br>Credit card retention rates. |

Source: Financial Accounting Standards Board, *Business Reporting: Insights into Enhancing Voluntary Disclosures* (Norwalk, Conn.: FASB, 2001).

Most companies recognize that both financial and nonfinancial measures can provide useful insights into what is happening in the company. As a result, many companies now use a broad-based measurement approach, called the **balanced scorecard**, to evaluate performance. The **balanced scorecard** incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. Nearly 50% of the largest companies in the United States, including **Unilever**, **Chase**, and **Wal-Mart**, are using the balanced scorecard approach.

The balanced scorecard evaluates company performance from a series of “perspectives.” The four most commonly employed perspectives are as follows.

1. The **financial perspective** is the most traditional view of the company. It employs financial measures of performance used by most firms.
2. The **customer perspective** evaluates how well the company is performing from the viewpoint of those people who buy and use its products or services. This view measures how well the company compares to competitors in terms of price, quality, product innovation, customer service, and other dimensions.
3. The **internal process perspective** evaluates the internal operating processes critical to success. All critical aspects of the value chain—including product development, production, delivery and after-sale service—are evaluated to ensure that the company is operating effectively and efficiently.
4. The **learning and growth perspective** evaluates how well the company develops and retains its employees. This would include evaluation of such things as employee skills, employee satisfaction, training programs, and information dissemination.

Within each perspective, the balanced scorecard identifies objectives that will contribute to attainment of strategic goals. Illustration 25-25 shows examples of objectives within each perspective.

|  |   |
|--|---|
| <p><b>Financial perspective</b></p> <ul style="list-style-type: none"> <li>Return on assets</li> <li>Net income</li> <li>Credit rating</li> <li>Share price</li> <li>Profit per employee</li> </ul>  | <p><b>Internal process perspective</b></p> <ul style="list-style-type: none"> <li>Percentage of defect-free products</li> <li>Stockouts</li> <li>Labor utilization rates</li> <li>Waste reduction</li> <li>Planning accuracy</li> </ul>   |
| <p><b>Customer perspective</b></p> <ul style="list-style-type: none"> <li>Percentage of customers who would recommend product</li> <li>Customer retention</li> <li>Response time per customer request</li> <li>Brand recognition</li> <li>Customer service expense per customer</li> </ul> | <p><b>Learning and growth perspective</b></p> <ul style="list-style-type: none"> <li>Percentage of employees leaving in less than one year</li> <li>Number of cross-trained employees</li> <li>Ethics violations</li> <li>Training hours</li> <li>Reportable accidents</li> </ul> |

**Illustration 25-25**

Examples of objectives within the four perspectives of balanced scorecard

The objectives are linked across perspectives in order to tie performance measurement to company goals. The financial objectives are normally set first, and then objectives are set in the other perspectives in order to accomplish the financial objectives.

For example, within the financial perspective, a common goal is to increase profit per dollars invested as measured by ROI. In order to increase ROI, a customer-perspective objective might be to increase customer satisfaction as measured by the percentage of customers who would recommend the product to a friend.

In order to increase customer satisfaction, an internal business process perspective objective might be to increase product quality as measured by the percentage of defect-free units. Finally, in order to increase the percentage of defect-free units, the learning and growth perspective objective might be to reduce factory employee turnover as measured by the percentage of employees leaving in under one year. Illustration 25-26 illustrates this linkage across perspectives.

**Illustration 25-26**

Linked process across balanced scorecard perspectives

Through this linked process, the company can better understand how to achieve its goals and what measures to use to evaluate performance. In summary, the balanced scorecard does the following:

1. Employs both financial and nonfinancial measures. (For example, ROI is a financial measure; employee turnover is a nonfinancial measure.)
2. Creates linkages so that high-level corporate goals can be communicated all the way down to the shop floor.
3. Provides measurable objectives for such nonfinancial measures as product quality, rather than vague statements such as “We would like to improve quality.”
4. Integrates all of the company’s goals into a single performance measurement system, so that an inappropriate amount of weight will not be placed on any single goal.

## SERVICE COMPANY INSIGHT

### It May Be Time To Fly United Again

Many of the benefits of a balanced scorecard approach are evident in the improved operations at **United Airlines**. At the time it filed for bankruptcy in 2002, United had a reputation for some of the worst service in the airline business. But when Glenn Tilton took over as United’s Chief Executive Officer in September 2002, he recognized that things had to change.

One thing he did was to implement an incentive program that allows all of United’s 63,000 employees to earn a bonus of 2.5% or more of their wages if the company “exceeds its goals for on-time flight departures and for customer intent to fly United again.” Since instituting this program, the company’s on-time departures are among the best, its customer complaints have been reduced considerably, and its number of customers who say that they would fly United again is at its highest level ever. While none of these things guarantees that United will survive (given the substantial increase in oil prices), these improvements certainly increase its chances.

Source: Susan Carey, “Friendlier Skies: In Bankruptcy, United Airlines Forges a Path to Better Service,” *Wall Street Journal* (June 15, 2004).

**?** Which of the perspectives of a balanced scorecard were the focus of United’s CEO? (See page 1190.)

## Do it!

Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

1. Percentage of repeat customers.
2. Number of suggestions for improvement from employees.
3. Contribution margin.
4. Market share.
5. Number of cross-trained employees.
6. Amount of setup time.

### Solution

1. Customer perspective.
2. Learning and growth perspective.
3. Financial perspective.
4. Customer perspective.
5. Learning and growth perspective.
6. Internal process perspective.

Related exercise material: BE25-7, E25-16, and **Do it!** 25-4.

## Balanced Scorecard

### action plan

- ✓ The financial perspective employs traditional financial measures of performance.
- ✓ The customer perspective evaluates company performance as seen by the people who buy its products or services.
- ✓ The internal process perspective evaluates the internal operating processes critical to success.
- ✓ The learning and growth perspective evaluates how well the company develops and retains its employees.

## COMPREHENSIVE

## Do it!

Manlow Company makes a cologne called Allure. The standard cost for one bottle of Allure is as follows.

| <u>Manufacturing Cost Elements</u> | <u>Standard</u> |   |              |                |
|------------------------------------|-----------------|---|--------------|----------------|
|                                    | <u>Quantity</u> | × | <u>Price</u> | = <u>Cost</u>  |
| Direct materials                   | 6 oz.           | × | \$ 0.90      | = \$ 5.40      |
| Direct labor                       | 0.5 hrs.        | × | \$12.00      | = 6.00         |
| Manufacturing overhead             | 0.5 hrs.        | × | \$ 4.80      | = 2.40         |
|                                    |                 |   |              | <u>\$13.80</u> |

During the month, the following transactions occurred in manufacturing 10,000 bottles of Allure.

1. 58,000 ounces of materials were purchased at \$1.00 per ounce.
2. All the materials purchased were used to produce the 10,000 bottles of Allure.
3. 4,900 direct labor hours were worked at a total labor cost of \$56,350.
4. Variable manufacturing overhead incurred was \$15,000 and fixed overhead incurred was \$10,400.

The manufacturing overhead rate of \$4.80 is based on a normal capacity of 5,200 direct labor hours. The total budget at this capacity is \$10,400 fixed and \$14,560 variable.

### Instructions

- (a) Compute the total variance for the three cost elements, and the price and quantity variances for direct materials and direct labor.
- (b) Compute the total variance for manufacturing overhead.

**action plan**

✓ Check to make sure the total variance and the sum of the individual variances are equal.

✓ Find the price variance first, then the quantity variance.

✓ Base overhead applied on standard hours allowed.

✓ Ignore actual hours worked in computing overhead variance.

**Solution to Comprehensive Do it!****(a)**

|                                  | <u>Total Variance</u> |
|----------------------------------|-----------------------|
| Actual costs incurred            |                       |
| Direct materials                 | \$ 58,000             |
| Direct labor                     | 56,350                |
| Manufacturing overhead           | 25,400                |
|                                  | 139,750               |
| Standard cost (10,000 × \$13.80) | 138,000               |
| Total variance                   | \$ 1,750 U            |

Direct Materials Variances

|          |   |                   |   |                   |   |           |
|----------|---|-------------------|---|-------------------|---|-----------|
| Total    | = | \$58,000          | – | \$54,000          | = | \$4,000 U |
|          |   | (58,000 × \$1.00) |   | (60,000 × \$0.90) |   |           |
| Price    | = | \$58,000          | – | \$52,200          | = | \$5,800 U |
|          |   | (58,000 × \$1.00) |   | (58,000 × \$0.90) |   |           |
| Quantity | = | \$52,200          | – | \$54,000          | = | \$1,800 F |
|          |   | (58,000 × \$0.90) |   | (60,000 × \$0.90) |   |           |

Direct Labor Variances

|          |   |                   |   |                   |   |           |
|----------|---|-------------------|---|-------------------|---|-----------|
| Total    | = | \$56,350          | – | \$60,000          | = | \$3,650 F |
|          |   | (4,900 × \$11.50) |   | (5,000 × \$12.00) |   |           |
| Price    | = | \$56,350          | – | \$58,800          | = | \$2,450 F |
|          |   | (4,900 × \$11.50) |   | (4,900 × \$12.00) |   |           |
| Quantity | = | \$58,800          | – | \$60,000          | = | \$1,200 F |
|          |   | (4,900 × \$12.00) |   | (5,000 × \$12.00) |   |           |

**(b)**Overhead Variance

|       |   |                       |   |                  |   |           |
|-------|---|-----------------------|---|------------------|---|-----------|
| Total | = | \$25,400              | – | \$24,000         | = | \$1,400 U |
|       |   | (\$15,000 + \$10,400) |   | (5,000 × \$4.80) |   |           |

## Summary of Study Objectives

### [1] Distinguish between a standard and a budget.

Both standards and budgets are predetermined costs. The primary difference is that a standard is a unit amount, whereas a budget is a total amount. A standard may be regarded as the budgeted cost per unit of product.

### [2] Identify the advantages of standard costs.

Standard costs offer a number of advantages. They (a) facilitate management planning, (b) promote greater economy, (c) are useful in setting selling prices, (d) contribute to management control, (e) permit “management by exception,” and (f) simplify the costing of inventories and reduce clerical costs.

**[3] Describe how companies set standards.** The direct materials price standard should be based on the

delivered cost of raw materials plus an allowance for receiving and handling. The direct materials quantity standard should establish the required quantity plus an allowance for waste and spoilage.

The direct labor price standard should be based on current wage rates and anticipated adjustments such as COLAs. It also generally includes payroll taxes and fringe benefits. Direct labor quantity standards should be based on required production time plus an allowance for rest periods, cleanup, machine setup, and machine downtime.

For manufacturing overhead, a standard predetermined overhead rate is used. It is based on an expected standard activity index such as standard direct labor hours or standard machine hours.

**[4] State the formulas for determining direct materials and direct labor variances.** The formulas for the direct materials variances are:

$$\left( \begin{array}{l} \text{Actual quantity} \\ \times \text{Actual price} \end{array} \right) - \left( \begin{array}{l} \text{Standard quantity} \\ \times \text{Standard price} \end{array} \right) = \begin{array}{l} \text{Total} \\ \text{materials} \\ \text{variance} \end{array}$$

$$\left( \begin{array}{l} \text{Actual quantity} \\ \times \text{Actual price} \end{array} \right) - \left( \begin{array}{l} \text{Actual quantity} \\ \times \text{Standard price} \end{array} \right) = \begin{array}{l} \text{Materials} \\ \text{price} \\ \text{variance} \end{array}$$

$$\left( \begin{array}{l} \text{Actual quantity} \\ \times \text{Standard price} \end{array} \right) - \left( \begin{array}{l} \text{Standard quantity} \\ \times \text{Standard price} \end{array} \right) = \begin{array}{l} \text{Materials} \\ \text{quantity} \\ \text{variance} \end{array}$$

The formulas for the direct labor variances are:

$$\left( \begin{array}{l} \text{Actual hours} \\ \times \text{Actual rate} \end{array} \right) - \left( \begin{array}{l} \text{Standard hours} \\ \times \text{Standard rate} \end{array} \right) = \begin{array}{l} \text{Total} \\ \text{labor} \\ \text{variance} \end{array}$$

$$\left( \begin{array}{l} \text{Actual hours} \\ \times \text{Actual rate} \end{array} \right) - \left( \begin{array}{l} \text{Actual hours} \\ \times \text{Standard rate} \end{array} \right) = \begin{array}{l} \text{Labor} \\ \text{price} \\ \text{variance} \end{array}$$

$$\left( \begin{array}{l} \text{Actual hours} \\ \times \text{Standard rate} \end{array} \right) - \left( \begin{array}{l} \text{Standard hours} \\ \times \text{Standard rate} \end{array} \right) = \begin{array}{l} \text{Labor} \\ \text{quantity} \\ \text{variance} \end{array}$$

**[5] State the formula for determining the total manufacturing overhead variance.** The formula for the total manufacturing overhead variance is:

$$\left( \begin{array}{l} \text{Actual} \\ \text{overhead} \end{array} \right) - \left( \begin{array}{l} \text{Overhead} \\ \text{applied at} \\ \text{standard} \\ \text{hours} \\ \text{allowed} \end{array} \right) = \begin{array}{l} \text{Total overhead} \\ \text{variance} \end{array}$$

**[6] Discuss the reporting of variances.** Variances are reported to management in variance reports. The reports facilitate management by exception by highlighting significant differences.

**[7] Prepare an income statement for management under a standard costing system.** Under a standard costing system, an income statement prepared for management will report cost of goods sold at standard cost and then disclose each variance separately.

**[8] Describe the balanced scorecard approach to performance evaluation.** The balanced scorecard incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. It employs four perspectives: financial, customer, internal processes, and learning and growth. Objectives are set within each of these perspectives that link to objectives within the other perspectives.

## Glossary

**Balanced scorecard** An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals. (p. 1163).

**Customer perspective** A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy and use its products or services. (p. 1163).

**Direct labor price standard** The rate per hour that should be incurred for direct labor. (p. 1151).

**Direct labor quantity standard** The time that should be required to make one unit of product. (p. 1152).

**Direct materials price standard** The cost per unit of direct materials that should be incurred. (p. 1151).

**Direct materials quantity standard** The quantity of direct materials that should be used per unit of finished goods. (p. 1151).

**Financial perspective** A viewpoint employed in the balanced scorecard to evaluate a company's performance using financial measures. (p. 1163).

**Ideal standards** Standards based on the optimum level of performance under perfect operating conditions. (p. 1150).

**Internal process perspective** A viewpoint employed in the balanced scorecard to evaluate the effectiveness and efficiency of a company's value chain, including product

development, production, delivery, and after-sale service. (p. 1163).

**Labor price variance** The difference between the actual hours times the actual rate and the actual hours times the standard rate for labor. (p. 1157).

**Labor quantity variance** The difference between actual hours times the standard rate and standard hours times the standard rate for labor. (p. 1157).

**Learning and growth perspective** A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees. (p. 1163).

**Materials price variance** The difference between the actual quantity times the actual price and the actual quantity times the standard price for materials. (p. 1155).

**Materials quantity variance** The difference between the actual quantity times the standard price and the standard quantity times the standard price for materials. (p. 1155).

**Normal capacity** The average activity output that a company should experience over the long run. (p. 1152).

**Normal standards** Standards based on an efficient level of performance that are attainable under expected operating conditions. (p. 1150).

**Standard costs** Predetermined unit costs which companies use as measures of performance. (p. 1148).

**Standard hours allowed** The hours that should have been worked for the units produced. (p. 1159).

**Standard predetermined overhead rate** An overhead rate determined by dividing budgeted overhead costs by an expected standard activity index. (p. 1152).

**Total labor variance** The difference between actual hours times the actual rate and standard hours times the standard rate for labor. (p. 1157).

**Total materials variance** The difference between the actual quantity times the actual price and the standard quantity times the standard price of materials. (p. 1155).

**Total overhead variance** The difference between actual overhead costs and overhead costs applied to work done. (p. 1159).

**Variations** The difference between total actual costs and total standard costs. (p. 1154).

## APPENDIX 25A

### Standard Cost Accounting System

**Study Objective [9]**  
Identify the features of a standard cost accounting system.

A **standard cost accounting system** is a double-entry system of accounting. In this system, companies use standard costs in making entries, and they formally recognize variances in the accounts. Companies may use a standard cost system with either job order or process costing.

In this appendix, we will explain and illustrate a **standard cost, job order cost accounting system**. The system is based on two important assumptions:

- (1) Variances from standards are recognized at the earliest opportunity.
- (2) The Work in Process account is maintained exclusively on the basis of standard costs.

In practice, there are many variations among standard cost systems. The system described here should prepare you for systems you see in the “real world.”

#### Journal Entries

We will use the transactions of Xonic, Inc. to illustrate the journal entries. Note as you study the entries that the major difference between the entries here and those for the job order cost accounting system in Chapter 20 is the **variance accounts**.

1. Purchase raw materials on account for \$13,020 when the standard cost is \$12,600.

|                                   |        |  |        |
|-----------------------------------|--------|--|--------|
| Raw Materials Inventory           | 12,600 |  |        |
| Materials Price Variance          | 420    |  |        |
| Accounts Payable                  |        |  | 13,020 |
| (To record purchase of materials) |        |  |        |

Xonic debits the inventory account for actual quantities at standard cost. This enables the perpetual materials records to show actual quantities. Xonic debits the price variance, which is unfavorable, to Materials Price Variance.

2. Incur direct labor costs of \$20,580 when the standard labor cost is \$21,000.

|                                |        |  |        |
|--------------------------------|--------|--|--------|
| Factory Labor                  | 21,000 |  |        |
| Labor Price Variance           |        |  | 420    |
| Factory Wages Payable          |        |  | 20,580 |
| (To record direct labor costs) |        |  |        |

Like the raw materials inventory account, Xonic debits Factory Labor for actual hours worked at the standard hourly rate of pay. In this case, the labor variance is favorable. Thus, Xonic credits Labor Price Variance.

**3. Incur actual manufacturing overhead costs of \$10,900.**

|   |        |        |
|---|--------|--------|
| Manufacturing Overhead                  | 10,900 |        |
| Accounts Payable/Cash/Acc. Depreciation |        | 10,900 |
| (To record overhead incurred)           |        |        |

The controllable overhead variance is not recorded at this time. It depends on standard hours applied to work in process. This amount is not known at the time overhead is incurred.

**4. Issue raw materials for production at a cost of \$12,600 when the standard cost is \$12,000.**

|                                       |        |        |
|---------------------------------------|--------|--------|
| Work in Process Inventory             | 12,000 |        |
| Materials Quantity Variance           | 600    |        |
| Raw Materials Inventory               |        | 12,600 |
| (To record issuance of raw materials) |        |        |

Xonic debits Work in Process Inventory for standard materials quantities used at standard prices. It debits the variance account because the variance is unfavorable. The company credits Raw Materials Inventory for actual quantities at standard prices.

**5. Assign factory labor to production at a cost of \$21,000 when standard cost is \$20,000.**

|                                   |        |        |
|-----------------------------------|--------|--------|
| Work in Process Inventory         | 20,000 |        |
| Labor Quantity Variance           | 1,000  |        |
| Factory Labor                     |        | 21,000 |
| (To assign factory labor to jobs) |        |        |

Xonic debits Work in Process Inventory for standard labor hours at standard rates. It debits the unfavorable variance to Labor Quantity Variance. The credit to Factory Labor produces a zero balance in this account.

**6. Applying manufacturing overhead to production \$10,000.**

|                              |        |        |
|------------------------------|--------|--------|
| Work in Process Inventory    | 10,000 |        |
| Manufacturing Overhead       |        | 10,000 |
| (To assign overhead to jobs) |        |        |

Xonic debits Work in Process Inventory for standard hours allowed multiplied by the standard overhead rate.

**7. Transfer completed work to finished goods \$42,000.**

|  |        |        |
|--|--------|--------|
| Finished Goods Inventory                                 | 42,000 |        |
| Work in Process Inventory                                |        | 42,000 |
| (To record transfer of completed work to finished goods) |        |        |

In this example, both inventory accounts are at standard cost.

**8. The 1,000 gallons of Weed-O are sold for \$60,000.**

|   |        |        |
|---|--------|--------|
| Accounts Receivable   | 60,000 |        |
| Cost of Goods Sold  | 42,000 |        |
| Sales   |        | 60,000 |
| Finished Goods Inventory                                      |        | 42,000 |
| (To record sale of finished goods and the cost of goods sold) |        |        |

The company debits Cost of Goods Sold at standard cost. Gross profit, in turn, is the difference between sales and the standard cost of goods sold.

9. Recognize unfavorable total overhead variance:

|  |     |     |
|--|-----|-----|
| Overhead Variance                      | 900 |     |
| Manufacturing Overhead                 |     | 900 |
| (To recognize total overhead variance) |     |     |

Prior to this entry, a debit balance of \$900 existed in Manufacturing Overhead. This entry therefore produces a zero balance in the Manufacturing Overhead account. The information needed for this entry is often not available until the end of the accounting period.

### Ledger Accounts

Illustration 25A-1 shows the cost accounts for Xonic, Inc., after posting the entries. Note that six variance accounts are included in the ledger. The remaining accounts are the same as those illustrated for a job order cost system in Chapter 20, in which only actual costs were used.

**Illustration 25A-1**  
Cost accounts with variances

#### Helpful Hint

All debit balances in variance accounts indicate unfavorable variances; all credit balances indicate favorable variances.

## Summary of Study Objective for Appendix 25A

**[9] Identify the features of a standard cost accounting system.** In a standard cost accounting system, companies

journalize and post standard costs, and they maintain separate variance accounts in the ledger.

## Glossary for Appendix 25A

**Standard cost accounting system** A double-entry system of accounting in which standard costs are used in

making entries and variances are recognized in the accounts. (p. 1168).

## APPENDIX 25B

### A Closer Look at Overhead Variances

As indicated in the chapter, the total overhead variance is generally analyzed through a price variance and a quantity variance. The name usually given to the price variance is the **overhead controllable variance**; the quantity variance is referred to as the **overhead volume variance**.

#### Overhead Controllable Variance

The **overhead controllable variance** shows whether overhead costs are effectively controlled. To compute this variance, the company compares actual overhead costs incurred with budgeted costs for the **standard hours allowed**. The budgeted costs are determined from a manufacturing overhead flexible budget. The concepts related to a flexible budget were discussed in Chapter 24.

For Xonic, Inc., the budget formula for manufacturing overhead is variable manufacturing overhead cost of \$3 per hour of labor plus fixed manufacturing overhead costs of \$4,400. Illustration 25B-1 shows the flexible budget for Xonic, Inc.

**Illustration 25B-2**  
Formula for overhead controllable variance

**Study Objective [10]**  
Compute overhead controllable and volume variance.

The overhead controllable variance for Xonic, Inc. is \$500 unfavorable.

Most controllable variances are associated with variable costs, which are controllable costs. Fixed costs are often known at the time the budget is prepared and are therefore not as likely to deviate from the budgeted amount. In Xonic's case, all of the overhead controllable variance is due to the difference between the actual variable overhead costs (\$6,500) and the budgeted variable costs (\$6,000).

Management can compare actual and budgeted overhead for each manufacturing overhead cost that contributes to the controllable variance. In addition, management can develop cost and quantity variances for each overhead cost, such as indirect materials and indirect labor.

## Overhead Volume Variance

The **overhead volume variance** is the difference between normal capacity hours and standard hours allowed times the fixed overhead rate. The overhead volume variance relates to whether fixed costs were under- or overapplied during the year. For example, the overhead volume variance answers the question of whether Xonic, Inc. effectively used its fixed costs. If Xonic produces less Weed-O than normal capacity would allow, an unfavorable variance results. Conversely, if Xonic produces more Weed-O than what is considered normal capacity, a favorable variance results.

The formula for computing the overhead volume variance is as follows.

### Illustration 25B-3

Formula for overhead volume variance

$$\text{Fixed Overhead Rate} \times \left( \begin{array}{c} \text{Normal} \\ \text{Capacity} \\ \text{Hours} \end{array} - \begin{array}{c} \text{Standard} \\ \text{Hours} \\ \text{Allowed} \end{array} \right) = \text{Overhead Volume Variance}$$

To illustrate the fixed overhead rate computation, recall that Xonic, Inc. budgeted fixed overhead cost for the year of \$52,800 (Illustration 25-6 on page 1152). At normal capacity, 26,400 standard direct labor hours are required. The fixed overhead rate is therefore \$2 (\$52,800 ÷ 26,400 hours).

Xonic produced 1,000 units of Weed-O in June. The standard hours allowed for the 1,000 gallons produced in June is 2,000 (1,000 gallons × 2 hours). For Xonic, standard direct labor hours for June at normal capacity is 2,200 (26,400 annual hours ÷ 12 months). The computation of the overhead volume variance in this case is as follows.

### Illustration 25B-4

Computation of overhead volume variance for Xonic, Inc.

$$\begin{array}{r} \text{Fixed} \\ \text{Overhead} \\ \text{Rate} \end{array} \times \left( \begin{array}{c} \text{Normal} \\ \text{Capacity} \\ \text{Hours} \end{array} - \begin{array}{c} \text{Standard} \\ \text{Hours} \\ \text{Allowed} \end{array} \right) = \begin{array}{c} \text{Overhead} \\ \text{Volume} \\ \text{Variance} \end{array}$$

$$\$2 \quad \times \quad (2,200 - 2,000) = \$400 \text{ U}$$

In Xonic's case, a \$400 unfavorable volume variance results. The volume variance is unfavorable because Xonic produced only 1,000 gallons rather than the normal capacity of 1,100 gallons in the month of June. As a result, it underapplied fixed overhead for that period.

In computing the overhead variances, it is important to remember the following.

1. Standard hours allowed are used in each of the variances.
2. Budgeted costs for the controllable variance are derived from the flexible budget.
3. The controllable variance generally pertains to variable costs.
4. The volume variance pertains solely to fixed costs.

## Summary of Study Objective for Appendix 25B

**[10] Compute overhead controllable and volume variance.** The total overhead variance is generally analyzed through a price variance and a quantity variance. The name

usually given to the price variance is the overhead controllable variance. The quantity variance is referred to as the overhead volume variance.

## Glossary for Appendix 25B

**Overhead controllable variance** The difference between actual overhead incurred and overhead budgeted for the standard hours allowed. (p. 1171).

**Overhead volume variance** The difference between normal capacity hours and standard hours allowed times the fixed overhead rate. (p. 1172).

Self-Test, Brief Exercises, Exercises, Problem Set A, and many more components are available for practice in *WileyPLUS*

**Note:** All asterisked Questions, Exercises, and Problems relate to material in the appendices to the chapter.

## Self-Test Questions

Answers are on page 1190.

- (SO 1) 1. Standards differ from budgets in that:
- budgets but not standards may be used in valuing inventories.
  - budgets but not standards may be journalized and posted.
  - budgets are a total amount and standards are a unit amount.
  - only budgets contribute to management planning and control.
- (SO 1) 2. Standard costs:
- are imposed by governmental agencies.
  - are predetermined unit costs which companies use as measures of performance.
  - can be used by manufacturing companies but not by service or not-for-profit companies.
  - All of the above.
- (SO 2) 3. The advantages of standard costs include all of the following *except*:
- management by exception may be used.
  - management planning is facilitated.
  - they may simplify the costing of inventories.
  - management must use a static budget.
- (SO 3) 4. Normal standards:
- allow for rest periods, machine breakdowns, and setup time.
  - represent levels of performance under perfect operating conditions.
  - are rarely used because managers believe they lower workforce morale.
  - are more likely than ideal standards to result in unethical practices.
- (SO 3) 5. The setting of standards is:
- a managerial accounting decision.
  - a management decision.
  - a worker decision.
  - preferably set at the ideal level of performance.
6. Each of the following formulas is correct *except*:
- Labor price variance = (Actual hours × Actual rate) – (Actual hours × Standard rate).
  - Total materials variance = (Actual quantity × Actual price) – (Standard quantity × Standard price).
  - Materials price variance = (Actual quantity × Actual price) – (Standard quantity × Standard price).
  - Total labor variance = (Actual hours × Actual rate) – (Standard hours × Standard rate).
7. In producing product AA, 6,300 pounds of direct materials were used at a cost of \$1.10 per pound. The standard was 6,000 pounds at \$1.00 per pound. The direct materials quantity variance is:
- \$330 unfavorable.
  - \$300 unfavorable.
  - \$600 unfavorable.
  - \$630 unfavorable.
8. In producing product ZZ, 14,800 direct labor hours were used at a rate of \$8.20 per hour. The standard was 15,000 hours at \$8.00 per hour. Based on these data, the direct labor:
- quantity variance is \$1,600 favorable.
  - quantity variance is \$1,600 unfavorable.
  - price variance is \$2,960 favorable.
  - price variance is \$3,000 unfavorable.
9. Which of the following is *correct* about the total overhead variance?
- Budgeted overhead and overhead applied are the same.
  - Total actual overhead is composed of variable overhead, fixed overhead, and period costs.
  - Standard hours actually worked are used in computing the variance.
  - Standard hours allowed for the work done is the measure used in computing the variance.
10. The formula for computing the total overhead variance is:
- actual overhead less overhead applied.
  - overhead budgeted less overhead applied.
  - actual overhead less overhead budgeted.
  - No correct answer given.

- (SO 6) **11.** Which of the following is *incorrect* about variance reports?
- They facilitate “management by exception.”
  - They should only be sent to the top level of management.
  - They should be prepared as soon as possible.
  - They may vary in form, content, and frequency among companies.
- (SO 6) **12.** In using variance reports to evaluate cost control, management normally looks into:
- all variances.
  - favorable variances only.
  - unfavorable variances only.
  - both favorable and unfavorable variances that exceed a predetermined quantitative measure such as a percentage or dollar amount.
- (SO 7) **13.** Generally accepted accounting principles allow a company to:
- report inventory at standard cost but cost of goods sold must be reported at actual cost.
  - report cost of goods sold at standard cost but inventory must be reported at actual cost.
  - report inventory and cost of goods sold at standard cost as long as there are no significant differences between actual and standard cost.
  - report inventory and cost of goods sold only at actual costs; standard costing is never permitted.
- 14.** Which of the following would *not* be an objective used in the customer perspective of the balanced scorecard approach? (SO 8)
- Percentage of customers who would recommend product to a friend.
  - Customer retention.
  - Brand recognition.
  - Earnings per share.
- \*15.** Which of the following is *incorrect* about a standard cost accounting system? (SO 9)
- It is applicable to job order costing.
  - It is applicable to process costing.
  - It reports only favorable variances.
  - It keeps separate accounts for each variance.
- \*16.** The formula to compute the overhead volume variance is: (SO 10)
- Fixed overhead rate  $\times$  (Standard hours – Actual hours).
  - Fixed overhead rate  $\times$  (Normal capacity hours – Actual hours).
  - Fixed overhead rate  $\times$  (Normal capacity hours – Standard hours allowed).
  - (Variable overhead rate + Fixed overhead rate)  $\times$  (Normal capacity hours – Standard hours allowed).

Go to the book's companion website,  
[www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt),  
 for additional Self-Test Questions.

## Questions

- “Standard costs are the expected total cost of completing a job.” Is this correct? Explain.
  - “A standard imposed by a governmental agency is known as a regulation.” Do you agree? Explain.
- Explain the similarities and differences between standards and budgets.
  - Contrast the accounting for standards and budgets.
- Standard costs facilitate management planning. What are the other advantages of standard costs?
- Contrast the roles of the management accountant and management in setting standard costs.
- Distinguish between an ideal standard and a normal standard.
- What factors should be considered in setting (a) the direct materials price standard and (b) the direct materials quantity standard?
- “The objective in setting the direct labor quantity standard is to determine the aggregate time required to make one unit of product.” Do you agree? What allowances should be made in setting this standard?
- How is the predetermined overhead rate determined when standard costs are used?
- What is the difference between a favorable cost variance and an unfavorable cost variance?
- In each of the following formulas, supply the words that should be inserted for each number in parentheses.
  - $(\text{Actual quantity} \times (1)) - (\text{Standard quantity} \times (2)) =$   
Total materials variance
  - $((3) \times \text{Actual price}) - (\text{Actual quantity} \times (4)) =$   
Materials price variance
  - $(\text{Actual quantity} \times (5)) - ((6) \times \text{Standard price}) =$   
Materials quantity variance
- In the direct labor variance matrix, there are three factors: (1) Actual hours  $\times$  Actual rate, (2) Actual hours  $\times$  Standard rate, and (3) Standard hours  $\times$  Standard rate. Using the numbers, indicate the formulas for each of the direct labor variances.
- Nash Company's standard predetermined overhead rate is \$8 per direct labor hour. For the month of June, 26,000 actual hours were worked, and 27,000 standard hours were allowed. Normal capacity hours were 28,000. How much overhead was applied?
- How often should variances be reported to management? What principle may be used with variance reports?
- What circumstances may cause the purchasing department to be responsible for both an unfavorable materials price variance and an unfavorable materials quantity variance?
- What are the four perspectives used in the balanced scorecard? Discuss the nature of each, and how the perspectives are linked.
- Ron Ely says that the balanced scorecard was created to replace financial measures as the primary mechanism for performance evaluation. He says that it uses only nonfinancial measures. Is this true?
- What are some examples of nonfinancial measures used by companies to evaluate performance?
- How are variances reported in income statements prepared for management?
  - May standard costs be used in preparing financial statements for stockholders? Explain.

- \*19. (a) Explain the basic features of a standard cost accounting system. (b) What type of balance will exist in the variance account when (1) the materials price variance is unfavorable and (2) the labor quantity variance is favorable?
- \*20. If the \$8 per hour overhead rate in question 12 includes \$5 variable, and actual overhead costs were \$218,000, what is the overhead controllable variance for June? The normal capacity hours were 28,000. Is the variance favorable or unfavorable?
- \*21. What is the purpose of computing the overhead volume variance? What is the basic formula for this variance?
- \*22. Rosie Perez does not understand why the overhead volume variance indicates that fixed overhead costs are under- or overapplied. Clarify this matter for Rosie.
- \*23. Rick Schroeder is attempting to outline the important points about overhead variances on a class examination. List four points that Rick should include in his outline.

## Brief Exercises

- BE25-1** Tijuana Company uses both standards and budgets. For the year, estimated production of Product X is 500,000 units. Total estimated cost for materials and labor are \$1,200,000 and \$1,600,000. Compute the estimates for (a) a standard cost and (b) a budgeted cost. *Distinguish between a standard and a budget.* (SO 1)
- BE25-2** Juneau Company accumulates the following data concerning raw materials in making one gallon of finished product: (1) Price—net purchase price \$2.20, freight-in \$0.20, and receiving and handling \$0.10. (2) Quantity—required materials 2.6 pounds, allowance for waste and spoilage 0.4 pounds. Compute the following. *Set direct materials standard.* (SO 3)
- (a) Standard direct materials price per gallon.  
 (b) Standard direct materials quantity per gallon.  
 (c) Total standard materials cost per gallon.
- BE25-3** Labor data for making one gallon of finished product in Juneau Company are as follows: (1) Price—hourly wage rate \$12.00, payroll taxes \$0.80, and fringe benefits \$1.20. (2) Quantity—actual production time 1.2 hours, rest periods and clean up 0.25 hours, and setup and downtime 0.15 hours. Compute the following. *Set direct labor standard.* (SO 3)
- (a) Standard direct labor rate per hour.  
 (b) Standard direct labor hours per gallon.  
 (c) Standard labor cost per gallon.
- BE25-4** Brand Company's standard materials cost per unit of output is \$10 (2 pounds  $\times$  \$5). During July, the company purchases and uses 3,200 pounds of materials costing \$16,160 in making 1,500 units of finished product. Compute the total, price, and quantity materials variances. *Compute direct materials variances.* (SO 4)
- BE25-5** Mersaw Company's standard labor cost per unit of output is \$20 (2 hours  $\times$  \$10 per hour). During August, the company incurs 2,100 hours of direct labor at an hourly cost of \$10.50 per hour in making 1,000 units of finished product. Compute the total, price, and quantity labor variances. *Compute direct labor variances.* (SO 4)
- BE25-6** In October, McEnroe Company reports 21,000 actual direct labor hours, and it incurs \$115,000 of manufacturing overhead costs. Standard hours allowed for the work done is 20,000 hours. The predetermined overhead rate is \$6 per direct labor hour. Compute the total overhead variance. *Compute total overhead variance.* (SO 5)
- BE25-7** The four perspectives in the balanced scorecard are (1) financial, (2) customer, (3) internal process, and (4) learning and growth. Match each of the following objectives with the perspective it is most likely associated with: (a) Plant capacity utilization. (b) Employee work days missed due to injury. (c) Return on assets. (d) Brand recognition. *Match balanced scorecard perspectives.* (SO 8)
- \***BE25-8** Journalize the following transactions for Bekin Manufacturing. *Journalize materials variances.* (SO 9)
- (a) Purchased 6,000 units of raw materials on account for \$11,100. The standard cost was \$12,000.  
 (b) Issued 5,500 units of raw materials for production. The standard units were 5,800.
- \***BE25-9** Journalize the following transactions for Royer Manufacturing. *Journalize labor variances.* (SO 9)
- (a) Incurred direct labor costs of \$24,000 for 3,000 hours. The standard labor cost was \$25,200.  
 (b) Assigned 3,000 direct labor hours costing \$24,000 to production. Standard hours were 3,100.
- \***BE25-10** Some overhead data for McEnroe Company are given in BE25-6. In addition, the flexible manufacturing overhead budget shows that budgeted costs are \$4 variable per direct labor hour and \$50,000 fixed. Compute the overhead controllable variance. *Compute the overhead controllable variance.* (SO 10)
- \***BE25-11** Using the data in BE25-6 and BE25-10, compute the overhead volume variance. *Compute overhead volume variance.* (SO 10)

**Do it! Review**

Compute standard cost.  
(SO 3)

**Do it! 25-1** Saito Company accumulated the following standard cost data concerning product I-Tal.

Materials per unit: 2 pounds at \$5 per pound  
Labor per unit: 0.2 hours at \$14 per hour  
Manufacturing overhead: Predetermined rate is 125% of direct labor cost

Compute the standard cost of one unit of product I-Tal.

Compute materials variance.  
(SO 4)

**Do it! 25-2** The standard cost of product 999 includes 2 units of direct materials at \$6.00 per unit. During August, the company bought 29,000 units of materials at \$6.20 and used those materials to produce 15,000 units. Compute the total, price, and quantity variances for materials.

Compute labor and manufacturing overhead variances.  
(SO 4, 5)

**Do it! 25-3** The standard cost of product 2525 includes 2 hours of direct labor at \$14.00 per hour. The predetermined overhead rate is \$21.00 per direct labor hour. During July, the company incurred 4,100 hours of direct labor at an average rate of \$14.40 per hour and \$81,300 of manufacturing overhead costs. It produced 2,000 units.

(a) Compute the total, price, and quantity variances for labor. (b) Compute the total overhead variance.

Match balanced scorecard perspectives and their objectives.  
(SO 8)

**Do it! 25-4** Indicate which of the four perspectives in the balanced scorecard is most likely associated with the objectives that follow.

1. Ethics violations.
2. Credit rating.
3. Customer retention.
4. Stockouts.
5. Reportable accidents.
6. Brand recognition.

**Exercises**

Compute budget and standard.  
(SO 1, 2, 3)

**E25-1** Horowitz Company is planning to produce 2,000 units of product in 2012. Each unit requires 3 pounds of materials at \$6 per pound and a half-hour of labor at \$14 per hour. The overhead rate is 70% of direct labor.

**Instructions**

- (a) Compute the budgeted amounts for 2012 for direct materials to be used, direct labor, and applied overhead.
- (b) Compute the standard cost of one unit of product.
- (c) What are the potential advantages to a corporation of using standard costs?

Compute standard materials costs.  
(SO 3)

**E25-2** Romy Schneider manufactures and sells homemade wine, and he wants to develop a standard cost per gallon. The following are required for production of a 50-gallon batch.

3,000 ounces of grape concentrate at \$0.04 per ounce  
54 pounds of granulated sugar at \$0.35 per pound  
60 lemons at \$0.60 each  
50 yeast tablets at \$0.25 each  
50 nutrient tablets at \$0.20 each  
2,500 ounces of water at \$0.004 per ounce

Romy estimates that 4% of the grape concentrate is wasted, 10% of the sugar is lost, and 20% of the lemons cannot be used.

**Instructions**

Compute the standard cost of the ingredients for one gallon of wine. (Carry computations to two decimal places.)

**E25-3** Sergey Company has gathered the information shown below about its product.

*Direct materials:* Each unit of product contains 4.5 pounds of materials. The average waste and spoilage per unit produced under normal conditions is 0.5 pounds. Materials cost \$4 per pound, but Sergey always takes the 2% cash discount all of its suppliers offer. Freight costs average \$0.25 per pound.

*Direct labor:* Each unit requires 2 hours of labor. Setup, cleanup, and downtime average 0.2 hours per unit. The average hourly pay rate of Sergey's employees is \$12. Payroll taxes and fringe benefits are an additional \$3 per hour.

*Manufacturing overhead:* Overhead is applied at a rate of \$6 per direct labor hour.

Compute standard cost per unit.

(SO 3)

### Instructions

Compute Sergey's total standard cost per unit.

**E25-4** Rush Repair Services, Inc. is trying to establish the standard labor cost of a typical oil change. The following data have been collected from time and motion studies conducted over the past month.

|                                     |                          |
|-------------------------------------|--------------------------|
| Actual time spent on the oil change | 1.0 hour                 |
| Hourly wage rate                    | \$10                     |
| Payroll taxes                       | 10% of wage rate         |
| Setup and downtime                  | 10% of actual labor time |
| Cleanup and rest periods            | 30% of actual labor time |
| Fringe benefits                     | 25% of wage rate         |

Compute labor quantity variance.

(SO 3, 4)

### Instructions

- Determine the standard direct labor hours per oil change.
- Determine the standard direct labor hourly rate.
- Determine the standard direct labor cost per oil change.
- If an oil change took 1.5 hours at the standard hourly rate, what was the direct labor quantity variance?

**E25-5** The standard cost of Product B manufactured by Sancho Company includes three units of direct materials at \$5.00 per unit. During June, 28,000 units of direct materials are purchased at a cost of \$4.70 per unit, and 28,000 units of direct materials are used to produce 9,000 units of Product B.

Compute materials price and quantity variances.

(SO 4)

### Instructions

- Compute the total materials variance and the price and quantity variances.
- Repeat (a), assuming the purchase price is \$5.20 and the quantity purchased and used is 26,200 units.

**E25-6** Cherie Company's standard labor cost of producing one unit of Product DD is 4 hours at the rate of \$12.00 per hour. During August, 40,800 hours of labor are incurred at a cost of \$12.10 per hour to produce 10,000 units of Product DD.

Compute labor price and quantity variances.

(SO 4)

### Instructions

- Compute the total labor variance.
- Compute the labor price and quantity variances.
- Repeat (b), assuming the standard is 4.2 hours of direct labor at \$12.25 per hour.

**E25-7** Injin Inc., which produces a single product, has prepared the following standard cost sheet for one unit of the product.

|   |      |
|---|------|
| Direct materials (8 pounds at \$2.50 per pound) | \$20 |
| Direct labor (3 hours at \$12.00 per hour)      | \$36 |

During the month of April, the company manufactures 230 units and incurs the following actual costs.

|  |         |
|--|---------|
| Direct materials purchased and used (1,900 pounds) | \$4,940 |
| Direct labor (700 hours)                           | \$8,120 |

Compute materials and labor variances.

(SO 4)

### Instructions

Compute the total, price, and quantity variances for materials and labor.

1178 **25** Standard Costs and Balanced Scorecard

Compute the materials and labor variances and list reasons for unfavorable variances.

(SO 4)

**E25-8** The direct materials and direct labor data shown below pertain to the operations of Viet Manufacturing Company for the month of August.

| Costs                    |               | Quantities                                      |             |
|--------------------------|---------------|---|-------------|
| Actual labor rate        | \$13 per hour | Actual hours incurred and used                  | 4,200 hours |
| Actual materials price   | \$128 per ton | Actual quantity of materials purchased and used | 1,225 tons  |
| Standard labor rate      | \$12 per hour | Standard hours used                             | 4,300 hours |
| Standard materials price | \$130 per ton | Standard quantity of materials used             | 1,200 tons  |

**Instructions**

- (a) Compute the total, price, and quantity variances for materials and labor.
- (b)  Provide two possible explanations for each of the unfavorable variances calculated above, and suggest where responsibility for the unfavorable result might be placed.

Prepare a variance report for direct labor.

(SO 4, 6)

**E25-9** During March 2012, Tyson Tool & Die Company worked on four jobs. A review of direct labor costs reveals the following summary data.

| Job Number     | Actual |         | Standard |         | Total Variance   |
|----------------|--------|---------|----------|---------|------------------|
|                | Hours  | Costs   | Hours    | Costs   |                  |
| A257           | 220    | \$4,400 | 225      | \$4,500 | \$ 100 F         |
| A258           | 450    | 9,900   | 430      | 8,600   | 1,300 U          |
| A259           | 300    | 6,150   | 300      | 6,000   | 150 U            |
| A260           | 115    | 2,070   | 110      | 2,200   | 130 F            |
| Total variance |        |         |          |         | <u>\$1,220 U</u> |

Analysis reveals that Job A257 was a repeat job. Job A258 was a rush order that required overtime work at premium rates of pay. Job A259 required a more experienced replacement worker on one shift. Work on Job A260 was done for one day by a new trainee when a regular worker was absent.

**Instructions**

Prepare a report for the plant supervisor on direct labor cost variances for March. The report should have columns for (1) Job No., (2) Actual Hours, (3) Standard Hours, (4) Quantity Variance, (5) Actual Rate, (6) Standard Rate, (7) Price Variance, and (8) Explanation.

Compute overhead variance.

(SO 5)

**E25-10** Manufacturing overhead data for the production of Product H by Garrity Company are as follows.

|   |           |
|---|-----------|
| Overhead incurred for 52,000 actual direct labor hours worked                           | \$213,000 |
| Overhead rate (variable \$3; fixed \$1) at normal capacity of 54,000 direct labor hours | \$4       |
| Standard hours allowed for work done  | 51,000    |

**Instructions**

Compute the total overhead variance.

Compute overhead variance.

(SO 5)

**E25-11** Bob Burgie Company produces one product, a putter called GO-Putter. Burgie uses a standard cost system and determines that it should take one hour of direct labor to produce one GO-Putter. The normal production capacity for this putter is 100,000 units per year. The total budgeted overhead at normal capacity is \$800,000 comprised of \$200,000 of variable costs and \$600,000 of fixed costs. Burgie applies overhead on the basis of direct labor hours.

During the current year, Burgie produced 90,000 putters, worked 94,000 direct labor hours, and incurred variable overhead costs of \$186,000 and fixed overhead costs of \$600,000.

**Instructions**

- (a) Compute the predetermined variable overhead rate and the predetermined fixed overhead rate.
- (b) Compute the applied overhead for Burgie for the year.
- (c) Compute the total overhead variance.

**E25-12** Rathman Company purchased (at a cost of \$10,900) and used 2,300 pounds of materials during May. Rathman’s standard cost of materials per unit produced is based on 2 pounds per unit at a cost of \$5 per pound. Production in May was 1,070 units.

Compute variances for materials.  
(SO 4)

**Instructions**

- (a) Compute the total, price, and quantity variances for materials.
- (b) Assume Rathman also had an unfavorable labor quantity variance. What is a possible scenario that would provide one cause for the variances computed in (a) and the unfavorable labor quantity variance?

**E25-13** Tovi Landscaping plants grass seed as the basic landscaping for business campuses. During a recent month, the company worked on three projects (Bose, Larkin, and Torres). The company is interested in controlling the materials costs, namely the grass seed, for these plantings projects.

Prepare a variance report.  
(SO 4, 6)

In order to provide management with useful cost control information, the company uses standard costs and prepares monthly variance reports. Analysis reveals that the purchasing agent mistakenly purchased poor-quality seed for the Bose project. The Larkin project, however, received higher-than-standard-quality seed that was on sale. The Torres project received standard-quality seed; however, the price had increased and a new employee was used to spread the seed.

Shown below are quantity and cost data for each project.

| Project        | Actual   |         | Standard |         | Total Variance |
|----------------|----------|---------|----------|---------|----------------|
|                | Quantity | Costs   | Quantity | Costs   |                |
| Bose           | 500 lbs. | \$1,175 | 460 lbs. | \$1,150 | \$ 25 U        |
| Larkin         | 400      | 960     | 410      | 1,025   | 65 F           |
| Torres         | 500      | 1,300   | 480      | 1,200   | 100 U          |
| Total variance |          |         |          |         | <u>\$ 60 U</u> |

**Instructions**

- (a) Prepare a variance report for the purchasing department with the following columns: (1) Project, (2) Actual pounds purchased, (3) Actual price, (4) Standard price, (5) Price variance, and (6) Explanation.
- (b) Prepare a variance report for the production department with the following columns: (1) Project, (2) Actual pounds, (3) Standard pounds, (4) Standard price, (5) Quantity variance, and (6) Explanation.

**E25-14** Figueroa Corporation prepared the following variance report.

Complete variance report.  
(SO 6)

**FIGUEROA CORPORATION**  
Variance Report—Purchasing Department  
For Week Ended January 9, 2013

| Type of Materials | Quantity Purchased | Actual Price | Standard Price | Price Variance | Explanation            |
|-------------------|--------------------|--------------|----------------|----------------|------------------------|
| Rogue11           | ? lbs.             | \$5.20       | \$5.00         | \$5,200 ?      | Price increase         |
| Storm17           | 7,000 oz.          | ?            | 3.25           | 1,050 U        | Rush order             |
| Beast29           | 22,000 units       | 0.45         | ?              | 440 F          | Bought larger quantity |

**Instructions**

Fill in the appropriate amounts or letters for the question marks in the report.

**E25-15** Phap Company uses a standard cost accounting system. During January, the company reported the following manufacturing variances.

Prepare income statement for management.  
(SO 7)

|                             |           |                         |         |
|-----------------------------|-----------|-------------------------|---------|
| Materials price variance    | \$1,250 U | Labor quantity variance | \$725 U |
| Materials quantity variance | 700 F     | Overhead variance       | 800 U   |
| Labor price variance        | 525 U     |                         |         |

In addition, 8,000 units of product were sold at \$8.00 per unit. Each unit sold had a standard cost of \$6.00. Selling and administrative expenses were \$6,000 for the month.

**Instructions**

Prepare an income statement for management for the month ended January 31, 2012.

## 1180 25 Standard Costs and Balanced Scorecard

Identify performance evaluation terminology.  
(SO 3, 8)

**E25-16** The following is a list of terms related to performance evaluation.

- |                                     |                                  |
|-------------------------------------|----------------------------------|
| (1) Balanced scorecard              | (5) Customer perspective         |
| (2) Variance                        | (6) Internal process perspective |
| (3) Learning and growth perspective | (7) Ideal standards              |
| (4) Nonfinancial measures           | (8) Normal standards             |

### Instructions

Match each of the following descriptions with one of the terms above.

- (a) The difference between total actual costs and total standard costs.
- (b) An efficient level of performance that is attainable under expected operating conditions.
- (c) An approach that incorporates financial and nonfinancial measures in an integrated system that links performance measurement and a company's strategic goals.
- (d) A viewpoint employed in the balanced scorecard to evaluate how well a company develops and retains its employees.
- (e) An evaluation tool that is not based on dollars.
- (f) A viewpoint employed in the balanced scorecard to evaluate the company from the perspective of those people who buy and use its products or services.
- (g) An optimum level of performance under perfect operating conditions.
- (h) A viewpoint employed in the balanced scorecard to evaluate the efficiency and effectiveness of the company's value chain.

Journalize entries in a standard cost accounting system.  
(SO 9)

**\*E25-17** Leab Company installed a standard cost system on January 1. Selected transactions for the month of January are as follows.

1. Purchased 18,000 units of raw materials on account at a cost of \$4.50 per unit. Standard cost was \$4.30 per unit.
2. Issued 18,000 units of raw materials for jobs that required 17,600 standard units of raw materials.
3. Incurred 15,200 actual hours of direct labor at an actual rate of \$4.80 per hour. The standard rate is \$5.50 per hour. (Credit Wages Payable.)
4. Performed 15,200 hours of direct labor on jobs when standard hours were 15,400.
5. Applied overhead to jobs at the rate of 100% of direct labor cost for standard hours allowed.

### Instructions

Journalize the January transactions.

Answer questions concerning missing entries and balances.  
(SO 4, 5, 9)

**\*E25-18** Tsar Company uses a standard cost accounting system. Some of the ledger accounts have been destroyed in a fire. The controller asks your help in reconstructing some missing entries and balances.

### Instructions

Answer the following questions.

- (a) Materials Price Variance shows a \$2,000 favorable balance. Accounts Payable shows \$128,000 of raw materials purchases. What was the amount debited to Raw Materials Inventory for raw materials purchased?
- (b) Materials Quantity Variance shows a \$3,000 unfavorable balance. Raw Materials Inventory shows a zero balance. What was the amount debited to Work in Process Inventory for direct materials used?
- (c) Labor Price Variance shows a \$1,500 unfavorable balance. Factory Labor shows a debit of \$140,000 for wages incurred. What was the amount credited to Wages Payable?
- (d) Factory Labor shows a credit of \$140,000 for direct labor used. Labor Quantity Variance shows a \$900 unfavorable balance. What was the amount debited to Work in Process for direct labor used?
- (e) Overhead applied to Work in Process totaled \$165,000. If the total overhead variance was \$1,200 unfavorable, what was the amount of overhead costs debited to Manufacturing Overhead?

Journalize entries for materials and labor variances.  
(SO 9)

**\*E25-19** Data for Injin Inc. are given in E25-7.

### Instructions

Journalize the entries to record the materials and labor variances.

Compute manufacturing overhead variances and interpret findings.  
(SO 10)

**\*E25-20** The information shown on page 1181 was taken from the annual manufacturing overhead cost budget of Jamaica Company.

|  |          |
|--|----------|
| Variable manufacturing overhead costs  | \$33,000 |
| Fixed manufacturing overhead costs     | \$19,800 |
| Normal production level in labor hours | 16,500   |
| Normal production level in units       | 4,125    |
| Standard labor hours per unit          | 4        |

During the year, 4,000 units were produced, 16,100 hours were worked, and the actual manufacturing overhead was \$54,000. Actual fixed manufacturing overhead costs equaled budgeted fixed manufacturing overhead costs. Overhead is applied on the basis of direct labor hours.

### Instructions

- Compute the total, fixed, and variable predetermined manufacturing overhead rates.
- Compute the total, controllable, and volume overhead variances.
-  Briefly interpret the overhead controllable and volume variances computed in (b).

**\*E25-21** The loan department of City Bank uses standard costs to determine the overhead cost of processing loan applications. During the current month a fire occurred, and the accounting records for the department were mostly destroyed. The following data were salvaged from the ashes.

*Compute overhead variances.*

(SO 10)

|  |            |
|--|------------|
| Standard variable overhead rate per hour                 | \$9        |
| Standard hours per application                           | 2          |
| Standard hours allowed                                   | 2,000      |
| Standard fixed overhead rate per hour                    | \$6        |
| Actual fixed overhead cost                               | \$13,200   |
| Variable overhead budget based on standard hours allowed | \$18,000   |
| Fixed overhead budget                                    | \$13,200   |
| Overhead controllable variance                           | \$ 1,500 U |

### Instructions

- Determine the following.
  - Total actual overhead cost.
  - Actual variable overhead cost.
  - Variable overhead cost applied.
  - Fixed overhead cost applied.
  - Overhead volume variance.
- Determine how many loans were processed.

**\*E25-22** Liam Company's annual overhead rate was based on estimates of \$200,000 for overhead costs and 20,000 direct labor hours. Liam's standards allow 2 hours of direct labor per unit produced. Production in May was 900 units, and actual overhead incurred in May was \$18,800. The overhead budgeted for 1,800 standard direct labor hours is \$17,600 (\$5,000 fixed and \$12,600 variable).

*Compute variances.*

(SO 10)

### Instructions

- Compute the total, controllable, and volume variances for overhead.
- What are possible causes of the variances computed in part (a)?

## Exercises: Set B

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

**P25-1A** Mifflin Corporation manufactures a single product. The standard cost per unit of product is shown below.

*Compute variances.*

(SO 4, 5)

|  |                |
|--|----------------|
| Direct materials—1 pound plastic at \$7.00 per pound | \$ 7.00        |
| Direct labor—1.5 hours at \$12.00 per hour           | 18.00          |
| Variable manufacturing overhead                      | 11.25          |
| Fixed manufacturing overhead                         | 3.75           |
| Total standard cost per unit                         | <u>\$40.00</u> |

The predetermined manufacturing overhead rate is \$10 per direct labor hour ( $\$15.00 \div 1.5$ ). It was computed from a master manufacturing overhead budget based on normal production of 7,500 direct labor hours (5,000 units) for the month. The master budget showed total variable costs of \$56,250 (\$7.50 per hour) and total fixed overhead costs of \$18,750 (\$2.50 per hour). Actual costs for October in producing 4,900 units were as follows.

|                                 |                  |
|---------------------------------|------------------|
| Direct materials (5,100 pounds) | \$ 37,230        |
| Direct labor (7,000 hours)      | 87,500           |
| Variable overhead               | 56,170           |
| Fixed overhead                  | <u>19,680</u>    |
| Total manufacturing costs       | <u>\$200,580</u> |

The purchasing department buys the quantities of raw materials that are expected to be used in production each month. Raw materials inventories, therefore, can be ignored.

**Instructions**

- (a) Compute all of the materials and labor variances.
- (b) Compute the total overhead variance.

Compute variances, and prepare income statement. (SO 4, 5, 7)

**P25-2A** Simon Manufacturing Corporation accumulates the following data relative to jobs started and finished during the month of June 2012.

| <u>Costs and Production Data</u>                     | <u>Actual</u> | <u>Standard</u> |
|--|---------------|-----------------|
| Raw materials unit cost                              | \$2.25        | \$2.00          |
| Raw materials units used                             | 10,600        | 10,000          |
| Direct labor payroll                                 | \$122,400     | \$120,000       |
| Direct labor hours worked                            | 14,400        | 15,000          |
| Manufacturing overhead incurred                      | \$184,500     |                 |
| Manufacturing overhead applied                       |               | \$189,000       |
| Machine hours expected to be used at normal capacity |               | 42,500          |
| Budgeted fixed overhead for June                     |               | \$51,000        |
| Variable overhead rate per hour                      |               | \$3.00          |
| Fixed overhead rate per hour                         |               | \$1.20          |

Overhead is applied on the basis of standard machine hours. Three hours of machine time are required for each direct labor hour. The jobs were sold for \$400,000. Selling and administrative expenses were \$40,000. Assume that the amount of raw materials purchased equaled the amount used.

**Instructions**

- (a) Compute all of the variances for (1) direct materials and (2) direct labor.
- (b) Compute the total overhead variance.
- (c) Prepare an income statement for management. Ignore income taxes.

Compute and identify significant variances. (SO 4, 5, 6)

**P25-3A** Panache Clothiers is a small company that manufactures tall-men’s suits. The company has used a standard cost accounting system. In May 2012, 11,200 suits were produced. The following standard and actual cost data applied to the month of May when normal capacity was 14,000 direct labor hours. All materials purchased were used.

| <u>Cost Element</u> | <u>Standard (per unit)</u>                                      | <u>Actual</u>   |
|---------------------|---|---|
| Direct materials    | 8 yards at \$4.30 per yard                                      | \$371,050 for 90,500 yards<br>(\$4.10 per yard)       |
| Direct labor        | 1.2 hours at \$13.50 per hour                                   | \$201,630 for 14,300 hours<br>(\$14.10 per hour)      |
| Overhead            | 1.2 hours at \$6.00 per hour<br>(fixed \$3.50; variable \$2.50) | \$49,000 fixed overhead<br>\$37,000 variable overhead |

Overhead is applied on the basis of direct labor hours. At normal capacity, budgeted fixed overhead costs were \$49,000, and budgeted variable overhead was \$35,000.

**Instructions**

- (a) Compute the total, price, and quantity variances for (1) materials and (2) labor.
- (b) Compute the total overhead variance.

- (c)  Which of the materials and labor variances should be investigated if management considers a variance of more than 4% from standard to be significant?

**P25-4A** Fuentes Manufacturing Company uses a standard cost accounting system. In 2012, the company produced 28,000 units. Each unit took several pounds of direct materials and 1½ standard hours of direct labor at a standard hourly rate of \$12.00. Normal capacity was 50,000 direct labor hours. During the year, 131,000 pounds of raw materials were purchased at \$0.92 per pound. All materials purchased were used during the year.

Answer questions about variances.

(SO 4, 5)

**Instructions**

- (a) If the materials price variance was \$2,620 favorable, what was the standard materials price per pound?
- (b) If the materials quantity variance was \$4,700 unfavorable, what was the standard materials quantity per unit?
- (c) What were the standard hours allowed for the units produced?
- (d) If the labor quantity variance was \$7,200 unfavorable, what were the actual direct labor hours worked?
- (e) If the labor price variance was \$10,650 favorable, what was the actual rate per hour?
- (f) If total budgeted manufacturing overhead was \$350,000 at normal capacity, what was the predetermined overhead rate?
- (g) What was the standard cost per unit of product?
- (h) How much overhead was applied to production during the year?
- (i) Using one or more answers above, what were the total costs assigned to work in process?

**P25-5A** Agri Labs, Inc. provides mad cow disease testing for both state and federal governmental agricultural agencies. Because the company's customers are governmental agencies, prices are strictly regulated. Therefore, Agri Labs must constantly monitor and control its testing costs. Shown below are the standard costs for a typical test.

Compute variances, prepare an income statement, and explain unfavorable variances.

(SO 4, 5, 7)

|   |             |
|---|-------------|
| Direct materials (2 test tubes @ \$1.50 per tube) | \$ 3        |
| Direct labor (1 hour @ \$25 per hour)             | 25          |
| Variable overhead (1 hour @ \$5 per hour)         | 5           |
| Fixed overhead (1 hour @ \$10 per hour)           | 10          |
| Total standard cost per test                      | <u>\$43</u> |

The lab does not maintain an inventory of test tubes. Therefore, the tubes purchased each month are used that month. Actual activity for the month of November 2012, when 1,500 tests were conducted, resulted in the following:

|                                     |          |
|-------------------------------------|----------|
| Direct materials (3,050 test tubes) | \$ 4,270 |
| Direct labor (1,600 hours)          | 36,800   |
| Variable overhead                   | 7,400    |
| Fixed overhead                      | 14,000   |

Monthly budgeted fixed overhead is \$14,000. Revenues for the month were \$75,000, and selling and administrative expenses were \$4,000.

**Instructions**

- (a) Compute the price and quantity variances for direct materials and direct labor.
- (b) Compute the total overhead variance.
- (c) Prepare an income statement for management.
- (d) Provide possible explanations for each unfavorable variance.

**\*P25-6A** Papillion Corporation uses standard costs with its job order cost accounting system. In January, an order (Job No. 12) for 1,900 units of Product B was received. The standard cost of one unit of Product B is as follows.

Journalize and post standard cost entries, and prepare income statement.

(SO 4, 5, 7, 9)

|                        |   |                |
|------------------------|---|----------------|
| Direct materials       | 3 pounds at \$1.00 per pound  | \$ 3.00        |
| Direct labor           | 1 hour at \$8.00 per hour   | 8.00           |
| Overhead               | 2 hours (variable \$4.00 per machine hour; fixed \$2.25 per machine hour) | 12.50          |
| Standard cost per unit |   | <u>\$23.50</u> |

Normal capacity for the month was 4,200 machine hours. During January, the following transactions applicable to Job No. 12 occurred.

1. Purchased 6,250 pounds of raw materials on account at \$1.06 per pound.
2. Requisitioned 6,250 pounds of raw materials for Job No. 12.
3. Incurred 2,100 hours of direct labor at a rate of \$7.75 per hour.
4. Worked 2,100 hours of direct labor on Job No. 12.
5. Incurred manufacturing overhead on account \$25,800.
6. Applied overhead to Job No. 12 on basis of standard machine hours allowed.
7. Completed Job No. 12.
8. Billed customer for Job No. 12 at a selling price of \$70,000.

#### Instructions

- (a) Journalize the transactions.
- (b) Post to the job order cost accounts.
- (c) Prepare the entry to recognize the total overhead variance.
- (d) Prepare the January 2012 income statement for management. Assume selling and administrative expenses were \$2,000.

Compute overhead controllable and volume variances.

(SO 10)

**\*P25-7A** Using the information in P25-1A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(SO 10)

**\*P25-8A** Using the information in P25-2A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(SO 10)

**\*P25-9A** Using the information in P25-3A, compute the overhead controllable variance and the overhead volume variance.

Compute overhead controllable and volume variances.

(SO 10)

**\*P25-10A** Using the information in P25-5A, compute the overhead controllable variance and the overhead volume variance.

## Problems: Set B

Compute variances.

(SO 4, 5)

**P25-1B** Lopez Corporation manufactures a single product. The standard cost per unit of product is as follows.

|   |             |
|---|-------------|
| Direct materials—2 pounds of plastic at \$5 per pound | \$10        |
| Direct labor—2 hours at \$12 per hour                 | 24          |
| Variable manufacturing overhead                       | 8           |
| Fixed manufacturing overhead                          | <u>6</u>    |
| Total standard cost per unit                          | <u>\$48</u> |

The master manufacturing overhead budget for the month based on normal productive capacity of 20,000 direct labor hours (10,000 units) shows total variable costs of \$80,000 (\$4 per labor hour) and total fixed costs of \$60,000 (\$3 per labor hour). Normal productive capacity is 20,000 direct labor hours. Overhead is applied on the basis of direct labor hours. Actual costs for November in producing 9,700 units were as follows.

|                                  |                  |
|----------------------------------|------------------|
| Direct materials (20,000 pounds) | \$ 98,000        |
| Direct labor (19,600 hours)      | 239,120          |
| Variable overhead                | 79,100           |
| Fixed overhead                   | <u>59,000</u>    |
| Total manufacturing costs        | <u>\$475,220</u> |

The purchasing department normally buys the quantities of raw materials that are expected to be used in production each month. Raw materials inventories, therefore, can be ignored.

#### Instructions

- (a) Compute all of the materials and labor variances.
- (b) Compute the total overhead variance.

**P25-2B** Lopes Manufacturing Company uses a standard cost accounting system to account for the manufacture of exhaust fans. In July 2012, it accumulates the following data relative to 1,800 units started and finished.

| <u>Cost and Production Data</u> | <u>Actual</u> | <u>Standard</u> |
|---------------------------------|---------------|-----------------|
| Raw materials                   |               |                 |
| Units purchased                 | 21,000        |                 |
| Units used                      | 21,000        | 22,000          |
| Unit cost                       | \$3.40        | \$3.00          |
| Direct labor                    |               |                 |
| Hours worked                    | 3,450         | 3,600           |
| Hourly rate                     | \$11.80       | \$12.50         |
| Manufacturing overhead          |               |                 |
| Incurred                        | \$101,500     |                 |
| Applied                         |               | \$108,000       |

Compute variances, and prepare income statement.  
(SO 4, 5, 7)

Manufacturing overhead was applied on the basis of direct labor hours. Normal capacity for the month was 3,400 direct labor hours. At normal capacity, budgeted overhead costs were \$20 per labor hour variable and \$10 per labor hour fixed. Total budgeted fixed overhead costs were \$34,000.

Jobs finished during the month were sold for \$280,000. Selling and administrative expenses were \$25,000.

#### Instructions

- Compute all of the variances for (1) direct materials and (2) direct labor.
- Compute the total overhead variance.
- Prepare an income statement for management. Ignore income taxes.

**P25-3B** Classy Clothiers manufactures women's business suits. The company uses a standard cost accounting system. In March 2012, 15,700 suits were made. The following standard and actual cost data applied to the month of March when normal capacity was 20,000 direct labor hours. All materials purchased were used in production.

Compute and identify significant variances.  
(SO 4, 5, 6)

| <u>Cost Element</u> | <u>Standard (per unit)</u>                                      | <u>Actual</u>  |
|---------------------|---|--|
| Direct materials    | 5 yards at \$6.80 per yard                                      | \$547,200 for 76,000 yards<br>(\$7.20 per yard)        |
| Direct labor        | 1.0 hours at \$11.50 per hour                                   | \$166,880 for 14,900 hours<br>(\$11.20 per hour)       |
| Overhead            | 1.0 hours at \$9.30 per hour<br>(fixed \$6.30; variable \$3.00) | \$120,000 fixed overhead<br>\$49,000 variable overhead |

Overhead is applied on the basis of direct labor hours. At normal capacity, budgeted fixed overhead costs were \$126,000, and budgeted variable overhead costs were \$60,000.

#### Instructions

- Compute the total, price, and quantity variances for (1) materials and (2) labor.
- Compute the total overhead variance.
-  Which of the materials and labor variances should be investigated if management considers a variance of more than 5% from standard to be significant?

**P25-4B** Quintana Manufacturing Company uses a standard cost accounting system. In 2012, 50,000 units were produced. Each unit took several pounds of direct materials and 2 standard hours of direct labor at a standard hourly rate of \$12.00. Normal capacity was 96,000 direct labor hours. During the year, 200,000 pounds of raw materials were purchased at \$1.00 per pound. All materials purchased were used during the year.

Answer questions about variances.  
(SO 4, 5)

#### Instructions

- If the materials price variance was \$8,000 unfavorable, what was the standard materials price per pound?
- If the materials quantity variance was \$24,000 favorable, what was the standard materials quantity per unit?
- What were the standard hours allowed for the units produced?
- If the labor quantity variance was \$10,800 unfavorable, what were the actual direct labor hours worked?

- (e) If the labor price variance was \$25,225 favorable, what was the actual rate per hour?
- (f) If total budgeted manufacturing overhead was \$792,000 at normal capacity, what was the predetermined overhead rate per direct labor hour?
- (g) What was the standard cost per unit of product?
- (h) How much overhead was applied to production during the year?
- (i) Using selected answers above, what were the total costs assigned to work in process?

Compute variances, prepare an income statement, and explain unfavorable variances.

(SO 4, 5, 7)

**P25-5B** Private Labs performs steroid testing services to high schools, colleges, and universities. Because the company deals solely with educational institutions, the price of each test is strictly regulated. Therefore, the costs incurred must be carefully monitored and controlled. Shown below are the standard costs for a typical test.

|  |                |
|--|----------------|
| Direct materials (1 petri dish @ \$2 per dish) | \$ 2.00        |
| Direct labor (0.5 hours @ \$20 per hour)       | 10.00          |
| Variable overhead (0.5 hours @ \$8 per hour)   | 4.00           |
| Fixed overhead (0.5 hours @ \$4 per hour)      | <u>2.00</u>    |
| Total standard cost per test                   | <u>\$18.00</u> |

The lab does not maintain an inventory of petri dishes. Therefore, the dishes purchased each month are used that month. Actual activity for the month of May 2012, when 2,500 tests were conducted, resulted in the following.

|                                 |          |
|---------------------------------|----------|
| Direct materials (2,530 dishes) | \$ 5,313 |
| Direct labor (1,240 hours)      | 26,040   |
| Variable overhead               | 10,100   |
| Fixed overhead                  | 5,700    |

Monthly budgeted fixed overhead is \$6,000. Revenues for the month were \$58,000, and selling and administrative expenses were \$2,000.

#### Instructions

- (a) Compute the price and quantity variances for direct materials and direct labor.
- (b) Compute the total overhead variance.
- (c) Prepare an income statement for management.
- (d) Provide possible explanations for each unfavorable variance.

Journalize and post standard cost entries, and prepare income statement.

(SO 4, 5, 7, 9)

**\*P25-6B** Uhren Manufacturing Company uses standard costs with its job order cost accounting system. In January, an order (Job No. 84) was received for 5,500 units of Product D. The standard cost of 1 unit of Product D is as follows.

|   |                |
|---|----------------|
| Direct materials—1.4 pounds at \$4.00 per pound | \$ 5.60        |
| Direct labor—1 hour at \$9.00 per hour          | 9.00           |
| Overhead—1 hour (variable \$7.40; fixed \$8.00) | <u>15.40</u>   |
| Standard cost per unit                          | <u>\$30.00</u> |

Overhead is applied on the basis of direct labor hours. Normal capacity for the month of January was 6,000 direct labor hours. During January, the following transactions applicable to Job No. 84 occurred.

1. Purchased 8,100 pounds of raw materials on account at \$3.60 per pound.
2. Requisitioned 8,100 pounds of raw materials for production.
3. Incurred 5,100 hours of direct labor at \$9.25 per hour.
4. Worked 5,100 hours of direct labor on Job No. 84.
5. Incurred \$87,650 of manufacturing overhead on account.
6. Applied overhead to Job No. 84 on the basis of direct labor hours.
7. Transferred Job No. 84 to finished goods.
8. Billed customer for Job No. 84 at a selling price of \$280,000.

#### Instructions

- (a) Journalize the transactions.
- (b) Post to the job order cost accounts.
- (c) Prepare the entry to recognize the total overhead variance.
- (d) Prepare the January 2012 income statement for management. Assume selling and administrative expenses were \$61,000.

- \*P25-7B** Using the information in P25-1B, compute the overhead controllable variance and the overhead volume variance. *Compute overhead controllable and volume variances.*  
(SO 10)
- \*P25-8B** Using the information in P25-2B, compute the overhead controllable variance and the overhead volume variance. *Compute overhead controllable and volume variances.*  
(SO 10)
- \*P25-9B** Using the information in P25-3B, compute the overhead controllable variance and the overhead volume variance. *Compute overhead controllable and volume variances.*  
(SO 10)
- \*P25-10B** Using the information in P25-5B, compute the overhead controllable variance and the overhead volume variance. *Compute overhead controllable and volume variances.*  
(SO 10)

## Problems: Set C

Visit the book's companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Waterways Continuing Problem

(This is a continuation of the Waterways Problem from Chapters 19 through 24.)

**WCP25** Waterways Corporation uses very stringent standard costs in evaluating its manufacturing efficiency. These standards are not “ideal” at this point, but management is working toward that as a goal. This problem asks you to calculate and evaluate the company’s variances.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to find the remainder of this problem.

# BROADENING YOUR PERSPECTIVE

## Decision Making Across the Organization

**BYP25-1** Donel Professionals, a management consulting firm, specializes in strategic planning for financial institutions. Lee Dong and Geri Elton, partners in the firm, are assembling a new strategic planning model for use by clients. The model is designed for use on most personal computers and replaces a rather lengthy manual model currently marketed by the firm. To market the new model, Lee and Geri will need to provide clients with an estimate of the number of labor hours and computer time needed to operate the model. The model is currently being test-marketed at five small financial institutions. These financial institutions are listed below, along with the number of combined computer/labor hours used by each institution to run the model one time.

| <u>Financial Institutions</u> | <u>Computer/Labor Hours<br/>Required</u> |
|-------------------------------|--|
| Midland National              | 25                                       |
| First State                   | 45                                       |
| Financial Federal             | 40                                       |
| Pacific America               | 30                                       |
| Lakeview National             | 30                                       |
| Total                         | <u>170</u>                               |
| Average                       | <u>34</u>                                |

Any company that purchases the new model will need to purchase user manuals for the system. User manuals will be sold to clients in cases of 20, at a cost of \$300 per case. One manual must be used each time the model is run because each manual includes a nonreusable computer-accessed password for operating the system. Also required are specialized computer forms that are sold only by Donel. The specialized forms are sold in packages of 250, at a cost of \$50 per package. One application of the model requires the use of 50 forms. This amount includes two forms that are generally wasted in each application due to printer alignment errors. The overall cost of the strategic planning model to clients is \$12,000. Most clients will use the model four times annually.

Donel must provide its clients with estimates of ongoing costs incurred in operating the new planning model, and would like to do so in the form of standard costs.

### Instructions

With the class divided into groups, answer the following.

- What factors should be considered in setting a standard for computer/labor hours?
- What alternatives for setting a standard for computer/labor hours might be used?
- What standard for computer/labor hours would you select? Justify your answer.
- Determine the standard materials cost associated with the user manuals and computer forms for each application of the strategic planning model.

## Managerial Analysis

**\*BYP25-2** Al Ignatenko and Associates is a medium-sized company located near a large metropolitan area in the Midwest. The company manufactures cabinets of mahogany, oak, and other fine woods for use in expensive homes, restaurants, and hotels. Although some of the work is custom, many of the cabinets are a standard size.

One such non-custom model is called Luxury Base Frame. Normal production is 1,000 units. Each unit has a direct labor hour standard of 5 hours. Overhead is applied to production based on standard direct labor hours. During the most recent month, only 900 units were produced; 4,500 direct labor hours were allowed for standard production, but only 4,000 hours were used. Standard and actual overhead costs were as follows.

|   | <b>Standard<br/>(1,000 units)</b> | <b>Actual<br/>(900 units)</b> |
|---|-----------------------------------|-------------------------------|
| Indirect materials                              | \$ 12,000                         | \$ 12,300                     |
| Indirect labor                                  | 43,000                            | 51,000                        |
| (Fixed) Manufacturing supervisors salaries      | 22,000                            | 22,000                        |
| (Fixed) Manufacturing office employees salaries | 13,000                            | 11,500                        |
| (Fixed) Engineering costs                       | 27,000                            | 25,000                        |
| Computer costs                                  | 10,000                            | 10,000                        |
| Electricity                                     | 2,500                             | 2,500                         |
| (Fixed) Manufacturing building depreciation     | 8,000                             | 8,000                         |
| (Fixed) Machinery depreciation                  | 3,000                             | 3,000                         |
| (Fixed) Trucks and forklift depreciation        | 1,500                             | 1,500                         |
| Small tools                                     | 700                               | 1,400                         |
| (Fixed) Insurance                               | 500                               | 500                           |
| (Fixed) Property taxes                          | 300                               | 300                           |
| Total   | <u>\$143,500</u>                  | <u>\$149,000</u>              |

### Instructions

- Determine the overhead application rate.
- Determine how much overhead was applied to production.
- Calculate the controllable overhead variance and the overhead volume variance.
- Decide which overhead variances should be investigated.
- Discuss causes of the overhead variances. What can management do to improve its performance next month?

## Real-World Focus

**BYP25-3** **Glassmaster Co.** is organized as two divisions and one subsidiary. One division focuses on the manufacture of filaments such as fishing line and sewing thread; the other division manufactures antennas

and specialty fiberglass products. Its subsidiary manufactures flexible steel wire controls and molded control panels.

The annual report of Glassmaster provides the following information.

### Glassmaster Company Management Discussion

Gross profit margins for the year improved to 20.9% of sales compared to last year's 18.5%. All operations reported improved margins due in large part to improved operating efficiencies as a result of cost reduction measures implemented during the second and third quarters of the fiscal year and increased manufacturing throughout due to higher unit volume sales. Contributing to the improved margins was a favorable materials price variance due to competitive pricing by suppliers as a result of soft demand for petrochemical-based products. This favorable variance is temporary and will begin to reverse itself as stronger worldwide demand for commodity products improves in tandem with the economy. Partially offsetting these positive effects on profit margins were competitive pressures on sales prices of certain product lines. The company responded with pricing strategies designed to maintain and/or increase market share.

#### Instructions

- (a) Is it apparent from the information whether Glassmaster utilizes standard costs?
- (b) Do you think the price variance experienced should lead to changes in standard costs for the next fiscal year?

### On the Web

**BYP25-4** The **Balanced Scorecard Institute** ([www.balancedscorecard.org](http://www.balancedscorecard.org)) is a great resource for information about implementing the balanced scorecard. One item of interest provided at its website is an example of a balanced scorecard for a regional airline.

**Address:** [http://www.balancedscorecard.org/files/Regional\\_Airline.pdf](http://www.balancedscorecard.org/files/Regional_Airline.pdf), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

#### Instructions

Go to the address above and answer the following questions.

- (a) What are the objectives identified for the airline for each perspective?
- (b) What measures are used for the objective in the customer perspective?
- (c) What initiatives are planned to achieve the objective in the learning perspective?

### Communication Activity

**BYP25-5** The setting of standards is critical to the effective use of standards in evaluating performance.

#### Instructions

Explain the following in a memo to your instructor.

- (a) The comparative advantages and disadvantages of ideal versus normal standards.
- (b) The factors that should be included in setting the price and quantity standards for direct materials, direct labor, and manufacturing overhead.

### Ethics Case

**BYP25-6** At Milton Manufacturing Company, production workers in the Painting Department are paid on the basis of productivity. The labor time standard for a unit of production is established through periodic time studies conducted by the Mobley Management Department. In a time study, the actual time required to complete a specific task by a worker is observed. Allowances are then made for preparation time, rest periods, and clean-up time. Tony Orlando is one of several veterans in the Painting Department.

Tony is informed by Mobley Management that he will be used in the time study for the painting of a new product. The findings will be the basis for establishing the labor time standard for the next 6 months. During the test, Tony deliberately slows his normal work pace in an effort to obtain a labor time standard that will be easy to meet. Because it is a new product, the Mobley Management representative who conducted the test is unaware that Tony did not give the test his best effort.

#### Instructions

- (a) Who was benefited and who was harmed by Tony's actions?
- (b) Was Tony ethical in the way he performed the time study test?
- (c) What measure(s) might the company take to obtain valid data for setting the labor time standard?

### "All About You" Activity

**BYP25-7** From the time you first entered school many years ago, instructors have been measuring and evaluating you by imposing standards. In addition, many of you will pursue professions that administer professional examinations to attain recognized certification. Recently, a federal commission presented proposals suggesting all public colleges and universities should require standardized tests to measure their students' learning.

#### Instructions

Read the following article at [www.signonsandiego.com/uniontrib/20060811/news\\_1n11colleges.html](http://www.signonsandiego.com/uniontrib/20060811/news_1n11colleges.html), and answer the following questions.

- (a) What areas of concern did the panel's recommendations address?
- (b) What are possible advantages of standard testing?
- (c) What are possible disadvantages of standard testing?
- (d) Would you be in favor of standardized tests?

#### Answers to Insight and Accounting Across the Organization Questions

**p. 1150 How Do Standards Help a Business?** **Q:** How will the creation of such standards help a business or organization? **A:** A business or organization may use the data to compare its performance relative to others with regard to common practices such as processing a purchase order or filling a sales order. Armed with this information, an organization can determine which areas to focus on with improvement campaigns.

**p. 1153 How Can We Make Susan's Chili Profitable?** **Q:** How might management use this raw material cost information? **A:** Management might decide to increase the price of its chili. Or it might revise its recipes to use cheaper ingredients. Or it might eliminate some products until ingredients are available at costs closer to standard.

**p. 1164 It May Be Time to Fly United Again** **Q:** Which of the perspectives of a balanced scorecard were the focus of United's CEO? **A:** Improving on-time flight departures is an objective within the internal process perspective. Customer intent to fly United again is an objective within the customer perspective.

#### Answers to Self-Test Questions

1. c 2. b 3. d 4. a 5. b 6. c 7. b  $(6,300 - 6,000) \times \$1$  8. a  $(15,000 - 14,800) \times \$8$  9. d 10. a 11. b 12. d 13. c 14. d \*15. c \*16. c

# CHAPTER 26

## Incremental Analysis and Capital Budgeting

### Study Objectives

After studying this chapter, you should be able to:

- 1 Identify the steps in management's decision-making process.
- 2 Describe the concept of incremental analysis.
- 3 Identify the relevant costs in accepting an order at a special price.
- 4 Identify the relevant costs in a make-or-buy decision.
- 5 Give the decision rule for whether to sell or process materials further.
- 6 Identify the factors to consider in retaining or replacing equipment.
- 7 Explain the relevant factors in whether to eliminate an unprofitable segment.
- 8 Determine which products to make and sell when resources are limited.
- 9 Contrast annual rate of return and cash payback in capital budgeting.
- 10 Distinguish between the net present value and internal rate of return methods.

### Feature Story

#### SOUP IS GOOD FOOD

When you hear the word *Campbell*, what is the first thing that comes to mind? Soup. Campbell *is* soup. It sells 38% of all the soup—including homemade—consumed in the United States.

But can a company survive on soup alone? In an effort to expand its operations and to lessen its reliance on soup, **Campbell Soup Company** began searching for an additional line of business. Campbell's management believed it saw an opportunity in convenient meals that were low in fat, nutritionally rich, and had therapeutic value for heart patients and diabetics. This venture would require a huge investment—but the rewards were potentially tremendous.

The initial investment required building food labs, hiring nutritional scientists, researching prototype products, constructing new production facilities, and marketing the new products. Management predicted that

with an initial investment of roughly \$55 million, the company might generate sales of \$200 million per year.

Four years later, the company had

created 24 meals, and an extensive field-study revealed considerable health benefits from the products. Unfortunately, initial sales of the new product line, called Intelligent Quisine, were less than stellar. After three years of disappointing sales, Campbell hired a consulting firm to evaluate whether to continue the project. Product development of the new line was costing \$20 million per year—a sum that some managers felt could be better spent developing new products in other divisions, or expanding overseas operations. One year later (eight years after it began), Campbell discontinued the project.

Campbell was not giving up on growth, but simply had decided to refocus its efforts on soup. The company's annual report stated management's philosophy: "Soup will be our growth engine." Campbell has sold off many of its nonsoup businesses, and in a recent year introduced 20 new soup products.

## Inside **CHAPTER 26**

- **Service Company Insight:** That Letter from AmEx Might Not Be a Bill (p. 1196)
- **Accounting Across the Organization:** These Wheels Have Miles Before Installation (p. 1200)
- **Management Insight:** Time to Move to a New Neighborhood? (p. 1204)
- **Management Insight:** Investing for the Future (p. 1207)
- **Management Insight:** Seeing the Big Picture (p. 1212)

# Preview of CHAPTER 26

An important purpose of management accounting is to provide relevant information for decision making. Examples of these decisions include the following: (1) **Campbell Soup's** decision to produce "therapeutic meals" rather than some other food product. (2) **Boeing's** strategic decisions to spend \$5 billion to build a plane for the 21st century—the B-777—and to cancel development of a larger version of the B-747. (3) **The Coca-Cola Company's** decision to spend \$750 million to build twelve plants in Russia.

This chapter begins with an explanation of management's decision-making process. It then considers the topics of incremental analysis and capital budgeting. The content and organization of Chapter 26 are as follows.

| Incremental Analysis and Capital Budgeting  |  |

| <ul style="list-style-type: none"> <li>• Management's decision-making process</li> <li>• Accept special-price order</li> <li>• Make or buy</li> <li>• Sell or process further</li> <li>• Retain or replace equipment</li> <li>• Eliminate unprofitable segment</li> <li>• Allocate limited resources</li> </ul> | <ul style="list-style-type: none"> <li>• Evaluation process</li> <li>• Annual rate of return</li> <li>• Cash payback</li> <li>• Discounted cash flow: NPV and IRR</li> </ul> |

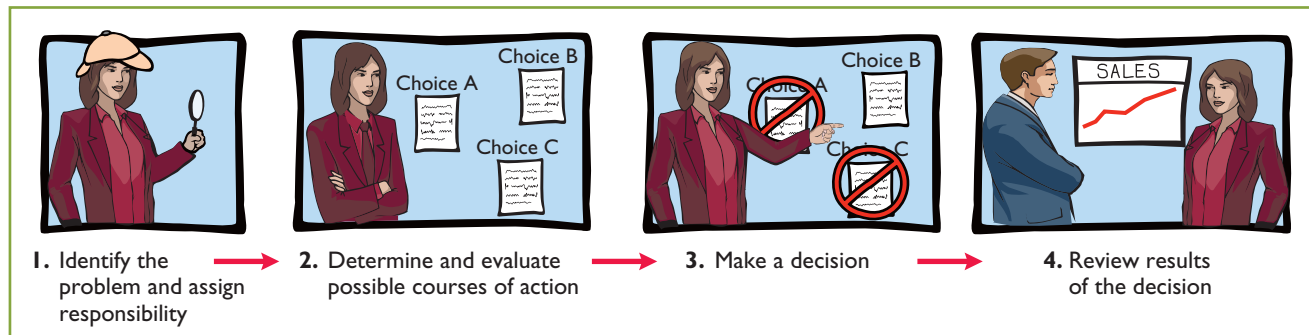

## SECTION 1 INCREMENTAL ANALYSIS

### Management's Decision-Making Process

**Study Objective [1]**  
Identify the steps in management's decision-making process.

Making decisions is an important management function. Management's decision-making process does not always follow a set pattern, because decisions vary significantly in their scope, urgency, and importance. It is possible, though, to identify some steps that are frequently involved in the process. These steps are shown in Illustration 26-1.

**Illustration 26-1**  
Management's decision-making process

Accounting's contribution to the decision-making process occurs primarily in Steps 2 and 4—evaluating possible courses of action, and reviewing the results. In Step 2, for each possible course of action, accounting provides relevant revenue and cost data. These show the expected overall effect on net income. In Step 4, accounting prepares internal reports that review the actual impact of the decision.

In making business decisions, management ordinarily considers both financial and nonfinancial information. *Financial information* is related to revenues and costs and their effect on the company's overall profitability. *Nonfinancial information* relates to such factors as the effect of the decision on employee turnover, the environment, or the overall image of the company in the community. Although the nonfinancial information can be as important as the financial information, we focus primarily on financial information that is relevant to the decision.

### The Incremental Analysis Approach

**Decisions involve a choice among alternative courses of action.** Suppose that you were deciding whether to purchase or lease a computer for use in doing your accounting homework. The financial data relate to the cost of leasing versus the cost of purchasing. For example, leasing involves periodic lease payments; purchasing requires “up-front” payment of the purchase price. In other words, the financial data relevant to the decision are the data that vary among the possible alternatives. The process used to identify the financial data that change under alternative courses of action is called **incremental analysis**. In some cases, when you use incremental analysis, both costs **and** revenues will change. In other cases, only costs **or** revenues will vary.

Just as your decision to buy or lease a PC affects your future, similar decisions, on a larger scale, affect a company's future. Incremental analysis identifies the probable effects of those decisions on future earnings. Such analysis inevitably involves estimates and uncertainty. Gathering data for incremental analyses may involve market analysts, engineers, and accountants. In quantifying the data, the accountant is expected to produce the most reliable information available at the time the decision must be made.

### How Incremental Analysis Works

The following example illustrates the basic approach in incremental analysis.

|   | A          | B             | C             | D                   |
|---|------------|---------------|---------------|---------------------|
|   |            |               |               | Net Income          |
|   |            | Alternative A | Alternative B | Increase (Decrease) |
| 1 |            |               |               |                     |
| 2 | Revenues   | \$125,000     | \$110,000     | \$ (15,000)         |
| 3 | Costs      | 100,000       | 80,000        | 20,000              |
| 4 | Net income | \$ 25,000     | \$ 30,000     | \$ 5,000            |
| 5 |            |               |               |                     |

**Study Objective [2]**  
Describe the concept of incremental analysis.

#### Alternative Terminology

Incremental analysis is also called *differential analysis* because the analysis focuses on differences.

**Illustration 26-2**  
Basic approach in incremental analysis

This example compares alternative B with alternative A. The net income column shows the differences between the alternatives. In this case, incremental revenue

will be \$15,000 less under alternative B than under alternative A, but a \$20,000 incremental cost saving will be realized.<sup>1</sup> Thus, alternative B will produce \$5,000 more net income than alternative A.

Incremental analysis sometimes involves changes that at first glance might seem contrary to your intuition. For example, sometimes variable costs *do not change* under the alternative courses of action. Also, sometimes fixed costs *do change*. For example, direct labor, normally a variable cost, is not an incremental cost in deciding between two new factory machines if each asset requires the same amount of direct labor. In contrast, rent expense, normally a fixed cost, is an incremental cost in a decision to continue occupancy of a building or to purchase or lease a new building.

## SERVICE COMPANY INSIGHT

### That Letter from AmEx Might Not Be a Bill

No doubt every one of you has received an invitation from a credit card company to open a new account—some of you have probably received three in one day. But how many of you have received an offer of \$300 to close out your credit card account? **American Express** decided to offer some of its customers \$300 if they would give back their credit card. You could receive the \$300 even if you hadn't paid off your balance yet, as long as you agreed to give up your credit card.

Source: Aparajita Saha-Bubna and Lauren Pollock, "AmEx Offers Some Holders \$300 to Pay and Leave," *Wall Street Journal Online* (February 23, 2009).

**?** What are the relevant costs that American Express would need to know in order to determine to whom to make this offer? (See page 1235.)

## Types of Incremental Analysis

A number of different types of decisions involve incremental analysis. The more common types of decisions are:

1. Accept an order at a special price.
2. Make or buy.
3. Sell or process further.
4. Retain or replace equipment.
5. Eliminate an unprofitable business segment.
6. Allocate limited resources.

We consider each of these types of analysis in the following pages.

### **Accept an Order at a Special Price**

Sometimes, a company has an opportunity to obtain additional business if it is willing to make a major price concession to a specific customer. To illustrate, assume that Sunbelt Company produces 100,000 automatic blenders per month, which is 80% of plant capacity. Variable manufacturing costs are \$8 per unit. Fixed manufacturing costs are \$400,000, or \$4 per unit. The blenders are normally sold directly to retailers at \$20 each. Sunbelt has an offer from Mexico Co.

#### Study Objective [3]

Identify the relevant costs in accepting an order at a special price.

<sup>1</sup> Although income taxes are sometimes important in incremental analysis, they are ignored in the chapter for simplicity's sake.

(a foreign wholesaler) to purchase an additional 2,000 blenders at \$11 per unit. Acceptance of the offer would not affect normal sales of the product, and the additional units can be manufactured without increasing plant capacity. What should management do?

If management makes its decision on the basis of the total cost per unit of \$12 (\$8 + \$4), the order would be rejected, because costs (\$12) would exceed revenues (\$11) by \$1 per unit. However, since the units can be produced within existing plant capacity, the special order **will not increase fixed costs**. The relevant data for the decision, therefore, are the variable manufacturing costs per unit of \$8 and the expected revenue of \$11 per unit. Thus, as shown in Illustration 26-3, Sunbelt will increase its net income by \$6,000 by accepting this special order.

|   | A          | B            | C            | D                   |
|---|------------|--------------|--------------|---------------------|
|   |            |              |              | Net Income          |
| 1 |            | Reject Order | Accept Order | Increase (Decrease) |
| 2 | Revenues   | \$0          | \$22,000     | \$ 22,000           |
| 3 | Costs      | 0            | 16,000       | (16,000)            |
| 4 | Net income | \$0          | \$ 6,000     | \$ 6,000            |
| 5 |            |              |              |                     |

**Illustration 26-3**  
Incremental analysis—  
accepting an order at a  
special price

Two points should be emphasized: First, we assume that sales of the product in other markets are not affected by this special order. If other sales are affected, then Sunbelt must consider the lost sales in making the decision. Second, if Sunbelt is operating at full capacity, it is likely that the special order would be rejected. Under such circumstances, the company would have to expand plant capacity. In that case, the special order would have to absorb these additional fixed manufacturing costs, as well as the variable manufacturing costs.

## Do it!

Cobb Company incurs a cost of \$28 per unit, of which \$18 is variable, to make a product that normally sells for \$42. A foreign wholesaler offers to buy 5,000 units at \$25 each. Cobb will incur shipping costs of \$1 per unit. Compute the increase or decrease in net income Cobb will realize by accepting the special order, assuming Cobb has excess operating capacity. Should Cobb Company accept the special order?

### Solution

|            | Reject      | Accept           | Net Income<br>Increase (Decrease) |
|------------|-------------|------------------|-----------------------------------|
| Revenues   | \$0-        | \$125,000        | \$125,000                         |
| Costs      | -0-         | 95,000*          | (95,000)                          |
| Net income | <u>\$0-</u> | <u>\$ 30,000</u> | <u>\$ 30,000</u>                  |

\* $(5,000 \times \$18) + (5,000 \times \$1)$

Given the result of the analysis, Cobb Company should accept the special order.

## Special Orders

### action plan

- ✓ Identify all revenues that will change as a result of accepting the order.
- ✓ Identify all costs that will change as a result of accepting the order, and net this amount against the change in revenues.

Related exercise material: BE26-2, BE26-3, E26-2, E26-3, and **Do it!** 26-1.

**Study Objective [4]**

Identify the relevant costs in a make-or-buy decision.

## Make or Buy

When a manufacturer assembles component parts in producing a finished product, management must decide whether to make or buy the components. For example, **General Motors Corporation** may either make or buy the batteries, tires, and radios used in its cars. Similarly, **Hewlett-Packard Corporation** may make or buy the electronic circuitry, cases, and printer heads for its printers. **Boeing** recently sold some of its commercial aircraft factories in an effort to cut production costs and focus instead on engineering and final assembly rather than manufacturing. The decision to make or buy components should be made on the basis of incremental analysis.

To illustrate the analysis, assume that Baron Company incurs the following annual costs in producing 25,000 ignition switches for motor scooters.

**Illustration 26-4**

Annual product cost data

|   |               |
|---|---------------|
| Direct materials                                | \$ 50,000     |
| Direct labor                                    | 75,000        |
| Variable manufacturing overhead                 | 40,000        |
| Fixed manufacturing overhead                    | 60,000        |
| Total manufacturing costs                       | \$225,000     |
| <b>Total cost per unit (\$225,000 ÷ 25,000)</b> | <b>\$9.00</b> |

Or, instead of making its own switches, Baron Company might purchase the ignition switches from Ignition Inc. at a price of \$8 per unit. The question again is, “What should management do?”

At first glance, it appears that management should purchase the ignition switches for \$8, rather than make them at a cost of \$9. However, a review of operations indicates that if Baron purchases the ignition switches from Ignition Inc., it will eliminate *all* of its variable costs but only \$10,000 of its fixed manufacturing costs. Thus, \$50,000 of the fixed manufacturing costs will remain if the ignition switches are purchased. The relevant costs for incremental analysis, therefore, are as follows.

**Illustration 26-5**

Incremental analysis—make or buy

|   | A                             | B         | C         | D                              |
|---|-------------------------------|-----------|-----------|--------------------------------|
|   |                               | Make      | Buy       | Net Income Increase (Decrease) |
| 1 |                               |           |           |                                |
| 2 | Direct materials              | \$ 50,000 | \$ 0      | \$ 50,000                      |
| 3 | Direct labor                  | 75,000    | 0         | 75,000                         |
| 4 | Variable manufacturing costs  | 40,000    | 0         | 40,000                         |
| 5 | Fixed manufacturing costs     | 60,000    | 50,000    | 10,000                         |
| 6 | Purchase price (25,000 × \$8) | 0         | 200,000   | (200,000)                      |
| 7 | Total annual cost             | \$225,000 | \$250,000 | \$ (25,000)                    |
| 8 |                               |           |           |                                |

**Ethics Note**

In the make-or-buy decision, it is important for management to take into account the social impact of its choice. For instance, buying may be the most economically feasible solution, but such action could result in the closure of a manufacturing plant that employs many good workers.

This analysis indicates that Baron Company will incur \$25,000 of additional costs by buying the ignition switches. Therefore, Baron should continue to make the ignition switches, even though the total manufacturing cost is \$1 higher than the purchase price. The reason is that if the company purchases the ignition switches, it will still have fixed costs of \$50,000 to absorb.

**OPPORTUNITY COST**

The foregoing make-or-buy analysis is complete only if the productive capacity used to make the ignition switches cannot be converted to another purpose. If there is an opportunity to use this productive capacity in

some other manner, then this opportunity cost must be considered. **Opportunity cost** is the potential benefit that may be obtained by following an alternative course of action.

To illustrate, assume that through buying the switches, Baron Company can use the released productive capacity to generate additional income of \$28,000. This lost income is an additional cost of continuing to make the switches in the make-or-buy decision. This opportunity cost therefore is added to the “Make” column, for comparison. Illustration 26-6 shows that it is now advantageous to buy the ignition switches.

|   | A                       | B             | C          | D                                     |
|---|-------------------------|---------------|------------|---------------------------------------|
|   |                         | <b>Make</b>   | <b>Buy</b> | <b>Net Income Increase (Decrease)</b> |
| 1 |                         |               |            |                                       |
| 2 | Total annual cost       | \$225,000     | \$250,000  | \$(25,000)                            |
| 3 | <b>Opportunity cost</b> | <b>28,000</b> | 0          | <b>28,000</b>                         |
| 4 | Total cost              | \$253,000     | \$250,000  | \$ 3,000                              |
| 5 |                         |               |            |                                       |

**Illustration 26-6**

Incremental analysis—make or buy, with opportunity cost

The qualitative factors in this decision include the possible loss of jobs for employees who produce the ignition switches. In addition, management must assess how long the supplier will be able to satisfy the company’s quality control standards at the quoted price per unit.

## Do it!

Juanita Company must decide whether to make or buy some of its components. The costs of producing 50,000 electrical cords for its floor lamps are as follows.

|                  |          |                   |          |
|------------------|----------|-------------------|----------|
| Direct materials | \$60,000 | Variable overhead | \$12,000 |
| Direct labor     | \$30,000 | Fixed overhead    | \$8,000  |

Instead of making the electrical cords at an average cost per unit of \$2.20 ( $\$110,000 \div 50,000$ ), the company has an opportunity to buy the cords at \$2.15 per unit. If the company purchases the cords, all variable costs and one-half of the fixed costs will be eliminated.

(a) Prepare an incremental analysis showing whether the company should make or buy the electrical cords. (b) Will your answer be different if the released productive capacity will generate additional income of \$25,000?

### Solution

| (a)                          | <u>Make</u>      | <u>Buy</u>       | <u>Net Income Increase (Decrease)</u> |
|------------------------------|------------------|------------------|---------------------------------------|
| Direct materials             | \$ 60,000        | \$ -0-           | \$ 60,000                             |
| Direct labor                 | 30,000           | -0-              | 30,000                                |
| Variable manufacturing costs | 12,000           | -0-              | 12,000                                |
| Fixed manufacturing costs    | 8,000            | 4,000            | 4,000                                 |
| Purchase price               | -0-              | 107,500          | (107,500)                             |
| Total cost                   | <u>\$110,000</u> | <u>\$111,500</u> | <u>\$ (1,500)</u>                     |

## Make or Buy

### action plan

- ✓ Look for the costs that change.
- ✓ Ignore the costs that do not change.
- ✓ Use the format in the chapter for your answer.
- ✓ Recognize that opportunity cost can make a difference.

This analysis indicates that Juanita Company will incur \$1,500 of additional costs if it buys the electrical cords.

(b)

|                  | <u>Make</u>      | <u>Buy</u>       | <u>Net Income Increase (Decrease)</u> |
|------------------|------------------|------------------|---------------------------------------|
| Total cost       | \$110,000        | \$111,500        | \$ (1,500)                            |
| Opportunity cost | 25,000           |                  | 25,000                                |
| Total cost       | <u>\$135,000</u> | <u>\$111,500</u> | <u>\$ 23,500</u>                      |

Yes, the answer is different: The analysis shows that net income will be increased by \$23,500 if Juanita Company purchases the electrical cords.

Related exercise material: BE26-4, E26-4, and **Do it!** 26-2.

## ACCOUNTING ACROSS THE ORGANIZATION

### These Wheels Have Miles Before Installation

Consider the make-or-buy decision faced by **Superior Industries International, Inc.**, a big aluminum-wheel maker in Van Nuys, California. For years, president

Steve Borick had ignored the possibility of Chinese manufacturing. Then, Mr. Borick started getting a blunt message from **General Motors** and **Ford**, with whom Superior does 85% of its business: Match the prices of Chinese wheel suppliers. Both auto makers said separately that if Superior could not agree to the lower prices, they would go directly to Chinese manufacturers or turn to other North American wheel-makers.

Stories like this, repeated in various industries, illustrate why manufacturers engage in overseas *off-shoring* (outsourcing). For example, compare the relative labor costs in major auto-producing nations, in dollars per hour, to see why incremental analysis often leads to outsourcing production to countries like China.

For example, compare the relative labor costs in major auto-producing nations, in dollars per hour, to see why incremental analysis often leads to outsourcing production to countries like China.

Source: Norihiko Shirouzu, "Big Three's Outsourcing Plan: Make Parts Suppliers Do It," *Wall Street Journal* (June 10, 2004), p. A1.

**?** What are the disadvantages of outsourcing to a foreign country? (See page 1235.)

### Sell or Process Further

Many manufacturers have the option of selling products at a given point in the production cycle or continuing to process with the expectation of selling them at a higher price. For example, a bicycle manufacturer such as **Schwinn** could sell its 10-speed bicycles to retailers either unassembled or assembled. A furniture manufacturer such as **Ethan Allen** could sell its dining room sets to furniture stores either unfinished or finished. The sell-or-process-further decision should be made on the basis of incremental analysis.

#### Study Objective [5]

Give the decision rule for whether to sell or process materials further.

The basic decision rule is: **Process further as long as the incremental revenue from such processing exceeds the incremental processing costs.**

Assume, for example, that Woodmasters Inc. makes tables. The cost to manufacture an unfinished table is \$35, computed as follows.

|                                    |             |
|------------------------------------|-------------|
| Direct material                    | \$15        |
| Direct labor                       | 10          |
| Variable manufacturing overhead    | 6           |
| Fixed manufacturing overhead       | 4           |
| <b>Manufacturing cost per unit</b> | <b>\$35</b> |

**Illustration 26-7**

Per unit cost of unfinished table

The selling price per unfinished unit is \$50. Woodmasters currently has unused productive capacity that is expected to continue indefinitely. Management concludes that some of this capacity can be used to finish the tables and sell them at \$60 per unit. For a finished table, direct materials will increase \$2 and direct labor costs will increase \$4. Variable manufacturing overhead costs will increase by \$2.40 (60% of direct labor). No increase is anticipated in fixed manufacturing overhead. Illustration 26-8 shows the incremental analysis on a per unit basis.

|    | A                               | B       | C               | D                              |
|----|---------------------------------|---------|-----------------|--------------------------------|
|    |                                 | Sell    | Process Further | Net Income Increase (Decrease) |
| 1  |                                 |         |                 |                                |
| 2  | Sales per unit                  | \$50.00 | \$60.00         | \$10.00                        |
| 3  | Cost per unit                   |         |                 |                                |
| 4  | Direct materials                | 15.00   | 17.00           | (2.00)                         |
| 5  | Direct labor                    | 10.00   | 14.00           | (4.00)                         |
| 6  | Variable manufacturing overhead | 6.00    | 8.40            | (2.40)                         |
| 7  | Fixed manufacturing overhead    | 4.00    | 4.00            | 0.00                           |
| 8  | Total                           | 35.00   | 43.40           | (8.40)                         |
| 9  | Net income per unit             | \$15.00 | \$16.60         | \$ 1.60                        |
| 10 |                                 |         |                 |                                |

**Illustration 26-8**

Incremental analysis—sell or process further

**Helpful Hint**

Current net income is known. Net income from processing further is an estimate. In making its decision, management could add a “risk” factor for the estimate.

It is advantageous for Woodmasters to process the tables further. The incremental revenue of \$10.00 from the additional processing is \$1.60 higher than the incremental processing costs of \$8.40.

## Retain or Replace Equipment

Management often has to decide whether to continue using an asset or replace it. To illustrate, assume that Jeffcoat Company has a factory machine with a book value of \$40,000 and a remaining useful life of four years. A new machine is available that costs \$120,000. It is expected to have zero salvage value at the end of its four-year useful life. If Jeffcoat acquires the new machine, variable manufacturing costs are expected to decrease from \$160,000 to \$125,000 annually, and the old unit will be scrapped. The incremental analysis for the **four-year period** is shown in Illustration 26-9 (page 1202).

**Study Objective [6]**

Identify the factors to consider in retaining or replacing equipment.

**Illustration 26-9**

Incremental analysis—retain or replace equipment

|   | A                                  | B                   | C            | D                    | E            | F                                 |
|---|------------------------------------|---------------------|--------------|----------------------|--------------|-----------------------------------|
|   |                                    | Retain<br>Equipment |              | Replace<br>Equipment |              | Net Income<br>Increase (Decrease) |
| 1 |                                    |                     |              |                      |              |                                   |
| 2 | Variable manufacturing costs       | \$640,000           | <sup>a</sup> | \$500,000            | <sup>b</sup> | \$140,000                         |
| 3 | New machine cost                   |                     |              | 120,000              |              | (120,000)                         |
| 4 | Total                              | \$640,000           |              | \$620,000            |              | \$ 20,000                         |
| 5 |                                    |                     |              |                      |              |                                   |
| 6 | <sup>a</sup> (4 years × \$160,000) |                     |              |                      |              |                                   |
| 7 | <sup>b</sup> (4 years × \$125,000) |                     |              |                      |              |                                   |
| 8 |                                    |                     |              |                      |              |                                   |

In this case, it is advantageous to replace the equipment. The lower variable manufacturing costs related to the new equipment more than offset its purchase cost.

One other point about Jeffcoat's decision: **The book value of the old machine does not affect the decision.** Book value is a **sunk cost**, which is a cost that cannot be changed by any present or future decision. Sunk costs **are not relevant in incremental analysis**. In this example, if the company retains the asset, book value is depreciated over its remaining useful life. Or, if the company acquires the new unit, book value is recognized as a loss of the current period. Thus, the effect of book value on current and future earnings is the same regardless of the replacement decision. However, **any trade-in allowance or cash disposal value of the existing asset is relevant** to the decision, because the company will not realize this value if the old asset is continued in use.

### Eliminate an Unprofitable Segment

Management sometimes must decide whether to eliminate an unprofitable business segment. For example, in recent years many airlines have quit servicing certain cities or have cut back on the number of flights; and **Goodyear** recently quit producing several brands in the low-end tire market. Again, the key is to **focus on the relevant costs—the data that change under the alternative courses of action**. To illustrate, assume that Martina Company manufactures tennis racquets in three models: Pro, Master, and Champ. Pro and Master are profitable lines. Champ (highlighted in color in Illustration 26-10) operates at a loss. Condensed income statement data for the three segments are:

#### Study Objective [7]

Explain the relevant factors in whether to eliminate an unprofitable segment.

#### Illustration 26-10

Segment income data

|                     | Pro              | Master           | Champ                     | Total             |
|---------------------|------------------|------------------|---------------------------|-------------------|
| Sales               | \$800,000        | \$300,000        | <b>\$100,000</b>          | \$1,200,000       |
| Variable expenses   | 520,000          | 210,000          | <b>90,000</b>             | 820,000           |
| Contribution margin | 280,000          | 90,000           | <b>10,000</b>             | 380,000           |
| Fixed expenses      | 80,000           | 50,000           | <b>30,000</b>             | 160,000           |
| Net income          | <u>\$200,000</u> | <u>\$ 40,000</u> | <u><b>\$ (20,000)</b></u> | <u>\$ 220,000</u> |

It might be expected that total net income will increase by \$20,000 to \$240,000 if Martina Company eliminates the unprofitable Champ line of racquets. However, **net income may decrease if that line is discontinued**. The reason is that the other products will have to absorb the fixed expenses allocated to the Champ racquets. To illustrate, assume that the \$30,000 of fixed costs applicable to the unprofitable segment are allocated  $\frac{2}{3}$  and  $\frac{1}{3}$  to the Pro and Master product lines, respectively.

#### Helpful Hint

A decision to discontinue a segment based solely on the bottom line—net loss—is inappropriate.

Fixed expenses will increase to \$100,000 (\$80,000 + \$20,000) in the Pro line and to \$60,000 (\$50,000 + \$10,000) in the Master line. Illustration 26-11 shows the revised income statements.

|                     | <u>Pro</u>       | <u>Master</u>    | <u>Total</u>             |
|---------------------|------------------|------------------|--------------------------|
| Sales               | \$800,000        | \$300,000        | \$1,100,000              |
| Variable expenses   | 520,000          | 210,000          | 730,000                  |
| Contribution margin | 280,000          | 90,000           | 370,000                  |
| Fixed expenses      | <b>100,000</b>   | <b>60,000</b>    | 160,000                  |
| Net income          | <u>\$180,000</u> | <u>\$ 30,000</u> | <u><b>\$ 210,000</b></u> |

**Illustration 26-11**  
Income data after eliminating unprofitable product line

Total net income has decreased \$10,000 (\$220,000 – \$210,000). This result is also obtained in the following incremental analysis of the Champ racquets.

|   | A                   | B           | C          | D                              |
|---|---------------------|-------------|------------|--------------------------------|
|   |                     | Continue    | Eliminate  | Net Income Increase (Decrease) |
| 1 |                     |             |            |                                |
| 2 | Sales               | \$100,000   | \$ 0       | <b>\$(100,000)</b>             |
| 3 | Variable costs      | 90,000      | 0          | <b>90,000</b>                  |
| 4 | Contribution margin | 10,000      | 0          | <b>(10,000)</b>                |
| 5 | Fixed costs         | 30,000      | 30,000     | <b>0</b>                       |
| 6 | Net income          | \$ (20,000) | \$(30,000) | <b>\$ (10,000)</b>             |
| 7 |                     |             |            |                                |

**Illustration 26-12**  
Incremental analysis—eliminating an unprofitable segment

The loss in net income is attributable to the contribution margin (\$10,000) that the company will not realize if it discontinues the segment.

In deciding on the future status of an unprofitable segment, management should consider the effect of elimination on related product lines. It may be possible for continuing product lines to obtain some or all of the sales lost by the discontinued product line. In some businesses, services or products may be linked—for example, free checking accounts at a bank, or coffee at a donut shop. In addition, management should consider the effect of eliminating the product line on employees who may have to be discharged or retrained.

## Do it!

Lambert, Inc. manufactures several types of accessories. For the year, the knit hats and scarves line had sales of \$400,000, variable expenses of \$310,000, and fixed expenses of \$120,000. Therefore, the knit hats and scarves line had a net loss of \$30,000. If Lambert eliminates the knit hats and scarves line, \$20,000 of fixed costs will remain. Prepare an analysis showing whether the company should eliminate the knit hats and scarves line.

## Unprofitable Segments

**action plan**

✓ Identify the revenues that will change as a result of eliminating a product line.

✓ Identify all costs that will change as a result of eliminating a product line, and net the amount against the revenues.

**Solution**

|                     | <u>Continue</u>    | <u>Eliminate</u>  | <u>Net Income Increase (Decrease)</u> |
|---------------------|--------------------|-------------------|---------------------------------------|
| Sales               | \$400,000          | \$ 0              | \$(400,000)                           |
| Variable costs      | 310,000            | 0                 | 310,000                               |
| Contribution margin | 90,000             | 0                 | (90,000)                              |
| Fixed costs         | 120,000            | 20,000            | 100,000                               |
| Net income          | <u>\$ (30,000)</u> | <u>\$(20,000)</u> | <u>\$ 10,000</u>                      |

The analysis indicates that Lambert should eliminate the knit hats and scarves line because net income will increase \$10,000.

## MANAGEMENT INSIGHT

### Time to Move to a New Neighborhood?

If you have ever moved, then you know how complicated and costly it can be. Now consider what it would be like for a manufacturing company with 260 employees and a 170,000-square-foot facility to move from southern California to Idaho. That is what **Buck Knives** did in order to save its company from financial ruin. Electricity rates in Idaho were half those in California, workers' compensation was one-third the costs and factory wages were 20% lower. Combined, this would reduce manufacturing costs by \$600,000 per year. Moving the factory would cost about \$8.5 million, plus \$4 million to move key employees. Offsetting these costs was the estimated \$11 million selling price of the California property. Based on these estimates, the move would pay for itself in three years.

Ultimately, the company received only \$7.5 million for its California property, only 58 of 75 key employees were willing to move, construction was delayed by a year which caused the new plant to increase in price by \$1.5 million, and wages surged in Idaho due to low unemployment. Despite all of these complications, though, the company considers the move a great success.

Source: Chris Lydgate, "The Buck Stopped," *Inc. Magazine* (May 2006), pp. 87–95.

- ?** What were some of the factors that complicated the company's decision to move?  
**?** How should the company have incorporated such factors into its incremental analysis?  
 (See page 1235.)

## Allocate Limited Resources

Companies, like individuals, face limited resources. For a retail department store, the limited resource may be floor space. For a manufacturing company, the limited resource may be raw materials, direct labor hours, or machine capacity. When a company has limited resources, management must decide which products to make and sell in order to maximize net income.

To illustrate, assume that Collins Company manufactures deluxe and standard pen and pencil sets. The limiting resource is machine capacity, which is 3,600 hours per month. Relevant data consist of the following.

|                              | <u>Deluxe Sets</u> | <u>Standard Sets</u> |
|------------------------------|--------------------|----------------------|
| Contribution margin per unit | \$8                | \$6                  |
| Machine hours required       | 0.4                | 0.2                  |

### Study Objective [8]

Determine which products to make and sell when resources are limited.

#### Illustration 26-13

Contribution margin and machine hours

The deluxe sets may appear to be more profitable: They have a higher contribution margin (\$8) than the standard sets (\$6). However, the standard sets take fewer machine hours to produce than the deluxe sets. Therefore, Collins needs to find the **contribution margin per unit of limited resource**—in this case, contribution margin per machine hour. This is obtained by dividing the contribution margin per unit of each product by the number of units of the limited resource required for each product, as shown in Illustration 26-14.

|   | <u>Deluxe Sets</u> | <u>Standard Sets</u> |
|---|--------------------|----------------------|
| Contribution margin per unit (a)                                    | \$8                | \$6                  |
| Machine hours required (b)  | 0.4                | 0.2                  |
| <b>Contribution margin per unit of limited resource [(a) ÷ (b)]</b> | <b>\$20</b>        | <b>\$30</b>          |

### Helpful Hint

CM alone is not enough in this decision. The key factor is CM per unit of limited resource.

### Illustration 26-14

Contribution margin per unit of limited resource

The computation shows that the standard sets have a higher contribution margin per unit of limited resource. This suggests that, given sufficient demand for standard sets, the company should shift the sales mix to standard sets or should increase machine capacity. If Collins Company is able to increase machine capacity from 3,600 hours to 4,200 hours, the additional 600 hours could be used to produce either the standard or deluxe pen and pencil sets. The total contribution margin under each alternative is found by multiplying the machine hours by the contribution margin per unit of limited resource, as shown below.

|  | <u>Produce Deluxe Sets</u> | <u>Produce Standard Sets</u> |
|--|----------------------------|------------------------------|
| Machine hours (a)                                    | 600                        | 600                          |
| Contribution margin per unit of limited resource (b) | \$20                       | \$30                         |
| <b>Contribution margin [(a) × (b)]</b>               | <b><u>\$12,000</u></b>     | <b><u>\$18,000</u></b>       |

### Illustration 26-15

Incremental analysis—computation of total contribution margin

From this analysis, we see that to maximize net income, Collins should use all of the increased capacity to make and sell the standard sets.

## SECTION 2 CAPITAL BUDGETING

Individuals make capital expenditures when they buy a new home, car, or television set. Similarly, businesses make capital expenditures when they modernize plant facilities or expand operations. Companies like **Campbell Soup** must constantly determine how to invest their resources. Other examples: Hollywood studios recently built 25 new sound stage projects to allow for additional filming in future years. Also, **Union Pacific Resources Group Inc.** announced that it would cut its capital budget by 19% in order to use the funds to reduce its outstanding debt.

In business, as for individuals, the amount of possible capital expenditures usually exceeds the funds available for such expenditures. Thus, the resources available must be allocated (budgeted) among the competing alternatives. The process of making capital expenditure decisions in business is known as **capital budgeting**. Capital budgeting involves choosing among various capital projects to find the one(s) that will maximize a company's return on its financial investment.

## Evaluation Process

Many companies follow a standard process in capital budgeting. At least once a year, top management requests proposals for projects from each department. A capital budgeting committee screens the proposals and submits its findings to the officers of the company. The officers, in turn, select the projects they believe to be most worthy of funding. They submit this list to the board of directors. Ultimately, the directors approve the capital expenditure budget for the year. Illustration 26-16 shows this process.

**Illustration 26-16**  
Corporate capital budget  
authorization process

The involvement of top management and the board of directors in the process demonstrates the importance of capital budgeting decisions. These decisions often have a significant impact on a company's future profitability. In fact, poor capital budgeting decisions have led to the bankruptcy of some companies.

Accounting data are indispensable in assessing the probable effects of capital expenditures. To provide management with relevant data for capital budgeting decisions, you should be familiar with the quantitative techniques that may be used. The three most common techniques are: (1) annual rate of return, (2) cash payback, and (3) discounted cash flow. We demonstrate each of these techniques in the following sections. To illustrate the three quantitative techniques, assume that Tappan Company is considering an investment of \$130,000 in new equipment. The new equipment is expected to last 10 years. It will have zero salvage value at the end of its useful life. Tappan uses the straight-line method of depreciation for accounting purposes. The expected annual revenues and costs of the new product that will be produced from the investment are:

**Illustration 26-17**  
Estimated annual net income  
from capital expenditure

|   |           |  |                  |
|---|-----------|--|------------------|
| Sales   |           |  | \$200,000        |
| Less: Costs and expenses                        |           |  |                  |
| Manufacturing costs (exclusive of depreciation) | \$145,000 |  |                  |
| Depreciation expenses ( $\$130,000 \div 10$ )   | 13,000    |  |                  |
| Selling and administrative expenses             | 22,000    |  |                  |
|   |           |  | <u>180,000</u>   |
| Income before income taxes                      |           |  | 20,000           |
| Income tax expense                              |           |  | <u>7,000</u>     |
| Net income                                      |           |  | <u>\$ 13,000</u> |

## MANAGEMENT INSIGHT

### Investing for the Future

Monitoring capital expenditure amounts is one way to learn about a company's growth potential. Few companies can grow if they don't make significant capital investments. Here is a list of well-known companies and the amounts and types of their capital expenditures in a recent year.

| Company Name              | Amount        | Types of Expenditures                                |
|---------------------------|---------------|--|
| Campbell Soup Company     | \$283 million | Acquisitions and plant expansions.                   |
| Barrick Gold Corporation  | \$228 million | Land acquisition and mine expansion.                 |
| Dell Computer Corporation | \$329 million | Manufacturing and office facilities.                 |
| Sears, Roebuck and Co.    | \$925 million | New stores.  |
| Nike Inc.                 | \$186 million | Warehouse locations, management information systems. |

**?** Why is it important for top management to constantly monitor the nature, amount, and success of a company's capital expenditures? (See page 1235.)

## Annual Rate of Return

The **annual rate of return technique** is based directly on accrual-accounting data rather than on cash flows. It indicates **the profitability of a capital expenditure** by dividing expected annual net income by the average investment. Illustration 26-18 shows the formula for computing annual rate of return.

$$\text{Expected Annual Net Income} \div \text{Average Investment} = \text{Annual Rate of Return}$$

Expected annual net income is obtained from the projected income statement. Tappan Company's expected annual net income is \$13,000. Average investment is derived from the following formula.

$$\text{Average Investment} = \frac{\text{Original Investment} + \text{Value at End of Useful Life}}{2}$$

The "value at the end of useful life" is the asset's salvage value, if any.

For Tappan Company, average investment is \$65,000  $(\$130,000 + \$0) \div 2$ . The expected annual rate of return for Tappan Company's investment in new equipment is therefore 20%, computed as follows.

$$\$13,000 \div \$65,000 = 20\%$$

Management then compares this annual rate of return with its **required rate of return** for investments of similar risk. The required rate of return is generally based on the company's **cost of capital**. The **cost of capital** is the rate of return that management expects to pay on all borrowed and equity funds. The cost of capital is a company-wide (or sometimes a division-wide) rate; it does not relate to the cost of funding a specific project.

### Study Objective [9]

Contrast annual rate of return and cash payback in capital budgeting.

**Illustration 26-18**  
Annual rate of return formula

**Illustration 26-19**  
Formula for computing average investment

**Helpful Hint**

A capital budgeting decision based on only one technique may be misleading. It is often wise to analyze the investment from a number of different perspectives.

The annual rate of return decision rule is: **A project is acceptable if its rate of return is greater than management's required rate of return. It is unacceptable when the reverse is true.** When companies use the rate of return technique in deciding among several acceptable projects, **the higher the rate of return for a given risk, the more attractive the investment.**

The principal advantages of this technique are simplicity of calculation and management's familiarity with the accounting terms used in the computation. A major limitation of the annual rate of return approach is that it does not consider the time value of money. For example, no consideration is given as to whether cash inflows will occur early or late in the life of the investment. As explained in Appendix D at the back of the book, recognition of the time value of money can make a significant difference between the future value and the present value of an investment. A second disadvantage is that this method relies on accrual-accounting numbers rather than expected cash flows.

## Cash Payback

The **cash payback technique** identifies the time period required to recover the cost of the capital investment from the annual cash inflow produced by the investment. Illustration 26-20 presents the formula for computing the cash payback period.

**Illustration 26-20**

Cash payback formula

|                                   |   |                             |   |                            |
|-----------------------------------|---|-----------------------------|---|----------------------------|
| <b>Cost of Capital Investment</b> | ÷ | <b>Net Annual Cash Flow</b> | = | <b>Cash Payback Period</b> |
|-----------------------------------|---|-----------------------------|---|----------------------------|

**Helpful Hint**

Net annual cash flow can also be approximated by net cash provided by operating activities from the statement of cash flows.

**Net annual cash flow** is approximated by taking net income and adding back depreciation expense. Depreciation expense is added back because depreciation on the capital expenditure does not involve an annual outflow of cash. Accordingly, the depreciation deducted in determining net income must be added back to determine net annual cash flows.

In the Tappan Company example, net annual cash flow is \$26,000, as shown below.

**Illustration 26-21**

Computation of net annual cash flow

|                             |                               |
|-----------------------------|-------------------------------|
| Net income                  | \$13,000                      |
| Add: Depreciation expense   | <u>13,000</u>                 |
| <b>Net annual cash flow</b> | <b><u><u>\$26,000</u></u></b> |

The cash payback period in this example is therefore five years, computed as follows.

$$\$130,000 \div \$26,000 = 5 \text{ years}$$

Evaluation of the payback period is often related to the expected useful life of the asset. For example, assume that at Tappan Company a project is unacceptable if the payback period is longer than 60% of the asset's expected useful life. The five-year payback period in this case is 50% of the project's expected useful life. Thus, the project is acceptable.

It follows that when companies use the payback method to decide among acceptable alternative projects, **the shorter the payback period, the more attractive the investment.** This is true for two reasons: First, the earlier the investment is recovered, the sooner the company can use the cash funds for other purposes. Second, the risk of loss from obsolescence and changed economic conditions is less in a shorter payback period.

The preceding computation of the cash payback period assumes **equal** cash flows in each year of the investment's life. In many cases, this assumption is not valid. In the

case of **uneven** cash flows, the company determines the cash payback period when the cumulative net cash flows from the investment equal the cost of the investment.

To illustrate, assume that Chen Company proposes an investment in a new website that is estimated to cost \$300,000. Illustration 26-22 shows the proposed investment cost, net annual cash flows, cumulative net cash flows, and the cash payback period.

| Year | Investment | Net Annual Cash Flow | Cumulative Net Cash Flow |
|------|------------|----------------------|--------------------------|
| 0    | \$300,000  |                      |                          |
| 1    |            | \$ 60,000            | \$ 60,000                |
| 2    |            | 90,000               | 150,000                  |
| 3    |            | 90,000               | 240,000                  |
| 4    |            | 120,000              | 360,000                  |
| 5    |            | 100,000              | 460,000                  |

Cash payback period = 3.5 years

**Illustration 26-22**  
Net annual cash flow schedule

As Illustration 26-22 shows, at the end of year 3, cumulative cash flow of \$240,000 is less than the investment cost of \$300,000. However, at the end of year 4, the cumulative net cash flow of \$360,000 exceeds the investment cost. The net cash flow needed in year 4 to equal the investment cost is \$60,000 (\$300,000 – \$240,000). Assuming the net cash flow occurs evenly during year 4, we then divide this amount by the annual net cash flow in year 4 (\$120,000) to determine the point during the year when the cash payback occurs. Thus, we get 0.50 (\$60,000/\$120,000), or half of the year, and the cash payback period is 3.5 years.

The cash payback method may be useful as an initial screening tool. It may be the most critical factor in the capital budgeting decision for a company that desires a fast turnaround of its investment because of a weak cash position. Like the annual rate of return, cash payback is relatively easy to compute and understand.

However, cash payback is not ordinarily the only basis for the capital budgeting decision because it ignores the expected profitability of the project. To illustrate, assume that Projects X and Y have the same payback period, but Project X's useful life is double the useful life of Project Y's. Project X's earning power, therefore, is twice as long as Project Y's. A further—and major—disadvantage of this technique is that it ignores the time value of money.

## Do it!

Rochelle Company is considering purchasing new equipment for \$250,000. The equipment has a 5-year useful life, and depreciation would be \$50,000 (assuming straight-line depreciation and zero salvage value). The purchase of the equipment should increase net income by \$25,000 each year for 5 years. (a) Compute the annual rate of return. (b) Compute the cash payback period.

### Solution

- (a) Average investment =  $(\$250,000 + 0) \div 2 = \$125,000$   
Annual rate of return =  $\$25,000 \div \$125,000 = 20\%$
- (b) Net annual cash flow =  $\$25,000 + \$50,000 = \$75,000$   
Cash payback period =  $\$250,000 \div \$75,000 = 3.3 \text{ years}$

## Capital Budgeting

### action plan

Use appropriate formulas:

- ✓ Annual rate of return = Expected annual net income  $\div$  Average investment.
- ✓ Average investment = (Original investment + Value at end of useful life)  $\div$  2.
- ✓ Cash payback period = Cost of capital investment  $\div$  Net annual cash flow.
- ✓ Net annual cash flow = Net income + Depreciation expense.

## Discounted Cash Flow

### Study Objective [10]

Distinguish between the net present value and internal rate of return methods.

The **discounted cash flow technique** is generally recognized as the best conceptual approach to making capital budgeting decisions. This technique considers both the estimated total net cash flows from the investment and the time value of money. The expected total net cash flow consists of the sum of the annual net cash flows plus the estimated liquidation proceeds when the asset is sold for salvage at the end of its useful life. But because liquidation proceeds are generally immaterial, we ignore them in subsequent discussions.

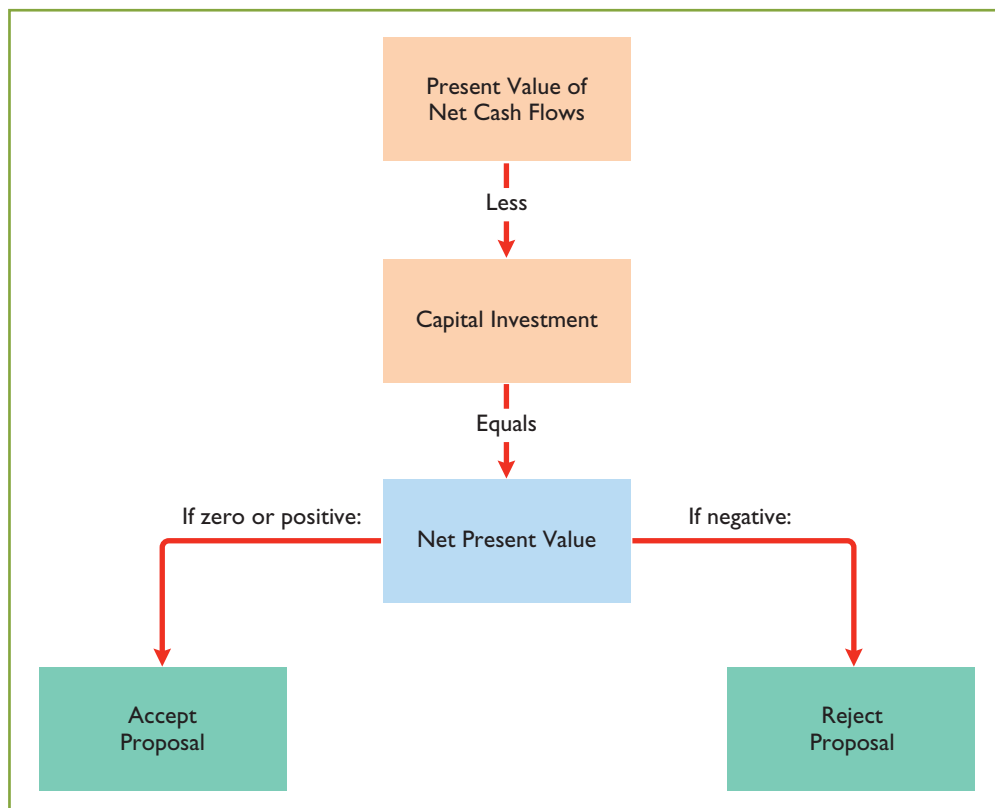

Two methods are used with the discounted cash flow technique: (1) net present value, and (2) internal rate of return. **Before we discuss the methods, we recommend that you examine Appendix D if you need a review of present value concepts.**

### Net Present Value Method

The **net present value (NPV) method** involves discounting net cash flows to their present value and then comparing that present value with the capital outlay required by the investment. The difference between these two amounts is referred to as **net present value (NPV)**. Company management determines what interest rate to use in discounting the future net cash flows. This rate, often referred to as the discount rate or **required rate of return**, is discussed in a later section.

The NVP decision rule is this: **A proposal is acceptable when net present value is zero or positive.** At either of those values, the rate of return on the investment equals or exceeds the required rate of return. When net present value is negative, the project is unacceptable. Illustration 26-23 shows the net present value decision criteria.

**Illustration 26-23**  
Net present value decision criteria

When making a selection among acceptable proposals, **the higher the positive net present value, the more attractive the investment.** The application of this method to two cases is described in the next two sections. In each case, we assume that the investment has no salvage value at the end of its useful life.

### EQUAL NET ANNUAL CASH FLOWS

Tappan Company's net annual cash flows are \$26,000. If we assume this amount is **uniform over the asset's useful life**, we can compute the present value of the net annual cash flows by using the present value of an annuity of 1 for 10 periods (in Table 2, Appendix D). The computation at a rate of return of 12% is:

|   |                              |
|---|------------------------------|
|   | <u>Present Values at 12%</u> |
| Discount factor for 10 periods                                | 5.65022                      |
| Present value of net annual cash flows:<br>\$26,000 × 5.65022 | <u><b>\$146,906</b></u>      |

### Ethics Note

Discounted future cash flows may not take into account all of the important considerations needed to make an informed capital budgeting decision. Other issues, for example, could include worker safety, product quality, and environmental impact.

### Illustration 26-24

Present value of net annual cash flows

The analysis of the proposal by the net present value method is as follows.

|  |                         |
|--|-------------------------|
|  | <u>12%</u>              |
| Present value of net annual cash flows       | \$146,906               |
| Capital investment                           | <u>130,000</u>          |
| <b>Positive (negative) net present value</b> | <u><b>\$ 16,906</b></u> |

### Illustration 26-25

Computation of net present value

The proposed capital expenditure is acceptable at a required rate of return of 12% because the net present value is positive.

### UNEQUAL NET ANNUAL CASH FLOWS

When net annual cash flows are unequal, we cannot use annuity tables to calculate their present value. Instead, we use tables showing the **present value of a single future amount for each net annual cash flow.**

To illustrate, assume that Tappan Company management expects the same aggregate net annual cash flow (\$260,000) over the life of the investment. But because of a declining market demand for the new product over the life of the equipment, the net annual cash flows are higher in the early years and lower in the later years. The present value of the net annual cash flows is calculated as follows using Table 1 in Appendix D.

| Year | Assumed Net Annual Cash Flows | Discount Factor | Present Value           |
|------|-------------------------------|-----------------|-------------------------|
|      |                               | 12%             | 12%                     |
|      | (1)                           | (2)             | (1) × (2)               |
| 1    | \$ 36,000                     | .89286          | \$ 32,143               |
| 2    | 32,000                        | .79719          | 25,510                  |
| 3    | 29,000                        | .71178          | 20,642                  |
| 4    | 27,000                        | .63552          | 17,159                  |
| 5    | 26,000                        | .56743          | 14,753                  |
| 6    | 24,000                        | .50663          | 12,159                  |
| 7    | 23,000                        | .45235          | 10,404                  |
| 8    | 22,000                        | .40388          | 8,885                   |
| 9    | 21,000                        | .36061          | 7,573                   |
| 10   | 20,000                        | .32197          | 6,439                   |
|      | <u><b>\$260,000</b></u>       |                 | <u><b>\$155,667</b></u> |

### Helpful Hint

The ABC Co. expects equal cash flows over an asset's 5-year useful life.

What discount factor should it use in determining present values if management wants (1) a 12% return or (2) a 15% return?

Answer: Using Table 2, the factors are (1) 3.60478 and (2) 3.35216.

### Illustration 26-26

Computing present value of unequal annual cash flows

Therefore, the analysis of the proposal by the net present value method is as follows.

**Illustration 26-27**  
Analysis of proposal using net present value method

|  |                  |
|--|------------------|
|  | <b>12%</b>       |
| Present value of net annual cash flows       | \$155,667        |
| Capital investment                           | 130,000          |
| <b>Positive (negative) net present value</b> | <b>\$ 25,667</b> |

In this example, the present values of the net annual cash flows are greater than the \$130,000 capital investment. Thus, the project is acceptable at a 12% required rate of return. The difference between the present values using the 12% rate under equal cash flows (\$146,906) and unequal net annual cash flows (\$155,667) is due to the pattern of the net cash flows.

## MANAGEMENT INSIGHT

### Seeing the Big Picture

Inaccurate trend forecasting and market positioning are more detrimental to capital investment decisions than using the wrong discount rate. **Amplex** patented the VCR but failed to see its market potential. **Westinghouse** made the same mistake with the flat-screen video display. More often, companies adopt projects or businesses only to discontinue them in response to market changes. **Texas Instruments** announced it would stop manufacturing computer chips, after it had made substantial capital investments that enabled it to become one of the world's leading suppliers. The company dropped out of some 12 business lines in only a few years.

Source: World Research Advisory Inc. (London, August 1998), p. 4.

**?** How important is the choice of discount rate in making capital budgeting decisions? (See page 1235.)

## Internal Rate of Return Method

The **internal rate of return method** differs from the net present value method in that it finds the **interest yield of the potential investment**. The **internal rate of return (IRR)** is the interest rate that will cause the present value of the proposed capital expenditure to equal the present value of the expected net annual cash flows. The determination of the internal rate of return involves two steps.

**Step 1. Compute the internal rate of return factor.** The formula for this factor is:

**Illustration 26-28**  
Formula for internal rate of return factor

|                           |   |                             |   |                                       |
|---------------------------|---|-----------------------------|---|---------------------------------------|
| <b>Capital Investment</b> | ÷ | <b>Net Annual Cash flow</b> | = | <b>Internal Rate of Return Factor</b> |
|---------------------------|---|-----------------------------|---|---------------------------------------|

The computation for Tappan Company, assuming equal net annual cash flows,<sup>2</sup> is:

$$\$130,000 \div \$26,000 = 5.0$$

<sup>2</sup>When net annual cash flows are equal, the internal rate of return factor is the same as the cash payback period.

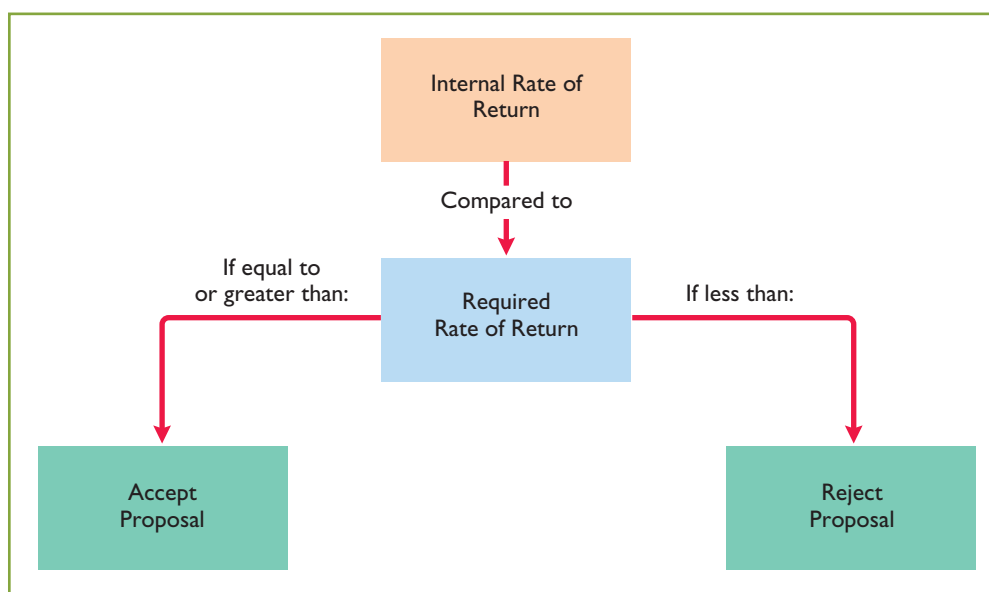

**Step 2. Use the factor and the present value of an annuity of 1 table to find the internal rate of return.** Table 2 of Appendix D is used in this step. The internal rate of return is the discount factor that is closest to the internal rate of return factor for the time period covered by the net annual cash flows.

For Tappan Company, the net annual cash flows are expected to continue for 10 years. Thus, it is necessary to read across the period-10 row in Table 2 to find the discount factor. The row for 10 periods is reproduced below for your convenience.

| (n)<br>Periods | 5%      | 6%      | 8%      | 9%      | 10%     | 11%     | 12%     | 15%            |
|----------------|---------|---------|---------|---------|---------|---------|---------|----------------|
| 10             | 7.72173 | 7.36009 | 6.71008 | 6.41766 | 6.14457 | 5.88923 | 5.65022 | <b>5.01877</b> |

In this case, the closest discount factor to 5.0 is 5.01877, which represents an interest rate of approximately 15%. The rate of return can be further determined by interpolation, but since we are using estimated net annual cash flows, such precision is seldom required.

Once managers know the internal rate of return, they compare it to the company's required rate of return (the discount rate). The IRR decision rule is as follows: **Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate of return.** Illustration 26-29 below shows these relationships. Assuming the required rate of return is 10% for Tappan Company, the project is acceptable because the 15% internal rate of return is greater than the required rate.

**Illustration 26-29**  
Internal rate of return  
decision criteria

The IRR method is widely used in practice. Most managers find the internal rate of return easy to interpret.

## Comparing Discounted Cash Flow Methods

Illustration 26-30 compares the two discounted cash flow methods—net present value and internal rate of return. When properly used, either method provides management with relevant quantitative data for making capital budgeting decisions.

### Illustration 26-30

Comparison of discounted cash flow methods

| Item             | Net Present Value   | Internal Rate of Return   |
|------------------|---|---|
| 1. Objective     | Compute net present value (a dollar amount).  | Compute internal rate of return (a percentage).   |
| 2. Decision rule | If net present value is zero or positive, accept the proposal.<br>If net present value is negative, reject the proposal | If internal rate of return is equal to or greater than the required rate of return, accept the proposal.<br>If internal rate of return is less than the required rate, reject the proposal. |

## Do it!

### Discounted Cash Flow

Watertown Paper Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$900,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$400,000 and that annual cash outflows would increase by \$190,000. Management has a required rate of return of 9%.

- (a) Calculate the net present value on this project, and discuss whether it should be accepted.
- (b) Calculate the internal rate of return on this project, and discuss whether it should be accepted.

#### action plan

- ✓ Compute net annual cash flow: Estimated annual cash inflows – Estimated annual cash outflows.
- ✓ Use the NPV technique to calculate the difference between net cash flows and the initial investment.
- ✓ Accept the project if the net present value is positive.
- ✓ Compute the IRR factor: Capital investment ÷ Net annual cash flows.
- ✓ Look up the factor in the present value of an annuity table to find the internal rate of return.
- ✓ Accept the project if the internal rate of return is equal to or greater than the required rate of return.

#### Solution

|  |                  |                           |                      |
|--|------------------|---------------------------|----------------------|
| (a) Estimated annual cash inflows      |                  |                           | \$400,000            |
| Estimated annual cash outflows         |                  |                           | <u>190,000</u>       |
| Net annual cash flow                   |                  |                           | <u>\$210,000</u>     |
|  | <u>Cash Flow</u> | <u>9% Discount Factor</u> | <u>Present Value</u> |
| Present value of net annual cash flows | \$210,000        | 4.48592*                  | \$942,043            |
| Capital investment                     |                  |                           | <u>900,000</u>       |
| Net present value                      |                  |                           | <u>\$ 42,043</u>     |

\*Table 2, Appendix D

Since the net present value is greater than zero, Watertown should accept the project.

- (b)  $\$900,000 \div 210,000 = 4.285714$ . Using Table 2 of Appendix D and the factors that correspond with the six-period row, 4.285714 is between the factors for 10% and 11%. Since the project has an internal rate that is greater than 10% and the required rate of return is only 9%, Watertown should accept the project.

Related exercise material: BE26-11, BE26-12, BE26-13, E26-12, E26-13, E26-14, E26-15, and **Do it!** 26-5.

**COMPREHENSIVE****Do it!**

Sierra Company is considering a long-term capital investment project called ZIP. The project will require an investment of \$120,000, and it will have a useful life of 4 years. Annual net income for ZIP is expected to be: Year 1 \$12,000; Year 2 \$10,000; Year 3 \$8,000; and Year 4 \$6,000. Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 12%.

**Instructions**

- Compute the annual rate of return for the project.
- Compute the cash payback period for the project. (Round to two decimals.)
- Compute the net present value for the project. (Round to nearest dollar.)
- Should the project be accepted? Why?

**Solution to Comprehensive Do it!**

(a)  $\$9,000 (\$36,000 \div 4) \div \$60,000 (\$120,000 \div 2) = 15\%$

(b) Depreciation expense is  $\$120,000 \div 4 \text{ years} = \$30,000$ .

Net annual cash flows are:

Year 1  $\$12,000 + \$30,000 = \$42,000$

Year 2  $\$10,000 + \$30,000 = \$40,000$

Year 3  $\$8,000 + \$30,000 = \$38,000$

Year 4  $\$6,000 + \$30,000 = \$36,000$

Cumulative net cash flows would be \$82,000 ( $\$42,000 + \$40,000$ ) at the end of year 2 and \$120,000 ( $\$42,000 + \$40,000 + \$38,000$ ) at the end of year 3. Since the cumulative net cash flows at the end of year 3 exactly equal the initial cash investment of \$120,000, the cash payback period is 3 years.

(c)

| Year | Discount Factor | Net Annual Cash Flow       | Present Value   |
|------|-----------------|----------------------------|-----------------|
| 1    | .89286          | \$42,000                   | \$ 37,500       |
| 2    | .79719          | 40,000                     | 31,888          |
| 3    | .71178          | 38,000                     | 27,048          |
| 4    | .63552          | 36,000                     | 22,879          |
|      |                 |                            | <u>119,315</u>  |
|      |                 | Capital investment         | <u>120,000</u>  |
|      |                 | Negative net present value | <u>\$ (685)</u> |

(d) The annual rate of return of 15% is good. However, the cash payback period is 75% of the project's useful life, and net present value is negative. The recommendation is to reject the project.

**action plan**

✓ To compute annual rate of return, divide expected annual net income by average investment.

✓ To compute cash payback, divide cost of the investment by net annual cash flows.

✓ Recall that net annual cash flow equals annual net income plus annual depreciation expense.

✓ Be careful to use the correct discount factor in using the net present value method.

**Summary of Study Objectives**

**[1] Identify the steps in management's decision-making process.** Management's decision-making process is: (a) identify the problem and assign responsibility, (b) determine and evaluate possible courses of action, (c) make the decision, and (d) review the results of the decision.

**[2] Describe the concept of incremental analysis.** Incremental analysis identifies financial data that change under alternative courses of action. These data are relevant to the

decision because they will vary in the future among the possible alternatives.

**[3] Identify the relevant costs in accepting an order at a special price.** The relevant information in accepting an order at a special price is the difference between the variable costs to produce the special order and expected revenues.

**[4] Identify the relevant costs in a make-or-buy decision.** In a make-or-buy decision, the relevant costs are

(a) the manufacturing costs that will be saved, (b) the purchase price, and (c) opportunity costs.

**[5] Give the decision rule for whether to sell or process materials further.** The decision rule for whether to sell or process materials further is: Process further as long as the incremental revenue from processing exceeds the incremental processing costs.

**[6] Identify the factors to consider in retaining or replacing equipment.** The factors to consider in determining whether equipment should be retained or replaced are the effects on variable costs and the cost of the new equipment. Also, any trade-in allowance or cash disposal value of the existing asset must be considered.

**[7] Explain the relevant factors in whether to eliminate an unprofitable segment.** In deciding whether to eliminate an unprofitable segment, determine the contribution margin, if any, produced by the segment and the disposition of the segment's fixed expenses.

**[8] Determine which products to make and sell when resources are limited.** When a company has limited resources, find the contribution margin per unit of limited resource. Then multiply this amount by the units of limited resource to determine which product maximizes net income.

**[9] Contrast annual rate of return and cash payback in capital budgeting.** The *annual rate of return* is obtained by dividing expected annual net income by the average investment. The higher the rate of return, the more attractive the investment. The *cash payback* technique identifies the time period to recover the cost of the investment. The formula is: Cost of capital expenditure divided by estimated net annual cash flow equals cash payback period. The shorter the payback period, the more attractive the investment.

**[10] Distinguish between the net present value and internal rate of return methods.** Under the *net present value* method, compare the present value of future net cash flows with the capital investment to determine net present value. The NPV decision rule is: Accept the project if net present value is zero or positive. Reject the investment if net present value is negative.

Under the *internal rate of return* method, find the interest yield of the potential investment. The IRR decision rule is: Accept the project when the internal rate of return is equal to or greater than the required rate of return. Reject the project when the internal rate of return is less than the required rate.

## Glossary

**Annual rate of return technique** Determines the profitability of a capital expenditure by dividing expected annual net income by the average investment. (p. 1207).

**Capital budgeting** The process of making capital expenditure decisions in business. (p. 1205).

**Cash payback technique** Identifies the time period required to recover the cost of a capital investment from the net annual cash flow produced by the investment. (p. 1208).

**Cost of capital** The rate of return that management expects to pay on all borrowed and equity funds. (p. 1207).

**Discounted cash flow technique** Considers both the estimated total net cash flows from the investment and the time value of money. (p. 1210).

**Incremental analysis** The process of identifying the financial data that change under alternative courses of action. (p. 1195).

**Internal rate of return (IRR)** The rate that will cause the present value of the proposed capital expenditure to

equal the present value of the expected net annual cash flows. (p. 1212).

**Internal rate of return method** Finds the interest yield of the potential investment. (p. 1212).

**Net present value (NPV)** The difference that results when the original capital outlay is subtracted from the discounted net cash flows. (p. 1210).

**Net present value (NPV) method** Discounts net cash flows to their present value and then compares that present value to the capital outlay required by the investment. (p. 1210).

**Opportunity cost** The potential benefit that may be obtained from following an alternative course of action. (p. 1199).

**Required rate of return** The rate that is generally based on the company's cost of capital. (p. 1207).

**Sunk cost** A cost that cannot be changed by any present or future decision. (p. 1202).

## Self-Test Questions

Answers are on page 1235.

- (SO 1) **1.** Three of the steps in management's decision process are: (1) Review results of decision. (2) Identify the problem. (3) Make the decision. The steps are performed in the following order.

- a.** (1), (2), (3).                      **c.** (2), (1), (3).  
**b.** (3), (2), (1).                      **d.** (2), (3), (1).  
**2.** Incremental analysis is the process of identifying the financial data that: (SO 2)

- a. do not change under alternative courses of action.  
 b. change under alternative courses of action.  
 c. are mixed under alternative courses of action.  
 d. No correct answer is given.
- (SO 3) 3. It costs a company \$14 of variable costs and \$6 of fixed costs to produce product A that sells for \$30. A foreign buyer offers to purchase 3,000 units at \$18 each. If the special offer is accepted and produced with unused capacity, net income will:  
 a. decrease \$6,000.                      c. increase \$12,000.  
 b. increase \$6,000.                      d. increase \$9,000.
- (SO 3) 4. Jobart Company is currently operating at full capacity. It is considering buying a part from an outside supplier rather than making it in-house. If Jobart purchases the part, it can use the released productive capacity to generate additional income of \$30,000 from producing a different product. When conducting incremental analysis in this make-or-buy decision, the company should:  
 a. ignore the \$30,000.  
 b. add \$30,000 to other costs in the “Make” column.  
 c. add \$30,000 to other costs in the “Buy” column.  
 d. subtract \$30,000 from the other costs in the “Make” column.
- (SO 4) 5. In a make-or-buy decision, relevant costs are:  
 a. manufacturing costs that will be saved.  
 b. the purchase price of the units.  
 c. opportunity costs.  
 d. All of the above.
- (SO 5) 6. The decision rule in a sell-or-process-further decision is: Process further as long as the incremental revenue from processing exceeds:  
 a. incremental processing costs.  
 b. variable processing costs.  
 c. fixed processing costs.  
 d. No correct answer is given.
- (SO 5) 7. Walton, Inc. makes an unassembled product that it currently sells for \$55. Production costs are \$20. Walton is considering assembling the product and selling it for \$68. The cost to assemble the product is estimated at \$12. What decision should Walton make?  
 a. Sell before assembly; net income per unit will be \$12 greater.  
 b. Sell before assembly; net income per unit will be \$1 greater.  
 c. Process further; net income per unit will be \$13 greater.  
 d. Process further; net income per unit will be \$1 greater.
- (SO 6) 8. In a decision to retain or replace equipment, the book value of the old equipment is a(n):  
 a. opportunity cost.                      c. incremental cost  
 b. sunk cost.                                  d. marginal cost.
- (SO 7) 9. If an unprofitable segment is eliminated:  
 a. net income will always increase.  
 b. variable expenses of the eliminated segment will have to be absorbed by other segments.  
 c. fixed expenses allocated to the eliminated segment will have to be absorbed by other segments.  
 d. net income will always decrease.
10. A segment of Hazard Inc. has the following data. (SO 7)
- |                |           |
|----------------|-----------|
| Sales          | \$200,000 |
| Variable costs | \$140,000 |
| Fixed costs    | \$100,000 |
- If this segment is eliminated, 50% of the fixed costs will be eliminated, and the rest will be allocated to the remaining segments. What should Hazard do?  
 a. Eliminate the segment; net income will be \$50,000 greater.  
 b. Eliminate the segment; net income will be \$10,000 greater.  
 c. Keep the segment; net income will be \$200,000 greater.  
 d. Keep the segment; net income will be \$10,000 greater.
11. If the contribution margin per unit is \$15 and it takes 3.0 machine hours to produce the unit, the contribution margin per unit of limited resource is: (SO 8)  
 a. \$25.    c. \$45.  
 b. \$5.    d. No correct answer is given.
12. Which of the following is *incorrect* about the annual rate of return technique? (SO 9)  
 a. The calculation is simple.  
 b. The accounting terms used are familiar to management.  
 c. The timing of the net cash flows is not considered.  
 d. The time value of money is considered.
13. What is a weakness of the cash payback approach? (SO 9)  
 a. It uses accrual-based accounting numbers.  
 b. It ignores the time value of money.  
 c. It is complicated to compute.  
 d. It cannot be used if a project has uneven net annual cash flows.
14. A project should be accepted if its internal rate of return exceeds: (SO 10)  
 a. zero.  
 b. the rate of return on a government bond.  
 c. the company’s required rate of return.  
 d. the rate the company pays on borrowed funds.
15. A positive net present value means that the: (SO 10)  
 a. project’s rate of return is less than the cutoff rate.  
 b. project’s rate of return exceeds the required rate of return.  
 c. project’s rate of return equals the required rate of return.  
 d. project is unacceptable.

## Questions

1. What steps are frequently involved in management’s decision-making process?
2. Your roommate, Dave Klein, contends that accounting contributes to most of the steps in management’s decision-making process. Is your roommate correct? Explain.
3. “Incremental analysis involves the accumulation of information concerning a single course of action.” Do you agree? Why?

## 1218 26 Incremental Analysis and Capital Budgeting

4. Dean Martin asks your help concerning the relevance of variable and fixed costs in incremental analysis. Help Dean with his problem.
5. What data are relevant in deciding whether to accept an order at a special price?
6. Quinones Company has an opportunity to buy parts at \$7 each that currently cost \$10 to make. What manufacturing costs are relevant to this make-or-buy decision?
7. Define the term “opportunity cost.” How may this cost be relevant in a make-or-buy decision?
8. What is the decision rule in deciding whether to sell a product or process it further?
9. Your roommate, Sylvia Ayala, is confused about sunk costs. Explain to your roommate the meaning of sunk costs and their relevance to a decision to retain or replace equipment.
10. Beacon Inc. has one product line that is unprofitable. What circumstances may cause overall company net income to be lower if the unprofitable product line is eliminated?
11. How is the contribution margin per unit of limited resources computed?
12. Describe the process a company may use in screening and approving the capital expenditure budget.
13. Your classmate, Mindy Penland, is confused about the factors that are included in the annual rate of return technique. What is the formula for this technique?
14. Frido Ortiz is trying to understand the term “cost of capital.” Define the term, and indicate its relevance to the decision rule under the annual rate of return technique.
15. Hank Snow claims the formula for the cash payback technique is the same as the formula for the annual rate of return technique. Is Hank correct? What is the formula for the cash payback technique?
16. What are the advantages and disadvantages of the cash payback technique?
17. Two types of present value tables may be used with the discounted cash flow technique. Identify the tables and the circumstance(s) when each table should be used.
18. What is the decision rule under the net present value method?
19. Identify the steps required in using the internal rate of return method.
20. Calliope Company uses the internal rate of return method. What is the decision rule for this method?

## Brief Exercises

*Identify the steps in management's decision-making process.*

(SO 1)

**BE26-1** The steps in management's decision-making process are listed in random order below. Indicate the order in which the steps should be executed.

- |  |   |
|--|---|
| <input type="checkbox"/> Make a decision.                                | <input type="checkbox"/> Review results of the decision.                    |
| <input type="checkbox"/> Identify the problem and assign responsibility. | <input type="checkbox"/> Determine and evaluate possible courses of action. |

*Determine incremental changes.*

(SO 2)

**BE26-2** Vinh Company is considering two alternatives. Alternative A will have sales of \$150,000 and costs of \$100,000. Alternative B will have sales of \$180,000 and costs of \$120,000. Compare Alternative A to Alternative B showing incremental revenues, costs, and net income. Which alternative should you choose?

*Determine whether to accept a special order.*

(SO 3)

**BE26-3** In Kastle Company, it costs \$30 per unit (\$20 variable and \$10 fixed) to make a product that normally sells for \$45. A foreign wholesaler offers to buy 4,000 units at \$23 each. Kastle will incur special shipping costs of \$1 per unit. Assuming that Kastle has excess operating capacity, prepare an incremental analysis that indicates the net income (loss) Kastle would realize by accepting the special order. Should the order be accepted?

*Determine whether to make or buy a part.*

(SO 4)

**BE26-4** Beamer Manufacturing incurs unit costs of \$8 (\$5 variable and \$3 fixed) in making a subassembly part for its finished product. A supplier offers to make 10,000 of the part at \$5.30 per unit. If the offer is accepted, Beamer will save all variable costs but no fixed costs. Prepare an analysis showing the total cost saving, if any, Beamer will realize by buying the part. What should they do?

*Determine whether to sell or process further.*

(SO 5)

**BE26-5** Keaton Inc. makes unfinished bookcases that it sells for \$60. Production costs are \$30 variable and \$10 fixed. Because it has unused capacity, Keaton is considering finishing the bookcases and selling them for \$72. Variable finishing costs are expected to be \$8 per unit with no increase in fixed costs. Prepare an analysis on a per unit basis showing whether Keaton should sell unfinished or finished bookcases.

*Determine whether to retain or replace equipment.*

(SO 6)

**BE26-6** Stanley Company has a factory machine with a book value of \$90,000 and a remaining useful life of 4 years. A new machine is available at a cost of \$200,000. This machine will have a 4-year useful life with no salvage value. The new machine will lower annual variable manufacturing costs from \$600,000 to \$440,000. Prepare an analysis showing whether the old machine should be retained or replaced.

**BE26-7** O'Toole, Inc. manufactures golf clubs in three models. For the year, the Eagle line has a net loss of \$20,000 from sales \$200,000, variable expenses \$180,000, and fixed expenses \$40,000. If the Eagle line is eliminated, \$34,000 of fixed costs will remain. Prepare an analysis showing whether the Eagle line should be eliminated.

*Determine whether to eliminate an unprofitable segment.*

(SO 7)

**BE26-8** In Cheval Company, data concerning two products are: Contribution margin per unit—Product A \$11, Product B \$12; machine hours required for one unit—Product A 2, Product B 2.5. Compute the contribution margin per unit of limited resource for each product.

*Show allocation of limited resources.*

(SO 8)

**BE26-9** Hinton Company is considering purchasing new equipment for \$300,000. It is expected that the equipment will produce annual net income of \$10,000 over its 10-year useful life. Annual depreciation will be \$30,000. Compute the cash payback period.

*Compute the cash payback period for a capital investment.*

(SO 9)

**BE26-10** Laura Oil Company is considering investing in a new oil well. It is expected that the oil well will increase annual revenues by \$130,000 and will increase annual expenses by \$80,000 including depreciation. The oil well will cost \$490,000 and will have a \$10,000 salvage value at the end of its 10-year useful life. Calculate the annual rate of return.

*Compute annual rate of return.*

(SO 9)

**BE26-11** Wales Company is considering two different, mutually exclusive capital expenditure proposals. Project A will cost \$395,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by \$70,000. Project B will cost \$270,000, has an expected useful life of 10 years, a salvage value of zero, and is expected to increase net annual cash flows by \$50,000. A discount rate of 9% is appropriate for both projects. Compute the net present value of each project. Which project should be accepted?

*Compute net present value.*

(SO 10)

**BE26-12** Jacques Company is evaluating the purchase of a rebuilt spot-welding machine to be used in the manufacture of a new product. The machine will cost \$170,000, has an estimated useful life of 7 years, a salvage value of zero, and will increase net annual cash flows by \$33,740. What is its approximate internal rate of return?

*Calculate internal rate of return.*

(SO 10)

**BE26-13** Travolta Company accumulates the following data concerning a proposed capital investment: cash cost \$225,000, net annual cash flow \$34,000, present value factor of cash inflows for 10 years 6.71 (rounded). Determine the net present value, and indicate whether the investment should be made.

*Compute net present value of an investment.*

(SO 10)

## Do it! Review

**Do it! 26-1** Maize Company incurs a cost of \$35 per unit, of which \$20 is variable, to make a product that normally sells for \$58. A foreign wholesaler offers to buy 6,000 units at \$31 each. Maize will incur additional costs of \$2 per unit to imprint a logo and to pay for shipping. Compute the increase or decrease in net income Maize will realize by accepting the special order, assuming Maize has sufficient excess operating capacity. Should Maize Company accept the special order?

*Evaluate special order.*

(SO 3)

**Do it! 26-2** Bert Company must decide whether to make or buy some of its components. The costs of producing 60,000 switches for its generators are as follows.

*Evaluate make-or-buy opportunity.*

(SO 4)

|                  |          |                   |          |
|------------------|----------|-------------------|----------|
| Direct materials | \$30,000 | Variable overhead | \$45,000 |
| Direct labor     | \$42,000 | Fixed overhead    | \$60,000 |

Instead of making the switches at an average cost of \$2.95 ( $\$177,000 \div 60,000$ ), the company has an opportunity to buy the switches at \$2.75 per unit. If the company purchases the switches, all the variable costs and one-third of the fixed costs will be eliminated.

(a) Prepare an incremental analysis showing whether the company should make or buy the switches. (b) Would your answer be different if the released productive capacity will generate additional income of \$30,000?

**Do it! 26-3** Pantera Corporation manufactures several types of accessories. For the year, the gloves and mittens line had sales of \$500,000, variable expenses of \$375,000, and fixed expenses of \$150,000. Therefore, the gloves and mittens line had a net loss of \$25,000. If Pantera eliminates the line, \$40,000 of fixed costs will remain.

*Analyze whether to eliminate unprofitable segment.*

(SO 7)

Prepare an analysis showing whether the company should eliminate the gloves and mittens line.

**Do it! 26-4** Lumine Company is considering purchasing new equipment for \$350,000. The equipment has a 5-year useful life, and depreciation would be \$70,000 (assuming straight-line depreciation

*Compute capital budgeting measures.*

(SO 9)

and zero salvage value). The purchase of the equipment should increase net income by \$40,000 each year for 5 years. (a) Compute the annual rate of return. (b) Compute the cash payback period.

Compute discounted cash flow measures.

(SO 10)

**Do it! 26-5** Samantha Box Corporation is considering adding another machine for the manufacture of corrugated cardboard. The machine would cost \$700,000. It would have an estimated life of 6 years and no salvage value. The company estimates that annual cash inflows would increase by \$300,000 and that annual cash outflows would increase by \$140,000. Management has a required rate of return of 9%.

(a) Calculate the net present value on this project, and discuss whether it should be accepted. (b) Calculate the internal rate of return on this project, and discuss whether it should be accepted.

## Exercises

Analyze statements about decision making and incremental analysis.

(SO 1, 2)

**E26-1** Bloom has prepared the following list of statements about decision making and incremental analysis.

1. The first step in management's decision-making process is, "Determine and evaluate possible courses of action."
2. The final step in management's decision-making process is to actually make the decision.
3. Accounting's contribution to management's decision-making process occurs primarily in evaluating possible courses of action and in reviewing the results.
4. In making business decisions, management ordinarily considers only financial information because it is objectively determined.
5. Decisions involve a choice among alternative courses of action.
6. The process used to identify the financial data that change under alternative courses of action is called incremental analysis.
7. Costs that are the same under all alternative courses of action sometimes affect the decision.
8. When using incremental analysis, some costs will always change under alternative courses of action, but revenues will not.
9. Variable costs will change under alternative courses of action, but fixed costs will not.

### Instructions

Identify each statement as true or false. If false, indicate how to correct the statement.

Make incremental analysis for special order.

(SO 3)

**E26-2** Billings Company manufactures toasters. For the first 8 months of 2013, the company reported the following operating results while operating at 75% of plant capacity.

|                       |                   |
|-----------------------|-------------------|
| Sales (400,000 units) | \$4,000,000       |
| Cost of goods sold    | <u>2,400,000</u>  |
| Gross profit          | 1,600,000         |
| Operating expenses    | <u>900,000</u>    |
| Net income            | <u>\$ 700,000</u> |

Cost of goods sold was 70% variable and 30% fixed. Operating expenses were 60% variable and 40% fixed.

In September, Billings Company receives a special order for 40,000 toasters at \$6.00 each from Del Carpic Company of Lima, Peru. Acceptance of the order would result in \$8,000 of shipping costs but no increase in fixed operating expenses.

### Instructions

- (a) Prepare an incremental analysis for the special order.
- (b)  Should Billings Company accept the special order? Why or why not?

Make incremental analysis for special-order decision.

(SO 3)

**E26-3** Shank Company produces golf discs which it normally sells to retailers for \$7 each. The cost of manufacturing 20,000 golf discs is:

|                   |                  |
|-------------------|------------------|
| Materials         | \$ 10,000        |
| Labor             | 30,000           |
| Variable overhead | 20,000           |
| Fixed overhead    | <u>40,000</u>    |
| Total             | <u>\$100,000</u> |

Shank also incurs 5% sales commission (\$0.35) on each disc sold.

Mulligan Corporation offers Shank \$4.75 per disc for 5,000 discs. Mulligan would sell the discs under its own brand name in foreign markets not yet served by Shank. If Shank accepts the offer, its fixed overhead will increase from \$40,000 to \$45,000 due to the purchase of a new imprinting machine. No sales commission will result from the special order.

### Instructions

- Prepare an incremental analysis for the special order.
- Should Shank accept the special order? Why or why not?
-  What assumptions underlie the decision made in part (b)?

**E26-4** Nona Inc. has been manufacturing its own shades for its table lamps. The company is currently operating at 100% of capacity. Variable manufacturing overhead is charged to production at the rate of 50% of direct labor cost. The direct materials and direct labor cost per unit to make the lamp shades are \$4.00 and \$6.00, respectively. Normal production is 40,000 table lamps per year.

A supplier offers to make the lamp shades at a price of \$13.50 per unit. If Nona Inc. accepts the supplier's offer, all variable manufacturing costs will be eliminated, but the \$40,000 of fixed manufacturing overhead currently being charged to the lamp shades will have to be absorbed by other products.

### Instructions

- Prepare the incremental analysis for the decision to make or buy the lamp shades.
-  Should Nona Inc. buy the lamp shades?
-  Would your answer be different in (b) if the productive capacity released by not making the lamp shades could be used to produce income of \$35,000?

**E26-5** Michelle Dawan recently opened her own basketweaving studio. She sells finished baskets in addition to the raw materials needed by customers to weave baskets of their own. Michelle has put together a variety of raw material kits, each including materials at various stages of completion. Unfortunately, owing to space limitations, Michelle is unable to carry all varieties of kits originally assembled and must choose between two basic packages.

The basic introductory kit includes undyed, uncut reeds (with dye included) for weaving one basket. This basic package costs Michelle \$12 and sells for \$27. The second kit, called Stage 2, includes cut reeds that have already been dyed. With this kit, the customer need only soak the reeds and weave the basket. Michelle is able to produce the second kit by using the basic materials included in the first kit and adding one hour of her own time (to produce two kits), which she values at \$18 per hour. Because she is more efficient at cutting and dying reeds than her average customer, Michelle is able to make two kits of the dyed reeds, in one hour, from one kit of undyed reeds. The kit of dyed and cut reeds sells for \$33.

### Instructions

Determine whether Michelle's basketweaving shop should carry the basic introductory kit with undyed and uncut reeds, or the Stage 2 kit with reeds already dyed and cut. Prepare an incremental analysis to support your answer.

**E26-6** Top Gear Bikes could sell its bicycles to retailers either assembled or unassembled. The cost of an unassembled bike is as follows.

|   |              |
|---|--------------|
| Direct materials                        | \$150        |
| Direct labor                            | 70           |
| Variable overhead (70% of direct labor) | 49           |
| Fixed overhead (30% of direct labor)    | 21           |
| Manufacturing cost per unit             | <u>\$290</u> |

The unassembled bikes are sold to retailers at \$400 each.

Top Gear currently has unused productive capacity that is expected to continue indefinitely; management has concluded that some of this capacity can be used to assemble the bikes and sell them at \$450 each. Assembling the bikes will increase direct materials by \$5 per bike, and direct labor by \$20 per bike. Additional variable overhead will be incurred at the normal rates, but there will be no additional fixed overhead as a result of assembling the bikes.

### Instructions

- Prepare an incremental analysis for the sell-or-process-further decision.
- Should Top Gear sell or process further? Why or why not?

*Make incremental analysis for make-or-buy decision.*

(SO 4)

*Make incremental analysis for further processing of materials.*

(SO 5)

*Make incremental analysis for sell-or-process-further decision.*

(SO 5)

## 1222 26 Incremental Analysis and Capital Budgeting

Make incremental analysis for retaining or replacing equipment.

(SO 6)

**E26-7** Haggis Enterprises uses a word processing computer to handle its sales invoices. Lately, business has been so good that it takes an extra 3 hours per night, plus every third Saturday, to keep up with the volume of sales invoices. Management is considering updating its computer with a faster model that would eliminate all of the overtime processing.

|                           | <u>Current Machine</u> | <u>New Machine</u> |
|---------------------------|------------------------|--------------------|
| Original purchase cost    | \$15,000               | \$21,000           |
| Accumulated depreciation  | 6,000                  | —                  |
| Estimated operating costs | 24,000                 | 20,000             |
| Useful life               | 5 years                | 5 years            |

If sold now, the current machine would have a salvage value of \$5,000. If operated for the remainder of its useful life, the current machine would have zero salvage value. The new machine is expected to have zero salvage value after 5 years.

### Instructions

Should the current machine be replaced? (Ignore the time value of money.)

Make incremental analysis for elimination of division.

(SO 7)

**E26-8** Gaby Rodriquez, a recent graduate of State's accounting program, evaluated the operating performance of Schultz Company's six divisions. Gaby made the following presentation to the Schultz board of directors and suggested the Ketchum Division be eliminated. "If the Ketchum Division is eliminated," she said, "our total profits would increase by \$16,870."

|                    | <u>The Other<br/>Five Divisions</u> | <u>Ketchum<br/>Division</u> | <u>Total</u>      |
|--------------------|-------------------------------------|-----------------------------|-------------------|
| Sales              | \$1,664,200                         | \$ 98,200                   | \$1,762,400       |
| Cost of goods sold | 978,520                             | 76,470                      | 1,054,990         |
| Gross profit       | 685,680                             | 21,730                      | 707,410           |
| Operating expenses | 527,940                             | 38,600                      | 566,540           |
| Net income         | <u>\$ 157,740</u>                   | <u>\$(16,870)</u>           | <u>\$ 140,870</u> |

In the Ketchum Division, cost of goods sold is \$56,000 variable and \$20,470 fixed, and operating expenses are \$12,000 variable and \$26,600 fixed. None of the Ketchum Division's fixed costs will be eliminated if the division is discontinued.

### Instructions

 Is Gaby right about eliminating the Ketchum Division? Prepare a schedule to support your answer.

Make incremental analysis for elimination of a product line.

(SO 7)

**E26-9** Nimoy Company makes three models of phasers. Information on the three products is given below.

|                     | <u>Stunner</u>   | <u>Double-Set</u> | <u>Mega-Power</u> |
|---------------------|------------------|-------------------|-------------------|
| Sales               | \$300,000        | \$500,000         | \$200,000         |
| Variable expenses   | 150,000          | 200,000           | 140,000           |
| Contribution margin | 150,000          | 300,000           | 60,000            |
| Fixed expenses      | 120,000          | 225,000           | 90,000            |
| Net income          | <u>\$ 30,000</u> | <u>\$ 75,000</u>  | <u>\$(30,000)</u> |

Fixed expenses consist of \$300,000 of common costs allocated to the three products based on relative sales, and additional fixed expenses of \$30,000 (Stunner), \$75,000 (Double-Set), and \$30,000 (Mega-Power). The common costs will be incurred regardless of how many models are produced. The other fixed expenses would be eliminated if a model is phased out.

Mr. Spock, an executive with the company, feels the Mega-Power line should be discontinued to increase the company's net income.

### Instructions

- Compute current net income for Nimoy Company.
- Compute net income by product line and in total for Nimoy Company if the company discontinues the Mega-Power product line. (*Hint:* Allocate the \$300,000 common costs to the two remaining product lines based on their relative sales.)
-  Should Nimoy eliminate the Mega-Power product line? Why or why not?

**E26-10** Depp Company manufactures and sells three products. Relevant per unit data concerning each product are given below.

|                             | Product |      |      |
|-----------------------------|---------|------|------|
|                             | A       | B    | C    |
| Selling price               | \$11    | \$12 | \$15 |
| Variable costs and expenses | \$4     | \$8  | \$9  |
| Machine hours to produce    | 2       | 1    | 2    |

#### Instructions

- Compute the contribution margin per unit of the limited resource (machine hour) for each product.
- Assuming 3,000 additional machine hours are available, which product should be manufactured?
- Prepare an analysis showing the total contribution margin if the additional hours are (1) divided equally among the products, and (2) allocated entirely to the product identified in (b) above.

**E26-11** Royce Service Center just purchased an automobile hoist for \$15,000. The hoist has a 5-year life and an estimated salvage value of \$1,080. Installation costs were \$2,900, and freight charges were \$820. Royce uses straight-line depreciation.

The new hoist will be used to replace mufflers and tires on automobiles. Royce estimates that the new hoist will enable his mechanics to replace four extra mufflers per week. Each muffler sells for \$65 installed. The cost of a muffler is \$35, and the labor cost to install a muffler is \$10.

#### Instructions

- Compute the payback period for the new hoist.
- Compute the annual rate of return for the new hoist. (Round to one decimal.)

**E26-12** Tanaka Manufacturing Company is considering three new projects, each requiring an equipment investment of \$22,000. Each project will last for 3 years and produce the following cash inflows.

| Year  | AA              | BB              | CC              |
|-------|-----------------|-----------------|-----------------|
| 1     | \$ 7,000        | \$ 9,500        | \$13,000        |
| 2     | 9,000           | 9,500           | 10,000          |
| 3     | 15,000          | 9,500           | 9,000           |
| Total | <u>\$31,000</u> | <u>\$28,500</u> | <u>\$32,000</u> |

The equipment's salvage value is zero. Tanaka uses straight-line depreciation. Tanaka will not accept any project with a payback period over 2 years. Tanaka's required rate of return is 12%.

#### Instructions

- Compute each project's payback period, indicating the most desirable project and the least desirable project using this method. (Round to two decimals.)
- Compute the net present value of each project. Does your evaluation change? (Round to nearest dollar.)

**E26-13** Armando Company is considering a capital investment of \$150,000 in additional productive facilities. The new machinery is expected to have a useful life of 5 years with no salvage value. Depreciation is by the straight-line method. During the life of the investment, annual net income and cash inflows are expected to be \$18,000 and \$48,000, respectively. Armando has a 12% cost of capital rate, which is the minimum acceptable rate of return on the investment.

#### Instructions

(Round to two decimals.)

- Compute (1) the annual rate of return and (2) the cash payback period on the proposed capital expenditure.
- Using the discounted cash flow technique, compute the net present value.

Compute contribution margin and determine the product to be manufactured.

(SO 8)

Compute cash payback period and annual rate of return.

(SO 9)

Compute cash payback period and net present value.

(SO 9, 10)

Compute annual rate of return, cash payback period, and net present value.

(SO 9, 10)

## 1224 26 Incremental Analysis and Capital Budgeting

Determine internal rate of return.

(SO 10)

**E26-14** Theta Company is considering three capital expenditure projects. Relevant data for the projects are as follows.

| <u>Project</u> | <u>Investment</u> | <u>Annual Income</u> | <u>Life of Project</u> |
|----------------|-------------------|----------------------|------------------------|
| 22A            | \$240,000         | \$13,300             | 6 years                |
| 23A            | 270,000           | 21,000               | 9 years                |
| 24A            | 288,000           | 20,000               | 8 years                |

Annual income is constant over the life of the project. Each project is expected to have zero salvage value at the end of the project. Theta Company uses the straight-line method of depreciation.

### Instructions

- Determine the internal rate of return for each project. Round the internal rate of return factor to three decimals.
- If Theta Company's required rate of return is 11%, which projects are acceptable?

Compute net present value and recommend project.

(SO 10)

**E26-15** Hyung Corporation is considering investing in two different projects. It could invest in both, neither, or just one of the projects. The forecasts for the projects are as follows.

|                       | <u>Project A</u> | <u>Project B</u> |
|-----------------------|------------------|------------------|
| Capital investment    | \$200,000        | \$300,000        |
| Net annual cash flows | \$50,000         | \$65,000         |
| Length of project     | 5 years          | 7 years          |

The required rate of return acceptable to Hyung is 10%.

### Instructions

- Compute the net present value of the two projects.
- What capital budgeting decision should Hyung make?
- Project A could be modified. By spending \$20,000 more initially, the net annual cash flows could be increased by \$10,000 per year. Would this change Hyung's decision?

## Exercises: Set B

Visit the book's website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Exercise Set B.

## Problems: Set A

Make incremental analysis for special order, and identify non-financial factors in decision.

(SO 3)

**P26-1A** Jaime Company is currently producing 16,000 units per month, which is 80% of its production capacity. Variable manufacturing costs are currently \$8.00 per unit. Fixed manufacturing costs are \$56,000 per month. Jaime pays a 9% sales commission to its sales people, has \$30,000 in fixed administrative expenses per month, and is averaging \$320,000 in sales per month.

A special order received from a foreign company would enable Jaime Company to operate at 100% capacity. The foreign company offered to pay 75% of Jaime's current selling price per unit. If the order is accepted, Jaime will have to spend an extra \$2.00 per unit to package the product for overseas shipping. Also, Jaime Company would need to lease a new stamping machine to imprint the foreign company's logo on the product, at a monthly cost of \$2,500. The special order would require a sales commission of \$3,500.

### Instructions

- Compute the number of units involved in the special order and the foreign company's offered price per unit.
- What is the manufacturing cost of producing one unit of Jaime's product for regular customers?
- Prepare an incremental analysis of the special order. Should management accept the order?
- What is the lowest price that Jaime could accept for the special order to earn net income of \$1.20 per unit?
-  What nonfinancial factors should management consider in making its decision?

**P26-2A** The management of Garcon Manufacturing Company has asked for your assistance in deciding whether to continue manufacturing a part or to buy it from an outside supplier. The part, called Tropica, is a component of Garcon's finished product.

An analysis of the accounting records and the production data revealed the following information for the year ending December 31, 2012.

1. The Machinery Department produced 36,000 units of Tropica.
2. Each Tropica unit requires 10 minutes to produce. Three people in the Machinery Department work full time (2,000 hours per year) producing Tropica. Each person is paid \$11.00 per hour.
3. The cost of materials per Tropica unit is \$2.00.
4. Manufacturing overhead costs directly applicable to the production of Tropica are: indirect labor, \$5,500; utilities, \$1,300; depreciation, \$1,600; property taxes and insurance, \$1,000. All of the costs will be eliminated if Tropica is purchased.
5. The lowest price for a Tropica from an outside supplier is \$3.90 per unit. Freight charges will be \$0.30 per unit, and a part-time receiving clerk at \$8,500 per year will be required.
6. If Tropica is purchased, the excess space will be used to store Garcon's finished product. Currently, Garcon rents storage space at approximately \$0.60 per unit stored per year. Approximately 6,000 units per year are stored in the rented space.

### Instructions

- (a) Prepare an incremental analysis for the make-or-buy decision. Should Garcon make or buy the part? Why?
- (b) Prepare an incremental analysis, assuming the released facilities can be used to produce \$10,000 of net income in addition to the savings on the rental of storage space. What decision should now be made?
- (c)  What nonfinancial factors should be considered in the decision?

**P26-3A** Pierre Manufacturing Company has four operating divisions. During the first quarter of 2012, the company reported total income from operations of \$61,000 and the following results for the divisions.

|                                     | Division           |                  |                  |                    |
|-------------------------------------|--------------------|------------------|------------------|--------------------|
|                                     | Denver             | Miami            | San Diego        | Tacoma             |
| Sales                               | \$455,000          | \$730,000        | \$920,000        | \$515,000          |
| Cost of goods sold                  | 380,000            | 480,000          | 576,000          | 430,000            |
| Selling and administrative expenses | 120,000            | 207,000          | 246,000          | 120,000            |
| Income (loss) from operations       | <u>\$ (45,000)</u> | <u>\$ 43,000</u> | <u>\$ 98,000</u> | <u>\$ (35,000)</u> |

Analysis reveals the following percentages of variable costs in each division.

|                                     | Denver | Miami | San Diego | Tacoma |
|-------------------------------------|--------|-------|-----------|--------|
| Cost of goods sold                  | 95%    | 80%   | 90%       | 90%    |
| Selling and administrative expenses | 80     | 60    | 70        | 60     |

Discontinuance of any division would save 60% of the fixed costs and expenses for that division.

Top management is deeply concerned about the unprofitable divisions (Denver and Tacoma). The consensus is that one or both of the divisions should be eliminated.

### Instructions

- (a) Compute the contribution margin for the two unprofitable divisions.
- (b) Prepare an incremental analysis concerning the possible elimination of (1) the Denver Division and (2) the Tacoma Division. What course of action do you recommend for each division?
- (c) Prepare a columnar condensed income statement using the CVP format for Pierre Manufacturing Company, assuming (1) the Denver Division is eliminated, and (2) the unavoidable fixed costs and expenses of the Denver Division are allocated 30% to Miami, 50% to San Diego, and 20% to Tacoma.
- (d) Compare the total income from operations with the Denver Division (\$61,000) to total income from operations without this division.

*Make incremental analysis related to make or buy; consider opportunity cost, and identify nonfinancial factors.*

(SO 4)

*Compute contribution margin, and prepare incremental analysis concerning elimination of divisions.*

(SO 7)

## 1226 26 Incremental Analysis and Capital Budgeting

Compute gain or loss, and determine if equipment should be replaced.

(SO 6)

**P26-4A** Last year (2011), Solomon Condos installed a mechanized elevator for its tenants. The owner of the company, Sam Solomon, recently returned from an industry equipment exhibition where he watched a computerized elevator demonstrated. He was impressed with the elevator's speed, comfort of ride, and cost efficiency. Upon returning from the exhibition, he asked his purchasing agent to collect price and operating cost data on the new elevator. In addition, he asked the company's accountant to provide him with cost data on the company's elevator. This information is presented below.

|  | <u>Old Elevator</u> | <u>New Elevator</u> |
|--|---------------------|---------------------|
| Purchase price                                     | \$120,000           | \$180,000           |
| Estimated salvage value                            | 0                   | 0                   |
| Estimated useful life                              | 6 years             | 5 years             |
| Depreciation method                                | Straight-line       | Straight-line       |
| Annual operating costs<br>other than depreciation: |                     |                     |
| Variable   | \$ 35,000           | \$ 12,000           |
| Fixed  | 23,000              | 8,400               |

Annual revenues are \$240,000, and selling and administrative expenses are \$29,000, regardless of which elevator is used. If the old elevator is replaced now, at the beginning of 2012, Solomon Condos will be able to sell it for \$25,000.

### Instructions

- Determine any gain or loss if the old elevator is replaced.
- Prepare a 5-year summarized income statement for each of the following assumptions:
  - The old elevator is retained.
  - The old elevator is replaced.
- Using incremental analysis, determine if the old elevator should be replaced.
- Write a memo to Sam Solomon explaining why any gain or loss should be ignored in the decision to replace the old elevator.

Compute annual rate of return, cash payback, and net present value.

(SO 9, 10)

**P26-5A** Verdugo Corporation is considering three long-term capital investment proposals. Relevant data on each project are as follows.

|                    | <u>Project</u>   |                  |                  |
|--------------------|------------------|------------------|------------------|
|                    | <u>Brown</u>     | <u>Red</u>       | <u>Yellow</u>    |
| Capital investment | \$190,000        | \$220,000        | \$250,000        |
| Annual net income: |                  |                  |                  |
| Year 1             | 25,000           | 20,000           | 26,000           |
| 2                  | 16,000           | 20,000           | 24,000           |
| 3                  | 13,000           | 20,000           | 23,000           |
| 4                  | 10,000           | 20,000           | 17,000           |
| 5                  | 8,000            | 20,000           | 20,000           |
| Total              | <u>\$ 72,000</u> | <u>\$100,000</u> | <u>\$110,000</u> |

Salvage value is expected to be zero at the end of each project. Depreciation is computed by the straight-line method. The company's required rate of return is the company's cost of capital which is 12%.

### Instructions

- Compute the annual rate of return for each project. (Round to one decimal.)
- Compute the cash payback period for each project. (Round to two decimals.)
- Compute the net present value for each project. (Round to nearest dollar.)
- Rank the projects on each of the foregoing bases. Which project do you recommend?

Compute annual rate of return, cash payback, and net present value.

(SO 9, 10)

**P26-6A** Daphne Kavier is the managing director of the Topeka Day Care Center. Topeka is currently set up as a full-time child care facility for children between the ages of 12 months and 6 years. Daphne is trying to determine whether the center should expand its facilities to incorporate a newborn care room for infants between the ages of 6 weeks and 12 months. The necessary space already exists. An investment of \$25,000 would be needed, however, to purchase cribs, high chairs, etc. The equipment purchased for the room would have a 5-year useful life with zero salvage value.

The newborn nursery would be staffed to handle 12 infants on a full-time basis. The parents of each infant would be charged \$200 weekly, and the facility would operate 52 weeks of the year. Staffing the nursery would require two full-time specialists and five part-time assistants at an annual cost of \$103,800. Food, diapers, and other miscellaneous supplies are expected to total \$14,000 annually.

### Instructions

- Determine (1) annual net income and (2) net cash flow for the new nursery.
- Compute (1) the annual rate of return and (2) the cash payback period for the new nursery. (Round to two decimals.)
- Assuming that Topeka can borrow the money needed for expansion at 10%, compute the net present value of the new room. (Round to the nearest dollar.)
-  What should Daphne conclude from these computations?

**P26-7A** Aero Tech Testing is considering investing in a new testing device. It has two options: Option A would have an initial lower cost but would require a significant expenditure for rebuilding after 5 years. Option B would require no rebuilding expenditure, but its maintenance costs would be higher. Since the option B machine is of initial higher quality, it is expected to have a salvage value at the end of its useful life. The following estimates were provided. The company's cost of capital is 9%.

|                                 | <u>Option A</u> | <u>Option B</u> |
|---------------------------------|-----------------|-----------------|
| Initial cost                    | \$90,000        | \$170,000       |
| Net annual cash flows           | \$20,000        | \$32,000        |
| Cost to rebuild (end of year 5) | \$26,500        | \$0             |
| Salvage value                   | \$0             | \$27,500        |
| Estimated useful life           | 8 years         | 8 years         |

### Instructions

- Compute the (1) net present value, and (2) internal rate of return for each option. (*Hint:* To solve for internal rate of return, experiment with alternative discount rates to arrive at a net present value of zero.)
- Which option should be accepted?

Compute net present value and internal rate of return.

(SO 10)

## Problems: Set B

**P26-1B** Kobe Inc. manufactures basketballs for the National Basketball Association (NBA). For the first 6 months of 2013, the company reported the following operating results while operating at 90% of plant capacity.

|                                     | <u>Amount</u>     | <u>Per Unit</u> |
|-------------------------------------|-------------------|-----------------|
| Sales                               | \$4,500,000       | \$50.00         |
| Cost of goods sold                  | 3,150,000         | 35.00           |
| Selling and administrative expenses | 360,000           | 4.00            |
| Net income                          | <u>\$ 990,000</u> | <u>\$11.00</u>  |

Fixed costs for the period were: Cost of goods sold \$900,000, and selling and administrative expenses \$135,000.

In July, normally a slack manufacturing month, Kobe receives a special order for 9,000 basketballs at \$32 each from the European Basketball Association (EBA). Acceptance of the order would increase variable selling and administrative expenses \$0.50 per unit because of shipping costs but would not increase fixed costs and expenses.

### Instructions

- Prepare an incremental analysis for the special order.
- Should Kobe Inc. accept the special order?
- What is the minimum selling price on the special order to produce net income of \$5.00 per ball?
-  What nonfinancial factors should management consider in making its decision?

Make incremental analysis for special order, and identify non-financial factors in decision.

(SO 3)

## 1228 26 Incremental Analysis and Capital Budgeting

Make incremental analysis related to make or buy; consider opportunity cost, and identify nonfinancial factors.

(SO 4)

**P26-2B** The management of Xiao Manufacturing Company is trying to decide whether to continue manufacturing a part or to buy it from an outside supplier. The part, called BIZBE, is a component of the company's finished product.

The following information was collected from the accounting records and production data for the year ending December 31, 2012.

- 6,000 units of BIZBE were produced in the Machining Department.
- Variable manufacturing costs applicable to the production of each BIZBE unit were: direct materials \$4.75, direct labor \$4.60, indirect labor \$0.45, utilities \$0.35.
- Fixed manufacturing costs applicable to the production of BIZBE were:

| Cost Item      | Direct         | Allocated      |
|----------------|----------------|----------------|
| Depreciation   | \$1,100        | \$ 900         |
| Property taxes | 500            | 200            |
| Insurance      | 900            | 600            |
|                | <u>\$2,500</u> | <u>\$1,700</u> |

All variable manufacturing and direct fixed costs will be eliminated if BIZBE is purchased. Allocated costs will have to be absorbed by other production departments.

- The lowest quotation for 6,000 BIZBE units from a supplier is \$66,000.
- If BIZBE units are purchased, freight and inspection costs would be \$0.30 per unit, and receiving costs totaling \$750 per year would be incurred by the Machining Department.

### Instructions

- Prepare an incremental analysis for BIZBE. Your analysis should have columns for (1) Make BIZBE, (2) Buy BIZBE, and (3) Net Income Increase/Decrease.
- Based on your analysis, what decision should management make?
- Would the decision be different if Xiao Company has the opportunity to produce \$6,000 of net income with the facilities currently being used to manufacture BIZBE? Show computations.
-  What nonfinancial factors should management consider in making its decision?

Compute contribution margin, and prepare incremental analysis concerning elimination of divisions.

(SO 7)

**P26-3B** Yacco Manufacturing Company has four operating divisions. During the first quarter of 2013, the company reported aggregate income from operations of \$135,000 and the divisional results shown on the next page.

|                                     | Division         |                  |                   |                   |
|-------------------------------------|------------------|------------------|-------------------|-------------------|
|                                     | I                | II               | III               | IV                |
| Sales                               | \$510,000        | \$390,000        | \$310,000         | \$170,000         |
| Cost of goods sold                  | 300,000          | 250,000          | 270,000           | 150,000           |
| Selling and administrative expenses | 60,000           | 80,000           | 65,000            | 70,000            |
| Income (loss) from operations       | <u>\$150,000</u> | <u>\$ 60,000</u> | <u>\$(25,000)</u> | <u>\$(50,000)</u> |

Analysis reveals the following percentages of variable costs in each division.

|                                     | I   | II  | III | IV  |
|-------------------------------------|-----|-----|-----|-----|
| Cost of goods sold                  | 70% | 80% | 75% | 90% |
| Selling and administrative expenses | 40  | 50  | 60  | 70  |

Discontinuance of any division would save 50% of the fixed costs and expenses for that division.

Top management is very concerned about the unprofitable divisions (III and IV). Consensus is that one or both of the divisions should be discontinued.

### Instructions

- Compute the contribution margin for Divisions III and IV.
- Prepare an incremental analysis concerning the possible discontinuance of (1) Division III and (2) Division IV. What course of action do you recommend for each division?
- Prepare a columnar condensed income statement for Yacco Manufacturing, assuming Division IV is eliminated. Use the CVP format. Division IV's unavoidable fixed costs are allocated equally to the continuing divisions.
- Reconcile the total income from operations (\$135,000) with the total income from operations without Division IV.

**P26-4B** Last year (2011), Bourne Company installed new factory equipment. The owner of the company, Jason Bourne, recently returned from an industry equipment exhibition where he watched computerized equipment demonstrated. He was impressed with the equipment's speed and cost efficiency. Upon returning from the exhibition, he asked his purchasing agent to collect price and operating cost data on the new equipment. In addition, he asked the company's accountant to provide him with cost data on the company's equipment. This information is presented below.

|   | <u>Old Equipment</u> | <u>New Equipment</u> |
|---|----------------------|----------------------|
| Purchase price                                    | \$210,000            | \$270,000            |
| Estimated salvage value                           | 0                    | 0                    |
| Estimated useful life                             | 6 years              | 5 years              |
| Depreciation method                               | Straight-line        | Straight-line        |
| Annual operating cost<br>other than depreciation: |                      |                      |
| Variable  | \$50,000             | \$15,000             |
| Fixed   | 30,000               | 8,000                |

Annual revenues are \$360,000, and selling and administrative expenses are \$45,000, regardless of which equipment is used. If the old equipment is replaced now, at the beginning of 2012, Bourne Company will be able to sell it for \$38,000.

#### Instructions

- Determine any gain or loss if the old equipment is replaced.
- Prepare a 5-year summarized income statement for each of the following assumptions:
  - The old equipment is retained.
  - The old equipment is replaced.
- Using incremental analysis, determine if the old equipment should be replaced.
-  Write a memo to Jason Bourne explaining why any gain or loss should be ignored in the decision to replace the old equipment.

**P26-5B** Zalopa Corporation is considering three long-term capital investment proposals. Each investment has a useful life of 5 years. Relevant data on each project are as follows.

|                    | <u>Project Ric</u> | <u>Project Rac</u> | <u>Project Roe</u> |
|--------------------|--------------------|--------------------|--------------------|
| Capital investment | \$140,000          | \$150,000          | \$180,000          |
| Annual net income: |                    |                    |                    |
| Year 1             | 13,000             | 18,000             | 27,000             |
| 2                  | 13,000             | 17,000             | 22,000             |
| 3                  | 13,000             | 13,000             | 16,000             |
| 4                  | 13,000             | 12,000             | 13,000             |
| 5                  | 13,000             | 9,000              | 12,000             |
| Total              | <u>\$ 65,000</u>   | <u>\$ 69,000</u>   | <u>\$ 90,000</u>   |

Depreciation is computed by the straight-line method with no salvage value. The company's cost of capital is 15%.

#### Instructions

- Compute the annual rate of return for each project. (Round to one decimal.)
- Compute the cash payback period for each project. (Round to two decimals.)
- Compute the net present value for each project. (Round to nearest dollar.)
- Rank the projects on each of the foregoing bases. Which project do you recommend?

**P26-6B** Cindi Austen is an accounting major at a midwestern state university located approximately 60 miles from a major city. Many of the students attending the university are from the metropolitan area and visit their homes regularly on the weekends. Cindi, an entrepreneur at heart, realizes that few good commuting alternatives are available for students doing weekend travel. She believes that a weekend commuting service could be organized and run profitably from several suburban and downtown shopping mall locations. Cindi has gathered the following investment information.

- Six used vans would cost a total of \$96,000 to purchase and would have a 3-year useful life with negligible salvage value. Cindi plans to use straight-line depreciation.
- Ten drivers would have to be employed at a total payroll expense of \$70,000.

Compute gain or loss, and determine if equipment should be replaced.

(SO 6)

Compute annual rate of return, cash payback, and net present value.

(SO 9, 10)

Compute annual rate of return, cash payback, and net present value.

(SO, 9, 10)

3. Other annual out-of-pocket expenses associated with running the commuter service would include gasoline \$28,000, maintenance \$2,800, repairs \$3,500, insurance \$3,200, and advertising \$1,500. (Exclude interest expense.)
4. Cindi has visited several financial institutions to discuss funding for her new venture. The best interest rate she has been able to negotiate is 10%. Use this rate for cost of capital.
5. Cindi expects each van to make ten round trips weekly and carry an average of five students each trip. The service is expected to operate 30 weeks each years. Each student will be charged \$16.00 for a round-trip ticket.

**Instructions**

- (a) Determine the annual (1) net income, and (2) net cash flow for the commuter service.
- (b) Compute (1) the annual rate of return, and (2) the cash payback period. (Round to two decimals.)
- (c) Compute the net present value of the commuter service. (Round to the nearest dollar.)
- (d)  What should Cindi conclude from these computations?

Compute net present value, and internal rate of return.

(SO 10)

**CP26-7B** Taos Clinic is considering investing in new heart-monitoring equipment. It has two options: Option A would have an initial lower cost but would require a significant expenditure for rebuilding after 4 years. Option B would require no rebuilding expenditure, but its maintenance costs would be higher. Since the option B machine is of initial higher quality, it is expected to have a salvage value at the end of its useful life. The following estimates were made of the cash flows. The company’s cost of capital is 8%.

|                                 | <u>Option A</u> | <u>Option B</u> |
|---------------------------------|-----------------|-----------------|
| Initial cost                    | \$135,000       | \$203,000       |
| Net annual cash flows           | \$31,000        | \$40,000        |
| Cost to rebuild (end of year 4) | \$50,000        | \$0             |
| Salvage value                   | \$0             | \$10,000        |
| Estimated useful life           | 8 years         | 8 years         |

**Instructions**

- (a) Compute the (1) net present value and (2) internal rate of return for each option. (*Hint:* To solve for internal rate of return, experiment with alternative discount rates to arrive at a net present value of zero.)
- (b) Which option should be accepted?

## Problems: Set C

Visit the book’s companion website, at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), and choose the Student Companion site to access Problem Set C.

## Comprehensive Problem: Chapters 19 to 26

**CP26** You would like to start a business manufacturing a unique model of bicycle helmet. In preparation for an interview with the bank to discuss your financing needs, you develop answers to the following questions. A number of assumptions are required; clearly note all assumptions that you make.

**Instructions**

- (a) Identify the types of costs that would likely be involved in making this product.
- (b) Set up five columns as indicated.

| <u>Item</u> | <u>Product Costs</u>    |                     |                               | <u>Period Costs</u> |
|-------------|-------------------------|---------------------|-------------------------------|---------------------|
|             | <u>Direct Materials</u> | <u>Direct Labor</u> | <u>Manufacturing Overhead</u> |                     |

Classify the costs you identified in (a) into the manufacturing cost classifications of product costs (direct materials, direct labor, and manufacturing overhead) and period costs.

- (c) Assign hypothetical monthly dollar figures to the costs you identified in (a) and (b).
- (d) Assume you have no raw materials or work in process beginning or ending inventories. Prepare a projected cost of goods manufactured schedule for the first month of operations.
- (e) Project the number of helmets you expect to produce the first month of operations. Compute the cost to produce one bicycle helmet. Review the result to ensure it is reasonable; if not, return to part (c) and adjust the monthly dollar figures you assigned accordingly.
- (f) What type of cost accounting system will you likely use—job order or process costing?
- (g) Explain how you would assign costs in either the job order or process costing system you plan to use.
- (h) Classify your costs as either variable or fixed costs. For simplicity, assign all costs to either variable or fixed, assuming there are no mixed costs, using the format shown.

| Item | Variable Costs | Fixed Costs | Total Costs |
|------|----------------|-------------|-------------|
|------|----------------|-------------|-------------|

- (i) Compute the unit variable cost, using the production number you determined in (e).
- (j) Project the number of helmets you anticipate selling the first month of operations. Set a unit selling price, and compute both the contribution margin per unit and the contribution margin ratio.
- (k) Determine your break-even point in dollars and in units.
- (l) Prepare projected operating budgets (sales, production, direct materials, direct labor, manufacturing overhead, selling and administrative expense, and income statement). You will need to make assumptions for each of the following:

|                            |  |
|----------------------------|--|
| Direct materials budget:   | Quantity of direct materials required to produce one helmet; cost per unit of quantity; desired ending direct materials (assume none). |
| Direct labor budget:       | Direct labor time required per helmet; direct labor cost per hour.   |
| Budgeted income statement: | Income tax expense is 45% of income from operations.   |

- (m) Prepare a cash budget for the month. Assume the percentage of sales that will be collected from customers is 75%, and the percentage of direct materials that will be paid in the current month is 75%.
- (n) Determine a relevant range of activity, using the number of helmets produced as your activity index. Recast your manufacturing overhead budget into a flexible monthly budget for two additional activity levels.
- (o) Identify one potential cause of materials, direct labor, and manufacturing overhead variances for your product.
- (p) Assume that you wish to purchase production equipment that costs \$720,000. Determine the cash payback period, utilizing the monthly cash flow that you computed in part (m) multiplied by 12 months (for simplicity).
- (q) Identify any nonfinancial factors that should be considered before commencing your business venture.

## Waterways Continuing Problem

(This is a continuation of the Waterways Problem from Chapters 19 through 25.)

**WCP26** Waterways Corporation puts much emphasis on cash flow when it plans for capital investments. The company chose its discount rate of 8% based on the rate of return it must pay its owners and creditors. Using that rate, Waterways then uses different methods to determine the best decisions for making capital outlays. Waterways is considering buying five new backhoes to replace the backhoes it now has. This problem asks you to evaluate that decision, using various capital budgeting techniques.

Go to the book's companion website, [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt), to find the remainder of this problem.

# BROADENING YOUR PERSPECTIVE

## Decision Making Across the Organization

**BYP26-1** Bigelow Company is considering the purchase of a new machine. The invoice price of the machine is \$170,000, freight charges are estimated to be \$4,000, and installation costs are expected to be \$6,000. Salvage value of the new equipment is expected to be zero after a useful life of 4 years. Existing equipment could be retained and used for an additional 4 years if the new machine is not purchased. At that time, the salvage value of the equipment would be zero. If the new machine is purchased now, the existing machine would be scrapped. Bigelow's accountant, Carmen Cabel, has accumulated the following data regarding annual sales and expenses with and without the new machine.

1. Without the new machine, Bigelow can sell 10,000 units of product annually at a per unit selling price of \$100. If the new unit is purchased, the number of units produced and sold would increase by 20%. The selling price would remain the same.
2. The new machine is faster than the old machine, and it is more efficient in its usage of materials. With the old machine the gross profit rate will be 25% of sales. With the new machine the rate will be 28% of sales.
3. Annual selling expenses are \$135,000 with the current equipment. Because the new equipment would produce a greater number of units to be sold, annual selling expenses are expected to increase by 10% if it is purchased.
4. Annual administrative expenses are expected to be \$100,000 with the old machine and \$113,000 with the new machine.
5. The current book value of the existing machine is \$36,000. Bigelow uses straight-line depreciation.
6. Bigelow's management wants a required rate of return of 15% on its investment and a payback period of no more than 3 years.

### Instructions

With the class divided into groups, answer the following. (Ignore income tax effects.)

- (a) Prepare an incremental analysis for the 4 years showing whether Bigelow should keep the existing machine or buy the new machine.
- (b) Calculate the annual rate of return for the new machine. (Round to two decimals.)
- (c) Compute the payback period for the new machine. (Round to two decimals.)
- (d) Compute the net present value of the new machine. (Round to the nearest dollar.)
- (e) On the basis of the foregoing data, would you recommend that Bigelow buy the machine? Why?

## Managerial Analysis

**BYP26-2** Cletus Company manufactures private-label small electronic products, such as alarm clocks, calculators, kitchen timers, stopwatches, and automatic pencil sharpeners. Some of the products are sold as sets, and others are sold individually. Products are studied as to their sales potential, and then cost estimates are made. The Engineering Department develops production plans, and then production begins. The company has generally had very successful product introduction. Only two products introduced by the company have been discontinued.

One of the products currently sold is a multi-alarm clock. The clock has four alarms that can be programmed to sound at various times and for varying lengths of time. The company has experienced a great deal of difficulty in making the circuit boards for the clocks. The production process has never operated smoothly. The product is unprofitable at the present time, primarily because of warranty repairs and product recalls. Two models of the clocks were recalled, for example, because they sometimes caused an electric shock when the alarms were being shut off. The Engineering Department is attempting to revise the manufacturing process, but the revision will take another 6 months at least.

The clocks were very popular when they were introduced, and since they are private-label, the company has not suffered much from the recalls. Presently, the company has a very large order for several items from Kmart Stores. The order includes 5,000 of the multi-alarm clocks. When Cletus suggested that Kmart purchase the clocks from another manufacturer, Kmart threatened to rescind the entire order unless the clocks were included.

Cletus has therefore investigated the possibility of having another company make the clocks for them. The clocks were bid for the Kmart order, based on an estimated \$5.50 cost to manufacture, as follows.

|                                 |        |
|---------------------------------|--------|
| Circuit board, 1 each @ \$1.00  | \$1.00 |
| Plastic case, 1 each @ \$0.50   | 0.50   |
| Alarms, 4 @ \$0.15 each         | 0.60   |
| Labor, 15 minutes @ \$12/hour   | 3.00   |
| Overhead, \$1.60 per labor hour | 0.40   |

Cletus could purchase clocks to fill the Kmart order for \$9 from Black Pearl, a Japanese manufacturer with a very good quality record. Black Pearl has offered to reduce the price to \$7.50 after Cletus has been a customer for 6 months, placing an order of at least 1,000 units per month. If Cletus becomes a “preferred customer” by purchasing 15,000 units per year, the price would be reduced still further to \$4.50.

Beta Products, a local manufacturer, has also offered to make clocks for Cletus. They have offered to sell 5,000 clocks for \$5 each. However, Beta Products has been in business for only 6 months. It has experienced significant turnover in its labor force, and the local media have reported that the owners may soon face tax-evasion charges. The owner of Beta Products is an electronic engineer, however, and the quality of the clocks is likely to be good.

If Cletus decides to purchase the clocks from either Black Pearl or Beta, all the costs to manufacturer could be avoided, except a total of \$5,000 in overhead costs for machine depreciation. The machinery is fairly new, and has no alternate use.

### Instructions

- What is the difference in profit under each of the alternatives if the clocks are to be sold for \$13.00 each to Kmart?
- What are the most important nonfinancial factors that Cletus should consider when making this decision?
- What should Cletus do in regard to the Kmart order? What should it do in regard to continuing to manufacture the multi-alarm clocks? Be prepared to defend your answer.

## Real-World Focus

**BYP26-3** Founded in 1983, the **Beverly Hills Fan Company** is located in Woodland Hills, California. With 23 employees and sales of less than \$10 million, the company is relatively small. Management feels that there is potential for growth in the upscale market for ceiling fans and lighting. They are particularly optimistic about growth in Mexican and Canadian markets.

Presented below is information from the president’s letter in the company’s annual report.

### Beverly Hills Fan Company President’s Letter

An aggressive product development program was initiated during the past year resulting in new ceiling fan models planned for introduction next year. Award winning industrial designer Ron Rezek created several new fan models for the Beverly Hills Fan and L.A. Fan lines, including a new Showroom Collection, designed specifically for the architectural and designer markets. Each of these models has received critical acclaim, and order commitments for next year have been outstanding. Additionally, our Custom Color and special order fans continued to enjoy increasing popularity and sales gains as more and more customers desire fans that match their specific interior decors. Currently, Beverly Hills Fan Company offers a product line of over 100 models of contemporary, traditional, and transitional ceiling fans.

### Instructions

- What points did the company management need to consider before deciding to offer the special-order fans to customers?
- How would incremental analysis be employed to assist in this decision?

## On the Web

**BYP26-4** **Campbell Soup Company** is an international provider of soup products. Management is very interested in continuing to grow the company in its core business, while “spinning off” those businesses that are not part of its core operation.

**Address:** [www.campbellsoups.com](http://www.campbellsoups.com), or go to [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt)

**Steps:**

1. Go to the home page of Campbell Soup Company at the address shown above.
2. Choose **Our Company** and then **Investor Center**.
3. Choose **Financial Reports**.
4. Choose the 2007 annual report, or the current annual report if 2007 is no longer available.

**Instructions**

Review the financial statements and management's discussion and analysis, and answer the following questions.

- (a) What was the total amount reported as "Purchases of Plant Assets" in the 2007 statement of cash flows? How does this amount compare with the previous year?
- (b) What range of interest rates does the company report on its long-term liabilities in the notes to its financial statements?
- (c) Assume that this year's capital expenditures are expected to increase cash flows by \$45 million. What is the expected internal rate of return (IRR) for these capital expenditures? (Assume a 10-year period for the cash flows.)

## Communication Activity

**BYP26-5** Refer back to E26-11 to address the following.

**Instructions**

Prepare a memo to Billie Evans, your supervisor. Show your calculations from E26-11, parts (a) and (b). In one or two paragraphs, discuss important nonfinancial considerations. Make any assumptions you believe to be necessary. Make a recommendation, based on your analysis.

## Ethics Case

**BYP26-6** Forcier Company operates in a state where corporate taxes and workmen's compensation insurance rates have recently doubled. Forcier's president has assigned you the task of preparing an economic analysis and making a recommendation about whether to move the company's entire operation to Missouri. The president is slightly in favor of such a move because Missouri is his boyhood home, and he also owns a fishing lodge there.

You have just completed building your dream house, moved in, and sodded the lawn. Your children are all doing well in school and sports and, along with your spouse, want no part of a move to Missouri. If the company does move, so will you because your town is a one-industry community, and you and your spouse will have to move to have employment. Moving when everyone else does will cause you to take a big loss on the sale of your house. The same hardships will be suffered by your co-workers, and the town will be devastated.

In compiling the costs of moving versus not moving, you have latitude in the assumptions you make, the estimates you compute, and the discount rates and time periods you project. You are in a position to influence the decision singlehandedly.

**Instructions**

- (a) Who are the stakeholders in this situation?
- (b) What are the ethical issues in this situation?
- (c) What would you do in this situation?

## "All About You" Activity

**BYP26-7** Managerial accounting techniques can be used in a wide variety of settings. As we have frequently pointed out, you can use them in many personal situations. They also can be useful in trying to find solutions for societal issues that appear to be hard to solve.

**Instructions**

Read the *Fortune* article "The Toughest Customers: How Hardheaded Business Metrics Can Help the Hard-core Homeless," by Cait Murphy, available at [http://money.cnn.com/magazines/fortune/fortune\\_archive/2006/04/03/8373067/index.htm](http://money.cnn.com/magazines/fortune/fortune_archive/2006/04/03/8373067/index.htm). Answer the following questions.

- (a) How does the article define “chronic” homelessness?
- (b) In what ways does homelessness cost a city money? What are the estimated costs of a chronic homeless person to various cities?
- (c) What are the steps suggested to address the problem?
- (d) What is the estimated cost of implementing this program in New York? What results have been seen?
- (e) In terms of incremental analysis, frame the relevant costs in this situation.

### Answers to Insight and Accounting Across the Organization Questions

**p. 1196 That Letter from AmEx Might Not Be a Bill** **Q:** What are the relevant costs that American Express would need to know in order to determine to whom to make this offer? **A:** Clearly, American Express would make this offer to those customers that are most likely to default on their bills. The most important relevant cost would be the “expected loss” that an at-risk customer posed. If a customer has a high probability of defaulting, and if the expected loss exceeds the \$300 cost, then American Express can probably save money by paying that customer to quit using its card so that the customer doesn’t ring up an even bigger bill.

**p. 1200 These Wheels Have Miles Before Installation** **Q:** What are the disadvantages of outsourcing to a foreign country? **A:** Possible disadvantages of outsourcing are that the supplier loses control over the quality of the product, as well as the timing of production. Also, the company exposes itself to price changes caused by changes in the value of the foreign currency. In addition, shipping large, heavy products such as tires is costly, and disruptions in shipping (due to strikes, weather, etc.) can cause delays in final assembly of vehicles. As a result of the outsourcing, the company will have to reassign, or even lay off, many skilled workers. Not only is this very disruptive to the lives of those employees, it also hurts morale of the remaining employees. As more U.S. employers begin to use robotic automation in their facilities, they are able to reduce the amount of labor required, and thus are beginning to be able to compete more favorably with foreign suppliers.

**p. 1204 Time to Move to a New Neighborhood?** **Q:** What were some of the factors that complicated the company’s decision to move? How should the company have incorporated such factors into its incremental analysis? **A:** The company received only \$7.5 million for its California property, only 58 of 75 key employees were willing to move, construction was delayed by a year which caused the new plant to increase in price by \$1.5 million, and wages surged in Idaho due to low unemployment. In performing incremental analysis of the decision to move, a company should perform sensitivity analysis. This would include evaluating the impact on the decision if all costs were, for example, 10% higher than expected or if cost savings were 10% lower than expected.

**p. 1207 Investing for the Future** **Q:** Why is it important for top management to constantly monitor the nature, amount, and success of a company’s capital expenditures? **A:** In order to remain competitive and to grow, companies must continually invest in new opportunities. However, not all projects will be successful, so management must continually monitor projects to ensure that continuation of the investment is in the company’s best interest.

**p. 1212 Seeing the Big Picture** **Q:** How important is the choice of discount rate in making capital budgeting decisions? **A:** The point of this discussion is that errors in implementation, as well as the accuracy of the estimated future benefits and costs as measured by cash inflows and outflows, is what matters the most when making capital expenditure decisions. While the choice of discount rates will result in incremental differences in present value calculations, “missing the big picture” has the potential to cause much bigger decision errors. Underestimating potential future cash inflows can result in missed opportunities. Underestimating future costs can result in failed investments.

# APPENDIX A

## Specimen Financial Statements:

### PepsiCo, Inc.

#### The Annual Report

Once each year a corporation communicates to its stockholders and other interested parties by issuing a complete set of audited financial statements. The **annual report**, as this communication is called, summarizes the financial results of the company's operations for the year and its plans for the future. Many annual reports are attractive, multicolored, glossy public relations pieces, containing pictures of corporate officers and directors as well as photos and descriptions of new products and new buildings. Yet the basic function of every annual report is to report financial information, almost all of which is a product of the corporation's accounting system.

The content and organization of corporate annual reports have become fairly standardized. Excluding the public relations part of the report (pictures, products, etc.), the following are the traditional financial portions of the annual report:

- Financial Highlights
- Letter to the Stockholders
- Management's Discussion and Analysis
- Financial Statements
- Notes to the Financial Statements
- Management's Responsibility for Financial Reporting
- Management's Report on Internal Control over Financial Reporting
- Report of Independent Registered Public Accounting Firm
- Selected Financial Data

In this appendix we illustrate current financial reporting with a comprehensive set of corporate financial statements that are prepared in accordance with generally accepted accounting principles and audited by an international independent certified public accounting firm. We are grateful for permission to use the actual financial statements and other accompanying financial information from the annual report of a large, publicly held company, PepsiCo, Inc.

#### Financial Highlights

Companies usually present the financial highlights section inside the front cover of the annual report or on its first two pages. This section generally reports the total or per share amounts for five to fifteen financial items for the current year and one or more previous years. Financial items from the income statement and the balance sheet that typically are presented are sales, income from continuing operations, net income, net income per share, net cash provided by operating activities, dividends per common share, and the amount of capital expenditures. The financial highlights section from PepsiCo's Annual Report is shown on page A2.

---

The financial information herein is reprinted with permission from the PepsiCo, Inc. 2009 Annual Report. The complete financial statements are available through a link at the book's companion website.

## PepsiCo Estimated Worldwide Retail Sales: \$108 Billion

Includes estimated retail sales of all PepsiCo products, including those sold by our partners and franchised bottlers.

### Mix of Net Revenue

- Food – 63%
- Beverage – 37%

- U.S. – 52%
- Outside the U.S. – 48%

### Net Revenues

- PepsiCo Americas Foods – 48%
- PepsiCo Americas Beverages – 23%
- PepsiCo International – 29%
  - Europe – 16%
  - AMEA – 13%

### Pro Forma Revenue Percentage by Segment

- PepsiCo Americas Foods – 36%
- PepsiCo Americas Beverages – 38%
- PepsiCo International – 26%
  - Europe – 16%
  - AMEA – 10%

The above pro forma 2009 revenue chart has been prepared to illustrate the effect of the PBG and PAS mergers as if the mergers had been completed as of the beginning of PepsiCo's 2009 fiscal year. The pro forma revenue presented above is not indicative of the future operating results or financial position of PBG, PAS and PepsiCo and is based upon preliminary estimates. The final amounts recorded may differ from the information presented and are subject to change.

## Letter to the Shareholders

Nearly every annual report contains a letter to the shareholders from the chairman of the board or the president, or both. This letter typically discusses the company's accomplishments during the past year and highlights significant events such as mergers and acquisitions, new products, operating achievements, business philosophy, changes in officers or directors, financing commitments, expansion plans, and future prospects. The letter to the stockholders is signed by Indra Nooyi, Chairman of the Board and Chief Executive Officer, of PepsiCo.

Only a short summary of the letter is provided below. The full letter can be accessed at the book's companion website at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt).

### Dear Fellow Shareholders,

Our commitment to the principles and values of *Performance with Purpose* has helped us earn trust and respect from our consumers and partners, and the communities in which we operate across the world. By staying true to this foundation and continuing to execute on our strategies, we are sure that PepsiCo will continue to provide long-term sustainable growth for all stakeholders.

The *Performance with Purpose* initiatives that we have chosen to showcase in this year's annual report demonstrate that what's right for society is also what's right for business. It is a belief to which we are deeply committed. It has stood the test in difficult years, and we believe it will stand the test of time to come.

**INDRA K. NOOYI**

*Chairman and Chief Executive Officer*

Indra K. Nooyi, *Chairman and Chief Executive Officer*

## Management's Discussion and Analysis

The **management's discussion and analysis (MD&A)** section covers three financial aspects of a company: its results of operations, its ability to pay near-term obligations, and its ability to fund operations and expansion. Management must highlight favorable or unfavorable trends and identify significant events and uncertainties that affect these three factors. This discussion obviously involves a number of subjective estimates and opinions. In its MD&A section, PepsiCo breaks its discussion into three major headings: Our Business, Our Critical Accounting Policies, and Our Financial Results. You can access the full MD&A section at [www.wiley.com/college/weygandt](http://www.wiley.com/college/weygandt).

## Financial Statements and Accompanying Notes

The standard set of financial statements consists of: (1) a comparative income statement for three years, (2) a comparative statement of cash flows for three years, (3) a comparative balance sheet for two years, (4) a statement of equity for three years, and (5) a set of accompanying notes that are considered an integral part of the financial statements. The auditor's report, unless stated otherwise, covers the financial statements and the accompanying notes. PepsiCo's financial statements and accompanying notes plus supplementary data and analyses follow.

(a) Includes total tax benefits of \$31 million in 2009, \$95 million in 2008 and \$216 million in 2007.

See accompanying notes to consolidated financial statements.

## Notes to Consolidated Financial Statements

### Note 1 Basis of Presentation and Our Divisions

#### BASIS OF PRESENTATION

Our financial statements include the consolidated accounts of PepsiCo, Inc. and the affiliates that we control. In addition, we include our share of the results of certain other affiliates based on our economic ownership interest. We do not control these other affiliates, as our ownership in these other affiliates is generally less than 50%. Equity income or loss from our anchor bottlers is recorded as bottling equity income in our income statement. Bottling equity income also includes any changes in our ownership interests of our anchor bottlers. Bottling equity income includes \$147 million of pre-tax gains on our sales of PBG and PAS stock in 2008 and \$174 million of pre-tax gains on our sales of PBG stock in 2007. There were no sales of PBG or PAS stock in 2009. See Notes 8 and 15 for additional information on our significant noncontrolled bottling affiliates. Income or loss from other noncontrolled affiliates is recorded as a component of selling, general and administrative expenses. Intercompany balances and transactions are eliminated. Our fiscal year ends on the last Saturday of each December, resulting in an additional week of results every five or six years.

Raw materials, direct labor and plant overhead, as well as purchasing and receiving costs, costs directly related to production planning, inspection costs and raw material handling facilities, are included in cost of sales. The costs of moving, storing and delivering finished product are included in selling, general and administrative expenses.

The preparation of our consolidated financial statements in conformity with generally accepted accounting principles requires us to make estimates and assumptions that affect reported amounts of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Estimates are used in determining, among other items, sales incentives accruals, tax reserves, stock-based compensation, pension and retiree medical accruals, useful lives for intangible assets, and future cash flows associated with impairment testing for perpetual brands, goodwill and other long-lived assets. We evaluate our estimates on an on-going basis using our historical experience, as well as other factors we believe appropriate under the circumstances, such as current economic conditions, and adjust or revise our estimates as circumstances change. As future events and their effect cannot be determined with precision, actual results could differ significantly from these estimates.

While the majority of our results are reported on a weekly calendar basis, most of our international operations report on a

monthly calendar basis. The following chart details our quarterly reporting schedule:

| Quarter        | U.S. and Canada | International                             |
|----------------|-----------------|---|
| First Quarter  | 12 weeks        | January, February                         |
| Second Quarter | 12 weeks        | March, April and May                      |
| Third Quarter  | 12 weeks        | June, July and August                     |
| Fourth Quarter | 16 weeks        | September, October, November and December |

See "Our Divisions" below and for additional unaudited information on items affecting the comparability of our consolidated results, see "Items Affecting Comparability" in Management's Discussion and Analysis of Financial Condition and Results of Operations.

Tabular dollars are in millions, except per share amounts. All per share amounts reflect common per share amounts, assume dilution unless noted, and are based on unrounded amounts. Certain reclassifications were made to prior years' amounts to conform to the 2009 presentation.

#### OUR DIVISIONS

We manufacture or use contract manufacturers, market and sell a variety of salty, convenient, sweet and grain-based snacks, carbonated and non-carbonated beverages, and foods in over 200 countries with our largest operations in North America (United States and Canada), Mexico and the United Kingdom. Division results are based on how our Chief Executive Officer assesses the performance of and allocates resources to our divisions. For additional unaudited information on our divisions, see "Our Operations" in Management's Discussion and Analysis of Financial Condition and Results of Operations. The accounting policies for the divisions are the same as those described in Note 2, except for the following allocation methodologies:

- stock-based compensation expense,
- pension and retiree medical expense, and
- derivatives.

#### Stock-Based Compensation Expense

Our divisions are held accountable for stock-based compensation expense and, therefore, this expense is allocated to our divisions as an incremental employee compensation cost. The allocation of stock-based compensation expense in 2009 was approximately 27% to FLNA, 3% to QFNA, 6% to LAF, 21% to PAB, 13% to Europe, 13% to AMEA and 17% to corporate unallocated expenses. We had similar allocations of stock-based compensation expense to our divisions in 2008 and 2007. The expense allocated to our divisions excludes any impact of changes in our assumptions during the year which reflect market conditions over which division management has no control. Therefore, any variances between allocated expense and our actual expense are recognized in corporate unallocated expenses.

### Pension and Retiree Medical Expense

Pension and retiree medical service costs measured at a fixed discount rate, as well as amortization of gains and losses due to demographics, including salary experience, are reflected in division results for North American employees. Division results also include interest costs, measured at a fixed discount rate, for retiree medical plans. Interest costs for the pension plans, pension asset returns and the impact of pension funding, and gains and losses other than those due to demographics, are all reflected in corporate unallocated expenses. In addition, corporate unallocated expenses include the difference between the service costs measured at a fixed discount rate (included in division results as noted above) and the total service costs determined using the Plans' discount rates as disclosed in Note 7.

### Derivatives

We centrally manage commodity derivatives on behalf of our divisions. These commodity derivatives include energy, fruit and other raw materials. Certain of these commodity derivatives do not qualify for hedge accounting treatment and are marked to market

with the resulting gains and losses reflected in corporate unallocated expenses. These gains and losses are subsequently reflected in division results when the divisions take delivery of the underlying commodity. Therefore, the divisions realize the economic effects of the derivative without experiencing any resulting mark-to-market volatility, which remains in corporate unallocated expenses. These derivatives hedge underlying commodity price risk and were not entered into for speculative purposes.

In 2007, we expanded our commodity hedging program to include derivative contracts used to mitigate our exposure to price changes associated with our purchases of fruit. In addition, in 2008, we entered into additional contracts to further reduce our exposure to price fluctuations in our raw material and energy costs. The majority of these contracts do not qualify for hedge accounting treatment and are marked to market with the resulting gains and losses recognized in corporate unallocated expenses within selling, general and administrative expenses. These gains and losses are subsequently reflected in division results.

(a) Represents net revenue from businesses operating in these countries.

(b) Long-lived assets represent property, plant and equipment, nonamortizable intangible assets, amortizable intangible assets, and investments in noncontrolled affiliates. These assets are reported in the country where they are primarily used.

## Note 2 Our Significant Accounting Policies

### REVENUE RECOGNITION

We recognize revenue upon shipment or delivery to our customers based on written sales terms that do not allow for a right of return. However, our policy for DSD and certain chilled products is to remove and replace damaged and out-of-date products from store shelves to ensure that our consumers receive the product quality and freshness that they expect. Similarly, our policy for certain warehouse-distributed products is to replace damaged and out-of-date products. Based on our experience with this practice, we have reserved for anticipated damaged and out-of-date products. For additional unaudited information on our revenue recognition and related policies, including our policy on bad debts, see "Our Critical Accounting Policies" in Management's Discussion and Analysis of Financial Condition and Results of Operations. We are exposed to concentration of credit risk by our customers, Wal-Mart and PBG. In 2009, Wal-Mart (including Sam's) represented approximately 13% of our total net revenue, including concentrate sales to our bottlers which are used in finished goods sold by them to Wal-Mart; and PBG represented approximately 6%. We have not experienced credit issues with these customers.

### SALES INCENTIVES AND OTHER MARKETPLACE SPENDING

We offer sales incentives and discounts through various programs to our customers and consumers. Sales incentives and discounts are accounted for as a reduction of revenue and totaled \$12.9 billion in 2009, \$12.5 billion in 2008 and \$11.3 billion in 2007. While most of these incentive arrangements have terms of no more than one year, certain arrangements, such as fountain pouring rights, may extend beyond one year. Costs incurred to obtain these arrangements are recognized over the shorter of the economic or contractual life, as a reduction of revenue, and the remaining balances of \$296 million as of December 26, 2009 and \$333 million as of December 27, 2008 are included in current assets and other assets on our balance sheet. For additional unaudited information on our sales incentives, see "Our Critical Accounting Policies" in Management's Discussion and Analysis of Financial Condition and Results of Operations.

Other marketplace spending, which includes the costs of advertising and other marketing activities, totaled \$2.8 billion in 2009 and \$2.9 billion in both 2008 and 2007 and is reported as selling, general and administrative expenses. Included in these amounts were advertising expenses of \$1.7 billion in both 2009

and 2008 and \$1.8 billion in 2007. Deferred advertising costs are not expensed until the year first used and consist of:

- media and personal service prepayments,
- promotional materials in inventory, and
- production costs of future media advertising.

Deferred advertising costs of \$143 million and \$172 million at year-end 2009 and 2008, respectively, are classified as prepaid expenses on our balance sheet.

### DISTRIBUTION COSTS

Distribution costs, including the costs of shipping and handling activities, are reported as selling, general and administrative expenses. Shipping and handling expenses were \$5.6 billion in both 2009 and 2008 and \$5.2 billion in 2007.

### CASH EQUIVALENTS

Cash equivalents are investments with original maturities of three months or less which we do not intend to rollover beyond three months.

### SOFTWARE COSTS

We capitalize certain computer software and software development costs incurred in connection with developing or obtaining computer software for internal use when both the preliminary project stage is completed and it is probable that the software will be used as intended. Capitalized software costs include only (i) external direct costs of materials and services utilized in developing or obtaining computer software, (ii) compensation and related benefits for employees who are directly associated with the software project and (iii) interest costs incurred while developing internal-use computer software. Capitalized software costs are included in property, plant and equipment on our balance sheet and amortized on a straight-line basis when placed into service over the estimated useful lives of the software, which approximate five to ten years. Software amortization totaled \$119 million in 2009, \$58 million in 2008 and \$30 million in 2007. Net capitalized software and development costs were \$1.1 billion as of December 26, 2009 and \$940 million as of December 27, 2008.

### COMMITMENTS AND CONTINGENCIES

We are subject to various claims and contingencies related to lawsuits, certain taxes and environmental matters, as well as commitments under contractual and other commercial obligations. We recognize liabilities for contingencies and commitments when a loss is probable and estimable. For additional information on our commitments, see Note 9.

## Notes to Consolidated Financial Statements

### RESEARCH AND DEVELOPMENT

We engage in a variety of research and development activities. These activities principally involve the development of new products, improvement in the quality of existing products, improvement and modernization of production processes, and the development and implementation of new technologies to enhance the quality and value of both current and proposed product lines. Consumer research is excluded from research and development costs and included in other marketing costs. Research and development costs were \$414 million in 2009, \$388 million in 2008 and \$364 million in 2007 and are reported within selling, general and administrative expenses.

### OTHER SIGNIFICANT ACCOUNTING POLICIES

Our other significant accounting policies are disclosed as follows:

- *Property, Plant and Equipment and Intangible Assets*—Note 4, and for additional unaudited information on brands and goodwill, see “Our Critical Accounting Policies” in Management’s Discussion and Analysis of Financial Condition and Results of Operations.
- *Income Taxes*—Note 5, and for additional unaudited information, see “Our Critical Accounting Policies” in Management’s Discussion and Analysis of Financial Condition and Results of Operations.
- *Stock-Based Compensation*—Note 6.
- *Pension, Retiree Medical and Savings Plans*—Note 7, and for additional unaudited information, see “Our Critical Accounting Policies” in Management’s Discussion and Analysis of Financial Condition and Results of Operations.
- *Financial Instruments*—Note 10, and for additional unaudited information, see “Our Business Risks” in Management’s Discussion and Analysis of Financial Condition and Results of Operations.

### RECENT ACCOUNTING PRONOUNCEMENTS

In December 2007, the FASB amended its guidance on accounting for business combinations to improve, simplify and converge internationally the accounting for business combinations. The new accounting guidance continues the movement toward the greater use of fair value in financial reporting and increased transparency through expanded disclosures. We adopted the provisions of the new guidance as of the beginning of our 2009 fiscal year. The new accounting guidance changes how business acquisitions are accounted for and will impact financial statements both on the acquisition date and in subsequent periods. Additionally, under the new guidance, transaction costs are expensed rather than

capitalized. Future adjustments made to valuation allowances on deferred taxes and acquired tax contingencies associated with acquisitions that closed prior to the beginning of our 2009 fiscal year apply the new provisions and will be evaluated based on the outcome of these matters.

In December 2007, the FASB issued new accounting and disclosure guidance on noncontrolling interests in consolidated financial statements. This guidance amends the accounting literature to establish new standards that will govern the accounting for and reporting of (1) noncontrolling interests in partially owned consolidated subsidiaries and (2) the loss of control of subsidiaries. We adopted the accounting provisions of the new guidance on a prospective basis as of the beginning of our 2009 fiscal year, and the adoption did not have a material impact on our financial statements. In addition, we adopted the presentation and disclosure requirements of the new guidance on a retrospective basis in the first quarter of 2009.

In June 2009, the FASB amended its accounting guidance on the consolidation of VIEs. Among other things, the new guidance requires a qualitative rather than a quantitative assessment to determine the primary beneficiary of a VIE based on whether the entity (1) has the power to direct matters that most significantly impact the activities of the VIE and (2) has the obligation to absorb losses or the right to receive benefits of the VIE that could potentially be significant to the VIE. In addition, the amended guidance requires an ongoing reconsideration of the primary beneficiary. The provisions of this new guidance are effective as of the beginning of our 2010 fiscal year, and we do not expect the adoption to have a material impact on our financial statements.

## Note 3 Restructuring and Impairment Charges

### 2009 AND 2008 RESTRUCTURING AND IMPAIRMENT CHARGES

In 2009, we incurred a charge of \$36 million (\$29 million after-tax or \$0.02 per share) in conjunction with our Productivity for Growth program that began in 2008. The program includes actions in all divisions of the business, including the closure of six plants that we believe will increase cost competitiveness across the supply chain, upgrade and streamline our product portfolio, and simplify the organization for more effective and timely decision-making. These charges were recorded in selling, general and administrative expenses. These initiatives were completed in the second quarter of 2009, and substantially all cash payments related to these charges are expected to be paid by 2010.

In 2008, we incurred a charge of \$543 million (\$408 million after-tax or \$0.25 per share) in conjunction with our Productivity for Growth program. Approximately \$455 million of the charge was recorded in selling, general and administrative expenses, with the remainder recorded in cost of sales.

A summary of the restructuring and impairment charge in 2009 is as follows:

|        | Severance and Other Employee Costs (a) | Other Costs | Total |
|--------|--|-------------|-------|
| FLNA   | \$ –                                   | \$ 2        | \$ 2  |
| QFNA   | –                                      | 1           | 1     |
| LAF    | 3                                      | –           | 3     |
| PAB    | 6                                      | 10          | 16    |
| Europe | 1                                      | –           | 1     |
| AMEA   | 7                                      | 6           | 13    |
|        | \$17                                   | \$19        | \$36  |

(a) Primarily reflects termination costs for approximately 410 employees.

A summary of the restructuring and impairment charge in 2008 is as follows:

|           | Severance and Other Employee Costs | Asset Impairments | Other Costs | Total |
|-----------|------------------------------------|-------------------|-------------|-------|
| FLNA      | \$ 48                              | \$ 38             | \$ 22       | \$108 |
| QFNA      | 14                                 | 3                 | 14          | 31    |
| LAF       | 30                                 | 8                 | 2           | 40    |
| PAB       | 68                                 | 92                | 129         | 289   |
| Europe    | 39                                 | 6                 | 5           | 50    |
| AMEA      | 11                                 | 2                 | 2           | 15    |
| Corporate | 2                                  | –                 | 8           | 10    |
|           | \$212                              | \$149             | \$182       | \$543 |

Severance and other employee costs primarily reflect termination costs for approximately 3,500 employees. Asset impairments relate to the closure of six plants and changes to our beverage product portfolio. Other costs include contract exit costs and third-party incremental costs associated with upgrading our product portfolio and our supply chain.

A summary of our Productivity for Growth program activity is as follows:

|  | Severance and Other Employee Costs | Asset Impairments | Other Costs | Total  |
|--|------------------------------------|-------------------|-------------|--------|
| 2008 restructuring and impairment charge | \$ 212                             | \$ 149            | \$ 182      | \$ 543 |
| Cash payments                            | (50)                               | –                 | (109)       | (159)  |
| Non-cash charge                          | (27)                               | (149)             | (9)         | (185)  |

| Liability as of December 26, 2009        | \$ 9                               | \$ –              | \$ 28       | \$ 37  |

## 2007 RESTRUCTURING AND IMPAIRMENT CHARGE

In 2007, we incurred a charge of \$102 million (\$70 million after-tax or \$0.04 per share) in conjunction with restructuring actions primarily to close certain plants and rationalize other production lines across FLNA, LAF, PAB, Europe and AMEA. The charge was recorded in selling, general and administrative expenses. All cash payments related to this charge were paid by the end of 2008.

A summary of the restructuring and impairment charge is as follows:

|        | Severance and Other Employee Costs | Asset Impairments | Other Costs | Total |
|--------|------------------------------------|-------------------|-------------|-------|
| FLNA   | \$ –                               | \$19              | \$ 9        | \$ 28 |
| LAF    | 14                                 | 25                | –           | 39    |
| PAB    | 12                                 | –                 | –           | 12    |
| Europe | 2                                  | 4                 | 3           | 9     |
| AMEA   | 5                                  | 9                 | –           | 14    |
|        | \$33                               | \$57              | \$12        | \$102 |

Severance and other employee costs primarily reflect termination costs for approximately 1,100 employees.

|   |                     | \$ 841    | \$ 732    |          |
| Amortization expense                                  |                     | \$ 63     | \$ 64     | \$ 58    |

Property, plant and equipment is recorded at historical cost. Depreciation and amortization are recognized on a straight-line basis over an asset's estimated useful life. Land is not depreciated and construction in progress is not depreciated until ready for service. Amortization of intangible assets for each of the next five years, based on existing intangible assets as of December 26, 2009 and using average 2009 foreign exchange rates, is expected to be \$65 million in both 2010 and 2011, \$61 million in 2012, \$58 million in 2013 and \$52 million in 2014.

**Notes to Consolidated Financial Statements**

Depreciable and amortizable assets are only evaluated for impairment upon a significant change in the operating or macroeconomic environment. In these circumstances, if an evaluation of the undiscounted cash flows indicates impairment, the asset is written down to its estimated fair value, which is based on discounted future cash flows. Useful lives are

periodically evaluated to determine whether events or circumstances have occurred which indicate the need for revision. For additional unaudited information on our amortizable brand policies, see "Our Critical Accounting Policies" in Management's Discussion and Analysis of Financial Condition and Results of Operations.

**NONAMORTIZABLE INTANGIBLE ASSETS**

Perpetual brands and goodwill are assessed for impairment at least annually. If the carrying amount of a perpetual brand exceeds its fair value, as determined by its discounted cash flows, an impairment loss is recognized in an amount equal to that excess. No impairment charges resulted from these impairment evaluations. The change in the book value of nonamortizable intangible assets is as follows:

|                | Balance,<br>Beginning 2008 | Acquisitions | Translation<br>and Other | Balance,<br>End of 2008 | Acquisitions | Translation<br>and Other | Balance,<br>End of 2009 |

For additional unaudited information on our income tax policies, including our reserves for income taxes, see "Our Critical Accounting Policies" in Management's Discussion and Analysis of Financial Condition and Results of Operations.

In 2007, we recognized \$129 million of non-cash tax benefits related to the favorable resolution of certain foreign tax matters.

### RESERVES

A number of years may elapse before a particular matter, for which we have established a reserve, is audited and finally resolved. The number of years with open tax audits varies depending on the tax jurisdiction. Our major taxing jurisdictions and the related open tax audits are as follows:

- U.S.—continue to dispute one matter related to tax years 1998 through 2002. Our U.S. tax returns for the years 2003 through 2005 are currently under audit. In 2008, the IRS initiated its audit of our U.S. tax returns for the years 2006 through 2007;
- Mexico—audits have been substantially completed for all taxable years through 2005;
- United Kingdom—audits have been completed for all taxable years prior to 2007; and
- Canada—audits have been completed for all taxable years through 2006. The Canadian tax return for 2007 is currently under audit.

While it is often difficult to predict the final outcome or the timing of resolution of any particular tax matter, we believe that our reserves reflect the probable outcome of known tax contingencies. We adjust these reserves, as well as the related interest, in light of changing facts and circumstances. Settlement of any particular issue would usually require the use of cash. Favorable resolution would be recognized as a reduction to our annual tax rate in the year of resolution. For further unaudited information on the impact of the resolution of open tax issues, see "Other Consolidated Results."

As of December 26, 2009, the total gross amount of reserves for income taxes, reported in other liabilities, was \$1.7 billion. Any prospective adjustments to these reserves will be recorded as an increase or decrease to our provision for income taxes and would impact our effective tax rate. In addition, we accrue interest related to reserves for income taxes in our provision for income taxes and any associated penalties are recorded in selling, general and administrative expenses. The gross amount of interest accrued, reported in other liabilities, was \$461 million as of December 26, 2009, of which \$30 million was recognized in 2009. The gross amount of interest accrued was \$427 million as of December 27, 2008, of which \$95 million was recognized in 2008.

## Notes to Consolidated Financial Statements

A rollforward of our reserves for all federal, state and foreign tax jurisdictions, is as follows:

|   | 2009    | 2008    |
|---|---------|---------|
| Balance, beginning of year                              | \$1,711 | \$1,461 |
| Additions for tax positions related to the current year | 238     | 272     |
| Additions for tax positions from prior years            | 79      | 76      |
| Reductions for tax positions from prior years           | (236)   | (14)    |
| Settlement payments                                     | (64)    | (30)    |
| Statute of limitations expiration                       | (4)     | (20)    |
| Translation and other                                   | 7       | (34)    |
| Balance, end of year                                    | \$1,731 | \$1,711 |

### CARRYFORWARDS AND ALLOWANCES

Operating loss carryforwards totaling \$6.4 billion at year-end 2009 are being carried forward in a number of foreign and state jurisdictions where we are permitted to use tax operating losses from prior periods to reduce future taxable income. These operating losses will expire as follows: \$0.2 billion in 2010, \$5.5 billion between 2011 and 2029 and \$0.7 billion may be carried forward indefinitely. We establish valuation allowances for our deferred tax assets if, based on the available evidence, it is more likely than not that some portion or all of the deferred tax assets will not be realized.

### UNDISTRIBUTED INTERNATIONAL EARNINGS

As of December 26, 2009, we had approximately \$21.9 billion of undistributed international earnings. We intend to continue to reinvest earnings outside the U.S. for the foreseeable future and, therefore, have not recognized any U.S. tax expense on these earnings.

## Note 6 Stock-Based Compensation

Our stock-based compensation program is a broad-based program designed to attract and retain employees while also aligning employees' interests with the interests of our shareholders. A majority of our employees participate in our stock-based compensation program. This program includes both our broad-based SharePower program which was established in 1989 to grant an annual award of stock options to eligible employees, based upon job level or classification and tenure (internationally), as well as our executive long-term awards program. Stock options and restricted stock units (RSU) are granted to employees under the shareholder-approved 2007 Long-Term Incentive Plan (LTIP), our only active stock-based plan. Stock-based compensation expense was \$227 million in 2009, \$238 million in 2008 and \$260 million in 2007. Related income tax benefits recognized in earnings were \$67 million in 2009, \$71 million in 2008 and

\$77 million in 2007. Stock-based compensation cost capitalized in connection with our ongoing business transformation initiative was \$2 million in 2009, \$4 million in 2008 and \$3 million in 2007.

At year-end 2009, 42 million shares were available for future stock-based compensation grants.

### METHOD OF ACCOUNTING AND OUR ASSUMPTIONS

We account for our employee stock options, which include grants under our executive program and our broad-based SharePower program, under the fair value method of accounting using a Black-Scholes valuation model to measure stock option expense at the date of grant. All stock option grants have an exercise price equal to the fair market value of our common stock on the date of grant and generally have a 10-year term. We do not backdate, reprice or grant stock-based compensation awards retroactively. Repricing of awards would require shareholder approval under the LTIP.

The fair value of stock option grants is amortized to expense over the vesting period, generally three years. Executives who are awarded long-term incentives based on their performance are offered the choice of stock options or RSUs. Executives who elect RSUs receive one RSU for every four stock options that would have otherwise been granted. Senior officers do not have a choice and are granted 50% stock options and 50% performance-based RSUs. Vesting of RSU awards for senior officers is contingent upon the achievement of pre-established performance targets approved by the Compensation Committee of the Board of Directors. RSU expense is based on the fair value of PepsiCo stock on the date of grant and is amortized over the vesting period, generally three years. Each RSU is settled in a share of our stock after the vesting period.

Our weighted-average Black-Scholes fair value assumptions are as follows:

|                         | 2009   | 2008   | 2007   |
|-------------------------|--------|--------|--------|
| Expected life           | 6 yrs. | 6 yrs. | 6 yrs. |
| Risk free interest rate | 2.8%   | 3.0%   | 4.8%   |
| Expected volatility     | 17%    | 16%    | 15%    |
| Expected dividend yield | 3.0%   | 1.9%   | 1.9%   |

The expected life is the period over which our employee groups are expected to hold their options. It is based on our historical experience with similar grants. The risk free interest rate is based on the expected U.S. Treasury rate over the expected life. Volatility reflects movements in our stock price over the most recent historical period equivalent to the expected life. Dividend yield is estimated over the expected life based on our stated dividend policy and forecasts of net income, share repurchases and stock price.

A summary of our stock-based compensation activity for the year ended December 26, 2009 is presented below:

| <b>Our Stock Option Activity</b> |                        |                              |                                     |  |

(a) In thousands.

As of December 26, 2009, there was \$227 million of total unrecognized compensation cost related to nonvested share-based compensation grants. This unrecognized compensation is expected to be recognized over a weighted-average period of 1.7 years.

#### Note 7 Pension, Retiree Medical and Savings Plans

Our pension plans cover full-time employees in the U.S. and certain international employees. Benefits are determined based on either years of service or a combination of years of service and earnings. U.S. and Canada retirees are also eligible for medical and life insurance benefits (retiree medical) if they meet age and service requirements. Generally, our share of retiree medical costs is capped at specified dollar amounts, which vary based upon years of service, with retirees contributing the remainder of the costs.

Gains and losses resulting from actual experience differing from our assumptions, including the difference between the actual return on plan assets and the expected return on plan assets, and from changes in our assumptions are also determined at each measurement date. If this net accumulated gain or loss exceeds 10% of the greater of the market-related value of plan assets or plan liabilities, a portion of the net gain or loss is included in expense for the following year. The cost or benefit of plan changes that increase or decrease benefits for prior employee service (prior service cost/ (credit)) is included in earnings on a straight-line basis over the average remaining service period of active plan participants, which is approximately 10 years for pension expense and approximately 12 years for retiree medical expense.

Our adoption of the standard on accounting for defined benefit pension and other postretirement plans required that, no later than 2008, our assumptions used to measure our annual pension and retiree medical expense be determined as of the balance sheet date, and all plan assets and liabilities be reported as of that date. Accordingly, as of the beginning of our 2008 fiscal year, we changed the measurement date for our annual pension and retiree medical expense and all plan assets and liabilities from September 30 to our year-end balance sheet date. As a result of this change in measurement date, we recorded an after-tax \$39 million decrease to 2008 opening shareholders' equity, as follows:

|                                      | Pension | Retiree Medical | Total  |
|--------------------------------------|---------|-----------------|--------|
| Retained earnings                    | \$(63)  | \$(20)          | \$(83) |
| Accumulated other comprehensive loss | 12      | 32              | 44     |
| Total                                | \$(51)  | \$ 12           | \$(39) |

**Notes to Consolidated Financial Statements**

Selected financial information for our pension and retiree medical plans is as follows:

|   | Pension    |            |               |          | Retiree Medical |            |

Of the total projected pension benefit liability at year-end 2009, \$564 million relates to plans that we do not fund because the funding of such plans does not receive favorable tax treatment.

**Notes to Consolidated Financial Statements****FUTURE BENEFIT PAYMENTS AND FUNDING**

Our estimated future benefit payments are as follows:

|                                | 2010  | 2011  | 2012  | 2013  | 2014  | 2015-19 |
|--------------------------------|-------|-------|-------|-------|-------|---------|
| Pension                        | \$340 | \$360 | \$395 | \$415 | \$450 | \$2,825 |
| Retiree medical <sup>(a)</sup> | \$110 | \$120 | \$125 | \$125 | \$130 | \$ 695  |

(a) *Expected future benefit payments for our retiree medical plans do not reflect any estimated subsidies expected to be received under the 2003 Medicare Act. Subsidies are expected to be approximately \$10 million for each of the years from 2010 through 2014 and approximately \$70 million in total for 2015 through 2019.*

These future benefits to beneficiaries include payments from both funded and unfunded pension plans.

In 2010, we will make pension contributions of approximately \$700 million, with up to approximately \$600 million expected to be discretionary. Our net cash payments for retiree medical are estimated to be approximately \$100 million in 2010.

**PENSION ASSETS**

Our pension plan investment strategy includes the use of actively-managed securities and is reviewed annually based upon plan liabilities, an evaluation of market conditions, tolerance for risk and cash requirements for benefit payments. Our investment objective is to ensure that funds are available to meet the plans' benefit obligations when they become due. Our overall investment strategy is to prudently invest plan assets in high-quality and diversified equity and debt securities to achieve our long-term return expectations. Our investment policy also permits the use of derivative instruments which are primarily used to reduce risk. Our expected long-term rate of return on U.S. plan assets is 7.8%, reflecting estimated long-term rates of return of 8.9% from our equity allocation and 6.3% from our fixed income allocation. Our target investment allocation is 40% for U.S. equity allocations, 20% for international equity allocations and 40% for fixed income

allocations. Actual investment allocations may vary from our target investment allocations due to prevailing market conditions. We regularly review our actual investment allocations and periodically rebalance our investments to our target allocations.

The expected return on pension plan assets is based on our pension plan investment strategy, our expectations for long-term rates of return and our historical experience. We also review current levels of interest rates and inflation to assess the reasonableness of the long-term rates. To calculate the expected return on pension plan assets, we use a market-related valuation method that recognizes investment gains or losses (the difference between the expected and actual return based on the market-related value of assets) for securities included in our equity strategies over a five-year period. This has the effect of reducing year-to-year volatility. For all other asset categories, the actual fair value is used for the market-related value of assets.

We adopted the new accounting guidance on employer's disclosures about postretirement benefit plan assets which requires that we categorize pension assets into three levels based upon the assumptions (inputs) used to price the assets. Level 1 provides the most reliable measure of fair value, whereas Level 3 generally requires significant management judgment. The three levels are defined as follows:

- Level 1: Unadjusted quoted prices in active markets for identical assets.
- Level 2: Observable inputs other than those included in Level 1. For example, quoted prices for similar assets in active markets or quoted prices for identical assets in inactive markets.
- Level 3: Unobservable inputs reflecting assumptions about the inputs used in pricing the asset.

Plan assets measured at fair value are categorized as follows:

|   | 2009           |                |                |             | 2008           |
|---|----------------|----------------|----------------|-------------|----------------|
|   | Total          | Level 1        | Level 2        | Level 3     | Total          |
| <b>U.S. plan assets</b>                           |                |                |                |             |                |

(a) Based on quoted market prices in active markets.

(b) Based on the fair value of the investments owned by these funds that track various U.S. large- and mid-cap company indices. Includes one fund that represents 25% of total U.S. plan assets.

(c) Based on the fair value of the investments owned by these funds that track various non-U.S. equity indices.

(d) Based on quoted bid prices for comparable securities in the marketplace and broker/dealer quotes that are not observable.

(e) Based on the fair value of the investments owned by these funds that track various government and corporate bond indices.

(f) Based on the fair value of the contracts as determined by the insurance companies using inputs that are not observable.

(g) Based on the fair value of the investments owned by these funds. Includes managed hedge funds that invest primarily in derivatives to reduce currency exposure.

## RETIREE MEDICAL COST TREND RATES

An average increase of 7.5% in the cost of covered retiree medical benefits is assumed for 2010. This average increase is then projected to decline gradually to 5% in 2014 and thereafter. These assumed health care cost trend rates have an impact on the retiree medical plan expense and liability. However, the cap on our share of

retiree medical costs limits the impact. A 1-percentage-point change in the assumed health care trend rate would have the following effects:

|   | 1% Increase | 1% Decrease |
|---|-------------|-------------|
| 2009 service and interest cost components | \$ 4        | \$ (3)      |
| 2009 benefit liability                    | \$30        | \$(26)      |

## SAVINGS PLAN

Our U.S. employees are eligible to participate in 401(k) savings plans, which are voluntary defined contribution plans. The plans are designed to help employees accumulate additional savings for retirement. We make matching contributions on a portion of eligible pay based on years of service. In 2009 and 2008, our matching contributions were \$72 million and \$70 million, respectively.

For additional unaudited information on our pension and retiree medical plans and related accounting policies and assumptions, see "Our Critical Accounting Policies" in Management's Discussion and Analysis.

## Note 8 Noncontrolled Bottling Affiliates

Our most significant noncontrolled bottling affiliates are PBG and PAS. Sales to PBG represented approximately 6% of our total net revenue in 2009 and 7% of our total net revenue in both 2008 and 2007.

See Note 15 for information regarding our pending mergers with PBG and PAS.

## THE PEPSI BOTTLING GROUP

In addition to approximately 32% and 33% of PBG's outstanding common stock that we owned at year-end 2009 and 2008, respectively, we owned 100% of PBG's class B common stock and approximately 7% of the equity of Bottling Group, LLC, PBG's principal operating subsidiary.

PBG's summarized financial information is as follows:

|                                | 2009            | 2008            | 2007     |
|--------------------------------|-----------------|-----------------|----------|
| Current assets                 | \$ 3,412        | \$ 3,141        |          |
| Noncurrent assets              | 10,158          | 9,841           |          |
| <b>Total assets</b>            | <b>\$13,570</b> | <b>\$12,982</b> |          |
| Current liabilities            | \$ 1,965        | \$ 3,083        |          |
| Noncurrent liabilities         | 7,896           | 7,408           |          |
| <b>Total liabilities</b>       | <b>\$ 9,861</b> | <b>\$10,491</b> |          |
| Our investment                 | \$ 1,775        | \$ 1,457        |          |
| Net revenue                    | \$13,219        | \$13,796        | \$13,591 |
| Gross profit                   | \$ 5,840        | \$ 6,210        | \$ 6,221 |
| Operating income               | \$ 1,048        | \$ 649          | \$ 1,071 |
| Net income attributable to PBG | \$ 612          | \$ 162          | \$ 532   |

## Notes to Consolidated Financial Statements

Our investment in PBG, which includes the related goodwill, was \$463 million and \$536 million higher than our ownership interest in their net assets less noncontrolling interests at year-end 2009 and 2008, respectively. Based upon the quoted closing price of PBG shares at year-end 2009, the calculated market value of our shares in PBG exceeded our investment balance, excluding our investment in Bottling Group, LLC, by approximately \$1.4 billion.

Additionally, in 2007, we formed a joint venture with PBG, comprising our concentrate and PBG's bottling businesses in Russia. PBG holds a 60% majority interest in the joint venture and consolidates the entity. We account for our interest of 40% under the equity method of accounting.

During 2008, together with PBG, we jointly acquired Russia's leading branded juice company, Lebedyansky. Lebedyansky is owned 25% and 75% by PBG and us, respectively. See Note 14 for further information on this acquisition.

### PEPSIAMERICAS

At year-end 2009 and 2008, we owned approximately 43%, respectively, of the outstanding common stock of PAS.

PAS summarized financial information is as follows:

|                                | 2009    | 2008    | 2007    |
|--------------------------------|---------|---------|---------|
| Current assets                 | \$ 952  | \$ 906  |         |
| Noncurrent assets              | 4,141   | 4,148   |         |
| Total assets                   | \$5,093 | \$5,054 |         |
| Current liabilities            | \$ 669  | \$1,048 |         |
| Noncurrent liabilities         | 2,493   | 2,175   |         |
| Total liabilities              | \$3,162 | \$3,223 |         |
| Our investment                 | \$1,071 | \$ 972  |         |
| Net sales                      | \$4,421 | \$4,937 | \$4,480 |
| Gross profit                   | \$1,767 | \$1,982 | \$1,823 |
| Operating income               | \$ 381  | \$ 473  | \$ 436  |
| Net income attributable to PAS | \$ 181  | \$ 226  | \$ 212  |

Our investment in PAS, which includes the related goodwill, was \$322 million and \$318 million higher than our ownership interest in their net assets less noncontrolling interests at year-end 2009 and 2008, respectively. Based upon the quoted closing price of PAS shares at year-end 2009, the calculated market value of our shares in PAS exceeded our investment balance by approximately \$515 million.

Additionally, in 2007, we completed the joint purchase of Sandora, LLC, a juice company in the Ukraine, with PAS. PAS holds a 60% majority interest in the joint venture and consolidates the entity. We account for our interest of 40% under the equity method of accounting.

### RELATED PARTY TRANSACTIONS

Our significant related party transactions are with our noncontrolled bottling affiliates. The transactions primarily consist of (1) selling concentrate to these affiliates, which they use in the production of CSDs and non-carbonated beverages, (2) selling certain finished goods to these affiliates, (3) receiving royalties for the use of our trademarks for certain products and (4) paying these affiliates to act as our manufacturing and distribution agent for product associated with our national account fountain customers. Sales of concentrate and finished goods are reported net of bottler funding. For further unaudited information on these bottlers, see "Our Customers" in Management's Discussion and Analysis of Financial Condition and Results of Operations. These transactions with our bottling affiliates are reflected in our consolidated financial statements as follows:

|  | 2009    | 2008    | 2007    |
|--|---------|---------|---------|
| Net revenue                                  | \$3,922 | \$4,049 | \$4,020 |
| Cost of sales                                | \$ 634  | \$ 660  | \$ 625  |
| Selling, general and administrative expenses | \$ 24   | \$ 30   | \$ 33   |
| Accounts and notes receivable                | \$ 254  | \$ 248  |         |
| Accounts payable and other liabilities       | \$ 285  | \$ 198  |         |

Such amounts are settled on terms consistent with other trade receivables and payables. See Note 9 regarding our guarantee of certain PBG debt.

We also coordinate, on an aggregate basis, the contract negotiations of sweeteners and other raw material requirements for certain of our bottlers. Once we have negotiated the contracts, the bottlers order and take delivery directly from the supplier and pay the suppliers directly. Consequently, these transactions are not reflected in our consolidated financial statements. As the contracting party, we could be liable to these suppliers in the event of any nonpayment by our bottlers, but we consider this exposure to be remote.

In addition, our joint ventures with Unilever (under the Lipton brand name) and Starbucks sell finished goods (ready-to-drink teas, coffees and water products) to our noncontrolled bottling affiliates. Consistent with accounting for equity method investments, our joint venture revenue is not included in our consolidated net revenue and therefore is not included in the above table.

**Note 9 Debt Obligations and Commitments**

|  | 2009           | 2008            |
|--|----------------|-----------------|
| <b>Short-term debt obligations</b>                     |                |                 |
| Current maturities of long-term debt                   | \$ 102         | \$ 273          |
| Commercial paper (0.7%)                                | -              | 846             |
| Other borrowings (6.7% and 10.0%)                      | 362            | 509             |
| Amounts reclassified to long-term debt                 | -              | (1,259)         |
|  | <b>\$ 464</b>  | <b>\$ 369</b>   |
| <b>Long-term debt obligations</b>                      |                |                 |
| Short-term borrowings, reclassified                    | \$ -           | \$ 1,259        |
| Notes due 2012-2026 (4.5% and 5.8%)                    | 7,160          | 6,382           |
| Zero coupon notes, \$225 million due 2010-2012 (13.3%) | 192            | 242             |
| Other, due 2010-2019 (8.4% and 5.3%)                   | 150            | 248             |
|  | <b>7,502</b>   | <b>8,131</b>    |
| Less: current maturities of long-term debt obligations | <b>(102)</b>   | <b>(273)</b>    |
|  | <b>\$7,400</b> | <b>\$ 7,858</b> |

The interest rates in the above table reflect weighted-average rates at year-end.

In the first quarter of 2009, we issued \$1.0 billion of senior unsecured notes, bearing interest at 3.75% per year and maturing in 2014. We used the proceeds from the issuance of these notes for general corporate purposes.

In the third quarter of 2009, we entered into a new 364-day unsecured revolving credit agreement which enables us to borrow up to \$1.975 billion, subject to customary terms and conditions, and expires in June 2010. We may request renewal of this facility for an additional 364-day period or convert any amounts outstanding into a term loan for a period of up to one year, which would mature no later than June 2011. This agreement replaced a \$1.8 billion 364-day unsecured revolving credit agreement we entered into during the fourth quarter of 2008. Funds borrowed under this agreement may be used to repay outstanding commercial paper issued by us or our subsidiaries and for other general corporate purposes, including working capital, capital investments and acquisitions. This agreement is in addition to our existing \$2.0 billion unsecured revolving credit agreement which expires in 2012. Our lines of credit remain unused as of December 26, 2009.

In addition, as of December 26, 2009, \$396 million of our debt related to borrowings from various lines of credit that are maintained for our international divisions. These lines of credit are subject to normal banking terms and conditions and are fully committed to the extent of our borrowings.

Subsequent to year-end 2009, we issued \$4.25 billion of fixed and floating rate notes. The issuance was comprised of \$1.25 billion of floating rate notes maturing in 2011 (the "2011 Floating Rates Notes"), \$1.0 billion of 3.10% senior unsecured notes maturing in 2015, \$1.0 billion of 4.50% senior unsecured notes maturing in 2020 and \$1.0 billion of 5.50% senior unsecured notes maturing in 2040. The 2011 Floating Rate Notes bear interest at a rate equal to the three-month London Inter-Bank Offered Rate ("LIBOR") plus 3 basis points.

We intend to use the net proceeds from this offering to finance a portion of the purchase price for the mergers with PBG and PAS and to pay related fees and expenses in connection with the mergers with PBG and PAS. Pending such use we invested the net proceeds in short-term, high-quality securities. If one or both of the mergers with PBG and PAS is not completed, we intend to use the remaining net proceeds from this offering for general corporate purposes, which may include the financing of future acquisitions, capital expenditures, additions to working capital, repurchase, repayment or refinancing of debt or stock repurchases.

Concurrently with the debt issuance after year-end, we terminated the commitments from lenders to provide us with up to \$4.0 billion in bridge financing to fund the mergers with PBG and PAS.

Also subsequent to year-end 2009, we entered into amendments to PBG's revolving credit facility (the Amended PBG Credit Facility) and PAS's revolving credit facility (the Amended PAS Credit Facility). Under the Amended PBG Credit Facility, subject to the satisfaction of certain conditions to effectiveness, at the closing of the merger with PBG, Metro will be able to borrow up to \$1,080 million from time to time. Borrowings under the Amended PBG Credit Facility, which expires in October 2012, are guaranteed by us. Under the Amended PAS Credit Facility, subject to the satisfaction of certain conditions to effectiveness, at the closing of the merger with PAS, Metro will be able to borrow up to \$540 million from time to time. Borrowings under the Amended PAS Credit Facility, which expires in June 2011, are guaranteed by us.

## Notes to Consolidated Financial Statements

### LONG-TERM CONTRACTUAL COMMITMENTS<sup>(a)</sup>

|   | Payments Due by Period |         |               |               |                    |
|---|------------------------|---------|---------------|---------------|--------------------|
|   | Total                  | 2010    | 2011–<br>2012 | 2013–<br>2014 | 2015 and<br>beyond |
| Long-term debt obligations <sup>(b)</sup>   | \$ 7,400               | \$ –    | \$ 1,332      | \$ 2,063      | \$ 4,005           |
| Interest on debt obligations <sup>(c)</sup> | 2,386                  | 347     | 666           | 500           | 873                |
| Operating leases                            | 1,076                  | 282     | 356           | 203           | 235                |
| Purchasing commitments                      | 2,066                  | 801     | 960           | 260           | 45                 |
| Marketing commitments                       | 793                    | 260     | 314           | 78            | 141                |
|   | \$13,721               | \$1,690 | \$3,628       | \$3,104       | \$5,299            |

(a) Reflects non-cancelable commitments as of December 26, 2009 based on year-end foreign exchange rates and excludes any reserves for uncertain tax positions as we are unable to reasonably predict the ultimate amount or timing of settlement.

(b) Excludes current maturities of long-term debt obligations of \$102 million. Includes \$151 million of principal and accrued interest related to our zero coupon notes.

(c) Interest payments on floating-rate debt are estimated using interest rates effective as of December 26, 2009.

Most long-term contractual commitments, except for our long-term debt obligations, are not recorded on our balance sheet. Non-cancelable operating leases primarily represent building leases. Non-cancelable purchasing commitments are primarily for oranges and orange juice, packaging materials and cooking oil. Non-cancelable marketing commitments are primarily for sports marketing. Bottler funding is not reflected in our long-term contractual commitments as it is negotiated on an annual basis. See Note 7 regarding our pension and retiree medical obligations and discussion below regarding our commitments to noncontrolled bottling affiliates.

### OFF-BALANCE-SHEET ARRANGEMENTS

It is not our business practice to enter into off-balance-sheet arrangements, other than in the normal course of business. However, at the time of the separation of our bottling operations from us various guarantees were necessary to facilitate the transactions. We have guaranteed an aggregate of \$2.3 billion of Bottling Group, LLC's long-term debt (\$1.0 billion of which matures in 2012 and \$1.3 billion of which matures in 2014). In the first quarter of 2009, we extended our guarantee of \$1.3 billion of Bottling Group, LLC's long-term debt in connection with the refinancing of a corresponding portion of the underlying debt. The terms of our Bottling Group, LLC debt guarantee are intended to preserve the structure of PBG's separation from us and our payment obligation would be triggered if Bottling Group, LLC failed to perform under these debt obligations or the structure significantly changed. Neither the merger with PBG nor the merger with PAS will trigger our payment obligation under our guarantee of a portion of Bottling Group, LLC's debt. As of December 26, 2009, we believe it is remote that these guarantees would require any cash payment. See Note 8 regarding contracts related to certain of our bottlers.

See "Our Liquidity and Capital Resources" in Management's Discussion and Analysis of Financial Condition and Results of Operations for further unaudited information on our borrowings.

### Note 10 Financial Instruments

In March 2008, the FASB issued new disclosure guidance on derivative instruments and hedging activities, which amends and expands the disclosure requirements of previously issued guidance on accounting for derivative instruments and hedging activities, to provide an enhanced understanding of the use of derivative instruments, how they are accounted for and their effect on financial position, financial performance and cash flows. We adopted the disclosure provisions of the new guidance in the first quarter of 2009.

We are exposed to market risks arising from adverse changes in:

- commodity prices, affecting the cost of our raw materials and energy,
- foreign exchange risks, and
- interest rates.

In the normal course of business, we manage these risks through a variety of strategies, including the use of derivatives. Certain derivatives are designated as either cash flow or fair value hedges and qualify for hedge accounting treatment, while others do not qualify and are marked to market through earnings. Cash flows from derivatives used to manage commodity, foreign exchange or interest risks are classified as operating activities. See "Our Business Risks" in Management's Discussion and Analysis of Financial Condition and Results of Operations for further unaudited information on our business risks.

For cash flow hedges, changes in fair value are deferred in accumulated other comprehensive loss within common shareholders' equity until the underlying hedged item is recognized in net income. For fair value hedges, changes in fair value are recognized immediately in earnings, consistent with the underlying hedged item. Hedging transactions are limited to an underlying exposure. As a result, any change in the value of our derivative instruments would be substantially offset by an opposite change in the value of the underlying hedged items. Hedging ineffectiveness and a net earnings impact occur when the change in the value of the hedge does not offset the change in the value of the underlying hedged item. Ineffectiveness of our hedges is not material. If the derivative instrument is terminated, we continue to defer the related

gain or loss and then include it as a component of the cost of the underlying hedged item. Upon determination that the underlying hedged item will not be part of an actual transaction, we recognize the related gain or loss in net income immediately.

We also use derivatives that do not qualify for hedge accounting treatment. We account for such derivatives at market value with the resulting gains and losses reflected in our income statement. We do not use derivative instruments for trading or speculative purposes. We perform assessments of our counterparty credit risk regularly, including a review of credit ratings, credit default swap rates and potential nonperformance of the counterparty. Based on our most recent assessment of our counterparty credit risk, we consider this risk to be low. In addition, we enter into derivative contracts with a variety of financial institutions that we believe are creditworthy in order to reduce our concentration of credit risk and generally settle with these financial institutions on a net basis.

### COMMODITY PRICES

We are subject to commodity price risk because our ability to recover increased costs through higher pricing may be limited in the competitive environment in which we operate. This risk is managed through the use of fixed-price purchase orders, pricing agreements, geographic diversity and derivatives. We use derivatives, with terms of no more than three years, to economically hedge price fluctuations related to a portion of our anticipated commodity purchases, primarily for natural gas and diesel fuel. For those derivatives that qualify for hedge accounting, any ineffectiveness is recorded immediately. We classify both the earnings and cash flow impact from these derivatives consistent with the underlying hedged item. During the next 12 months, we expect to reclassify net losses of \$124 million related to these hedges from accumulated other comprehensive loss into net income. Derivatives used to hedge commodity price risk that do not qualify for hedge accounting are marked to market each period and reflected in our income statement.

Our open commodity derivative contracts that qualify for hedge accounting had a face value of \$151 million as of December 26, 2009 and \$303 million as of December 27, 2008. These contracts resulted in net unrealized losses of \$29 million as of December 26, 2009 and \$117 million as of December 27, 2008.

Our open commodity derivative contracts that do not qualify for hedge accounting had a face value of \$231 million as of December 26, 2009 and \$626 million as of December 27, 2008. These contracts resulted in net losses of \$57 million in 2009 and \$343 million in 2008.

### FOREIGN EXCHANGE

Financial statements of foreign subsidiaries are translated into U.S. dollars using period-end exchange rates for assets and liabilities and weighted-average exchange rates for revenues and expenses. Adjustments resulting from translating net assets are reported as a separate component of accumulated other comprehensive loss within common shareholders' equity as currency translation adjustment.

Our operations outside of the U.S. generate 48% of our net revenue, with Mexico, Canada and the United Kingdom comprising 16% of our net revenue. As a result, we are exposed to foreign currency risks. On occasion, we may enter into derivatives, primarily forward contracts with terms of no more than two years, to manage our exposure to foreign currency transaction risk. Exchange rate gains or losses related to foreign currency transactions are recognized as transaction gains or losses in our income statement as incurred.

Our foreign currency derivatives had a total face value of \$1.2 billion as of December 26, 2009 and \$1.4 billion as of December 27, 2008. The contracts that qualify for hedge accounting resulted in net unrealized losses of \$20 million as of December 26, 2009 and net unrealized gains of \$111 million as of December 27, 2008. During the next 12 months, we expect to reclassify net losses of \$20 million related to these hedges from accumulated other comprehensive loss into net income. The contracts that do not qualify for hedge accounting resulted in a net gain of \$1 million in 2009 and net losses of \$28 million in 2008. All losses and gains were offset by changes in the underlying hedged items, resulting in no net material impact on earnings.

### INTEREST RATES

We centrally manage our debt and investment portfolios considering investment opportunities and risks, tax consequences and overall financing strategies. We use various interest rate derivative instruments including, but not limited to, interest rate swaps, cross currency interest rate swaps, Treasury locks and swap locks to

## Notes to Consolidated Financial Statements

manage our overall interest expense and foreign exchange risk. These instruments effectively change the interest rate and currency of specific debt issuances. Our interest rate and cross currency swaps are generally entered into concurrently with the issuance of the debt that they modify. The notional amount, interest payment and maturity date of the interest rate and cross currency swaps match the principal, interest payment and maturity date of the related debt. Our Treasury locks and swap locks are entered into to protect against unfavorable interest rate changes relating to forecasted debt transactions.

The notional amounts of the interest rate derivative instruments outstanding as of December 26, 2009 and December 27, 2008 were \$5.75 billion and \$2.75 billion, respectively. For those interest rate derivative instruments that qualify for cash flow hedge accounting, any ineffectiveness is recorded immediately. We classify both the earnings and cash flow impact from these interest rate derivative instruments consistent with the underlying hedged item. During the next 12 months, we expect to reclassify net losses of \$6 million related to these hedges from accumulated other comprehensive loss into net income.

Concurrently with the debt issuance after year-end, we terminated \$1.5 billion of interest rate derivative instruments, and the realized loss will be amortized into interest expense over the duration of the debt term.

As of December 26, 2009, approximately 57% of total debt, after the impact of the related interest rate derivative instruments, was exposed to variable rates compared to 58% as of December 27, 2008. In addition to variable rate long-term debt, all debt with maturities of less than one year is categorized as variable for purposes of this measure.

### FAIR VALUE MEASUREMENTS

In September 2006, the FASB issued new accounting guidance on fair value measurements, which defines fair value, establishes a framework for measuring fair value, and expands disclosures about fair value measurements. We adopted the new guidance as of the beginning of our 2008 fiscal year as it relates to recurring financial assets and liabilities. As of the beginning of our 2009 fiscal year, we adopted the new guidance as it relates to nonrecurring fair value measurement requirements for nonfinancial assets and

liabilities. These include goodwill, other nonamortizable intangible assets and unallocated purchase price for recent acquisitions which are included within other assets. Our adoption did not have a material impact on our financial statements. See Note 7 for the fair value framework.

The fair values of our financial assets and liabilities as of December 26, 2009 are categorized as follows:

|   | 2009         |              |              |            |
|---|--------------|--------------|--------------|------------|
|   | Total        | Level 1      | Level 2      | Level 3    |
| <b>Assets<sup>(a)</sup></b>                               |              |              |              |            |
| Available-for-sale securities <sup>(b)</sup>              | \$ 71        | \$ 71        | \$ -         | \$-        |
| Short-term investments—index funds <sup>(c)</sup>         | \$120        | \$120        | \$ -         | \$-        |
| <b>Derivatives designated as hedging instruments:</b>     |              |              |              |            |

(a) Financial assets are classified on our balance sheet within other assets, with the exception of short-term investments. Financial liabilities are classified on our balance sheet within other current liabilities and other liabilities.

(b) Based on the price of common stock.

(c) Based on price changes in index funds used to manage a portion of market risk arising from our deferred compensation liability.

(d) Based on observable market transactions of spot and forward rates.

(e) Based on LIBOR and recently reported transactions in the marketplace.

(f) Based primarily on the price of our common stock.

(g) Based on recently reported transactions in the marketplace, primarily swap arrangements.

(h) Based on the fair value of investments corresponding to employees' investment elections.

(i) Based on average prices on futures exchanges.

The effective portion of the pre-tax (gains)/losses on our derivative instruments are categorized in the tables below.

| <b>Assets<sup>(a)</sup></b>                       |              |              |              |            |
| Available-for-sale securities <sup>(b)</sup>      | \$ 41        | \$ 41        | \$ -         | \$-        |
| Short-term investments—index funds <sup>(c)</sup> | 98           | 98           | -            | -          |
| Forward exchange contracts <sup>(d)</sup>         | 139          | -            | 139          | -          |
| Interest rate derivatives <sup>(e)</sup>          | 372          | -            | 372          | -          |
| Prepaid forward contracts <sup>(f)</sup>          | 41           | -            | 41           | -          |
| <b>Total assets at fair value</b>                 | <b>\$691</b> | <b>\$139</b> | <b>\$552</b> | <b>\$-</b> |
| <b>Liabilities<sup>(a)</sup></b>                  |              |              |              |            |
| Forward exchange contracts <sup>(d)</sup>         | \$ 56        | \$ -         | \$ 56        | \$-        |
| Commodity contracts—other <sup>(g)</sup>          | 345          | -            | 345          | -          |
| Commodity contracts—futures <sup>(i)</sup>        | 115          | 115          | -            | -          |
| Deferred compensation <sup>(h)</sup>              | 447          | 99           | 348          | -          |
| <b>Total liabilities at fair value</b>            | <b>\$963</b> | <b>\$214</b> | <b>\$749</b> | <b>\$-</b> |

(a) Financial assets are classified on our balance sheet within other assets, with the exception of short-term investments. Financial liabilities are classified on our balance sheet within other current liabilities and other liabilities.

(b) Based on the price of common stock.

(c) Based on price changes in index funds used to manage a portion of market risk arising from our deferred compensation liability.

(d) Based on observable market transactions of spot and forward rates.

(e) Based on LIBOR and recently reported transactions in the marketplace.

(f) Based primarily on the price of our common stock.

(g) Based on recently reported transactions in the marketplace, primarily swap arrangements.

(h) Based on the fair value of investments corresponding to employees' investment elections.

(i) Based on average prices on futures exchanges.

The carrying amounts of our cash and cash equivalents and short-term investments approximate fair value due to the short-term maturity. Short-term investments consist principally of short-term time deposits and index funds of \$120 million as of December 26, 2009 and \$98 million as of December 27, 2008 used to manage a portion of market risk arising from our deferred compensation liability. The fair value of our debt obligations as of December 26, 2009 and December 27, 2008 was \$8.6 billion and \$8.8 billion, respectively, based upon prices of similar instruments in the marketplace.

The preceding table excludes guarantees, including our guarantee aggregating \$2.3 billion of Bottling Group, LLC's long-term debt. The guarantee had a fair value of \$20 million as of December 26, 2009 and \$117 million as of December 27, 2008 based on our estimate of the cost to us of transferring the liability to an independent financial institution. See Note 9 for additional information on our guarantees.

## Note 11 Net Income Attributable to PepsiCo per Common Share

Basic net income attributable to PepsiCo per common share is net income available for PepsiCo common shareholders divided by the weighted average of common shares outstanding during the period. Diluted net income attributable to PepsiCo per common share is calculated using the weighted average of common shares outstanding adjusted to include the effect that would occur if in-the-money employee stock options were exercised and RSUs and preferred shares were converted into common shares. Options to purchase 39.0 million shares in 2009, 9.8 million shares in 2008 and 2.7 million shares in 2007 were not included in the calculation of diluted earnings per common share because these options were out-of-the-money. Out-of-the-money options had average exercise prices of \$61.52 in 2009, \$67.59 in 2008 and \$65.18 in 2007.

**Notes to Consolidated Financial Statements**

The computations of basic and diluted net income attributable to PepsiCo per common share are as follows:

|   | 2009    |                       | 2008    |                       | 2007    |                       |
|---|---------|-----------------------|---------|-----------------------|---------|-----------------------|
|   | Income  | Shares <sup>(a)</sup> | Income  | Shares <sup>(a)</sup> | Income  | Shares <sup>(a)</sup> |
| Net income attributable to PepsiCo                          | \$5,946 |                       | \$5,142 |                       | \$5,658 |                       |
| Preferred shares:   |         |                       |         |                       |         |                       |
| Dividends   | (1)     |                       | (2)     |                       | (2)     |                       |

| Diluted net income attributable to PepsiCo per common share | \$ 3.77 |                       | \$ 3.21 |                       | \$ 3.41 |                       |

(a) *Weighted-average common shares outstanding.*

**Note 12 Preferred Stock**

As of December 26, 2009 and December 27, 2008, there were 3 million shares of convertible preferred stock authorized. The preferred stock was issued only for an ESOP established by Quaker and these shares are redeemable for common stock by the ESOP participants. The preferred stock accrues dividends at an annual rate of \$5.46 per share. At year-end 2009 and 2008, there were 803,953 preferred shares issued and 243,553 and 266,253 shares outstanding, respectively. The outstanding preferred shares had a fair value of \$73 million as of December 26, 2009 and \$72 million as of December 27, 2008. Each share is convertible at the option of the holder into 4.9625 shares of common stock. The preferred shares may be called by us upon written notice at \$78 per share plus accrued and unpaid dividends. Quaker made the final award to its ESOP plan in June 2001.

### Note 13 Accumulated Other Comprehensive Loss Attributable to PepsiCo

Comprehensive income is a measure of income which includes both net income and other comprehensive income or loss. Other comprehensive income or loss results from items deferred from recognition into our income statement. Accumulated other comprehensive loss is separately presented on our balance sheet as part of common shareholders' equity. Other comprehensive income/(loss) attributable to PepsiCo was \$900 million in 2009, \$(3,793) million in 2008 and \$1,294 million in 2007. The accumulated balances for each component of other comprehensive loss attributable to PepsiCo were as follows:

|  | 2009             | 2008      | 2007     |
|--|------------------|-----------|----------|
| Currency translation adjustment                                    | <b>\$(1,471)</b> | \$(2,271) | \$ 213   |
| Cash flow hedges, net of tax <sup>(a)</sup>                        | <b>(42)</b>      | (14)      | (35)     |
| Unamortized pension and retiree medical, net of tax <sup>(b)</sup> | <b>(2,328)</b>   | (2,435)   | (1,183)  |
| Unrealized gain on securities, net of tax                          | <b>47</b>        | 28        | 49       |
| Other  | <b>-</b>         | (2)       | 4        |
| Accumulated other comprehensive loss attributable to PepsiCo       | <b>\$(3,794)</b> | \$(4,694) | \$ (952) |

(a) Includes \$23 million after-tax gain in 2009, \$17 million after-tax loss in 2008 and \$3 million after-tax gain in 2007 for our share of our equity investees' accumulated derivative activity.

(b) Net of taxes of \$1,211 million in 2009, \$1,288 million in 2008 and \$645 million in 2007. Includes \$51 million decrease to the opening balance of accumulated other comprehensive loss attributable to PepsiCo in 2008 due to the change in measurement date. See Note 7.

### Note 14 Supplemental Financial Information

|                                   | 2009           | 2008    | 2007 |

| Finished goods                    | <b>1,179</b>   | 1,125   |      |
|                                   | <b>\$2,618</b> | \$2,522 |      |

(a) Includes accounts written off.

(b) Includes currency translation effects and other adjustments.

(c) Inventories are valued at the lower of cost or market. Cost is determined using the average, first-in, first-out (FIFO) or last-in, first-out (LIFO) methods. Approximately 10% in 2009 and 11% in 2008 of the inventory cost was computed using the LIFO method. The differences between LIFO and FIFO methods of valuing these inventories were not material.

(a) During 2008, together with PBG, we jointly acquired Lebedyansky, for a total purchase price of \$1.8 billion. Lebedyansky is owned 25% and 75% by PBG and us, respectively.

## Notes to Consolidated Financial Statements

### Note 15 Acquisition of Common Stock of PBG and PAS

On August 3, 2009, we entered into the PBG Merger Agreement and the PAS Merger Agreement.

The PBG Merger Agreement provides that, upon the terms and subject to the conditions set forth in the PBG Merger Agreement, PBG will be merged with and into Metro (the PBG Merger), with Metro continuing as the surviving corporation and our wholly owned subsidiary. At the effective time of the PBG Merger, each share of PBG common stock outstanding immediately prior to the effective time not held by us or any of our subsidiaries will be converted into the right to receive either 0.6432 of a share of PepsiCo common stock or, at the election of the holder, \$36.50 in cash, without interest, and in each case subject to proration procedures which provide that we will pay cash for a number of shares equal to 50% of the PBG common stock outstanding immediately prior to the effective time of the PBG Merger not held by us or any of our subsidiaries and issue shares of PepsiCo common stock for the remaining 50% of such shares. Each share of PBG common stock held by PBG as treasury stock, held by us or held by Metro, and each share of PBG Class B common stock held by us or Metro, in each case immediately prior to the effective time of the PBG Merger, will be canceled, and no payment will be made with respect thereto. Each share of PBG common stock and PBG Class B common stock owned by any subsidiary of ours other than Metro immediately prior to the effective time of the PBG Merger will automatically be converted into the right to receive 0.6432 of a share of PepsiCo common stock.

The PAS Merger Agreement provides that, upon the terms and subject to the conditions set forth in the PAS Merger Agreement, PAS will be merged with and into Metro (the PAS Merger, and together with the PBG Merger, the Mergers), with Metro continuing as the surviving corporation and our wholly owned subsidiary. At the effective time of the PAS Merger, each share of PAS common stock outstanding immediately prior to the effective time not held by us or any of our subsidiaries will be converted into the right to

receive either 0.5022 of a share of PepsiCo common stock or, at the election of the holder, \$28.50 in cash, without interest, and in each case subject to proration procedures which provide that we will pay cash for a number of shares equal to 50% of the PAS common stock outstanding immediately prior to the effective time of the PAS Merger not held by us or any of our subsidiaries and issue shares of PepsiCo common stock for the remaining 50% of such shares. Each share of PAS common stock held by PAS as treasury stock, held by us or held by Metro, in each case, immediately prior to the effective time of the PAS Merger, will be canceled, and no payment will be made with respect thereto. Each share of PAS common stock owned by any subsidiary of ours other than Metro immediately prior to the effective time of the PAS Merger will automatically be converted into the right to receive 0.5022 of a share of PepsiCo common stock.

On February 17, 2010, the stockholders of PBG and PAS approved the PBG and PAS Mergers, respectively. Consummation of each of the Mergers is subject to various conditions, including the absence of legal prohibitions and the receipt of regulatory approvals. On February 17, 2010, we announced that we had refiled under the HSR Act with respect to the Mergers and signed a Consent Decree proposed by the Staff of the FTC providing for the maintenance of the confidentiality of certain information we will obtain from DPSG in connection with the manufacture and distribution of certain DPSG products after the Mergers are completed. The Consent Decree is subject to review and approval by the Commissioners of the FTC. We hope to consummate the Mergers by the end of February, 2010.

We currently plan that at the closing of the Mergers we will form a new operating unit. This new operating unit will comprise all current PBG and PAS operations in the United States, Canada and Mexico, and will account for about three-quarters of the volume of PepsiCo's North American bottling system, with independent franchisees accounting for most of the rest. This new operating unit will be included within the PAB business unit. Current PBG and PAS operations in Europe, including Russia, will be managed by the Europe division when the Mergers are completed.

## Management's Responsibility for Financial Reporting

To Our Shareholders:

At PepsiCo, our actions—the actions of all our associates—are governed by our Worldwide Code of Conduct. This Code is clearly aligned with our stated values—a commitment to sustained growth, through empowered people, operating with responsibility and building trust. Both the Code and our core values enable us to operate with integrity—both within the letter and the spirit of the law. Our Code of Conduct is reinforced consistently at all levels and in all countries. We have maintained strong governance policies and practices for many years.

The management of PepsiCo is responsible for the objectivity and integrity of our consolidated financial statements. The Audit Committee of the Board of Directors has engaged independent registered public accounting firm, KPMG LLP, to audit our consolidated financial statements, and they have expressed an unqualified opinion.

We are committed to providing timely, accurate and understandable information to investors. Our commitment encompasses the following:

**Maintaining strong controls over financial reporting.** Our system of internal control is based on the control criteria framework of the Committee of Sponsoring Organizations of the Treadway Commission published in their report titled *Internal Control—Integrated Framework*. The system is designed to provide reasonable assurance that transactions are executed as authorized and accurately recorded; that assets are safeguarded; and that accounting records are sufficiently reliable to permit the preparation of financial statements that conform in all material respects with accounting principles generally accepted in the U.S. We maintain disclosure controls and procedures designed to ensure that information required to be disclosed in reports under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported within the specified time periods. We monitor these internal controls through self-assessments and an ongoing program of internal audits. Our internal controls are reinforced through our Worldwide Code of Conduct, which sets forth our commitment to conduct business with integrity, and within both the letter and the spirit of the law.

**Exerting rigorous oversight of the business.** We continuously review our business results and strategies. This encompasses financial discipline in our strategic and daily business decisions. Our Executive Committee is actively involved—from understanding strategies and alternatives to reviewing key initiatives and financial

performance. The intent is to ensure we remain objective in our assessments, constructively challenge our approach to potential business opportunities and issues, and monitor results and controls.

**Engaging strong and effective Corporate Governance from our Board of Directors.** We have an active, capable and diligent Board that meets the required standards for independence, and we welcome the Board's oversight as a representative of our shareholders. Our Audit Committee is comprised of independent directors with the financial literacy, knowledge and experience to provide appropriate oversight. We review our critical accounting policies, financial reporting and internal control matters with them and encourage their direct communication with KPMG LLP, with our General Auditor, and with our General Counsel. We also have a Compliance Department to coordinate our compliance policies and practices.

**Providing investors with financial results that are complete, transparent and understandable.** The consolidated financial statements and financial information included in this report are the responsibility of management. This includes preparing the financial statements in accordance with accounting principles generally accepted in the U.S., which require estimates based on management's best judgment.

**PepsiCo has a strong history of doing what's right.** We realize that great companies are built on trust, strong ethical standards and principles. Our financial results are delivered from that culture of accountability, and we take responsibility for the quality and accuracy of our financial reporting.

## Management's Report on Internal Control Over Financial Reporting

To Our Shareholders:

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Rule 13a-15(f) of the Exchange Act. Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based upon the framework in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on that evaluation, our management concluded that our internal control over financial reporting is effective as of December 26, 2009.

KPMG LLP, an independent registered public accounting firm, has audited the consolidated financial statements included in this Annual Report on Form 10-K and, as part of their audit, has issued their report, included herein, on the effectiveness of our internal control over financial reporting.

During our fourth fiscal quarter of 2009, we continued migrating certain of our financial processing systems to SAP software. This software implementation is part of our ongoing global business transformation initiative, and we plan to continue implementing such software throughout other parts of our businesses over the course of the next few years. In connection with the SAP implementation and resulting business process

changes, we continue to enhance the design and documentation of our internal control processes to ensure suitable controls over our financial reporting.

Except as described above, there were no changes in our internal control over financial reporting during our fourth fiscal quarter of 2009 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Peter A. Bridgman  
Senior Vice President and Controller

Richard Goodman  
Chief Financial Officer

Indra K. Nooyi

## Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders  
PepsiCo, Inc.:

We have audited the accompanying Consolidated Balance Sheets of PepsiCo, Inc. and subsidiaries ("PepsiCo, Inc." or "the Company") as of December 26, 2009 and December 27, 2008, and the related Consolidated Statements of Income, Cash Flows and Equity for each of the fiscal years in the three-year period ended December 26, 2009. We also have audited PepsiCo, Inc.'s internal control over financial reporting as of December 26, 2009, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). PepsiCo, Inc.'s management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on these consolidated financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability

of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of PepsiCo, Inc. as of December 26, 2009 and December 27, 2008, and the results of its operations and its cash flows for each of the fiscal years in the three-year period ended December 26, 2009, in conformity with U.S. generally accepted accounting principles. Also in our opinion, PepsiCo, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 26, 2009, based on criteria established in *Internal Control—Integrated Framework* issued by COSO.

As discussed in Note 2 to the consolidated financial statements, the Company changed its method of accounting for business combinations and noncontrolling interests in 2009.

(a) The restructuring and impairment charge in 2009 was \$36 million (\$29 million after-tax or \$0.02 per share). The restructuring and impairment charge in 2008 was \$543 million (\$408 million after-tax or \$0.25 per share). See Note 3.

(b) In 2009, we recognized \$274 million (\$173 million after-tax or \$0.11 per share) of mark-to-market net gains on commodity hedges in corporate unallocated expenses. In 2008, we recognized \$346 million (\$223 million after-tax or \$0.14 per share) of mark-to-market net losses on commodity hedges in corporate unallocated expenses.

(c) In 2008, we recognized a non-cash charge of \$138 million (\$114 million after-tax or \$0.07 per share) included in bottling equity income as part of recording our share of PBG's financial results.

(d) In 2009, we recognized \$50 million of costs associated with the proposed mergers with PBG and PAS, as well as an additional \$11 million of costs in bottling equity income representing our share of the respective merger costs of PBG and PAS. In total, these costs had an after-tax impact of \$44 million or \$0.03 per share.

(e) Represents the composite high and low sales price and quarterly closing prices for one share of PepsiCo common stock.

| Five-Year Summary   | 2009     | 2008     | 2007     |
|---|----------|----------|----------|
| Net revenue   | \$43,232 | \$43,251 | \$39,474 |
| Net income attributable to PepsiCo                            | \$ 5,946 | \$ 5,142 | \$ 5,658 |
| Net income attributable to PepsiCo per common share – basic   | \$ 3.81  | \$ 3.26  | \$ 3.48  |
| Net income attributable to PepsiCo per common share – diluted | \$ 3.77  | \$ 3.21  | \$ 3.41  |
| Cash dividends declared per common share                      | \$ 1.775 | \$ 1.65  | \$ 1.425 |
| Total assets  | \$39,848 | \$35,994 | \$34,628 |
| Long-term debt  | \$ 7,400 | \$ 7,858 | \$ 4,203 |
| Return on invested capital <sup>(a)</sup>                     | 27.2%    | 25.5%    | 28.9%    |

| Five-Year Summary (continued)                                 | 2006     | 2005     |
|---|----------|----------|
| Net revenue   | \$35,137 | \$32,562 |
| Net income attributable to PepsiCo                            | \$ 5,642 | \$ 4,078 |
| Net income attributable to PepsiCo per common share – basic   | \$ 3.42  | \$ 2.43  |
| Net income attributable to PepsiCo per common share – diluted | \$ 3.34  | \$ 2.39  |
| Cash dividends declared per common share                      | \$ 1.16  | \$ 1.01  |
| Total assets  | \$29,930 | \$31,727 |
| Long-term debt  | \$ 2,550 | \$ 2,313 |
| Return on invested capital <sup>(a)</sup>                     | 30.4%    | 22.7%    |

(a) Return on invested capital is defined as adjusted net income attributable to PepsiCo divided by the sum of average common shareholders' equity and average total debt. Adjusted net income attributable to PepsiCo is defined as net income attributable to PepsiCo plus net interest expense after-tax. Net interest expense after-tax was \$211 million in 2009, \$184 million in 2008, \$63 million in 2007, \$72 million in 2006 and \$62 million in 2005.

- Includes restructuring and impairment charges of:

|           | 2009   | 2008   | 2007   | 2006   | 2005   |
|-----------|--------|--------|--------|--------|--------|
| Pre-tax   | \$ 36  | \$ 543 | \$ 102 | \$ 67  | \$ 83  |
| After-tax | \$ 29  | \$ 408 | \$ 70  | \$ 43  | \$ 55  |
| Per share | \$0.02 | \$0.25 | \$0.04 | \$0.03 | \$0.03 |

- Includes mark-to-market net (income)/expense of:

|           | 2009      | 2008   | 2007      | 2006   |
|-----------|-----------|--------|-----------|--------|
| Pre-tax   | \$ (274)  | \$ 346 | \$ (19)   | \$ 18  |
| After-tax | \$ (173)  | \$ 223 | \$ (12)   | \$ 12  |
| Per share | \$ (0.11) | \$0.14 | \$ (0.01) | \$0.01 |

- In 2009, we recognized \$50 million of costs associated with the proposed mergers with PBG and PAS, as well as an additional \$11 million of costs in bottling equity income representing our share of the respective merger costs of PBG and PAS. In total, these costs had an after-tax impact of \$44 million or \$0.03 per share.
- In 2008, we recognized \$138 million (\$114 million after-tax or \$0.07 per share) of our share of PBG's restructuring and impairment charges.
- In 2007, we recognized \$129 million (\$0.08 per share) of non-cash tax benefits related to the favorable resolution of certain foreign tax matters. In 2006, we recognized non-cash tax benefits of \$602 million (\$0.36 per share) primarily in connection with the IRS's examination of our consolidated income tax returns for the years 1998 through 2002. In 2005, we recorded income tax expense of \$460 million (\$0.27 per share) related to our repatriation of earnings in connection with the American Job Creation Act of 2004.
- On December 30, 2006, we adopted guidance from the FASB on accounting for pension and other postretirement benefits which reduced total assets by \$2,016 million, total common shareholders' equity by \$1,643 million and total liabilities by \$373 million.
- The 2005 fiscal year consisted of 53 weeks compared to 52 weeks in our normal fiscal year. The 53rd week increased 2005 net revenue by an estimated \$418 million and net income attributable to PepsiCo by an estimated \$57 million (\$0.03 per share).

# APPENDIX D

## Time Value of Money

### Study Objectives

After studying this appendix, you should be able to:

- 1 Distinguish between simple and compound interest.
- 2 Identify the variables fundamental to solving present value problems.
- 3 Solve for present value of a single amount.
- 4 Solve for present value of an annuity.
- 5 Compute the present value of notes and bonds.

Would you rather receive \$1,000 today or a year from now? You should prefer to receive the \$1,000 today because you can invest the \$1,000 and earn interest on it. As a result, you will have more than \$1,000 a year from now. What this example illustrates is the concept of the **time value of money**. Everyone prefers to receive money today rather than in the future because of the interest factor.

### Nature of Interest

**Interest** is payment for the use of another person's money. It is the difference between the amount borrowed or invested (called the **principal**) and the amount repaid or collected. The amount of interest to be paid or collected is usually stated as a **rate** over a specific period of time. The rate of interest is generally stated as an **annual rate**.

The amount of interest involved in any financing transaction is based on three elements:

1. **Principal ( $p$ ):** The original amount borrowed or invested.
2. **Interest Rate ( $i$ ):** An annual percentage of the principal.
3. **Time ( $n$ ):** The number of years that the principal is borrowed or invested.

### Simple Interest

**Simple interest** is computed on the principal amount only. It is the return on the principal for one period. Simple interest is usually expressed as shown in Illustration D-1 on the next page.

#### Study Objective [1]

Distinguish between simple and compound interest.

## D2 Appendix D Time Value of Money

**Illustration D-1**  
Interest computation

|  |   |                              |   |                         |   |                         |
|--|---|------------------------------|---|-------------------------|---|-------------------------|
| <b>Interest</b>  | = | <b>Principal</b><br><i>p</i> | × | <b>Rate</b><br><i>i</i> | × | <b>Time</b><br><i>n</i> |
| <p>For example, if you borrowed \$5,000 for 2 years at a simple interest rate of 12% annually, you would pay \$1,200 in total interest computed as follows:</p> $\begin{aligned} \text{Interest} &= p \times i \times n \\ &= \$5,000 \times .12 \times 2 \\ &= \$1,200 \end{aligned}$ |   |                              |   |                         |   |                         |

### Compound Interest

**Compound interest** is computed on principal **and** on any interest earned that has not been paid or withdrawn. It is the return on the principal for two or more time periods. Compounding computes interest not only on the principal but also on the interest earned to date on that principal, assuming the interest is left on deposit.

To illustrate the difference between simple and compound interest, assume that you deposit \$1,000 in Bank Two, where it will earn *simple interest* of 9% per year, and you deposit another \$1,000 in Citizens Bank, where it will earn compound interest of 9% per year *compounded annually*. Also assume that in both cases you will not withdraw any interest until three years from the date of deposit. Illustration D-2 shows the computation of interest you will receive and the accumulated year-end balances.

**Illustration D-2**  
Simple versus compound interest

| Bank Two                    |                 |                              | Citizens Bank                 |                   |                              |
|-----------------------------|-----------------|------------------------------|-------------------------------|-------------------|------------------------------|
| Simple Interest Calculation | Simple Interest | Accumulated Year-End Balance | Compound Interest Calculation | Compound Interest | Accumulated Year-End Balance |
| Year 1 \$1,000.00 × 9%      | \$ 90.00        | \$1,090.00                   | Year 1 \$1,000.00 × 9%        | \$ 90.00          | \$1,090.00                   |
| Year 2 \$1,000.00 × 9%      | 90.00           | \$1,180.00                   | Year 2 \$1,090.00 × 9%        | 98.10             | \$1,188.10                   |
| Year 3 \$1,000.00 × 9%      | 90.00           | \$1,270.00                   | Year 3 \$1,188.10 × 9%        | 106.93            | \$1,295.03                   |
|                             | \$ 270.00       |                              |                               | \$ 295.03         |                              |
|                             |                 | \$25.03                      | Difference                    |                   |                              |

Note in Illustration D-2 that simple interest uses the initial principal of \$1,000 to compute the interest in all three years. Compound interest uses the accumulated balance (principal plus interest to date) at each year-end to compute interest in the succeeding year—which explains why your compound interest account is larger.

Obviously, if you had a choice between investing your money at simple interest or at compound interest, you would choose compound interest, all other things—especially risk—being equal. In the example, compounding provides \$25.03 of additional interest income. For practical purposes, compounding assumes that unpaid interest earned becomes a part of the principal, and the accumulated balance at the end of each year becomes the new principal on which interest is earned during the next year.

Illustration D-2 indicates that you should invest your money at the bank that compounds interest annually. Most business situations use compound interest. Simple interest is generally applicable only to short-term situations of one year or less.

## Present Value Variables

The **present value** is the value now of a given amount to be paid or received in the future, assuming compound interest. The present value is based on three variables: (1) the dollar amount to be received (future amount), (2) the length of time until the amount is received (number of periods), and (3) the interest rate (the discount rate). The process of determining the present value is referred to as **discounting the future amount**.

In this textbook, we use present value computations in measuring several items. For example, Chapter 15 computed the present value of the principal and interest payments to determine the market price of a bond. In addition, determining the amount to be reported for notes payable and lease liabilities involves present value computations.

### Study Objective [2]

Identify the variables fundamental to solving present value problems.

## Present Value of a Single Amount

To illustrate present value, assume that you want to invest a sum of money that will yield \$1,000 at the end of one year. What amount would you need to invest today to have \$1,000 one year from now? Illustration D-3 shows the formula for calculating present value.

### Study Objective [3]

Solve for present value of a single amount.

$$\text{Present Value} = \text{Future Value} \div (1 + i)^n$$

#### Illustration D-3

Formula for present value

Thus, if you want a 10% rate of return, you would compute the present value of \$1,000 for one year as follows:

$$\begin{aligned} PV &= FV \div (1 + i)^n \\ &= \$1,000 \div (1 + .10)^1 \\ &= \$1,000 \div 1.10 \\ &= \$909.09 \end{aligned}$$

We know the future amount (\$1,000), the discount rate (10%), and the number of periods (1). These variables are depicted in the time diagram in Illustration D-4.

#### Illustration D-4

Finding present value if discounted for one period

If you receive the single amount of \$1,000 **in two years**, discounted at 10% [ $PV = \$1,000 \div (1 + .10)^2$ ], the present value of your \$1,000 is \$826.45 [ $(\$1,000 \div 1.21)$ ], depicted as shown in Illustration D-5 on the next page.

## D4 Appendix D Time Value of Money

### Illustration D-5

Finding present value if discounted for two periods

You also could find the present value of your amount through tables that show the present value of 1 for  $n$  periods. In Table 1, below,  $n$  (represented in the table's rows) is the number of discounting periods involved. The percentages (represented in the table's columns) are the periodic interest rates or discount rates. The 5-digit decimal numbers in the intersections of the rows and columns are called the **present value of 1 factors**.

When using Table 1 to determine present value, you multiply the future value by the present value factor specified at the intersection of the number of periods and the discount rate.

**Table 1**  
Present Value of 1

| <b>(n)</b><br><b>Periods</b> | <b>4%</b> | <b>5%</b> | <b>6%</b> | <b>8%</b> | <b>9%</b> | <b>10%</b> | <b>11%</b> | <b>12%</b> | <b>15%</b> |

| 9                            | .70259    | .64461    | .59190    | .50025    | .46043    | .42410     | .39092     | .36061     | .28426     |
| 10                           | .67556    | .61391    | .55839    | .46319    | .42241    | .38554     | .35218     | .32197     | .24719     |
| 11                           | .64958    | .58468    | .52679    | .42888    | .38753    | .35049     | .31728     | .28748     | .21494     |
| 12                           | .62460    | .55684    | .49697    | .39711    | .35554    | .31863     | .28584     | .25668     | .18691     |
| 13                           | .60057    | .53032    | .46884    | .36770    | .32618    | .28966     | .25751     | .22917     | .16253     |
| 14                           | .57748    | .50507    | .44230    | .34046    | .29925    | .26333     | .23199     | .20462     | .14133     |
| 15                           | .55526    | .48102    | .41727    | .31524    | .27454    | .23939     | .20900     | .18270     | .12289     |
| 16                           | .53391    | .45811    | .39365    | .29189    | .25187    | .21763     | .18829     | .16312     | .10687     |
| 17                           | .51337    | .43630    | .37136    | .27027    | .23107    | .19785     | .16963     | .14564     | .09293     |
| 18                           | .49363    | .41552    | .35034    | .25025    | .21199    | .17986     | .15282     | .13004     | .08081     |
| 19                           | .47464    | .39573    | .33051    | .23171    | .19449    | .16351     | .13768     | .11611     | .07027     |
| 20                           | .45639    | .37689    | .31180    | .21455    | .17843    | .14864     | .12403     | .10367     | .06110     |

For example, the present value factor for one period at a discount rate of 10% is .90909, which equals the \$909.09 ( $\$1,000 \times .90909$ ) computed in Illustration D-4. For two periods at a discount rate of 10%, the present value factor is .82645, which equals the \$826.45 ( $\$1,000 \times .82645$ ) computed previously.

Note that a higher discount rate produces a smaller present value. For example, using a 15% discount rate, the present value of \$1,000 due one year from now is \$869.57, versus \$909.09 at 10%. Also note that the further removed from the present the future value is, the smaller the present value. For example, using the same

discount rate of 10%, the present value of \$1,000 due in **five years** is \$620.92, versus the present value of \$1,000 due in **one year**, which is \$909.09.

The following two demonstration problems (Illustrations D-6 and D-7) illustrate how to use Table 1.

Suppose you have a winning lottery ticket and the state gives you the option of taking \$10,000 three years from now or taking the present value of \$10,000 now. The state uses an 8% rate in discounting. How much will you receive if you accept your winnings now?

$PV = ?$   $i = 8\%$   $\$10,000$

Now 1 2 3 years

$n = 3$

**Answer:** The present value factor from Table 1 is .79383 (3 periods at 8%). The present value of \$10,000 to be received in 3 years discounted at 8% is **\$7,938.30** (\$10,000  $\cdot$  .79383).

**Illustration D-6**  
Demonstration problem—  
Using Table 1 for PV of 1

Determine the amount you must deposit now in a bond investment, paying 9% interest, in order to accumulate \$5,000 for a down payment 4 years from now on a new Toyota Prius.

$PV = ?$   $i = 9\%$   $\$5,000$

Now 1 2 3 4 years

$n = 4$

**Answer:** The present value factor from Table 1 is .70843 (4 periods at 9%). The present value of \$5,000 to be received in 4 years discounted at 9% is **\$3,542.15** (\$5,000  $\cdot$  .70843).

**Illustration D-7**  
Demonstration problem—  
Using Table 1 for PV of 1

## Present Value of an Annuity

The preceding discussion involved the discounting of only a single future amount. Businesses and individuals frequently engage in transactions in which a *series* of equal dollar amounts are to be received or paid at evenly spaced time intervals (periodically). Examples of a series of periodic receipts or payments are loan agreements, installment sales, mortgage notes, lease (rental) contracts, and pension obligations. As discussed in Chapter 15, these periodic receipts or payments are **annuities**.

The **present value of an annuity** is the value now of a series of future receipts or payments, discounted assuming compound interest. In computing the present value of an annuity, you need to know: (1) the discount rate, (2) the number of discount periods, and (3) the amount of the periodic receipts or payments.

**Study Objective [4]**  
Solve for present value of an annuity.

D6 **Appendix D** Time Value of Money

To illustrate how to compute the present value of an annuity, assume that you will receive \$1,000 cash annually for three years at a time when the discount rate is 10%. Illustration D-8 depicts this situation, and Illustration D-9 shows the computation of its present value.

**Illustration D-8**

Time diagram for a three-year annuity

**Illustration D-9**

Present value of a series of future amounts computation

| Future Amount            | × Present Value of 1 Factor at 10% | = Present Value   |
|--------------------------|------------------------------------|-------------------|
| \$1,000 (one year away)  | .90909                             | \$ 909.09         |
| 1,000 (two years away)   | .82645                             | 826.45            |
| 1,000 (three years away) | .75132                             | 751.32            |
|                          | <b>2.48686</b>                     | <b>\$2,486.86</b> |

This method of calculation is required when the periodic cash flows are not uniform in each period. However, when the future receipts are the same in each period, there are two other ways to compute present value. First, you can multiply the annual cash flow by the sum of the three present value factors. In the previous example,  $\$1,000 \times 2.48686$  equals  $\$2,486.86$ . The second method is to use annuity tables. As illustrated in Table 2 below, these tables show the present value of 1 to be received periodically for a given number of periods.

| (n)<br>Periods | 4%       | 5%       | 6%       | 8%      | 9%      | 10%     | 11%     | 12%     | 15%     |
|----------------|----------|----------|----------|---------|---------|---------|---------|---------|---------|
| 1              | .96154   | .95238   | .94340   | .92593  | .91743  | .90909  | .90090  | .89286  | .86957  |
| 2              | 1.88609  | 1.85941  | 1.83339  | 1.78326 | 1.75911 | 1.73554 | 1.71252 | 1.69005 | 1.62571 |
| 3              | 2.77509  | 2.72325  | 2.67301  | 2.57710 | 2.53130 | 2.48685 | 2.44371 | 2.40183 | 2.28323 |
| 4              | 3.62990  | 3.54595  | 3.46511  | 3.31213 | 3.23972 | 3.16986 | 3.10245 | 3.03735 | 2.85498 |
| 5              | 4.45182  | 4.32948  | 4.21236  | 3.99271 | 3.88965 | 3.79079 | 3.69590 | 3.60478 | 3.35216 |
| 6              | 5.24214  | 5.07569  | 4.91732  | 4.62288 | 4.48592 | 4.35526 | 4.23054 | 4.11141 | 3.78448 |
| 7              | 6.00205  | 5.78637  | 5.58238  | 5.20637 | 5.03295 | 4.86842 | 4.71220 | 4.56376 | 4.16042 |
| 8              | 6.73274  | 6.46321  | 6.20979  | 5.74664 | 5.53482 | 5.33493 | 5.14612 | 4.96764 | 4.48732 |
| 9              | 7.43533  | 7.10782  | 6.80169  | 6.24689 | 5.99525 | 5.75902 | 5.53705 | 5.32825 | 4.77158 |
| 10             | 8.11090  | 7.72173  | 7.36009  | 6.71008 | 6.41766 | 6.14457 | 5.88923 | 5.65022 | 5.01877 |
| 11             | 8.76048  | 8.30641  | 7.88687  | 7.13896 | 6.80519 | 6.49506 | 6.20652 | 5.93770 | 5.23371 |
| 12             | 9.38507  | 8.86325  | 8.38384  | 7.53608 | 7.16073 | 6.81369 | 6.49236 | 6.19437 | 5.42062 |
| 13             | 9.98565  | 9.39357  | 8.85268  | 7.90378 | 7.48690 | 7.10336 | 6.74987 | 6.42355 | 5.58315 |
| 14             | 10.56312 | 9.89864  | 9.29498  | 8.24424 | 7.78615 | 7.36669 | 6.98187 | 6.62817 | 5.72448 |
| 15             | 11.11839 | 10.37966 | 9.71225  | 8.55948 | 8.06069 | 7.60608 | 7.19087 | 6.81086 | 5.84737 |
| 16             | 11.65230 | 10.83777 | 10.10590 | 8.85137 | 8.31256 | 7.82371 | 7.37916 | 6.97399 | 5.95424 |
| 17             | 12.16567 | 11.27407 | 10.47726 | 9.12164 | 8.54363 | 8.02155 | 7.54879 | 7.11963 | 6.04716 |
| 18             | 12.65930 | 11.68959 | 10.82760 | 9.37189 | 8.75563 | 8.20141 | 7.70162 | 7.24967 | 6.12797 |
| 19             | 13.13394 | 12.08532 | 11.15812 | 9.60360 | 8.95012 | 8.36492 | 7.83929 | 7.36578 | 6.19823 |
| 20             | 13.59033 | 12.46221 | 11.46992 | 9.81815 | 9.12855 | 8.51356 | 7.96333 | 7.46944 | 6.25933 |

Table 2 shows that the present value of an annuity of 1 factor for three periods at 10% is 2.48685.<sup>1</sup> (This present value factor is the total of the three individual present value factors, as shown in Illustration D-9.) Applying this amount to the annual cash flow of \$1,000 produces a present value of \$2,486.85.

The following demonstration problem (Illustration D-10) illustrates how to use Table 2.

Kildare Company has just signed a capitalizable lease contract for equipment that requires rental payments of \$6,000 each, to be paid at the end of each of the next 5 years. The appropriate discount rate is 12%. What is the present value of the rental payments—that is, the amount used to capitalize the leased equipment?

$PV = ?$       \$6,000      \$6,000      \$6,000      \$6,000      \$6,000

**Answer:** The present value factor from Table 2 is 3.60478 (5 periods at 12%). The present value of 5 payments of \$6,000 each discounted at 12% is **\$21,628.68** ( $\$6,000 \times 3.60478$ ).

**Illustration D-10**  
 Demonstration problem—  
 Using Table 2 for PV of an  
 annuity of 1

## Time Periods and Discounting

In the preceding calculations, the discounting was done on an *annual* basis using an *annual* interest rate. Discounting may also be done over shorter periods of time such as monthly, quarterly, or semiannually.

When the time frame is less than one year, you need to convert the annual interest rate to the applicable time frame. Assume, for example, that the investor in Illustration D-8 received \$500 **semiannually** for three years instead of \$1,000 annually. In this case, the number of periods becomes six ( $3 \times 2$ ), the discount rate is 5% ( $10\% \div 2$ ), the present value factor from Table 2 is 5.07569, and the present value of the future cash flows is \$2,537.85 ( $5.07569 \times \$500$ ). This amount is slightly higher than the \$2,486.86 computed in Illustration D-9 because interest is paid twice during the same year; therefore interest is earned on the first half year's interest.

## Computing the Present Value of a Long-Term Note or Bond

The present value (or market price) of a long-term note or bond is a function of three variables: (1) the payment amounts, (2) the length of time until the amounts are paid, and (3) the discount rate. Our illustration uses a five-year bond issue.

### Study Objective [5]

Compute the present value of notes and bonds.

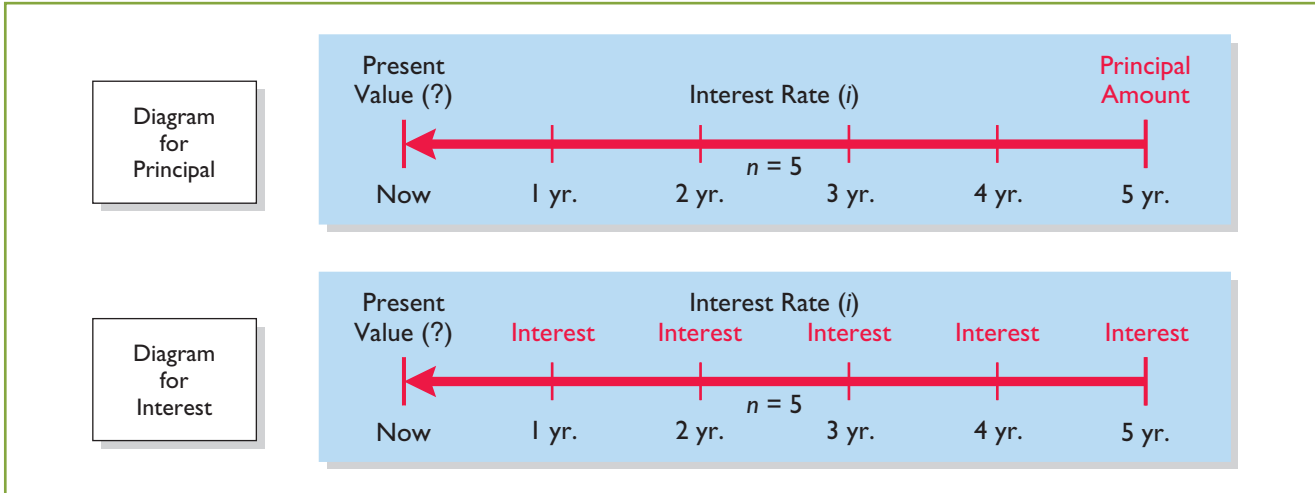

<sup>1</sup>The difference of .00001 between 2.48686 and 2.48685 is due to rounding.

D8 **Appendix D** Time Value of Money

The first variable—dollars to be paid—is made up of two elements: (1) a series of interest payments (an annuity), and (2) the principal amount (a single sum). To compute the present value of the bond, we must discount both the interest payments and the principal amount—two different computations. The time diagrams for a bond due in five years are shown in Illustration D-11.

**Illustration D-11**  
Present value of a bond time diagram

When the investor’s market interest rate is equal to the bond’s contractual interest rate, the present value of the bonds will *equal* the face value of the bonds. To illustrate, assume a bond issue of 10%, five-year bonds with a face value of \$100,000 with interest payable **semiannually** on January 1 and July 1. If the discount rate is the same as the contractual rate, the bonds will sell at face value. In this case, the investor will receive the following: (1) \$100,000 at maturity, and (2) a series of ten \$5,000 interest payments  $[(\$100,000 \times 10\%) \div 2]$  over the term of the bonds. The length of time is expressed in terms of interest periods—in this case—10, and the discount rate per interest period, 5%. The following time diagram (Illustration D-12) depicts the variables involved in this discounting situation.

**Illustration D-12**  
Time diagram for present value of a 10%, five-year bond paying interest semiannually

Illustration D-13 shows the computation of the present value of these bonds.

| <u>10% Contractual Rate—10% Discount Rate</u>   |                                |
|---|--------------------------------|
| <b>Present value of principal to be received at maturity</b>                            |                                |
| $\$100,000 \times PV$ of 1 due in 10 periods at 5%                                      |                                |
| $\$100,000 \times .61391$ (Table 1)   | \$ 61,391                      |
| <b>Present value of interest to be received periodically over the term of the bonds</b> |                                |
| $\$5,000 \times PV$ of 1 due periodically for 10 periods at 5%                          |                                |
| $\$5,000 \times 7.72173$ (Table 2)  | 38,609*                        |
| <b>Present value of bonds</b>   | <b><u><u>\$100,000</u></u></b> |

\*Rounded

**Illustration D-13**  
Present value of principal and interest—face value

Now assume that the investor’s required rate of return is 12%, not 10%. The future amounts are again \$100,000 and \$5,000, respectively, but now a discount rate of 6% ( $12\% \div 2$ ) must be used. The present value of the bonds is \$92,639, as computed in Illustration D-14.

| <u>10% Contractual Rate—12% Discount Rate</u>   |                               |
|---|-------------------------------|
| <b>Present value of principal to be received at maturity</b>                            |                               |
| $\$100,000 \times .55839$ (Table 1)   | \$55,839                      |
| <b>Present value of interest to be received periodically over the term of the bonds</b> |                               |
| $\$5,000 \times 7.36009$ (Table 2)  | 36,800                        |
| <b>Present value of bonds</b>   | <b><u><u>\$92,639</u></u></b> |

**Illustration D-14**  
Present value of principal and interest—discount

Conversely, if the discount rate is 8% and the contractual rate is 10%, the present value of the bonds is \$108,111, computed as shown in Illustration D-15.

| <u>10% Contractual Rate—8% Discount Rate</u>  |                                |
|---|--------------------------------|
| <b>Present value of principal to be received at maturity</b>                            |                                |
| $\$100,000 \times .67556$ (Table 1)   | \$ 67,556                      |
| <b>Present value of interest to be received periodically over the term of the bonds</b> |                                |
| $\$5,000 \times 8.11090$ (Table 2)  | 40,555                         |
| <b>Present value of bonds</b>   | <b><u><u>\$108,111</u></u></b> |

**Illustration D-15**  
Present value of principal and interest—premium

The above discussion relies on present value tables in solving present value problems. Many people use spreadsheets such as Excel or financial calculators (some even on websites) to compute present values, without the use of tables. Many calculators, especially “financial calculators,” have present value (*PV*) functions that allow you to calculate present values by merely inputting the proper amount, discount rate, and periods, and pressing the PV key. Appendix E illustrates how to use a financial calculator in various business situations.

## Summary of Study Objectives

**[1] Distinguish between simple and compound interest.** Simple interest is computed on the principal only, while compound interest is computed on the principal and any interest earned that has not been withdrawn.

**[2] Identify the variables fundamental to solving present value problems.** The following three variables are fundamental to solving present value problems: (1) the future amount, (2) the number of periods, and (3) the interest rate (the discount rate).

**[3] Solve for present value of a single amount.** Prepare a time diagram of the problem. Identify the future amount, the number of discounting periods, and the discount (interest) rate. Using the present value of a single amount table, multiply the future amount by the present value factor specified at the intersection of the number of periods and the discount rate.

**[4] Solve for present value of an annuity.** Prepare a time diagram of the problem. Identify the future annuity pay-

ments, the number of discounting periods, and the discount (interest) rate. Using the present value of an annuity of 1 table, multiply the amount of the annuity payments by the present value factor specified at the intersection of the number of periods and the interest rate.

**[5] Compute the present value of notes and bonds.** To determine the present value of the principal amount: Multiply the principal amount (a single future amount) by the present value factor (from the present value of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate.

To determine the present value of the series of interest payments: Multiply the amount of the interest payment by the present value factor (from the present value of an annuity of 1 table) intersecting at the number of periods (number of interest payments) and the discount rate. Add the present value of the principal amount to the present value of the interest payments to arrive at the present value of the note or bond.

## Glossary

**Annuity** A series of equal dollar amounts to be paid or received at evenly spaced time intervals (periodically). (p. D5).

**Compound interest** The interest computed on the principal and any interest earned that has not been paid or withdrawn. (p. D2).

**Discounting the future amount(s)** The process of determining present value. (p. D3).

**Interest** Payment for the use of another's money. (p. D1).

**Present value** The value now of a given amount to be paid or received in the future assuming compound interest. (p. D3).

**Present value of an annuity** The value now of a series of future receipts or payments, discounted assuming compound interest. (p. D5).

**Principal** The amount borrowed or invested. (p. D1).

**Simple interest** The interest computed on the principal only. (p. D1).

## Brief Exercises

Use tables to solve exercises.

Use present value tables.

**BED-1** For each of the following cases, indicate (a) to what interest rate columns, and (b) to what number of periods you would refer in looking up the discount rate.

1. In Table 1 (present value of 1):

|     | <u>Annual Rate</u> | <u>Number of Years Involved</u> | <u>Compounding Per Year</u> |
|-----|--------------------|---------------------------------|-----------------------------|
| (a) | 12%                | 6                               | Annually                    |
| (b) | 10%                | 15                              | Annually                    |
| (c) | 8%                 | 12                              | Semiannually                |

2. In Table 2 (present value of an annuity of 1):

|     | <u>Annual Rate</u> | <u>Number of Years Involved</u> | <u>Number of Payments Involved</u> | <u>Frequency of Payments</u> |
|-----|--------------------|---------------------------------|------------------------------------|------------------------------|
| (a) | 8%                 | 20                              | 20                                 | Annually                     |
| (b) | 10%                | 5                               | 5                                  | Annually                     |
| (c) | 12%                | 4                               | 8                                  | Semiannually                 |

Determine present values.

**BED-2** (a) What is the present value of \$30,000 due 8 periods from now, discounted at 8%? (b) What is the present value of \$30,000 to be received at the end of each of 6 periods, discounted at 9%?

- BED-3** Ramirez Company is considering an investment that will return a lump sum of \$600,000 5 years from now. What amount should Ramirez Company pay for this investment in order to earn a 10% return?
- Compute the present value of a single-sum investment.*
- BED-4** LaRussa Company earns 9% on an investment that will return \$700,000 8 years from now. What is the amount LaRussa should invest now in order to earn this rate of return?
- Compute the present value of a single-sum investment.*
- BED-5** Polley Company sold a 5-year, zero-interest-bearing \$36,000 note receivable to Valley Inc. Valley wishes to earn 10% over the remaining 4 years of the note. How much cash will Polley receive upon sale of the note?
- Compute the present value of a single-sum zero-interest-bearing note.*
- BED-6** Marichal Company issues a 3-year, zero-interest-bearing \$60,000 note. The interest rate used to discount the zero-interest-bearing note is 8%. What are the cash proceeds that Marichal Company should receive?
- Compute the present value of a single-sum zero-interest-bearing note.*
- BED-7** Colaw Company is considering investing in an annuity contract that will return \$40,000 annually at the end of each year for 15 years. What amount should Colaw Company pay for this investment if it earns a 6% return?
- Compute the present value of an annuity investment.*
- BED-8** Sauder Enterprises earns 11% on an investment that pays back \$100,000 at the end of each of the next 4 years. What is the amount Sauder Enterprises invested to earn the 11% rate of return?
- Compute the present value of an annuity investment.*
- BED-9** Chicago Railroad Co. is about to issue \$200,000 of 10-year bonds paying a 10% interest rate, with interest payable semiannually. The discount rate for such securities is 8%. How much can Chicago expect to receive for the sale of these bonds?
- Compute the present value of bonds.*
- BED-10** Assume the same information as in BED-9 except that the discount rate is 10% instead of 8%. In this case, how much can Chicago expect to receive from the sale of these bonds?
- Compute the present value of bonds.*
- BED-11** Berghaus Company receives a \$75,000, 6-year note bearing interest of 8% (paid annually) from a customer at a time when the discount rate is 9%. What is the present value of the note received by Berghaus Company?
- Compute the present value of a note.*
- BED-12** Troutman Enterprises issued 8%, 8-year, \$1,000,000 par value bonds that pay interest semiannually on October 1 and April 1. The bonds are dated April 1, 2012, and are issued on that date. The discount rate of interest for such bonds on April 1, 2012, is 10%. What cash proceeds did Troutman receive from issuance of the bonds?
- Compute the present value of bonds.*
- BED-13** Ricky Cleland owns a garage and is contemplating purchasing a tire retreading machine for \$16,280. After estimating costs and revenues, Ricky projects a net cash flow from the retreading machine of \$2,800 annually for 8 years. Ricky hopes to earn a return of 11% on such investments. What is the present value of the retreading operation? Should Ricky Cleland purchase the retreading machine?
- Compute the value of a machine for purposes of making a purchase decision.*
- BED-14** Martinez Company issues a 10%, 6-year mortgage note on January 1, 2012, to obtain financing for new equipment. Land is used as collateral for the note. The terms provide for semi-annual installment payments of \$78,978. What were the cash proceeds received from the issuance of the note?
- Compute the present value of a note.*
- BED-15** Durler Company is considering purchasing equipment. The equipment will produce the following cash flows: Year 1, \$30,000; Year 2, \$40,000; Year 3, \$60,000. Durler requires a minimum rate of return of 12%. What is the maximum price Durler should pay for this equipment?
- Compute the maximum price to pay for a machine.*
- BED-16** If Carla Garcia invests \$2,745 now, she will receive \$10,000 at the end of 15 years. What annual rate of interest will Carla earn on her investment? (*Hint: Use Table 1.*)
- Compute the interest rate on a single sum.*
- BED-17** Sara Altom has been offered the opportunity of investing \$51,316 now. The investment will earn 10% per year and at the end of that time will return Sara \$100,000. How many years must Sara wait to receive \$100,000? (*Hint: Use Table 1.*)
- Compute the number of periods of a single sum.*
- BED-18** Stacy Dains purchased an investment for \$11,469.92. From this investment, she will receive \$1,000 annually for the next 20 years, starting one year from now. What rate of interest will Stacy's investment be earning for her? (*Hint: Use Table 2.*)
- Compute the interest rate on an annuity.*
- BED-19** Diana Rossi invests \$8,559.48 now for a series of \$1,000 annual returns, beginning one year from now. Diana will earn a return of 8% on the initial investment. How many annual payments of \$1,000 will Diana receive? (*Hint: Use Table 2.*)
- Compute the number of periods of an annuity.*
- BED-20** Minitori Company needs \$10,000 on January 1, 2015. It is starting a fund on January 1, 2012.
- Compute the amount to be invested.*

## D12 Appendix D Time Value of Money

### Instructions

Compute the amount that must be invested in the fund on January 1, 2012, to produce a \$10,000 balance on January 1, 2015, if:

- (a) The fund earns 8% per year compounded annually.
- (b) The fund earns 8% per year compounded semiannually.
- (c) The fund earns 12% per year compounded annually.
- (d) The fund earns 12% per year compounded semiannually.

*Compute the amount to be invested.*

**BED-21** Venuchi Company needs \$10,000 on January 1, 2017. It is starting a fund to produce that amount.

### Instructions

Compute the amount that must be invested in the fund to produce a \$10,000 balance on January 1, 2017, if:

- (a) The initial investment is made January 1, 2012, and the fund earns 6% per year.
- (b) The initial investment is made January 1, 2014, and the fund earns 6% per year.
- (c) The initial investment is made January 1, 2012, and the fund earns 10% per year.
- (d) The initial investment is made January 1, 2014, and the fund earns 10% per year.

*Select the better payment option.*

**BED-22** Letterman Corporation is buying new equipment. It can pay \$39,500 today (option 1), or \$10,000 today and 5 yearly payments of \$8,000 each, starting in one year (option 2).

### Instructions

Which option should Letterman select? (Assume a discount rate of 10%.)

*Compute the cost of an investment, amount received, and rate of return.*

**BED-23** Carmen Corporation is considering several investments.

### Instructions

- (a) One investment returns \$10,000 per year for 5 years and provides a return of 10%. What is the cost of this investment?
- (b) Another investment costs \$50,000 and returns a certain amount per year for 10 years, providing an 8% return. What amount is received each year?
- (c) A third investment costs \$70,000 and returns \$11,971 each year for 15 years. What is the rate of return on this investment?

*Select the best payment option.*

**BED-24** You are the beneficiary of a trust fund. The fund gives you the option of receiving \$5,000 per year for 10 years, \$9,000 per year for 5 years, or \$30,000 today.

### Instructions

If the desired rate of return is 8%, which option should you select?

*Compute the semiannual car payment.*

**BED-25** You are purchasing a car for \$24,000, and you obtain financing as follows: \$2,400 down payment, 12% interest, semiannual payments over 5 years.

### Instructions

Compute the payment you will make every 6 months

*Compute the present value of bonds.*

**BED-26** Contreras Corporation is considering purchasing bonds of Jose Company as an investment. The bonds have a face value of \$40,000 with a 10% interest rate. The bonds mature in 4 years and pay interest semiannually.

### Instructions

- (a) What is the most Contreras should pay for the bonds if it desires a 12% return?
- (b) What is the most Contreras should pay for the bonds if it desires an 8% return?

*Compute the present value of bonds.*

**BED-27** Garcia Corporation is considering purchasing bonds of Fred Company as an investment. The bonds have a face value of \$90,000 with a 9% interest rate. The bonds mature in 6 years and pay interest semiannually.

### Instructions

- (a) What is the most Garcia should pay for the bonds if it desires a 10% return?
- (b) What is the most Garcia should pay for the bonds if it desires an 8% return?

# APPENDIX E

## Using Financial Calculators

### Study Objective

After studying this appendix, you should be able to:

- 1 Use a financial calculator to solve time value of money problems.

Business professionals, once they have mastered the underlying concepts in Appendix D, often use a financial (business) calculator to solve time value of money problems. In many cases, they must use calculators if interest rates or time periods do not correspond with the information provided in the compound interest tables.

To use financial calculators, you enter the time value of money variables into the calculator. Illustration E-1 shows the five most common keys used to solve time value of money problems.<sup>1</sup>

### Study Objective [1]

Use a financial calculator to solve time value of money problems.

**Illustration E-1**  
Financial calculator keys

where

- N = number of periods
- I = interest rate per period (some calculators use I/YR or  $i$ )
- PV = present value (occurs at the beginning of the first period)
- PMT = payment (all payments are equal, and none are skipped)
- FV = future value (occurs at the end of the last period)

In solving time value of money problems in this appendix, you will generally be given three of four variables and will have to solve for the remaining variable. The fifth key (the key not used) is given a value of zero to ensure that this variable is not used in the computation.

## Present Value of a Single Sum

To illustrate how to solve a present value problem using a financial calculator, assume that you want to know the present value of \$84,253 to be received in five years, discounted at 11% compounded annually. Illustration E-2 (page E2) pictures this problem.

<sup>1</sup>On many calculators, these keys are actual buttons on the face of the calculator; on others, they appear on the display after the user accesses a present value menu.

## E2 Appendix E Using Financial Calculators

### Illustration E-2

Calculator solution for present value of a single sum

The diagram shows you the information (inputs) to enter into the calculator:  $N = 5$ ,  $I = 11$ ,  $PMT = 0$ , and  $FV = 84,253$ . You then press **PV** for the answer:  $-\$50,000$ . As indicated, the **PMT** key was given a value of zero because a series of payments did not occur in this problem.

### Plus and Minus

The use of plus and minus signs in time value of money problems with a financial calculator can be confusing. Most financial calculators are programmed so that the positive and negative cash flows in any problem offset each other. In the present value problem above, we identified the  $\$84,253$  future value initial investment as a positive (inflow); the answer  $-\$50,000$  was shown as a negative amount, reflecting a cash outflow. If the  $84,253$  were entered as a negative, then the final answer would have been reported as a positive  $50,000$ .

Hopefully, the sign convention will not cause confusion. If you understand what is required in a problem, you should be able to interpret a positive or negative amount in determining the solution to a problem.

### Compounding Periods

In the problem above, we assumed that compounding occurs once a year. Some financial calculators have a default setting, which assumes that compounding occurs 12 times a year. You must determine what default period has been programmed into your calculator and change it as necessary to arrive at the proper compounding period.

### Rounding

Most financial calculators store and calculate using 12 decimal places. As a result, because compound interest tables generally have factors only up to 5 decimal places, a slight difference in the final answer can result. In most time value of money problems, the final answer will not include more than two decimal points.

## Present Value of an Annuity

To illustrate how to solve a present value of an annuity problem using a financial calculator, assume that you are asked to determine the present value of rental receipts of  $\$6,000$  each to be received at the end of each of the next five years, when discounted at 12%, as pictured in Illustration E-3.

### Illustration E-3

Calculator solution for present value of an annuity

In this case, you enter  $N = 5$ ,  $I = 12$ ,  $PMT = 6,000$ ,  $FV = 0$ , and then press  $PV$  to arrive at the answer of \$21,628.66.

## Useful Applications of the Financial Calculator

With a financial calculator, you can solve for any interest rate or for any number of periods in a time value of money problem. Here are some examples of these applications.

### Auto Loan

Assume you are financing the purchase of a used car with a three-year loan. The loan has a 9.5% nominal annual interest rate, compounded monthly. The price of the car is \$6,000, and you want to determine the monthly payments, assuming that the payments start one month after the purchase. This problem is pictured in Illustration E-4.

|         |          |          |           |                |           |
|---------|----------|----------|-----------|----------------|-----------|
| Inputs: | 36       | 9.5      | 6,000     | ?              | 0         |
|         | <b>N</b> | <b>I</b> | <b>PV</b> | <b>PMT</b>     | <b>FV</b> |
| Answer: |          |          |           | <b>-192.20</b> |           |

**Illustration E-4**  
Calculator solution for auto loan payments

To solve this problem, you enter  $N = 36$  ( $12 \times 3$ ),  $I = 9.5$ ,  $PV = 6,000$ ,  $FV = 0$ , and then press  $PMT$ . You will find that the monthly payments will be \$192.20. Note that the payment key is usually programmed for 12 payments per year. Thus, you must change the default (compounding period) if the payments are other than monthly.

### Mortgage Loan Amount

Let's say you are evaluating financing options for a loan on a house. You decide that the maximum mortgage payment you can afford is \$700 per month. The annual interest rate is 8.4%. If you get a mortgage that requires you to make monthly payments over a 15-year period, what is the maximum purchase price you can afford? Illustration E-5 depicts this problem.

|         |          |          |                  |            |           |
|---------|----------|----------|------------------|------------|-----------|
| Inputs: | 180      | 8.4      | ?                | -700       | 0         |
|         | <b>N</b> | <b>I</b> | <b>PV</b>        | <b>PMT</b> | <b>FV</b> |
| Answer: |          |          | <b>71,509.81</b> |            |           |

**Illustration E-5**  
Calculator solution for mortgage amount

You enter  $N = 180$  ( $12 \times 15$  years),  $I = 8.4$ ,  $PMT = -700$ ,  $FV = 0$ , and press  $PV$ . You find a present value of \$71,509.81—the maximum house price you can afford, given that you want to keep your mortgage payments at \$700. Note that by changing any of the variables, you can quickly conduct “what-if” analyses for different situations.

## Summary of Learning Objective

**[1] Use a financial calculator to solve time value of money problems.** Financial calculators can be used to solve the same and additional problems as those solved with time value of money tables. One enters into the financial calculator the amounts for all but one of the unknown elements

of a time value of money problem (periods, interest rate, payments, future or present value). Particularly useful situations involve interest rates and compounding periods not presented in the tables.

## Brief Exercises

*Determine interest rate.*

**BEE-1** Reba McEntire wishes to invest \$19,000 on July 1, 2012, and have it accumulate to \$49,000 by July 1, 2022.

**Instructions**

Use a financial calculator to determine at what exact annual rate of interest Reba must invest the \$19,000.

*Determine interest rate.*

**BEE-2** On July 17, 2012, Tim McGraw borrowed \$42,000 from his grandfather to open a clothing store. Starting July 17, 2013, Tim has to make 10 equal annual payments of \$6,500 each to repay the loan.

**Instructions**

Use a financial calculator to determine what interest rate Tim is paying.

*Determine interest rate.*

**BEE-3** As the purchaser of a new house, Patty Loveless has signed a mortgage note to pay the Memphis National Bank and Trust Co. \$14,000 every 6 months for 20 years, at the end of which time she will own the house. At the date the mortgage is signed the purchase price was \$198,000, and Loveless made a down payment of \$20,000. The first payment will be made 6 months after the date the mortgage is signed.

**Instructions**

Using a financial calculator, compute the exact rate of interest earned on the mortgage by the bank.

*Various time value of money situations.*

**BEE-4** Using a financial calculator, solve for the unknowns in each of the following situations.

- (a) On June 1, 2012, Shelley Long purchases lakefront property from her neighbor, Joey Brenner, and agrees to pay the purchase price in seven payments of \$16,000 each, the first payment to be payable June 1, 2013. (Assume that interest compounded at an annual rate of 7.35% is implicit in the payments.) What is the purchase price of the property?
- (b) On January 1, 2012, Cooke Corporation purchased 200 of the \$1,000 face value, 8% coupon, 10-year bonds of Howe Inc. The bonds mature on January 1, 2022, and pay interest annually beginning January 1, 2013. Cooke purchased the bonds to yield 10.65%. How much did Cooke pay for the bonds?

*Various time value of money situations.*

**BEE-5** Using a financial calculator, provide a solution to each of the following situations.

- (a) Bill Schroeder owes a debt of \$35,000 from the purchase of his new sport utility vehicle. The debt bears annual interest of 9.1% compounded monthly. Bill wishes to pay the debt and interest in equal monthly payments over 8 years, beginning one month hence. What equal monthly payments will pay off the debt and interest?
- (b) On January 1, 2012, Sammy Sosa offers to buy Mark Grace's used snowmobile for \$8,000, payable in five equal annual installments, which are to include 8.25% interest on the unpaid balance and a portion of the principal. If the first payment is to be made on December 31, 2012, how much will each payment be?

# APPENDIX F

## Standards of Ethical Conduct for Management Accountants

Management accountants have an obligation to the organizations they serve, their profession, the public, and themselves to maintain the highest standards of ethical conduct. In recognition of this obligation, the Institute of Management Accountants (IMA) has published and promoted the following standards of ethical conduct for management accountants.<sup>1</sup>

### IMA Statement of Ethical Professional Practice

Members of IMA shall behave ethically. A commitment to ethical professional practice includes: overarching principles that express our values, and standards that guide our conduct.

#### *Principles*

IMA's overarching ethical principles include: Honesty, Fairness, Objectivity, and Responsibility. Members shall act in accordance with these principles and shall encourage others within their organizations to adhere to them.

#### *Standards*

A member's failure to comply with the following standards may result in disciplinary action.

##### **I. COMPETENCE**

Each member has a responsibility to:

1. Maintain an appropriate level of professional expertise by continually developing knowledge and skills.
2. Perform professional duties in accordance with relevant laws, regulations, and technical standards.
3. Provide decision support information and recommendations that are accurate, clear, concise, and timely.
4. Recognize and communicate professional limitations or other constraints that would preclude responsible judgment or successful performance of an activity.

## II. CONFIDENTIALITY

Each member has a responsibility to:

1. Keep information confidential except when disclosure is authorized or legally required.
2. Inform all relevant parties regarding appropriate use of confidential information. Monitor subordinates' activities to ensure compliance.
3. Refrain from using confidential information for unethical or illegal advantage.

## III. INTEGRITY

Each member has a responsibility to:

1. Mitigate actual conflicts of interest. Regularly communicate with business associates to avoid apparent conflicts of interest. Advise all parties of any potential conflicts.
2. Refrain from engaging in any conduct that would prejudice carrying out duties ethically.
3. Abstain from engaging in or supporting any activity that might discredit the profession.

## IV. CREDIBILITY

Each member has a responsibility to:

1. Communicate information fairly and objectively.
2. Disclose all relevant information that could reasonably be expected to influence an intended user's understanding of the reports, analyses, or recommendations.
3. Disclose delays or deficiencies in information, timeliness, processing, or internal controls in conformance with organization policy and/or applicable law.

## ***Resolution of Ethical Conflict***

In applying the Standards of Ethical Professional Practice, you may encounter problems identifying unethical behavior or resolving an ethical conflict. When faced with ethical issues, you should follow your organization's established policies on the resolution of such conflict. If these policies do not resolve the ethical conflict, you should consider the following courses of action:

1. Discuss the issue with your immediate supervisor except when it appears that the supervisor is involved. In that case, present the issue to the next level. If you cannot achieve a satisfactory resolution, submit the issue to the next management level. If your immediate superior is the chief executive officer or equivalent, the acceptable reviewing authority may be a group such as the audit committee, executive committee, board of directors, board of trustees, or owners. Contact with levels above the immediate superior should be initiated only with your superior's knowledge, assuming he or she is not involved. Communication of such problems to authorities or individuals not employed or engaged by the organization is not considered appropriate, unless you believe there is a clear violation of the law.
2. Clarify relevant ethical issues by initiating a confidential discussion with an IMA Ethics Counselor or other impartial advisor to obtain a better understanding of possible courses of action.
3. Consult your own attorney as to legal obligations and rights concerning the ethical conflict.
